588. In the case of Wisley, did you recommend any ground to be set apart for recreation?—Yes.

589. How much?—Two acres.

590. In determining upon the amount of recreation ground required, had you merely reference to the number of persons who now use it as a place of recreation, since that number is stated to be very considerable?—I only take into consideration those who, for the time being, use the ground.

591. There might be two ways of considering whether recreation ground would be required: one would be to look at the population living in the parish, and the other would be to what extent the common is at the present moment practically used for recreation ground?—Yes.

592. I suppose that you do not take the latter point into consideration?—No.

593. Should you consider that that was beyond your province as acting under this Act of Parliament?—I certainly think so. I presume that you are now alluding to what may be called the public rights over it?

594. Yes?—I think that I should not have taken that into consideration, unless there had been a public right which was recognised.

595. When you determine that recreation ground is not required for the public (I am not now speaking of any rights of common which are not contemplated under this provision), ought not you to have some consideration for the fact that the public are at the present moment using the waste land to a very large extent as a place of recreation, and that the inclosure deprives them of the enjoyment which they are now possessing?—I think that is a fact rather for Parliament to determine, inasmuch as the Act requires Parliament to consider the expediency of all the inclosures. Every single inclosure must now be made a subject of reference to Parliament, and they must decide whether or not any inclosure ought to be exempted from the Act. I have always considered that it is for Parliament to say whether or not there are those general public rights; in fact, we cannot recognise them as legal rights, because I believe that, in point of law, they are mere trespasses, and it has been so decided by every tribunal.

596. In considering, first, whether any recreation ground would be required, and, secondly, the extent of it, you would not think that you ought to take into view people who came from a distance to enjoy the recreation, without claiming any special legal right over the ground beyond what they might have by user?—I think not. There have been very few cases of that sort; Chigwell was one place where we set out the largest amount which the law gave us power to set out; it was stated that many people came there on Sundays and on holidays.

597. Do you think that it would be desirable, in order to meet cases of that sort, that the Act of Parliament should be altered so as to allow a larger maximum than 10 acres to be employed for recreation ground?—I think that that might be done with advantage, because there are frequently tracts of land which I could set out entire if the Act of Parliament gave me power to do so; but the Act, under the sliding scale, limits us to a certain extent. If I can do so I generally get the parties, after the Act has sanctioned the inclosure, to propose a resolution at some meeting to extend the area where there has been a sufficient user of it to justify a larger allotment than the Act gives.

598. You consider that cases where lands are inclosed in the neighbourhood of large towns might practically be put upon a different footing in regard to the recreation ground than those where there is no great population?—I think so. I think that it would be very desirable to get as large an extent of land as possible for exercise and recreation in the vicinity of every town or large village.

599. Will you go through the list of places which are appended to the last Annual Report of the Commissioners, and state whether there is any information which you would like to bring before the Committee with reference to them; the explanations in the report are given in very vague and general terms, and perhaps you might like to state specifically some of the details?—The first inclosure is Skyborah Hill in the parish of Llanvair, Waterdine. I find there are only seven or eight cottages near the hill, and they are all scattered, no two are near one another; the bulk of the cottages in the parish lie three or four miles from the hill. All the land has been inclosed up to the base of the hill, and from that point the hill rises like the roof of a house, and extends back for nearly half-a-mile. No person would ever be found to take manure up there; any person who cultivated an allotment there must ascend the steep hill and take manure up. I do not think that it is possible to take it up.

600. Mr. *Fawcett.*] Is it not stated that a portion of this land which you propose to inclose is adapted for agriculture, namely, about half of what you say that you cannot get manure into: I understand you to say, that this land is so steep that it is of no use to appropriate any of it to allotments, because, owing to its steepness, you could not get manure to it, but you state that one-half of it is adapted to agriculture; is land adapted to agriculture which cannot be manured?—That is quite true. The upper part of it could all be cultivated, and there are tracts of land lying on the same high elevation which I observed had been cultivated. It would be cultivated with turnips and oats, and a part of it would be converted into sheep pasture. The whole of it is table land. I went over it from beginning to end.

601. Colonel *Barttelot.*] How far is this land from the cottages?—From half-a-mile to three-quarters of a mile; a few cottages lie at the base of

of the hill, and the cottagers would have to take the manure up half-a-mile. The village is situate three or four miles from the hill; it is one of those wild open tracts which no doubt would have been inclosed before if the land had been sufficiently good.

602. Mr. *Liddell.*] In your opinion would this table land be at too great a distance from these cottages to be practically available, or useful to the occupants?—The table land at the top would not be available for the cottagers, but people taking it as a farm would very likely carry manure up and plough the land; in fact, they have already done so in the neighbourhood close by this very hill.

603. *Chairman.*] The next case in the Report of the Commissioners is Shrewsbury Castle Common? — Yes; that borders on Exmoor. There are only three or four cottages in the parish, each of which has a garden. There are two farm-houses; but there are no other cottages nearer than the village, and they are nearly three miles off, so that the cottagers there would have to take this wild tract of land, and to take manure three miles.

604. When you say that the cottages are provided with gardens, do you take any means of ascertaining the size of those gardens, because gardens are often small and men are pleased to have allotments in addition to those gardens?—They vary; they very seldom exceed 10 to 12 poles, except a few.

605. Mr. *Fawcett.*] With regard to Skyborah Hill, you would bring a considerable tract of land under cultivation, namely about 230 acres; you state that half the amount could be converted into arable cultivation?—Yes, that was the estimate given by the people who attended the meeting.

606. The additional land brought into cultivation would require labourers to till it?—Undoubtedly.

607. Is it therefore not quite possible that more cottages may be built in the neighbourhood of the hill?—I should never for one moment entertain the principle of cottages being built without gardens. If cottages were to be built for the cultivation of the land, they would be built by the persons who wanted to use the labourers for the cultivation of the land. If we were to set out allotments for those cottages we should be fostering the very evil which every person is now trying to prevent, namely, the evil of having cottages built without land.

608. What rule do you lay down with regard to the amount of garden which you consider is sufficient, so that a labourer should not require an allotment?—Of course a good deal must depend upon the size of the common, and the quantity which ought to be taken from the common. As a rule, I have always inquired how many cottages there are in the parish without gardens, or with insufficient gardens, and I have always endeavoured to set out as allotments sufficient to provide for all those purposes.

609. Can you state positively that those seven or eight cottages in the neighbourhood of Skyborah Hill are so provided with gardens that they do not want allotments?—I saw most of the cottages; I cannot say that they had very large gardens, but I should say that they had sufficient gardens. They had from 15 to 20 poles, and some of them had more; I should have set out no allotments for these cottages.

610. Does not a labourer, if he has a garden of only 15 poles, consider that an allotment is a great boon to him?—Undoubtedly a labourer considers an allotment a great boon, if it is sufficiently near and under certain conditions, but there are certain conditions under which an allotment is of no use to a labourer.

611. Mr. *Liddell.*] Would not a very material consideration be that of accessibility to the allotment ground from the cottage?—Yes.

612. Is not easy access a condition which you consider a very important one in assigning these allotments?—Certainly; I think that, without free access, and without the garden being within a certain distance, it is of no use whatever.

613. I take the question of distance, and the question of access separately, because the allotment may be within a reasonable distance, but the access may be so difficult, as to render it almost impossible for the man to avail himself of it?—There must be a convenient access; for instance, if he has to carry the manure up hill to land on a high elevation, and as he has for various purposes to go up the hill, he would not use an allotment there.

614. When I find with reference to Skyborah Hill, that the great steepness of the hill side is alleged as a reason for not assigning those allotments, I apprehend that that explains your objection?—Undoubtedly.

615. Would it be the case, that the expense of constructing paths for the conveyance of manure and for the purposes of access, would be beyond the means of the labourer?—Yes, and there is no power in the Act of Parliament to lay out any money for that purpose.

616. Mr. *Walsh.*] In those hill districts, is it not the invariable method of a farmer in manuring them, to manure them by folding sheep upon the top of them?—That is one mode of cultivation.

617. Therefore, land which was held by a man who had a flock of sheep, might be suitable for agricultural purposes, which would be unsuitable for allotments if a man had to move up his manure, would it not?—Undoubtedly; and that observation applies to a very large extent of land which is now being inclosed; in fact, almost all the tracts of good land were inclosed before our Act came into operation; that is to say, all that would pay the expenses of a private inclosure Act, and you are now dealing, for the most part, with waste lands.

618. *Chairman.*] In Fairbourn Heath, in the parish of Harrietsham, it is stated, that "owing to the distance of the heath from the village, no allotments for either exercise and recreation, or for labouring poor, have been set out"; it is also stated that "the soil of the heath is sufficiently good for arable cultivation"; have you any reason to suppose that that soil would not in itself be adapted for spade cultivation?—I think that if that land were broken up and levelled, and brought into some state of cultivation previously cottagers might use it, but it is one of the roughest pieces of land which I ever saw; it is covered all over with brushwood and stumps of trees, and it has been dug out for gravel in places.

619. Mr. *Martin.*] Have all those cottages large gardens to them?—They all have gardens; the cottages between the village and Fairbourn Heath, all have gardens.

620. According to my recollection, they have largeish gardens?—Yes.

621. *Chairman.*]

Mr. N. Wetherell. — 3 June 1869.

621. *Chairman.*] Supposing that this land is brought into cultivation for farming purposes as you suppose, do you see any probability of new cottages being built in that neighbourhood to supply accommodation for the labour which would be wanted either there or in the neighbourhood?—Certainly not; the land is only 39 acres.

622. Mr. *Fawcett.*] You describe the land as being extremely rough; cannot land which is extremely rough be better put under spade cultivation than under the plough?—The Act of Parliament gives no power of levelling garden allotments, and I am perfectly satisfied that no cottager would ever take that land as it now exists; he must prepare it for a year or two before it could be brought into cultivation for gardens.

623. Did you take the opinion of any practical man in the neighbourhood upon the subject?—I have no doubt that I asked the people who were present at the meeting whether or not such land could be brought into cultivation, but I am bound to inspect it myself.

624. Mr. *Martin.*] Is not that land employed for the production of very large hop-poles?—Yes.

625. Mr. *Knatchbull-Hugessen.*] Is it not the case with regard to many of these smaller inclosures, that the neighbourhood desires the inclosure of these smaller commons, because they are principally used as a refuge for tramps?—That is so.

626. *Chairman.*] With regard to Withypool Common, the report states that it contains about 1,904 acres, and that "nearly the whole of this large tract of land could, after inclosure, be profitably converted to arable cultivation;" what provision was made in that provisional order for exercise and recreation ground, and for allotments for the labouring poor?—One acre was set out for exercise and recreation, and five acres for the labouring poor.

627. Did you determine upon that amount of one acre upon a review of the existing population in the immediate neighbourhood of Withypool Common?—Yes, it is a very scanty population indeed, and they have never resorted to the common for exercise and recreation; it is an exceedingly wild tract; it slopes up from the village and any allotments set out for exercise and recreation must be set out on a steep hill; there was a small quantity at the foot of the hill, and it was considered that one acre for the school children would be ample; there are other commons where they can rove about.

628. Are there any considerable number of persons living in the vicinity of the common?—There are not; if you wish it, I can read a letter which I received the other day from the rector of the parish; it is from the Reverend Joseph Jekyll; he says, "I think the land given to the occupiers by the lord of the manor for the benefit of the poor is two acres." That was an allotment previously given by the lord of the manor for the benefit of the poor; he goes on to say, "I wished it to be allotted to the deserving poor under certain rules, but was out-voted by the niggardly farmers; it is let to the highest bidder at an enormous rent, and the money is applied to the rates; no gentleman or landowner lives in the parish, and the occupiers are of the lowest and poorest sort; the majority of the labourers are freebooters, living entirely on plunder; I am very glad to find that the common is to be inclosed; it will be a work of time to eradicate the evil induced by it; for the last half century every one has grazed the common and erected huts, and inclosed small plots, without let or hindrance; predatory habits have been induced which will take a generation to eradicate; I think the five acres quite sufficient for the population, which is just about 300; if any more be required, it would be one acre of the deep black ground for cutting their turf; they have been in the habit, from time immemorial, of cutting or paring the spine, and selling the ashes; no recreation ground is required in this wild country."

629. Have you any reason to anticipate that there will be any increase of population after the inclosure of that common?—The cultivation of the land may induce persons to come to the parish.

630. Would it not be well to look prospectively to that state of things, and to provide for the alteration which may occur when this common is under cultivation, rather than to look to the habits of the existing people?—It may be so in some cases, but I confess that I have not taken that matter into consideration; I consider that the Act of Parliament does not enable us to look prospectively to the making provision for future generations.

631. Mr. *Knatchbull-Hugessen.*] You say that the one acre allotted in this common was especially for the school children?—Yes.

632. Do you think that one acre is a sufficient space for a game of cricket, or for any of those games which are pursued?—It is only for quite small children; there are very few cottages in the parish.

633. Mr. *Fawcett.*] You recollect visiting Withypool?—Yes; well.

634. Did you take any evidence from the labouring poor there, as to their wishes on the subject?—I am not aware that any evidence was given by the labouring poor.

635. Should you be surprised to hear that I received three letters from Withypool, expressing great discontent with the amount allotted for allotments, and also the small quantity reserved for recreation ground?—I confess that I should not be surprised to hear it, for they are a very curious set there. Many of these people, when you speak of allotments, understand that they are to have the allotments set out in perpetuity; many of them are under the impression that these allotments are to be set out for them, and the letter of the rector, Mr. Jekyll, states what these gentlemen are in the habit of doing, they are encroachers and they have taken land, and have squatted down there, and they hold these allotments in defiance of the Commissioners.

636. Have I been correctly informed that the village is close to the common?—Yes.

637. Have I also been correctly informed that friendly societies are in the habit of meeting on particular days in the year on the common, and that they would consider it a great hardship to be deprived of that open ground?—I am not aware that that information is correct; I have heard nothing about it.

638. You have stated that two acres have been already reserved, and that the rector complains that that land, owing to what he describes as the niggardliness of the farmers, is let at a most enormous amount?—Yes.

639. Does not that prove that there is a great demand for village allotments?—I have no doubt that

that the inhabitants would cultivate many of these allotments but I consider that five acres would give 40 allotments, which are far more than the present number of cottages, or than the future cottages would be likely to use.

640. You speak of the allotments being the eighth of an acre each?—I thought that the Honourable Member was speaking of cottage gardens. The two acres to which the rector alludes are two acres held for cultivation as gardens.

641. I was not speaking of recreation ground, but of allotments; you say that these five acres reserved for allotments would supply 40 allotments; how many allotments do you contemplate that that will be divided into?—There would be 20 allotments at a quarter of an acre, or 40 allotments at 20 poles each; that would be quite sufficient.

642. That is one-eighth of an acre; do you think that an allotment of one-eighth of an acre is sufficient?—I believe that in nine cases out of 10 it would be sufficient. A cottager can farm a quarter of an acre under certain circumstances. If you lay a quarter of an acre to his cottage he will use it to a certain extent for vegetables; he will plant part of it with gooseberries, but will very seldom plant the whole with potatoes or other vegetables, unless he has a market for them in the neighbourhood.

643. Are you aware that the assistant-commissioners who were appointed to inquire into the question of agriculture, expressed an entirely different opinion from one-eighth of an acre being sufficient?—I have read their report with a great deal of care and attention. I have made inquiries of every person to whom I could refer who had any knowledge on the matter; I have referred to parish officers; I have referred to farmers; and I have referred to the labourers themselves; and I have made special inquiries as to what has been done where allotments have been set out: and the conclusion at which I have arrived is, that one-eighth of an acre, namely, 20 poles, is as much as a labouring man can do justice to. An acre would give eight allotments of 20 poles each, and five times eight would be 40 allotments; that would be far more than Withypool would cultivate.

644. With regard to the recreation ground, you contemplate no provision whatever as a recreation ground for the more adult part of the population; you reserve this acre as a recreation ground for children; you do not contemplate making any provision for the lads?—No; I have referred to all the parties there, and I have never found that at Withypool any of the parties have resorted to the land for exercise and recreation.

645. You have not contemplated the case of their using it for purposes of cricket, and things like that?—No: people could not play at cricket there; it is on a hill, and they could not do so unless they went to the very top of the hill; the land slopes down to the river.

646. You have described some ground as being flat near the river?—There is a small portion lying just on the bank of the river, where I have set out ground for exercise and recreation.

647. Do you say that the only ground near the village which is flat is one acre?—Where the five acres are set out it is not so steep; there is an incline; but the mountain slopes down to the village.

648. The point to which I wish to go is this; you state, as it appears to me, two different reasons for not recommending a recreation ground; first, you state that it is not wanted; and, secondly, that there is no ground that is suitable; am I to understand that both those reasons influenced you?—I think so.

649. Am I to understand that there is only one acre in this place which is sufficiently flat?—There may be a little more or less; there is a very small quantity situate just on the edge of the river.

650. You state in your report, that almost the whole of this land might be brought under cultivation?—Yes; for various purposes, sheep-walks and arable cultivation.

651. Would you suppose that, if you inclosed the land, it would change the habits of the population, and that instead of having a roaming population, you would have a settled population there?—You might get a larger population there in consequence of the cultivation; but I understand that a great part of this land will be held as sheep-walk.

652. You have not contemplated making any sort of provision for the new population?—Certainly not.

653. Who will obtain possession of that land; will any of it be the rector's glebe?—I think that I can inform the Honourable Member upon that point; I am not aware that the rector would receive anything.

654. You are not aware either one way or the other?—With regard to the right over Withypool Common, the evidence given before me was, that every landowner in the parish had turned on cattle at all time within the memory of man, and that the manor was co-extensive with the parish; I find that the Reverend Joseph Jekyll owns the tythes, but I cannot find his name as the owner of any glebe, or of any land in the parish, and I therefore assume that he has no interest.

655. Colonel *Barttelot.*] Do you know the acreage of this parish?—I do not.

656. Do the 1,904 acres which are to be inclosed form a great portion of the parish, or only a small portion of it?—I find that the columns in this document which I produce giving the extent, are not added up; I have them all here; the rateable value of the parish is 1,693 *l.*; 136 acres are rated at 126 *l.*; 83 acres are rated at 65 *l.*, and 84 acres are rated at 70 *l.*; it is not 1 *l.* an acre.

657. Taking it in rough terms, I suppose that the parish may be 2,000 acres more than what is going to be inclosed?—Yes.

658. What is the population of the parish?—Three hundred and seven. The rector says about 300, and I believe that there are not above eight or nine cottages in the parish.

659. Will this land, supposing it to be inclosed, be principally broken up, or will it be used as sheep pasture?—Parts of it will undoubtedly be broken up.

660. Will half of it be broken up?—That I cannot undertake to say. The evidence before me was that all could be broken up. I dare say that the land having a southern aspect will be broken up immediately, but that the land having a northern aspect, and lying at the top, will most likely be used for sheep pasture.

661. Supposing this land to be inclosed, do you think that the population, which you speak of as a loose population, who live by taking their neighbours' goods, would remove from that place

Mr. *N. Wetherell.*

3 June 1869

or not?—I think that many of them would remain; they are what we call squatters.

662. Supposing that they remained there, would not their great object be to get as large an allotment as possible, so that they might cultivate the allotment, and not do ordinary labourers' work: I am speaking of this population which you say is of a peculiar character; would not their great object be to get as large an allotment as possible, so that they might cultivate the allotment themselves, without doing the ordinary labour of a common man?—I think that they would hardly obtain control of sufficient land through the medium of the garden allotments to keep them.

663. I quite understand what Mr. Fawcett has stated, namely, that he has received letters from these parties, and I want to know whether the object of these men was not to get as large allotments as possible, because they thought that they might cultivate them themselves?—Many of them may have done so.

664. They thought that they should get those allotments in perpetuity?—I have no doubt of it. Notice was given of the meeting. It so happened that there was a disputed question of manor, and the matter was thoroughly ventilated. There were one or two meetings previously. I held two meetings, and am satisfied that everybody in the parish had notice; a great many attended and I have a list of their names; I inquired especially whether there was a necessity for setting out a larger allotment for exercise and recreation. An assistant commissioner had previously set out two acres, and they said, "One acre will be sufficient for exercise and recreation, and we will have five acres for gardens." No recreation ground was set out except this one acre for children.

665. Mr. *Knatchbull-Hugessen.*] With regard to the clergyman who writes in such laudatory terms of his parishioners, was he present at your meeting?—He was certainly present at one meeting.

666. Did he fight the battle of the poor, as you have told us that incumbents generally do?—He was certainly for an allotment being set out. He was present at one of the meetings, and I know perfectly well that he advocated an allotment being set out for the poor.

667. And he is satisfied with the amount which you allotted?—Yes.

668. Mr. *Liddell.*] You stated just now, I think, that the inhabitants of Withypool had from time immemorial been in the habit of paring the surface, and burning it, and selling it for ashes?—I read that from the rector's letter.

669. If that immemorial usage had been the practice for ages, would it not absolutely constitute a legal right to the surface, which could be maintained in a court of law?—I think that that would be a question of some difficulty to answer. If they pared the surface for a legitimate object, namely, for fuel, it would be a legal right; but no person has a right to dig and injure the soil, and to take it away and sell it. What the rector states would not be a legal right, because they have taken the surface, not for the purposes of fuel, but for the purpose of converting it into ashes and selling it for manure.

670. But would not the possession, undisturbed for ages, of that *quasi* right, be quite sufficient to explain that a certain number of these poor people feel very much aggrieved that that right has not been so far recognised as at least to assign to them, in the division of the common, certain portions in the shape of allotment ground?—The rights of common, or the rights of the character to which the Honourable Member is now referring, are not rights for which any compensation is made at the preliminary stage of the inclosure. The allotments for the labouring poor, and for exercise and recreation, are not allotments in compensation of rights. The rights of common, or any benefit arising from the common, will be a subject for consideration at a future stage, and it will be for these parties, if the inclosures proceed, to put in their claims to those rights, and they will have to be considered.

671. You spoke of there having been a lawless population, and that they had encroached to a certain extent upon this common, and that they had become squatters: how many years undisturbed possession gives a squatter a title?—Twenty years; he then has a title against all the world.

672. Then I apprehend that these people had not fulfilled that condition, and had not acquired that right?—I do not know that; the valuer goes into that point subsequently; we are not empowered to go into it.

673. Colonel *Barttelot.*] Supposing that a man came and stole this ground in order to make it into ashes, he not having any right at all upon the common, that would give him no right there?—Certainly not; in order to get a right of fuel, he must have a house; fuel is appendant or appurtenant to a house; the mere fact of a man, who has no cottage, going on the common to pare the turf or ashes, would of course give him no right.

674. Supposing that a man who pared for ashes was resident in a cottage which would get an allotment, that allotment would be given as a matter of course?—Undoubtedly, if he established a legal right.

675½ Mr. *Leveson Gower.*] Would you have given a larger recreation ground if more suitable ground had been at your disposal?—I very much doubt whether larger allotments would have been given; it is the wildest possible land; the people have never resorted to the common for exercise and recreation. There is uninclosed ground close by.

676. The insufficiency of suitable ground was not the reason why you did not give a larger amount of recreation ground?—No, it was principally because it would not be used.

677. Mr. *Knight.*] There are two separate manors, one to the south, the other to the north, each having a large quantity of waste ground, which of those are you inclosing?—Both; I think that the wastes are under the same manor. There was a dispute; a gentleman there claimed to be the owner of another manor.

678. It is a wild district round Exmore?—It adjoins Exmore on one side.

679. How many thousand acres have been inclosed under the Inclosure Act: I think that 18 different commons have been inclosed within my recollection; are you aware of the fact that almost invariably in hilly parishes the population has decreased between the census of 1841 and the census of 1861?—I am not aware of the fact, but I have heard generally that the population about there has decreased.

680. So that the inclosure of those commons has not increased the population, but has decreased it?—I am not sufficiently conversant with the

the facts to be able to give an opinion upon the point.

681. Mr. *Martin.*] You said that these people expected the allotments to be set out in perpetuity; would they not be set out in perpetuity? —No, they would be set out, and placed under the control of the allotment wardens.

682. Do you mean that the person who first got them thought that they would hold them for ever?—Yes, without paying any rent; that is the general idea there.

683. Mr. *Fawcett.*] You have stated that the parishioners of Withypool have been in the habit of cutting fuel on the common; when a common is inclosed, will there be any provision for fuel? —Of course, the cottagers who have cut fuel, and who have established their right, will have an allotment set out with respect to that fuel right.

684. As far as I understand you, supposing that this common was not inclosed, all the present and future inhabitants of Withypool would have a right to cut fuel? — No, I beg the Honourable Member's pardon; I have never stated that, or suggested it for a moment.

685. To whom is the right of fuel confined?— The right of fuel would be confined to the owners of houses and cottages who had a right to cut fuel.

686. At the present moment, have all the cottagers in the place the right to cut fuel?—I should think most decidedly not, for this reason, that I believe the larger number of cottages have been built within the memory of man, say, within the last 30 years, and, of course, they can acquire no right by user for that time.

687. When will Parliament have an opportunity of expressing its opinion as to whether or not sufficient land has been reserved for the rights of fuel; because, in this Bill, we have no means of knowing how much land you will reserve; will Parliament, or not, have the power of exercising any opinion in that respect?—I should say, that under the Act, Parliament has no power of doing so.

688. Under the Act of Parliament, Parliament has no power to interfere except as to whether the land shall be inclosed, and as to the quantity of land which is set out for allotments and recreation grounds?—The only allotments which we are directed to set out when the inclosure commences are the allotments for exercise and recreation, and for the labouring poor; the other allotments for fuel are allotments for common rights, which receive compensation in land.

689. And, under the present proceeding, that never comes under the cognisance of Parliament? —I do not remember such a case, and I cannot imagine that such a case could ever come before Parliament.

690. Parliament has no power to express an opinion as to whether or not the common rights have been properly provided for; according to the present Act of Parliament, in your opinion, Parliament has no control over the provisions which are made for those common rights? — Parliament has no control over the provisions which are made for those common rights; that rests entirely with the Commissioners; a final meeting called, the appeal meeting is held, and any party who wishes to do so appears there and makes objection to his allotment on the ground of its insufficiency, or that it is in a wrong position; that is the time for determining whether proper allotments, for rights of common, have been set out, and it is then for the Commissioners to take the matter into consideration, and they may direct further allotments to be set out, or not, for the rights of common.

691. Mr. *Peek.*] Are you aware that in the case of Wisley Common, which is one of the commons scheduled to the Inclosure Bill of this year, evidence has been given before a Parliamentary Committee that nothing was known of the inclosure in the neigbourhood except by the persons immediately interested, until the Bill itself was before Parliament?—I can only speak to what took place at the meeting which I held, and not a word was there said about any public rights over the common, or as to the user by the public.

692. I will repeat my question. Are you aware that in the case of Wisley Common, which is one of the commons scheduled to the Inclosure Bill of this year, evidence has been given before a Parliamentary Committee that nothing was known of the inclosure in the neighbourhood except by the persons immediately interested, until the Bill itself was before Parliament?—I only know what is stated in the report. I knew nothing about it at the time; not a word was said about it.

693. Wisley Church, it is stated in the same evidence, "is little more than a barn, with a turret to it, situate in a farm-yard, and is frequented only by a few cottagers who are resident in the neighbourhood": if this be so, do not you think that notice of your meeting should have been posted in other places besides on the church door? — Of course the Commissioners knew nothing whatever of any public rights over the common; they could only proceed in the manner prescribed by the Act of Parliament; there is a clause in the Act of Parliament specially directing them what notices they are to give, and they have not only given all the notices required by the Act, but have gone far beyond it. In most inclosures, as I have stated, the directions which have been given by the Commissioners have been to post the notice upon any place of worship in the parish.

694. But this is an important common, and, as I understand it, the notice should have been posted in other places besides on the church door, upon which only it was posted: if the Act of Parliament says that means should be taken for making it known, it is quite clear that sufficient means were not taken? — The assistant commissioner has nothing whatever to do with the notices. I only state what I find to be the case when I go down to hold the meetings. In almost every case I find that the notices go far beyond the requirements of the Act of Parliament.

695. Mr. *Fawcett.*] What induced you not to reserve any ground as allotments in the case of Wisley?—Because "the parish is very thinly populated and the cottages lie dispersed; each of them has a garden annexed to it; and an allotment for the labouring poor has, therefore, not been required": those are my reasons.

696. You state, in the reasons which are presented to Parliament nothing about the unsuitableness of the land?—I think not.

697. When you state that the cottages have gardens, must not Parliament draw from that the conclusion that the labourers do not require allotments; you state distinctly that they do not?

Mr. N. Wetherell. 3 June 1869.

—It would depend upon the quantity of land which they have.

698. In this case, do you not state distinctly that the labourers living in Wisley do not require allotments?—Undoubtedly.

699. Are you aware that the labourers themselves in Wisley thought that they required allotments so much, that they went to a neighbouring parish for them?—No evidence of that sort was produced before me.

700. If you had asked any one of these labourers in Wisley, would you not have been informed of that fact?—I have stated that only three persons attended the meeting, namely, the agent for the lord, and two other persons.

701. In this case, although so very few persons attended the meeting, you did not take pains to ascertain the facts themselves, but you obtained them from the persons who attended the meeting?—Undoubtedly, I got all the evidence that I could.

702. Are you aware that the Committee which sat upon Wisley Common unanimously agreed that 10 acres should be reserved as allotments?—That is for cottage gardens; that is done under an independent jurisdiction.

703. Are you aware that the Committee unanimously agreed that 10 acres ought to be reserved as allotments for cottage gardens?—I have no doubt that that is so.

704. And you decided that none should be reserved for allotments for cottage gardens?—Ten acres would give 40 allotments of a quarter of an acre each, being about double the number of cottages in the parish, or more.

705. The Committee unanimously recommended a reservation of 10 acres for allotments, and the Commissioners recommended the reservation of none; is not that statement correct?—Certainly; that appears by their report, and by the Report of the Committee of the House of Commons.

706. Mr. *Liddell.*] You told us that Wisley Common was unfit for gardens; do you mean that it is unfit for gardens because the cost of cultivating it would be beyond the reach of a labourer?—The cost of labour would be beyond the means of a poor man.

707. Should I be correct, or anything near correct, in saying that the market price of land, such as Wisley Common, might be taken at something like 10 *l.* per acre, but that the cost of its cultivation would be 25 *l.* per acre?—I could not undertake to say what the cost of cultivation would be. I should think that 10 *l.* might be the market value of the common.

708. And you could not state, from your own knowledge, what would be the cost per acre of bringing it into cultivation?—I could not.

709. Sir *Michael Hicks Beach.*] As to the recreation ground, which was recommended by the Committee who sat on Wisley Common, to be reserved, are you aware that the Committee recommended the reservation of a recreation ground of six acres?—Yes.

710. Would it have been in the power of the Inclosure Commissioners, under the present law, to have given as much ground as six acres in that case?—They had no power to do it; they are limited by the scale of population.

711. What would be the maximum which they could have given?—Four acres.

712. Therefore, to that extent, the recommendation of that Committee points to an alteration in the present law, and not to any fault of the Inclosure Commissioners?—Precisely so.

713. Is that the fact also with respect to allotments for labouring poor in the case of Wisley Common?—The Committee recommended 10 acres.

714. Had you power to set out as much as that?—Yes; the power is unlimited with regard to land for cottage gardens, but not as to recreation ground.

715. Mr. *Pease.*] Have you ascertained how many cottages occupied by the labouring poor there are in Wisley?—I do not think that that appears in my report; the report states, that it is very thinly populated, and that the cottages lie dispersed; there is no village, and every cottage has a garden.

716. Do you say that there are not 40 cottages?—The population is only 166; I suppose that there are not above seven or eight cottages in the parish.

717. *Chairman.*] With regard to Saxlingham Common, I find that only one acre was reserved for allotments for the labouring poor; will you state the grounds upon which you came to the conclusion that that was the right extent of land to allot?—There are only four cottages near the common without sufficient gardens; the bulk of the cottages lie a mile and a-half from the common.

718. When you say "a sufficient garden," what do you wish us to understand by that phrase?—I have considered that about 20 poles is a sufficient garden; about the eighth of an acre.

719. Did you ascertain that the gardens were of that extent?—I saw every garden; I remember them perfectly, because I had to walk by the cottages to the village; I cannot remember the exact extent, but I have no doubt that there was sufficient.

720. Had you in view that this acre would be divided among labourers who were not in possession of gardens, or that it would be added to the gardens of those who had gardens?—My view was, that it would be divided among those who had not gardens; there were only four cottages near the common without sufficient gardens.

721. Mr. *Knight.*] Do those cottages belong to the poor, or to the adjoining proprietors?—I cannot answer that question.

722. Mr. *Fawcett.*] As I understand you, you reserved this one acre for four cottages, which were without sufficient gardens?—Yes.

723. Then you allotted to each of these cottages, which you say had not sufficient gardens, a quarter of an acre?—There is an opportunity for them to have a quarter of an acre each.

724. But you say that the cottages which had sufficient gardens had not more than the eighth of an acre?—About that.

725. How do you reconcile the statement, that in the case of a garden an eighth of an acre is sufficient, so as not to want an allotment, with the fact of your allotting a quarter of an acre to a house without a sufficient garden?—I have no doubt that some of the cottagers who have gardens would be glad to take a portion in addition; the Act of Parliament mentions a quarter of an acre as the maximum of allotment, and in this case, I set out the maximum.

726. You stated that the cottages which had sufficient gardens had about 20 poles, did you not?—

not?—That is my impression; I cannot pretend to say what is the exact quantity; those gardens, I presume, had 20 poles, and in this case, I set out sufficient to give the applicants a quarter of an acre each, that being the maximum allowed by the Act of Parliament.

727. *Chairman.*] Will you turn to the case of Lightwood Green, and tell us what has been the reservation in that case?—I had nothing to do with that inclosure.

728. Then there is a case of Kirton Marsh; will you state, in greater detail than is given in the report, the reasons for which no allotment for exercise and recreation ground, or for the labouring poor, has been set out in that case: it is stated generally in the report, that it being marsh land, you did not consider that in the present state of the ground, that marsh land could either be satisfactorily cultivated with the spade, or used for recreation; but had you any reference to what the land would become after it had been drained and embanked, and brought into use for agricultural purposes?—If the land is embanked, as doubtless it will be, it will be valuable and perfectly fitted for garden purposes; my sole reason for not setting out land there for exercise and recreation, or for the labouring poor, is, that the village is situated about two miles and a-half from the marsh, and that the few cottages which are near to it are provided with garden ground.

729. Mr. *Knatchbull-Hugessen.*] Who will pay for that embankment?—The landowners; most likely a portion of the land will be sold for the payment of the expenses. It will be extremely valuable land. I believe that at present every tide flows over it.

730. *Chairman.*] Then am I to understand that the reason why you thought that no allotments were necessary for these purposes, was the deficiency of population, and not the quality of the ground?—I certainly considered the quality of ground; it will not be suitable for some years to come, unless it is embanked off.

731. Did you ascertain the extent of ground which was attached to those cottages?—I saw the gardens. There are only three or four cottages near to the marsh, and they are all provided with garden ground.

732. I presume that it was not a part of your proceedings to inquire whether it was probable that cottages would hereafter be built in consequence of the reclaiming of this marsh?—Certainly not. I assume that persons who want cottages for the cultivation of the land would be the persons to whom allotments are made; they will have land allotted to them sufficient, not only for building cottages, but also for laying out gardens adjoining their cottages.

733. But you did not contemplate the possibility of these persons erecting cottages without any garden grounds, and that opportunities should be afforded to them of getting allotments?—Certainly not; I think that that would be most mischievous.

734. Mr. *Knatchbull-Hugessen.*] A considerable sum would be required in order to bring this land into a proper state of cultivation, would it not?—A large sum.

735. That sum would be found by the landowners, and the persons who had benefitted by the inclosure?—Yes.

736. Do you not think that if more labour was required these landowners would bring that labour to the land?—No doubt, labour would be brought to the land; but I think that in this, and in almost every parish, the surplus labour in the parish would be quite sufficient for the cultivation of this land.

737. Do you think that if it was found that additional labourers were required, in such a case as this the landowners would show any indisposition to bring that labour to the land?—No.

738. Do you think that the labour which is required for the land would be brought there in a proper proportion, better by leaving the discretion in the hands of the landowners who had employed their capital and brought the land into a proper state of cultivation, or by giving power to some extraneous body, or some parochial authorities, to bring such labourers as they might think it right to bring?—The labour ought to be provided, and it doubtless would be provided, by the landowners who had allotments, and they would make ample provision for their comforts, including gardens.

739. Do you not think that any landowner who understands his business recognises the desirability of bringing the necessary labourers as near as possible to his land which is to be cultivated?—Undoubtedly.

740. Supposing that an allotment was given with regard to a prospective population in the case of Kirton Marsh, in what way do you think that it would facilitate the bringing of labour on the land; how do you think that the labourers could be brought upon that land through that allotment; what would be the process?—I can hardly imagine that any labourers would be brought there, except by the landowners; the landowners themselves ought to, and probably would, build cottages for their labourers on or adjoining the land.

741. Do you think that the allotment wardens would be likely to bring upon Kirton Marsh any number of additional labourers?—I think not.

742. Would they be deterred by the fear of increasing the rates, and so on?—I think not.

743. If it is desirable to provide for any prospective population in such a case as Kirton Marsh, do you see any manner in which you can better do it than by trusting to the necessity which the landowners would feel for bringing that population there, if their wants required it?—Certainly not; perhaps I may be allowed to make one observation, with regard to prospective allotments being set out, which may or may not be ever used as gardens. The Act of Parliament makes no provision for utilising such an allotment until the contingency arises which will bring the gardens into existence. The Act of Parliament empowers the allotment wardens to let the land in pieces not exceeding a quarter of an acre; it also directs that all the allotments shall be let as gardens. The consequence is, that if you are making provision for future generations (I am, of course, assuming that the present generation is amply provided for), if you allot a large piece of land, as is the case in Wisley, without making a provision for utilising it in the meantime, it will become a nuisance rather than a benefit. There are not labourers in the parish who will take it under the Act of Parliament, because the allotment wardens have no power to let it in pieces exceeding a quarter of an acre, and they are bound to let it as gardens, and you will, therefore, have many acres of gardens lying idle

Mr. *N. Wetherell.*
3 June 1869.

and waste. I have written to several gentlemen indiscriminately who I know are interested in the matter, and I have eight or 10 letters stating the result of their knowledge as to allotments already set out. Many of the allotments have never been used for gardens; they have been let to farmers, and have been used for other purposes.

744. Mr. *Liddell.*] With reference strictly to Kirton Marsh, apart from the question of the distance of two and a-half miles from any cottage, are not the present circumstances of Kirton Marsh such as absolutely to preclude you, the assistant commissioner, from assigning allotments; inasmuch as to render the land available for cultivation a preliminary expenditure in the shape of an embankment is absolutely necessary?—I do not think that I should take that into account. I should assume that the embankment would operate for the benefit of all parties, both those having private and those having public allotments.

745. From what source is the capital to be derived to make that embankment; as I have understood from you, there is no power in the allottees to advance money for purposes of that kind?—That is so, but the embankment would run round the whole common seaward, and if an allotment were to be set out for cottage gardens, of course they would have the benefit of the embankment without contributing in any way to the expense.

746. Would not that allotment be absolutely useless without the embankment?—It could not be used, because the tidal water, I believe, flows over the land at every tide.

747. Then you must look to some other persons providing the money than the allottees?—Yes, but those other persons provide the land for the allotment. I think that it is intended that the land for the benefit of the poor should be set out at the expense of the common. Those persons get the benefit of the Act of Parliament for a trifle, namely, for 20 *l.*, instead of having to incur the expenses of a private Act of Parliament; and therefore, it would be quite fair for them to contribute, not only the land, but something beyond.

748. Mr. *Johnston.*] The value of the allotments would be large?—Yes.

749. And the rent-charge would go into the pockets of the allottees of the common?—The rent-charge would go in part into the pockets of the allottees in part compensation for their allotments, and the residue is paid over to the poor's rates.

750. Colonel *Barttelot.*] Is not it very important that this inclosure should take place as soon as possible?—I have understood so.

751. Supposing that no decision is come to for some time with regard to Kirton Marsh; no inclosure can take place in this year, and it must be thrown over until another year?—It would depend upon whether Parliament passes another Bill. The Commissioners are bound to report in January, upon which report a Bill is brought in; in fact, this Bill which is now suspended; and then the Commissioners have power to report again at any time during the Session.

752. But unless this marsh is inclosed from the sea it can be of no use, except for the feeding of sheep?—None whatever.

753. *Chairman.*] From your experience does it occur to you that the time has come for making any amendments in the Inclosure Act: in the first place, do you think that it would be possible to make any change with regard to the rent-charge which is imposed upon the ground reserved for the cultivation of the labouring poor?—I do not think that there is any sufficient reason for altering it; I thought so at first, in talking the matter over with the Commissioners, but I now think, that as the rent-charge is so small, that it is hardly necessary to alter it.

754. Do you find in practice that too large a rent is required by the churchwardens and minister from the labourers who cultivate their allotments?—I do not find it so by experience; the Act of Parliament provides for that matter, because it directs that there shall be a revision of valuation in, I think, every 10 years. I have never found any complaint in that respect.

755. Mr. *Martin.*] Are you acquainted with the cases of Ashwell, Meppershall, and Stotfold; the last witness told us that they charged double the rate, and I asked whether it was not done in defiance of the law under sect. 109, and I wish to ask you whether that is common?—I have no knowledge of that matter.

756. *Chairman.*] Do you know whether the churchwardens generally attend at the meetings in the case of those allotments, and whether it is habitual for the provisions of the Act to be adopted, which empower the election of two ratepayers to act in conjunction with the churchwarden and the ministers?—I am unable to give any information as to the working and management of the allotments; it does not come under my jurisdiction; it is only by accident that I hear of it; but I have written to four or five valuers, who are men of experience, to know what is the real state of the allotments where they have acted as valuers, and whether those allotments have been properly managed; I have their letters, and it is shown that in many cases there has been gross neglect, and that the allotments have been let to farmers instead of to labourers, and that some of the people turn their donkeys on.

757. Have you reason to believe that those were cases where there were no labouring poor desiring to avail themselves of allotments, or that they were merely cases in which slackness existed with regard to those persons who had the management of the allotments?—There are numbers of allotments which I have set out, in which I was persuaded in my own mind that there was little probability of their being used; they were sufficiently near for the labouring poor to take them, but they have not taken them. In one case good land has been set out close to the village, six or seven years, but has never been touched up to this time.

758. Then it would appear from that practice, that in cases where, from any causes, the labouring poor do not avail themselves of the ground set apart for their use, that ground is used for other purposes, and still obtains the rent which is paid to the parochial authorities?—Not always; in several cases no rent is paid, so that the allottee does not get his rent-charge.

759. Those would be cases where the churchwarden and the minister neglected the duty imposed upon them by the Act of Parliament?—Yes, and where the poor do not take the allotments.

760. I gather from what you have said, that it is not your opinion that the maximum quantity of a quarter of an acre prescribed by the Act, should

should be enlarged?—I think that that is more than sufficient; a quarter of an acre might undoubtedly be made available for many cottagers near a town, but I am perfectly satisfied that there is not one case in 50 where a cottager can use a quarter of an acre with advantage.

761. In your experience, have you not found that in allotment gardens, which are set apart for persons who are residing in villages or towns, half-an-acre is frequently cultivated with great advantage to a man, or a family, who have that amount?—I certainly have not found that to be so; I have a letter as to the adjoining parish to that in which I live, in Sussex; there was a large allotment of garden ground by a brother-in-law of mine; the parish is a poor parish, and he let the allotments out in quarters of acres. I wrote the other day to the rector of the parish, to make inquiries as to how the labourers and the poor men used them, and this is the answer which I received; it is addressed to myself by a nephew of mine, "On the allotment question, I have been able to get the opinions of Mr. Taylor, my landlord, whom I hold to be a man of remarkably sound judgment, of Mr. J. Barrow, who is looked upon as our oracle in most things, and who was, I think, for a time your tenant at Bardown, and of Mr. H. Barton's bailiff; these I may suppose represent the farmers' view of the case. To-night also, being the monthly meeting night of our benefit club, I took the opportunity of getting the opinions of the labouring men, who were present in considerable numbers. There seems a remarkable agreement on both sides, that given average land, at a distance say of half-a-mile from the village, the eighth part of an acre is more likely to answer a labouring man's purpose than a quarter of an acre. The arguments in behalf of the smaller quantity, were the obvious ones of the less difficulty in getting manure, and the less physical wear and tear in labour; the allotments in the Windmill Field were a quarter of an acre each, but as a proof that they were not the more valued on that score, not a few of the tenants sublet their cants, retaining only half the fourth for themselves. One or two who argued for the quarter of an acre said, that when they sowed half the ground with corn, their doing so gave them an advantage in a better succession of crops, but this benefit seemed to be outweighed by the labour difficulty. Quality of soil appeared to be the great point, and next to that nearness to the village. If the land is at all poorer than average land, quantity seemed to be voted a very doubtful blessing, and one of the best cultivators said that he was sure that he had taken more out of himself in keeping his allotment up to the mark than ever did him any real good. All were agreed that allotments, say of one-eighth of an acre with reasonably good soil, and near the village, are a very great boon to labouring men; but, except under such conditions, the opinion of their advantage was a very qualified one. Much of the rent of my uncle's allotments was given back in prizes, and all the tenants who paid their rent had each year a good dinner; so that in our parish there was an inducement to people to seek for allotments, which might weaken the evidence of the fact that the quarter of an acre cants in the Windmill Field, distant nearly three-quarters of a mile from the village, were, as a rule, always sought for; and, as the choice was also between a quarter of an acre and nothing, many, no doubt, took the quarter of an acre who would nevertheless have preferred the one-eighth of an acre. The rent was 10*s.* for the quarter of an acre in the Windmill Field, and is also 10*s.* for the one-eighth of an acre in the Wheelers Field, where the land is good and close to the village, being at the rate of 2*l.* an acre in the one case, and 4*l.* an acre in the other."

762. Colonel *Barttelot.*] Those allotments were private allotments belonging to one owner?—Yes.

763. *Chairman.*] Are you aware whether or not the labourers there spoken of were all employed in farming operations?—Not all.

764. Do you think that some of them followed a sedentary pursuit during the day?—The reason why allotments of a quarer of an acre were given was, that there was a large number of people unemployed. The allotments were set out in or about the year 1830; the parish was a very poor parish; the poor's rates were very high. In the year 1816 they were 1*l.* 6*s.* in the pound. These allotments were set out in order to keep as many people employed as could be, but the result was that many of them could not cultivate the whole of their allotments, and sublet parts.

765. Is it the habit in that part of the country for cottages to be provided with pigsties, from which manure can be obtained?—Almost invariably.

766. I have understood you to say, that you are not aware of any instances where so large an allotment as half-an-acre has been advantageously cultivated?—I would not say that; I think that if you set out a quarter of an acre immediately adjoining the cottage, the man will use it to advantage; he will plant gooseberry and currant trees there; but except in the vicinity of a large town, where there is an opportunity of selling his vegetables, I do not think that he will cultivate more than an eighth of an acre with vegetables; and one-eighth of an acre, if well cropped, will provide quite sufficient vegetables for the family.

767. Are you not aware of a larger portion than a quarter of an acre being allotted?—Certainly not; I know of no such case.

768. Do you think that it would be desirable that the Commissioners should have more authority to control the use of this garden ground after the inclosure has been completed?—I think it would be very desirable that additional power should be given; it is rather a difficult question; one would not like to see land lying entirely idle and waste; but I am afraid that if you give the allotment-wardens power to use it for any other purpose except as garden ground, it would be considered as a dedication in perpetuity for that purpose, which would prevent its being again turned into garden ground.

769. Are you aware whether the Commissioners have frequently made the regulations which they are empowered by the Act to make for the guidance of the minister and churchwardens?—I have no knowledge whatever of that; that would not fall within my department.

770. From what you know of those parochial bodies, does it seem to you that they would be likely to observe regulations which were made for their guidance, as to which, at the same time, there is no penalty to be enforced for the breach of them?—I am afraid not; as a rule, I do not think that the farmers very much like these allotments; I may state, that, taking the 12 applications which are included in this report, upon the usual

Mr. *N. Wetherell.*

3 June 1869.

usual question, whether any allotment should be set out for exercise or recreation for the labouring poor, there is not one case in which it is proposed that there should be any such allotment; that is always a battle which I have to fight.

771. From what class of persons does that opinion come?—It comes from the landowners and the parishioners. For instance, I will take Wisley Common; Lord Lovelace, Mr. Charles Buxton, and Mr. Locke King did not propose any allotment for the labouring poor. The question is, "Is it proposed that any, and, if any, what, allotment should be made for the labouring poor"? and the answer is, "No." Then, as regards Kirton Marsh, the question is, "Is it proposed that any, and, if any, what, allotment should be made for exercise and recreation"? and the answer is, "It lies quite out of the way for any such purpose." Then, as regards any allotment for the labouring poor, the answer is, "The population is too far distant for such objects." Throughout the whole of these inclosures there is not a single case in which the applicants propose to make any allotments for cottages.

772. Extending your memory over a wide field, should you say that generally you find that the parties who are inclosing these commons are not alive to the advantages of giving allotment ground for the labouring poor?—I think I may state, as a rule, that the parties applying, who are generally the landowners, do not propose allotments for such a purpose.

773. Does that observation apply also to the recreation ground?—It applies to both. When I speak of allotting the farmers come and tell me that the poor have had no rights over the common, and therefore should have no allotments.

774. Do you think that there is a prejudice among the farming class against the allotments, even when they are not connected with waste lands?—Certainly, in a great many instances. They come before me, and state that the poor do not want these allotments, and they state reasons.

775. Do these reasons apply to the benefit of the labourer himself, or do they refer to some other consideration?—The farmers object to the labourers having allotments for various reasons; many of them imagine that the labourer expends his time and trouble upon the allotments, instead of doing his regular work.

776. They are afraid that he will not reserve his leisure hours for the allotment, but will devote his other time to it?—Many of them have that impression. As a general rule, farmers do not readily assent to the allotment of gardens, or to an allotment for exercise and recreation.

777. Have you found it to be a very general feeling among the labourers themselves that these allotment gardens are a great benefit to them?—Certainly, with certain qualifications. I have spoken to hundreds of poor people, and there is but one answer, namely, they wish to know if the land is sufficiently near, and sufficiently good. I have written to several people, and that is the answer from them all without any qualification. It would be a great boon if some exchange could be effected; but I think that it would be difficult to make any provision for it. I have asked the question over and over again, until I am tired of asking it, viz., whether the parties will consent to an exchange for land of sufficient value nearer to the village; but they will not do it in one case in a hundred.

778. If it is left optional, you do not consider that any advantage will arise?—Just so.

779. When you speak of the distance at which an allotment has been reserved, will you state your general idea of the distance which would be too great from the residence?—That would depend very much upon the means of access. The allotments to which I have just referred lie upon a road, and the village lies upon either side of the road, about three-quarters of a mile off; there is no difficulty there in finding tenants. But I should think that a mile would be the outside. Many of the labouring poor have told me that they would not go beyond a mile; and even to go a mile, it is a long distance.

780. Do you think that it would be possible for information to be obtained, and given to Parliament, showing the results of the provisions of this Act of Parliament, with reference to the allotments for the labouring poor and the recreation grounds?—It certainly might be possible to get information as to the expediency of setting out prospective allotments, but I am perfectly satisfied that, without some provision as to these allotments in the meantime, it would be mischievous. If those allotments are not let for garden grounds they become waste.

781. Do you think that it would be easy to give information as to the state of these allotment grounds, which have been set apart?—Yes, the parishes have records, and it would merely be to send down a formal letter every year, directing the churchwardens to give information upon the point.

782. So that the Commissioners would have no difficulty in obtaining accurate information upon that point?—I think not.

783. Mr. *Knatchbull-Hugessen.*] Is not the real measure of value of an allotment to a labourer, its proximity to his dwelling, and the possibility of his employing thereon what I may call the surplus labour of himself and his family?—Without those conditions an allotment is useless.

784. When you go down to these meetings of inquiry, do you generally find a desire on the part of the neighbourhood that the inclosure should be made?—I think so.

785. Do you think that the present means of giving notice to the public is sufficient?—I think so. I can devise no other means, because you do not know *à priori* who the parties are. The Act of Parliament directs that a notice shall be inserted in the newspapers which are circulated in the neighbourhood.

786. Do you think that a notice of 14 days is long enough?—I think that that time might be extended; it is rather short.

787. You say that the labouring poor do not much attend the meetings?—They do not.

788. At what time are your meetings held?—At the usual hour; 11 in the morning.

789. Is it not almost impossible for a labouring man to attend at 11 o'clock in the morning?—Large numbers of the labouring men are, of course, thereby precluded from attending, but as to large commons, where there has been much agitation, I have known every labouring man come.

790. Would you not be far more likely to secure the attendance of the labouring poor, and therefore to ascertain their wishes, if the meetings

ings were held after their work was finished?—Undoubtedly, but it would not be so convenient to the assistant commissioner; sometimes we should have a difficulty in getting back at night.

791. Do you never hear of objections being made after these meetings which are held by the assistant commissioner?—Yes; memorials have been sent up by parties, but they are, in the majority of cases, by mere cottagers, who have no interest themselves.

792. Have you never heard it suggested that there was no person to express an opinion on the part of the labourers against the inclosure?—No, I never heard that.

793. Is it your opinion that the lords of manors are generally opposed to these allotments?—No, I think that the lords of manors are generally favourable to them.

794. The opposition would come more from the smaller farmers than from the great landowners?—Yes; the lord of the manor gets one-sixteenth, and a commoner will get double or treble what he has enjoyed out of the common.

795. Then, in fact, those allotments which have been given in past years have been rather in consequence of the action of the Commissioners supported by the lords, as against the smaller class of occupiers?—As regards those inclosures in which I have been concerned it has been one perpetual battle; I have had to fight the farmers in numbers of cases, and I have ordered allotments to be set out, and in many cases I have said, "If you do not consent to these allotments, I am satisfied that the Commissioners will not sanction the inclosure."

796. Do you agree with the statement, which has been made at various times, that the population living on and around commons before they are inclosed is generally of an inferior character?—Yes, I have myself observed that, and I have heard it from every quarter; I think that there can be no doubt of it.

797. Then you think that the inclosure of commons tends to the improvement of the population?—Certainly.

798. I asked you a question just now about Kirton Marsh, which I will a little amplify; do you think that it would be wise to fetter the discretion of the Commissioners as to these allotments in any future legislation?—I think not.

799. If that discretion was to be fettered, and if it was enacted that a certain specified amount of land, in proportion to the size of the common, should in all cases be set out for these allotments, would not there be great local inconvenience and many local complaints?—Undoubtedly. I think that it would be a most prejudicial enactment.

800. With regard to Kirton Marsh, in that particular case, would it not be an unfortunate thing if, irrespectively of all other considerations, the Commissioners were bound to set out a large allotment for the labouring poor?—I think that it would be very undesirable.

801. Would it bring, for the purposes of cultivation, the labouring poor in the proportion in which they might be wanted?—I think not.

802. Is it not very certain that, if there was a real want of labouring poor in any such inclosure, those persons whose capital carried out the inclosure would, for their own interest, bring the labouring poor there?—That is the view which I have always entertained upon the subject; namely, that those parties who have the benefit of the allotments would, and ought to build cottages for the poor who would be engaged in the cultivation.

803. If the question of bringing a future population upon such a marsh land was left to an extraneous authority, that is to say an authority totally apart from those persons who would be applying for the inclosure, might not it have the effect of deterring those persons from proceeding with such improvements as would be greatly advantageous to the community?—I think that that would be very likely to be the case.

804. Do you suggest any amendment upon this point in the Inclosure Act as at present existing?—I think that it is very desirable to give a power, for instance, to clear ground set out for cottage gardens. I am perfectly satisfied that, in many cases, the poor will not take the gardens in consequence of the expense of bringing them into cultivation. For instance, take such a place as Fairbourn Heath; it is a miserable rough piece of land, full of bushes; no poor man would think of taking it in its present state.

805. Do you think that it would be desirable, in such a case, to give the power to sell a portion of the common for the purpose of employing the proceeds in such a clearance?—I think that you might make that a part of the general expenses of the inclosure, and then it would be at the option of the parties whether they would pay by a rate or sell the land for the purpose. If it was made a part of the general expense, it would follow the same rule as the other expenses of the inclosure.

806. When you go down to these meetings, you have stated (as is the case) that you represent the public?—Yes.

807. You have to see that the dealing is fair between the lord and the other commoners, and between the lord and the commoners and the public?—Undoubtedly.

808. Can you suggest any means by which the public could be further protected than they are under the present law?—No, I can offer no suggestion whatever. The question of the lord's interest is one which has been well ascertained for a long series of years; the lord receives the usual proportion, and, as regards the commoners, it is a question of right; they may put in their claims, and have them heard, and they have the power to have them determined by a court of law, if they think it necessary. As to the public, I think that these allotments are all that can be reasonably set out for the purpose. There are many cases, in the proximity of large towns, where it might be desirable to make larger allotments than the 30th section of the Act permits, and in a number of cases which I can mention, larger allotments have been set out. For instance, in the inclosure of one common 50 acres have been set out. In the town of Nantwich the whole has been set out as a park. At Petersfield Mr. Bonham-Carter and Lord Hylton have very kindly set out a large extent as a park.

809. Might not the cases to which you allude, with regard to commons in the proximity of towns, be dealt with by an extension of the existing law, which already deals separately with commons within a certain distance of populous places?—I think so.

810. Do you know many instances in which

Mr. *N. Wetherell.*

3 June 1869.

allotments have been granted, and complaints have been made afterwards, that they were unnecessary?—No, I should scarcely hear of them, except by accident; the moment that the award is completed, the duties of the assistant commissioner are at an end, as regards that inclosure.

811. With regard to the recreation ground; do you think that the powers which are given to you under the 25th clause are sufficient?—I think it very desirable that the Commissioners should have power to set out a larger quantity of land.

812. You think that the public rights are undefined?—Yes.

813. To what extent would you wish to carry allotments for recreation purposes?—I do not see any objection to having them unlimited in the same way as allotment gardens; my chief objection to the present system is, that sometimes there are spaces of land, the whole of which should be dedicated to exercise or recreation; it sometimes happens that we have only power to set out a small portion at the time, and we have to take the chance of parties consenting or not to a further allotment of it; I think that it might be desirable to set out any quantity.

814. Would you advise an unlimited right of setting out allotments for recreation, without the payment of any rent whatever?—That is a question which I have never considered; there is power under the Act of Parliament to set out the ground to an individual, subject to the right of its being used; he then takes the herbage in part compensation of his allotment; if it is set out to the churchwardens and overseers they may let it, and apply the rents in aid of the highway rates.

815. With regard to the undefined rights of the public, after you have dealt with these allotments as respects persons who have common rights, do you recognise the undefined rights of the public in any way, excepting as regards the allotments for recreation, and for the labouring poor?—There may be public rights, such as the right of holding a fair, or the right of holding a market, and rights of that sort; perhaps they are not actually legal rights; but in those cases we recognise them; and in some cases I believe that allotments have been set out subject to the right of holding a fair.

816. Supposing that a large number of persons, whom I call for convenience the public, have been in the habit of riding or walking, or holding picnics on the common, do you recognise that in any way?—Certainly not; of course I act upon what I consider to be the law on the subject. There are one or two cases which have been lately decided, and which I can produce, upon that very point.

817. In your opinion is any alteration of the law desirable, by which such rights, which, though undefined, are practically recognised, could be compensated in any manner?—I cannot imagine how they could be compensated.

818. Excepting by setting out a large quantity of land for recreation?—But that would not satisfy the gentlemen who have been accustomed to ride across the common; I see that in the Wisley report spaces for riding have been set out.

819. I refer not only to riding, but to walking, and holding pic-nics, because the two latter classes of persons would not necessarily be of the same description as those who would ride?—If you were to recognise those rights, and to provide for them, you must leave open the whole common.

820. Is your view of a common that it is exactly the same, divisible between different landowners, as inclosed land, except that in the one case there is a fence, and that in the other case there is no fence?—Precisely.

821. Then, in all your dealings with these inclosures, as an assistant commissioner, you practically exclude the public rights altogether?—Not exactly so, because if we find a public right, for instance, a right of way, of course a way is set out under the inclosure, but it is confined to tracks and a certain width, instead of roving over the whole common.

822. What is your interpretation of the word "neighbourhood," with regard to the allotments for exercise and recreation?—It is impossible to define it except to say, "The portions of land which lie in the immediate vicinity," but it is impossible to lay down any radius within which you would give a definition to the term "neighbourhood."

823. Might not that which would be a perfect allotment for recreation for a very small area, be very inadequate if you considered the wants of the neighbourhood, taking as the neighbourhood a very much larger area?—No doubt; many such cases might arise.

824. Do you think that in such cases the Commissioners should have unlimited power to allot larger spaces for recreation?—Yes, to deduct so much from the common, without having rent for it, after deducting the one-sixteenth for the lord.

825. A large portion of the common remains for the rights of turbary, and of pasture belonging to the estates?—Yes, whatever rights the parties may possess.

826. Therefore there is always a large portion of land with which you might deal if your powers were amplified?—Undoubtedly, without in the slightest degree abridging the rights of the commoners.

827. There are certain rights which you take to be rights of property?—Yes.

828. You would satisfy those rights in every case; and in the application of your power, you would only deal with what you had power to deal with after the rights of property had been satisfied?—Under the present system of allotments, the rights of property exhaust the whole common. After setting out the public allotments, and a certain proportion to the lord, that which is thus allotted among the commoners is frequently twice as much as they have enjoyed; for instance, land may be worth 30*l.* or 40*l.*, to sell which, when sold, would give more than 1*l.* an acre per annum, but which has never produced more than 5*s.* or 6*s.* an acre per annum as common; and the moment the commoners get into possession of their allotments, they can sell them, and they have often realised three or four times as much as they have previously enjoyed.

829. Putting aside the lord, the commoners, and the local public, have you any doubt that the value of the inclosure to the country *quâ* productiveness is very much larger than it would be if the land remained uninclosed?—That certainly is so as a rule. There may be downs which cannot be broken up, but, with the exception of those very few cases, there is no doubt that the inclosure of a common develops its value; I can mention one case, namely, that of Chigwell, where I am satisfied that the land is worth, in

parts

parts, 40 *l.*, 60 *l.*, or even 100 *l.* an acre, and where the value of the herbage has previously never been worth more than 1 *s.* 6 *d.* an acre, that land is now worth, to sell, 40 *l.* or 60 *l.* an acre; you could clear it for very nearly the profit of the wood, and then it would be worth a very large sum of money; that is in Hainault Forest.

830. Sir *Michael Hicks Beach.*] You have given one answer which you perhaps might qualify; I understood you to say that you did not recognise the rights of the public in making these inclosures?—When I spoke of the rights of the public, I understood those rights of the public which are undefined, or the exercise of certain privileges which have never been obstructed; for instance, the right of roving and riding over the common; we have never recognised those rights, except in a certain beaten track.

831. But so far as the rights of the public may be interpreted to mean the rights of the labouring poor, or the rights of the neighbourhood to recreation, you have recognised them?—Yes; our attention is specially directed by the Act to the recognition of those rights; we make no compensation for the public rights of roving or playing upon the common; that is where the public pass over without obstruction.

832. I understood you to say that you would like to see the power of providing recreation ground practically unlimited?—I think that there would be no objection to it; I do not at present see any objection to it.

833. But of course it would require some further provision than now exists as to appropriating the rents arising from such recreation ground?—The number of cases would probably be small; there would probably be a very few acres more set out than are now set out; it might be worth while to let that ground, subject to a rent, in the same way as the other ground now awarded for the purpose.

834. It seems to me that, at present, the only way of appropriating the rents of recreation ground is in fencing, levelling, or maintaining such recreation ground?—And if there is any surplus, handing it over to the surveyors of highways.

835. With regard to the allotments for the labouring poor, you have stated that you consider one-eighth of an acre, as a rule, sufficient?—Yes.

836. And therefore a quarter of an acre might be taken as the extreme limit?—Yes; there seems to be no disagreement upon that point, namely, that a quarter of an acre, under any circumstances, is as much as a man can cultivate.

837. Is it not only provided in the Act that such land must be used for gardens, but it is definitely provided that no dwellings shall be erected upon it?—Yes.

838. And also that it is only a parishioner who can occupy it?—Yes.

839. In a very small parish like the parish of Wisley, which you have stated to contain only 23 or 24 houses of the labouring poor, I suppose that an average which would give a quarter of an acre to each of those houses, would be considered amply sufficient for the purpose of allotments?—I should say so.

840. In fact anything beyond six acres in that case; would be practically wasted?—I think so, and there is no power to take care of the allotments in the meantime until new cottages are built.

841. Is that the principle upon which you have always gone?—Certainly.

842. Therefore, supposing the recommendation of the Select Committee to be adopted, and 10 acres to be given in the place of six, the remaining four acres in the case of Wisley could not be utilised under the present law?—They could not; they would be wasted; there is no power to let the land except for gardens.

843. Of course if the population increased, that land might be utilised?—Undoubtedly.

844. In the cases which have come before you, have you considered the possibility of an increase in the population?—No; except in certain exceptional cases, such as the case of finding minerals, the rural population has stood still; and in many cases it has decreased.

845. In your opinion there is no necessity for making provision for an increase of population?—No.

846. Did you hear Mr. Bailey Denton's evidence?—No; I was in the room, but I did not catch all that he said.

847. Did you hear him express the opinion that these allotments should be let at a certain rate which would provide for taking more land, and that aged persons should have the ground at a cheaper rate than able-bodied persons would have it at?—I think that there is great objection to that; it would be letting the land much higher than the farming value of the land.

848. Has it come under your observation that the land has been let at a greater rate than the farming value of it?—Yes, on some occasions. I remember setting out garden allotments where I found private allotments, with the rents unreasonably high. In one of the early cases the parties protested against setting out allotments, on the ground that the farmers let the labourers have a considerable quantity of land for that purpose, but I found that they let it at the rate of 8 *l.* or 10 *l.* per acre.

849. What increase of per-centage upon the farming value of the land do you think that a poor man could afford to pay for an allotment, taking the farming value of the land at 20 *s.* an acre?—I think that 4 *l.* an acre would be the outside. I have known land readily taken at that price.

850. You have spoken of cases where, in your opinion, the rent of private allotments was high; what, in your opinion, would be the proper amount of increased rent on the farming value for such land to be let at?—It is to be let free of rates and taxes, and there would be an addition to cover that. I should say that there might be an increase of about 50 or 75 per cent. Supposing that land is worth 1 *l.* an acre, in many cases they charge a rent of 30 *s.*, which is 50 per cent.

851. Have you formed any definite opinion upon the matter?—No, I have never gone into it; that does not fall within my department; it is done by the valuer after I have done with my part of the inclosure.

852. You, as assistant commissioner, do not lay down rules?—No; we have nothing whatever to do with that.

853. Referring to the view of Mr. Bailey Denton, I take it that you do not concur with it?—No, I think that it would be objectionable. I have never considered the case, but, *primâ facie*, I should

Mr. *N. Wetherell.*

3 June 1869.

I should say that there is a great objection to it.

854. Mr. *Liddell.*] May we not fairly classify the rights attaching to these commons under three main heads, namely, rights appendant, rights appurtenant, and rights in gross?—Those rights exist.

855. Are not those rights maintainable in any court of law?—Yes.

856. Are there any other rights which you would respect, in deciding upon a question of inclosure apart from those, and arising from use and long custom?—Yes, there are other rights; there is the right to take clay for instance. A person may have exercised for a long time the right to take a limited amount of clay for making bricks, and also the right to take gravel.

857. If that right was a right appurtenant, it would attach to a person in the neighbourhood, whose holding touched the common?—I can imagine that the lord might make a grant to any person to take a limited quantity of clay, for instance, supposing that he was not infringing upon the rights of the commoners, it would of course limit the quantity which he might take; I have found one or two cases where a person, by grant or by prescription, has taken so many loads of clay a year from the common.

858. In setting out allotments for the labouring poor, should you consider, that if a man had that right of taking clay, it would constitute an undisputed claim on his part to have an allotment set out for him, in compensation for that right?—Undoubtedly, if he had that right, and established it by user; there are many cases of that sort which have been established in law.

859. I presume that these are the points which come before you in your preliminary inquiry?—No; but when the inclosure has been sanctioned, and the valuer has been appointed, he gives notice to all persons to put in their claims, and then is the time for every person having the right of common of pasture, or common of turbary, or any other right, to put in his claim; and if it is not objected to, it is as a matter of course allowed; but if it is objected to, the valuer is assisted by an assessor to determine that claim.

860. Then are these points which do not come before you?—They come before me if I am appointed as assessor; parties put in their claims, and if they are not objected to, the valuer merely allows the claims, and then allotments are awarded upon that basis; if the claims are objected to, a day is fixed for hearing the claims, and the valuer may determine the case himself; but in most cases he applies to the Commissioners to send down an assistant commissioner, as assessor, and therefore these claims come before me in numerous cases, in my capacity as assessor.

861. You have told us, that when you go for the first time to inspect a common, you inspect the parish; whom do you usually get to accompany you on those occasions?—The Commissioners generally write to the gentlemen who have been in communication with them with reference to the inclosure, asking them to appoint somebody to accompany me round.

862. A person with a thorough local knowledge?—Yes; the overseer, or some person who is thoroughly acquainted with the matter.

863. You have stated that you take particular care to inquire into the number of cottages and gardens, and so forth?—Yes.

864. Is that in company with this person?—No; I do not wish you to understand that; I frequently arrive at it from the information of other parties. Sometimes the parish extends for several miles.

865. Then you are obliged to trust to hearsay evidence?—If the matter is inquired into in the parish, in a room where many people attend, there is never any difficulty in getting information; I do not think that I was ever deceived upon any one occasion.

866. If very few persons attend, the difficulty of obtaining accurate information becomes very great?—The rate book, and the parish map are present; that is by the order of the Commissioners; and I can always get information as to the character of the occupiers, viz., whether they are shopkeepers or not.

867. As a rule, what persons attend the preliminary inquiry?—I generally have a list made; a considerable number of the parishioners generally attend, the agent of the lord of the manor frequently attends, and the landlords or their agents attend, and also the farmers, though they have no interest.

868. Do the ministers of religion attend?—Yes, sometimes; it is a public meeting, there is no objection to any person attending.

869. Or to any person putting in a claim?—Any person may come.

870. So that if any claim is ignored or passed over, which ought to be attended to, it is, in fact, the fault of the people of the locality in not bringing it to your notice?—Is the Honourable Member referring to public claims or private claims?

871. I am now speaking of public claims; the claims of the poor?—I always inquire whether there are any public rights existing over the land.

872. I want to get at the machinery by which the claims of the poor themselves are brought before you at your preliminary meeting of inquiry?—I always make inquiry as to the rights with reference to the allotment of ground for exercise and recreation, and gardens, and I can always get information from the parties as to the distance from the common, and so forth; those are the only rights which the poor have, except the cottagers, who have private rights of allotments.

873. The law says that in all cases of the inclosure of a common, a certain portion shall be set apart for the labouring poor; and I wish to ascertain how, as a rule, the rights of the labouring poor are brought before you at the preliminary inquiry?—The only way in which they are brought before me is, that I go through all these questions; and upon the question whether it is proposed that any allotments shall be set out for the labouring poor, or for exercise and recreation, I hear what the people have to say, and I then inquire whether there is any necessity for them, and whether there is a probability of the parties using the land if it is set out, and what the population is, and what the state of the population is, whether they are miners, or whether they are employed in agriculture; and I inquire into every circumstance which can enable me to form a judgment as to the necessity of setting out any allotments for the poor. In many instances some person in the parish takes up the case of the poor, and appears at the meeting, and urges that there

there should be a larger allotment for them, but that is only occasionally.

874. Does not the nature of the labour in which a poor man is engaged make a very great difference in the value of an allotment to him?—There is no doubt about it.

875. For instance, a shoemaker would value an allotment much more than an ordinary agricultural labourer?—A shoemaker or a small tailor would do so. I never make any distinction in the case of labouring poor of that class, or even small shopkeepers.

876. Would not that make a great difference in your mind as to the quantity which you would allot; you have said that an allotment, to be valuable, ought not to exceed the eighth of an acre?—It would not make much difference, because there are only one or two shoemakers or tailors in the parish; that is rather a question for the allotment wardens.

877. You have said that farmers do not like these allotments, and that they look upon them as a question of compensation for rights, rather than as a source of public benefit; are not the farmers all over the country, as a rule, the guardians of the poor?—Yes.

878. Do not they appear to understand that the difference of possessing an allotment, or not, may be the difference between a man being upon the rates or not?—They ought to do so, and I have no doubt that many of them do so; there are, of course, many exceptions, but from my experience the farmers, as a rule, have not been advocates of allotments; in the last 12 reports they have not, in any one case, proposed any allotment.

879. I presume that you have put that point to the farmers?—Yes.

880. Has not that been found to have an effect in removing their objections?—Of course the best way in which I can put it to them is, that they are not giving away the land, but merely allowing the poor to have the use and occupation of it, they paying the rent back; that is for cottage gardens.

881. With regard to the approaches to allotments, have the allotment wardens any power at present to spend money, or to raise money for the purpose of making those approaches?—No; but still it would be the duty of the valuer to take care that proper approaches should be made.

882. The cost of constructing such approaches, I suppose, would be thrown upon the allottees?—Upon the inclosure generally; it would be a part of the inclosure expenses; the valuer should take care of that, and if, when I hold an appeal meeting, any complaint is made that a direction is not given to make approaches, I direct approaches to be made.

883. A share of such an expenditure, I presume, would be subsequently taken out, in the shape of rent, from each labouring man to whom an allotment was given?—Yes, not being a public allotment.

884. So that it would be thrown equally over the whole?—Yes.

885. Mr. *Lowther*.] Referring again to the question of notices, have you not frequently heard it made a complaint, subsequently to the inclosure taking place, that the inhabitants of the village were not generally aware of the proceeding?—No, I have scarcely ever heard it.

886. Would you see any objection to a real publicity being ensured by hand-bills, similar to those announcing sales by auction, being posted in conspicuous places?—I see no objection to it; I have often seen it done; parties have published hand-bills.

887. I mean in an official way?—I see no objection to it; the expense is very small.

888. As to the allotments to the labouring poor; have exchanges under section 92 been frequently carried out; it is that section which gives the power to exchange inconveniently situated lands nearer the village?—Those exchanges have been very seldom made; I have, I think, already stated that I have constantly inquired upon that point; in almost every inclosure I have endeavoured to get parties to exchange, but they will not do it.

889. Do you think that the benefit of allotments to the labouring poor is as great in purely rural districts as it was in the first part of your experience?—I think so; they all consider it a great boon.

890. I understand that in making your inquiries, you do not take evidence as to the use of the common by the public as a recreation ground?—I do, as respects its use as a recreation ground; but the question which was put was as to roving over it; if I found that any parties had been in the practice of using it for exercise and recreation, I should inquire whether there was a village green, although perhaps not close to the village, and unless a more convenient place was found, I should reserve that ground.

891. In section 15 of the Act, there is a provision that a village green may be held to be a substitute for a recreation ground under the Act; is it not the case that common rights over such green have not been extinguished, and still exist, to the deterioration of the green as a recreation ground?—Certainly; and in the case of many village greens you find them used for almost every purpose; there are cesspools and all sorts of nuisances there; there is a power given to the Commissioners in the Act of Parliament to place the village greens under the special control of parties, so as to exclude those nuisances from them.

892. Is that often done?—Yes.

893. Do you not think that whenever an inclosure is carried out under this Act, which takes into account the existence of a village green, the extinction and compensation of common rights on such green should be provided for?—Not compensation; that is decidedly the policy of the Act of Parliament. The Act directs ground to be set out for exercise and recreation, discharging all the rights of common; that is what the commoners give up, in consequence of what appears to me to be the benefit of the Act of Parliament; the commoners give up a portion of the common over which they have rights.

894. But where they give up no such portion, because there is a village green, do you not think that common rights, which are bad for that green as a recreation ground, ought to be extinguished under the inclosure?—Yes; and they are extinguished under the inclosure.

895. I understood from Mr. Darby that they are not, and he gave us an argument to the contrary, namely, that there is a power to let recreation ground under this Act as pasturage?—Undoubtedly there is, but those are not rights of common; the rights of the common would be extinguished, but then these allotments are set out,

Mr. *N. Wetherell.*

3 June 1869.

out, and power is given to the proper officers to let the rights of pasturage over them; that is an independent power originated by the Act of Parliament, and not a common right.

896. Mr. Darby said that common rights were not extinguished on these village greens, and he gave the power of letting them for pasturage as an argument why they need not be so?—I have no doubt that Mr. Darby is quite right in the view which he takes, namely, that the village greens, which are not dealt with by the Act, remain exactly the same as they were before. There is power in the Commissioners to have them placed under proper control, without at all interfering with the rights of common; but where we allot a village green, and deal with it, the rights of common are extinguished.

897. Mr. *Pease.*] Did I rightly understand you to say that considerable advantage would arise from holding your meetings in the evening rather than in the morning?—The poor might be there after their day's work.

898. There is nothing in the Act to prevent your doing so?—No, there is nothing in the Act to prevent it.

899. As to your care, as an assistant commissioner, in always attending to the allotments for the labouring poor, has that subject always had your special attention?—Certainly; I consider it my duty, in every case, to inspect the land, and to see where those allotments may be set out in the best way.

900. And where the poor residing in the immediate neighbourhood, within a reasonable distance, required allotments, they would be provided for them?—Yes.

901. Have you had many complaints of that not having been done?—I can hardly answer that question, but I believe that there is evidence submitted to the Committee by Mr. Darby, of answers sent by the churchwardens and overseers, showing what number of allotments were considered sufficient, what number were insufficient, and what number had never been used.

902. Mr. Darby was to tabulate them, and to submit them to the Committee?—I understand that in 129 cases the answer was, that the allotment was quite sufficient, that in 22 or 23 cases more could have been used, and that in 30 cases the allotments had not been used.

903. Mr. *Peek.*] Where do you generally hold your meetings?—Generally in the parish.

903.* Do you require proof of due notice of your meeting before proceeding with its business?—Yes, a duplicate copy of the notice is always forwarded to the Commissioners, with an indorsement that the notices have been posted on the church doors. In addition to that, I always require the party, if possible, to attend and prove that he actually affixed the notice.

904. What evidence do you require of the correctness of the statements made in the application to the Inclosure Office?—That is rather a wide question.

905. For instance, do you require the promoters of the inclosure to prove their case formally, and without any assistance from you, as a plaintiff proves his case before a court of law?—Certainly not, or otherwise we should never be able to act. In many cases several of the parties interested never attend. The questions framed by the Commissioners are many of them of a formal nature, which require the mere production of the parish books. There is a question as to the extent of the land; that is shown by the production of the tithe map. Then there is the question, "does the land lie together, or is it in more than one, and in how many separate tracts"? That I see myself by the production of the map. Then there is a question whether it is arable or pasture land, and that I see. There is also a question whether there are mines or minerals. The chief thing is to ascertain whether you have the assent of the parties. The Act of Parliament says that you must have the assent of one-third.

906. You have to ascertain whether one-third of the persons interested in common assent to the application for inclosure?—Yes.

907. How can you ascertain that where there are claims, of the legality of which you are uncertain?—It is impossible to ascertain it in a number of cases; it is impossible to ascertain whether some of the parties are interested or not.

908. If a person makes a claim, who really has no ground for his claim, do you reckon him or not?—If, in my opinion, a party has no ground for claim, I invariably exclude him from the list of the persons interested; all that I can do is, to inquire at the time of holding the meeting who are the parties exercising the rights of common, and who have exercised those rights within the last 20 or 30 years, or for such a time as will give a right at law. Numbers of persons come and say that they have exercised rights, and no person objects to them; they are then only admitted for the purpose of ascertaining the assent of one-third; when you come to the next stage, you must get the assent of persons representing two-thirds in value; and unless the Commissioners are satisfied that the assent of two-thirds in value is given, they will not proceed with the inclosure. When you come to the next stage, after appointing the valuer, all these persons are required to put in claims, and to prove them in the usual way, and then I ascertain the facts.

909. Do you take special care to ascertain the feeling of the labouring poor of the parish or parishes in which the inclosure takes place; first, with regard to the inclosure generally; and secondly, with regard to the setting out of allotments, under sections 30 and 31 of the Act?—Yes.

910. Supposing that very little evidence other than that on behalf of the promoters is given at a meeting, and that the attendance is very thin, do you feel yourself bound to seek further evidence before reporting to the Commissioners?—Sometimes; sometimes there is a want of evidence as to the rights of the lord of the manor. That is an important question, and the Commissioners cannot proceed without ascertaining who is the lord of the manor. If there is any dispute between the lords as claimants I take further evidence; but in most cases there is no necessity for any adjournment, or for taking further evidence.

911. You take good care that, in your opinion, sufficient evidence shall be before you, if not on one day, on some other day?—I always take sufficient evidence to justify me in reporting to the Commissioners. A meeting is called to hear objections; it is, I take it, to be presumed that all inclosures are desirable, and it is for the parties to attend, and to object to the inclosure, if they have any objection to make; I obtain all the evidence that I can.

912. Do you make special inquiry at your meetings,

meetings, or otherwise, as to the feeling in the neighbourhood relative to the setting apart of a recreation ground?—Yes, as far as I can; of course I can only take the opinion of those persons who are present at the meeting.

913. Are you guided alone by the feeling in the neighbourhood, for or against allotments, or do you form your own judgment after considering both this feeling and the economic conditions of the neighbourhood?—In the majority of cases, if I took the feeling in the neighbourhood, no allotments would be set out at all. In all these forms of applications there is not a single case in which it has been proposed to set out allotments, and therefore in the majority of cases I have been obliged to exercise my own judgment; sometimes the clergyman takes up the case of the poor.

914. You sometimes, I believe, adjourn your meetings?—Yes.

915. Is any notice advertised or posted of the adjourned meeting?—Generally; I have it posted on the church.

916. So that the neighbours have just as much means of knowing of the adjourned meeting as of the original meeting?—No, they would not have as much means, because I do not publish notice in the papers.

917. Do you consider that you have power to insist upon notice being so given where it appears to you that the proposal to inclose is not generally known in the neighbourhood?—There is no power to give it.

918. In the case of Wisley, the neighbourhood said that they knew nothing about the proceedings until afterwards; if you found that there was such an absence of knowledge in the neighbourhood, would you feel yourself bound to give further notice?—I think that I should report to the Commissioners that it was desirable to give further notice, but I do not remember such a case having happened.

919. Is it not desirable that in such cases notice of the adjourned meeting should be posted and advertised?—Yes.

920. In making your report to the Inclosure Commissioners, under sect. 26 of the Act, what interpretation do you put upon the direction that the Inclosure Commissioners shall report "his opinion" as to the expediency or inexpediency of the proposed inclosure, with the reasons for such inclosure?—I should report to the Commissioners whether it would be expedient to enclose land, having reference to a greater benefit accruing from the inclosure than leaving the land in its present state of common, being entirely waste, and producing next to nothing. In many commons I find that the herbage is worth a very few shillings, but that if inclosed it is worth as many pounds. I take all matters into consideration, having reference to the health and comfort and convenience of the neighbourhood, and whether the land is of that quality which renders it desirable to be inclosed, or whether any public rights are to be interfered with; I take all these questions into consideration.

921. Do you agree with Mr. Darby in thinking that the best land has been already inclosed?—I think so.

922. And that that which now comes before the Commissioners is of an inferior quality?—Very inferior; if you look through all these inclosures, I think that you will find that they are tracts of land which have not hitherto been worth cultivating; you now get artificial manure, and better cultivation; if anybody goes into Wales, he can see that the inclosures have crept up the hills in the last 20 or 30 years, which nobody thought of cultivating before.

923. If so, in your opinion, is not this fact, taken in conjunction with the fact that the inclosure Acts are wholly based upon the policy of making land more productive, a reason for construing liberally the various provisions in the Act; first, with respect to the preservation of commons where they are valuable for health and recreation; and, secondly, with respect to allotments for health and recreation, and for the labouring poor; if the best land has been long ago inclosed, and only the worst land remains to be inclosed, do you not think that a very liberal view of health and recreation allotments ought to be taken?—Yes; I see no reason why it should not.

924. Where commons are in the neighbourhood, or at an easy railway distance of populous places, is not their inclosure sometimes promoted for the sake of building operations?—Certainly; that is one reason which is frequently given for the inclosure.

925. Supposing it be proved to you that the inhabitants of the surrounding neighbourhood continually use a common as a means of transit from one point to another, but not in such a mode as to have created a right of way, have you any power to recommend to the Inclosure Commissioners that spaces should be left (as recommended by the Wisley Common Committee) for walking and riding across the common?—You could set them out under the designation of allotments for exercise and recreation.

926. Would you do so?—If they merely wanted a way across the common, the valuer must set out a hard road, and have it certified by the magistrates.

927. Do you consider that the possession of a *quasi* right, such as that of cutting turf, is enough to entitle a man to assent to, or dissent from, the provisional order?—If he has a legal right to cut turf, it would carry with it the right of assent or dissent. I will suppose that he has a cottage, and a right of turbary.

928. This is a *quasi* right; the man assumes that he has a right which other people say he has not; should you consider that the assertion of the right, whether it was well founded or not, would entitle him to assent to, or dissent from, the provisional order?—Certainly not, if it was found that the assertion of the right prevented the Commissioners from obtaining the two-thirds, there would be an inquiry by them on the point.

929. You have said that after you have settled the quantity of land to be reserved for the public use, you often advise the parties to give more?—Certainly. I have constantly done so.

930. And you, as an assistant commissioner, think that more land should often be reserved for the general advantage of the public than the Act allows you to set out?—Yes, certainly, for exercise and recreation ground; for allotment gardens we can set out any quantity, but as to the exercise and recreation ground we are limited.

931. And I think that I understand you, that the Act of Parliament does not allow you to look forward to a future population?—That is my opinion. I am satisfied that the Act of Parliament

Mr. *N. Wetherell.*

3 June 1869.

ment never contemplated any prospective allotments.

932. I think that you said that a quarter of an acre was the maximum allowed to one allottee?—Yes, under the Act of Parliament.

933. Would not some scheme for the management of a common, such as that now possible in the case of commons within 15 miles of London, be as likely to raise the characters of the inhabitants bordering upon a common, as an inclosure?—I think not; there would be a great difficulty in such schemes. You must then have regard to the commons according to legal rights. There are now numbers of persons who exercise certain privileges over a common, who would be utterly excluded if you once determined their legal rights; and so again with regard to trespasses.

934. I understood you to say that these commons deteriorated rather than improved the character of the poor people living around them?—That is so.

935. There is a scheme for managing these commons for the general good, in the shape of recreation; do you not think that if commons could be put under such a body as the commons round London ought, and probably might be put under, it would raise the character of the population?—I do not think it would. I do not think that it would at all affect it.

936. Mr. *Martin.*] You said that the farmers were hostile to these allotments; do you find that the objections are to these allotments only; do you think that the farmers object to the system of allotments?—There is no doubt about it.

937. If I understand you rightly, you wish to have the powers of exchange under section 92 compulsory; do you think that that would be an improvement?—No, I think not, because I think that it would check all inclosures. I am constantly asking whether any party will give up land, but I doubt whether it would not be too great an interference with the rights of private property to require the giving up of cultivated land. The power in the Act is for any person to give up a part of his own land near the village in exchange for waste land.

938. If the party was deriving benefit from the inclosure there would be no hardship?—I think that he would very much object to it.

939. Do you not think that it would strengthen your hands?—There is no doubt of it, if I could insure allotments near the dwellings of the inhabitants.

940. You have stated with regard to Wisley Common that if the recommendation, of which we have heard so much, of four acres was adopted they would be left to lie waste for a certain time, and would not be useful; but if that recommendation is carried out it cannot be by this General Inclosure Act of yours, but must be by some special Act, must it not?—Yes.

941. And, in order to obviate that difficulty, it would be easy to provide for those extra four acres?—Undoubtedly.

942. With regard to Mr. Bailey Denton's scheme, with respect to which you were asked by one Honourable Member, under section 109 the land is to be let at the farming value?—Yes, or rather at not less than the farming value.

943. You say that, if it is the case of a private allotment made by a country gentleman, if the land is worth 1 *l.* an acre at the farming value, it will generally be let at 30 *s.*?—Yes, or 35 *s.*

944. Then there would be no hardship if in these cases the land was let at 25 *s.*, would there?—No.

945 Under those circumstances Mr. Bailey Denton's scheme might be perfectly feasible?—You have to keep the fences in repair, and to pay the rates and taxes, and the tithe rent charge, if there is any.

946. I understood you that, after allowing for those charges, the land was generally let at 50 per cent. more?—No; the 50 or 75 per cent. is to cover those expenses, or else you would get far beyond the farming value.

947. In Mr. Bailey Denton's evidence, in those columns which he mentioned, I understood him to say that, as to this extra rent, in one instance the farming value was 4 *l.* 10 *s.*, and the rent paid by the small owners was 7 *l.* 4 *s.*; and I certainly understood him to say that that was after all those charges were deducted?—I know nothing whatever about those charges.

948. You have stated that, in obtaining your information, you always have the rate book, and that that shows the number of cottages in the parish?—Almost invariably.

949. I thought that it only included those above the value of 6 *l.*?—No; I have had the matter constantly brought before me, and have been told that they have paid no rates; but still they appear there.

950. Do you ever ask the labourers themselves as to the value of the allotments?—Constantly; I have asked hundreds.

Tuesday, 8th June 1869.

MEMBERS PRESENT:

Colonel Barttelot.	Mr. Liddell.
Mr. William Cowper.	Mr. Lowther.
Mr. Fawcett.	Mr. Philip Wykeham Martin.
Mr. Leveson Gower.	Mr. Knight.
Lord George Hamilton.	Mr. Pease.
Mr. Vernon Harcourt.	Mr. Peek.
Mr. Knatchbull-Hugessen.	Mr. Walsh.

THE RIGHT HONOURABLE WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. NATHAN WETHERELL, called in; and further Examined.

Mr. *N. Wetherell.* 8 June 1869.

951. *Chairman.*] Do you wish to make any alteration in your former evidence?—At Question No. 882, the question was asked of me, whether the cost of constructing such approaches, that is approaches to the allotments for cottage gardens, would be thrown upon the allottees. I replied, "Yes, upon the inclosure generally; it would be a part of the inclosure expenses, the valuer should take care of that, and if, when I hold an appeal meeting, any complaint is made that a power is not given to make approaches, I direct approaches to be made." The next question is, "A share of such an expenditure, I presume, would be subsequently taken out in the shape of rent from each labouring man to whom an allotment was given"? and my answer is, "Yes." I was under the impression that the Honourable Member was alluding to any approaches made after the inclosure had gone out of the Commissioner's hands. Of course the allotment wardens, if they made such approaches, would have to raise the rents, but all approaches or fences, or anything done to the allotments for cottage gardens during the inclosure, are borne by the inclosure generally. By the 124th section of the Act, the allotments for exercise and recreation, and for the labouring poor, are specially excepted from contributing any portion of the expenses of the inclosure, and therefore the approaches to these allotments would be borne by the inclosure generally.

952. Mr. *Fawcett.*] I think that you have stated that an allotment, if more than half-a-mile from the cottages of the labouring poor, and if there is not a good access to it, is of little advantage to them?—Yes, generally speaking, I should say so.

953. Were not you concerned in a very large and important inclosure, namely Swaffham Heath, of 2,500 acres?—Yes, I attended all the meetings.

954. Is it correct that the land which you allotted for the labouring poor is more than a mile from that town or village?—I think about a mile.

955. Is it also correct that it would have been possible for you to have set out land for allotments much nearer the town than that?—I cannot undertake to say that; the town of Swaffham is surrounded by the inclosed lands of the parish. We have no power to take allotments from common field lands, but only from the commons which are subject at all times of the year to rights of common, or which are waste of a manor.

956. It has been stated to me that from the land subject to rights of common at all times of the year, and from the waste, allotments might have been set out much nearer than the land which was set out?—I think that very likely there might have been land nearer the town, but certainly not so good.

957. Are you aware that the land which was set out was so poor that its general value has only been estimated at 15 *s.* an acre?—The land is undoubtedly very poor, but what is its exact annual value I cannot state.

958. Then I am to understand that the land which was set out was a mile distant from the town, and was extremely poor?—I believe so; I believe that it was about a mile distant, and the whole of the heath is, comparatively speaking, poor land.

959. Have I also been correctly informed that the means of access to the land which was set out was extremely inconvenient, whereas other land might have been set out to which there was a good road?—There is a good road the whole way to the land which has been set out.

960. You say that there is a good road through the allotment land?—It is a hard road.

961. Have you any suggestions to make with regard to giving greater publicity to the sections of the Act of Parliament by which these reservations of land for allotments and for recreation grounds are made?—The question was put to me the other day, whether any greater publicity could be given; and it has been suggested that there should be handbills. I can conceive no better way of giving publicity.

962. Should you see any objection to having included in the notices affixed to the church and chapel doors a copy of the sections of the Act relating to allotments?—No objection whatever.

Mr. *N. Wetherell.*

8 June 1869.

963. Do you think that the labouring poor are generally aware of the provisions of the Act of Parliament by which these allotment grounds and recreation grounds are reserved?—Many of them are; there have been some inclosures in which the question of allotments has been mooted, and I have had a very large attendance of poor people, but in an ordinary inclosure scarcely any poor people attend; in fact it is the giving up of a day's work.

964. Do you think that the mention of these sections of the Act of Parliament, so as to give the labouring poor full notice of the provisions of the Act of Parliament, would be advantageous?—There is no objection whatever to it, and I think that it might be advantageous.

965. Are you aware that the land which is reserved as allotments for the labouring poor is, as a general rule, let at far beyond its agricultural value?—In many cases it is; but, as I have before stated, that does not fall within my department. I know nothing, except by accident, of what becomes of the land after I have held an appeal meeting, but I know that some land is let far beyond the agricultural value.

966. Under the present Act of Parliament the rent of these allotments really goes to the reduction of the rates, does it not; supposing that 50 acres of land are reserved, as at Swaffham, is not that land vested in allotment wardens?—It is vested in the churchwardens and overseers; the allotment wardens have the management of it.

967. They are trustees for the application of the rent?—Yes.

968. And is not that rent devoted, under the Act of Parliament, to parochial purposes?—No; the rent which is paid to the allotment wardens by the poor who cultivate the gardens is expended, first of all, in keeping up the fences, and so on, and in payment of the rates and taxe; then a proportion of it is paid over to satisfy the rentcharge, which is received from the land by the Act of Parliament, and the remainder is paid over in aid of the poors rates of the parishes. A rentcharge is imposed upon the land so set apart for cottage gardens, and that rentcharge the valuer has to allot to different parties, as he thinks fit, in part compensation of their common rights. Supposing that an allotment of four acres was set out, bearing a rent charge of 4 *l.*, and that you were entitled to an allotment for common rights of five acres, the valuer might say, "I will give you 1 *l.* worth of this rentcharge," and the residue of your allotment in land, and so as to the other allottees.

969. It may therefore be generally said that the proceeds resulting from these allotments go to the commoners and to the landowners?—Yes; and I also make a point of explaining that to the parties as a reason why an allotment should be set out; that it is not giving the land away from the commoners, but that the poor use it, paying a rent, so that the commoners practically and substantially lose nothing by it; they get back a fair rent from the allotments.

970. At what is the rentcharge of which you speak estimated; is it a fair agricultural rent?—The rentcharge is estimated according to the value which the land would bear at the time of the inclosure; I can refer you to the section.

971. As it is provided by the Act of Parliament, that the land should be let at a fair agricultural rent, nothing should be charged for it beyond the rentcharge, should there?—You must have something beyond the agricultural rent, because some of the land is liable to rates, and there may be fences to be kept up.

972. If the rent is sufficient to cover the rentcharge, and to provide for the rates, and to keep up the fences, by the provisions of the Act of Parliament nothing ought to be left to hand over in the shape of poor rates, ought there?—The Act of Parliament says that it shall not be let at less than the agricultural value; it gives the power to the allotment wardens to charge anything they like; I have heard that in many cases the allotment wardens have charged much more than the agricultural value, and I think that it is an abuse.

973. Should you think it advantageous to introduce some words into the Act of Parliament to limit the amount of rent which should be charged by the allotment wardens?—I should certainly introduce words into the Act of Parliament to let the poor get the utmost they can out of the land; the provisions of the present Act impose no limit upon the allotment wardens as to the amount of rent charged.

974. And you think that such a limit ought to be introduced?—I think that there would be no objection whatever to it; I think that any limit which could be introduced into the Act of Parliament, so as to allow the churchwardens and overseers to enable the poor to have the greatest benefit out of the land, would be an advantage.

975. You have stated that in the case of land being extremely rough, and being covered with bushes, it is of very little use reserving it as allotments, because the poor have no means of clearing it?—That is so; they would not take land where it would require a year or two to bring it into cultivation for garden ground.

976. Have you considered whether, in such cases, some plan of mortgaging the land might be adopted, so as to raise a fund to enable it to be brought into cultivation?—I have never considered that point; it is outside the Act of Parliament.

977. With reference to the questions which were put to you by Mr. Knatchbull-Hugessen relating to Kirton Marsh, you expressed the feeling that the combination of duty and self-interest would induce the landlords to build cottages if any land were put into cultivation, did you not?—Yes, to build cottages, and to annex gardens to the cottages.

978. Are you aware that over great tracts of country those feelings of duty and self-interest do not seem to produce any effect whatever?—That is a speculative question.

979. Are you aware that in the Report of the Commissioners who investigated the subject of public gangs, they stated the evil which existed from there being public gangs where there was not a single cottage?—I have read the report, and I think the statement correct.

980. Therefore you see that landowners are not influenced by self-interest in providing cottages for the labouring poor?—My experience is that they have provided cottages.

981. But did not those Commissioners recommend that, in cases where public gangs existed, they were distinctly required, because there were no cottages upon the land?—I think I remember a statement to that effect.

982. Did you not state in your last evidence that

that you thought that it did not come within your competency to recognise the right of the public, so far as related to walking or roving over the common?—I should be glad to have the opportunity of explaining what I then said, as many Members have put questions to me, having reference to distinct classes of rights. First of all, with regard to public allotments for cottage gardens, I, perhaps, need say nothing further. Then, with regard to public rights of exercise or recreation, if there is a common near the village, and if there is a convenient access, I have made a point of setting out a portion, whether it is convenient or not, for recreation. That consideration has guided me in almost every case. Then there is a certain class of public rights which, perhaps, are not legalised, such as holding fairs and races, and volunteer shooting. I have always reported to the Commissioners upon all those rights. In some cases allotments have been set out, subject to a right of holding a fair or a market, in the vicinity of a town; then there is another class of cases, where the user has, to a certain extent, been localised. I may refer to two or three cases which have taken place within the last year or two; one case is that of the Bathford inclosure, in the vicinity of Bath. At the summit of the common there was a terrace where the people had been in the habit of walking, especially on Sundays, and the most beautiful views were obtained from it. I directed the whole of that land to be set apart for exercise and recreation, and it has been set apart, and the award is confirmed with that condition. There is another case, namely, that of Mayhill, in the parish of Longhope, near Gloucester, where there is a most beautiful view, and where gentlemen and ladies resort in carriage parties. I there ordered four acres to be set apart, with a knoll of trees.

983. *Chairman.*] Will you state whether the Bathford inclosure exceeded the maximum amount of 10 acres?—I cannot exactly mention that; the whole of the terrace which had been used for those purposes was set out. Then there is an inclosure which will come before the House of Commons, near the Lizard Point, where there is a most beautiful cove, namely, the Kynance Cove, to which numbers of visitors resort. I there directed two acres to be set apart for the public, so that they might have access to it without payment. At Nantwich the whole of the common has been devoted to public purposes. Again at Hirwain, near Aberdare, we have set out 100 acres for exercise and recreation, and 30 acres for cottage gardens. I have always, if I possibly could, set out allotments for that purpose. But then there is another class of cases, such as that of ladies driving, and gentlemen riding over the common, as in Wisley Common. I have not considered those cases to be of such a character as to justify my setting out anything, and if you did anything you must keep the whole common open. There are now six acres to be set out, and of course gentlemen will not ride, and ladies will not drive over six acres of rough land.

984. Mr. *Fawcett.*] I understand you to have said, in the answer which you have just given, that in one place you reserved six acres for exercise and recreation, had you power to do that under the Act of Parliament?—That was made a term of the inclosure, but if it is left to the assistant commissioner to say what quantity is to be set out, he has only to refer to the clause which provides the sliding scale. In numerous cases the Commissioners have made it a term of the inclosure, that they will assent to the inclosure where a larger quantity is allotted, provided that two thirds in value will also give their assent to the provisions which the Commissioners so introduce into the provisional order.

985. Then in that case it may be described that there was a voluntary arrangement between you and the parties concerned?—Yes.

986. I think that you expressed an opinion that it would be desirable not to have the amount of land which should be reserved by Act of Parliament strictly limited as it is now?—I think that it would be desirable to give the Commissioners a discretion as to that, and I have always thought so.

987. With respect to Wisley Common, you have described the land as being so poor that it is of small agricultural value?—Yes.

988. Putting the case of the land of a common being so poor that it has no agricultural value, and the public having hitherto used it for the purpose of riding and walking, and roving over it, cannot you suppose that there would not be any advantage to the public from inclosing that common?—I should certainly not report to the Commissioners to that effect, I think that it should be left to the discretion of Parliament to say whether, there having been a certain user, not a user in point of law, but a trespass, it should be exempted from the operation of the Act of Parliament.

989. When you say, "not a user in point of law," are you aware that if any person walked over a common he could be immediately prosecuted as a trespasser?—I would not advise any body to bring an action for it; it would result in a farthing damages.

990. I have understood you to say that the public have no right, but that they are trespassers, and that you have hitherto made no distinction between trespassing on a common and trespassing upon private property?—I have, I believe, stated that persons have no legal right to go over a common except in the beaten track.

991. But I understand you that although they have no legal right, if they exercised the right, it would be of no use for any person to bring an action against them?—I suppose that he would get a farthing damages.

992. Then is not the right which is exercised as valuable to the public as a legal right?—That is certainly one way of putting it, but I should consider all those things as trespasses, and not as legal rights; we hold our meetings to ascertain what the rights are, and we cannot take into account the rights which we know by various legal decisions, are nothing else but trespasses.

993. You describe them as trespasses, but yet you say that no one could proceed against them?—I believe that there would be no chance of getting a substantial verdict, and it is the same with regard to private property; supposing that you found a person trespassing upon your land, under circumstances which would not enable you to prosecute him on a summary process, you might bring an action, and you would get a farthing damages.

994. Although you say that the people, for instance, in the case of Wisley Common, are trespassers, yet you can have no doubt whatever that if that common was not inclosed, the public, although

Mr. *N. Wetherell.*

8 June 1869.

although you describe them as trespassers, would probably continue to use the common?—There is no doubt about it; I do not think that it is fair that these trespasses should be set up as a right.

995. You said, on the last occasion, that the meetings which the assistant commissioners held were usually held at 11 o'clock, a time when you admitted that it is difficult for the labouring poor to attend the meetings?—The meeting is usually held at 11 o'clock.

996. And that is a time when it is inconvenient for the labouring poor to attend?—The labouring poor would probably be at their labour.

997. Would there be any disadvantage in holding the meetings in the evening?—Since that question was asked me on the last occasion, I have considered the point; I cannot help thinking that after a hard day's work, if I began to examine labourers about commons appurtenant, or commons appendant, they would be all asleep.

998. But some of them might give information, might they not?—Yes; if they could understand the subject.

999. As far as the Inclosure Office is concerned, there would be no practical difficulty in holding the meeting in the evening, would there?—There would be many objections to it.

1000. But not very serious objections?—Not very serious objections.

1001. Do you agree with the doctrine which was laid down by the Chief Commissioner, Mr. Darby, that Parliament has no power when these Inclosure Bills are introduced to amend any of them, but can only pass or reject each separate inclosure?—I should have thought that Parliament had power to act in the matter.

1002. Mr. Darby distinctly laid down the doctrine, that if a Bill was introduced into Parliament, say, proposing an inclosure in any particular case, reserving, as at Withypool, one acre for recreation ground, and five acres for allotment, Parliament had no power to say, "We will pass that Inclosure Bill on the condition that you shall treble the recreation ground, and treble the amount reserved for allotments?"—I think it very likely that what Mr. Darby meant was this; the assent of parties is given on certain conditions, and if you alter those conditions, it would be only fair that the parties should have an opportunity of saying, "we will withdraw from this inclosure?"—I think that that is all that Mr. Darby meant, because I had a conversation with him upon the subject.

1003. Then you would agree with Mr. Darby that before Parliament amended any of Bills, the Bills ought to be sent back to ascertain the opinions of the parties concerned?—Undoubtedly; I think that the parties should have an opportunity of considering whether they will assent to the inclosure upon the new terms imported into the Provisional Order.

1004. Then Parliament has no power to introduce an amendment, but simply to suggest an amendment?—Yes, that is the way in which I would put it; to suggest certain new terms, and to leave it to the parties. Of course Parliament would have power to make an amendment if they pleased.

1005. If they introduced an amendment, and did not suggest that amendment, you would consider it to be a breach of the undertaking with the parties concerned?—I think that the parties ought to have an opportunity of saying whether they would assent to the alteration or not.

1006. If an alteration were introduced, the parties would fairly say that the bargain had been broken?—I think so; if my memory serves me rightly, there was a case where I directed the full amount of four acres to be set out, namely, at Chigwell, which is within the forest of Hainault, where I acted as one of the disafforesting Commissioners. In that case Parliament directed 50 acres to be set out, instead of four acres, and I am almost confident that it was remitted to the parties to say whether they would assent to it or not.

1007. Do you not think it desirable that the Inclosure Bills which are introduced into Parliament should give more information than they now do?—The Inclosure Commissioners are charged with the burden of reporting to Parliament whether the terms have been, or have not been, complied with.

1008. The information derived from the Bills which are introduced is the only means which Parliament has of forming an opinion whether the inclosure should be made or not; and, therefore, ought not the information to be more explicit?—There would be no objection to its being a little more explicit.

1009. It would enable Parliament to arrive at a more definite and correct opinion, if you stated the exact distance of the cottages from the inclosure, instead of stating that they are at a little distance from the inclosure?—There is no objection to that. I believe that in some cases the distance is mentioned.

1010. But in some cases it is not, and you would see no objection to making the information more explicit where it was possible?—I see no objection to it.

1011. Mr. *Walsh.*] Will you state how the valuer is appointed?—As soon as Parliament has passed the Inclosure Bill, a meeting is called by the Commissioners for the purpose of appointing a valuer; and then the persons who attend the meeting, either by themselves or their agents, vote for the appointment; you need not get the assent of a proportion of all the parties interested, but only of those who attend; and in order to render the appointment of the valuer legal, there must be the concurrence of parties representing both a majority in point of numbers, and a majority in point of value; if the majority in point of numbers votes for one gentleman, and the majority in point of value votes for another gentleman, there is no appointment at the meeting, and the appointment of the valuer then devolves upon the Inclosure Commissioners.

1012. Does the lord of the manor ever reserve the appointment of the valuer as a condition of his consent?—Such a thing may have happened, but it has never happened within my knowledge, and if the lord did so, I think that the Inclosure Commissioners would not give their assent to the matter.

1013. Do not the Commissioners of Woods and Forests do so on behalf of the Crown?—I do not remember any case of that sort.

1014. Will you take this paper into your hand —(*handing a Paper to the Witness*)—those are the terms which the Commissioners of Woods and Forests forwarded to me of a proposed inclosure in Wales last year; I have selected that as the latest case, will you read the second condition of the inclosure?—"That it be referred to either of the undermentioned surveyors and valuers to ascertain the annual and fee simple value of the land

land in its present condition, if held in severalty, and the present annual and fee simple values under existing circumstances of the rights of the Crown (in and to the soil and over the surface) on the one hand, and of the commoners (over the surface) on the other hand. (3.) That the referee set out allotments to the Crown and the commoners in accordance with his valuation in satisfaction of their respective rights."

1015. How do you reconcile that with your previous answer?—I have never seen nor heard of it, and I doubt whether it means the appointment of the valuer. I know nothing of it; *non constat* that the Inclosure Commissioners have sanctioned it.

1016. Would you consider that as being contrary to the spirit of the Act?—Certainly; I should consider that I had no power whatever to go out of the section of the Act of Parliament which directs the valuer to be appointed in a certain way. I have acted in a great many inclosures; 700 or 800 have come under my jurisdiction, and I never remember a case in which the valuer has been appointed otherwise than in direct accordance with the Act of Parliament.

1017. Here is another case in 1864, in which the terms are identical with those to which I have alluded; you would consider that as being contrary to the statute?—Yes; the lord of the manor has the power to import any particular terms into the provisional order, as a condition of his assent, but I never heard of such a term as the Honourable Member has alluded to being imported, and it never came under my cognizance, and I do not feel at all sure that the Commissioners would sanction it. That, however, is a matter upon which I have no knowledge; it would be for the Commissioners to determine whether they would consent to it or not.

1018. Colonel *Barttelot.*] With regard to a question which was asked you by Mr. Fawcett, with respect to the powers of Parliament, what I understand you to say is that Parliament has a perfect power to amend any of these provisional orders, but that in deference to the parties interested, when so amended, the matter ought to be sent back to them, for them to say whether they will agree to the inclosure or not?—That is my view of the subject.

1019. Do you not think that that is a just and fair view of the case?—I think so.

1020. That is to say, considering that those parties are the parties most particularly interested in that inclosure?—I think so, because Parliament might impose a term upon the persons having common rights, whereby a great portion of the common might be taken from them, and it might be perfectly useless to inclose the remainder. I put an extreme case, but still it might occur. At Chigwell a large portion of valuable land, worth 200*l.* an acre, was taken away, and it is now, I believe, very little used, so I am informed.

1021. With regard to the time of holding the meeting, if it was considered that the evening would be the best time, there would, I suppose, be no serious objection on your part?—Certainly not.

1022. But you still consider that the morning is the best time?—The morning is the best time.

1023. Do you not think that if the labouring poor were very much interested in the inclosure they would be able to attend the meeting between 12 and one o'clock, which is their dinner hour?—Many of them reside at a distance, and do not come home to dinner; and perhaps they may be working at a great distance from the common.

1024. Do you not think, that if it was a very great advantage to these people to attend the meeting, those persons who employ them would, upon an occasion of that sort, allow them to come to the meeting?—I hardly think that the farmers would allow it. Many of the poor would have no *locus standi* in the inclosure.

1025. Do not you think that the new Act which was passed a short time ago, namely, the Union Chargeability Act, has altered the whole aspect of affairs, and made many of those persons who before were not anxious to build cottages in their own parish, much more anxious that their labourers should reside on the spot?—I think so.

1026. From your observation, going all over England, do you not think that the labouring poor are being better housed than they were formerly?—They are better housed.

1027. And, so far as you have seen, owners of estates are doing their best to provide proper cottage accommodation?—Within my own knowledge and experience, that is so. In the parish in which I live, and in the adjoining parish, the whole system of cottages has been remodelled. I have built cottages myself. As a rule the cottages are improved; they are remodelled or rebuilt.

1028. With respect to the question of the user of the public, which has been raised by Mr. Fawcett, is it not the fact that the public, on most of these commons, have no right whatever?—As a matter of law, they have no right whatever.

1029. Is it not also a fact, that the lord of the manor, and the copyholders, and others, have not objected to the public using the common, because they have thought that no rights would accrue to them from so doing?—I cannot answer that question, as to what induced the lord or the copyholders to abstain from exercising the positive right of turning persons off, but I never heard of any common where the public have been kept off, except where it has been a place for sporting, and where, of course, it has been preserved as a part of the demesnes.

1030. Are there not large commons of that kind which are used for sporting, in which the public are strictly kept to the high roads?—Yes, there are many such commons.

1031. With regard to the owners, is it not the fact that the owners have thought that no right would accrue to the public by allowing them to ride across the common?—Yes, if no damage occurs.

1032. Mr. *Vernon Harcourt.*] Can you give us any instance of an action of trespass upon a common apart from actual injury done, either in respect of game or in respect of herbage?—No; I have stated that as a rule the public pass and repass over the commons which are not used for sporting purposes without any obstruction.

1033. Colonel *Barttelot.*] But in the case of any common which the lord of the manor chooses to use for sporting purposes, he keeps off all persons?—Yes, I know of many cases where the lord of the manor, through his game-keepers, keeps

Mr. *N Wetherell.*

8 June 1869.

Mr. *N. Wetherell.*

8 June 1869.

keeps off all persons excepting those who have a legal right of depasturing their cattle there.

1034. With regard to the 30th section of the Act, what is your definition of the term "neighbourhood." I will put a case; supposing that the parish is a small parish within the manor, and that there is a large town close by out of the manor, does not this 30th section clearly lay down that it shall be the parish, and not outside the parish, and that what you are to take account of is the neighbourhood?—I do not think that there is any limit; I have never considered that there is any limit of that sort.

1035. The words of the 30th section are, "For the inhabitants of the neighbourhood, not exceeding the quantity hereinafter mentioned, applicable to each case, that is to say, where the land to be inclosed shall be situate in any parish the population of which," and so on. The word "parish" is mentioned all through?—Yes, that is for limiting the amount of land set out, but the moment that the land is set out, and the award is executed, the user of the land extends to the neighbourhood.

1036. In setting out that land, do you take into account the neighbourhood, or a large town outside the parish, as contra-distinguished from the parish?—Certainly; I think that on the last occasion I mentioned a case in which an inclosure took place, and where there were very few people in the parish who by any possibility could use the land, as it lay at such a distance from the bulk of the parishioners. I was there informed that people from a large town, namely Cowbridge, were in the habit of resorting to a portion of the common, and that, in fact, county cricket matches were played there, and I directed that land to be set out for exercise and recreation, although a very few of the population of the parish would use it; but we took the population of the parish in regard to what we should set out as an allotment.

1037. You think it very advisable that the law should be altered with regard to the increase of recreation grounds, and that it should be in the hands of the Commissioners to say whether the recreation grounds might not be larger than is at present allowed by the Act of Parliament?—I have expressed my views upon that point in the affirmative.

1038. Supposing that there was a village green of 10 acres, and that you could only set out four acres, you would like to set out the whole?—I should.

1039. With regard to the allotments, supposing that a cottager had a small garden, should you not say that 20 rods were quite sufficient to set out for him?—Such is my view of the matter, from the best information which I can obtain.

1040. And in no instance, supposing that he had no garden, should you think that more than a quarter of an acre was necessary?—Not more than a quarter of an acre.

1041. Therefore, as far as the allotments are concerned, you think that ample powers are given by the present Act?—Certainly, as far as regards cottage gardens.

1042. *Chairman.*] Your opinion has been asked with reference to the power which Parliament has of altering the provisional orders; is it not a fact that the Bill which is brought before Parliament is a Bill for confirming a provisional order, and that the provisional order is not brought so definitely before the House of Commons, that the House can make any alteration in that provisional order, but that what the House can do, is to declare that it will withhold the confirmation of a particular provisional order, unless the Commission, with the proper assent of the parties concerned, will so alter the provisional order as to bring it into a condition in which Parliament would be willing to confirm it?—Yes; I think that that is what has been already done in one case.

1043. Mr. *Knatchbull Hugessen.*] Under the 27th section of the Act, the consent to the inclosure of two-thirds in value of the lands proposed to to be inclosed is necessary, and that consent must be given upon the terms and conditions proposed in the provisional order?—Yes.

1044. Therefore, if those terms and conditions are altered by Parliament, is it not held that that circumstance causes a state of things in which the assents to the actual proposals about to become law have not been obtained?—I think that in that case the provisional order ought to be remitted to the parties, for the purpose of ascertaining whether or not their assent will be given upon those terms.

1045. Is not that the meaning which Mr. Darby meant to convey?—I have no doubt that that is what Mr. Darby meant to say.

1046. *Chairman.*] In the 30th section of the Act of 1845, there seems to be this inconsistency, that the early part of the clause states that the Commissioners may set apart recreation ground for the inhabitants of the neighbourhood, whereas in the latter part of the clause it is stated that the population of the parish should be the population to be considered in deciding upon the size of the recreation ground; do you think that the proper way of carrying out the first part of the clause would be to withdraw altogether the limit which is assigned in the latter part of the clause, namely, that which is founded upon the population of the parish?—I think so; otherwise you would never be able to determine exactly the radius within which you should take the amount of the population. I think that it would be better to give a discretion to the Commissioners to set out such land as the circumstances of the case would justify.

1047. If the law were so altered you would have much more facility than you have hitherto had, as an Assistant Commissioner, in meeting the cases which you have mentioned, where there was a localised user by the inhabitants of the neighbourhood?—Yes.

1048. And you think that it is fair, that where the public have enjoyed a particular portion of a common, that enjoyment which they have hitherto had should be reserved to them under the inclosure, provided that there is no undue interference with the rights of the commoners, and of the lord of the manor?—Yes; I think that should be done in every case, and, as far as I remember, I think we have generally adopted that rule. I can mention many cases where we have adopted the rule, and have set out those portions for exercise and recreation which we have found to be used, from time to time, either by the parishioners or the people in the neighbourhood.

1049. Mr. *Knatchbull Hugessen.*] A question has been asked with regard to a village green; is it not the case that under the 15th section of this Act, village greens are specially exempt from the inclosure?—Village greens are specially exempted;

exempted; in the early part of the clause it is provided that they shall not be dealt with with a view to allot the land to allottees, but the same section proceeds to state that the Commissioners may allot them for the purpose of preserving them, and I apprehend that the rights of common would then be discharged.

1050. But the whole result of that section is to prevent the inclosure of village greens in allottments?—Yes.

1051. Mr. *Liddell.*] Mr. Fawcett, in a question which he put to you, implied that the unfortunate system which is known as the gang system, was mainly due to the absence of cottage accommodation; is it not the fact that the gang system (an unhappy system as it is) prevailed to the largest extent in what we know as the fen counties?—That is so.

1052. Is it not also a fact that the natural insalubrity of the soil of that low country has absolutely acted as a bar to the aggregation of individuals, either in hamlets, or in villages, or in cottages?—It has been so stated, but I have not paid any great attention to that part of the matter.

1053. May we not naturally assume that if that is so, the process of cultivation as it goes on will prevent that insalubrity, and that it will then become the interest of the landowners to construct cottages?—Yes.

1054. Therefore the censure which was implied in Mr. Fawcett's question requires some modification?—Yes; there is one large inclosure in Cambridgeshire, namely, Grunty Fen, of several thousand acres, that has been drained and has been brought into arable cultivation, and is worth a great deal of money. I think that 260 acres have been set out as cottage gardens.

1055. Mr. *Vernon Harcourt.*] You used a remarkable expression with regard to the labourers in respect of allotments; you said that they had no *locus standi*; is it the view which is generally taken by the Commissioners, that the labouring poor have no *locus standi* with reference to the allotments?—I simply mean that they have no vested right in the land. On the former occasion, when I was asked who attended the meetings, I observed that the meeting was an open one, and that any person attended who pleased. The poor sometimes come there and complain of the inclosure, but as a rule the poor cannot come; they are at their work.

1056. Do you not consider that when this statute, under which you act, stated that no land should be inclosed without a certain amount being set aside for recreation ground, it gave to the persons who were to use that recreation ground a vested right?—I merely used the term "vested right" as contradistinguished from the general right which the poor under an inclosure have to call upon us to set out land.

1057. Surely Parliament by this very Act created a right in them, and their right is quite as real a right to see that their interests are protected in the inclosure as the right of the lord of the manor, or of the Commissioners, is it not?—I venture to express my dissent from that, because we are not bound to set out allotments; it is merely a matter within our discretion.

1058. But are you not bound to explain to Parliament why you do not do so?—Undoubtedly, and I consider that I am bound to inquire into the case of the poor, and the allotments which should be set out.

1059. As I gathered from your evidence just now, you seemed to consider it not very material whether the labouring poor were, or were not, present at the investigation; how can you report to Parliament without having heard these people specially upon the point?—I consider that the Assistant Commissioner stands between the landowners on the one hand, and the poor on the other; I consider that we are trustees for the poor, and that it is our duty on every occasion to set out allotments for them when we are justified in doing so.

1060. Is is not rather a peculiar way of performing that function, that you should in many cases determine the question upon hearing only the landowners, and not the poor?—The Commissioners can only give such notices as the Act directs, those notices are given, and we cannot compel the attendance of any party.

1061. In your judgment is it a satisfactory way of exercising a judicial office between two parties to come to a determination having heard only one side?—I consider that I have the means of deciding without hearing the parties. I constantly set out large allotments without having heard a single poor person.

1062. You tell us that you regard the poor as having no *locus standi*?—All that I meant by that term was that they had no vested rights unless they had rights of common in the land.

1063. Have they not a statutory vested right to claim, before you, to have a certain proportion of that land set apart?—It would entirely turn upon the meaning of the term "vested."

1064. Then you do not regard the obligation of the statute as what you consider a vested right?—I consider that the poor have no vested right in the land, in my understanding of the word "vested." I have never questioned that they have a right to ask to have allotments set out; and they occasionally come, or the incumbent of the parish, or some one else comes, and asks for allotments for them. Whether they are asked for or not, I am bound to inquire, and I do inquire, and so does every Assistant Commissioner inquire, whether or not allotments are required.

1065. How many Assistant Commissioners are there?—I think that at present there are not more than two.

1066. As respects the Bill which we are now considering, which is before Parliament at present, how many of those inclosures have you personally had under your consideration?—That appears in the evidence which I gave the other day; there are, I think, 12.

1067. On the average, how long does the investigation of each case by you on the spot take?—It varies very much; if there is any question of right, for instance, a question as to the ownership of the manor, it may take two days.

1068. Suppose that there are not disputed rights?—If there are no disputed rights, it may take two hours, or five hours.

1069. Is there any case in which you order an inclosure without seeing the place?—Never. I am bound by the Act of Parliament to see the land. I have never reported to the Commissioners on any single inclosure without having seen the land.

1070. I have asked you with reference to the right of the labouring poor to be heard upon the

Mr. *N. Wetherell.*

8 June 1869.

question of allotments; I suppose that you would take the same view with reference to the interests of the neighbourhood, on the subject of the recreation ground; would you feel yourself bound to hear parties upon that subject?—Yes.

1071. Whom would you hear on that subject?—Any person who happened to be present.

1072. You would consider that they had a *locus standi* to claim the recreation ground?—I beg the Honourable Member's pardon; I think that the term "*locus standi*" has had a wrong interpretation put upon it. I did not intend for a moment to say that they had not any right to be present, they are always invited to be present. All that I meant to say was, that they had not the same legal right in the common as a commoner has.

1073. How many of these reports which are now before Parliament have been in any respect varied by the head Commissioners; I suppose that your reports which you send in to the Commissioners are reports at some length?—Yes.

1074. Are those reports generally acted upon by the Commissioners, or are they varied in any respect?—As a rule they are acted upon.

1075. Can you give us any recent instances in which the principal Commissioners have varied the recommendations made in the reports of the Assistant Commissioner?—I can mention one case. I think that it was the inclosure of a parish near Maidstone, namely, Ditton, where I recommended that no allotment should be set out, but the Commissioners over-ruled my report, and directed that an allotment should be set out; that is one case. I remember a case in Devonshire, viz., Linton; there an allotment was proposed to be made to a gentleman on an undertaking that he should keep it open, but the Commissioners thought that the better plan would be that it should be allotted as a place of exercise and recreation; and to that extent they over-ruled my report. There are one or two other cases in which they have done so, but, as a rule, they adopt my report.

1076. You have said (and I believe quite accurately) that by law the public have no rights, except so far as they may be rights of way, over a common, but you have added that practically the public have a stray over what may be called the commons of England, is not that so?—Yes.

1077. And you do not know of any instance in which an action has been brought by the lord, or the commoners, against a person for merely wandering over a common?—No, I cannot mention such a case.

1078. Surely the state of things, as regards the public, is very considerably altered when the common is inclosed, is it not?—Yes.

1079. That is to say, that persons who have practically an unlimited right over that common, although not a legal right, lose that enjoyment as soon as a fence is put round it, and an action will be brought against them, which would not be before brought?—Yes, it becomes private property.

1080. In point of fact, does not the Inclosure Act make that a real trespass which would before only be a nominal trespass?—It has that effect.

1081. And, practically, it excludes the general public from land of which they substantially had the enjoyment before?—Yes, that applies to every inclosure.

1082. Have you ever had the curiosity to estimate if inclosures go on at the rate at which they are now going on in England, how long it will be before the whole land of England will be inclosed, and as to which the public will have no rights at all?—No, I have never made such a calculation.

1083. How much uninclosed land is there now?—I believe about 7,000,000 of acres; those are lands which are subject to rights of common; the Inclosure Commissioners have no jurisdiction unless the land is subject to rights of common; I believe that many of those lands are grouse moors in the north, which are still subject to rights of common.

1084. Has there been any case in which you or the Commissioners have declined to inclose land where there has been any application for inclosure?—I do not remember any such case at present.

1085. Are there any circumstances under which you would think it right to decline to carry out an inclosure which was applied for by sufficient parties?—I think that the mode in which the Commissioners have generally dealt with lands where there have been public rights over them, has been to leave the matter to Parliament.

1086. I am not speaking of public rights, I am assuming that your general view of the law is a correct one, namely, that the right is in the lord and the commoners, and I am supposing the case of a common which would be of no value for arable or grazing purposes, and that application was made for its inclosure, should you consider yourself justified in declining to make that inclosure?—I should not, because I believe that almost every tract of land might be beneficially inclosed.

1087. Supposing that there was the case of a common with gorse on it adjoining game covers, and that the landowner desired to inclose that common merely to protect the game, without any view of turning it to a cultivable purpose, should you think it right to authorise that inclosure?—Most certainly.

1088. And you would do so quite irrespectively of any amount of enjoyment which the public, having no vested rights in it, might have of that common?—Not necessarily; it might be so near a town as to make it inexpedient to inclose it, but I think that it would be rather left to Parliament to say whether it should be inclosed or not; in a rural district, although a common near inclosures is not very valuable land, I should not for a moment hesitate to report to the Commissioners that it ought to be inclosed.

1089. You consider that the protection of the game for sporting purposes, which Colonel Barttelot has alluded to, would be a sufficient ground for authorising an inclosure, quite apart from any value which might attach to the land for purposes of cultivation?—There are very few tracts which cannot be cultivated in some way or another.

1090. Should you require to be satisfied that the land was going to be so employed, and was not merely going to be made an additional game cover?—I should not consider that I had a right to enter into that question.

1091. Then you do not consider that any part of the basis of the recommendation of an inclosure is,

is, that it will add to the produce of the country?—I can hardly imagine a tract of land which cannot be employed in some way, either for planting, or for sheep pasture; it may not be capable of being converted to arable cultivation, but in most cases it is capable of being cultivated; where gorse will grow, wheat will grow.

1092. On the subject of exchanges, you have said that there have been very few cases of exchanges where there have been inclosures?—Very few indeed.

1093. And I suppose that you agree with Mr. Darby, that it is no part of your duty to negotiate an exchange for allotment ground, or recreation ground, in a more convenient situation?—I do not know whether it should be dealt with as a duty, but in many cases I have asked whether the land could be exchanged for other land nearer to the village; that question was put to me on the last occasion, and I stated that I was tired of asking the question; you can get scarcely any landowner to assent to it; the proposed exchange is of a small quantity of good land for a large quantity of bad land, and the landowners will not readily assent to it; in some cases exchanges have taken place; and at Swaffham I believe that Mr. Hammond has almost consented to an exchange for 50 acres there set out.

1094. You do not consider yourself to be in a situation to say to the lord of the manor, and to the commoners, "I will not advise this inclosure unless you, among you, will agree to find a convenient space for the people of the village"?—I do not.

1095. Do you think that it would be a good thing if you had such a power?—Yes; it would undoubtedly be a good thing to get an exchange, if it could be done without interference with the rights of property; there are many cases in which I think that you might fairly call upon the parties to do so.

1096. You think that there are many cases in which you might call upon the parties as a condition of the allotment to provide, by some arrangement among themselves a convenient space of ground for the people of the parish, and of the neighbourhood?—There are some such cases.

1097. When you go down to see one of these places which are to be inclosed, who makes the arrangements; do you find that certain proposals are made to you with reference to allotments, or with reference to recreation ground, or do you direct them yourself?—A form of application is sent to the parties by the Commissioners, which contains certain items, which they have to fill up.

1098. Then, generally speaking, when you go down, I suppose that you find a quantity proposed by the parties on the spot?—I have referred to the 12 cases in the present report, and there was not a proposal in any one of those cases that an allotment should be set out.

1099. From whom do the proposals principally come; from the landowners, or from the farmers?—They come from various parties.

1100. I take it that as a rule the lord of the manor is always one of the applicant parties?—No.

1101. Am I to understand that in no one of the cases where proposals were made to you for an inclosure, did the parties propose to give anything to the poor in the way of allotments or recreation ground?—Yes, that was so in these 12 cases with which I have had to deal.

1102. In none of those cases did the parties propose to give anything to the poor in any shape?—I believe so. The answer, generally speaking, is that it is quite unnecessary. At Saxlingham it was said, "This is reserved for consideration at the meeting."

1103. In how many of those cases was the lord of the manor one of the applicants?—In the Hunston Inclosure Mr. Johnstone appeared for himself and his co-trustee as lords of the manor.

1104. What did he say with regard to allotments for recreation, or for the poor?—"No."

1105. You said that you knew many cases in which the public had been excluded from commons where game was preserved there. In what way was the right of sporting as against the public enforced?—The gamekeepers watched the common.

1106. Was it by action of trespass, or by a summary proceeding under the Game Laws?—In one or two cases there were summary proceedings under the Game Laws. I remember one case where I had to set out the boundaries of Selston in Nottinghamshire, and summary proceedings were proved before me.

1107. It is necessary, in a summary proceeding under the Game Laws, to give some evidence that a man is in pursuit of game, either by a dog or in some other way; but supposing that a person was simply taking recreation upon that ground, he could not be proceeded against under the Game Laws?—He could not.

1108. Do you know any instance in which the right has been enforced against a person who was not in pursuit of game?—None whatever.

1109. And that has been so whether the land was land which was preserved for game purposes, or not?—Just so.

1110. Therefore it would only be in the case of persons who were actually engaged in the pursuit of game that proceedings would be taken against them?—Yes; and these facts were put in evidence before me to prove the boundary, and whether the land belonged to one manor or another.

1111. Can you state for how many days altogether, upon these 12 inclosures, you were engaged on the spot?—I do not think that I was engaged for more than one day in any meeting, excepting the case of Withypool, where there was a question as to the ownership of a manor, and there I was obliged to adjourn the meeting; but with that exception, I do not think that more than one day was occupied.

1112. And I suppose that that would be about the average in the course of the year?—Yes, there is scarcely ever more than one day occupied, except there is a legal question.

1113. Then, practically, as regards the period occupied with reference to these inclosures, they might be carried on in a very short time; the number authorised for the year is 14?—That is the number in this report, but not the number during the year; that is the January report, but the Commissioners may make another report.

1114. On the average, how many inclosures do you recommend in a year?—It varies very much; it may be double that number; there are not so many now as there used to be.

1115. Mr. *Lowther*.] At these meetings, when you first go down and examine into these matters, do the poor come to take any active part themselves, or are they represented?—Sometimes

Mr. *N. Wetherell.*

8 June 1869.

Sometimes they are represented by a solicitor, or some gentleman who acts for them; but very seldom.

1116. I think that it is proposed that, in advertising your meeting, the sections of the Act should be quoted?—That has been suggested.

1117. Do you think that the poor would understand the sections of an Act of Parliament?—I am very doubtful upon it; there is no harm in having them advertised; there is very little expense.

1118. Mr. *Pease.*] You gave as an instance, in reply to a question from Mr. Fawcett, whether you would reserve ground for public purposes, the case of Kynance, in Cornwall, were you said two acres were reserved?—Yes.

1119. Do you consider that sufficient?—I merely mentioned that case as an illustration of land reserved where the public have a right over it; but I did not mention, that in addition to this land, there is a village green reserved of four or five acres.

1120. Whereabouts is that reserved?—Abutting upon the village of Lizard.

1121. Have any reservations been made of the public rights as between the Lizard and Kynance, and Mullion, where the public, as you are aware, spread over the most beautiful parts of the Cornish coast?—I do not exactly remember where Mullion is.

1122. Mullion is west of Kynance, or perhaps nearly north?—I think that there are no rights over it. I am not sure whether that is a part of the common.

1123. It is all open?—But a great part of it has been awarded, and the Commissioners have no right to deal with it.

1124. As regards the question which was asked you by Mr. Harcourt, as to turning the public off where the land is preserved for shooting, is it not the fact that the gamekeepers turn off the public, and that those lands are kept strictly private?—They undoubtedly turn them off; but I was asked whether any proceedings were taken.

1125. Is it not the case, that the public are so turned off, and that the moors are kept strictly private?—Yes.

1126. Mr. *Lowther.*] Are you acquainted with the moors in Cumberland and Westmorland?—Yes.

1127. Are the public turned off there?—Yes.

1128. Are people who are looking after their sheep turned off?—Those are commoners; I have expressly excepted them; they would not be turned off; and it is those rights which make the moors subject to inclosure, for they are common rights.

1129. Mr. *Leveson-Gower.*] I have understood it to be your opinion that the rent which should be asked for the allotment ground should be according to the agricultural value of the land?—The rent is, according to the agricultural value, at least not less; the Act directs that; I have nothing to do with the inclosure after I hold the appeal meeting, that is a matter for the alottment wardens.

1130. I have understood you to say that the lords of the manors have never brought actions, because if they did so they would only get a farthing damages against trespassers?—Yes, not being trespassers against the gamelaws.

1131. I suppose that that is because they would be trespassers interfering in no way with the enjoyment of the common by the lord of the manor?—Yes; and that would apply equally to inclosed land.

1132. Therefore the right of these parties to walk over these commons is subject to the condition that they in no way interfere with the enjoyment of the commons by the lord of the manor?—I should presume so.

1133. Mr. *Martin.*] I do not think that on the former occasion you and I understood each other with regard to the exchanges. Are you not now obliged to give an acre of good land for an acre of common land; if you wish to exchange a portion of a common for a portion nearer the village, I believe that you are not obliged to take into consideration the value?—You must take into consideration the value if you exchange the situation to inclosed land; sometimes I have set out allotments in wild tracts, where it has been impossible, to tell which is the best place. If you exchange land on the common for other land on the common, then it is acre for acre; but of course nobody having land near a village would give up an acre of his good land for an acre of bad land. If I see that there is a probability of an exchange, I always direct a large portion of the waste land to be set out, so as to ensure a fair allotment on exchange.

1134. Mr. *Fawcett.*] Did I rightly understand you, in reply to Colonel Barttelot, to state that land used as common, over which the public had been accustomed to rove, was suddenly reserved by the will of the lord of the manor, and that the public were warned off it, and that it was used for private purposes?—Where it is waste of the manor, and the soil belongs to the lord, and the lord has used it for sporting purposes, I have known numerous cases where the lord has proceeded under a summary jurisdiction before the magistrates, and has had the parties convicted.

1135. Have you known any case where that has been done if a man has simply walked over the land?—I do not remember any case where a person simply walking over a common has been warned off or fined for trespass, excepting in grouse moors, where the land has been preserved.

1136. You stated that you knew repeated cases of waste of manors which the public used, and over which they had been accustomed to rove, and that those lands had been reserved by the lords of the manors for sporting purposes, and that consequently the public had been deprived of them?—I have stated that I have known numbers of cases where the lord has used these lands for sporting purposes, and has kept off all persons except those who were there for a legitimate purpose, namely, for depasturing their cattle.

1137. Have you known people warned off who were merely walking there?—No; where the land has been reserved for sporting purposes the gamekeepers will generally not allow persons to come on; if persons are merely walking over, perhaps the keepers would not interfere with them, but if they are there without showing some good reason for it, they would interfere.

1138. Have you or not, known people warned off who were simply there for the purposes of recreation and walking?—Never; where they have been warned off it has been under suspicion that they were there for poaching, but where they

they have been there simply for the purpose of exercise and recreation, I have never known a single case of a person being warned off, except in grouse moors.

1139. Mr. *Knight.*] Has a commoner, who has the right of depasturing cattle, any right to go on the common except for depasturing cattle?—No.

1140. Then the lord could warn him off if he went there for any other purpose?—Yes.

1141. Colonel *Barttelot.*] Supposing an inclosure to be desired by the lord, and the commoners, you would not think its proximity to a game cover an objection to your proceeding with it?—Certainly not.

Mr. *N. Wetherell.*

8 June 1869.

Mr. Hugh Browne, called in; and Examined.

1142. *Chairman.*] With what inclosure are you acquainted?—I am acquainted with the inclosure which took place in Nottingham, in 1845 or 1846. More than 1,000 acres were inclosed in Nottingham Park, which is contiguous to the town; there was also an inclosure between Eastwood and Hill Top, with which I am acquainted, and I have a little information with respect to the amount of land which was set out for allotments, and for recreation ground at Selston. Under the Nottingham Inclosure there are about 125 acres set aside for the public, who have fared singularly well in Nottingham.

1143. Where are those 125 acres situated with reference to the town of Nottingham?—The largest portion is on the north side of the town, including the racecourse, and several cricket grounds, and a slope, which is turned into an ornamental walk; that would include, I should say, 80 acres.

1144. And that is contiguous to the town?—It is within the town boundary. The next portion is likewise in the town, and also in the building part of the town; it probably includes about 20 or 25 acres. We also have some land in the meadows, which I believe is under the inclosure, and which is likewise used for a cricket ground; it either comes under the inclosure, or it belonged to the corporation, and was set aside by them. The effect of that is, that the property in the neighbourhood of all that open land has very much increased in value. I may say that the property adjoining the Arboratum generally fetches about 10*s.* an acre.

1145. In fact that recreation ground served the purpose of a park, and a fresh value was given to any ground looking upon it?—Yes, or anywhere near it. I live within 100 yards of it, and I have derived advantage from it, although I cannot look into it.

1146. Have you any complaint to make with reference to the Inclosure Act, or the manner in which it has been carried into effect?—Not at all, but quite the contrary.

1147. You wish to inform us of the advantages which have accrued from this large amount of recreation ground being set apart?—I do.

1148. Have you any information to give with reference to the allotment gardens for the labouring poor?—Under that Act I believe that there are no allotment gardens; those are already provided out of land belonging to the corporation, for which there is a rent.

1149. Is there any other point which you would wish to mention?—I thould like to speak of Nottingham Park. The site of Nottingham Park I am well acquainted with; I believe that it came to the Dukes of Newcastle in the time of Charles the First, but it has always been open ground until the first inclosure began about 45 years ago, and then building began. The first buildings were on some of the finest building land in the kingdom, and overlooking the Trent Valley; and as there was a great want of building land in the town before the Nottingham inclosure, nobody complained.

Mr. *H. Browne.*

1150. Colonel *Barttelot.*] Do you know whether any rent was asked by the Duke of Newcastle with regard to that inclosure in the town?—I believe that he had nothing to do with it; his land is just outside the town.

1151. But the waste is his?—Yes, but it is just outside the town. I should like to mention the way in which an inclosure has taken place between Hill Top and Eastwood. Until nine years ago it was a piece of land of about 15 acres, and it was the great cricket ground of the neighbourhood, and a great place for sports for a great mining population; it was inclosed without any Act of Parliament, on an order of the Commissioners, and by the simple will of two Inclosure Commissioners.

1152. *Chairman.*] Have you anything further to suggest to the Committee?—I would suggest that there should be, what there is not in the present Inclosure Act, namely, a clear recognition of the public right to go over open land.

1153. Mr. *Fawcett.*] Have you any suggestions to make with regard to the improvement of the Inclosure Act?—The main point which I should suggest, would be the recognition of the right of the public to go over open land.

1154. You suggest that the right of the public to go over commons should be recognised by Act of Parliament: in what way would you carry that out, because if you recognised it generally it would of course prevent all inclosure?—Yes, and I would have it carried out less by a Parliamentary Act than by the act of some local body, such as the quarter sessions.

1155. Am I to understand that your proposal would be, that, in order properly to protect the interests of the public, an inclosure before it was finally completed should be laid before the quarter sessions, or some other local tribunal?—Yes.

1156. Have you known any lands inclosed in the neighbourhood of Nottingham, over which there were footpaths, which have been shut up in consequence of the inclosure?—I cannot speak as to legal inclosures, but there were many paths over Nottingham Park which have been quite disregarded. The legal inclosures took place before my recollection, but upon examining the titles I have found that they have taken place in many parishes around Nottingham, and the effect of that is that although centuries ago there was plenty of recreation ground, there is now hardly a yard of any land for public recreation.

1157. Do you state that although half the county was open land, there is now scarcely a yard reserved for the public?—In 19 cases out of 20 there is not one yard reserved for the public. When I speak of legal inclosures I mean those by Act of Parliament, or under the

Mr. *H. Browne.*

8 June 1869.

authority of an Act of Parliament; when I speak of illegal inclosures I mean what takes place merely by the act of the proprietor.

1158. Do you assert upon your local knowledge that a great portion of this land has been inclosed without Inclosure Acts?—No, the greater part of it was inclosed 70 or 80 years ago by Inclosure Acts.

1159. And nothing was reserved to the public?—Nothing.

1160. Have there been any Inclosure Acts since 1845 affecting Nottinghamshire?—There is a common now inclosed, namely Selston Common, of 800 or 900 acres, and I believe that only five acres are to be set aside for public recreation. It is in the midst of a mining population who very much want public recreation, and for want of it miners are to be seen kicking their heels without knowing what to do with themselves.

1161. From your knowledge in that district, do you think that five acres is very inadequate, and that a great advantage would result from more land being reserved?—I think that a very great advantage would result from it; five acres will not give an acre a piece to each village which now participates in the advantage.

1162. Have you any idea of the population of those districts?—There is Colnor Park, which is a very large place, and which is the seat of the Butterley Company.

1163. What is its population?—About 5,000 or 6,000 persons.

1164. What is the population of the other places?—The others are small villages.

1165. Have you any idea why more land was not reserved as recreation ground at the time of the inclosure?—I was asked why the poor did not take an interest in these inclosures. Generally the poor are excessively ignorant of these matters, and, besides that, they dare not do it in opposition to the landed proprietors.

1166. Then your opinion is that the reason why some agitation was not got up in Selston for a larger allotment of recreation ground, was partly from the fear of the proprietors, and partly from ignorance?—I am speaking generally. In Eastwood no one ventures to raise the question; it would be ruinous to him to do so.

1167. Do you think that it would be advantageous to have the sections of the Act of Parliament relating to the labouring poor published in the neighbourhood?—I do; and if I may offer another suggestion it is this, that in corporate towns there is much greater freedom.

1168. Take a town with a population of 50,000, you think that notice of the inclosure should be sent to the corporate authorities of that town?—Yes.

Mr. Nathan Wetherell, called in; and further Examined.

Mr. *N. Wetherell.*

1169. *Chairman.*] Have you any information to give as to the decisions of courts of law upon the questions to which you have referred?—Yes.

[*The Witness delivered in the following Paper:*—]

"Lewes Spring Assizes, 1862.

"*Swinge* v. *Dowell*, 2 Foster & Finlason, 845.

"Evidence that in a place of resort for pleasure, as a wood or the like, people have gone about wherever they pleased, there being no definite enduring trackway in any particular direction, but merely temporary and transitory tracks, not passable in wet weather, and varying every season, and never proved to have been repaired. Held, not evidence on which a jury could properly find either a public highway or a public right of resort for air and exercise, or a prescriptive right of way.—Justice *Wightman.*"

"*Fitch* v. *Rawlings*, 2 H. B. L., 393.

"Where held, that a custom for the inhabitants of a place to play games there is good, but not for strangers or persons coming there."

"Vide *Smith* v. *Tyson*, 9 A. & E., 406."

"Kent Spring Assizes, 1862.

"*Chapmon* v. *Cripps*, 2 Foster & Finlason, 365.

"The mere use by people of tracks in a wood where they were free to wander about as they pleased, is not necessarily enough to show a dedication of such tracks to the public as public footways.—C. J. *Erle.*

"Jury found verdict for plaintiff."

Mr. Hugh Seymour Tremenheere, called in; and Examined.

Mr. *H. S. Tremenheere.*

1170. *Chairman.*] What is the Commission on which you are at present engaged?—The object of the Commission is stated to be "to inquire into and report upon the employment of children, young persons, and women in agriculture, for the purpose of ascertaining to what extent, and with what modifications the principles of the Factory Acts can be adopted for the regulation of such employment, and especially with a view to the better education of such children."

1171. In what way do you consider that the cultivation of garden allotments come within the scope of the inquiry entrusted to that Commission?—Because they have a very direct effect in improving the pecuniary resources of the agricultural labourer.

1172. Is it your opinion that the advantages to be derived from a garden allotment extend so far as to enable a cottager to defray the expense of sending his child to school?—Yes, to a certain extent.

1173. In one portion of your first Report there is a Table showing how the Inclosure Commissioners have disposed of the number of acres inclosed under their authority since 1845, and it there appears that out of 320,000 acres inclosed, only 2,119 acres have been assigned for the use of the labouring poor as garden allotments?—Yes.

1174. Will

1174. Will you state the data upon which that Table was prepared?—I prepared that Table myself by carefully examining all the reports of the Inclosure Commissioners from 1845 to the present time.

1175. May we understand that those figures are accurate?—I am afraid that they are not altogether accurate; they are as accurate as I can make them, after a great deal of labour and trouble. I submitted the Table to two of the Inclosure Commissioners, namely, Mr. Caird and Mr. Ridley, who were the only gentlemen who happened to be in London at that time, and I received the table back from them after some days, saying that they had examined it as well as they could by the aid of one of their clerks, and that it was substantially correct.

1176. Those figures being substantially correct, are you of opinion that the number of acres which have been assigned for allotments for the labouring poor is smaller than, *primâ facie*, it would appear that it should be?—That was the impression which was produced on my mind, namely, that, *primâ facie*, that quantity so allotted was a very small one.

1177. Are you still of opinion, after a full consideration of the subject, that the amount is too small?—I am afraid that, in order to answer that question satisfactorily, I must trouble the Committee with a few figures, which are the result of the consideration which I have subsequently given to the matter.

1178. Mr. *Knight.*] Were those 320,000 acres, to which you have referred, waste of manors?—They were subject to the discretion of the Commissioners, as regards assigning allotments out of them to the labouring poor.

1179. *Chairman.*] What remarks do you wish to make with reference to that table?—That table suggested to me several points for consideration, which I will, with the permission of the Committee, now enumerate *seriatim;* it struck me,—

First, that the number of acres assigned as public allotments to the labouring poor seemed to bear but a small proportion to the total number of acres assigned, subject to the discretion of the Commissioners.

Secondly, there appeared to me to be an absence of any definite rule, supposing such a rule possible, as to the proportion to be set aside for the labouring poor out of the land to be inclosed.

Thirdly, the reasons given in certain cases for not assigning public allotments to the labouring poor, namely, that "the poor had gardens already," or that the land was "distant from the cottagers' dwellings, elevated, or otherwise unfit for garden allotments," appeared questionable, as not in accordance with the spirit and intentions of the Act as to be gathered from the Report of 1843 and the Debates in Parliament.

Fourthly, although power is given to the Commissioners to frame regulations for the letting of the allotments, to be in force for five years, it does not appear from the annual reports whether this power, be it desirable or practicable, as the case now stands, or otherwise, has ever been exercised; neither does it appear whether any steps have been taken to ascertain whether the land allotted has been properly dealt with, and whether it has been valued every five years, as required by the Act, for the purpose of keeping a check upon the allotment wardens, and prevent its being let at a higher rate than that prescribed by the Act, namely, what it would be worth for farming purposes; and whether the rents have been collected and paid over for the purposes directed by the Act.

Fifthly, it appeared worthy of consideration on examining these reports, whether periodical returns (perhaps once every five years) might not be required, not only of the land assigned in public allotments under the Act, but of the total quantity of land occupied in cottage gardens, and field allotments in England and Wales.

Sixthly, I would submit for the consideration of the Committee whether it would not be satisfactory to Parliament and the public, if the results of the operations of the General Inclosure Act since its commencement in 1845 should be brought out by the Inclosure Commissioners from their annual reports, somewhat after the form of the table in section 296 of our Report, and the results of each year added as they arise.

On each of these points I shall be glad to be permitted to make successively such observations as have occurred to me.

With regard to the first point, namely, the apparently small proportion which the number of acres assigned as public allotments bears to the total number of acres inclosed, never having had occasion to examine these questions before, and feeling bound to give the Inclosure Commissioners the fullest credit for the manner in which they had carried the Act into effect, I guarded my colleague and myself in the comments which I offered in section 297 of our Report, from any appearance of assuming that my interpretation of the results brought out by that table was the correct one. I thought that *primâ facie*, a case was presented for inquiry, and that if the views of the Inclosure Commissioners were in accordance with the Act, it might fairly be open to consideration whether the Act itself might not now with propriety be amended in some few respects, after the experience of nearly 25 years since it passed. The first point which I wish to submit to the consideration of the Committee relates to the figures of the table, showing that of 261, 255 acres assigned, subject to the discretion of the Commissioners, only 2,119 were assigned as public allotments to the labouring poor.

1180. Mr. *Knatchbull-Hugessen.*] Does that include recreation and labouring poor allotments?—No, not recreation grounds, but only garden allotments, called by the Commissioners public allotments, to distinguish them from the allotments set out on behalf of common rights. *Primâ facie*, as I have observed, this quantity assigned as public allotments is very small. The question is, what proportion does it bear to the quantity which ought to be assigned with reference, first, to any principle indicated in the Act, which might be taken as a guide; and secondly, to any principle that may be suggested on general considerations.

The only principle indicated in the Act refers to the size of the gardens into which the total allotments in any one case is to be divided, By section 109, the total allotment is to be "let in gardens, not exceeding a quarter of an acre each," to the poor inhabitants of the parish. The Commissioners, therefore, may be entitled to consider that in

Mr. *H. S. Tremenheere.*

8 June 1869.

determining the total allotment in any case, they are required to keep in view the fact that the portions into which it is to be divided in gardens among the labouring poor, must not exceed a quarter of an acre each. Subject to that limitation, the question arises, does the quantity assigned in allotments bear a proper proportion to the whole quantity assigned? One of the Inclosure Commissioners, Mr. Caird, with whom I have had the advantage of discussing these points, puts the matter thus: The total quantity inclosed, subject to the discretion of the Commissioners, is 320,855 acres. Assuming that the cultivation of that quantity of land requires an average of two men per 100 acres, there will be (3208 × 2 =) 6,416 persons for whom a garden allotment should be provided. But the Act requires that no garden allotment should be larger than a quarter of an acre. The number 6,416, divided by four, gives 1,604, as that of the number of acres that ought to be so applied at the above rate. But the Inclosure Commissioners have assigned 2,119, or 515 acres in excess of that estimate. In assuming the above figure of two men per 100 acres, Mr. Caird has pointed out to me the coincidence that whereas the census of 1861 gives the total number of agricultural labourers in England and Wales, of 20 years and upwards, as 745,977, the assumed proportion of two men per 100 acres for the total area of England and Wales (37,000,000 acres) gives 740,000, or almost the identical number. But I venture to submit, whether a fairer ground of comparison would not be arrived at by eliminating the waste land from both sides of the calculation. Of the total area of England and Wales, namely, 37,000,000 acres, the agricultural returns for 1868 show that the total average, under crops of all sorts, and permanent pasture (exclusive of heath or mountain land) is 25,542,427 acres. At an average of three men per 100 acres, this would give 766,272 men, a number so little in excess of that of the census number of 745,977, as to justify the number three as affording a close approximation to the average employed per 100 acres in the cultivation of the land. On the other hand, if from the total of 320,855 acres of the land inclosed, subject to the discretion of the Commissioners, the 30,103 acres given in the table as elevated land, unsuited for gardens, be deducted, there would remain 290,752 acres which, at three men per 100 acres, and a quarter of an acre per man would give 2,180 acres as the quantity which, on this calculation, ought to have been allotted by the Commissioners, a quantity only exceeding by the trifling amount of 61 acres that which they have allotted. Again, applying the principle of three men to 100 acres, and a quarter of an acre allotments to the 261,255 acres out of which the 2,119 acres, as given in the table, have been assigned, it will result that, at the above rate, the quantity which ought to have been allotted would be 1,959 acres, whereas the Commissioners have allotted 2,119. I am glad, therefore, that the closer investigation, as far as the available data permit, of the results of the action of the Inclosure Commissioners in this respect shows that the total quantity of land assigned by them in public allotments, although *primâ facie* small when compared with the total quantity assigned, is nevertheless, as far as calculations founded on averages are concerned, such as amply to satisfy the proportions indicated, as far as they are indicated, by the Act. In using the word "averages," I lay stress upon that word in order to show the Committee that I shall have to recur to it subsequently. But on the other hand, and as qualifying this view, I have a few remarks to make. I take the liberty of further submitting to the Committee, whether in the present day, with the increased experience of the value of a good-sized allotment to a labouring man, with the greater confidence in the system than existed in 1845, and with the increased and increasing desire on all hands to improve the condition of the labourer by every mode that the most just and liberal views can suggest, it would not be desirable to untie the hands of the Commissioners, and the allotment wardens, in so far as regards the present limitation of the allotment garden to a quarter of an acre. I am aware that much is to be said, and that much has been said before this Committee against this view. The generally received opinion undoubtedly is (and it is held by many persons of the highest independent authority in the matter, as well as by most respectable occupiers of land), that a larger allotment than a quarter of an acre (many persons say even less) cannot be well managed by an ordinary agricultural labourer, or that if well managed, it is at the expense of the time and strength which he owes to his employer. There is unquestionably a great mass of very weighty evidence to that effect. Nevertheless, I shall be able to show to the Committee that this opinion is far from being universal, that it is subject to several qualifications, that there is a considerable amount of opinion and experience on the other side, and that the question is very different when you are considering the matter of the inclosure of waste lands, from what it is when you are simply dealing with allotments voluntarily made in default of cottage gardens for the use and benefit of the labourers on an estate. In the former case, namely, that of allotments out of lands about to be enclosed, it is expedient to keep in view the fact that, the inclosure being once made, all future opportunities are extinguished by which the labouring man might acquire a right to a portion of it as waste, by grant, or user, as heretofore; that its value when inclosed is often greatly enhanced to the respective owners, among whom it is divided. And that it is therefore equitable to the future generation of labourers to reserve a portion of land for their benefit, calculated according to a liberal estimate of future requirements; and it is also important to observe that other classes of labouring men, besides those working on the land, namely, the artisans of villages and towns, are in very many cases interested in the question. Fully acknowledging, therefore, the fact that opinions, especially the farmers' opinions, very greatly incline towards limiting allotments to plots not exceeding a quarter of an acre, I am nevertheless able to refer the Committee to nearly 30 very important witnesses in the Report on Allotments of 1843, and in the Appendix to our First Report (the only one yet published), whose testimony shows that, in point of fact, allotments larger than a quarter of an acre, namely from one-third to half an acre, are given with much benefit to the labourer, and as far as appears, without loss to, or objection from the farmer, and that, among these, half-acre allotments exist in some localities in considerable numbers. The evidence on this point shows that the question

tion of the propriety of half-acre allotments depends upon circumstances which vary both in localities and with individuals. It depends on the nature of the soil, on the situation of the allotments, as to whether they are very near the cottager's dwelling, or otherwise, and on the skill and industry of the labourer, and the size of his family. It is justified also in the case of men who are not sure of constant employment, and of old men unequal to hard work. It is often also of great benefit to some classes of artisans who are occupied in sedentary trades.

In order to elucidate this point, I am afraid that I must trouble the Committee by referring to many of the pieces of evidence which are annexed to the Appendix to our First Report, and also by making a few extracts from the Report of 1843. At page 459 of the Appendix, Part 2, to our First Report, there is the evidence of the Rev. C. A. Yate, who states as follows: "I have 31 acres of land which I let in allotments of from a quarter to one acre; half-an-acre is the usual amount. The cottagers plough their allotments; they either hire a plough, or in some cases their employers plough it for them. I let them grow what they like. They pay 3 *l.*, or in some cases 3 *l.* 10 *s.* per acre, and pay tolerably punctually. I have a great many applications for my allotments, whenever any are vacant. The farmers have not complained to me about the allotments." At page 442, there is the evidence of James Marriott, a labourer, who says, "I have half-an-acre of ground; I can manage that with my regular work; I would not have so much if I could not grow half wheat. I feel a better man for having that; I could not manage more. I think a man is better off as a labourer with that amount than with two or three acres." At page 456 there is the statement of J. S. Lovell, Esq., who states that he farms 240 acres, which is chiefly his own property. He says, "There are 24 acres of land here left in the hands of trustees to be allotted, at their discretion, to the most deserving of the poor, at the rate of 2 *s.* 6 *d.* an acre, that works well. Each family (married couple) has half-an-acre, and six of the most deserving families have a portion of the land together, on which they can keep six cows. They can manage half-an-acre a-piece, if conveniently situated, without seriously interfering with their ordinary labour."

1181. Mr, *Liddell.*] Will you be kind enough to tell us whether it is 2 *s.* 6 *d.* an acre, or not?—I will have set that right if it is wrong; it is doubtless a nominal rent.

1182. Did that case occur in Northamptonshire?—Yes, at Thornby; it was a donation, and the trustees allotted the land at their discretion to the most deserving poor. At page 309 there is the evidence of Mr. Thomas Hardy, a farmer, who states: "The thing which pacified the men in our district was giving each of them half-an-acre of land at a nominal rent; nobody can tell how much it has added to their prosperity. It is that land which keeps our best labour at Croyland."

1183. Mr. *Martin.*] In what county was that?—In Lincolnshire. Mr. Wilson, of Croyland, says: "The lands are divided into half-acres and roods, the rent paid by the poor varying, according to quality, from 33 *s.* to 50 *s.* per acre. He also states, that this fact induces many people to remain in the town. At page 184 there is a letter from Mr. Kersey Cooper, the manager of the estates of the Duke of Grafton, in Suffolk. He states: "A piece of land attached to the house, or as near as circumstances will admit, is necessary to produce vegetables, &c. The quantity might vary from 30 to 50 rods, according to a man's capacity and requirements; and in instances where there is a large family of boys it would be expedient to extend this quantity for the children's industrial occupation after working hours. I have seen the best results from this arrangement; the parents are encouraged by their own and their children's united industry, and their resources increase in proportion to their wants, with the great advantage of training the boys to frugal and industrious habits, which are not forgotten in manhood." At page 326, Mr. Camm, bailiff to the Speaker, at Ossington, in Nottinghamshire, states: "There are 70 allotment gardens at Sutton, belonging to the Speaker; there is always a list of names of those who want an allotment, and the demand has increased; they pay from 4 *s.* to 11 *s.*, and generally very regularly; the size is from six perches to two roods. If a man grows potatoes on his rood, he will get 15 sacks in a fair year, worth about 6 *l.* to him." At page 152 there is the evidence of the Rev. James Shirley, of Frettenham, in Norfolk, who says: "All but 280 acres belong to Lord Suffield; many have half-an-acre of land; all have gardens." At page 368 there is the evidence of the Rev. C. Overton, relating to Cottingham, in Yorkshire, who states: "A piece of land (25 acres, 37 poles), set out by Mr. Ringrose, let by the half-acre to anyone who will take it, at 2 *l.* half-an-acre per annum, occupied by 30 tenants." At page 121 there is the evidence of Mr. Herbert Jenner Fust, relating to Falfield, in Gloucestershire, in which he states that "there are six acres of allotments let in plots of from 30 to 80 perches, at 3 *d.* a perch." At page 132, Mr. Onslow, who has allotments, says that he has a few half-acre allotments.

1184. In what district is that?—In Gloucestershire. At page 307, it is stated that at Spalding there are a few half-acre allotments. At page 325 it is stated that at Caunton, in Nottinghamshire, there are a few half-acre allotments. At page 401, at Thorne, in Yorkshire, it is stated that there are a few labourers, and small tradesmen who have half-acre allotments. At page 457, the Rev. E. Thompson mentions that a few allotments are over half-an-acre, and that he considers that it fosters the independence of the labourer to have that amount. At page 458, Lord Henley suggests, as the desirable quantity, allotments of from a quarter of an acre to half-an-acre. Then as regards allotments of one-third of an acre, it appears from pages 54, 119 and 121, that it is the practice on Lord Orford's estate, and on Lord Ducie's estate, to give allotments of one-third of an acre. It is also the practice at Hayton, as is stated at page 377. Archdeacon Wise advocates one-third of an acre at page 157; and Mr. Sotheron Estcourt, who is known to have given great attention to allotments for many years, at page 145, says, that in certain exceptional cases, he gives one-third of an acre. Then, with regard to the Report of the Committee of 1843, there is strong evidence upon the subject of half-acre allotments being defensible in certain cases. I had perhaps better draw attention to that point. In the evidence of Mr. Henry Martin, who was

Mr. *H. S. Tremenheere.*

8 June 1869.

the first witness examined by that Committee, Lord John Manners asked him at Question 119, "What quantity of land do you consider a labouring man, in full employment, can manage?—One quarter of an acre; 40 rods. Mr. *Childers.*] The general rent of that is 10*s.*?—Yes. *Chairman.* Do you know of any instances where they have had more than a quarter of an acre?—Yes; in some cases, where they have had particularly large families, perhaps 60 rods, and some have had half-an-acre. Have they done justice to half-an-acre?—Quite so; we find them nearly as well cultivated as the allotments of a quarter of an acre. Mr. *Childers.*] If land could be obtained without difficulty, would you, where you had the management of allotments, prefer a quarter or half-an-acre?—Where the families were large, half-an-acre; where they were smaller, a quarter of an acre." At question 199, Sir Edward Knatchbull asked the Rev. S. Demainbray, a gentleman who gave very important evidence before that Committee, "What is the extent of each occupation"? And the answer was, "In general half-an-acre, but when a man is advanced in life, and his strength is not sufficient for a regular labourer, many an old man has his two acres, which he cultivates perfectly, and that keeps him off the parish; I suppose I have half-a-dozen cases of that description." At Question 707, Mr. Gent, a landed proprietor in Essex, was asked by Mr. Stanton, "If a labourer has a large family, do you think half-an-acre too much?—No, for he can employ his children growing up, and can do a great deal in that way. Do you forbid the use of the plough?—In the small allotments, not in the large ones; in the half-acre allotments they borrow a plough and plough part of it up, but in the 20 rods they use the spade." At Question 847, Sir George Strickland was asked by the Chairman, "What should you consider the amount of land which a labouring man can cultivate without interfering with his paid labour?—I should say, on an average, half-an-acre. It might vary, according to the number of his family?—That cannot alter his circumstances very much, when you get a piece of land attached to his cottage; therefore you must take the average, and I should say, on an average, half-an-acre was a good amount." At Question 283, Captain Scobell was asked, "How much land do you let in your parishes to each family"? And the answer was, "I consider the maximum of that let, with very rare exceptions to be from 50 to 60 poles each family."

1185. Mr. *Liddell.*] Your great object is to show that the poor can cultivate more land?—Yes; that in certain cases they can cultivate satisfactorily more than a quarter of an acre.

This amount of evidence may be taken, I apprehend, to show conclusively that in the opinion of many persons of position and experience in various parts of the country, half-acre allotments are in some cases desirable, and that quarter-acre allotments are exceeded in other localities up to the size of one-third of an acre. To continue therefore, the limitation to quarter-acre allotments in the case of allotments assigned from inclosures under this Act would be in many instances to deprive future occupants of portions of land which they would be able to use with benefit to themselves, and without detriment to their employers. Having regard also to the probable progress of the agricultural and other labourers in intelligence, and consequently in skill, it may reasonably be anticipated that a larger proportion of both of them will by degrees be able to manage allotments, if near their dwellings, of greater size than a quarter of an acre, and up to the limit of half-an-acre, with increasing success, and without reasonable objection on the part of their employers. Looking to the future, to the probable progress of the country in population and intelligence, and prospectively also to the moral and material benefit of the labouring classes interested in the question of allotments from inclosures, it may not be unjustifiable to say that in estimating the total amount of allotment in cases of inclosure, the Commissioners should no longer be limited in their view to the division of the total quantity into quarter-acre allotments, but should be empowered to take into account that a certain proportion, say, one quarter, might be divided into allotments of half-an-acre. Assuming this as a principle, namely, that one-fourth may be half-acre, and three-fourths quarter-acre allotments, the effect may be thus exhibited as applied to the figures of the table at section 296 of our report, before referred to. For the 261,255 acres there mentioned, the result would have been, that at the calculation of three men per 100 acres previously stated, 2,448 acres would have been allotted, instead of the 2,119 acres shown in the table, or 329 acres more than have been assigned as public allotments to the labouring poor. If, in the opinion of the Committee, the proportion empowered to be taken might be extended to one-half, to be divided into half-acre allotments, the excess, as applied to those figures, would be 819 acres. This is the measure of the excess, which, if either principle were adopted, would take place in the amount of the public allotments out of the next 261,255 acres inclosed; and so on for the future.

This leads me to the second point to which I have said I wished to direct the attention of the Committee, namely, the apparent absence in the Annual Reports of the Commissioners of any definite rule as to the proportion to be set aside for the labouring poor, out of the land inclosed. In looking through the whole of the Annual Reports of the Commissioners, it will be seen that although, in many cases, a very ample proportion of the land to be inclosed was set out as an allotment to the labouring poor, in many other instances, not including the mountain or moor land, it would appear that the proportion was small, if the supposition be correct that the land was to be inclosed, in order to be brought into cultivation. If it was to be brought into cultivation, it would employ, according to its quality, one, two, three, or more men per 100 acres. I must illustrate this point by briefly calling the attention of the Committee to a few of the cases which I have found scattered through the Reports of the Inclosure Commissioners, in which what appears to be a very small amount of allotment for the labouring poor, has been made, so far as appears from the reports. There is the case of Wilburton, in Cambridgeshire, in 1847, where the extent was 779 acres, but where only two acres where allotted for the poor. There is then the case of Oakworth Common, in Yorkshire, in 1849, of 975 acres in extent, where only two acres were allotted. In Twyford Down, in the county of Southampton, in 1851, 647 acres were the extent, and two acres were allotted. In Lurkenhope Common, in Shropshire, in the same year, there were 596 acres, and only one acre

was

was allotted. I do not mean to say that this is a perfect account, nor am I able to offer explanations which, probably, the Inclosure Commissioners might make, but, looking at their reports, I see a considerable number of cases in which a very small allotment has been made. There is Nazeing, in Essex, in 1855, with 454 acres, where only one acre was allotted. In 1856, at Romsley, in the county of Worcester, there were 348 acres, and only one acre was allotted. At Alderholt, in the county of Dorset, in the same year, there were 842 acres, and only two acres were allotted. At Rogate, in the county of Sussex, in the same year, there were 848 acres, and only three acres were allotted. In 1857, at Ashwell, in the county of Hertford, there were 2,625 acres, and only three acres were allotted. At Bowesmoor, in the county of York, in the same year, there were 12,517 acres, and only four acres were allotted. At Burntwood, in the county of Stafford, in the same year, there were 1,840 acres, and only four acres were allotted. At North Baddesley, in the county of Southampton, in the same year, there were 738 acres, and two acres were allotted. I merely use these instances to show that any person looking over these reports will be struck by the very great variation in the quantity of land allotted. In some cases it will be found that the allotments appear very considerably beyond all proportion to the number of persons who would be likely to be called into existence to cultivate the land, and in other instances the allotments appear to be very small, coupled with the fact that all the inclosures were made with a view to the land being brought into cultivation. I use these instances for this purpose; I say that the averages which I have worked out in the previous part of my statement, do not tell the whole story, and that averages are for this purpose somewhat delusive. I would, therefore, submit that in all cases equity and sound policy point out that the allotment for the labouring poor should be on a liberal scale, bearing reference, not to the existing population only, but to that which may be called into existence by the inclosure and cultivation of the land. The principles, accordingly, which I would venture to suggest as those which should be kept in view are, first, that the amount of allotment should not fall below a certain ratio, calculated on the number of men per 100 acres to which the land, when inclosed and effectually cultivated, might be expected in time to afford employment; secondly, the principles above adverted to, according to which the Commissioners would be enabled to assign as the ratio of individual allotments one-fourth, or one-half, as half-acre allotments, and three-fourths, or one-half, as quarter-of-an-acre allotments.

The third point adverted to for consideration, is closely connected with this branch of the subject. From the table in section 296 of our report, it appears that as regards 19,516 acres inclosed, subject to the discretion of the Commissioners, no public allotments were made to the labouring poor, on the ground that "the poor had gardens already." I beg leave to submit, whether two arguments may not be fairly urged against this view. In the first place, the gardens which the poor have already may not be their own; they may be of very varying size, some very small. Although it may be the general custom of the locality to attach gardens to cottages, the custom may change with changes of ownership; land now in cottage gardens may be wanted for other purposes. Secondly, the plea that the poor "have gardens already" seems to contemplate only the present cottage population, whereas the words of the Act, and the equity of the case, seem to me to point not only to the existing population, whose field of labour would be the land now in cultivation, but to the additional number of labourers, and their families, who must of necessity be brought to the spot when the land is inclosed, if it is to fulfil the general object of inclosure (except in the case of mountain land), namely, that of bringing the land into cultivation. The wording of the clauses of the Act bearing upon this point seems to show clearly that the interests of the future labourers who might be brought upon the land were kept in view. The allotment for the poor inhabitants of the parish (that is under section 109 of the Act) is without limitation as to time or number; the managers of it, "the allotment wardens," are in part to be chosen "yearly." The Inclosure Commissioners are empowered by the same section to frame regulations for the management of the allotments, to be in force for five years; the land is to be re-valued every 10 years, and by section 149 the allotments are referred to as being "held in trust for the poor inhabitants of the parish." Further, by the same section, "the trustees for the time being" may at any time, with the consent of the Commissioners, exchange an allotment inconveniently situated for land more convenient and suitable. Manifestly, therefore, both increasing members and future generations are contemplated, and it is amply shown in sections 300 to 316 of our Report, by quotations from the evidence before the Select Committee of 1843, and by the speeches of honourable Members of leading authority, while the General Inclosure Bill was under discussion, that the interests of "the future cottagers" were kept clearly in view. I am led by these considerations to the conclusion that the reason given by the Commissioners for not allotting land because "the poor have gardens already," cannot be sustained. On the question of the land which is elevated, and unsuitable to garden allotments, I will say a few words before I close my remarks.

The fourth question is touched upon in section 318 of our Report, which notices the fact that up to this time, from the passing of the Inclosure Act in 1845, nothing is known as to whether or how far the 108th and 109th clauses of the Act (vesting in trustees the land assigned as public allotments to the labouring poor) have been carried into effect. We state that "Parliament has provided the means for securing the land in question permanently to the poor, but whether they are in the enjoyment of it the public is in ignorance." I presume to think that it might properly engage the attention of this Committee, whether any system could be devised by which the Inclosure Commissioners could periodically at intervals, perhaps of every five years, be kept informed by the allotment wardens as to the use made of the land assigned in public allotments; whether or not they were appreciated by the labouring poor, and, if not, what were the obstacles to be removed.

The fifth question is referred to in sections 233 and 317 of our Report. It is there suggested

Mr. *H. S. Tremenheere.*

8 June 1869.

gested that a return of the total quantity of land in cottage gardens and allotments should be obtained at the same time, and by the same machinery, as the agricultural return, namely, by the officers of the Inland Revenue Department, under direction of the Statistical Department of the Board of Trade. This question has been very favourably entertained by the Board of Trade, and inquiry was made of the Inland Revenue Department upon the subject. The answer was communicated to this Commission in April last, to the effect that the information could be obtained, but that it would be necessary to employ the assistance of overseers and other persons having local knowledge, and that the cost would be between 3,000 *l.* and 4,000 *l.* The Board of Trade, therefore, did not consider it desirable to carry out the suggestion. It may be acceptable to this Committee to be made acquainted with the fact that the cost of carrying the suggestion into effect has been approximately ascertained. Should the Committee deem the suggestion worthy of further consideration, I would only add, that all the purposes in view would probably be sufficiently answered if the inquiry was made once only every five years.

The sixth matter to which I beg to invite the attention of the Committee, relates to the table at section 296 of our Report. I beg leave to submit to the Committee that it would be satisfactory to Parliament, and to the public, if the results of the operation of the General Inclosure Act since the commencement of the Act in 1845 should be brought out from the annual Reports of the Inclosure Commissioners, somewhat after the form of that table. The table contains the facts to be gathered from the statements and figures in those Reports. I, extracted and arranged them with much labour, and the Inclosure Commissioners, as before mentioned, after examining them, assented to their general accuracy. Their absolute accuracy, however, cannot be ascertained without as minute an analysis, occupying much time, as I had subjected them to; and I regret to say that, on lately referring to my original manuscript, I discovered reason to believe that an omission had been made in copying it, which in one portion of the table, that giving the number of acres in which no allotment is made "because the poor have gardens already," caused the quantity stated to be too small. Without venturing to correct the table, I beg permission to submit it to the Committee in an amended and shortened form, which shows the total results up to the year 1867, and the manner in which, for the information of Parliament and of the public, the results of each succeeding year could be tabularised.

[*The Witness delivered in the following Paper:—*]

REPORT FOR 1868.

I.

	Acres.
Brought forward from last report. Total acres inclosed from 1845 to 1867 - - - - -	484,893
Acreage of inclosures confirmed since the last annual report - - - - - - - - - -	
TOTAL acreage of inclosures confirmed since 1845 - - - - - - - -	

II.

The acres, the inclosure of which has been confirmed since the last annual report, have been disposed of as follows:—	
Number of acres coming under section 31 of the Act which gives power to the Commissioners (the common rights being unstinted) to require public allotments for gardens to be assigned to the labouring poor - - - - - - - - - -	
Assigned to lords of manors and other persons having title to a portion of the land inclosed, acres - - - - - - - - -	
Assigned as public allotments to the labouring poor, acres - - - - - - - -	
Assigned to lords of manors and other claimants without any public allotment for gardens being made to the labouring poor - - - - -	
Number of acres not coming under section 31 (the common rights being stinted), and in respect of which the Commissioners have no power to require public allotments for gardens for the labouring poor - - - - - - - - -	

III.

Brought forward from the last annual report. Assigned to lords of manors and other persons having title to a portion of the land inclosed since 1845 -	
Assigned since last annual report (*see* Table) -	
TOTAL assigned since 1845, and out of which allotments have been made to the labouring poor - - - - - - - - -	
Brought forward from the last annual report. Assigned as public allotments to the labouring poor since 1845 - - - - - - - - - -	
Assigned since the last annual report to the labouring poor - - - - - - - - -	
TOTAL assigned since 1845 as public allotments to the labouring poor out of the above acres - - - - - - -	

Witness.] I may also mention that another error in the table has been pointed out to me by Mr. Wetherell, but it was an error which it was impossible for any person not connected with the office to discover. It has been adverted to by Mr. Darby in his evidence, and also by Mr. Bailey Denton, and it is this: the amount which is stated as about to be inclosed very often contains a proportion which is not subject to the discretion of the Commissioners. Mr. Bailey Denton alluded to four instances of that sort, but as there was no notice of it in the report, it was of course quite impossible for any person to discover that that was so. That would unquestionably vary the total figures; but, according to my view, it only affords a stronger reason why the Inclosure Commissioners might be called upon to tabularise the whole of their results up to the present time, and to add the results of every succeeding year.

Having been kindly permitted by the Committee to make this general statement, I wish to enlarge upon a few of the points, and especially since

REPORT

since I have had the advantage of reading the evidence of Mr. Darby and of Mr. Bailey Denton, and to call the attention of the Committee to some few of the points there adverted to. The points upon which I wish to say a few words are the following: In the first place, I wish to speak with regard to the fact, that the Act contemplates a prospective population. Secondly, I wish to allude to the suggestion of Mr. Bailey Denton, that it might be possible, by an alteration of the Act, to permit the land to be let to the labouring poor at a higher rent than that prescribed for farming purposes, so as to produce a fund out of which land might hereafter be acquired to be let to the labouring poor. Thirdly, I wish to call the attention of the Committee to the present constitution of the board of allotment wardens, and to make suggestions for its improvement.

With regard to the question whether the Act does or not contemplate a prospective population, I presume to think that references to the Report of 1843, to the Debates in Parliament, and also to the terms of the Act, make out a very strong case in favour of the view that a prospective population was in the mind of the Legislature at the time of the passing of the Act. On the other hand, it has been argued that, even if that is so, there is no need to take the prospective population into account, because it appears by the Agricultural Returns that the population of the agricultural districts is declining. On that point I beg leave to read to the Committee a paragraph in a pamphlet by Mr. Caird, on "Our Daily Food." At page 76 he says, "The proportion between the producers and consumers of food is thus undergoing a marked change. In 1831 28 per cent. of the population of England and Wales was occupied in the business of agriculture. In 1841 it was 22 per cent. In 1851 it had fallen to 16 per cent., not so much from an actual decrease of the numbers employed in agriculture as from the far greater proportional increase of trade. In 1861 the proportion was 10 per cent., and then not only had the proportion diminished, but the actual number had decreased by nearly one-fifth. It is a very remarkable fact, that in the course of a single generation the proportion of the people of England employed in and dependent on agriculture had diminished from a third to a tenth. The only means of arresting this is by providing better paid, and more regular employment in country work, and thus diminishing the temptation of the higher wages of the mines, the factory, and the towns:" so that Mr. Caird, recognising the fact that not only the proportional numbers but the actual numbers had increased, does not treat it as a thing which is to be invariable, and which is to proceed, but suggests that means should be taken to arrest it. Before we accept the fact that the numbers have decreased in any particular locality, I think that it is necessary to consider the causes of this decrease; whether small farms had been extinguished and thrown into large ones, and whether any part of the land had been converted into permanent pasture, and if the latter was the case, whether that process was likely to be one of indefinite extension in this country; and whether it is not the opinion of many practical persons that it has very nearly, if not quite, attained the maximum, and whether the quantity of land suitable for permanent pasture is not restricted by the fact of how much of it will take to feed a bullock—whether in fact one acre will feed a bullock, of which I presume there is no unlimited quantity in this country. Therefore it is hardly a pressing argument in a question of this kind, where the interests of the agricultural labourer are concerned, to be able to refer to the results of 10 years, during which it is an unquestionable fact that the actual numbers have decreased. I think that, as a matter of policy, Parliament is bound to contemplate the possibility of that process being arrested, and that the labourers who will be called into existence for the cultivation of this land which is about to be inclosed will increase. A second reason was suggested why it was not necessary to contemplate allotments for a prospective population, namely, that the landowners would in their own interest provide them when required. Mr. Darby mentions that if it was a matter left to large landowners, and liberal and good landowners in general, there could be no difficulty upon that point, but that the opposition comes from the smaller commoners, and from the farmers. And in point of fact the very Act itself assumes that you cannot rest upon the general principle that allotments will always be given, but that you must take security that they shall be given. Another fact mentioned by Mr. Darby was, that the poor were generally against the allotments, as if they were under a sense that they were likely to be deprived of some priviledge which they had before. It was also mentioned that the setting-out of allotments for a prospective population might encourage the small speculators in cottages to build them without reference to gardens. If a speculator build upon a portion of an allotment of land, the landowners would be equally able to build upon a portion of the inclosed land. In former days the small speculator was a good deal brought into existence. But now, since the law enlarging the area of settlement, the intervention of the small speculator in cottage building is not to be under the system of close parishes, contemplated as a thing always likely to go on, or to be accepted as an argument against providing legally for a prospective population an allotment which would manifestly be for their benefit. I am therefore led to the conclusion that deferred allotments, as they might be called, should be set out, contemplating a prospective population as well as the population now already in existence. Then the question arises, How would you manage it? I should presume to say that the valuer would be able to form a very good opinion from the quality of the land, as to what proportion of labourers would be required to work the land, supposing that it was well occupied, as regards capital and skill, and according to the best knowledge of the day, and that he would be able to say, "Inasmuch as this land is allotted for the purposes of cultivation, if it is properly cultivated it will employ one, two, or three men, per 100 acres." That being the case, a deferred allotment calculated upon that basis might be set out. Then the question arises, How would you let such a deferred allotment; would you confine it to the present regulations of the Act, that is to say, that it should be let only for garden purposes, and exclusively to the labouring poor? I think that, in a case of that kind, the allotment wardens should be empowered either to let that land for garden purposes to a higher class of occupants, or for farming purposes, and that they should be required

Mr. *H. S. Tremenheere.*

8 June 1869.

Mr. *H. S. Tremenheere.*

8 June 1869.

quired to capitalise the rent for future use. If it was let for farming purposes, it is quite clear that there should be an alteration in the Act, and that permission should be given to the allotment wardens to let it for a term not less than 14 years, for the sake of its improvement; and that as the rent accrued, it should be in the power of the allotment wardens either to use it in renting more land if required by the growth of the population, or in assisting them to purchase land more conveniently situated, which is a power which they have not now, but which they ought to have. Without going further into that point, I submit that it is a question for the consideration of the Committee, whether, if a prospective population is to be recognised, a mode of dealing with the land so allotted to them cannot be pointed out. In that respect it would in some way meet the ideas of Mr. Bailey Denton. He proposed that it should be in the power of the allotment wardens to let the land now allotted under the Act at a higher rent than the farm rent prescribed by the Act, and that the surplus should be used in order to hire other land; the said surplus forming, I presume, a guarantee fund in their hands which would secure them against risk in hiring land. If deferred allotments were also to be set out under an amended Act, there would be an additional source from which to derive a fund for those purposes. But in order that any such suggestion should be properly carried into effect, I think that it would be absolutely necessary to alter the constitution of the board of the allotment wardens. I think that there are many reasons, even irrespective of anything which Mr. Bailey Denton has suggested, why that should be done. It appears, according to the evidence, that the allotment wardens are occasionally not appointed at all, and that if appointed they have not acted; and, in other cases, it appears that they have exceeded their duties; and they are under no supervision. I think that those considerations suggest that it is very desirable that very considerable amendments should be made. As to their constitution, it appears very objectionable to unite with them the overseers and churchwardens of the poor. That appears to connect the system of allotments with the idea of their being in some respect in the hands of the poor law guardians; and Mr. Bailey Denton's plan seems to trench, without the modification which I have suggested, upon the principle of three Acts of Parliament which are in existence, but which have been in abeyance from that very cause. The first of those Acts is the Act of 59 Geo. 3. c. 12, in 1819, by which the overseers were empowered, in section 12, "to purchase, or to hire and take on lease, for and on account of the parish, any suitable portion or portions of land within or near to such parish, not exceeding 20 acres in the whole." Then, by the 13th section, it is enacted: "That for the promotion of industry amongst the poor, it shall be lawful for the churchwardens and overseers of the poor of any parish, with the consent of the inhabitants in vestry assembled, to let any portion or portions of such parish land as aforesaid, or of the land to be so purchased or taken on account of the parish, to any poor and industrious inhabitant of the parish, to be by him or her occupied and cultivated on his or her own account, and for his or her own benefit, at such reasonable rent, and for such term, as shall, by the inhabitants in vestry, be fixed and determined." There was another Act passed in 1831, extending the quantity to 50 acres. There was also another Act passed in 1832, with the same object, which Act recites, "Whereas in parishes inclosed under Acts of Parliament, there are in many cases allotments made for the benefit of the poor, chiefly with a view to fuel, which are now comparatively useless and unproductive; and whereas it would tend much to the welfare and happiness of the poor if those allotments could be let at a fair rent, and in small portions, to industrious cottagers of good character, while the distribution of fuel might be augmented by appropriating the said rents to the purchase of an additional quantity." But the Poor Law Commissioners in 1834, in reporting upon the question of allotments, reported that "where the system is carried on by individuals, it has been generally beneficial, but where managed by parish officers, it has seldom succeeded"; and I believe that, since that period, those arrangements have fallen pretty much into desuetude, chiefly because the churchwardens and overseers have had something to do with their management. I submit to the Committee, that if the constitution of the allotment wardens was altered, it might obviate that objection. I think that that body should be composed of the clergyman and two persons nominated by him, and also a fourth member. The clergyman is now empowered to nominate his own churchwarden, and I do not see that there is any objection to the clergyman being allowed to appoint two resident gentlemen who may take an interest in the matter, and I should say that the fourth member should be an elected member.

1186. *Chairman.*] Is it not the law at present that two persons may be elected to sit among the allotment wardens?—Yes.

1187. Are you not aware that that portion of the Act has been to a great extent inoperative?—I believe so, and therefore I would suggest that the clergyman should have power to nominate two persons, which would always enable him to have the assistance of men of influence and independent of the farmers in his parish, and that there should be a fourth member who might be elected by the vestry.

1188. Mr. *Liddell.*] Do you not think that there would be a considerable danger of conflict between the clergyman and the dissenting ministers if you gave the power to the clergyman?—I do not think that there would be. Conflict may very possibly arise on questions relating to schools, or on religious matters; but on the management of allotments it does not appear likely. At present the clergyman's churchwarden is a member of the board of allotment wardens, and I do not know that objections have been made to the constitution of the board on that score. But I merely submit to the consideration of the Committee what I have suggested, because I believe that it is very desirable that the constitution of the board of allotment wardens should be altered.

Tuesday, 15*th June* 1869.

MEMBERS PRESENT:

Colonel Barttelot.
Sir Michael Hicks Beach.
Mr. Thomas Chambers.
Mr. William Cowper.
Mr. Fawcett.
Mr. Leveson Gower.
Lord George Hamilton.
Mr. Lowther.
Mr. Knatchbull-Hugessen.
Mr. Liddell.
Mr. Philip Wykeham Martin.
Mr. Knight.
Mr. Pease.
Mr. Peek.
Mr. Walsh.

THE RIGHT HON. WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. HUGH SEYMOUR TREMENHEERE, called in; and further Examined.

Mr. *H. S. Tremenheere.*
15 June 1869.

1189. *Chairman.*] HAVE you any further observations to submit to the Committee, in continuation of the remarks which you made at their last meeting?—I have a few; but before I take up the thread of what I was laying before the Committee the other day, I wish to be permitted to revert to one point upon which I had not an opportunity of fully expressing my ideas. I am desirous of showing clearly to the Committee that I did not step beyond the line of my duty in dealing with this question of the inclosure of waste land. The Inquiries of the Commission of which I am at the head made it evident, as I stated on the last occasion, that the question of allotments bore very distinctly on the condition, and consequently upon the education, of the labouring classes. That led me to look into all the public documents which I could find illustrating that subject, from the latter end of the last century to the present time. Among the most important of those documents was the Report of the Committee of 1843, which dealt not only with the allotments but with the question of waste lands, and on the Report of that Committee the General Inclosure Act was founded. Of course I was led by that to look into the General Act, and subsequently, as a natural consequence, to look through the reports of the Inclosure Commissioners, considering that the whole question bore very directly upon the interests of the labourers in agriculture. I have been desirous of making these observations, not for the sake of setting myself right with the Inclosure Commissioners, who quite understand my reasons, but in case it might be thought by any other persons that I had stepped beyond the strict line of my duty in presuming to deal with this question, and in offering suggestions to the Committee upon it. Having said these few words, by way of explanation, I will resume what I was laying before the Committee on the last occasion, concerning the alteration of the constitution of the Board of Allotment Wardens. It occurs to me, with submission to the Committee, that means should be taken for bringing that Board into more direct communication with the Inclosure Commissioners, for two main purposes: first of all, if they are required to make periodical reports to the Inclosure Commissioners as to the manner in which the allotments have been dealt with, the Inclosure Commissioners would be able to present to Parliament periodically a report founded on those reports; secondly, an alteration of the Act would be desirable by which the Board of Allotment Wardens might be permitted to sell as well as to exchange allotment lands. The Committee are aware, that by two sections of the Act at present, the power of exchange is given. By section 86, the valuer, before the question of the inclosure is settled, is enabled to recommend the exchange of the land about to be set out as allotments, for old inclosures; secondly, by section 149, the allotment wardens are empowered at any time to exchange land. It appears to me, with submission to the Committee, to be desirable that the allotment wardens should have power, not only to exchange but to sell, subject to the approval of the Commissioners, in order to vest the proceeds in land more convenient and more suitable for allotments.

1190. Then your suggestion is, that the power of exchange should be enlarged to a power of sale?—Yes, and the proceeds to be reinvested in land more convenient. At present they can only exchange; they cannot sell.

1191. Would you intrust this power only to the Commissioners, or would you extend it to the allotment wardens?—I should intrust it to the allotment wardens, subject to the approval of the Commissioners.

1192. As the Commissioners are a more responsible body than the allotment wardens, do you see any advantage in taking from them the responsibility of making the purchase under the advice of the allotment wardens, and giving it to the allotment wardens to be the principal parties?—I should think that the allotment wardens, being on the spot, and being locally acquainted with the circumstances, would be better able to carry out that power than the Commissioners.

Mr. *H. S. Tremenheere*, 15 June 1869.

1193. Do you anticipate that the allotment wardens will be a differently constituted body from that which they are at present?—Certainly. Then, secondly, assuming always that they are a differently constituted body, I should say that their power of letting should be enlarged. At present they are only empowered, in fact they are required by the Act, to let the land at a farming rent. I think it desirable that this limitation should be no longer enforced. It is very possible that in many cases the pecuniary resources of the agricultural labourer may be so small that it would be a very great boon to him to have an allotment simply at a farming rent; but as long as the land is let below its value, so long I think it must be considered as a sort of gratuity to a labouring man, and a badge of dependence perpetuating the feeling of pauperism, provided he is able to pay a better rent. The higher rent I do not think could be considered in the light of a tax, as suggested by an Honourable Member, because it would really be a rent paid by an independent man coming as a competitor into the market, and he might, from the amount of his earnings, be able to pay it. I find, both from the evidence before this Committee and from other evidence, that in many cases the labourers are able and willing to pay a higher rent than a farm rent. Mr. Bailey Denton mentioned cases where they paid willingly from 4½ *d.* to 6 *d.*, whereas the farming rent would be only 2 *d.*

1194. I think you stated in the early part of your evidence, that you considered that those allotments were of great pecuniary advantage to the labourer; that pecuniary advantage would mainly arise from the rent being fixed at a farming rent; if you were to authorise the allotment wardens to get as much money as they could from the land, would you not then be depriving the labourer of the special pecuniary advantage which he gets from this land?—To a certain small extent. If the Right Honourable Chairman will allow me, I will illustrate how that would tell upon his income. Mr. Bailey Denton stated that the clear profit upon a quarter of an acre of allotment was 4 *l.* That is entirely consistent with a great deal of the evidence in the report of 1843. In the report of 1843 many witnesses state that the net profit ranges from 4 *l.* to 5 *l.* on a quarter of an acre. I find that Mr. Norman, in page 119 of the appendix to our report states the profit to be from 50 *s.* to 118 *s.*, according to size; and it is very rarely, as Honourable Members are aware, that the size exceeds a quarter of an acre. Mr. Culley, at page 134, after a great deal of investigation of the matter, puts the net money value to the labourer of an allotment on ordinary land, at 1 *s.* 6 *d.* per pole, out of which he says he pays 6 *d.* as rent; that is to say, not the rent according to the value of the land for farming purposes, but the accommodation or full rent. This leaves 1 *s.* per pole clear for the labourer. But, at a farming rent of 2 *d.*, supposing the allotment was 30 poles, the net value to the labourer would be 1 *s.* 4 *d.*, amounting to 40 *s.* But if he paid the full accommodation rent of 6 *d.* he would only gain 30 *s.*, of course, from his 30 poles; so that the difference in an allotment of that size would be 10 *s.* If you took an allotment of 40 poles at a farming rent, the clear gain would be 53 *s.* 4 *d.*; if you took 60 poles the clear gain would be 80 *s*; if you took 80 poles it would be 106 *s.* 8 *d.* In each case the difference of net value to the labourer would be represented by the sum of 4 *d.* per pole, to be deducted from the above amounts in case of his paying the full rent of 6 *d.*; but this would still leave him a clear 1 *s.* per pole, which would be such an addition to his income as might have a considerable effect in favour of the education of his children, by better enabling him to dispense with their labour at an early age.

1195. You do not make that suggestion for the benefit of the present occupier, because he is to pay more rent; who is to get the advantage of this increased payment of rent on the part of the present holder?—The allotment wardens should be empowered, under the supposed new constitution of their body, to obtain, if they could, with the sanction of the Inclosure Commissioners, that increased rent from either all the holders, or a certain proportion of the holders, as might be thought expedient under the circumstances of the labourer.

1196. Then does not your suggestion amount to this, that you would tax the present holders of allotments for the benefit of some future persons, who might possibly have other allotments?—I do not look upon it in the light of a tax. I think that it is simply putting the labourer on a footing of independence. Supposing the total earnings of a labourer amount to 16 *s.* or 18 *s.* a week, as they do in North Northumberland and in Yorkshire, and in some other places, he would be perfectly able to pay the full accommodation rent. The labourer in North Northumberland earning those wages has a cow as a portion of his wages, and that cow is not let to him under its market value. You estimate its real value, and it makes a part of his annual earnings. So I say, if he is able to pay the full accommodation rent, why should he not? By giving it to him at a lower rent, I think you lower his feeling of independence. It is very justifiable, I have no doubt, under certain circumstances, where the condition of the labourer is low, that he should have that benefit; but still it is a thing which I think can hardly be dissociated in the mind from the old principle of ekeing out wages through some extraneous source. Fifty years ago the labourers' wages were eked out by the cottage rents being paid out of the rates, and from various other sources. If his cottage rent, even now, is very much lower than the value, that is in point of fact, under a veiled form, paying wages in another shape.

1197. At present the rent of the allotment is fixed by the definite rule of taking the value of the land before the man's spade-labour renders it more valuable than it was before. Supposing that, instead of adopting that rule, your suggestion were to be taken that the rent should be fixed at that which it would fetch in the market, might not this injustice arise upon the cultivator of the ground; that after he had spent his own hand-labour upon it, and had raised it to a very high state of cultivation, such as in the case of a market garden near a town, he might then be obliged to increase the rent that he paid in consequence of the improvements which he himself had made upon the land?—I do not think such a case would be likely to arise. The allotment wardens would be men to be trusted in a matter of that kind, I should think. If the allotment was newly taken in and required a great deal of extra labour, any board of just men would put the land at nothing beyond the farming rent; and so it would be likely to remain,

just

just as any other landlord would allow it to remain, until the occupier had had his full value out of his improvement. But supposing that another generation came, and a subsequent tenant several years afterwards enters upon that land so improved, so that it would require no additional cultivation, and no additional expense, in that case I should think it just, provided that it be done without undue pressure upon the resources of the labourer, to let it at a higher rent.

1198. Does it not often happen that in the neighbourhood of towns, accommodation land is let at much more than its fair value, simply because there are certain persons to whom it is a very special object to have that land; and might not the same thing occur with regard to those allotment gardens, viz., that they might really be let above the value at which they would be let to an ordinary labourer, because somebody might offer to take them, desiring them for a very special reason?—That somebody could, under the Act as it stands, only be some other agricultural labourer; the allotments, as under the present Act, ought not to be thrown open to any higher class; I assume that the same class of people would have it; but if an agricultural labourer, or an artizan, were to offer a higher rent, I think the allotment wardens ought to have the power to accept it, subject, as their proceedings are proposed to be, to the revision of the Inclosure Commissioners.

1199. What was your next suggestion?—The last point which I wish to have the honour of noticing to the Committee, is a point which has connection I think, with the above question, supposing it was entertained by the Committee. Assuming that it may be the desire of the Committee that the Act should be altered, I would beg to call their attention to a clause in the Bill which was introduced in 1845, and which went through the House of Commons, but failed in the House of Lords. That Bill was brought in, I believe, by the Right Honourable the Chairman of this Committee. The clause in this Bill, to which I am about to refer, was designed for the purpose of facilitating the taking of land for allotment purposes, which was already under lease; and it was to prevent the necessity of a new lease in case both landlord and tenant might be willing to let land for allotment purposes. The clause was intended to give that power without disturbing the covenants of a lease, and therefore as we have been contemplating the sale of the present allotments, and the reinvestment of the money in more convenient allotments, and also contemplating a different power of letting, I should presume to suggest to the Committee, whether a clause of this kind might not be properly introduced into any amended Bill: "Be it enacted that, when any lands are held under any lease for a term of years, it shall be lawful for the lessor, with the consent of the lessee, to resume possession of any portion of the said demised lands for and during the residue of such term, without in any way affecting, disturbing, or making void the said lease or the covenants, conditions, and provisoes therein contained or any of them, so far as the same relates or relate to the residue of the lands therein contained; and the amount of the rent payable on behalf of the said portion of the demised land, of which possession has been resumed, shall be endorsed in a memorandum on the said lease, and the said lessee, his executors, administrators, and assigns shall be discharged and exonerated from so much and such part of the rent reserved in the said lease as is mentioned and set forth in the memorandum." I have slightly altered the wording from that of the clause in the Bill of 1845.

1200. Would you entrust that power to the allotment wardens, as at present constituted, or under some change?—Under the change which I have presumed to sketch out.

1201. The change, I think, which you suggested was, that the minister of the parish should have authority to name two allotment wardens; was that your idea?—Yes; and that another member should be elected.

1202. Supposing the Act were amended to that effect, what security would there be against a failure from negligence, or other causes, on the part of the clergyman and the electors to name this body of allotment wardens?—No more security than there is at present under the Act, but a better probability.

1203. At present, under the Act, the allotment wardens are permanent official persons who must always be in existence, and who have succession, and therefore, without the act of any person whatever, those allotment wardens, consisting of the churchwardens and overseers and the minister of the parish, are always in existence; would you not lose that advantage if you trusted to a selection or a nomination, which might possibly not take place, since there is no security in the Act that it should take place?—You would have the clergyman as a permanent officer; and it is often found now that, although there is succession in the body, in point of fact the churchwardens and overseers do not act, and that nobody is elected.

1204. Do you conclude then, that the duties under this Act are often considered so onerous that no one is willing, of his own accord, to undertake them?—It may be that it is in consequence of the duties being onerous, but I should hardly think that that would press very much as a general fact. I should be more inclined to attribute it to the disinclination of the churchwardens and overseers to take a part in it, inasmuch as they are very often farmers themselves, and they have a leaning rather against the allotment system.

1205. But, whether the duties of the allotment wardens are considered to be onerous, or whether there is a prejudice against their exercise, or whether the matter is thought of too little importance to be paid attention to, is it not the fact that that part of the Act which has directed that two allotment wardens should be elected by the ratepayers, has not been put into execution?—Certainly; and for that reason I would venture to submit to the Committee that power should be given to the clergyman to select two gentlemen to act with him, inasmuch as it may be assumed that the clergyman is most likely to take an interest in it, and that he would find persons in the parish willing to enter into it with him and prevent that failure.

1206. You also stated, that there was to be associated with him, one person elected by the ratepayers; have you reason to suppose, that under the new constitution that person would be more frequently elected by the ratepayers than he is at present?—If he was not elected by the ratepayers, there would still be a body consisting of three persons who would be likely, according

Mr. *H. S. Tremenheere.*

15 June 1869.

to my view, to carry out the intentions of the Legislature.

1207. But supposing that the clergyman did not execute his power of nomination, it would still remain then, that the clergyman of the parish would be the only person acting, would it not?—Yes.

1208. And yet you consider that larger powers might be entrusted to so small a body as that, than can be entrusted to the present body, which consists of the clergyman of the parish, with the certain addition of the churchwardens and overseers?—Yes, larger powers, subject to the approval of the Inclosure Commissioners, and connected also with a requirement that periodical reports should be made as to how the allotments are dealt with.

1209. Do you think that there would be really any advantage in eliminating from this body of allotment wardens, those persons bearing office in the parish, who are therefore certain to be always in existence, and always subject to the duties imposed upon them?—I should think that the certainty of their existence is somewhat counterbalanced by the unwillingness with which they are found to perform their duties.

1210. But one of those churchwardens is always nominated by the incumbent of the parish, is he not?—Yes.

1211. Do you apprehend that the person whom he nominated for the office of allotment warden, would be a very different character from the person whom he now nominates as churchwarden?—I should think so. It is very likely to be a landowner, or some independent gentleman in the parish.

1212. I understand, that you do not anticipate any great difficulty in intrusting a body of that sort, with the power to sell land?—I do not, subject to the approval of the Commissioners, and under the requirement that the proceeds should be reinvested in land, more suitable for allotment purposes.

1213. From what fund would they be able to defray the expenses, which must attach to selling and buying land?—I have contemplated the possibility of their being empowered to let a portion of the allotment at an accommodation rent; and to let what I have called the deferred allotment at what they could get for it, subject to the power of resuming it as wanted. I have also stated that I think that it is not desirable that they should be required to pay the net proceeds over in aid of the rates, but that they should be empowered to capitalise it. If they were to do so, a fund which would be small at first would increase, by which they would be able to obtain, in a different part of the parish, land of better quality, from the sale of the poor allotment land.

1214. Would it not be necessary to give them some sort of corporate existence, in order to prevent the fund which they might lay up at their bankers, passing at their deaths to their ordinary heirs?—No doubt it would, but being brought into connection with the Inclosure Commissioners, I presume that it would not be difficult to devise a plan by which the rent might be invested safely.

1215. At present all those difficulties are absent, because the body entrusted with such matters is the Commissioners; do you not think that if this power of selling was given to the Commissioners, they would be always willing, on their public responsibility, to attend to any suggestions, or representations, which were made to them by the allotment wardens?—I have no doubt that it would be so as a mere matter of convenience in administering the fund, which I entirely submit to the better judgment of the Committee. I merely say that I think that one body or the other might be entrusted with the administration of a fund of that kind.

1216. Have you any further suggestion to make for the amendment of the Act?—None.

1217. Have your inquiries led you to the conviction that it is for the public good that all labourers should have the occupation of so much garden ground as they can conveniently cultivate?—Yes; of so much as they can conveniently cultivate.

1218. What do you consider to be, in a general way, the advantages, moral and pecuniary, of the allotments to the labouring classes?—The moral advantages, I have no doubt, are very considerable. As was expressed by Sir Henry Fletcher, in the course of the inquiry before the Select Committee of 1843, the value of the allotment is to be estimated, not only by the money which it brings into the labourer's pocket, but by what it keeps in his pocket, and prevents from flowing out into the beerhouse, and other places.

1219. Do you attach much importance to the labourers having this useful recreation for their leisure hours?—Certainly, very great importance.

1220. And you consider that it is useful to children to have the training which is given them in a garden?—Certainly.

1221. Do you consider that a larger amount of produce is obtained from the soil by garden cultivation and spade husbandry than by farm cultivation?—No doubt.

1222. So that those allotments may be considered to add, so far as they go, to the total produce of the country?—Yes.

1223. Do those advantages of which we have been speaking belong only to agricultural labourers, or do they accrue to a still greater extent to labourers employed in sedentary occupations?—I am not prepared to say that they accrue to a still greater extent, but they accrue very considerably to the artizans engaged in sedentary occupations.

1224. A saddler or shoemaker, or anyone in a village who was occupied in a room all day, would be able to work with greater power in a garden, would he not, than a man who had been farming during the day?—Yes.

1225. And a man who had been engaged during the day in a sedentary occupation would gain more advantage in health, would he not, than a man who had been engaged in agricultural labour?—Yes.

1226. Then would you consider that the giving of allotments should be by no means restricted to persons employed in agriculture?—Certainly.

1227. Are you of opinion, from what you have seen of the subject, that notwithstanding the pains which many landowners have taken to furnish garden-ground to their tenants, a very considerable proportion of the labouring class are still without that advantage?—Certainly.

1228. Is not the demand for land so great that landowners must often find it difficult to appropriate sufficient land for the purpose?—Yes.

1229. Then, if there is this difficulty, do you think that it is specially desirable to get from the uninclosed land ground which might supply the deficiencies

deficiencies which have existed from various circumstances in the neighbourhood?—I do.

1230. You said that you were struck by the absence of any definite rule as to the proportion to be set aside for the labouring poor, out of the lands to be enclosed; what rules do you think could be laid down?—I stated in my evidence last week that I think it possible that a rule might be laid down by the valuer when he values the land for the general purposes of the inclosure, to the effect that an allotment might be set out, in proportion to the number of men likely to be employed per 100 acres, supposing the land to be brought into cultivation.

1231. As the matter must be left to the direction of the Commissioners, owing to the very changeable circumstances of each neighbourhood, would you not say that the rule which should govern the Commissioners, should be to set aside as much land for allotment gardens as would meet the wants of the labouring poor of the neighbourhood, without encroaching too far on the amount of land to be otherwise allotted?—I should think that that would be a somewhat indefinite instruction, and I do not think it is likely that it could be said that to allot land in the proportion which I have indicated, would be encroaching too far upon the total amount subject to the discretion of the Commissioners.

1232. You have mentioned one class of persons for whom gardens should be allotted, viz.: those who may after the inclosure be employed in cultivating it; but are there not other very extensive classes which ought to be considered in the matter, such as, for instance, those who residing in cottages in the neighbourhood of the waste that is to be inclosed, have had the enjoyment of the waste land, but who do not get compensation, because they are mere tenants, and have no property in the cottages in which they reside?—Their case appears to me to be contemplated under the Act at present. The allotment must be set out sufficient for the whole poor inhabitants of the parish.

1233. But if the allotment were only to be set out for those who are employed in the cultivation, might there not be a large number of poor inhabitants who would then get no benefit whatever from the allotment gardens? — The cottagers existing in the neighbourhood of land about to be inclosed, I assume, are employed now on the land now under cultivation.

1234. You speak now of those who are employed on farms, but are there not generally near waste lands a considerable number of persons who are not farm labourers?—There are many persons who live exclusively upon what they have obtained from the waste, or artizans.

1235. Are there not near waste lands many persons who may live in a variety of ways, but who are not actually employed on a farm, such as artizans?—I should hardly think that, in dealing with an agricultural question, you should take into account the increase in the artizan population.

1236. In villages and in scattered hamlets are there not often persons who from age or infirmities cannot be employed in agricultural labour, but to whom an allotment garden would be very suitable?—That is very true; but the condition does not seem to attach in the same degree to the land about to be inclosed to provide for such persons. I consider that, as regards the provision of allotments for a future population, the condition chiefly attaches to those who are likely to be brought into existence by the cultivation of the land.

Mr. *H. S. Tremenheere.*

15 June 1869.

1237. In such a case as I have supposed, where the cottagers were enjoying the common (whether by right or by user we do not now inquire), and where they get no compensation, because they are tenants and not landowners, do you not think that they would have as fair a claim as anyone for an allotment garden?—Their claim has been already recognised, by the present Act, in the assignment of the allotment on behalf of those rights; and I do not see myself that they have a further claim upon the land about to be inclosed, except the one now recognised on their behalf, in so far as they are poor inhabitants of the parish.

1238. You would not doubt, I suppose, that those persons would be suffering a loss by the inclosure, but still you think that though they have suffered a loss they ought to be excluded from the benefit of getting an allotment garden; do you not contemplate that those who framed the Act must have intended by setting apart this allotment ground, to prevent them from suffering, and to give them this sort of compensation, so that they might not be neglected, while everyone who had a right of property was taken care of?—I should hardly think that the Act contemplated these individuals from two points of view. They contemplated them as occupiers of cottages, either in fee or belonging to the lord. If the cottages belonged to the lord, an allotment was set out to the lord; if the cottagers occupied cottages of their own, an allotment was set out for them.

1239. But are you supposing that all those cottagers who were tenants and were occupying houses which were not their own, must necessarily be persons who would, after the inclosure, be employed in the cultivation of the inclosed land?—No; I think it highly probable that they are employed in the cultivation of the land which is now under cultivation.

1240. I think I understood you to say that in some way or other they would get a benefit from the inclosure of the land; in what way would their claim for some advantage, to arise to them out of the inclosure of the land, be satisfied?—If they were to be employed in the cultivation of the land to be inclosed they would get a benefit by it.

1241. But as you have estimated that either two or three men only are wanted for 100 acres, must there not arise a very large number of cases where men who have had the enjoyment of a common will not be employed in the cultivation of that common when it is inclosed?—Yes, they are employed in some way or other in the cultivation of the land now under cultivation, and their case is contemplated under the present Act.

1242. Will you state whether it is from the Act, or from general principles, that you have assumed that this allotment ground should be restricted to the use of those labourers who would be employed in the cultivation of the land after its inclosure, to the exclusion of others, either agricultural labourers or artizans, or to the exclusion of other people who are neither agricultural labourers nor artizans, but who still have been residing in the neighbourhood of the common, and have enjoyed it?—Perhaps I am wrong in limiting it to that extent. But I believe I misapprehended the scope of the question. My meaning is that the Act provides distinctly for the case of the

Mr. *H. S. Tremenheere.*

15 June 1869.

the existing "poor inhabitants," and contemplates, though it does not so distinctly refer to, a future population, for whom allotments would be equally desirable, and who have an equitable right to the consideration of Parliament.

1243. Do you find anything in the Act of Parliament which would point out that that was the particular class who were to be benefitted by those allotment gardens?—Certainly not; I insisted so much upon the necessity of some rule of that kind, principally with a view of securing to those who were likely to be called into existence in the cultivation of the land, an allotment which I find they do not now always get.

1244. Then there is another class of persons who reside in the neighbourhood, within such a distance of the allotment ground as that they might conveniently cultivate it, and who would come under the general designation, as used in the Act, of "labouring poor," but who have had no enjoyment of the common while it was waste, having simply the claim of neighbourhood, without any other claim whatever, and who neither have, nor are likely to have, any common rights; might they not also have a claim to be considered by the allotment wardens, in the appropriation of the allotment grounds?—Yes.

1245. If those various classes of persons, to which I have alluded, ought to be considered by the allotment wardens in distributing the land entrusted to them, does it not follow from your calculation, which would show that the Inclosure Commissioners have set out a sufficient portion of land, on an average, to meet the wants of those who are not employed in the cultivation of the inclosed land, that the amount set apart by the Inclosure Commissioners is insufficient for all the demands that might fairly be made upon the land so appropriated?—I had in view the fact that, according to the calculation suggested by Mr. Caird, founded on averages, proper provision had been made for all present claims. What I thought was defective was consideration for the claims of those who would be called into existence by the cultivation of the land.

1246. Am I right in supposing, that in your evidence you have suggested, that looking at the Reports of the Committee of 1843, and looking at the opinions which have been frequently expressed in Parliament, and looking at the Act itself, you are of opinion that those allotment grounds were intended for the general population of the labouring poor, without any particular restriction beyond that of their being in need of it?—Yes.

1247. And, therefore, may we not conclude from your calculation, that the amount of ground set apart as allotment gardens, has not been sufficient for that large class of persons?—Yes.

1248. You state in your evidence, that you think that the reasons given by the Inclosure Commissioners, for not assigning public allotments appeared questionable, as not being in accordance with the statutory intentions of the Act; and one of those reasons you said was, that the poor had gardens already; on what ground did you think that that reason was not in accordance with the intentions of the Act?—Because I thought that the intention of the Act was to provide allotments for the poor inhabitants of the parish; and that although they might have gardens, some might have very small gardens; and in all cases the tenure of those gardens might be insecure.

1249. Do you think that it would be desirable that the Commissioners should state in their reports what the sizes of those gardens were, in order that Parliament might judge whether the possession of a garden was really a reason why an additional piece of land should not be given to the holder?—Yes.

1250. You stated, that although power is given to the Commissioners to frame regulations for the letting of the allotments, they have not done so; is it not the fact, that in the Act the Commissioners have no power of enforcing their regulations?—Certainly.

1251. Therefore, their regulations would come simply in the form of advice, would they not?—Yes.

1252. Do you think that the advice which they would give for the letting of allotments would be such as would command the assent of parties who might think that they understood the particular circumstances of their locality, better than Commissioners sitting in London?—I think, that if the allotment wardens were to be in direct communication with the Commissioners in London, and sent up the rules for instance which they laid down in each case, it would be quite possible that the Commissioners might, in certain cases, see reason to suggest better rules, and their suggestion would be likely to come with considerable weight upon gentlemen who may not possibly be aware of what are the best rules.

1253. Do you think that in order to establish a satisfactory communication between the allotment wardens and the Commissioners, it would be necessary to give the Commissioners some coercive power over the allotment wardens?—I am not prepared to say to what extent that should be done; but with regard to the suggestion which I have ventured to make with reference to the power of sale of the land, there should be coercive power in that point of view; that is to say, that nothing should be done, except with the approval of the Commissioners.

1254. As it appears that the allotment wardens are not, generally speaking, very active or enterprising; in regard to this particular branch of duty, do you think that much is to be done simply by the Commissioners inviting communications from the allotment wardens?—I think it is a step which might be tried, and which might be attended with success; I am not prepared to say, that coercive power would not be better, but that I submit to the Committee.

1255. If it were imposed upon the Commissioners as a duty, to ascertain the facts of each case by sending persons on the spot to examine and report, would not a considerable expense be involved by such an arrangement?—Yes, if the Commissioners were required to examine into each case; but I do not contemplate that that would be at all necessary; if the allotment wardens were in regular communication with the Commissioners, I should think the Commissioners would be able very easily to judge in what cases special inquiry might be necessary.

1256. Do you suppose that the ordinary journeys of the Assistant Commissioners would enable them to obtain much information as to the manner in which previous inclosures had been dealt with by the allotment wardens?—I think if the Assistant Commissioners were instructed to keep the Commissioners in London informed to the best of their power, of the state and condition of the allotments, a great deal of information might be

be obtained which would operate as a check upon the allotment wardens.

1257. You have recommended that periodical returns should be obtained of the total quantity of land occupied in cottage gardens and field allotments; would that only be obtained by the statistical returns of the Board of Trade?—I have so stated.

1258. You have suggested the term of five years; do you think it would be necessary to receive those returns as often as every five years?—I should think that if the term was longer the question might fall out of sight; and therefore that it would be desirable to keep the Commissioners and the public informed once in five years as to how they are progressing.

1259. If the expense were not a consideration, you would wish to have it once in five years; but if a considerable sum was to be employed in obtaining it, would it not be sufficient to have a return every 10 years?—It would be very desirable to have it every 10 years, but I should say it would be more desirable to have it every five years. The sum, according to the opinion of the Inland Revenue Department, for a return for England and Wales, is not very large; between 3,000 *l.* and 4,000 *l.*

1260. With regard to those cases which you mentioned, where a maximum amount of half an acre was frequently used, do you understand that those half acres were frequently employed in the growth of fruit trees, or in the feeding of cows?—It does not strike me that they are very much employed in the feeding of cows, but in some counties they are partially used for the growth of fruit trees.

1261. So that even supposing that the maximum allotment of half an acre might be more than a labourer could cultivate conveniently with his own hands with a spade, yet you think in other ways he might get considerable produce from the ground with less labour, as for instance, with fruit trees?—Yes.

1262. Do you believe that it is common in England for labourers to keep cows?—It is, unfortunately, by no means common.

1263. Mr. *P. W. Martin.*] In the Midland counties is it not common?—In some counties, but very little in others.

1264. *Chairman.*] Can you state what average extent of pasture would be necessary to keep a cow?—I am not sufficiently conversant with farming matters to state positively, but I believe an acre of good land will keep a cow.

1265. Inferior land might require three acres, might it not?—Yes.

1266. But in the case of a man who had an allotment garden, he might be able to provide winter food for his cow out of his garden, might he not?—I am not so sure about that. I believe such cases are exceptional.

1267. But you are able to inform the Committee that where allotments are set out by private individuals, there are very numerous cases in which they have found that half an acre might advantageously be allotted to one family?—Yes.

1268. Mr. *Knatchbull-Hugessen.*] When you published your report in October last, you came to the conclusion, did you not, from the facts and figures before you, that the Inclosure Commissioners had not allotted as much land to the labouring poor as you thought, under the Act, they might have done?—Yes.

1269. But I understood you to say now, upon closer investigation, that taking into account the limitations imposed upon them by the Act, you think, on the whole, that they have acted liberally in the matter?—I do not think that that is exactly the upshot of what I have stated. I think that, taking averages, it does appear that they have allotted to the extent of a quarter of an acre per head; but I qualified that by saying that the averages were delusive in this case, and that there were many instances in which it appears that the quantity was smaller than I should think would be considered a liberal allotment.

1270. But as they are limited (as I think they are) to a quarter of an acre, you do not wish to blame the Commissioners for the course they have pursued?—Certainly not; I do not wish to blame them in the least degree.

1271. Do you not think that, taking into account the very varied and different circumstances of all those commons, any calculation founded on such averages must be, to a very great extent, fallacious?—Yes.

1272. You stated that you think that with reference to a greater allotment the improvement of position so gained by the labourer would enable him to send his children to school?—It enables him to keep them longer at school.

1273. Has it ever entered into your calculation that the desire to avail himself as much as possible of all the surplus labour of his family might induce him to keep them from school to work upon this allotment?—I do not think the amount of labour required upon the allotment would be sufficient to induce him to keep them from school for those purposes.

1274. Then do you not agree in the statement, that the value of an allotment to a labourer is in proportion to its proximity to his dwelling, and to the possibility of his employing upon it his own surplus labour and that of his family?—Certainly, the value greatly depends upon its proximity to his dwelling; but I do not think that the employment of the surplus labour of his family would be likely to have the effect of keeping the children from school.

1275. Is it not the case now that, in agricultural districts, one great difficulty which we have to contend against in our wish to educate the children of the poor, is the natural desire of the parents to get the benefit of their children's wages, whenever and wherever they can be employed?—Certainly.

1276. Then if a man's means would be materially improved by a considerable allotment, and the labour required upon the allotment would of course be in proportion to its size, do you not think it possible that by giving a large allotment you might create that temptation to keep the children from school instead of sending them to it?—I do not think it would be likely to operate to any great extent. The children go to school at nine o'clock in the morning, and leave at four o'clock in the afternoon. If the allotment is near the dwelling, there is plenty time in the morning and evening in which they can be most healthily and beneficially employed.

1277. With regard to the proposal that the minister of the parish should have the nomination of two of the allotment wardens, do you think that would be generally popular in the country?—I know that on general grounds giving any such power to a clergyman is objected to; but I think that it is chiefly objected to when ques-

Mr. *H. S. Tremenheere.*

15 June 1869.

tions relating to schools or churches, or any ecclesiastical matters arise, and that very little, if any, objection would be likely to arise in the case of an appointment having to deal with such a matter as allotments in the interest of the labouring poor. I merely made that as a suggestion, and if the Committee think that any other person would be better, of course it is open to them to recommend it.

1278. Do you not think it would be better if the clergyman, supposing it were desirable to give him more power, should at least nominate only half, and not a clear majority of the allotment wardens?—I thought it desirable to give the clergyman the power of nominating a clear majority, because of the difficulty of finding persons who will cordially enter into this question, especially in the exclusively rural districts, where the farmers are probably the persons now elected.

1279. With regard to the broad question of inclosures, what rights of property are you disposed to recognise in a manor which is about to be inclosed?—The fullest rights of property both in the lords and the commoners.

1280. At question 820, I asked Mr. Wetherell this: "Is your view of a common that it is exactly the same, divisible between different landowners, as inclosed land, except that in the one case there is a fence, and that in the other case there is no fence"? and that his answer was "Precisely"; is that the answer that you would give to that question?—From a legal point of view I have not the shadow of a doubt as to the entire rights of both lords and commoners over the soil about to be inclosed; but I presume to think that there is an equitable right in all those persons who might have the benefit of that common, supposing that they were living near to it, and supposing that it were to remain uninclosed; and that equitable right I am desirous of preserving for the benefit of those likely to be called into existence for the cultivation of that land.

1281. Do you recognise a legal right as exhausting a common, and a subsequent equitable right which is afterwards to override the legal right?—I do not think that is exactly the view to take of it. The legal right I consider to be distinctly in the lord and the commoners, but the equitable right is a thing which arises out of the circumstances connected with the general ownership of the land.

1282. Then you might fall back upon the truism, that property has its duties as well as its rights?—It is that.

1283. But in that case the same argument would apply to every person's property, whether it consisted of inclosed land or uninclosed land, would it not?—I do not think quite to the same degree. That uninclosed land has been uninclosed for centuries; as long as it remained uninclosed, although the strict legal right was in the lord and commoners, the persons growing up generation after generation on or in the neighbourhood of that common were able to obtain interests in it; and I think that, if you once put an end to that possibility of obtaining an interest in it, you are equitably required to provide prospectively for those who might otherwise have obtained such an interest.

1284. Do you draw a distinction between an interest and a right?—It is not a right which can be enforced in a court of law, but I submit that, in the consideration of the Legislature, it is equitable to the future occupants of that land, and the future labourers upon that land, that that inchoate and, as it were, imperfect right should be recognised.

1285. I suppose that it may be equitable, for some great public object, that Parliament should take somebody's property; but you would go rather beyond that in this case, would you not, and recognise some right on the part of the commoners?—There is a right, no doubt, in Parliament to take property for public purposes, for a road, or anything of that kind, giving the owners in that case compensation, because there was no prior equitable right; but I presume to think that there is a prior equitable right in all cases of inclosures, vested in the persons who, if the inclosures had not existed, might have obtained interests in that land.

1286. Do you recognise some right, on the part of the public, as distinct from the rights of the lords and commoners, which you think should be compensated in every inclosure of the waste of a manor?—For public purposes; but the question that I am contemplating is not a public purpose; it is for the purposes of individual advantage and interest.

1287. Then you somehow limit those rights of property, and you do not practically agree with the statement that the rights of property are exhausted by the lords and commoners?—The legal rights are.

1288. Upon what principles would you ascertain the extent and value of the equitable right or interest, so as to allot land according to it?—I acknowledge the extreme difficulty of ascertaining and defining any principle bearing upon the future; but still I think that it can be arrived at from the point of view which I have stated. If the inclosure is made for the purposes of cultivation, and when that inclosed land is cultivated, you employ 20 men, for instance, who had not been so employed before, I think it is equitable that the prospective interests of those 20 men in that inclosure should be provided for.

1289. You were asked something with regard to the tenants' compensation, that is to say, with regard to the compensation to persons who had occupied a house, and had of course enjoyed a certain benefit from the land for which they would not be compensated under this Bill; is it not the case that, if those people had any rights of property, they would receive an allotment in respect of those rights, and that if they had not rights of property, the only way in which they could receive allotments would be by coming within the category of labouring poor, to whom those allotments would be made; or would you suggest any other means by which the existing population could be considered?—I think that the Act contemplates their case; that, as labouring poor, they are entitled to the allotments. But, on referring to the Debates which took place when the general inclosure was under consideration, I gather from the tone of those Debates that something more was in the mind of the Legislature, and that they were contemplating not only the existing, but a future population.

1290. Let us take an instance which we have had before, viz., Kirton Marsh; here is a common which is to be cultivated; what is the process by which you would propose to bring that population into existence in the future?—Supposing that common consisted of a thousand acres, and

and was divided among four owners of 250 acres each; if the individual proprietors desired to bring that into cultivation, they would erect farm buildings, and employ their capital for the purpose; and among the things which they would do, would be presumably to build labourers' cottages there. If all landlords were liberal, and could be depended upon to provide for the comfort and convenience of their labourers, I should say that there was no need for this Act; but inasmuch as it is in evidence that there is reluctance to give even cottage gardens, in many cases, to the proper extent, and great reluctance to give allotments, especially the reluctance felt by the smaller commoners, I think the equity of the case requires that the interest of those future cultivators of that land should be provided for.

1291. Then you rely upon the large landowner still to build the cottages?—The large landowner or the small landowner, if he is to cultivate the land, must provide farm buildings and all their appurtenances.

1292. But people do not build farm buildings except for a considerable quantity of land?—I am speaking of the case assumed.

1293. Taking your own instance of four people having 250 acres each, and erecting buildings; is it to them that you would look to bring this population?—Certainly.

1294. But you think that, having brought it, it would be necessary to guard the prospective population against those who brought them there by giving them, from some extraneous source, gardens?—Out of the land so brought into cultivation, securing them the reasonable accommodation of a garden.

1295. They would labour on those 250 acres, I suppose?—Yes.

1296. Then, supposing that these proprietors of the 250 acres objected to their having allotments, you would be no better off than you were before, would you?—There would still be a fund; there would be an allotment set out on behalf of those 20 people.

1297. But if the proprietor who brought the men there and built cottages for them, objected to their having allotments, you would be no better off, would you?—The proprietor might certainly object to their having allotments; I mean, object both to public allotments, and to setting them out in connection with his own cottages.

1298. But wherever they were set out, supposing that the proprietor objected to those labourers having allotments (as farmers do, as you know), you would be no better off as regards providing for them, would you?—The case incidentally might happen, and the labourers for the time being would be no better off; but still, according to my views, the equity of the case would be satisfied, because Parliament would have secured so much land, and it does not follow that because one landlord might object to his labourers occupying such land, the next might do the same.

1299. But, supposing that they did not object to their having a garden, is it not probable that they would provide them with gardens to their cottages when they built the latter?—It is very probable, but it is not by any means universal; it is very frequently the case that the contrary exists.

1300. You do not think that it is safe to trust to those whose capital would bring the land into cultivation to provide the necessary labour and to make the labourers comfortable?—I do not, because I find at the present time there is a very great deficiency both of the cottage gardens and allotments.

1301. Is that the case all over England?—Not all over England, happily. In some counties gardens or allotments are very general, and most liberally provided.

1302. You speak of the absence of any definite rule as to the proportion of land to be set aside; you do not think it possible, I presume, to make any definite rule, but you would rather leave a wider discretion in the hands of the Commissioners?—Yes, indicating that such a rule might be laid down.

1303. There is no limit under the present Act as to the total amount which they may allot, but there is a limit as to the quantity to each individual allotment, is there not?—There is no limit as to the total amount; and I find that in many cases, very large allotments have been made far beyond any such rule as that which I have indicated.

1304. Do you not think that any considerable allotment being made in opposition to the wish of the lords and commoners might have a contrary effect to that which you suppose, and might rather prevent their encouraging the erection of cottages?—I should hope not.

1305. What is the passage in the Act which leads you to suppose that a prospective population was contemplated, or is it rather from the tone of the Debates that you gathered such an impression?—It is both from the Debates and from the general terms of the Act. I have referred to the clauses (sects. 109, 149) in a former part of my evidence.

1306. The Preamble of the Act is to this effect: "Whereas it is expedient to facilitate the inclosure and improvement of commons and other lands now subject to rights of property which obstruct cultivation, and the productive employment of labour:" that clearly contemplates a state of property which was detrimental to the interests of the country, and its improvement; but it clearly and fully recognises the rights of property, does it not?—Certainly. The Preamble of the Act is silent with respect to allotments; the Act, nevertheless, gives unlimited power to the Commissioners to set them out. By giving that power the Act does not the less clearly and fully recognise the rights of property.

1307. The size of the allotment (as to the benefit which it would be) must depend very much upon the quality of the land, and also upon the individual labourer's family, must it not?—Undoubtedly.

1308. I understand that you would only wish to untie the hands of the Commissioners, and to give them power to make a larger allotment, but you would not oblige them to give any larger allotments than they give at present?—Certainly not.

1309. Mr. *Liddell.*] You, I think, advocate the extension of the power of exchange given in the 149th clause of the Inclosure Act, to a power of sale to be invested in the hands of the allotment wardens?—Yes.

1310. A favourable opportunity might occur at any time of selling a portion of those allotments; I presume you would not debar them from availing themselves of any favourable opportunity which arose of effecting a sale; but you would rather

Mr. *H. S. Tremenheere.*

15 June 1869.

rather wish that they should avail themselves of any favourable opportunity which occurred, of selling at a good price, would you not?—Yes.

1311. But it might happen, that no equally favourable opportunity occurred for purchasing; how would you suggest that they should invest the money in the interim?—I have stated that the power of sale should not be exercised except with the permission and under the approval of the Commissioners; and I should contemplate that the allotment wardens would not be allowed to sell unless they saw a prospect of reinvesting.

1312. In land?—In land, of course, more conveniently situated for the purposes of allotments.

1313. Then I understand you distinctly to say, that you would not wish to see the power of sale placed in the hands of the allotment wardens, unless there was an immediate prospect of purchasing land, either more conveniently situated for the purposes of the poor, or for some other specific reason?—Certainly.

1314. You stated, a short time since, that there is no limit in the present Act to the total amount which may be appropriated to the labouring poor; did you say that you knew of cases in which lands were appropriated, and in the hands of the allotment wardens, considerably in excess of the demands of the district?—I did not intend to state that. What I intended to state was, that I see in the Reports of the Commissioners many instances in which a very large allotment has been made in proportion to the total quantity and amount of the inclosure; an allotment far beyond the measure of any rule which I have stated here.

1315. Does not that appear as if the Commissioners had had in their minds there, the probability of some prospective population arising, for whom they wish to provide?—I should think so, very possibly.

1316. Have you ever inquired into the circumstances under which these large and (as we will call them for the sake of argument) excessive appropriations have been set apart?—I do not think it at all my duty to go into the way in which the Commissioners have dealt with those cases.

1317. In reference to the prospective populations, you have said that you see a possibility of the valuer laying down some rule which is to be calculated, as I understand you, upon the probable increase of population required for the improved cultivation?—Yes.

1318. All that is based upon the supposition that the enclosed lands are to be used for agricultural purposes, is it not?—Certainly.

1319. But may it not very commonly occur, that they are applied for other purposes, and are used, for instance, as building ground; and are there not many cases of commons which are after inclosure applied to building purposes?—Yes.

1320. Do you imagine that it would be possible, in a case of that kind, to provide for the prospective increase of population?—That would depend upon the size of the inclosure. A portion of it might be built upon, and a portion of it might be brought into cultivation, and a considerable latitude should be left to the Commissioners to determine in cases of that kind, if you untied their hands, and enabled them to exercise their judgment upon each case as it arose.

1321. If it is fair to provide for the wants of the probable agricultural population, surely *à fortiori*, it is fair to provide for the wants of a future population springing up upon the existence of a town or large village, or a railway station, or any purpose of that kind, is it not?—I do not think that that presses to the same extent as the increase of population for agricultural purposes. The original grants of manors in feudal times, were for the purpose of raising a population for the defence of the country; and as that population increased, every head of a household, and every family born into the world on those manors, had an opportunity of getting a portion of this land out of which, or with the aid of which, they lived. It is beyond the byview of any such original grants that towns should have sprung up or have similar claims.

1322. Then, am I to distinctly understand, that you do not think that the time has come, when, in the inclosure of lands, either in the neighbourhood of villages or in the midst of large scattered communities, the future wants of a town or a village population, apart from the agricultural labourer, ought to be considered?—I am not prepared to go to that length. I think those are questions of discretion, which may be trusted to the Commissioners in each case.

1323. Supposing that a common, or a waste of a manor, is to be inclosed in a mining district, do you not think that the requirements of such a population as a mining population ought to be considered in appropriating future allotments for what may be called the labouring poor, taking them to be persons employed in manual labour, upon the confines of this ground?—A mining population is very often a temporary population; the mining ceases, and away goes the population.

1324. I understand, then, that you would invariably give the preference to a settled, over an unsettled population?—Yes.

1325. That would dismiss from consideration a very large amount of your calculations, would it not?—Yes, as far as providing for a prospective population is concerned. It is the interests of the future agricultural population which I think it is equitable chiefly to have in view.

1326. Mr. *Leveson Gower.*] Do you agree with Mr. Caird, that means should be taken to arrest the decrease of the agricultural population?—Certainly.

1327. Is it not a tendency in all civilised countries for their agricultural population to be diminished and their manufacturing population increased?—Comparatively, no doubt that is so; but it concerns very much the strength and power of this country that our agricultural population should be developed to the utmost possible extent.

1328. Is it not the case that agricultural improvements result in the diminution of the labour employed in agriculture?—If you have, we will say, any given area covered with small occupiers, of course agricultural improvements will doubtless tend to displace a number of those small occupiers. If that given area is all cultivated as one holding, supposing it to be badly cultivated, there will be a smaller proportion of labourers; if it is highly cultivated you will have a larger proportion on that land, and therefore the higher the cultivation, the greater the relative number of persons employed.

1329. Is it not the case that in the period from 1851 to 1861, the agricultural population was diminished?—Yes.

1330. And is it not likewise the case that a greatly

greatly increased amount of agricultural land was brought into cultivation during that period? —Yes.

1331. And that the agricultural produce has increased?—Yes.

1332. Has it not been the case that the labourers employed in agriculture, freed by the diminution of agricultural employment, have engaged in manufactures?—Yes.

1333. Do you not think that it is an advantage to the country that labour should go where it is best remunerated?—Certainly.

1334. In that case do you think that it would be wise by any artificial means to arrest that beneficial result?—I think that that beneficial result is quite consistent with the means taken to increase the amount of labour employed upon the land.

1335. It would have this tendency, would it not, that fewer would go to manufactures and more to agriculture?—There might be an increase to both; there might be an increase of the numbers employed upon the land.

1336. Do you think that any of those means would be sufficient to arrest that great diminution of the agricultural population which is the natural tendency of the country?—I should very much hope that this decline of the relative proportions of the agricultural population is not constant. If more capital were applied to the land, I see no reason why the agricultural population should not increase. Mr. Caird tells us that you want an addition of 50,000 acres a year to supply the persons brought annually into existence in this country; and it is to be hoped that by the increased improvement of machinery, and the greater application of capital to the land, the landed interest of this country will be able to supply a very considerable proportion of this demand, to the very great benefit of the country.

1337. Has it not been the case, that it has been found more and more profitable to purchase food in exchange for manufactures instead of producing it directly?—Yes, because agriculture has been in a very backward state.

1338. Has not that been the result of a freer communication with other countries?—Probably; but every year the agricultural skill of the country, and the machinery applied to agriculture is improving; and it is to be hoped that that will tell more and more upon the increase, both relatively and absolutely, of the agricultural labouring population.

1339. Has not that result been simultaneous with a very great improvement in agriculture? —A great improvement in agriculture has taken place within the last 20 or 30 years; but it is to be hoped that it has not come to anything like its termination yet.

1340. Supposing that the population does not increase in any district which is inclosed, if you put aside a certain amount of land for prospective population, is not that land lost to cultivation in the interim?—No. It would be let, as I ventured to sketch out, by the allotment wardens, for farming purposes.

1341. Mr. *Liddell.*] Always to be resumed when the demand arose?—Yes.

1342. Mr. *Lowther.*] I think you said that people occupied in sedentary occupation were likelier to cultivate, and did cultivate better than people employed in agriculture?—The Honourable Member must have mistaken my answer. I did not mean to say that they cultivated better, but in answer to a question of the Right Honourable Chairman, I said that I thought that it might be more beneficial to their health than in the case of agricultural labourers.

1343. Mr. *Peek.*] Is there not this difference between legal rights in inclosed lands and legal rights in or over commons, that, as a matter of fact, the land is not of such a nature as to enable the common to be inclosed and turned to profit? —Yes.

1344. Are not the lords and commoners, as a matter of fact, obliged to come to Parliament to enable them to inclose?—Yes; and that is the foundation of the view which I have taken; that in order that the lords and commoners should be enabled to give an additional value to the land to be inclosed, they must come to Parliament: and if they come to Parliament to ask for the use of a beneficial Act, I think it is equitable for the Legislature to say that out of the lands so to be inclosed the prospective interests of the persons who will cultivate that land should be secured to them.

1345. If so, may not an Inclosure Act be fairly deemed a boon, to be refused by Parliament or granted on such terms as they think fit?—Yes.

1346. In prescribing such terms, do you think that interests actually enjoyed by persons not able to prove them to the satisfaction of a legal tribunal, should be taken into account and protected?—Yes.

1347. From your inquiries into the present state of agriculture, do you agree with Mr. Darby and Mr. Wetherell that the best commons for agricultural purposes have been long since inclosed, and that those which now come under the operation of the Inclosure Act are of an inferior character?—As a general statement that is probably true; but I should venture to presume that there are many instances in which, from local circumstances, land of a very fair character has not yet been inclosed.

1348. In your calculations under question 1180, have you not considered only the provision of gardens for the additional labourers likely to be brought into a district to cultivate the land about to be enclosed, and not the labourers already there?—I am afraid I have been a little misunderstood, in regard to that point; I certainly contemplated, in making that suggestion relative to the future population, that the present Act dealt sufficiently with the interests of the existing poor population.

1349. I understood that you would require from all the allotment wardens periodical returns to the Inclosure Commissioners, and that no sale should be completed without such consent from head quarters?—Yes.

1350. How often would you relet the land?— In cases such as I contemplate of deferred allotments, it would be necessary, in order that such allotments should be brought into proper cultivation, to empower the allotment wardens to grant leases of 14 years.

1351. At the expiration of the leases, would you revalue them precisely as any other land?— Yes.

1352. Would you limit the competition for allotments to the labouring poor?—Yes, the competition for the allotments set out on behalf of the existing labouring poor, including the artizan class; but not the letting of what I have called the deferred allotments; allotments not immedi-

Mr. *H. S. Tremenheere.*

15 June 1869.

ately required for the purposes of the labouring population.

1353. If I have understood you aright, you have a scheme for creating, as it were, a *corpus* for the acquisition of additional lands?—Yes.

1354. Supposing that a labouring poor man could only see his way to give 1 *l.* for an allotment, but that I, being a gentleman in the neighbourhood, have a bailiff or a gardener, and would give 2 *l.* for that same piece of land, would you allow the competition of a person in my position as against the poor person?—Certainly not, in regard to allotments under the present Act; the Act now would prevent land being so let in a case of that kind; it is let by the allotment wardens, for the benefit of the labouring poor, to the labouring poor; and I presume, therefore, that that would be interpreted to mean strictly persons working for daily wages.

1355. You give a great deal of power to those allotment wardens; they might look upon a gentleman's bailiff, or a gentleman's gatekeeper, or gardener, as a labouring poor man, in the same way as they would look upon an agricultural labourer earning his 10 *s.* a week; and they might think also, might they not, that if they could get double the rent for the same piece of land, the double rent would go for the general advantage, and that they were doing their duty in getting that increased rent?—Their duty is to let to the labouring poor; and if they were to let to a higher class, such as shopkeepers in a village, assuming that the allotment wardens are to be in connection with the Commissioners, and to report to them, it would be in the power of any person acquainted with the facts and locally interested, to complain to the Commissioners, and any abuse of that kind would be stopped.

1356. That would be one of the great advantages, would it not, of those periodical reports which you think all allotment wardens ought by Parliament to be compelled to make to the Commissioners?—I think so.

1357. In the event of that supposed 1,000 acres being inclosed, would it not be easy, from the circumstances of similar neighbouring inclosed lands, to calculate what the probable wants of the 1,000 acres when inclosed would be?—I should think it would be very easy.

1358. Mr. *Fawcett.*] Have you not, as one of the Commissioners appointed to inquire into the condition of people employed in agriculture, in your report recently presented to Parliament, stated as a general conclusion that the poor had been injured, and not benefited, by the inclosure of lands?—I quoted the opinions of many leading politicians on both sides of the House, given during the discussion on the General Inclosure Bill, to the effect that the rights of the poor, in advertently, during the time that inclosures were made by private Acts, have been very greatly neglected.

1359. You quote the present Duke of Newcastle, when Lord Lincoln, who says that the interests of the labouring poor were systematically ignored and neglected, do you not?—Yes.

1360. Then you go on to say, do you not, without any qualification as to confining your remarks to inclosures having taken place under the private Acts, previous to 1843, that the poor have not been benefited but injured by the inclosure of lands, or words to that effect?—Not entirely; they have been greatly benefited, as I think I stated, by the increased value of their labour, and by their employment at higher wages given for the inclosed land.

1361. Do you state that in your report?—Yes. This may be the paragraph to which the Honourable Member referred:—"Now, it is made abundantly manifest by the evidence appended to this report, as, indeed, it has been long since by evidence on former occasions presented to Parliament, and otherwise brought before the public, that, beneficial as the extensive inclosure of waste lands and the system of large farms have generally been in providing better remuneration and more employment for the labourers in agriculture (while the public interests have been thereby, and at the same time, greatly promoted), other circumstances have arisen in conjunction with those great changes which have been pointed to as in some places greatly diminishing, in others entirely putting an end to, advantages which the agricultural labourer formerly possessed. First, the inclosure of waste lands has often and in various ways prejudicially affected the condition of the cottager."

1362. The last sentence which you have read refers not only to the inclosures which took place previous to 1843, but also may be taken to refer to some of the inclosures which have taken place under the Act which we are now considering, because you refer to evidence as given to you in your report?—Yes; the report proceeds thus:—"Secondly, the absorption of the small farms in larger ones has, in proportion as it has advanced, lessened his opportunities, and tended to deprive him of the hope, of rising out of the condition of a day labourer into one of comparative independence."

1363. Therefore, am I not right in saying that in some cases you say that the labourers by the inclosure of lands have been distinctly injured, and not benefited?—In some cases, they have been prejudicially affected in the sense of being deprived of opportunities of adding to their means by the help of land which had been a portion of the uninclosed land.

1364. Therefore, according to that opinion, you would not say that in every case it was desirable, according to the preamble of the Act of Parliament, to facilitate the inclosure of lands, but that each separate case ought to be examined and watched with a view of seeing whether it was desirable or not?—That is not the exact conclusion that I intended to draw. The conclusion which I intended to draw was, that, beneficial as the inclosures are on general grounds, it is desirable that, inasmuch as the interests of the cottagers frequently suffer, Parliament should protect those interests.

1365. Therefore, if they are not more amply and more fully protected than they have been during the last 25 years, since the Inclosure Acts were passed, in many cases the labouring poor will be prejudicially affected, and not benefited, by the inclosure of lands, will they not?—I am not prepared to go quite to the extent of the latter part of the Honourable Member's question, which strikes me as raising an argument against the inclosure at all in certain cases. The labouring poor generally are benefited inasmuch as a larger field is produced for their beneficial employment, and possibly at higher wages; but in certain cases they may be prejudicially affected by being deprived of the means of obtaining portions of that inclosed land, by grant or user, as they

they have hitherto been; and to some of them the more beneficial employment and the higher wages may not, and in fact do not, arise. This certainly points to the conclusion that their interests should be more fully protected than they have been during the last 25 years.

1366. But am I not to understand, from the words of your report, that, in some cases, you consider that the advantages which you have pointed out as resulting, as a general rule, from the inclosure of land, are, in some cases, more than counterbalanced, so far as the labouring poor are concerned, by the disadvantages which result to them from the inclosure of land; and therefore, on the whole, that they have been, in the case of some inclosures, prejudicially affected?—I did not mean that that conclusion which seems to be against the inclosure at all, should be drawn to that extent. It is correct, as far as regards some of the labouring poor.

1367. Do you not think that anyone would be justified in drawing such a conclusion from that sentence in your report?—It must be taken in connection with the context. I may have expressed myself inexactly, but this was my meaning, as I think will appear if that passage is read with the previous sentence and the following one: that, to a certain extent, and under certain circumstances, and with reference to certain things, they are prejudiced.

1368. Without asking you to express any general opinion with regard to the balance of advantages and disadvantages, do you think that, in consequence of some defects in the Act of Parliament in some cases, the poor have undoubtedly suffered under disadvantages from the inclosure of lands?—Yes, some of the poor in certain cases.

1369. You have stated, have you not, in your evidence, that you think that those persons who ought to be particularly considered with regard to the providing of allotments, are those who would be called into existence by the cultivation of land, which was about to be inclosed?—Yes.

1370. Are you aware that that opinion is in distinct antagonism to the opinion which has been expressed by the Chief Commissioner, Mr. Darby, he affirming that the Commissioners have no power whatever to consider those people who would be called into existence to cultivate the land which would be inclosed?—I am aware of that.

1371. Then you and Mr. Darby differ entirely on that point, do you not?—I presume so.

1372. Then, it being Mr. Darby's opinion that the prospective population ought not to be considered with regard to the inclosure of lands, we cannot conclude that, in reserving land as allotments for the labouring poor, the prospective population will be in the least degree taken into consideration by the Inclosure Commissioners, represented by Mr. Darby?—I suppose that is the case.

1373. Then that being the case, your calculation, by which you brought out the result that there had been enough land reserved as allotments, is a calculation which cannot in the least degree apply to the Commissioners, considering the rules which have regulated their conduct, because that calculation is based, is it not, upon elements which they say they have never considered?—They say they have not considered the prospective population.

1374. Your calculation, which would go to prove that a sufficient amount of land has been reserved for the labouring poor, is entirely based upon considering the prospective population, and that alone, is it not?—My calculation was based upon the fact that a quarter of an acre is the utmost which they can allot, and that the total amount, if calculated on that basis, would give a quarter of an acre per head to all the existing population among whom it was to be divided.

1375. I think that in your report, and also in your evidence, your calculation as to the sufficiency or insufficiency of the amount of land which has been reserved for allotments, is based upon the following considerations: speaking roughly, you state that 320,000 acres of land have been enclosed, out of which allotments could have been reserved for the labouring poor; you calculate that the number of people, supposing that two persons are required for 100 acres of land, who will be required to cultivate those 320,000 acres is somewhere about 8,000: then you suppose that each of those 8,000 persons has a quarter of an acre allotted to him: that gives about 2,000 acres required for allotments: you find that is the amount which the Commissioners have reserved, and therefore from that calculation you have come to the conclusion that, on the whole, the amount reserved has not been insufficient?—Yes, the Honourable Member has put it correctly.

1376. Then the calculation which you have made to prove that the amount has not been insufficient, is a calculation which the Commissioners could never in the least degree consider or entertain, is it not?—They did not entertain it; it was not within their view, I have no doubt.

1377. *Chairman.*] Was not this calculation suggested to you by one of the Commissioners himself?—Yes, by Mr. Caird.

1378. Might it not follow from that, that one of the Commissioners thought, that in laying out this ground for allotment gardens, the prospective population that would be employed in agriculture should be considered?—I do not think that that was in the consideration of Mr. Caird; I merely put the case to him, that a quarter of an acre per head ought, as might be gathered from the Act, to be assigned, and he said, "Well, take our figures, and it amounts to that."

1379. Mr. *Fawcett.*] But Mr. Caird never stated to you that the prospective population had been in the least degree taken into consideration by the Commissioners, did he?—Not at all.

1380. Mr. Darby stated in his evidence given before the Committee, that the prospective population had distinctly not been taken into their consideration; in an early part of your evidence I think you found that the calculation which you had made was not a very valuable one, because it was clear that not only the prospective population had to be considered, but also the existing population who came under the category of labouring poor?—Yes.

1381. Therefore as the amount reserved has only been just sufficient to provide a quarter of an acre for the prospective population which you suppose would be called into existence by the land which would be brought into cultivation, and would not provide for the labouring population now existing, would you not come to the general conclusion, that the amount reserved has been insufficient?—Yes. The impression I meant to convey was, that the amount was sufficient according to their point of view, and looking

Mr. *H. S. Tremenheere.*

15 June 1869.

to the limitation imposed upon them by the Act, as they interpreted it, and that therefore I imputed no blame to them. It was not my view, as I have shown by taking exception to basing the calculation upon averages, and by the other considerations which I have presumed to submit to the Committee; my argument was, if the Commissioners are right, there is so much more reason why the Act should be amended.

1382. In regard to the present Inclosure Bill, taking the case of Withypool; in that case, 2,000 acres of land would be brought under cultivation, would they not?—Yes.

1383. According to your calculation, would not 2,000 acres require 40 men to cultivate them?—Yes.

1384. Forty men at a quarter of an acre each, would require 10 acres of allotment?—Yes.

1385. Five only have been reserved?—Yes.

1386. Therefore, the quantity is insufficient by one half, is it not, if we consider only the prospective population, and take no notice of the existing population?—Exactly.

1387. With regard to Wisley, another common, there 380 acres would be brought into cultivation; and you are probably aware, that there no provision whatever is made with reference to prospective population?—I am.

1388. Therefore, taking the present Bill, if we only consider the prospective population, and leave out of consideration altogether the existing population, the quantity reserved as allotments is insufficient to provide for the prospective population, is it not?—Yes.

1389. Therefore, speaking generally with regard to the Inclosure Bill at the present time before Parliament, the quantity reserved as allotments for the labouring poor, is not adequate, is it?—Quite so.

1390. When you spoke of the commoners and the lord of the manor exhausting the legal rights in the common, you did not mean, I suppose, to lead the Committee to understand that that kind of property in common land is the same as property which is owned by a private individual, did you?—Certainly not.

1391. And the fact that it is not the same has been abundantly shown by the circumstance, that Parliament does not allow those whom you have described as the legal owners of commons to do anything with them without coming to Parliament?—Quite so.

1392. Have you at all considered the amount of land which has been reserved for recreation?—I have not.

1393. Have you any suggestions to make upon that point?—I have not.

1394. You have stated, I think, in your report, that allotments are even more important with regard to artizans and labourers who live in large towns, than with regard to labourers who are employed on the land?—They are more important in regard to their health.

1395. Then if there was a common in the neighbourhood of a large town, do you think that especial care ought to be taken, if possible, without doing injustice to the lord of the manor and the commoners, to reserve land for allotments?—Quite so.

1396. Have you considered whether, with regard to the lands reserved for allotments, some system of co-operative farming amongst the labourers themselves might be applied with advantage?—I have not.

1397. You are perfectly familiar with the system of co-operative farming introduced by Mr. Gurdon of Assington, are you not?—Yes.

1398. Do you think that five or six labourers joining their allotments together and cultivating them in common, might derive advantages from it?—I can conceive such a case, but I am afraid that, in the present stage of intelligence of the agricultural population, such cases would be very rare.

1399. But if your scheme of education was carried out, and their intelligence was improved, do you not think that it would not be so rare, and that great advantages might result?—Very possibly, in a future generation.

1400. Do you know whether such a thing as that is ever done at present?—I do not remember at present any case in which it is done.

1401. Should you conceive from the fact that the allotment is limited to a quarter of an acre, that there is anything in the Act to prevent that union of allotments amongst the labourers themselves?—No, I should think not.

1402. You contemplate, do you not, that the allotment wardens should keep the proceeds of the rents arising from the allotment gardens, for the purpose of buying more land, or for improving the existing land?—Yes, or for renting additional land, according to the suggestion of Mr. Darby, subject to the approval of the Commissioners.

1403. Then you would wish all those clauses and parts of the Act of Parliament to be repealed which at the present time call upon the allotment wardens to hand over the proceeds in aid of rates, or for the repair of highways?—Yes; that they should not be required absolutely to hand over the proceeds in aid of the rates.

1404. I suppose in your investigations it was brought under your notice that in some cases where there was open land and waste land, agricultural labourers got many comforts and many luxuries which it was impossible for them to obtain when all the land was inclosed?—Certainly.

1405. For instance, since the lands have been generally inclosed, it is much less frequent, is it not, for agricultural labourers, at any rate in some parts of the country, to keep cows, poultry, and pigs?—Yes.

1406. Do you not think in cases where cows, poultry, and pigs can be kept by agricultural labourers, it not only provides them with useful food, but gives them a very important addition to their income?—Decidedly so.

1407. Therefore in some cases you would say that the advantages which agricultural labourers derive from those waste lands are not compensated by the additional employment which results from the inclosure of the land?—Yes.

1408. Therefore it would be quite right for Parliament in some cases to say that this land, on public grounds, shall not be inclosed, would it not?—I hardly think that it would be right on public grounds to go to that extent; I should say that it should not be inclosed except subject to certain conditions. If it was to be kept uninclosed it might involve the withdrawal of so much very good land from future use for the benefit of the country.

1409. But do you not think that in cases where you do not consider that very great advantages would arise from the cultivation of the land, and where at the present time great advantages

vantages do arise to the poor from having an open space of ground, where it is possible to conceive that the advantage to the public would be greater from keeping the land open than from inclosing it, it would be right for Parliament, on grounds of public policy, to prevent the inclosure?—Parliament would doubtless deal with every case of that kind as it came before them. I should hesitate to lay down a general rule.

1410. Your idea, as far as I understand you, would be this: that without laying down a general rule Parliament should in each case consider the advantages and disadvantages that would result from the inclosure of any particular land; and if it came to the conclusion that the advantages which would result from keeping the land open, more than counterbalanced the disadvantages, or in other words that public advantage would result from keeping the land open, then it would be quite legitimate for Parliament to say that the lands should not be inclosed?—Yes.

1411. You think, speaking generally, that in a country increasing in population, such as England, where land is gradually becoming a scarcer and more expensive commodity, it is very important, at any rate, not to have all the open land inclosed, do you not?—I should think that if for the public convenience or the public health, it was thought desirable to prevent the inclosure of any land now waste, within a certain distance of large towns, it would be perfectly justifiable to prevent such inclosures; but that must be considered *sub modo* in each particular case. Railways were referred to the other day, and it was said that they gave access to uninclosed land 20 and 30 miles away from the population. I should say that it would be highly unjust to the lords and commoners to prevent such land being inclosed without compensation; but if the distance, instead of 20 miles, was two miles, it would be a very different thing.

1412. Am I not correct in saying that the late Sir Robert Peel, and other very eminent politicians, laid down the doctrine that the inclosure of land ought to be watched by Parliament with the utmost care, because labouring persons who had common rights held property which they could not alienate?—Yes.

1413. And that when the common is inclosed, and a certain amount of property is given to them in compensation, that property they can immediately dispose of, and the next generation is robbed?—It was so.

1414. And therefore in many cases, although the compensation given to labourers is perfectly fair and ample, that property is got rid of, and the next generation is decidedly worse off than the previous one?—Yes, that was Sir Robert Peel's doctrine.

1415. Are you aware that Mr. Darby gave a list of 30 parishes in which there had been very large inclosures of land, and that he stated that in the great majority of those 30 parishes, selected at hazard, there had been a reduction of population?—Yes.

1416. If the inclosure of land causes more employment to the people, as it must do, by bringing more land into cultivation, how can you account for this decrease of population?—The decrease in population in those particular parishes might have arisen from various circumstances. What I adverted to the other day might have been one of the causes; that is to say, if small farms had been thrown into large ones, that might have caused a decrease. The populations might have been in excess before, and it might have been desirable that the excess should be drafted off.

1417. But still it is almost fair to conclude, is it not, that where there is a large inclosure of land, and more land has been brought into cultivation, and you find, after a few years, that the result of that is that the population has decreased, the result has not been very satisfactory to the labouring population?—The population may have decreased upon land already in cultivation from various causes; but I do not think that that is a foundation for argument, either one way or the other. It might vary.

1418. In the case of land, such as Kirton Marsh, to which the Honourable Member for Sandwich has alluded, in which there are no cottages, it has been stated by previous witnesses that we might leave it to the landowners, who would be induced, by a feeling of duty and self-interest, to build cottages with proper gardens; do you think that the combination of those motives is sufficient to secure good cottages with gardens to labourers?—Certainly not.

1419. And you say that, from your experience of the state of cottages in different parts of the country?—Yes.

1420. Therefore, in every case in which it was possible, do you think it would be well, as far as the labouring poor were concerned, to reserve land which might be devoted to allotments?—Yes; Parliament having the power to do so before they allow a beneficial Act to be put into execution.

1421. Have you any suggestions to make with regard to the form in which the Reports are presented to Parliament?—I have ventured to lay before the Committee a form which I presume would give the facts in a clear manner, subject to any suggestion for the improvement of such form.

1422. You have stated, have you not, that you have examined and gone through, very carefully, those Reports ever since the year 1845?—Very carefully.

1423. Should you, or should you not, say that the information contained in them was so indefinite that, in many cases, it would be difficult for a Member, who had nothing whatever else to guide him, to decide whether enough land had or had not been reserved for the labouring poor?—It would be extremely difficult, and indeed impossible.

1424. Therefore, under the present system, Parliament is called upon to decide upon a very important question without sufficient information to enable it to come to a proper decision, is it not?—That is my opinion.

1425. Colonel *Barttelot.*] I think you are a barrister, are you not?—I was at the bar a great many years ago.

1426. Will you kindly, as nearly as you can, describe to the Committee what is the distinction between law and equity; is not equity, in the legal sense, governed by rules as definite as those which govern the common law?—Yes.

1427. And does not the practice in Chancery require a specific *locus standi* for access to its jurisdiction, just in the same way as the practice in the common law courts?—Certainly, in cases that are to come before the courts.

1428. Then, *primâ facie*, must not a man have some

Mr. *H. S. Tremenheere.*

15 June 1869.

some right before he can put in a claim to any portion of a common?—Certainly; a legal claim.

1429. I am asking these questions because you have been asked a great number of questions upon the rights of those who are neither lords nor commoners; and I wish you, if you are able, clearly to define how far you would go in that equitable right?—I have endeavoured to make it clear that I would go as far as this: that inasmuch as the General Inclosure Act is a beneficial Act, I think it equitable in the view of Parliament (for I am not speaking of a Court of Chancery), to recognise the rights of persons who would be called into existence for the cultivation of the land so to be inclosed.

1430. But do you recognise any rights of the public who have been in the habit of using that common by walking or riding over it?—With all deference to the honourable Member, it is rather beyond the scope of my duties to pronounce an opinion upon that. That is a question which refers to the interests of the general public. I have had my mind kept upon the question of the interests of the labouring population, but I will give the best answer in my power, if the honourable Member wishes to repeat the question.

1431. I should like an answer to that question, because I distinctly understood you to say, in answer to an Honourable Member, that you only looked to the interest of the agricultural poor, and not beyond it?—I did not mean that the agricultural poor ought alone to be considered; but that in certain cases the interest of artisans and villagers came fairly within view in a question of this kind with regard to allotments; but if I am asked whether persons living near, who have been in the habit of walking over the common, or of straying over it for purposes of pleasure, ought to be considered the case of an inclosure, I should say no doubt that it would be considered when the question came before Parliament; and it might please Parliament to say that in consequence of that user of the public in certain cases, that common should not be inclosed if it was near a town.

1432. But because people, without any right, had gone down by railway, we will say, 10 miles from a town, and had used that common, you would not reserve any portion of that common for their pleasure and recreation?—No; that was a case which I put to an Honourable Member just now; that because railways brought people 10 or 20 miles out of town to recreate themselves upon this common, I should not think it at all just that the owner of that common should be debarred from inclosing it in consequence of the modern invention of railways; if Parliament thought it desirable for the public health that such a common should be kept uninclosed, that would be a case for compensation, I should think.

1433. I think you stated that no common could be inclosed, without coming to Parliament for such an inclosure?—Yes.

1434. Do you not know that it is a fact, that supposing a man is lord of the manor, and owns all the rights upon a common, he can inclose that common at his will and pleasure?—Yes.

1435. Then it is not the fact, is it, that they must come to Parliament for every inclosure?—Of course it is subject to an exceptional case of that kind.

1436. Do you not know that it is a fact, that a lord of the manor, with commoners holding in fee, if they agree upon the distribution of the common, can inclose that common at his pleasure without coming to Parliament?—It may be so; but I apprehend that the question before me now is, what is legal, and what is justifiable under a general Act; what is done outside of it, I do not know.

1437. If that is so, and if in certain instances the waste land can be inclosed in that manner, does not that clearly prove that the lord and commoners in other uninclosed lands, have the legal right to the soil?—They have the legal right. In cases where the ownership is divided, and the commoners do not agree, Parliament has pointed out a mode by which they can do what is beneficial to themselves, namely, divide the common among them.

1438. Clearly showing that they have more or less of legal right in the ground?—I have never disputed for a moment the legal right.

1439. It has been stated by a former witness, that Parliament placed those terms upon those inclosures, for the purpose of giving an inexpensive method of inclosure, instead of a very expensive one; is that your opinion?—Yes.

1440. I understand generally from the whole of your evidence, that you think that the present Inclosure Act does work well, and is a fair and just Act, but that you would like to amend it, by allowing the Commissioners to allot rather a larger portion of allotment land, and perhaps rather a larger amount of recreation ground?—I did not touch the question of the recreation ground at all, but a larger amount of allotment ground, I think, might be apportioned.

1441. I think I distinctly understood from you, that in no instance would you wish to reserve more than half-an-acre?—No.

1442. And that as a general rule, a quarter of an acre is amply sufficient?—Yes.

1443. If the cottager had a garden besides, would you think that unless he had a family, a quarter of an acre was too much?—I do not think that that is the general opinion. Very often a man without a large family, if he is a skilled and industrious man, can work a quarter of an acre, either attached to his cottage, or close to it. That is very much the case in very large allotments.

1444. Putting all the other questions on one side, and taking it as a broad principle, you think that the proper rights ought to be reserved to the lords and the commoners, but with rather a larger amount of allotment in each inclosure?—Quite so.

1445. In regard to the question of the land which is still left uninclosed, do you know the country generally, more or less, from north to south?—Yes, more or less.

1446. Do you not know that there is a large proportion of very stiff clay land in some counties which has not been inclosed, and which is waterlogged, and is in a very bad state from want of drainage; and that that land, when drained, and well cultivated, does produce very good crops, and produces a great deal more for purposes of food than is now produced?—No doubt.

1447. Do you not know that in many instances the inclosure of that land is a very great boon to the whole neighbourhood, on account of the drainage, and that it makes the neighbourhood much more healthy?—Certainly.

1448. Although the poor people may in some instances lose some rights which you have described, yet you think that for the general benefit

benefit of the district those lands ought to be inclosed?—Certainly; I have never said anything to raise the contrary presumption.

1449. There was one interesting point which you mentioned in Northumberland, and that was in regard to a man keeping a cow; can you tell me at all what rent they pay in that part of the world for a cow?—£. 8 a year, I think.

1450. In the south of England, we always count the profit of a cow at 10 *l.*; I presume that there the farmer, or whoever lets it to them, keeps the cow, and they pay him the 8 *l.* a year, and keep all the profit?—I presume so.

1451. In the counties of Sussex and Surrey, with which I am pretty well acquainted, there are, perhaps, as many commons as there are anywhere in the country; I should be very sorry to deny that in many instances the poor man who can keep a cow, and can rent a meadow, benefits very much by the fact of the common being uninclosed; but if, when the common is inclosed, that man is in a position to take three, or four, or five acres of the inclosed land, and can still keep his cow, he would not sustain any injury by the inclosure, would he?—No.

1452. Do you think it advisable that the landlord should stock the garden with fruit trees, or that the cottager should find his own trees?—In such counties as Herefordshire and Worcestershire, I know that the cottager makes a great deal of his fruit trees at very little cost.

1453. Of course, if the landlord finds the trees, the tenant has to pay more rent; do you advise the landlord to find them, or do you recommend the tenant to find the trees?—I have known instances in which the landlord has found the trees for a small payment.

1454. When once planted they cannot be removed?—No.

1455. With regard to the power to sell the allotments, I presume that your idea with regard to that was, that you might sell the allotments in places out of the way, and not convenient for the labouring poor, and that you would be much more likely to be able to buy a piece of land in the immediate neighbourhood, than you would be to be able to exchange it?—Certainly.

1456. With regard to the higher rent, I presume that depends very much upon the class of soil; if it is a good loamy soil, a man could afford to give a higher rent in proportion to the farming rent, than if it was a light sandy soil, could he not?—Certainly; a light sandy soil would require so much more manure.

1457. Supposing that a great alteration was made in the present system of inclosure, and that a larger proportion of land was retained for other purposes than that of the lords and commoners, of course all those lands that have been inclosed would have been inclosed on much more advantageous terms than those that in the future would be inclosed, would they not?—The difference would really be very small over so large an area. I have stated in my evidence that, supposing a larger proportion had been taken by the Inclosure Commissioners, for instance, in the first supposed case, half-an-acre more over one-fourth of the total amount; in the second case, half-an-acre more over one-half of the total amount inclosed, and out of which allotments were made; the difference in the 261,000 acres inclosed would have been, in the first case, that 330 more acres would have been assigned as allotments, and in the second case, 819 acres; so that I cannot conceive that the additional portion of land can be treated as deducting anything of importance from either the lord or the commoners.

1458. *Chairman.* In comparing the inclosures under the Inclosure Act, with those that took place before it, must we not remember that the machinery is far less expensive now than it was under the old system?—Certainly; under the old system, an Inclosure Act cost several hundred pounds.

1459. You have been asked whether you agree with Mr. Wetherell, that a common is exactly the same, devisible between landowners as inclosed land, except that in the one case there is a fence, and in the other there is no fence; does not that involve a very great difference?—Yes; that is a very important difference.

1460. Is not the difference this, that the ownership of land which gives the right of inclosing land by fences, carries with it the right of excluding the public?—Yes.

1461. But a right of common which is limited to the use of the produce of the surface, and does not extend to the erection of fences does not involve the exclusion of the public, does it?—No.

1462. Would it not be necessary for any one bringing an action for trespass, to show that an inclosure had been broken?—Certainly.

1463. And the absence of a fence would probably prevent him from successfully bringing an action against a trespasser?—I apprehend that it is not quite so; the trespass might be to a certain extent over an uninclosed land, so as to injure its value for feeding purposes, and if the trespass amounted to anything serious enough to sustain an action, something more than a farthing damages would be obtained; the commoners have a right to be protected in the user of their pasturage.

1464. But taking the case of the pure presence of an individual who had no special rights in a common, would not the fact of there being no right of inclosing that common make an immense difference between that case and the case of a person walking over land which was inclosed?—Certainly.

1465. Then if Parliament gives to the lord and the commoners the power which they had not before, of erecting fences upon the land, thereby practically depriving the public of a power which they previously exercised, is it not perfectly fair that Parliament should impose the conditions which it has imposed by the Act of Parliament, that some portion of the land to be inclosed should be set apart for the benefit of the public, either in the form of recreation ground or of allotment gardens for the labouring poor?—Decidedly, and it is only a question of degree between what the Act now does, and what I have taken the liberty of suggesting to the Committee.

1466. Supposing that it were to appear that in a particular proposal for inclosure, the inconvenience to the public of being deprived of the power which they practically exercised of going over a common was great, might not Parliament fairly decline to give to the persons who were pecuniarily interested in that common the advantages of the Inclosure Act, to enable them thereby to exclude the public?—Yes.

1467. Mr. *Knatchbull-Hugessen.*] There are rights of passage over inclosed lands, are there not, by way of footpaths?—Certainly.

Mr. *H. S. Tremenheere.*

15 June 1869.

1468. Did you ever know an instance of an action for trespass being successfully brought, where no damage whatever had been done, even in the case of inclosed lands?—I do not know that I ever knew a case, but such a case is quite possible in order to sustain a right.

1469. The Chairman says that Parliament gives the power of erecting fences and excluding the public; but is it not, as a matter of law, the fact that, if the lords and the commoners can agree, they have the power of erecting fences and inclosing and excluding the public without coming to Parliament?—That is so.

1470. Therefore is it not the fact that the Act of Parliament, which we are now considering, was passed in order rather, in the first instance, to facilitate the settling of disputes between the lords and commoners as to whether those fences should be erected, and as to the proper division between themselves?—As a matter of history, I am not aware of that. I believe its principal object was to provide a less expensive mode of proceeding.

1471. Does not the Preamble of that Bill show that?—It is to facilitate inclosures, no doubt; but the Act itself imposes terms at the same time.

1472. Therefore we must, after all, come back to this; what is a public right, and how is it to be defined, and, if it exists, how is it to be compensated?—Yes. But I must not be understood by this answer to admit that those propositions exhaust the whole subject. The Act gives two distinct kinds of power to the Commissioners; first, that of dealing with rights cognisable in a court of law. On behalf of these they, among other things, are required to assign allotments in respect of proved legal rights. Secondly, by section 31, unlimited power is granted to them to set out allotments "for the labouring poor," irrespective of any rights that can be enforced in a court of law. These latter allotments are called by the Commissioners "public allotments," to distinguish them from the former, set out on behalf of their rights.

1473. *Chairman.*] When Parliament, in any form, grants an Inclosure Act, does it not take away, by that Inclosure Act, certain powers of wandering to and fro upon the open land which, whatever may be the legal right involved, may still, practically, be exercised by the public?—Yes.

1474. Mr. *Fawcett.*] Is there, to your mind, any analogy between the case which the Honourable Member for Sandwich has put to you, of a footpath through inclosed land, and the right of wandering over uninclosed land?—I think not.

1475. The footpath may be walled on each side, may it not, so as absolutely to exclude the public from wandering, on foot, either to the right or to the left of the footpath?—Yes.

1476. You have stated, in reply to the question of the honourable and gallant Member for West Sussex, and the Honourable Member for Sandwich, that, in certain cases, a common can be inclosed without coming to Parliament; that never practically takes place, does it?—I am not aware.

1477. And for this reason, that it is impossible to get that consent between the lords and the commoners, from the fact that they are certain, some of them, to have different rights in the property?—I should think it a very rare case.

1478. Have you ever known a case?—No; but my experience is not large in matters of that kind.

1479. It is more a theoretical than a practical right, is it not?—I should think so.

1480. You stated, in defence of your proposal for letting those allotments at a competition rent, and not at a fair agricultural rent, that you think it will increase the independence of the labourer; and you strengthened that argument by saying that in Northumberland, where the agricultural labourers are better off than in any other part of the kingdom, they take a cow at the full market price, and it is not given them as a charity?—Yes.

1481. Is not the case of the allotment, and the rent of a cow, somewhat different; is not the cow rented from the farmer, and if the cow was rented at less than its market value it would be something in aid of wages, would it not?—Yes; and if you let an allotment worth sixpence per pole, to a man capable of paying the full value, for twopence, you in point of fact make him a present of fourpence.

1482. But does not the real difference arise in this way, whether the present is made to him by his employer, or whether it is made to him by a body entirely independent of his employer?—I do not think that there is a difference in the effect upon the *morale* of the labourer; I think that if you give a well-paid labourer an allotment below its market value, it comes into the same category as paying cottagers' rents out of rates; both are done by an extraneous body, independent of his employer; but both, I conceive, have a bad effect upon the independent feeling of the labourer.

1483. But, according to that, if you let a man an allotment for nothing, or if it was his own property you would make out that he was no better off for it than if he had to pay a very heavy rent, would you not?—No.

1484. Mr. *Leveson Gower.*] When you say that you do not know of any commons which have been inclosed without coming to Parliament, do you mean to state that you are not aware of any such cases, or that you know that there are no such cases?—My answer was, that I was not very conversant with matters of that kind, and that I was not aware of any such cases.

Mr. James Reed, called in; and Examined.

Mr. *J. Reed.*

1485. *Chairman.*] Where do you reside?—In the village of Withypool.

1486. What office do you fill in that parish?—I am clerk of the parish, in the parish church.

1487. How near is Withypool Common to the village?—I should say about a furlong, that is to say from the central part of the village; some of it is not so far.

1488. What is the population of the village?—The population of the village, I should think, must average from 120 to 150, that is to say, men, women, and children.

1489. Do you know how many houses there are?—Yes, to an average; it is not a great number to count. There are about 30, and I consider that they contain from four to five in each, averaging

aging the one with the other. There are more houses on the borders of the village, that will add to population.

1490. Where is the school situated to which an acre of waste land has been assigned as a playground?—The school is in the village.

1491. Where is the piece of land that has been assigned to it?—That is not far from the village; I should think it is about, perhaps, rather more than a furlong from the school.

1492. Has the school any playground now?—None whatever, except the public road.

1493. Are the inhabitants of the village in the habit of walking upon the common?—They are.

1494. How often do you think they go there?—That is a question that is difficult for me to answer; but I very often see them there.

1495. Do they play any games on the common?—They do, sometimes.

1496. What sort of games?—They play at "tip," and various games.

1497. Can you tell us how they play at that first game which you mentioned?—Tip heels over head; also play with balls. I never practised it at all; I am past that; my hair is the wrong colour for that.

1498. When the common is inclosed where will they go to take their walks, and to have their games and recreations?—I cannot say where they can go; I do not know of any place. There were some small places about the village that people laid a claim to, and they are now inclosed; therefore there is nothing but the road.

1499. How far do you think they would have to go along the road, before they found another open space where they could enjoy themselves?—They could not find one for miles, except they did go on the common.

1500. Is there no open common within reach of an ordinary walk?—No; he would not want any more recreation by the time he came to any other common.

1501. Is this common on a steep hill, or a gentle slope?—A gentle slope.

1502. It is all upon rising ground, is it?—A little rising ground.

1503. Can they play at ball on this sloping ground?—Yes; but I never took particular notice of their plays.

1504. What other people do you know are in the habit of going on this common, besides those who live in the village?—There is a friendly society of young men established in the village, and they generally take their pastime there on their annual meeting days.

1505. Are there any other people living in the neighbourhood, who do not live in the village, and who yet are in the habit of going upon this common?—I do not know that I ever saw any in particular. I might have seen some there, but I cannot say particularly.

1506. Is there any other village near this common, besides the village of Withypool?—No.

1507. Are the inhabitants quite satisfied with the settlement which has been made, namely, that the common is to be inclosed, and that no recreation ground is to be set apart, except the one acre for the school?—So far as I have inquired, they are not.

1508. What is the feeling, so far as you know it?—They seem to state that they shall be bound up in that way, when all the waste, as I have stated before, will be inclosed; that they will be as badly off, they say, as in a town, and will not have the accommodation which they would get in a town in the way of recreation ground. The population of the whole parish is about 300, and I think, the village is nearly half.

1509. What reason have you for supposing that the inhabitants of the village think it a hardship that they should have no recreation ground?—Because they say so.

1510. Have they ever said so in a public meeting?—I do not know that ever they did in public meeting; but I received a letter to inquire a little into the minds of the people about it; I did not give them to understand that I had received that letter, nor that it required an answer, yet I found that their discourse was to have more recreation ground.

1511. What is your own personal opinion about it?—I do not think it is enough.

1512. Do you think that if a recreation ground had been set apart of several acres, that ground would generally have been used?—I do.

1513. Did you, or did any other of the inhabitants of the village, express that opinion when the assistant commissioner came down there to consider the subject?—I do not know whether they did at that time, but they have since.

1514. Have they ever sent up a memorial to the Commissioners on the subject?—Not that I know of.

1515. Is there some land already inclosed in or about the village?—Yes.

1516. How is that land occupied?—It is under cultivation.

1517. Mr. *Knatchbull-Hugessen.*] You received a letter asking you to make inquiries about it?—I did.

1518. That called your attention to the matter?—Yes, it did.

1519. You had not thought much about it before, I suppose?—I had thought of it, and had spoken of it before, that it was not enough; in fact, if I understood it rightly, the Commissioner was not satisfied to lay down so small a portion.

1520. How do you know that?—Because he said that he would have some portion. There was a landowner or two who seemed to say that we had got recreation ground enough besides, and that they could go to work, and recreate themselves with that.

1521. Had you full notice of the meeting which the assistant commissioner held when he came to Withypool?—Yes, I think there was due notice given.

1522. Did you yourself attend?—I did.

1523. And not many of the inhabitants attended?—Yes, some attended; several of the labouring class attended.

1524. Did they then complain?—I heard complaints the same evening.

1525. How far do you live from the common?—I live near the centre of the village; and, as I have stated, the centre of the village is about a furlong from the common. But a little more to the playground already appointed, or to the more convenient ground.

1526. There are five acres allotted for recreation, are there not?—I do not think it is one. There are three roads to be cut out of it.

1527. You cannot play many games on one acre, can you?—No, we cannot.

1528. Mr. *Knight.*] Is not wrestling one of the chief games at Withypool?—Yes; I have seen that, but never on the common but once, that I know of.

Mr. *J. Reed.*
15 June 1869.

1529. The land you speak of which was inclosed in the village was one of the old Exmoor Pounds, was it not?—There are portions there which bear the name of pounds, and there are others, which do not, that have been recently inclosed, that would have been convenient for playground.

1530. Mr. *Lowther.*] You said that you received a letter from somebody about the inclosures?—I did.

1531. Did you tell anybody that you had had this letter?—No.

1532. Did you receive the letter before you had the meeting?—No, since that; I did not tell anyone that I had had a letter.

1533. Are you married?—Yes.

1534. Did you tell your wife?—No, I had no need to. She saw the letter.

1535. You do not think she told anybody about it, do you?—I do not know; I cannot say for that. Women are not a class to keep secrets.

1536. Was there any talk in the village about it?—I do not know that there was, but I cannot say there was not.

1537. Did you come together at the public, and have a talk about it?—No; I inquired of some individuals about it, and some were so slender in their minds about it that I did not think it worth while to inquire of them.

1538. Did you find that they did not care much about it?—I found that they were willing to leave more room, and they were not satisfied with the small room to be left uninclosed, as it was likely it would be.

1539. Are there no fields round Withypool where they can walk?—Yes; they can trespass if they risk that; but if any one had a field there he would not like to have the field trespassed for any kind of plays. It is not often they do.

1540. How long are you in walking from the village to the common?—In walking a furlong, it depends upon the pace I walk.

1541. But how long does it take you yourself to walk from the village to the common?—I can walk there leisurely in 10 minutes, and perhaps in five minutes.

1542. If they want to go to any other common for recreations, they must go a very long way, must they?—Yes, they must.

1543. How much time would be occupied in walking there?—You must go a long, long way for it. I think they must come out on Brendon Hill Ironworks.

1544. How much time would they have to occupy in walking there?—There is a common about five or six miles away, so that would depend upon the pace they walked, as to about what time it would take them to go there.

1545. Mr. *Knight.*] Could they not go to Winsford Hill?—They dare not go there, I know.

1546. Mr. *Martin.*] Do they play cricket down there?—Yes, sometimes.

1547. Do they play football?—I do not know a great deal about their plays; I do not pay much attention to it. I am more of a working man than a playing man.

1548. Mr. *Fawcett.*] I understood you to say that some of the large landowners objected to the small quantity of one acre being reserved?—They did.

1549. Was it the large landowners who objected?—There were some; I never heard it come from them myself, but I was informed that two or three who had some property near, expected that if there was much taken for playground they should be obliged to go further for their allotments; they were thinking that they should have that ground which might be apportioned for playgrounds or gardens, or whatever it might be, so they stuck fast to as small a portion as that; I have been informed by some of the neighbours that that was the case.

1550. Do you know whether the landowners were large or small landowners who objected to it?—There was one whose farm, perhaps, might be about 70 *l.* or 80 *l.* a year; he joins with his farm that very plot which has been appointed.

1551. It was stated, in reply to a question which I put to the Commissioner, that the reason why they did not reserve more than one acre for the recreation ground was, that all the rest of the land was so steep, that if they had reserved any other land it would have been of no use for purposes of recreation; should you from your local knowledge say that was that correct, or not correct?—It never could rest upon that point at all, because the land is very little at a declivity; there is nothing dangerous, there is nothing to hinder the working of any plough. I have seen them dancing on the green, and such plays as that; I have seen as many as 50 couple dancing at a time on the green that might be laid down for a playground.

1552. Then if 50 couples came there, I suppose that was at the time of the Friendly Society's meeting?—Yes.

1553. A population of 120 would scarcely supply 50 couple, would it?—No; they had a band there, and that is something new to them.

1554. Then I am to understand you, that a larger recreation ground than this might have been set out on equally convenient ground, and equally near the village?—Quite so, on the other side of the road. The road divides this piece, which has been partly appointed out, as might be said, and the piece which I was saying could be apportioned out, perhaps four times as large.

1555. *Chairman.*] Would that portion on the other side of the road, be as flat as the portion which has been set apart for a recreation ground?—It lies in the same state, it lies to one scheme in the same way.

1556. Colonel *Barttelot.*] You talked about a green; is there a village green, or was there a village green there?—The grass was green on the common, and there was a village green before it was inclosed.

1557. There was a village green before this last inclosure, was there?—No, there was a village green, which our minister fought very hard to keep as a playground, and he tried it at Taunton, and it cost him, I dare say, 300 *l.*, or 400 *l.*, to try to keep it as a recreation ground.

1558. When was this inclosure of the village green made, of which you are now speaking?—That must have been, I suppose, 15 or 16 years ago.

1559. Then, if I understand you aright, four acres or more could have been got within a furlong of the village, which would have answered all the purposes of a recreation ground, if it had not been recently inclosed?—I daresay there might have been a portion that could have been appointed out.

1560. You have stated that close to the village there

there was plenty of ground which could be set out as recreation ground. I think that the assistant commissioner has stated that there was no such ground; I want you distinctly to state to the Committee whether, in your opinion, within one furlong of the village, there is ground which could have been set out sufficiently good for a recreation ground?—It is my opinion, if it had not been recently inclosed by freebooters.

1561. Mr. *Knatchbull-Hugessen.*] You are parish clerk, are you not?—I am.

1562. You are pretty well acquainted with your rector, of course?—Yes.

1563. Do you agree with him in his statement that the labourers are pretty generally freebooters, living on plunder?—I cannot say that. There have been robberies committed on the land, no doubt.

1564. You do not quite agree with that description, do you?—No, I do not; nor have I had anything to do with it, either.

1565. *Chairman.*] What part has the Reverend Mr. Jekyll taken in this inclosure?—Mr. Jekyll did not inclose it. He went and tried it at Taunton, to keep it open, and he was beaten.

1566. When the Commissioner came down, did the Reverend Mr. Jekyll take the part of the poor inhabitants in their want of a place of recreation?—I cannot say whether he did for recreation; but this I can say, that I heard him speaking particularly that there ought to be a portion otherwise, either for gardens or for turf; but for recreation I did not hear him, though he might have said so.

1567. Mr. *Knatchbull-Hugessen.*] Did Mr. Jekyll attend the meeting?—He did. Mr. *J. Reed.* 15 June 1869.

1568. Do you know that he is satisfied with the allotment which has been set out?—I do not know.

1569. If he is satisfied, would that do a good deal to reconcile you to it?—I do not know that it would. He does not want any recreation ground, for he has plenty to go to of his own, for he takes a three-miles' ride to the church.

1570. Even if some of the people are freebooters, that is no reason, you think, why they should not have a little recreation?—No.

1571. Mr. *Knight.*] Did you ever hear the old saying,—

> "Steal the sheep, and sell the wool,
> Say the bells of Withypool"?—

I have heard it now; but I never heard it before.

1572. Mr. *Martin.*] Are those people who object tenant farmers, or are they rich squires?—Not squires.

1573. But what sort of people were they?—Farmers.

1574. Were they small tenant farmers?—They vary about it. I have heard the opinions of two or three.

1575. What is the largest farm in the parish, either in acreage or in rental?—I dare say the largest farm in the parish is not above 300 acres.

Tuesday, 22nd June 1869.

MEMBERS PRESENT:

Colonel Barttelot.	Mr. Knatchbull-Hugessen.
Sir Michael Hicks Beach.	Mr. Liddell.
Mr. William Cowper.	Mr. Lowther.
Mr. Fawcett.	Mr. Phillip Wykeham Martin.
Mr. Leveson Gower.	Mr. Knight.
Lord George Hamilton.	Mr. Pease.
Mr. Vernon Harcourt.	Mr. Peek.
Mr. Andrew Johnston.	Mr. Walsh.

THE RIGHT HONOURABLE WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. WILLIAM BUSHEN, called in; and Examined

Mr. *W. Bushen.*

22 June 1869.

1576. *Chairman.*] WHERE do you reside?—At Withypool.

1577. What situation do you fill at Withypool?—Schoolmaster.

1578. Can you inform the Committee in what position the recreation ground is situated which has been set apart by the recent provisional order of the Inclosure Commissioners?—Yes.

1579. Will you explain to the Committee what is the position of that piece of ground; how near is it to the school?—It is about three furlongs from it; I want a map to show it exactly. I have a little sketch, if the Committee would like to look at it. (*The Witness produced the same, and explained it to the Committee.*)

1580. Is the recreation ground on the opposite side of the river from the village and the school?—Yes.

1581. And is it near the common?—Yes.

1582. In short, it is a corner of the common?—Yes, only a road separates it.

1583. Do you think that one acre of ground is as much as is required by the inhabitants of the village and the neighbourhood for the purpose of recreation?—No.

1584. Supposing that more were to be taken from the common, would that part which might be taken from the common be of the same character as the one acre which has been set apart already for a recreation ground?—Just the same.

1585. I see on this map a road; is the part which has been set apart on the whole of one side of that road?—Yes.

1586. And would the part which might be added to it be on the other side of that road?—Yes.

1587. Will you describe the character of the ground which has been set apart for a recreation ground; is it flat ground?—No.

1588. What sort of slope has it?—About 20 inches in a perch.

1589. What is the inclination of the ground near it which you have pointed out as capable of being added to the one acre which has been set out?—It is just the same; it would be on the opposite side of the road.

1590. Is the ground on the other side of the road of the same gradient, that is to say, 20 inches in a perch?—Just the same.

1591. Would you say that that part on the other side of the road is not steeper than the part on this side of the road?—It is just the same.

1592. Is it the same in the character of the soil?—Nearly so; it is rather wet; but that would not be any injury to the recreation ground; that applies to one corner near the road.

1593. Have the children of your school at present any playground?—They go out in the roads, and play on the common, just where they like.

1594. Is it the custom of the inhabitants of the village generally to go out on this common?—Yes.

1595. Have you frequently seen them there?—Yes.

1596. Do they play at any games on the common?—Yes.

1597. What sort of games?—"Cat and dog," and "hare and hounds," and foot-ball.

1598. The first games which you have mentioned would require a good deal of space for their adequate enjoyment, would they not?—Yes, especially hare and hounds; the hare would have to dodge about a good deal, there being a small space.

1599. You have said that the ground on the eastern side of the road is on the same inclination as the ground on the western side of the road; can you state how far that ground extends, and will you say that it is of the same slope as that on the western side?—I should think that you might have seven or eight acres there.

1600. And after you have taken about seven acres does the hill rise more precipitously?—Yes.

1601. Mr. *Knatchbull-Hugessen.*] How many children

children have you at your school?—There are 35 on the books now; there are 45 in the winter.

1602. Do you say that the recreation ground allotted is insufficient for them?—Yes; an acre would be insufficient.

1603. Did you appear at any of the meetings which were held at Withypool previously to the provisional order?—No.

1604. You did not urge the claims of the inhabitants to a larger recreation ground?—I did not; I know that recreation ground was left at Exford.

1605. Do you know whether the common is to be divided among many individuals or appropriated only to two or three?—To many.

1606. Are there many inhabitants of the parish among whom it would be divided?—Yes.

1607. Persons who are resident there?—Yes.

1608. The same persons who would enjoy it for recreation?—Yes.

1609. Do you think that those persons would prefer having it divided among them, and each man receiving a portion as his separate property, or having it left open for recreation?—Having it left open for recreation.

1610. Did you take any means to ascertain that?—I have spoken to several persons about it, and they seem willing to have some recreation ground.

1611. Are any of them dissatisfied with the amount which is allotted to them; have you heard any of them say that they have not had a sufficient amount allotted?—There is none allotted yet.

1612. I have understood you to say that those people who claimed recreation ground are the same people who claim rights of common?—They will claim.

1613. But still you think that they would be better satisfied to have it left open rather than inclosed and divided amongst them?—I think so.

1614. Mr. *Liddell.*] Did not you think that it formed any part of your duty when the assistant inclosure commissioner came down to investigate this scheme for inclosing the common, to represent the interests of the school of which you are the head?—I understood some ground was to be left as recreation ground, and having no business there else I did not attend the meeting.

1615. Then you were not made aware how small a proportion was to be assigned in the shape of recreation ground?—Not before; I have heard of it since.

1616. If you had had a little more information previously, should you have felt it your duty to have gone and represented the interests of the children?—I should.

1617. I understood you to say that a portion of this acre appropriated for recreation ground was what you call "rather wet"; what do you mean by "rather wet"?—It is not a portion of the acre that has been appropriated for recreation ground that is wet, but a small portion of the land adjoining.

1618. Is it a bog?—Yes.

1619. And is it so boggy that it would be unsafe, or very inconvenient to walk over?—No; in the summer you can walk over it without wetting your shoes; I walked across it the other day.

1620. How large a space is affected by this undrained spring?—Twenty perches, I should think.

1621. Only a small bit?—Only a small bit.

1622. Is it in so bad a state that the assistant commissioner may have thought that it would detract from the advantage of the recreation ground, if it was annexed to it?—No, I think not.

1623. Mr. *Johnston.*] Did you know of the meeting being held?—Yes.

1624. Do you think that it was generally known?—Yes, I think that it was.

1625. Mr. *Pease.*] You said that you had 35 children on your books; how many attend the school?—An average of 25 in the summer, but there are about 40 in the winter time.

1626. What are the ages of those children; what is the age of your eldest scholar?—I had some in the winter of the age of 23 or 24.

1627. What is the age of the children?—Thirteen or 14.

1628. What is the age of the eldest?—Four teen.

1629. How many children have you under 10 years of age out of the 25 who attend the school?—I should think 10.

1630. Were those persons who were of the age of 23 in the day school, or the night school, in the winter time?—In the day school, and in the night school as well.

1631. Are you acquainted with the Rev. Mr. Jekyll?—I know him.

1632. Do you believe with him that for the last century this common has been surrounded by a number of freebooters; Mr. Jekyll says, "The majority of the labourers are freebooters, living entirely on plunder; I am very glad to find that the common is to be inclosed; it will be a work of time to eradicate the evil induced by it"; if that is his sentiment, would you agree with him?—No; the majority of the labourers are not freebooters, but of good reputation. There are a few that have taken a small portion of land each from the common, and small cottages have been erected, but they all contend that they have had liberty from the lord of the manor to do so, and some of them are paying acknowledgment for the land.

1633. Mr. Jekyll says, "For the last half century everyone has grazed the common and erected huts, and inclosed small plots, without let or hindrance; predatory habits have been induced, which will take a generation to eradicate"; does that corroborate your sentiments?—A few persons have taken portions from the common, but as to the whole of the inhabitants, I would not say so.

1634. Mr. Jekyll goes on to say, "If any more be required, it would be one acre of the deep black ground for cutting their turf; they have been in the habit, from time immemorial, of cutting or paring the spine, and selling the ashes; no recreation ground is required in this wild country"; those are not your sentiments?—No.

1635. And you do not think that Mr. Jekyll's opinion is worth much?—No.

1636. Mr. *Peek.*] You say that the children now play on the common?—Yes; or on the highway.

1637. If the common were inclosed, as is proposed, they would have no place to play in?—They would not. I took them on this spot of ground which we have been speaking of in the winter. I went with them there myself.

Mr. *W. Bushen.* —— 22 June 1869.

1638. You say that there is a space of seven or eight acres; do you think that that would be sufficient for these games which they play?—Yes.

1639. What notice was given of the meeting of the assistant commissioner at Withypool?—I do not know exactly; a week or 10 days.

1640. Was it put in the papers?—I believe so.

1641. Were handbills circulated?—One was put on the church door.

1642. Do you think that the parishioners knew that they were at liberty to attend that meeting?—I think that they did.

1643. In your opinion quite sufficient notice was given of the meeting?—Yes.

1644. And of the object of the meeting?—Yes.

1645. And you think that if anybody did not go to the meeting it was entirely his own fault?—Yes.

1646. Mr. *Fawcett.*] The assistant commissioner, Mr. Wetherell, stated, in reply to a question put by me, that the reason why not more than one acre was reserved for recreation in the case of Withypool was that no other ground was adapted for recreation, the whole of the rest of the common being so steep; should you, or not, say that that statement was correct?—I should think that it was not correct.

1647. Then am I to understand you that the eight acres of ground to which you refer are in every respect, both considering its steepness, its situation, and every other particular, just as well adapted for recreation ground as the one acre which has been appropriated?—Just as well.

1648. Do you know anything about the ground which has been appropriated as allotments in the case of Withypool; five acres have been set aside as allotments for the labouring poor?—I do not know anything about that.

1649. From your knowledge, can you say whether those five acres are sufficient, or whether it would be an advantage to the parish to have more ground set aside for the labouring poor?—I should think that it would not be enough.

1650. You think that if more than five acres were appropriated it would be a boon to the parish?—Yes.

1651. You give that opinion from your knowledge of the general feeling of the inhabitants of Withypool?—Yes.

1652. You stated, in reply to the honourable Member for Surrey, that the public of Withypool was sufficiently acquainted with the meetings which the Commissioner held; do you think that they were acquainted with the provisions of the Act of Parliament which enabled the Commissioner to set aside a certain amount of land for recreation, and also to appropriate a sufficient amount of land as allotments for the labouring poor?—I should think that they were.

1653. You think that they knew the privileges which Parliament had conferred upon them with regard to recreation ground, and allotments for the labouring poor?—Yes.

1654. Do you know that the assistant commissioner was bound by the Act of Parliament, unless there were good grounds to the contrary, to appropriate some ground for allotments for the labouring poor and for recreation?—I should consider that he was, because there was some ground so appropriated at Exford, the neighbouring parish, and that is why I did not attend the meeting.

1655. Mr. *Knight.*] Can you state how many labourers' cottages there are in Withypool?—There are 39 householders.

1656. How many of those are labouring men, and how many are shopkeepers and farmers?—About 25 are labouring men.

1657. Most of them have little bits of ground as gardens?—Most of them.

1658. Are there any without?—I do not know of any without.

1659. But do you think that they would all like to hire a bit more if they could?—Yes.

1660. *Chairman.*] What should you say was the size of the gardens which are round those cottagers' houses?—Some would be seven or eight perches, and some, I dare say, 13 or 14 perches; I cannot state exactly the size.

1661. Mr. *Knight.*] Who are the chief owners of the cottages in Withypool; do the men own them themselves, or are they let to them?—Some of them own them themselves; there are, of course, some who do not.

1662. In any of those cases has the land been taken in from the common originally?—Yes, in some of them.

1663. In how many of them?—In five, I think.

1664. Who has taken in the piece of land which belonged to the Exmoor Pounds?—The late Mr. Lee.

1665. What has he done with it?—It is let out now; a farmer rents it.

1666. Is not that much flatter and better ground than that which you have spoken of?—Yes.

1667. If that had been made a recreation ground, no other ground would have been wanted; that is the best place?—Yes.

1668. Are you aware that that land now belongs to the Crown and not to Mr. Lee?—I am not.

1669. Colonel *Barttelot.*] In answer to an honourable Member on the other side of the table, who asked you whether the people living in the neighbourhood of Withypool, and around the common were freebooters, you replied, "Not exactly so"; are you a Withypool man?—Yes.

1670. Have you lived there all your life?—Nearly so.

1671. What do you mean by that answer, do you mean that these people have been in the habit of living by taking all manner of things from this common, and inclosing this common without any right to do so?—No, they have not made their living out of it, but two or three of them have taken a little spot; I could point out on the map where those little spots are.

1672. Have these men regular employment; do they work regularly or not?—Most of them, I believe, do so.

1673. You must know the fact, as you live there?—Yes, every one does so.

1674. Do all of them go out as day labourers?—Yes.

1675. Do any of them keep cows?—No, not that I am aware of.

1676. I think that you said that a great many of them lived in their own cottages?—Yes.

1677. There are 30 labourers; how many of those, should you say, live in their own cottages; do 20 live in their own cottages?—I am not prepared

prepared to say exactly; I should think 12 live in their own cottages.

1678. Do you not know that these 20 men will get an allotment when the common is inclosed?—Some of them will not.

1679. Why not?—Because those houses have not been built long enough, as I understand.

1680. They have not been built for 20 years?—No.

1681. Do you think that 1 foot in 10 is not too steep for a recreation ground?—I should think not.

1682. What game could you play upon such ground; you could not play cricket, or anything of that kind?—I should think that you could play cricket there, although I never saw any cricket played there. I have seen them playing football, and "cat and dog," and "hare and hounds," but I never saw any cricketing, or anything of that kind.

1683. *Chairman.*] Do you know how many of the inhabitants of the village will have allotments under the provisional order?—I do not.

1684. It has been stated in evidence before us that one acre is enough for the school children, because there are other commons where the children can rove about; will you mention where those other commons are on which the children can rove about?—I do not know of any other commons.

1685. Is there no other open ground within reach of the school where the children can go to play?—No.

1686. How many miles would you have to go before you could come to another common?—A mile.

1687. What is the name of that common which you would reach in a mile?—Winsford Hill.

1688. Is there a very steep hill to reach to it?—Yes.

1689. Are you sure that it is not more than a mile?—That is about the distance.

1690. That is to say, to the beginning of the common?—Yes.

1691. We have also been told that the public of that neighbourhood are not in the habit of using the Withypool Common for recreation, and for walking, and exercise; is that the case?—They exercise on the common.

1692. Is it the habit of the people of the village to go out upon the common for their exercise and amusement?—Yes; I sent my scholars there last winter, and went with them.

1693. Did you do so often?—Not very often.

1694. How far is the beginning of the common from your school?—About a furlong.

1695. Do you think that the inhabitants are dissatisfied at the idea of the common being inclosed, and only one acre being reserved for the use of the children?—I think that more than one acre is required; I think that they wish more to be left.

1696. Are you aware whether the inhabitants generally are displeased with what is about to be done with respect to setting apart only one acre?—I think that they are.

1697. Have any of them spoken to you upon the subject?—Some of them have done so.

1698. Can you state why they did not represent this matter to the assistant commissioner when he had a meeting there?—I cannot.

1699. Will you state what the impression on the minds of the people was as to the probability of a recreation ground being set apart for them by the assistant commissioner?—I heard some of them say that one acre was not enough, and that there ought to be more left.

1700. And was there an expectation that a proper amount would be set out, because it had been done in a previous allotment in the neighbourhood?—I believe so; I expected it.

1701. Will you state where that previous allotment was?—It was in Exford parish.

1702. Have you had the cultivation of a garden yourself?—A very small one.

1703. How large a garden do you think that you could cultivate in your leisure hours?—Ten or fifteen perches.

1704. Do you think that many labouring men could cultivate, with advantage, a larger amount of garden than that?—I think that they could.

1705. Supposing the case of a labouring man having more leisure than you have, and being able to employ his evenings in cultivating garden ground, what amount, from your own experience, should you think that he could satisfactorily cultivate?—I think that I said half-an-acre just now, but I am not prepared to state.

1706. You do not feel able to answer that question decisively?—No.

1707. Mr. *Knatchbull-Hugessen.*] At what time do you open school in the day?—Nine o'clock.

1708. Do you think that there are many labouring men who have more leisure than you have?—I dare say that they have not, but I have to prepare for the school.

1709. Mr. *Liddell.*] Have you a night school?—Yes, in the winter.

1710. But not in the summer?—Not in the summer.

1711. Mr. *Lowther.*] At what time is the day school closed?—At half-past four.

1712. Mr. *Peek.*] In the case of Withypool, did Mr. Wetherell go down more than once?—I am not aware.

1713. Do you know Mr. Reed, who gave evidence before this Committee?—Yes.

1714. Mr. Reed was asked, "Could they not go to Winsford Hill"? and his answer was, "They dare not go there, I know"?—Did I say that they could go? I did not understand it exactly; it is Sir Thomas Acland's property; I do not know that they would be allowed to go there.

1715. The Chairman asked you which was the nearest common, and you said that Winsford Hill was the nearest common, and that the people could go and play there, but that there was some amount of disadvantage, as the ground was rather steep; but Mr. Reed says, "They dare not go there, I know"?—I did not exactly understand that.

1716. *Chairman.*] Have you reason to suppose that the owner of Winsford Common would not allow the public to come and play there?—I do not believe that he would.

1717. Which is the nearest common to which the public would be allowed to go?—I question whether they would be allowed to go on any common near.

1718. Any common within reach of Withypool?—Just so.

1719. Mr. *Fawcett.*] Did you not state that all the labouring population in this place were generally employed as day labourers?—Yes, generally.

1720. If Withypool Common was inclosed and cultivated

Mr. *W. Bushen.*

22 June 1869.

cultivated, would it not cause a greater demand for labour?—Yes.

1721. Therefore, would not the labouring population probably increase?—I should think that it would.

1722. And therefore, if the population increased, would there not be a demand and a need for further ground for allotments?—I should think so.

1723. Mr. *Knight.*] What wages do the labouring poor in Withypool now get?—Those who are working for farmers get 9*s.* a week, and house rent paid; and those who do not work for farmers get, I believe, 12*s.* a week.

Mr. GEORGE GODLEY, called in; and Examined.

Mr. *G. Godley.*

1724. *Chairman.*] WHERE do you live?—At Pyecombe, in Sussex.

1725. Do you live in the village?—Yes.

1726. What employment do you follow?—I am a lime burner.

1727. Do you fill any office in the parish?—I am clerk of the parish.

1728. Are you acquainted with the circumstances of the proposed inclosure in Pyecombe?—Yes.

1729. Are you aware whether the Commissioners proposed to set apart any ground for allotment for recreation, or allotment for the labouring poor?—It is not by the will of the poor that it should be inclosed.

1730. Colonel *Barttelot.*] Is this down land?—It is all pasture land.

1731. Is it on the South Downs?—Yes; it is all on the South Downs.

1732. Mr. *Fawcett.*] You are the parish clerk of Pyecombe, are you not?—Yes.

1733. You know the land which is proposed to be inclosed?—Yes.

1734. A portion of it is Worstenbury Hill?—Yes; about 300 acres.

1735. That land is very much visited by the inhabitants of Pyecombe for the purposes of recreation, is it not?—Yes; a number of people resort there for recreation from Hurst and Brighton as well.

1736. How far is Hurst from Pyecombe?—It is the adjoining parish.

1737. Is the population of Hurst about 2,000?—It is quite 2,000; it is a market town.

1738. Is it not about five miles from Brighton?—To Hurst, eight miles.

1739. If this land was inclosed would the inhabitants of Pyecombe and of Hurst have any open ground in which they could take recreation and exercise?—No ground whatever.

1740. They would be confined to the highway?—Yes.

1741. I suppose, then, that this inclosure has caused considerable discontent among the inhabitants of Pyecombe and Hurst?—Yes; because Pyecombe is considered a very unhealthy place, and if that is taken away the people will have no place in which to walk for the benefit of their health.

1742. I understand you to say that the bottom of Worstenbury Hill is all down?—Yes.

1743. Then the people walking on it do it no injury?—None at all.

1744. Have you ever heard any complaints from the owners of Worstonbury Hill that the public have done any harm to it?—I have been there for 50 years, and I never heard any complaint of the people walking on it.

1745. During the 50 years that you have resided in Pyecombe, you have never heard that any injury has been done by the people walking on Worstonbury Hill?—None at all.

1746. Is there not another inclosure called the Dale Inclosure?—Yes.

1747. What is the nature of that inclosure?—A part of it is wood ground and a part of it is pasture. It is of great interest to the public; one part is small wood, and the public have always had the privilege of going to cut it to mend their garden fence, or to cut a few sticks for beans and peas, but now they are ejected from it.

1748. You consider that a great hardship?—Yes.

1749. And a great loss to the poor?—Yes.

1750. You have spoken of people coming over from Brighton, and also from Hurst, to resort to Worstonbury Hill; how many people have you seen there at the same time?—From 150 to 200 people.

1751. Has that been very frequently the case during the summer months?—Yes; there scarcely is a day without there being some considerable party there.

1752. Colonel *Barttelot.*] With regard to this Worstonbury Hill, supposing that it was inclosed, would it be cultivated, would it be ploughed up?—No, it could not be.

1753. And the chances are that nothing more would be done with it than that it would be marked out with a fence running up, or perhaps a demarcation across the hill, to show which part belonged to one proprietor and which belonged to another?—Yes.

1754. And the chances are that you would not be prevented from walking over it, just the same as you can do at the present moment?—If they make an inclosure they keep you off.

1755. That is not so on the downs; other inclosures have been made similar to this, and the great object is to define a man's rights, and what portion belongs to him?—Yes.

1756. There are similar inclosures which have been made upon the downs, are there not, and which are merely marked out by posts?—Yes.

1757. Are people hindered from going where those posts have been put?—No.

1758. Do you know where the butts are on those hills?—Yes; they are where the riflemen go to practice.

1759. Are not those butts to remain?—Yes, of course.

1760. And cannot any persons go there to see the shooting?—Not unless they get leave from the lord of the manor.

1761. But if they get the leave of the lord of the manor, they can go there whenever they like?—Yes.

1762. And you know that the chances are, that neither Mr. Campion, nor any of those persons, will hinder you from going there still?—They have not done so yet; when they inclose they will not let the public cross the land.

1763. From

1763. From there to the dyke is all open, is it not?—Yes.

1764. And cannot you go there without let or hindrance?—Yes, if we walk across the foot-paths.

1765. Cannot you walk across there when you like?—No; there are keepers who, if they see you off the path, order you off.

1766. *Chairman.*] Do you expect that after this Worstonbury Hill has been inclosed, the public will be ordered off, if they cross it?—Yes, that is a sure thing.

1767. Is that the down from which you said just now people were warned off?—It is a bit of pasture-ground, the same as the Cow-down. No cows or horses, or anything of the sort, go on to Worstonbury Hill.

1768. Mr. *Liddell.*] You say that hardly a day passes without a large number of people coming out from Brighton on to Worstonbury Hill?—Yes, when the weather permits.

1769. Can they get to it across the downs, or do they come along the highways?—They come along the highway; there is a straight road from Brighton to it along the highway, but the other mode is a long distance out of the way.

1770. If this inclosure was made, the people of Brighton could not come there any longer?—No; they would consider it, I suppose in the same way as walking across a gentleman's field.

1771. Do you know that there is a strong feeling in Brighton against inclosing this hill?—A good many of the people in Brighton know that it is going to be inclosed, and they think that it will be a great hurt to many parties, because it is a place which is reserved for public recreation and pastime.

1772. Mr. *Peek.*] Do you know of any small places on the downs which have been inclosed and turned into farms?—No; I am not a very great traveller, and I do not go far from Pyecombe, so that I cannot give you any information about that.

Mr. *G. Godley.*
22 June 1869.

1773. Mr. *Martin.*] How far is Pyecombe from Hassock's-gate?—Three miles.

1774. How far is it from Keymer?—About the same distance.

1775. Then there would be an inconvenience to the people of Keymer and Hassock's-gate if this place was inclosed?—Yes; many persons go on the hill upon the Sunday, or on whatever day is convenient; there are numbers of people there.

1776. Hassock's-gate is becoming a large place, is it not?—Yes.

1777. Mr. *Fawcett.*] Is there a very fine view from the top of the hill?—Yes; it is almost the highest hill in the county. There is the Ditchling beacon, which is about two and a half miles further eastward; Chenkenbury is also a high hill, but it is about ten miles from Pyecombe.

1778. Colonel *Barttelot.*] Who gave you leave to cut the underwood which you have spoken of?—The farmers Brown have been there for generations, and they always gave the people there leave to do so.

1779. You did not do it without leave?—No; they said that it was almost free ground, and that the poor could go there and cut wood when they liked.

1780. But still you always asked leave?—No, because it was a generous thing to let us go and do it.

1781. *Chairman.*] How many miles from Brighton is the Worstenbury Hill?—Five miles.

Mr. James Mobbs, called in; and Examined.

1782. *Chairman.*] Where do you reside?—At Swaffham.

1783. What is your occupation?—I am a coachbuilder.

1784. What observation do you desire to make to the Committee with reference to the inclosure in the neighbourhood of Swaffham?—I should wish to express the dissatisfaction which there is at the situation of the allotments.

1785. Will you describe where the allotments are?—They are situated on the worst road out of Swaffham to the heath; we call it Swaffham-heath; it is a bye-road; in fact, they have to make a new road across a piece of land to it, which the valuer has not done, although he has made roads for the private allotees.

1786. Will you state how near Swaffham-heath is to the town of Swaffham?—It is at different distances, according to the different roads. Swaffham Heath leads round the whole town, excepting by one road, namely, the Norwich-road; some part is close. From the nearest house in the poorest district in Swaffham it is 2 furlongs and 20 yards.

1787. Is the heath which is to be inclosed 4293 acres?—I think that it is not so much as that.

1788. Do you know how much it is?—There are a lot of half-year lands.

1789. Where does the allotment for the labouring poor lie?—The allotment for the labouring poor lies on the road to Beachemwell.

Mr. *J. Mobbs.*

1790. Is that a good place for an allotment ground for the labouring poor?—It is in a bad situation.

1791. In what respect?—On account of the distance.

1792. Where do the people reside who are expected to use these allotment gardens?—The poorest district is at the Pool, which is a large pit.

1793. How far is that from this allotment ground?—I have not measured it, but I think quite two miles.

1794. Do you think that a portion of the common might have been set apart for allotment gardens much nearer to where these people live?—I cannot tell you that; the lord of the manor raised some objection to it when it was proposed; he said that it was his freehold, or his own personal property, or something of that sort, but still the poor always had the right of turning on stock there and to play cricket and other games.

1795. Without entering into legal rights, and looking only to the common itself, do you say that there is a suitable portion of the common much nearer?—Certainly.

1796. And that part which is nearer would be equally suitable for the purpose as to the quality of the ground?—It would be better.

Mr. *J. Mobbs.*

22 June 1869.

1797. Will you inform us what extent of land has been set apart as a place of recreation?—Five acres, I believe.

1798. Where is it situated?—That is situated about seven furlongs from the nearest house, about a mile and a-quarter from the centre of the town.

1799. Do you consider that an inconvenient arrangement?—I spoke to the Rev. Mr. Everard about it, and I quite agreed with all that he said; he made these remarks, he said that it being situated away from the town the young men of the labouring population were very difficult of access, that they were shy of all people in a superior position, and that they would naturally get away from the moral influence of people better situated in life, and that consequently instead of the recreation ground being a benefit, it would be an injury, as they would resort there on Sundays and on holidays, and that all sorts of bad characters would get there. But that if it were close at hand and accessible to all classes of the community it might be made to exercise a very ameliorating influence upon the young agricultural labourers, a very numerous class who at present keep themselves apart and are very difficult to reach.

1800. If you think that that is an inconvenient place will you inform the Committee what part of the common you think would have been more convenient for the purpose?—A part which was nearer the town.

1801. Is there a portion of the common close to the town which is suitable for recreation ground?—There is some within two furlongs and 30 yards of the nearest house.

1802. Are you aware of the reasons which prevented the assistant commissioner from setting apart a portion of the common much nearer to the town than the part which he has appropriated?—It was, I believe, on account of the objection by the few large owners.

1803. Were you present at the meeting which was held by the assistant commissioner?—Yes, I was present at the first one.

1804. Was the matter discussed at a public meeting?—The assistant commissioner told us, who were not owners, that we had no legal rights, and that he could not entertain our claims.

1805. Whose claims did he allude to as not being legal?—The claims of the poor who had exercised the right of pasturage, and of cutting fuel, and that sort of thing.

1806. That, no doubt, had reference to allotments in severalty to individuals?—I think not.

1807. Did the assistant commissioner listen to any observations which were made with reference to the proper position for an allotment for recreation?—I cannot speak to that point.

1808. You do not remember whether any observations were made on behalf of the public as to the proper selection of a recreation ground?—I cannot speak to that point; we have a little recreation ground now in the centre of the town, but it is not large enough.

1809. That is independent of the common?—Yes.

1810. And you are of opinion that the amount of five acres, which was set apart for a recreation ground, was too small for the recreation of the inhabitants?—If it was situated accessibly I should not object to the size.

1811. How is this recreation ground reached; by what sort of a road?—By a good road; it has been inclosed by Mr. Horner, the local valuer, and there is a good fence upon it; there is a gate which has been put up, and the people cannot put stock there.

1812. Is the common, where it is near the town of Swaffham, flat or hilly?—I should say that it is all flat.

1813. Mr. *Knatchbull-Hugessen.*] Do you know the population of the parish?—I think that it is 4,000.

1814. Then in giving an allotment of five acres, do you know that the assistant commissioner allotted the fullest amount which the law empowered him to do?—I understand so.

1815. Mr. *Liddell.*] You said that the ground allotted to the labouring poor was very inconveniently situated for them?—It is the farthest off, and it is on the worst road.

1816. Do you remember a public meeting which was held in May 1868?—We were excluded from it; we were told that five acres were allotted, and that we had no right to be there.

1817. Who told you that?—Mr. Wetherell.

1818. Do you remember a public meeting which was held when the question of the inclosure of this common was first discussed?—I do; it had been discussed for years; but I have resided in Swaffham for 12 years, and it was within that time.

1819. Were you present at that meeting?—I was.

1820. Did you represent the labouring poor on that occasion?—No.

1821. Do you take an interest in the labouring poor?—Yes.

1822. Who represented them?—No one, excepting a poor man named Brunden who collected the fee, and engaged a person of the legal profession; and he, on hearing from Mr. Wetherell that no person save owners of property has any legal claim, made a speech hoping the Commissioners would consider the poor; pocketed his fee, and their resistance ceased.

1823. Then how did it become known to the assistant commissioner that the labouring poor required allotments?—There were people who did not stand up for them, namely, the middle class, who thought that they should get a portion of this land, and therefore the labouring poor were left adrift.

1824. Then were the labouring poor not represented?—Certainly not, because they had not the sense to represent themselves.

1825. Do you think that if they had been represented, they would have got a better recreation ground?—I think that if they had been represented, we should have been very much better off than we are now.

1826. Did you make representations at that meeting?—No, I did not think that we were competent to do so.

1827. Then you resigned your function?—Certain parties put in their claims, and Mr. Wetherell told me that we had no right.

1828. Are you quite certain of that?—I will not say that he said so in so many words, but that was the effect of what he said. He said that we had no rights, and no legal claim, I believe that those were the words.

1829. Was not that quite true?—I understand that it is so; but I think that it is a very unsatisfactory law.

1830. You

1830. You had no rights as a commoner?—I am not an owner of property.

1831. But you went to the meeting as an inhabitant?—I did.

1832. And as an inhabitant, you did not think it your duty to represent, in any way whatever, the interests of the labouring poor?—We petitioned the Inclosure Commissioners a little time ago, upon a certain grievance which we had, and our petition was not entertained.

1833. What was the grievance?—We ratepayers, who had not had our privileges recompensed at all, felt that we ought to be at no expense to maintain roads for the landowners. That is one objection which we have; we say that the parties who get the land ought to make their own roads, and not to take the soil and then come upon the occupiers to make roads for them. The other that, up to this award, the town used to get materials for the public roads free; now the pit is given to the lord of the manor, and he charges one shilling per load, which at the late consumption would cost 40 *l.* per annum; now with the increased extent it will cost considerably more, particularly as the new roads are not half made.

1834. Are you an occupier?—I am.

1835. Do you occupy land in the neighbourhood of this common?—No: I occupy premises in the town; I appear as a parishioner in Swaffham. When I hired my place for 14 years, I had the privilege of turning on the common anything which I thought fit.

1836. You come here and say that the appropriation for the labouring poor is inconveniently situated, and I ask you why, at the meeting, you, taking an interest in the poor of Swaffham, did not represent that inconvenience: upon reconsideration, do you mean to tell us that if you had represented the inconvenience of the appropriation for the poor, you would not have been attended to?—I do not believe that there would have been any attention paid to them any more than to the barking of a dog.

1837. Why do you say that?—From the experience at that meeting; and other parties have expressed that opinion as well.

1838. At that meeting, did you hear any person stopped from giving evidence upon these matters?—I do not say that any person was actually stopped; but when a person is told that he has no legal claim, it is enough to shut him up, that is to say, if he has any sense about him. You were asking me another question, namely, the reason why I now take up this matter and did not do so then.

1839. Why do you take up this matter now?—Reading the discussions in Parliament, I saw the motion which was brought forward by Mr. Fawcett, and I also saw the statement made by Mr. Bruce, that no representation had been made to the Home Office; I found that certain Members were taking up the cause of the poor man; I thought that the Commissioners might, perhaps, have acted up to the letter of the law, though not to its spirit, and therefore I wrote to Mr. Fawcett.

1840. Then you come here with these representations, knowing that you had not represented the cause of the poor at the proper time?—No, I was told by the proper authority that I had no right.

1841. Mr. *Knight.*] And you believed it to be true?—Yes.

1842. What land do you occupy?—I occupy an acre, which I let off to my men.

1843. Mr. *Lowther.*] Do you say that the lord of the manor objected to the allotment being put in a particular place?—Yes; I heard him say so.

1844. What did he say?—I cannot say how that matter was; he said that it was a part of his freehold, or something of that sort. The allotment is in the worst part of the town; and in fact the trustees appointed under the Commissioners are now in treaty with a certain individual to exchange part of the present allotment for land close by the Pool.

1845. Mr. *Pease.*] Were no representations, that you know of, made to Mr. Wetherell, that these allotments for the labouring poor were in a wrong situation?—I do not know; I did not attend the subsequent meeting.

1846. And nothing that you know of was communicated to Mr. Wetherell as to these allotments being in a wrong situation?—All that I know of it is from hearsay.

1847. How far were the allotments from what you think to be the best situation?—I think that the allotment ought to have been laid as near the poor man's door as possible. The nearest possible point of the land allotted, and on the worst road, is a mile and a quarter from the nearest cottage; the poorest district of the town is over two miles away.

1848. How far would the place which you would have preferred be?—Two furlongs and 30 yards.

1849. And no representation that you know of was made to Mr. Wetherell on the subject?—I cannot speak to that.

1850. Mr. *Peek.*] Was the land near the town more valuable than any other ground?—Certainly not.

1851. That is to say, that the site which you would have pointed out was not more valuable than the site which was laid out?—I think that the land was a little better.

1852. Was it better situated, besides being nearer?—There was no difference in it, excepting in position.

1853. Although the poor people have exercised rights over the common for many years, the assistant commissioner told them that they had no rights?—No legal rights.

1854. Although those poor people had exercised rights, whether legal or not, for many years?—Certainly.

1855. Did no one at the meeting attend in the interest of the poor?—Plenty of notice was given of this meeting, so that everybody went who took an interest in the matter. Of course a poor man who could not leave his work did not go. A considerable number of the inhabitants went, but they were told that the poor had no legal claim.

1856. And upon that the poor gave up their claim?—Yes; I went to the Rev. Mr. Sumner, and asked him whether it was worth while to hold a public meeting; he said, "No, that the poor and the whole of the inhabitants had been shelved, and that we should only be exciting hopes which could not be realised."

1857. Lord *George Hamilton.*] You have spoken of privileges; whose privileges do you refer to?—My privileges as a ratepayer, and the privileges of the inhabitants.

1858. You do not allude to the privileges of any

Mr. *J. Mobbs.*

22 June 1869.

any particular class; do you refer to privileges which you had been enjoying before?—When I first went to Swaffham I had the right of turning on a pony, and then the Commissioners come and say, "You shall keep these roads in order; you shall pay rates to support these roads."

1859. The privilege to which you refer is your right to turn on a pony?—Yes.

1860. Mr. *Fawcett.*] As an inhabitant of Swaffham, and as a resident there, can you state whether ever since this inclosure has been made, there has been considerable discontent among the poor?—Yes; and ever since the award has been published, it has been among the little owners.

1861. Am I correct in stating that the reason why those complaints were not made to any efficient quarter was, that an impression existed, especially amongst the poor in Swaffham, that the thing had been done, and that it was of no use to complain about it?—Certainly.

1862. And you never would have thought of making those complaints unless it had been for the discussion which took place upon the Inclosure Bill during the present Session of Parliament?—Certainly not.

1863. In the report of that discussion did not you read the remark of the Home Secretary, Mr. Bruce, that no complaints had been made to the Home Office?—I did.

1864. And you were astonished to hear that assertion, none of you being aware that you could make complaints to the Home Office?—Certainly.

1865. And that was the reason why you communicated with me?—Certainly.

1866. What is the impression which exists in Swaffham as to the effect which has been produced upon the poor by this inclosure?—It will stop poachers, there will be less poaching; it will give more labour for a year or two, but eventually the real poor, that is to say, the destitute classes, will be a great deal worse off.

1867. You have said that with regard to this inclosure the poor have been completely shelved?—Yes; I mean the labouring poor, the working men.

1868. And you said that that was almost the universal impression in Swaffham?—Yes, excepting two or three men who get the lion's share.

1869. You quoted the opinion of Mr. Sumner?—Yes.

1870. He is the son of the late Archbishop of Canterbury? — He is son of Colonel G. Sumner, and a relative of the late archbishop.

1871. And he entirely agreed with you?—He did.

1872. What were the privileges which the poor previously enjoyed?—Whoever had a steer, or young calf, could turn it on the common, a herdman was kept, and there were donkeys. Here is an epitome which was put into the local paper when the assistant commissioner was there.

1873. Can you give any estimate of the number of stock which you have seen turned out?—Fifty, or more.

1874. And you consider that this privilege of turning out stock is a great boon to the poor?—Yes; if a man has to go four miles to his labour, it is a great boon to him to be able to keep a donkey.

1875. You say that at the first public meeting the assistant commissioner told the labouring poor, and those who were not owners of the property, that they had no legal rights?—Yes.

1876. From that assertion of his that you had no legal rights, by which I presume that he meant that you had no right to have land allotted to you, or in severalty, the poor, of course, like yourself, drew the conclusion that they had no legal rights?—Yes; it is of no use complaining about the law, we must try to alter it: we felt that it was of no use resisting the law if it was against us.

1877. And therefore you thought it was of no use to put in any statement, or to make any complaints with regard to the inconvenience of the land, which was reserved for allotments or for recreation?—Certainly; I thought that it was no part of my business that I was excluded from it.

1878. If at that time the provisions of the Act of Parliament had been distinctly explained to you, by which Parliament reserves land as allotments for the labouring poor and for recreation, and if it had been explained to you at the public meeting that you had a right to make complaints as regards land set apart for allotments or for recreation, do you not think that you would have made complaints as to the situation of the ground?—Certainly I should.

1879. Therefore these complaints were not made in consequence of the provisions of the Act of Parliament not having been properly explained to you?—I cannot say; I do not know anything of the Act of Parliament.

1880. If you had known that you had a right to make complaints with regard to the situation of the land, you would have made those complaints?—Certainly.

1881. You state that the land which has been reserved as allotments for the labouring poor is in such an inconvenient situation that it is perfectly obvious to anyone who visits the heath?—Certainly.

1882. It must strike every one who visits the heath, that one of the most inconvenient situations possible has been selected for allotments for the labouring poor and for recreation?—No; they might be put in a worse place.

1883. But still it would strike any stranger that they were put in an inconvenient place?—Certainly.

1884. The assistant commissioner stated, in reply to a question which I put to him, that the road to the allotment ground was a good road; can you state, from your local knowledge, whether that is correct or not?—That is a mistake.

1885. Are you aware that a man in your employment, named George Parsons, wrote to me?—Yes.

1886. Did he not express great dissatisfaction at the situation of the allotments?—Yes, and he perhaps expressed his own feelings because he is a little owner.

1887. And in that letter, did he not express astonishment at the fact that the labouring poor could have made complaints to the Home Office?—Yes.

1888. And the only reason why he did not come to be examined to-day is, that his wife is seriously ill?—Yes.

1889. Mr. *Knight.*] What amount of new road is laid out in the inclosure?—I do not know the extent, but the amount claimed by the valuer is 1,200 *l.*; that road is about half made, and we have to keep it in order.

1890. Colonel *Barttelot.*] Who has to keep that road in order now?—The parish; we who are ratepayers have to pay 8*d.* to the farmers' 2*d.*; that is another great inconsistency.

1891. Why is that?—Because they have the majority, and they rule us on the local board.

1892. Who appointed the herdman to look after the stock?—He has been appointed from time immemorial, I expect.

1893. What did the 6*d.* per head which was paid per week go for; did the herdman get it?—Yes, he had the rate as his wages.

1894. Could anybody living in Swaffham turn out upon the common?—I believe so; anyone who has a house.

1895. Are you sure?—I have known parties coming through Swaffham, such as tramps, stopped; but I have never known an instance of a parishioner being stopped.

1896. Was it reserved for those who had rights upon the common, or were those who had rights, or no rights, allowed to turn out upon the common?—There was no reservation.

1897. Do you know whether the lord of the manor appointed the herdman, or not?—I cannot say; the herdman was appointed by the court-leet of the manor.

1898. Mr. *Vernon Harcourt.*] What has become of the land which has been inclosed; how many hands is it in?—About 100.

1899. How long is it since the inclosure took place?—A part is being inclosed now.

Mr. *J. Mobbs.*
22 June 1869.

1900. Have any of the rights been parted with since that time to other people, so as to pass into single hands; have persons who got allotments under the inclosure parted with them?—Yes; I bought 25 acres myself.

1901. How much has been accumulated in a single hand?—I cannot tell you the extent.

1902. Mr. *Martin.*] You said that when this common was inclosed they would not let persons go on?—They will not let them do so now; there is a fence. Men used to go and pretend to cut ling, and used to become poachers.

1903. Is the common very large?—It is upwards of 2,300 acres.

1904. Mr. *Fawcett.*] Was the common much used by persons walking over it for purposes of recreation?—They used to walk over it on Sundays; but it was not much used.

1905. You say that the inhabitants used to have the right of cutting ling, and so on, there?—Yes.

1906. Was that a great boon to them?—Yes.

1907. It was a very important addition to the income of the poorest persons?—Yes.

1908. Some of the poor almost got a living by it?—Yes.

1909. And under the allotment they have no compensation for that?—They have not any.

Mr. John Bonham-Carter, a Member of the House, called in; and Examined.

1910. *Chairman.*] Do you live in the centre of a district in which many inclosures have taken place?—Yes; I live at Petersfield, which is on the borders of Hampshire and Sussex. The whole of that country within a great many miles has, since the beginning of this century, and to a great degree in the last 20 years, been subject to inclosure.

Mr. *J. Bonham-Carter.* M.P.

1911. What number of recent inclosures have come within your knowledge in that neighbourhood?—I think about a dozen inclosures in contiguous parishes.

1912. Have you anything to state to the Committee with reference to the circumstances under which those inclosures took place?—I have listened to the greater part of the evidence which has been given before this Committee, and it has struck me that the deductions from the tabular statements in the Inclosure Commissioners' Report give a very erroneous impression as regards recreation and allotment grounds, compared with either the intention of the parties inclosing or the requirements of the particular case. The district in which I live is of such a varied character that each inclosure is almost typical of some of the cases which have come before the Committee. The country is an amphitheatre of the South Downs which slope into a valley, so that within a very short mileage the land varies from almost pure chalk to very heavy clay and light sand, and it appears to me that every one of these inclosures present different features, which can only be efficiently dealt with by an examination on the spot, and that it is very difficult to give to any body of individuals, sitting as the Committee does here, at a distance, a full view of the interests of the different parties, and that it is certainly not possible to give it to them fully in the detail which is set forth in the Appendix to the Report of the Inclosure Commissioners. Those reports in three or four lines practically give the pith of the statement, and are well condensed from the assistant commissioner's reports, and they must be taken as the opinion of persons in whom the country places confidence, but as not at all showing the care or attention which is given to those particular inclosures, or the trouble which is taken upon the spot.

1913. When you say that the tabular statements of the Inclosure Commissioners mislead us, do you mean that, although *primâ facie* there appears to have been a very small quantity of ground set apart for recreation ground and allotment gardens, yet, from a fair investigation of the subject, we should find that a sufficient quantity has been set apart?—That is my entire belief, and I justify it by the particular circumstances which have occurred within my own observation.

1914. Can you inform me of any such cases which fall within our inquiry?—This is the Ordnance Map, with the boundaries of the parishes set out; this is a map of the district which extends from Woolmer Forest to the very corner of the Forest of Bere, which have been inclosed by the Government; Bere Forest is not very far from Portsmouth. The greater part of this country has been inclosed since the beginning of the century. The range of the South Downs is here (*pointing out the same*); there are seven consecutive parishes, in all of which inclosures have taken place within 20 years, most of them very recently. In the case of the downs, the inclosures were of commons subject to stinted rights, and therefore no allotments or recreation ground was set out excepting in the case of one common, which was inclosed before the General Inclosure Act was passed.

Mr. *J. Bonham-Carter*, M.P. 22 June 1869.

Under the old Inclosure Act it was an almost invariable practice to reserve, without leaving it to the parties to object, a certain amount of land for exercise and recreation, and allotments for the labouring poor, and therefore that was done in the case of the inclosure of Ramsdean, and Oxenbourne Downs; those are very steep downs, with a small proportion of heavy clay on one side of them; the exercise and recreation grounds set out there have to my knowledge never been used from that time to this; it was quite impossible from the nature of the ground to set out recreation grounds nearer the dwellings of the labouring poor; that was before the passing of the General Inclosure Act. I wish to speak as much as possible, not to what arguments were urged at the time, but as to what has happened subsequently with regard to the allotments which were set out. That was the first inclosure; that inclosure arose entirely from quarrels amongst the farmers, and it was to adjust their rights. The farmers signed the requisite statement that the common to be inclosed consisted of 1,000 acres, and when it came to be inclosed they said that it turned out to be 400 acres; therefore there is no reason for surprise that they should have quarrelled; that was the ground for that inclosure. The next inclosure in which I was lord of the manor was of the same character, namely, stinted common; there were only two commoners, and no allotments for recreation ground or for the labouring poor was called for under the Act, or set out. There would have been no objection if they had been set out, but all that part nearest the village being down, there was no possibility of having cottage gardens. In that parish, the rector himself had the glebe, in which he gave a large quantity of cottage garden, and the principal tenant let out a large amount of cottage garden, both of these being land of first-rate quality: a large amount of that inclosure still remains open, and except when nuisances are created, the inhabitants are allowed to come on that ground, and they constantly use, as a walk, the ground which leads up to an eminence. In consequence of these inclosures, a feeling arose in the district, that the land should be further inclosed. Petersfield lies in the centre of a basin, having a common adjoining it, of about 200 acres, but not in the parish; and it occurred to myself, and to my neighbour, Lord Hylton, who was then Sir William Jolliffe, that seeing that this common was not in any degree utilised, and that it was encroached upon by persons who had no right, and were trespassers, it would be much better to have it in severalty, and to set out a recreation ground for Petersfield, which actually had no right upon the common; it was one of the cases of a common of vicinage, the largest part of which belonged to parties with very defined rights; Petersfield had only about seven acres as common of vicinage, and another tithing had the right of about 35 acres; and by representing the matter to the parish of Sheet, which had the largest portion, we found no difficulty in arranging that the 35 acres in Sheet, and nearly the whole of the land in Petersfield, of which Sir William Jolliffe was then the lord, and who undertook the whole cost of that part, and a portion of the 35 acres adjoining, of which I was also the lord, should be thrown together into one area, and under the powers of the Act should be vested in Lord Hylton and myself as trustees, for recreation ground; this was under three separate inclosure proceedings.

1915. How much total ground for recreation did that make?—Thirty-five acres were set out in Sheet; I think seven acres in Petersfield, and four acres in the adjoining parish of Buriton.

1916. Was that done under the powers of the General Inclosure Act?—Yes; there was a meeting for instructions, and the instructions to the valuer were to set out this land subject to a certain authority vested in Lord Hylton and myself as trustees of this recreation ground; it was levelled, and drained, and fenced at the expense of the inclosure, and then the herbage was vested in Lord Hylton and myself, for which we paid a considerable sum, and the recreation ground is now maintained partly by turning on a limited number of cattle, and the proceeds are devoted to what may be called the payment of a recreation guardian, a man whose time is entirely devoted to the maintenance of this ground; I should add that a broad terrace-walk round a large mere adjoining this recreation ground, was made at the expense of the inclosure.

1917. Has experience shown that that arrangement is a satisfactory one?—I believe that the arrangement is entirely satisfactory. I believe that the advantage to the town of Petersfield, which had originally no legal rights, is exceedingly great, and that great benefit has been derived from thus dealing with a common of 200 acres, which formerly was very wet and was covered with furze, and never gave one-tenth of the enjoyment to those who went on it which it does now, taking the recreation ground of the size which I have mentioned, and which has been cared for, and over the whole of which persons can now travel. I mention this case, because it is one in which a much larger amount of land than the Act required was, by common consent, dedicated to the public, and clearly no disposition to ignore the interests of the poor existed, yet, in respect of which, in three inclosures affecting the common, no allotments for labouring poor in cottage gardens would appear in the tabular returns, and any inference of neglect from the simple figures would be erroneous.

1918. Is there any other inclosure in that neighbourhood in which ground has been set apart for recreation or allotment gardens?—Yes; in all the other inclosures in that neighbourhood there has always been some ground set aside for recreation and for the labouring poor, but with very different results. In some cases the allotments have been readily taken up, and are held, and the rent is paid, but in some cases they are absolutely neglected. One case was referred to by Mr. Tremenheere (and which was one of the reasons why I asked to give evidence here), namely, the case of Rogate, in which he stated, as was true, that the interests of the poor had been overlooked. The allotment ground is not at this moment broken up at all, and the clergyman has not succeeded in inducing the labourers to break up this ground. Almost all the cottages have very good gardens, and this allotment ground was almost entirely the result of Mr. Wetherell's suggestion. There was no intention at first to set out allotment gardens, but upon viewing the spot (which, as far as I have observed, Mr. Wetherell has always done) Mr. Wetherell suggested that it was better to set out a piece of inclosed land. He suggested that a piece of land should me made allotable, and that the piece

piece of land which was set out as allotment garden should be exchanged for land, which, in his opinion, was most convenient for allotment garden. But although Mr. Wetherell was anxious to afford this opportunity, it has never been made use of by the cottagers who are adjoining. They have all very good gardens of their own. That applies to the Rogate Inclosure, which is close to my residence, and in the county of Sussex. I have taken the inclosures here consecutively, as they stand upon the map. There is also an inclosure which adjoins my house, and the land is almost entirely heavy clay. I do not think that upon a sale of the land, if it was sold in the market, even at the increased price which is given to it as being inclosed and turned to account by cultivation, it would cover the expenses of the inclosure. But that inclosure was really carried out, because there were such an immense number of squatters whose cottages were of the very worst possible character; they were the causes of fever, and fever has been almost permanent in that parish. It was done partly to relieve the poor rates, and partly to improve the condition of the poor, which it would have done very largely; but even there, the allotment gardens are not used.

1919. From your experience, what do you think is the amount of land which may be appropriated to a labourer?—There are allotments of two acres within 300 yards of my own house; that is very light land. There is also an allotment of land which I let, which was originally held by the rector before I bought the property, and which is exceedingly good land. The consequence of that is, that the allotment set out under the Inclosure Act is not very much sought after; it is poor land, and it is within a quarter of a mile of the village. From what I have seen, I think that if the land is good land, and it is not far from the cottages, from 20 to 25 rods is as much as a man wants and can manage.

1920. Have you any suggestions to make to the Committee as to amendments in the law as it now stands?—It strikes me that a little more latitude might be given to the Commissioners. I have always observed, that Mr. Wetherell at the meetings which he has held, at many of which I have been present, and at some of which I have presided, has considered himself as a sort of poor man's advocate; when it has not been suggested in the preliminary application, he has always asked the question, and has always gone on to the ground, and he having looked at the tithe maps and having seen the ground, has always pointed out the best place for these allotments. I have never seen any difficulty in conceding these allotments. It is true, that in the original application that provision is not always included, but that is because the assistant commissioner is the person who would from his great experience of these matters present certain reasons as to the propriety, or otherwise, of setting out the ground. I must say that at the many meetings where I have been present, and certainly at those where I have been in the chair, there has been every desire to give every person who has had any *locus standi* the fullest opportunity of stating his case. The proceedings on these inclosures are generally spread over a very large period of time, and an immense number of small debateable points are raised. During that period it seems to me almost impossible that any person who has been aggrieved should not find a mouthpiece, either through himself or through some other person. Of course those parties who are closest to the common, and who have derived the largest amount of advantage, are dissatisfied when they lose that advantage; but excepting in the case of turbary I have not known any case in which the poor have complained; and I consider that they have obtained a very great and direct advantage.

1921. Do you consider that, generally speaking, the question of the benefit of the poor as to the recreation grounds and allotment gardens, has chiefly fallen upon the assistant commissioner?—No, I do not say that it has fallen upon him in that sense, but at the meeting, I think that he has generally been consulted by the promoters as to what ought to be done. I do not think that there has been any disposition to exclude the poor, either as to the allotments for the labouring poor or for recreation, but it has been generally supposed that the Assistant Commissioner had knowledge upon the subject, and that there would be an arrangement with regard to the poor. The clergyman generally attends the meeting, and I have never found any case in which there has been any desire to exclude information regarding the poor, as well as respecting those persons who have wanted the land in severalty.

1922. Do you see any way in which the difficulty can be got over with regard to an exchange of allotments for the labouring poor, where it would be desirable to exchange them for a more desirable piece of ground?—It appears to me that the limitation of area for area is very undesirable, and that it would be desirable that the assistant commissioner should put the question distinctly before the meeting whether some arrangement may not be attempted by allotting a piece of land, in lieu of a larger allotment, upon a common which is at some distance from the village, or from most of the cottages. I believe that that is the rule at present, but I do not think that it is very effective, and I think that the Commissioners should have the power of carrying out cheaply any exchange of this sort almost at any point. At present, under the Act of last Session, certain fees are, I believe, placed upon inclosures, but as these allotments and recreation grounds are, generally speaking, small in quantity, and not of any very great value, I think that there ought to be no difficulty placed in the way of such an exchange. I think that those fees ought to be remitted, and that facilities should be given by law to bring the allotments and recreation ground nearer to the population.

1923. Do you consider that that power might be lodged with the Commissioners?—Yes; I think that the assistant commissioner is, in the first instance, the eye of the Commissioners; he investigates the case upon the spot; and the Commissioners are a court of appeal. They could not in that character themselves make the first inquiries. I think that they might carry their powers a great deal further, as regards the interests of the poor and looking after the inclosures, than they are empowered to do, because, after the award is once given, the power of the Commissioners ceases for all practical purposes.

1924. At present they have no compulsory powers even for the enforcement of the bye-laws or regulations, which they make, and certainly not

Mr. *J. Bonham-Carter*, M.P.

22 June 1869.

for controlling the discretion of the trustees who have the care of these grounds; do you see any way in which, without too large an expenditure of money, such a control could be exercised by the Commissioners after an inclosure was completed?—I think that at present the arrangements for the regulation of recreation and allotment grounds are not sufficient, and that in the case of even convenient allotment grounds they run to waste, because there is no legal power of dealing with them; and the same with regard to recreation grounds. I know a recreation ground on which only once in several years a game of cricket has been played, though it has been set out for that purpose; I think that these grounds which became wastes by non-user might become more available by money being expended upon them, either by rate or otherwise.

1925. Have you any other suggestion to make for the amendment of the law?—I think that the valuer is very often not sufficiently controlled by the Commissioners, and that they have not the power of controlling him; in one instance we had a valuer who got us into hot water, and who did not carry out the views of the Commissioners under the inclosure, and I think that additional powers should be given to the Commissioners to control, or to remove the valuer; I think that a greater power of exercising control ought to be in their hands.

1926. Do you not think it rather important that the valuer should be an independent authority, free to act upon his own judgment, without control with regard to his decisions; in what respect do you think that he should be controlled?—If he does his work dilatorily, and negligently, having once got possession of the inclosure, the valuer may incur very great expense, and may protract the proceedings for a very long time, and he sets both the commoners and the Commissioners at defiance. When it is recollected what an exceedingly large amount he has constantly under his charge, I think that more control ought to be exercised over him; I think that in those cases which occurred in my experience, the largest portion of the expenditure was upon the roads, which of course are exceedingly valuable to the poor; many of the points with regard to the roads, as to the way in which the contracts were made, gave rise to very great difficulty, and supposing that a valuer chose to do anything excessive (though I do not say that he would do so) there would appear to be no remedy in the hands of the Commissioners; I should like to mention one cause for inclosures, which I have not heard referred to, and which certainly operated with us in our part of the country: it was not supposed that the Statute of Philip & Mary, with regard to impounding, was operative; but about 10 or 12 years ago a decision was given that it was not obsolete, and that any impounding of cattle must be subject to that Act, which fixed the fee as 4 *d.*, as all which under any circumstances could be taken for the impounding of cattle. The consequence was, that trespassing, which existed to a very large amount on these commons, could not be checked, and that that was a very great additional inducement to the commoner, whose rights were constantly encroached upon to assent to the inclosure; I think that this Act might be modified.

1927. Mr. *Liddell.*] Have you any further suggestions to make with regard to the notices which are given of an inclosure; do you think that the neighbourhood, as a rule, is sufficiently aware of the scheme for an inclosure beforehand?—I think that it would be a desirable thing that the form of questions which are issued by the Inclosure Commissioners, and which have to be answered before an inclosure takes place, should be published in some of the local papers, so that the people in the neighbourhood should be more fully aware of the step which was proposed to be taken; in my part of the country there is a penny newspaper which circulates among the poorer classes, with a circulation of something like 20,000, and which is immensely read, and I think that it would very likely prevent heart-burnings if the original questions which apply to the inclosure were made more public than they now are.

1928. Yours, perhaps, is a very populous and enlightened neighbourhood, but there may be other parts of the country in which no newspapers circulate; do you think that measures might be taken in more remote districts for giving notice that an inclosure was contemplated?—As far as I have seen the notices of the inclosure have been posted upon the church doors, and elsewhere; I think that they should be posted in several places near any common which is about to be inclosed.

1929. You think that every practicable means should be adopted of acquainting the whole of the district of the contemplated inclosure?—Certainly.

1930. Mr. *Johnston.*] In the case of the Rogate Inclosure, you said that the allotments were not broken up?—Yes.

1931. In the case of their being let free of rent, say, for the first two years, do you not think that that would very likely induce them to break up the ground?—They only pay 1 *d.*, 2 *d.*, or 3 *d.* a rod, and I do not think that the amount which they pay is any objection.

1932. Still, if they pay anything for rent, is it not a bar to a labouring man, seeing that he would be paying cash, in addition to giving his labour entirely unproductively, as far as the first year is concerned?—As I understand it, the allotments are to be let at the rent which agricultural land would fetch; in those cases I think that it is quite competent for the allotment wardens to assume that the rough land could not in that condition be let at any but a nominal rent as agricultural land, and let it accordingly to break up in the first year.

1933. Do you know whether any such offer has ever been made by the allotment wardens; do not you think that if such an offer were made it might have some effect?—I think not in the case to which I refer; I think that the land is strong land, and that they have quite sufficient land at present.

1934. Mr. *Fawcett.*] You have alluded to the report which is annually presented to Parliament; did not you say that it was not complete?—I said that it was a correct condensation of the reports of the assistant commissioners to the Commissioners, but that no condensation could convey the actual facts, and that in these cases you must put confidence in the assistant commissioner.

1935. You stated that the country had the most implicit confidence in the assistant commissioner?—I am not aware that that was my phrase.

1936. I understood you to say that the Inclosure Commissioners were a body of gentlemen in whom the country had implicit confidence?—I did not intend to give an opinion as to the confidence of the country, except so far as it comes within my observation; but with reference to the inclosures in my neighbourhood, of which there have been a large number, I have never heard the acts of the Commissioners in any way impugned, and I believe that their decisions, as carried out, have hitherto been such, that I may safely say that they have the confidence of all that part of the country with which I am acquainted.

1937. In most of those inclosures in which you have been interested you have taken some public part, have you not?—Yes; in a large proportion of them.

1938. Then we are to understand that your observation with regard to the confidence in the Commissioners is confined to those inclosures in which you have been interested, or in which upon public grounds you have taken a part?—I have had very considerable opportunities of observing the conduct of the inclosure by the assistant commissioner, and I have been very greatly impressed with the ability, and care, and kindness with which those meetings have been conducted, and the readiness, I may say, on the part of everybody to hear all that could be said. I may say that an immense quantity of time has been wasted in giving everybody who wished to say anything with reference to the inclosure an opportunity of being heard.

1939. Then your observation as to the assistant commissioner does not refer to what has taken place throughout the country, but refers to those inclosures which were considered at public meetings at which you were present?—It refers to about 14 inclosures in the district of country in which I reside.

1940. And with which inclosures you are personally acquainted?—Yes.

1941. Your opinion does not arise from an investigation of the general subject, but merely from those particular inclosures in which you were interested?—I was naturally interested in the way in which a public function was exercised, and my opinion was that it was exercised satisfactorily to all parties concerned. Of course, some of the poor were not at first prepared for a curtailment of certain rights and privileges; but those were generally privileges arising from their living nearer to the commons than other poor people.

1942. You have always taken a great interest in the welfare of the poor living in your neighbourhood; is not that a subject which has greatly interested you?—I do not think that anyone can feel that he has done his duty fully to the poor; but I hope that, consistently with my duties here, I do not neglect them.

1943. If you were present at a meeting where an inclosure was being discussed, and if the poor were not properly protected, the impression would exist in the district that the mere fact of your presence in the room would defend them?—I do not know that I am entitled to say that I should do my duty there better than any other person under similar circumstances.

1944. Supposing that a case arose similar to that at Withypool, in which only one acre had been reserved as a recreation ground, would not your interest in the welfare of the poor immediately induce you to step forward, and, if you had any right to be heard, to demand an explanation from the assistant commissioner why more land should not be reserved?—If I had been at the meeting I certainly should have satisfied myself as to whether more land was required, or not. If I recollect rightly, the question at Withypool was whether or not more recreation ground was required for a school.

Mr. *J. Bonham-Carter*, M.P. 22 June 1869.

1945. The answer of the assistant commissioner was that no other ground was suitable for a school?—I think that I may answer that question by saying that Lord Hylton and myself on one occasion, when circumstances required it, purchased a small recreation ground, because it happened to be adjoining a school, which being for young children, a large space was not necessary.

1946. Do you not think that it might make a very considerable difference as to how the poor were provided for, whether or not it happened that a gentleman like Lord Hylton, who took an interest in the poor, was present at these meetings which the assistant inclosure commissioner held?—From all that I saw of the action of Mr. Wetherell in the matter of the inclosures, my impression certainly is, that he would be very anxious to see that the claims and interests of the poor were duly observed.

1947. Mr. Wetherell said that he reserved only one acre in a particular case for a recreation ground, and he alleged as his distinct reason that no other ground was fitted for the purpose; if he had taken the trouble to walk to the common, he would have discovered that immediately touching that common there were seven acres equally adapted for a recreation ground; how can you reconcile the opinion of Mr. Wetherell with that fact which has been brought out in evidence, and which has not been refuted?—From all my experience of Mr. Wetherell, I should have felt that there were some reasons which were satisfactory to his mind. I understand the Honourable Member to say, that Mr. Wetherell's answer was, that there was no other land within a certain distance fit for a recreation ground, and that that was the only reason given. I should have been rather surprised to find him wrong, and I certainly should have considered that Mr. Wetherell's experience was such, that it would be put before the opinion of any one single witness in this matter.

1948. Should you consider that the evidence of a stranger, as to whom there was not any evidence that he had ascertained the steepness of ground, was to be put before the evidence of two respectable witnesses who held an important position in the parish?—From what I saw of Mr. Wetherell I should say that he went over the ground himself, and that he took the evidence of other parties upon whose evidence he could form a competent judgment, and that therefore there was every guarantee against any mistake.

1949. With regard to the inclosures at Rogate, can you describe the rates at which they have been offered to the labouring poor; do you know the exact amount of rent at which they have been offered to them?—No; I have made it my business to inquire into the returns which were made to the inquiries sent out by the Commissioners, and I do not find that any return was made from Rogate.

1950. You are possibly aware that from the evidence which has been given us, it appears that the poor are often asked a price for allotments, which

Mr. *J. Bonham-Carter*, M.P.
22 June 1869.

which is three or four times the agricultural value of the land?—The agricultural value of the land, for ploughing purposes, is very often much less than it would be for spade husbandry, and as far as I have seen, those persons who hire fields from farmers to let out again, which is often considered a very great boon to a labourer, have constantly to pay a very large rent to the farmer, who will not part with his field except for that larger rent, but nevertheless they have no difficulty in letting the allotments at a rent which will recoup them, provided that they are of sufficiently good quality, and sufficiently near to the cottages.

1951. As you do not know what rent has been asked for these allotments, which, as in the case of Rogate, have not been used, you cannot state whether or not the reason why they have not been used is on account of the excessive rent which has been asked for them?—I have a most thorough opinion that that is not the reason.

1952. Upon what do you base that opinion?—It is from what I know of the owner of the adjoining land, the lord of the manor, and from what I know of the clergyman.

1953. Have not the allotments to be let by the allotment wardens?—Yes; but a resident gentleman can generally exercise a good deal of influence, and can influence the dealing with the allotments on his property.

1954. You cannot give us any definite information as to the fact whether or not these allotments have been kept out of cultivation because of the excessive rent asked by the allotment wardens?—I have no doubt that it is not so, but I cannot give any definite information; I know that all the cottages which are near this piece of land which Mr. Wetherell directed to be set out have very large gardens, and I believe that it is the natural want of demand which prevents the allotments being taken.

1955. Do you know the size of these gardens?—Some of them, I should think, must be an acre or two; and from what I see of them, I should say that these gardens which they have round the cottages are not all broken up.

1956. You have frequently referred to the assistant commissioner; do you not think that the assistant commissioner, as compared with the Commissioners, is the responsible person in the case of these inclosures?—I think that he is primarily the responsible person; I think, also, that it is because the Commissioners have, in fact, so good an assistant commissioner that there are very few appeals.

1957. Did you hear Mr. Darby's evidence?—Yes.

1958. After hearing that evidence, do you not think that the assistant commissioner is something more than the eye of the Commissioners, and that he is also the body and the limbs?—The assistant commissioner gives the first report, and the Commissioners usually accept the recommendations which come from the assistant commissioner. The assistant commissioner first goes down and makes his statement to the Commissioners, and he afterwards very frequently goes down and acts as an assessor, but the appointment of the valuer and all the other business, which is very extensive, is in the hands of the Commissioners.

1959. You have referred to Petersfield, and to a recreation ground being set out for that town through the liberality of yourself and others?—Yes.

1960. That recreation ground is about 47 acres?—Yes.

1961. You are probably aware that if it had not been for the liberality of yourself and others, the Act of Parliament would have precluded so large an amount of recreation ground being set out?—I am quite aware that the amount of recreation ground which could be set out by the Commissioners could only be 12 acres.

1962. Therefore this recreation ground did not result from the Act of Parliament, but from a private arrangement with the owners?—Twelve acres could have been set out under the Act of Parliament, whereas over 40 acres were set out.

1963. From your experience, do you think that it would be well to alter the Act of Parliament, and to leave the amount of recreation ground absolutely in the discretion of the Inclosure Commissioners, as is the case with regard to the allotments for the labouring poor?—I think that four acres is too small an amount. With regard to Petersfield Heath, I think that it was a matter of neighbourly feeling. If we had proceeded according to the Act of Parliament, the inhabitants must have been content with 12 acres; but that was not the spirit in which any of us acted, and we felt that it was for the advantage of the neighbourhood. I think that greater discretion might be left in the Commissioners.

Mr. Edward Carleton Tufnell, called in; and Examined.

Mr. *E. C. Tufnell.*

1964. Mr. *Knatchbull-Hugessen.*] You have had great experience as to the habits of the labouring classes?—Yes.

1965. And you are now one of the Commissioners appointed to inquire into the employment of women and children in agriculture?—Yes, and the extension to them of education, and especially with reference to the education of the children.

1966. In your examination of that question, have you formed an opinion as to the operation of the present allotment system?—I believe that the present allotment system is very advantageous to the labourers, but that it is not advantageous unless it is given directly into their hands. With respect to the size of the allotments there is an overwhelming amount of evidence to show that as a general rule an allotment should never exceed a quarter of an acre.

1967. Is the opinion which you have just expressed based upon the evidence given before you, the Commission, as to the employment of women and children in agriculture?—Yes.

1968. Do you agree with Mr. Wetherell in his answer to question 643, in which he says, "I have referred to parish officers; I have referred to farmers, and I have referred to the labourers themselves, and I have made special inquiries as to what has been done where allotments have been set out, and the conclusion at which I have arrived is that one-eighth of an acre, namely 20 poles, is as much as a labouring man can do justice to"?—According to the evidence, generally 20 poles is quite sufficient. An estate which

which has had more allotments laid out upon it than any other is that of the Duke of Bedford; he has 1,250 allotments, and they run from 20 to 30 poles, 20 poles being the ordinary and most approved amount, that is an eighth of an acre.

1969. Do you think that any amendment of the law extending the powers of the commissioners, and giving a larger sized allotment, would work satisfactorily, or the reverse?—I think that it would work unsatisfactorily, because there is a considerable danger of turning the agricultural labourer into a small farmer. A large body of evidence has been given upon that subject. In some parts of the country the allotments are very large, especially in the neighbourhood of Bristol, there are several parishes in which very large allotments are given, the allotments there are very large to the labouring men who cultivate them by themselves and their families, and they operate very disadvantageously upon the school since they employ their own children, who consequently get no education, a result which is contrary to the objects of the commission to which I belong. In Lincolnshire, in some cases, the land is occupied in very small farms, of three or four acres. According to the evidence which we have received there, the children of those farmers get less schooling than the children of the hired labourers, and the relieving officer says that they are more indifferent to education than hired labourers, or if not indifferent, less able to afford it. The children of very small farmers descend to the condition of the lowest class of labourers, simply from the want of education. Thus, so far from these small farms enabling a man to rise out of the condition of a day labourer into one of comparative independence, it has exactly the reverse effect, and lowers his family in the scale of civilisation.

1970. Do you think that any improvement in the constitution of the allotment wardens is possible, and if so, what suggestions would you make upon that subject?—I think that the alteration which Mr. Tremenheere proposed would be extremely injurious, and would never pass. His idea was that the clergyman should be practically put into the position of sole administrator of the allotments. The instant that such a measure as that was introduced into Parliament, you would, of course, have the Presbyterian minister, and the Wesleyan minister, and the Roman Catholic minister, saying, "Are we to be prevented from having some authority over the allotments, simply because we do not belong to the dominant religion"? The present disposition of the public generally, is to put all religions upon an equality, and I think that no minister would venture to make such a proposal; with respect to allotment wardens, I do not see that it is possible to have any other persons as allotment wardens than the parish authorities, because you could not get any other persons to take the duty.

1971. You would not recommend any other person to take that duty than the parish authorities?—I think that in most cases of country parishes no other persons than the ordinary parish authorities could be found.

1972. Mr. *Pease.*] Do you agree in the opinion which Mr. Darby expressed, that as soon as a labouring man had hired labour on his allotment, his allotment ceased to be an advantage to him?—Yes. The moment he commences the business of a farmer he probably descends in condition, lives harder and brings up his family worse. It is a common saying in some parts of the counry, that the worst employer a man can serve is himself.

1973. Mr. *Fawcett.*] A considerable body of evidence was presented to you, as one of the Commissioners to inquire into the condition of people employed in agriculture, showing that in certain cases half-an-acre had worked, and might work, to the advantage of the labourer?—There is some evidence on both sides; but the preponderating evidence is, that an amount beyond a a quarter of an acre, or even one-eighth of an acre, is injurious.

1974. When you say, the "preponderating evidence," do you mean that those persons who speak in favour of only a quarter of an acre, state that in any case half-an-acre would be injurious?—I can imagine that in some cases half-an-acre would not be injurious; but, in most cases, all those persons who have had to do with allotments say that they should be confined to a very small quantity.

1975. But still it is the opinion of persons, who gave evidence before you, that half-an-acre might be an advantage?—I would not untie the powers of the Commissioners in that respect. Where it was desirable, I think that you find the landlords quite willing to give that amount, and if you gave power to a public body to do it, there might be danger of giving too much land, and thus injuring the labouring population. I believe that, in a great majority of cases, half-an-acre of land is rather too much than too little.

1976. *Chairman.*] I suppose that the principle on which the amount of land should be settled is, that a sufficient amount of ground should be given to a labouring man, so as to afford him an opportunity of employing the leisure time which he could devote to the cultivation of his garden without interfering with his ordinary engagements?—Certainly.

1977. Do you apprehend that in some instances an allotment, as large as half-an-acre, might withdraw him from some other occupation which he might follow?—I think that if it were more than that it might induce him to withdraw his children from school, which would be a great evil.

1978. Colonel *Barttelot.*] The allotment would be of no use, would it, if it was more than half-a-mile from the residence of the labourer?—It would be of comparatively small use.

1979. Sir *Michael Hicks Beach.*] Where the allotment was half-an-acre, and where it was perfectly cultivated, did not the witnesses before you state that it was cultivated by the plough, and not by spade husbandry?—In some cases it may have been done in that way. Those persons who have spoken most against large allotments seem to me to have omitted a point, which, in my view, is a most important one, namely, that there is a tendency to prevent the children being educated.

1980. That is the reason why you mainly object to them?—Yes; it reduces the families of those who have large gardens, and even the families of small farmers to the condition of the lowest class of labourers, from the want of education.

1981. Do you not think that the allotment should be cultivated by spade husbandry, and not by the plough?—Yes.

Mr. E. C. Tufnell.

22 June 1869.

1982. Mr. *Liddell.*] You have had an opportunity of examining a great many labourers themselves upon the question?—Yes.

1983. Is the mass of evidence which you have taken from labouring men in favour of a larger allotment than a quarter of an acre, or not?—It is generally confined to the smaller quantity.

1984. Then the labouring men generally say that a quarter of an acre is sufficient for their purposes?—Yes.

1985. Is that distinctly the result of your experience?—Yes. I have been one of the Assistant Poor Law Commissioners for 15 years, and I have attended every board of guardians from Penzance to Ramsgate, and the whole question has been before me; I have resided for a short time in several parishes in that part of the country, and therefore I am personally acquainted with the matter in addition to the evidence which I have received as one of the Commissioners appointed to inquire into the employment of young persons in agriculture, with a view especially to the better education of the children.

1986. In your recent investigations into the condition of the agricultural labourers you did not examine any witnesses, did you?—There is no examination of mine in this report.

1987. Mr. *Lowther.*] With respect to the allotments at Bristol you said that they were larger than others; of what size were they?—They were allotments to labouring men; they operated very disadvantageously upon the education of the neighbourhood; they were from four to ten acres in size.

1988. Mr. *Martin.*] Those allotments are not in grass, are they?—No; the object is to grow vegetables to sell in Bristol.

1989. Mr. *Leveson Gower.*] Am I to understand you to say that excepting a labourer had had children, no labouring man could benefit by an allotment of more than a quarter of an acre of allotment land?—Not exactly; I think that if a man has more than a quarter of an acre he is more likely to be injured than benefited; and, if he has children, the probability is that those children will be deprived of education for the purpose of employing them on the land; such is the common result in all large allotments and small farms.

1990. *Chairman.*] Are there not many instances where the allotment ground has been used for the growth of fruit trees, and in that way has yielded a considerable profit to the owner of it without entailing this additional amount of work from his children?—I believe that fruit trees are not generally advantageous to a labourer; because, in the first place, the crop is extremely precarious, and I can mention the evidence of Mr. Cobbett, the well-known polictical writer, who published much in favour of allotments, but who strongly recommends labourers never to have fruit trees in their allotments.

Mr. NATHAN WETHERELL, called in; and further Examined.

Mr. N. Wetherell.

1991. *Chairman.*] SINCE we had the pleasure of hearing your evidence, we have had before us two residents from Withypool, and the statements which they have made do not agree with the opinions upon which you informed us, that you had determined on setting apart only one acre there for recreation ground; may I ask you whether in your visits to Withypool, you personally inspected the ground, or whether you only gained your information from what was stated at the meeting?—I personally inspected the ground; in fact, you cannot get to Withypool without passing over the spot.

1992. Am I to understand that you were of opinion that the one acre which you set apart for recreation ground was of a different character as regards steepness, or other circumstances, from a considerable portion of the common which was closely adjoining that one acre?—Yes, it lies close to the river on a flat; as you enter Withypool it lies on the left. (*The Witness pointed out the position to the Committee on a map.*)

1993. It has been stated to the Committee that a portion of the common of about seven acres on the eastern side of the road, is exactly of the same character as that one acre on the western side of the road, which you set apart for recreation, and is equally suitable in every respect to the one acre; what have you to say to that statement?—My impression is, that the gardens would occupy a good deal of that side, (*pointing to the map*). The acre set out for exercise and recreation is here (*pointing out the same*).

1994. It has been stated to us that the portion set apart for recreation is on a slope, but that the portion to the east of the road is on a similar slope, and that it is equally suitable for recreation ground?—I think that it is a much steeper slope.

1995. Are you still of opinion that if you had desired to set apart more than one acre for recreation ground, there was not a portion of the common which would have been suitable for that purpose?—I think that it might be set apart if it were merely for the purposes which were referred to on my last examination, but not for cricket, or games of that sort; it is on too steep a slope for that purpose.

1996. As the common is now used for purposes of recreation by the inhabitants, do you conceive that the mere fact of its being recreation ground would render land, which is at present employed for recreation, unsuitable for that purpose, because it was called a recreation ground?—Certainly not.

1997. So that the mere fact of its now being in use would have justified you in assigning a larger portion than one acre?—The chief reason why I did not set out more was that there was evidence before me that the land had not been used for that purpose.

1998. Had you reason to doubt that the inhabitants of a village would naturally use for purposes of recreation a large common which was near them; did you require actual evidence of the number of times of their going upon that common to induce you to suppose that they used it?—They might have walked over it, but I do not think that they used it for any games. I never heard of any such user.

1999. When the Commissioners have to set apart a recreation ground, do they confine its use to games, such as cricket; do they not rather look to the purpose for which parks are usually

usually employed, namely, the purpose of walking, or sitting, or breathing fresh air?—They undoubtedly would not confine themselves to setting out allotments for exercise and recreation, in those cases only where the ground was used for games; if it was near the village they would do so, and I have always done so. The former assistant commissioner set out two acres, but the parties afterwards said that one acre was sufficient for the school children, and that the ground had never been used for games.

2000. You have stated that you had been told that the children had other commons on which they could rove about; we have been informed in evidence that there is no other open space to which the children could have resorted?—I do not think that I had evidence to that effect; I did not intend, in my former evidence, to limit it to the children, but to state that there were other commons where the inhabitants could rove about.

2001. At that meeting were you informed that there were other commons to which the people could go?—Yes.

2002. We have heard in evidence that, although there is a common within a mile, that is a common upon which people are not allowed to go?—There were other commons; I think that Exmoor adjoins it, and I think that there is another common lying to the north.

2003. If it had been made clear to you at the meeting that there were no other commons in the neighbourhood to which the people could resort, should you have proposed to give a larger amount?—I think that I should not have proposed it.

2004. Will you explain the ground upon which you thought that the inhabitants of this village were not entitled to have any recreation ground when they lost the use of the common to which they had resorted, and when they had no other common to which they could resort?—I abstained from setting out a larger quantity because, as far as I could understand, the inhabitants had not resorted to the common for any purpose of amusement. The population is very scanty, and it was considered that if this allotment was set out for the school children it was all that was required, and that if a greater allotment was set out it would not be used.

2005. Supposing that it had been stated to you at the meeting that the people did resort to this common, should you have enlarged the amount of exercise and recreation ground?—I have no doubt that I should.

2006. Do you think that sufficient notice was given of the meeting at Withypool?—I think so; it was the usual notice; several people were there.

2007. Did anybody undertake to represent the claims of the inhabitants, as regarded the want of a recreation ground?—I cannot undertake to say that, without looking at the minutes. I think that Mr. Jekyll, the clergyman, was there; he was there on one occasion, and I am under the impression that he proposed allotments for the labouring poor, but not for exercise and recreation. I do not find on my minutes any such evidence; I remember perfectly well, that after the meeting I walked with several of the parties all over the place where the allotments are set out, and settled the place where they should be set out.

2008. As it appears to many people that one acre is a very insufficient amount of ground for any purposes of recreation, will you explain to the Committee why you limited it to that small area?—Merely because I had reference to its use by the children of the school.

2009. Do you think that one acre is sufficient for a children's playground?—I think so.

2010. But you did not contemplate its being used by any other than the children of the school?—Certainly not; I may also state that there are several allotments which I have set out near villages, which have never been used. I think that there are some letters in evidence from different parties who have given information in that respect. I know of several allotments which have never been used. I saw one in Somersetshire the other day.

2011. Do you mean to say that if you had set out more land in Withypool you believe that it would not have been used?—Yes, I have that firm impression.

2012. Why do you suppose that when the inhabitants went out for a walk in the evening they should not go to the recreation ground; do you suppose that people prefer walking and talking upon a dusty road instead of going to a recreation ground which is very near at hand?—I do not believe that persons are in the habit of confining themselves to small allotments of four or five acres. If the whole common were left open they would go to it, but from my own experience they will not go to allotments of four or five acres. A large portion of that common will still be left open; it will not be cultivated owing to its slope.

2013. Mr. *Knatchbull-Hugessen.*] If you could have left open the whole common, you think that it would have been resorted to?—Yes.

2014. Then your evidence comes to this, that the limited amount which the Commissioners are able to set out for recreation, makes it practically useless to the inhabitants, except for a limited species of recreation?—Just so.

2015. Of this scanty population of Withypool, were there many who claimed as commoners, and who had allotments as commoners?—I have a list of those who attended the meeting.

2016. Were there many of the labouring class who acquired rights as being squatters?—I have no doubt that I can tell you the exact number. There are about 25 persons interested as landowners.

2017. And are there about 39 householders?—I do not know the number of householders, but there are very few cottages, and many of those cottages in Withypool have no rights over the common.

2018. Mr. *Liddell.*] When you were at Withypool, did you receive any evidence as to the character and habits of the population resident in the immediate neighbourhood of that common?—Yes.

2019. What was the nature of the evidence which you received of the habits and character of the population?—I read a note the other day, which stated that they were a predatory class.

2020. Mr. *Fawcett.*] You did not receive that note as evidence when you were at Withypool, but it was written to you lately, was it not?—Certainlly; it was since I was first required to attend this Committee.

2021. Mr. *Liddell.*] Your information, which was derived on the spot, rather tends to confirm the opinion which has been expressed by Mr. Jekyll, as to the character of the population?—Yes.

Mr. *N. Wetherell.*

22 June 1869.

2022. Mr. *Fawcett.*] In reply to a question which I before put to you, you gave as a reason why you did not appropriate more land, that it was because all the other available land was so steep?—The chief reason was that I thought that it was not required.

2023. Did you not, in reply to my question, state that the reason why you did not appropriate more land, was because it was so steep, and because there was no other available land?—I stated that there was no other available land, except the land close down by the river, the river running between the common and the village.

2024. You are probably aware that the parish clerk and the village schoolmaster, have both come here, and have stated most positively that in immediate contiguity to this one acre, there are seven or eight acres of land not more steep and equally available?—I am not aware of that.

2025. Do you think that their local information is not correct?—I do not agree with them, because I am perfectly satisfied that the land is on a slope.

2026. Does the other land slope more than the one acre which you alloted?—I think that it slopes much more than the one acre; I think that the one acre is flat land; that is my impression, according to my recollection.

2027. You have said that all the people told you that this common was not used for purposes of recreation and playing games?—I was told so; it was stated publicly at the meeting, and not contradicted, and to that extent they all agreed upon it.

2028. Will you read the evidence as to that fact?—I am not sure that I have it; I frequently take very little evidence upon these matters in the room, and I am frequently obliged to depend upon my personal inspection; I may have no notes of the evidence.

2029. Will you refer and see whether you have any such notes?—I have no notes upon that point; I have no evidence upon it.

2030. There is no record in your Minutes of Evidence that you put the question to any of the people in the room, asking publicly for information upon the point?—No, I merely put the question contained in the formal application, namely, whether any allotments were proposed for gardens and for recreation.

2031. Can you state from whom you derived the information that the ground was never used for recreation?—It would be from the parties present at the meeting; at the meeting information was required as to the necessity for allotting exercise or recreation ground, and after the meeting I walked all over the land close to the village in order to set out the most desirable places for exercise and recreation.

2032. Then am I to understand you to state that the question was put at the public meeting with regard to the recreation ground?—I am perfectly satisfied of it.

2033. Will you, from your Minutes of Evidence, state what record you have upon that question?—There were questions put without end, and it was impossible for me to take down the answers.

2034. You have no record whatever upon that point?—I have no record whatever, except of the amount which was set out.

2035. Can you, from your recollection, name any one with whom you conversed after the meeting was over, who told you that no more ground was required?—No; three or four persons were present.

2036. Can you recollect who they were?—Mr. Rowcliffe, the solicitor to the lord, I think, was one.

2037. He is not an inhabitant of Withypool?—No.

2038. Did any inhabitant of Withypool accompany you?—I think that there was a gentleman named Jones.

2039. Was he a resident?—I cannot say; he was a farmer, an occupier.

2040. You cannot tell me whether you did or did not apply, or give me the name of any inhabitant of Withypool to whom you applied, as to whether ground would be likely to be required for recreation and games?—I can give you the names of the parties who were present at the meeting. Another assistant commissioner held a meeting two years ago, and he then proposed to set out two acres for exercise and recreation ground, and his report was referred to, and it was thought that one acre would be sufficient, and it was thought that it would, perhaps, be better to add a little more to the gardens. I now remember perfectly well that the question was considered at the meeting, and we went over the land; Mr. Rowcliffe was one of the party, and a farmer, I believe, of the name of Jones was another.

2041. What were the exact means which you took to ascertain whether any games were played on the common, and whether it was likely that the ground would be required for recreation?—I merely asked the general question, what were the requirements for an allotment for exercise and recreation.

2042. You asked that most important question affecting the future interests of this population, and you did not keep any record of the reply to it?—It does not appear that I did. I do not do so with regard to all the inclosures; in the case of many inclosures I get information upon the spot.

2043. But in this case you did not do so?—The question was discussed, and I have only a record of the result, namely, that it was determined to set out one acre. I find that I have a list of all the persons who were present; there were 18 persons present. The gentleman to whom I have referred was not Mr. Jones, but it was one of the Messrs. Moores who was there; I am almost sure that that is so.

2044. Are they inhabitants of the village?—I do not think that they are inhabitants of the village; they are farmers in the parish.

2045. But they are not inhabitants in the village?—I could not undertake to say whether they are or not.

2046. Colonel *Barttelot.*] Are you still of opinion that the ground adjoining this one acre is too steep for recreation, in the ordinary sense of the word?—My impression is so. A part of this land would be occupied by the gardens.

2047. We have two gradients to deal with; one of two feet five inches in a perch, and the other, which is nearer to the recreation ground, is one foot eight inches in a perch; would that be about your idea: namely, one foot in 10 in the least slope, and one foot in five in the greatest slope?—I could not say what it would be.

2048. *Chairman.*] Do you remember the circumstances of the meetings which you held at Swaffham;

Swaffham; we have evidence that certain persons appeared before you on that occasion, and were prevented from advocating the rights of the poor with regard to the situation of the allotment garden, by being told that as they had no legal rights they were not entitled to be heard?—I am perfectly satisfied that that is utterly without foundation. I never refused to hear a man in my lifetime. I have no doubt that there were a great many people at Swaffham who offered to put in their claims for cottages and houses, which were newly built. I am bound by the Act of Parliament. I have no doubt that at the preliminary meeting I may have given my opinion to the gentleman who has been examined here; he may have claimed amongst the parties who were commoners, and I have no doubt that I told him that he had no legal interest as a commoner for the purpose of being reckoned as one of those persons interested in the inclosure.

2049. You neither on that occasion, nor on any other, intended that it should be understood that you declined to hear any one on behalf of the poor, with regard to allotment gardens?—Most certainly not.

2050. It has been stated to us that the allotment gardens are now seven furlongs from the nearest part of the town, and that they might have been within two furlongs but for the opposition which was raised at the meeting on behalf of the lord of the manor; can you recollect the circumstances which prevented you from putting the allotment gardens much nearer to the town than they are?—No; I can give no statement to contradict that without looking at the map. My impression is that there is no land from which allotments could be taken nearer than the heath. All the land lying between the heath and the town is land from which no allotments could be taken; it is half-year land, and land which is not subject to those rights which would entitle the Commissioners to demand allotments for public purposes.

2051. Then your impression is that the ground which you allotted was as near as you could place it, taking public rights and custom into account?—It was not quite so close; there was a little land nearer, but it was poorer, but there is very little difference; I could not have set out land within two furlongs, or anything like it.

2052. Can you explain why the recreation ground is so far from the town?—It is for the same reason; I do not exactly recollect where the exercise ground is set out, but I rather think that it is in very close proximity to the allotment gardens.

2053. It is two miles from the town?—Without having my papers here I cannot explain that; I think that it was set out on the heath, but I am not quite sure of that.

2054. Would your object have been to set it out as near to the town as you could?—Most certainly, but all the intervening land is land from which the Commissioners could not insist upon having allotments set out, it is half-year land, or land of that description; but, in order to clear up any question in that respect, I shall be very happy to look over my notes and to send a statement to the Committee, or to attend here again.

2055. If you will send in a statement of the facts relating to the distance between the town and these allotments it will be satisfactory?—I will do so.

2056. Mr. *Fawcett.*] You have stated that allotments a mile and a-half from the residence of the labourers are of no use to them?—I have.

2057. Knowing that this land which you reserved as allotments was at that distance, did you try to induce the commoners to make an exchange for more convenient land?—I did; and the matter was very much discussed, and I have since received a letter, in which the writer expresses his expectation that Mr. Hamond, who is the largest owner in the parish, will assent; a larger allotment was set out, with the probability that an allotment might be made nearer the town.

2058. Do you think that you would have been performing your duty to the poor, if you had said that you would not recommend an inclosure without that condition?—I considered that I had no such power, and that I should have been exceeding the powers of the Act if I had made any such stipulation.

2059. But it would not have been beyond your province to have stated in your report, that if such an arrangement was not assented to, the labouring poor would suffer?—I think not; but I do not know that it would have been of any use; I should certainly have recommended the inclosure, independently of that circumstance.

2060. But still you might have made such a statement, so that Parliament might have seen the disadvantage to the poor?—It might have had that effect; I was asked that question on my last examination, and I stated, that in certain cases I thought it desirable; and this is exactly one of those cases. Where there is open field-land and waste, and a general right over the whole, I think that the Commissioners ought to have a power to insist upon allotments over the open field-land; they have no such power under the Act at present.

2061. There is nothing to preclude your mentioning the inconvenience of any particular land in your report, is there?—I do not frame the reports which are brought before Parliament.

2962. But the Inclosure Commissioners could have done so?—They might have done so.

2063. That is one of the amendments which you would propose; namely, that in certain cases the desirability of an exchange should be mentioned?—Yes; in certain cases I think that that is very desirable.

2064. What are the commons which are now about to be inclosed, in which it would be advantageous to have the desirability of an exchange stated?—There is a large inclosure at Castor in Northamptonshire; I do not know whether it will go on or not. The Ecclesiastical Commissioners are the lords of the manor, but I have held a meeting in that case.

2065. Is that in either of the two Inclosure Bills which are now before Parliament?—No.

2066. Colonel *Barttelot.*] So far as your memory serves you, you gave the allotments as near as you possibly could to the town of Swaffham?—Certainly; having reference to the character of the land. Of course we are sometimes obliged to set out allotments at a greater distance, on account of the intermediate land being bad, if it does not make a great difference to the poor in going backwards and forwards.

2067. *Chairman.*] Do you remember the circumstances attending the inclosure of Wainfleet, in Lincolnshire, in, I think, 1866; in that case, 100 acres were inclosed, and three acres were allowed as garden ground, and nothing was al-

Mr. N. Wetherell. 22 June 1869.

lotted for exercise and recreation ground?—I do not think that I attended that case.

2068. It is stated by the Commissioners that the reason why no ground was set apart for recreation was, that the occupation of the people was entirely agricultural, and that there was no need of allotment for exercise and recreation; does it appear to you that the fact of the inhabitants being agricultural would apply in all cases as showing that they did not require a place for exercise and recreation?—I never made such a distinction as that. As a rule, I certainly should make no such distinction.

2069. I observe that there are several inclosures where very small proportions have been set out for allotment gardens; I find that at Lackenthorpe there were 596 acres, and that only one acre was set apart for garden ground?—I am sorry that I cannot give you any information upon that case; another assistant commissioner attended it.

2070. Do you remember the circumstances attending the inclosure at Nazing?—Yes; I find that about 240, or 250 acres, were land from which no allotments could be taken. There was Nazing Marsh, a low marsh, and there were some small greens, and the population was very scattered.

2071. Do you remember the circumstances attending the Bowescum Inclosure; 12,000 acres were inclosed, and four acres were set apart for gardens?—I did not attend that meeting.

2072. In the case of North Baddesley there were 738 acres inclosed, and two acres were set apart for allotment ground; was that one of your cases?—There were 653 acres, and the other part was woodland. The population was only 302. Three acres were set out for exercise and recreation, and two acres for the labouring poor. All the cottages had gardens; many of them half-an-acre. Almost all the parish belongs to one proprietor, and he has taken care that all the persons shall have allotment gardens; almost all have half-an-acre.

2073. Mr. *Fawcett.*] You, I suppose, are reading this explanation from your private notes?—Yes.

2074. And not from what was presented to Parliament?—No; but I have no doubt that I reported this to the Commissioners.

2075. But still they did not think it necessary to mention those facts?—All the reports are here.

2076. *Chairman.*] I observe some instances in which only one acre was set apart for recreation ground, as, for example, at Chirbury and at Chillington; do you not think that the circumstances must be very special which justify only a single acre being set apart; the Chirbury inclosure was in 1868, and the Chillington inclosure was in 1866?—I do not remember those cases.

2077. Do you remember the circumstances of the inclosure at Alderholt?—I do; that is in the county of Dorset; 841 acres were inclosed; all the parties in that case had gardens; two acres were set out for the labouring poor and two acres for exercise and recreation; it was a poor miserable tract of land, very sandy.

2078. Do you think that it would be desirable to alter the law, so as to enable an exchange to be made, under different circumstances from the present, where the exchange must be between two pieces of land of exactly the same area; do you think that it would be desirable to alter the discretion which is given by law, so that a larger amount of area might be exchanged for another area?—I think that we have that power now; if land is exchanged on a common, we, of course, take acre for acre; but if private land is exchanged, of course a larger amount must be given if the land is bad land.

2079. With regard to the first case which you have mentioned, namely, that of common land, do you think that an advantage would arise from enlarging the discretion, and not requiring it to be acre for acre?—I think so.

Appendix, No. 1.

PAPER handed in by Mr. *N. Wetherell.*

STATEMENT of Mr. *N. Wetherell*, directed by the Honourable COMMITTEE of the COMMONS INCLOSURE ACT to be made by him in reference to the ALLOTMENT set out in the SWAFFHAM INCLOSURE for the LABOURING POOR.

THE allotment of 50 acres was set out by me for the labouring poor, after an inspection of the land, and after consultation with the numerous parties who attended the preliminary meeting.

The only tracts from which the allotment could be taken under the powers of the Inclosure Act were Swaffham Heath, the Splashes, and Lynn Scoot (shown respectively on the plan herewith sent), for these alone were either waste of a manor, or subject to rights of common, which could be exercised at all times of the year for cattle, levant and couchant, on other land (8th & 9th Vict. cap. 118, sect. 31).

The other tracts comprised in the inclosure, called half-year-lands, were neither waste of a manor, nor subject to rights of common, which could be exercised at all times of the year, and consequently no allotment for the labouring poor could be taken from them.

It will be observed on reference to the map, that the half-year-lands (coloured) and the * inclosed lands (uncoloured) entirely sever the town of Swaffham from the heath, the Splashes, and Lynn Scoot. * Old Inclosures.

The portion of the heath nearest to the town was selected as the site of the allotment for the labouring poor.

The tract called the Splashes lies somewhat nearer than the heath to the town, but the heath was considered to be the most advantageous situation for the allotment.

Complaints were made to me at a subsequent meeting, that the allotment was too far from the town, and I was requested to set it out on the half-year-land; but this, as shown above, could not be carried out, except with the consent of the owner of such half-year-land. I do not remember any request whatever being made to me to change the site of the allotment to any other part of the heath, or to the Splashes or Lynn Scoot.

It has, I believe, been represented to the Committee by one of the witnesses, that the allotment might have been set out within two furlongs of the town; the witness probably referred to a site on the half-year-land, but it has already been shown that no portion of that land could have been taken for the purpose.

If the witness referred to the Splashes as being within two furlongs of the town, an admeasurement of the distance on the map will show that he is in error.

I beg to state further, that in my former evidence I have suggested that in some cases a power of compulsory exchange of the public allotments might be advantageously vested in the Inclosure Commissioners. The cases to which I refer are those which are similar in their circumstances to the Swaffham Inclosure, viz., cases in which open field land and waste land are mixed up in one inclosure. In these cases I think it desirable that the Inclosure Commissioners should have a power, by exchange, or otherwise, to appropriate any portion of the land for exercise and recreation, and for the labouring poor.

23 June 1869. *N. Wetherell.*

Appendix, No. 2.

PAPERS handed in by Mr. *Walsh* (*Vide* Question 1014.)

Sir, Office of Woods, &c., S.W., 17 December 1864.

I HAVE to acknowledge the receipt of your letter of the 12th instant, inquiring upon what terms the Crown will give its assent to the inclosure of the waste lands in the township of Llanbadarnfynydd, in the lordship or manor of South Ugre, county Radnor.

In reply, I have to inform you that I have recently had under consideration the conditions upon which the Crown's assent has heretofore been signified to the inclosure of its waste

Appendix, No. 2.

land, and I have come to the conclusion that those conditions are arbitrary and founded rather upon precedent than upon the merits of the case. After giving my best attention to the subject, therefore, I have arrived at the opinion that, in future inclosures of Crown wastes, the respective interests of the Crown and the commoners in and to the lands should be ascertained in some more satisfactory and definite manner, and that those interests should be compensated accordingly.

With this view, the terms upon which I shall be willing to assent, on behalf of Her Majesty, to the inclosure of the Crown wastes in the township of Llanbadarnfynydd, are as follows, being similar to those which I have recently proposed in three other cases:

1st. That the land to be inclosed be taken to be that shown on the Crown plans.

2nd. That it be referred to either of the under-mentioned surveyors and valuers to ascertain the annual and fee simple value of the land in its present condition, if held in severalty, and the present annual and fee simple values of the rights of the Crown (in and to the soil and over the suface) on the one hand, and of the commoners (over the surface) on the other hand.

3rd. That the referee set out allotments to the Crown and the commoners in accordance with his valuation in satisfaction of their respective rights.

4th. That in the event of the land not being of sufficient value to satisfy the rights of the Crown and the commoners, as valued, the referee to apportion the land between the Crown and the commoners in proportion to the values of their respective rights. On the other hand, if the land is more than sufficient to satisfy those rights, as valued by the referee, the residue to be divided equally between the Crown on the one hand, and the ommoners on the other.

5th. That all mines, minerals, stone, and substrata, be reserved to Her Majesty with full power to enter and work them; and compensation for surface damage done in working them to be provided for by a rate upon all the allotments (including the Crown's), in accordance with the provisions of the Act 22 & 23 Vict. c. 43.

6th. That an office copy of the award and plan annexed be supplied to this Department at the expense of the inclosure.

7th. That the expenses of the inclosure, including the charges and expenses of the referee, be provided for by a rate in accordance with the provisions of the General Inclosure Acts.

I am, &c.

Richard Banks, Esq. (signed) *James K. Howard.*

Names of Surveyors and Valuers above referred to.

Daniel Norton of Broad-street, London.
John Oakley of Waterloo-place, London.
Edmund James Smith of Whitehall-place, London.
Jeremiah Matthews of Birmingham.

Gentlemen, Office of Woods, &c., S.W., 22 December 1864.

I HAVE to acknowledge the receipt of your letter of the 19th instant, relative to the contemplated inclosure of the Crown wastes in the township or Llanbadarnvynydd, in the lordship or manor of South Ugre, county Radnor, and to inform you, with reference to the concluding paragraph, that, under the arrangement proposed by me, a valuer would be appointed in accordance with the provisions of the General Inclosure Acts, but he would be relieved from the task of setting out the allotment to the Crown. He would, however, still have to apportion the commoners' allotment among the various claimants.

I am, &c.

Messrs. Banks. (signed) *James K. Howard.*

INDEX

TO

REPORT

FROM THE

SELECT COMMITTEE

ON

INCLOSURE ACT.

Ordered, by The House of Commons, *to be Printed,*
7 *July* 1869.

I N D E X.

[*N.B.*—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.* to the Pages in the Appendix; and the *Numerals* following *Rep.* to the pages in the Report.]

A.

Agricultural Labourers. Admission as to there being no requirement in the Inclosure Act that garden allotments can only be set out for those employed upon the land, *Darby* 27–30——Definition of the term "labouring poor" adverted to as not confined to agricultural labourers; the great majority of the inclosures take place, however, in agricultural districts, *ib.* 33–48——Term "labouring poor" further adverted to as not limited to agricultural labourers, *ib.* 197. 376, 377.

Large portion of the agricultural labouring class unprovided with garden ground, *Tremenheere* 1227–1229——Examination to the effect that agricultural labourers and artizans who have been residing in the neighbourhood of a common about to be inclosed, should be provided with allotments irrespectively of their employment on the inclosed land, *ib.* 1232–1245. 1348——Importance of further improvements in agriculture as tending to prevent decrease of the agricultural population, *ib.* 1326–1339.

See also *Allotments.* *Education.*

Alderholt Inclosure (*Dorset*). Circumstances under which only two acres were set out for the labouring poor, and two acres for recreation in carrying out the inclosure at Alderholt, *Wetherell* 2077.

Allotment Wardens. Serious defect in the Act in there being no effective check as to the appointment and action of allotment wardens, *Darby* 237. 426. 438–448——Failure of the Act as regards the appointment and action of wardens, *Denton* 486–489——Frequent instances of neglect on the part of allotment wardens, the land set out for the labouring poor being often improperly used or not used at all, *Wetherell* 756–759.

Objection to the overseers and churchwardens acting as allotment wardens, *Tremenheere* 1185——Necessity of an amended constitution of the board of allotment wardens, *ib.*—Suggestion that the board of wardens should consist of the clergyman of the parish, of two members nominated by him, and of an elected member, *ib.* 1185–1188——Twofold object to be gained by bringing the allotment wardens into more direct communication with the Inclosure Commissioners, *ib.* 1189.

Statement in further support of an amended constitution of the board of allotment wardens, increased power being given at the same time to the board, *Tremenheere* 1200–1215——Unwillingness evinced by the churchwardens and overseers to act, *ib.* 1203, 1204. 1209——Increased weight likely to be attached by the allotment wardens to the suggestions of the Commissioners, if the former body were in more direct communication with the latter; doubt as to the expediency of a general coercive power in the Commissioners, *ib.* 1250–1256——Improbability of much objection being made to the clergyman nominating two members of the board of wardens, *ib.* 1277, 1278.

Decided objection to the alteration suggested by Mr. Tremenheere in the constitution of the board of allotment wardens, *Tufnell* 1970, 1971.

Report, 1869—*continued.*

ALLOTMENTS (LABOURING POOR):

1. *Extent and Class of Land subject to Allotments; Power of the Commissioners in the Matter.*
2. *Evidence in Defence of the Practice of the Commissioners as to the Amount of the Allotments.*
3. *Exceptions taken to the Action of the Commissioners.*
4. *Considerations as to the Actual Quantity of Allotment desirable for each Labourer.*
5. *Question of Proximity to the Labourers' Cottages.*
6. *Important Benefits of the Allotment System.*
7. *Circumstance of Allotments not being promoted by the Applicants for Inclosure.*
8. *Question of setting out a certain Proportion of Allotment Land in the case of each Inclosure.*
9. *Conclusions of the Committee.*

1. *Extent and Class of Land subject to Allotments; Power of the Commissioners in the Matter:*

Definition in clauses 30 and 31 of the Inclosure Act of the class of land in respect of which allotments may be set out for the labouring poor, *Darby* 2——Absence of limit as to the amount to be set out for the labouring poor; that is, in respect of that class of land subject to allotments for the purpose, *ib.*——Several instances of inclosure adduced as showing the very small proportion of waste land subject to public allotment, compared with the total quantity of land dealt with, *Denton* 478——Ample powers under the Act as to the amount to be set out for garden allotments, out of the land available for the purpose, *Wetherell* 1039–1041——Advantage if the Commissioners were vested with greater discretion and latitude in setting out allotments, *Bonham-Carter* 1920–1924. 1963.

2. *Evidence in Defence of the Practice of the Commissioners as to the Amount of the Allotments:*

Inquiry made in certain cases in which the allotments were said to be insufficient, the result showing that 1,356 quarters of acres were set out, instead of only 144 quarters, the amount required according to the Act of Parliament, *Darby* 23–28——Explanation that a second allotment is not given in cases where tenements already have allotments in respect of rights of common, *ib.* 86–88——Instances of the allotments set out having been found more than sufficient, *ib.* 92.

Further statement as to the total allotments having been at a much larger rate than a quarter of an acre to each man for 100 acres, *Darby* 203, 204——Inaccurate conclusions likely to be formed as to the amount of allotment ground, unless it be considered that a large portion of the inclosed land is not fit for allotment, *ib.* 238, 239——Further evidence explanatory of the total allotment acreage set apart as compared with a certain calculation of Mr. Tremenheere on the subject, *ib.* 262. 419——Witness repeats that each case must be judged according to its particular circumstances, in order to arrive at a proper understanding relative to the total allotments, *ib.* 337. 417, 418——Total of thirteen acres proposed to be allotted by the present Bill, *ib.* 337.

Statement of the number of cases in which the allotments have been sufficient, the number of cases in which insufficient, and the number in which they have not been used at all, *Wetherell* 901, 902——Discretion exercised by witness upon the question of allotments, irrespectively of the feeling in the neighbourhood, *ib.* 912, 913——Examination to the effect that though the labouring poor are not dealt with as having a vested right in the land, every consideration is given to their general claim to allotments, *ib.* 1055–1064. 1072.

Belief that every care is taken in each case of inclosure, and that sufficient land is set apart; several instances to this effect in witness's neighbourhood, *Bonham-Carter* 1912–1914. 1934–1941——Instances of the garden allotments set apart by the Commissioners not being taken up, *ib.* 1918, 1919.

3. *Exceptions taken to the Action of the Commissioners:*

Examination to the effect that a larger quantity of allotment ground for the labouring poor might with advantage have been set out by the Inclosure Commissioners in certain cases, *Denton* 504. 521–529——Statement that allotments should not be withheld merely because cottagers already have gardens, it being essential to consider the size of the gardens, *ib.* 504, 505. 523–526.

Substantial accuracy of a Table prepared by witness, showing that out of 320,000 acres inclosed since 1845, only 2,119 acres have been assigned as allotments for the labouring poor, *Tremenheere* 1173–1175——Statement in detail to the effect that the total amount assigned by the Inclosure Commissioners in garden allotments, though comparatively very small, is such as amply to satisfy the proportions indicated by the Act of 1845, *ib.* 1176–1180.

Several

ALLOTMENTS (*LABOURING POOR*)—continued.

3. *Exceptions taken to the Action of the Commissioners*—continued.

Several questions proposed by witness for consideration in connection with the limited reservation of garden allotments, *Tremenheere* 1179——Calculated employment of three men per 100 acres, rather than of two men per 100 acres, in order to arrive at the total quantity of allotment land to be reserved, *ib.* 1180—— Arguments opposed to the course pursued by the Commissioners in not setting out allotments where the labouring poor have gardens already, *ib.* 1185——Absence of any definite rule as to the proportion set aside for the labouring poor out of the land inclosed; several instances cited on this point, *ib.* 1185. 1302, 1303 ——Twofold objection to the course pursued in not providing allotment land for cottagers who have gardens already, *ib.* 1248, 1249.

Explanation that witness does not blame the Commissioners for their action in the reservation of allotment land, though he condemns as delusive the system of averages upon which the quantity of allotment is based, *Tremenheere* 1268–1271——Great variation in the practice of the Commissioners as to the proportion of land reserved, *ib.* 1303. 1314–1316——Approval of the working of the Act, save that a larger amount of allotment land should be reserved, *ib.* 1440–1444——Very small deduction from the proportion of land allotted to the lords and commoners by a moderate increase in the reservation of allotments for the labouring poor, *ib.* 1457.

4. *Considerations as to the Actual Quantity of Allotment desirable for each Labourer:*

Conclusion as to an allotment of a quarter of an acre being too much for a labouring man unless he has facilities for obtaining manure; difficulty also as to labour, even though there may be some boys in the family, *Darby* 59–63——Further expression of the opinion that an allotment of a quarter of an acre is as much as, or more than a labouring man can properly cultivate, *ib.* 245. 424, 425—— Conclusion that the size of allotments for the labouring poor should, as a rule, be twenty poles, though under certain circumstances a larger quantity would be desirable, *Denton* 497–500. 504–509. 526–529.

Ample opportunities of witness for ascertaining the requirements of the labouring poor in regard to allotments, *Wetherell* 566, 567——Grounds for concluding that an allotment of one-eighth of an acre is on an average as much as a labouring man can properly cultivate, *ib.* 639–643. 718. 761–764. 835, 836——Maximum of a quarter of an acre allowed for each allotment by the allotment wardens, *ib.* 725. 743——Opinion that a quarter of an acre is almost invariably more than a cottager can use with advantage; data for the conclusion rather that an eighth of an acre is ample, *ib.* 760–767. 835–838.

Evidence in support of the conclusion that the limitation by Act of each garden allotment to a quarter of an acre is inexpedient, and that from one-third to half-an-acre may be given in numerous instances with great advantage, *Tremenheere* 1180–1185—— Several ways in which a garden allotment of half-an-acre might be beneficially used by a labourer, *ib.* 1260–1267.

Opinion that an allotment of from twenty to twenty-five rods is as much as a labouring man can manage, *Bonham-Carter* 1919——Conclusion that as a rule no allotment should exceed a quarter of an acre, whilst an eighth of an acre would generally be sufficient; large mass of evidence in support of this view, *Tufnell* 1966–1969. 1972–1990.

5. *Question of Proximity to the Labourers' Cottages:*

Uselessness of allotments when at a distance of two miles from the labourers' cottages, *Darby* 31, 32——Very little use of an allotment if more than a mile from the labourer's cottage; belief that they are all within half a mile, *ib.* 198, 199——Conclusion as to allotments for the labouring poor being of little value to them if more than half a mile from their cottages, *Denton* 480. 530——Desire of the labouring classes for allotments if they are sufficiently near, and if the ground is suitable, *Wetherell* 777. 779. 783—— Comparative uselessness of an allotment if more than a mile from the labourer's home, *Wetherell* 779. 783; *Tufnell* 4978.

6. *Important Benefits of the Allotment System:*

Calculation that an allotment garden of twenty poles should pay a cottager's rent, *Denton* 506–508——Increased benefit of allotments for the labouring poor as compared with the demand for them thirty years ago, *ib.* 514, 515——Equal benefit of allotments for the labouring poor at the present time as compared with twenty-five years ago, *Wetherell* 889.

Statement in support of the conlcusion that the question of allotments bears very directly upon the condition and education of the labouring classes, *Tremenheere* 1189 ——Moral and social benefit by the labouring classes having as large allotments as they can conveniently cultivate, *ib.* 1217–1220——Increase of produce by an increase of allotments, *ib.* 1221, 1222——Belief as to the system of garden allotments being very advantageous to labourers, *Tufnell* 1966.

Report, 1869—*continued.*

ALLOTMENTS (*LABOURING POOR*)—continued.

7. *Circumstance of Allotments not being promoted by the Applicants for Inclosure:*

Statement that in no instance, out of the several applications for inclosure in the present Report of the Commissioners, has there been any proposal for setting out allotments for the labouring poor, *Wetherell* 770, 771. 913. 1097–1104.

8. *Question of setting out a certain Proportion of Allotment Land in the case of each Inclosure:*

Inexpediency of the Commissioners being required by Act to set out in all cases a certain quantity of land in proportion to the size of the inclosure, *Wetherell* 798–803.

Opinion in favour of a definite rule as to the proportion of land to be reserved, whilst it should be in the discretion of the Commissioners to provide allotment gardens of more than a quarter of an acre, *Tremenheere* 1185. 1302, 1303. 1307, 1308. 1314–1320. 1357.

9. *Conclusions of the Committee:*

Total of 2,223 acres appropriated as allotments for the labouring poor under the Act of 1845, *Rep.* iii——Inability of the Committee to pronounce any general opinion as to the sufficiency or insufficiency of the public allotments made by the Commissioners, *ib.*——Concurrence of the Committee in the view that in many cases an allotment of half an acre would not be beneficial to the labourer, *ib.*——Recommendation, however, that the maximum quantity which may be allotted by the allotment wardens be extended to half an acre in cases in which the quarter acre allotments are not all appropriated in separate tenancies for the labouring poor, *ib.*

Allotments (*Recreation and Exercise*). See *Recreation Ground.*

Applications for Inclosure. Necessity of one-third in value of the persons interested joining in the application for inclosure before the Commissioners can proceed, *Darby* 71, 72. 76——Stop put to the proceedings unless it can be clearly proved that one-third in value of the persons interested have assented to the application, *Wetherell* 564——Application for inclosure in several instances in order to prevent the use of the land by tramps, *ib.* 625.

Statement as to no allotments having been proposed by the applicants in the several cases in the present Report which were investigated by witness, *Wetherell* 770, 771. 913. 1097–1104——Way in which witness is satisfied at the meeting that one-third of those interested assent to the application for inclosure, *ib.* 905–908.

Approaches to Allotments. Practice in regard to approaches to allotments, the cost being thrown upon the inclosure generally, *Wetherell* 881–884——Further explanation on the subject of the cost of approaches and the source whence the expenditure is defrayed, *ib.* 951.

Artisans. Opinion as to the unfairness of taking land from the lord and commoners, and allotting it among the manufacturing population, *Darby* 29. 33–42——Examination upon the question whether the term "labouring poor" should not be so interpreted as to comprise artisans and working men generally, as well as agricultural labourers, *ib.* 33–48. 197. 376, 377——Statement that in the great majority of cases the inclosures take place in agricultural districts, but that if there were miners or artisans sufficiently near, their claims would doubtless be taken into consideration, *ib.* 37–48.

Equal recognition of the claim of a shoemaker as of an agricultural labourer as regards the setting out of garden allotments, *Wetherell* 574. 874–876——Great value of allotments for artisans engaged in sedentary occupations, *Tremenheere* 1223–1226. 1342——Conclusion that artisans and others residing near commons should be provided with allotments irrespectively of their employment on the land, *ib.* 1232–1245. 1348——Special importance of allotments for artisans on the score of health, *ib.* 1394, 1395——

Assistant Commissioners. Commencement of the action of the Assistant Inclosure Commissioners on receiving from the Commissioners the form of local application for inclosure, *Wetherell* 556. 557——Completion of the work of the Assistant Commissioner when the inclosure is completed, *ib.* 810.

See also *Commissioners* (*Local Inquiry*).

Report, 1869—*continued.*

B.

Bonham-Carter, John (Member of the House). (Analysis of his Evidence.)—Resides at Petersfield; is conversant with the circumstances of numerous inclosures which have taken place on the borders of Hampshire and Sussex from time to time, 1910, 1911——Erroneous conclusions which may be drawn from the Inclosure Commissioners' report as to the course pursued in setting out recreation ground and allotments, a personal examination being essential in each case before judging whether the land set apart has been sufficient, 1912. 1934——Belief that every care is taken in each case of inclosure, and that sufficient land is set apart; several instances to this effect in witness's neighbourhood, 1912–1914. 1934–1941.

Confidence placed in the Inclosure Commissioners and in the Assistant Commissioners, so far as witness's experience extends, 1912. 1935–1941——Particulars relative to an inclosure near Petersfield, in which, out of about 200 acres, forty-six acres were reserved for recreation ground; private arrangement with the owners under which this was effected, 1914–1917. 1959–1963——Instances of the garden allotments set apart by the Commissioners not being taken up, 1918, 1919——Reservation of allotment ground in the case of Rogate inclosure, in consequence of Mr. Wetherell's anxiety on the subject, whereas the ground has not been taken or broken up; belief that this is not owing to any excess in the rent demanded, 1918. 1930–1933. 1949–1955.

Opinion that an allotment of from twenty to twenty-five rods is as much as a labouring man can properly utilise, 1919——Advantage if the Commissioners were vested with greater discretion and latitude in setting out allotments, 1920–1924. 1963——Desire always evinced by Mr. Wetherell to consider the local claims to garden allotments, whilst every facility is given to representations on behalf of the poor, 1920, 1921——Increased facilities suggested on the subject of exchanges of allotments, 1922, 1923.

Responsibility respectively of the assistant Commissioner and of the Commissioners; adoption generally of the views of the former, 1923. 1956–1958——Improved regulations required in cases where the allotments or recreation grounds are not used, 1924——Want of increased control in the Commissioners over the valuer, 1925, 1926——Expediency of every practicable means being taken to disseminate notice of each intended inclosure, 1927–1929——Doubt as to any blame attaching to Mr. Wetherell in connection with Withypool inclosure, and the reservation of only one acre for recreation, 1944–1948.

Browne, Hugh. (Analysis of his Evidence.)—Statement relative to a large inclosure near Nottingham about twenty-five years ago, when some 125 acres were set apart for recreation purposes; approval of the operation of the Act under which this enclosure was effected, 1142–1150——Comment upon an inclosure of some land between Hill Top and Eastwood, upon an order of the Inclosure Commissioners, such land having been previously used for purposes of recreation, 1151——Suggestion, that before inclosures are effected, there should be a clear recognition of the public right to go over common or open land, 1152–1154——Suggestion that each inclosure should be submitted to a local body, such as the quarter sessions, 1154, 1155.

Numerous inclosures around Nottingham in former years, without the reservation of any land for recreation, 1156–1159——Very inadequate space reserved for recreation upon the inclosure by the Commissioners of Selston Common in Nottinghamshire; large population adjacent, 1160–1166——Very inadequate representation of the claims of the public in regard to recreation ground, 1165, 1166——Fuller notice suggested when inclosures are contemplated, 1167, 1168.

Bushen, William. (Analysis of his Evidence.)—Is Schoolmaster at Withypool, 1576, 1577——Complains of the reservation of only one acre for recreation purposes upon the inclosure of Withypool Common, and supplies sundry details in support of the conclusion that a much larger recreation allotment should have been set out, 1578 *et seq.*——Considers that the reservation of only five acres of allotment land for the labouring poor is also inadequate, 1648–1651. 1655–1660. 1719–1722.

C.

Chigwell Inclosure. Special circumstances under which the largest possible quantity of recreation ground was set out in the case of Chigwell Inclosure, *Wetherell* 596.

Claims (*Commoners.*) Facilities given to persons to put in claims at a late period of the proceedings necessary before the inclosure of any common, *Darby* 90, 91——Very full facilities given to poor people to appear before the Assistant Commissioner, and to put in their claims, *ib.* 254. 257, 258. 387——Every facility is given by witness to persons to make claims, *Wetherell* 561–567.

Clearance of Allotment Ground. Advantage if there were a power of clearing the ground set out for garden allotments, out of the general expenses of the inclosures, *Wetherell* 804, 805.

Recommendation that the Commissioners should have power to order that the expenses of clearing the allotments for the labouring poor should be included in the expenses of the Act, *Rep.* v.

Report, 1869—*continued.*

Commissioners. Responsibility of the Commissioners for the decision adopted in each case in respect of allotments, *Darby* 11. 13. 187——Reliance necessarily placed by the Commissioners upon the inquiries and reports of the Assistant Commissioner, it being impossible for the former to make local investigation of each intended inclosure, *ib.* 121–127——Explanation that the Commissioners though placing every reliance on the reports of the Assistant Commissioners, by no means adopt their views invariably, or implicitly, *ib.* 218–222——Supervision exercised by the Commissioners over the proceedings and reports of the Assistant Commissioners, though the former may but rarely object to the recommendations of the latter as to the allotments to be set out, *ib.* 360–369.

Great care always taken by the Inclosure Commissioners to arrive at facts before making allotments, *Denton* 524——Detailed report made by witness to the Commissioners, the latter sometimes overruling the recommendations arrived at, *Wetherell* 575–577——Instances of the Commissioners having varied the recommendations of witness, though, as a rule, they adopt them, *ib.* 1073–1075——Responsibility respectively of the Assistant Commissioner and of the Commissioners; adoption generally, of the views of the former, *Bonham-Carter* 1923. 1956–1958.

See also *Allotments.* *Inclosures.* *Local Inquiry.* *Recreation.* *Reports of Commissioners.*

Commoners. Circumstance of the objections to allotments or recreation grounds proceeding more from the commoners than from the lords, *Darby* 142——Effect of inclosure in largely enhancing the value of the commoners' interest, *Wetherell* 794. 828——Belief as to the commoners and the public being adequately protected under the present system of dealing with inclosures, *ib.* 806–808——Due consideration given to the right of taking clay or gravel, and to rights of common generally, in the setting out of commoners' allotments, *ib.* 854–860——*See* also *Claims.* *Local Inquiry.* *Notice of Inclosure.*

Competition for Allotments. Conclusion that any competition for garden allotments should be limited to the labouring poor, *Tremenheere* 1352–1356.

Co-operative System. Statement as to it never having been intended by the Act that allotments should be worked in partnership, *Darby* 236——Doubt as to the practicability of a system of co-operative farming of allotment ground, *Tremenheere* 1396–1401.

Cottage Accommodation. Statement as regards insufficiency of cottage accommodation in any place, that the appropriation of allotments would not ensure the building of such cottages as are desirable, *Darby* 128–130——Question considered as to the fairness of providing allotments in cases where cottages have been run up speculatively without gardens with a view to obtaining allotments, *ib.* 412–415. 431–434.

Conclusion as to its being very mischievous to set out allotments prospectively, with a view to a supply of garden ground for any cottages erected in future by the landowners, *Wetherell* 732–743. 842–845——Exceptions to the rule of landlords in providing cottages where additional labour is required in cultivation *ib.* 977–981. 1051–1054——Considerable improvement in the provision of cottage accommodation throughout the country, *ib.* 1025–1027.

Cricket. Large quantity of recreation ground necessary for the game of cricket, *Denton* 510–513.

Crown Wastes. Communications from Mr. Howard in December 1864 explanatory of the modified terms to be required in future on the part of Her Majesty on the inclosure of Crown wastes, *App.* 127, 128.

Conclusion of the Committee that the condition upon which the assent of the Crown has been given in the case of Llanbadarnfynydd is contrary to the intention and spirit of the 23rd and 33rd sections of the General Inclosure Act, *Rep.* vi.

Cultivation of Allotments. Use of the inclosed land as pasture or arable, accordingly as it is best adapted for either, *Darby* 230, 231—— Disapproval of the cultivation of fruit trees on garden allotments, *Tufnell* 1990.

D.

Dale Inclosure. Hardship in connection with the Dale Inclosure, as many poor persons will no longer be allowed to cut underwood for fences, &c., *Godley* 1746–1749. 1778–1780.

Darby, George. (Analysis of his Evidence.)—Has been Inclosure Commissioner since 1845; 1—Reference to clauses 30 and 31 of the Inclosure Act as specifying the land out of which allotments may be set apart for exercise and recreation, or for the labouring poor, 2—Restriction upon the Commissioners under the 30th clause, as to the quantity to be set out for exercise and recreation, the amount being limited according to the population, *ib.*——Absence of limit as to the amount to be set out for the labouring poor; that is in respect of that class of land subject to allotments for the purpose, *ib.*—— Several modes of disposal of the money or rent charge derived from the allotments set out for the labouring poor, 3—Considerable difficulty in cases where the rent-charge has to be divided among the allottees, *ib.*——Occasional complaints made that the valuers employed by

Report, 1869—*continued.*

Darby, George. (Analysis of his Evidence)—*continued.*

by the Commissioners place too high a rent-charge upon the land, 4——Responsibility of the churchwardens and overseers, or allotment wardens, for the payment of the rent-charge, 5-7——Limited jurisdiction of the Commissioners as to the letting of the allotments or the use made of them, 7-9.

Duty of the Assistant Commissioners to make local inquiry, and to take into consideration the circumstances of each particular case before reporting to the Commissioners and recommending the quantity of land to be set out, 10–12. 183-187——Responsibility of the Commissioners for the decision adopted in each case, 11. 13. 187——Reference had to the existing population near the land, but not to the prospective population, in deciding upon the amount of allotment to be set out, 14. 31, 32——Statement showing that in a considerable number of the largest inclosures, there has been no increase in the population, as between 1851 and 1861; 14-22. 96, 97. 131.

Inquiry made in cetrain cases in which the allotments were said to be insufficient, the result showing that 1,356 quarters of acres were set out instead of only 144 quarters, the amount required according to the Act of Parliament, 23-28——Admission as to there being no requirement in the Act that allotments can only be set out for those employed upon the land, 27-30——Opinion as to the unfairness of taking land from the lord and commoners, and allotting it among the manufacturing population, 29. 35-42——Uselessness of allotments when at a distance of two miles from the labourers' cottages, 31, 32.

Examination upon the question whether the term "labouring poor" should not be so interpreted as to comprise artisans and working men generally, as well as agricultural labourers, 33–48——Statement that in the great majority of cases the inclosures take place in agricultural districts, but that if there were miners or artisans sufficiently near their claims would doubtless be taken into consideration, 37–48.

Reference had to the amount and proximity of the population in setting out recreation ground, 49——Maximum of ten acres of recreation ground in any case, 49, 50——Practice as to the allotment of the herbage, and as to the levelling and fencing of the ground set apart for recreation, 52-54.

Particulars set forth in the provisional order made by the Commissioners for each inclosure; necessity of the document being signed by two thirds of the parties interested, 55. 72——Veto of the lord of the manor on the provisional order, so that without his assent there is an end of the proceedings, 55-58. 67——Action of the Home Office adverted to as being merely ministerial, it resting with Parliament to sanction or reject the provisions, 57, 58. 65–67.

Conclusion as to an allotment of a quarter of an acre being too much for a labouring man unless he has facilities for obtaining manure; difficulty also as to labour even though there may be some boys in the family, 59–63——Inquiry made by the Assistant Commissioners as to the size of the gardens attached to cottages before making recommendation relative to the allotments to be set out, 63, 64——Irregular and costly character of many of the inclosures effected previously to the Act of 1845; 68–70.

Necessity of one third in value of the persons interested joining in the application for inclosure before the Commissioners can proceed, 71, 72. 76——Practice as to the appointment of a valuer, after the proceedings have been sanctioned by Parliament, and as to the investigation of claims and objections, 72——Very satisfactory working of the Act as regards the protection by the Commissioners of the interest of the lords and of the commoners, 77-80——Clauses 30 and 31 of the Act further adverted to as intended to secure certain public advantages in return for the facilities given by the Act to those having defined rights, 81-85.

Explanation that a second allotment is not given in cases where tenements already have allotments in respect of rights of common, 86–88——Due care taken to give full notice to all persons interested, 89–91. 216, 217——Facilities given to persons to put in claims at a late period of the proceedings, 90, 91——Instances of the allotments set out having been found more than sufficient, 92——Very full allotment in the case of Grunty Fen Inclosure, though it was complained of as insufficient, 93, 94——Difficulty if the Commissioners were to consider in each case the wants of the prospective population, 95-97.

Inability of witness to supply offhand a detailed explanation of the Withypool Inclosure, in which out of 1,904 acres only one acre was allotted for recreation; allotment in this case of five acres for the labouring poor, 98-106——Limitation of recreation allotments to the wants of those living in the "neighbourhood"; definition of this term, 107–109——Explanation of the practice of the Commissioners in regard to exchanges; limited jurisdiction in this respect, 110–112.

Discretion exercised by the Commissioners in not providing recreation allotments in certain cases where the population is engaged in agricultural or open air employment, and is not within a certain distance, 113–120——Reliance necessarily placed by the Commissioners upon the inquiries and reports of the Assistant Commissioners, it being impos-

Report, 1869—*continued.*

Darby, George. (Analysis of his Evidence)—*continued.*

sible for the former to make local investigation of each intended inclosure, 121–127——Statement, as regards insufficiency of cottage accommodation in any place, that the appropriation of allotments would not ensure the building of such cottages as are desirable, 128–130.

Rule of the Commissioners to facilitate and sanction all inclosures when the conditions of the Act as to the application and provisional order are complied with, 132–135——Explanation in reference to the veto possessed by the lord of the manor, though as a rule he may obtain only one-fifteenth or one-sixteenth of the common, 136–142——Circumstance of the objections to allotments or recreation grounds proceeding more from the commoners than from the lord, 142.

Examination relative to the information contained in a certain table or "statement of the proceedings which have taken place since the inclosures have been sanctioned;" facility of supplying further details in connection with each inclosure, 143–156——Explanation as regards a table of "applications for inclosures not yet sanctioned," 157–160——Reference to a certain table as showing the cases in which there has been no allotment for recreation, or for the labouring poor, and as containing information relative to the abandonment of applications, 161–171.

Consideration of the means of the Commissioners for supplying a detailed statement, showing the amount of inclosure since 1845, and the proportion between the allotments made and the land subject to allotment; readiness of witness to afford all possible information to the Committee on this and other points, 172–182.

Satisfactory representation of the interests of the labouring poor during the local inquiry by the Assistant Commissioner, 183–187——Further statement as to the inexpediency of assigning allotments prospectively with reference to increase of population; difficulty as to the custody or ultimate sale of unappropriated allotments, 188–196. 223–225——Term "labouring poor" further adverted to as not limited to agricultural labourers, 197——Very little use of an allotment, if more than a mile from the labourer's cottage; belief that they are all within half-a-mile, 198, 199.

Discretion necessary in each case as to the distance of a recreation allotment from the population, 200——Further statement as to the total allotments having been at a much larger rate than a quarter of an acre to each man for one hundred acres, 203, 204——Several instances of exchange of allotment land, 205–209——Particular circumstances under which the Commissioners would probably submit that inclosure should not take place as being detrimental to the public health, &c., 210–215.

Explanation that the Commissioners, though placing every reliance on the reports of the Assistant Commissioners, by no means adopt their views invariably or implicitly, 218–222——Statement that as a rule the better land has already been brought under the Inclosure Act, 226.

[Second Examination.]—Further particulars in connection with the setting out of only one acre for recreation ground in the case of Withypool Inclosure, 227. 302–321——Comparatively inferior character of the land now brought forward for inclosure, 228, 229——Use of the inclosed land as pasture or arable, accordingly as it is best adapted for either, 230, 231——Decision of the Commissioners upon each application for inclosure according to its particular circumstances, there being no general rule adopted, 232. 235.

Difficulty in making any allowance for prospective population as regards the amount of recreation ground to be set out, 234, 235——Statement as to it never having been intended by the Act that allotments should be worked in partnership, 236——Serious defect in the Act in there being no power to enforce the proper maintenance of the recreation ground, 237. 426. 438–448——Serious defect also in there being no effective check as to the appointment and action of allotment wardens, *ib.*

Inaccurate conclusions likely to be formed as to the amount of allotment ground, unless it be considered that a large portion of the inclosed land is not fit for allotment, 238, 239——Explanation that the allotments are vested in the churchwardens and overseers of the parish in which the inclosure is situated, and are for the benefit of the labouring poor of the parish, and not of the manor, 240, 241. 373–376. 462, 463——Duty of the Commissioners as to the carrying out of inclosures irrespectively of the sufficiency of allotments to be awarded, 242——Further statement as to the lord having an absolute veto upon each inclosure scheme; and as to there being good reasons for the possession of such veto, 243, 244. 396–403.

Further expression of the opinion that an allotment of a quarter of an acre is as much as or more than a labouring man can properly cultivate, 245. 424, 425——Limited power of the Commissioners as to interference with the procedure under Local Acts passed previously to 1845; 246–248——Great saving of expense by carrying out several inclosures under one Act instead of by having a Local Act in each case, 249. 404–409——Very slight extent to which commons within the metropolitan radius come before the Commissioners, 250, 251.

Continued

Report, 1869—*continued.*

Darby, George. (Analysis of his Evidence)—*continued.*

Continued existence of a public right of way irrespectively of inclosure, 252, 253. 470 —— Very full facilities given to poor people to appear before the Assistant Commissioner and to put in their claims, 254. 257, 258. 387——Doubt as to its being feasible to produce to the Committee minutes of the proceedings or evidence before the Assistant Commissioners, 259-261——Further evidence explanatory of the total allotment acreage set apart as compared with a certain calculation of Mr. Tremenheere on the subject, 262. 419——Full right of the House of Commons to reject any provisional order, but not to alter it after its terms have been agreed to by the lord and commoners, 263.

Examination in reference to each inclosure dealt with in the Report of the Commissioners for the present year, and in explanation of the course adopted in each case as regards allotments for recreation and for the labouring poor, 264 *et seq.*——Statement relative to the omission from the Report of certain particulars in some of these cases, so that Parliament has not full means of comprehending the decisions arrived at, 272-301. 343-354——Evidence in explanation and defence of the course pursued in the case of Wesley Common inclosure, where only two acres are reserved for recreation ground whilst there is no allotment for the labouring poor, 322-341.

Total of thirteen acres proposed to be allotted by the present Bill, 337——Witness repeats that each case must be judged according to its particular circumstances, in order to arrive at a proper understanding relative to the total allotments, 337. 417, 418—— Conclusion as to the beneficial effect of the inclosures, and as to the improved condition of the people even in those places were the population has decreased or has remained stationary, 355-359. 420-422. 435-437. 467-469. 471.

Supervision exercised by the Commissioners over the proceedings and reports of the Assistant Commissioners, though the former may but rarely object to the recommendations of the latter as to the allotments to be set out, 360-369——Absence of power in the Home Office to interfere with the Inclosure Bills introduced through the office, 370-372 ——Definition of the term "labouring poor" further adverted to as not confined to agricultural labourers, 376, 377.

Improvements further suggested with respect to the proper maintenance of the allotments and recreation grounds, 379-383. 438-448——Approval of any surplus from the allotments being appropriated towards the local rates, 384——Several steps taken by the Assistant Commissioner before a valuer is appointed, 385, 386——Ascertainment at an early stage of the proceedings whether the assent of the lord will be given, 388—— Further statement as to the circumstances and conditions attending the appointment of valuer, 389-393——Importance of Kirton Marsh and other inclosures in the Bill before Parliament being sanctioned without delay, 394, 395.

Clear intention of the Act of 1845, that justice should in the first instance be done to the lord and the commoners, 410, 411——Question considered as to the fairness of providing allotments in cases where cottages have been run up speculatively without gardens with a view to obtaining allotments, 412-415. 431-434——Very few complaints as to the working of the Act, or the system of allotments, 415, 416. 428——Due attention paid to all complaints and representations which come before the Commissioners, 415. 453-455——Opinion as to the sufficiency of the recreation ground generally set out, 423.

Suggestion whether the rent charge in respect of the allotments might not be largely reduced, 427——Further statement as to the Commissioners having no right to apportion the allotments with reference to prospective increase of population in the neighbourhood, 429-432. 458-460——Liberality of the lords rather than of the commoners as to the amount to be set out for allotments, 461——Doubt as to the inexpediency of a power to extinguish common rights over village greens when used as substitutes for recreation grounds, 464-466.

Deferred Allotments. Suggestions for ascertaining the proper amount of land to be set apart as deferred allotments for a prospective population, *Treemenheere* 1185——Enlarged powers proposed in the allotment wardens in connection with the present use of deferred allotments, and with the rents derived therefrom, *ib.*——Advantage of a system of deferred allotments as enabling the allotment wardens to hire other lands and to let it out on the plan proposed by Mr. Bailey Denton, *ib.*——Contemplated temporary letting of deferred allotments, *ib.* 1340, 1341. 1349-1352.——*See* also *Surplus Rents.*

Denton, John Bailey. (Analysis of his Evidence.)—Is a valuer and agricultural engineer; has had considerable experience as a valuer under the Inclosure Act, 472, 473——Duty of the valuer under the Act to assess the allotments for the labouring poor at the productive farming value, 474, 475——Positive instructions under which the valuer acts in placing a rent-charge upon the allotments, 476——Considerable difficulty in consequence of the rent-charge being too low; facility of buying the rent charges at fifteen years' purchase, 477, 478. 483-485.

Several instances of inclosure adduced as showing the very small proportion of waste

Report, 1869—*continued.*

Denton, John Bailey. (Analysis of his Evidence)—*continued.*

land subject to public allotment, compared with the total quantity of land dealt with, 478——Very unsatisfactory practice in different places as to the disposal of the surplus derived in respect of the allotments, 478–483——Circumstance of the rent actually paid by the occupiers of allotments being frequently double the amount of the farm rent put upon the land by the valuer; instances of this, 478. 492–494.

Conclusion as to allotments for the labouring poor being of little value to them if more than half a mile from their cottages, 480. 530——Failure of the Act as regards the appointment and action of allotment wardens, 486–489——Exceptional instances of difficulty in letting the allotment gardens, 490, 491.

Proposition that the surplus derived by the parish authorities beyond the rent-charge placed upon the allotments be made available for an extension of the allotment garden system; snggestions in detail for the working of this scheme, 493. 496. 541–553——Contemplated adoption of witness's plan of garden allotments not only in parishes where allotments are already set out under the Inclosure Act, but in parishes generally, 493——Proposed lease of land in the first instance by local authorities, such land to be let in garden allotments at an increased rent, and the surplus to be applied towards an extension of the system, 493. 541–553.

Direction by the Inclosure Act that any surplus derived from allotments be applied towards the parochial rates, 494, 495——Corroboration of Mr. Darby's statement that in agricultural parishes the population is not on the increase, 496——Conclusion that the size of allotments for the labouring poor should, as a rule, be twenty poles, though under certain circumstances a larger quantity would be desirable, 497–500. 504–509. 526–529——Instances of abuse of the system of allotment gardens set out by private owners, 501–503. 518–520.

Examination to the effect that a larger quantity of allotment ground for the labouring poor might with advantage have been set out by the Inclosure Commissioners in certain cases, 504. 521–529——Large quantity of recreation ground necessary for the game of cricket, 510–513——Increased benefit of allotments for the labouring poor as compared with the demand for them thirty years ago, 514, 515——Great care always taken by the Inclosure Commissioners to arrive at facts before making allotments, 524——Impression that the power of exchange of allotment land might with advantage be more frequently exercised, 532–540.

Disputed Claims. Inquiry instituted by witness in cases of disputed claims to rights of turbary, &c., *Wetherell* 927, 928.

E.

Education. Effect of garden allotments in better enabling agricultural labourers to educate their children, *Tremenheere* 1171, 1172. 1189——Doubt as to the labour required for the cultivation of garden allotments having any effect in inducing parents to keep their boys from school, *ib.* 1272–1276——Prejudicial effect as regards education, if large allotments were provided for labourers, *Tuffnell* 1969. 1977–1979. 1980. 1987.

Exchanges. Explanation of the practice of the Commissioners in regard to exchanges; limited jurisdiction in this respect, *Darby* 110–112——Several instances of exchange of allotment land, *ib.* 205–209—— Impression that the power of exchange of allotment land might with advantage be more frequently exercised, *Denton* 532–540.

Great advantage if exchanges could be effected so as to provide allotments near the cottages; exceptional instances of this being possible, *Wetherell* 777, 778. 888——Disapproval of compulsory powers of exchange, *ib.* 937–939——Difficulty as to exchanges further adverted to; advantage if in some cases the lords and commoners were required to promote exchange as a condition of inclosure, *ib.* 1092–1096. 1133.

Increased facilities suggested on the subject of exchanges of allotments, *Bonham-Carter* 1922, 1923——Objection to the limitation of area for area, *ib.* 1922.

Excess by witness of his duty if he refused to forward any inclosure unless an exchange could be effected, *Wetherell* 2058, 2059——Approval of the desirability of exchange being mentioned in the Report laid before Parliament, *ib.* 2060–2064——Advantage of an enlarged discretion in the Commissioners as to exchanges, the limitation of acre for acre in the case of common land not being desirable, *ib.* 2078, 2079.

Recommendation by the Committtee that exchanges may be made in consideration of the quality and value of the lands as well as of the area, *Rep.* v——Suggestion, as regards the inconvenience experienced in the Swaffham Inclosure, that in cases of inclosure in which open field lands are comprised in the same inclosure with the waste of the manor, the Commissioners may have certain facilities in the way of exchange, *ib.*——Proposed mention in the Reports to Parliament of the measures taken to effect exchanges, and the causes of failure, *ib.*

Expense.

Report, 1869—*continued.*

Expense. Great saving of expense by carrying out several inclosures under one Act, instead of by having a Local Act in each case, *Darby* 249. 404-409.

F.

Fairbourn Heath. Very unsuitable character of the land at Fairbourn Heath for allotments, whilst the cottages already have gardens attached, *Wetherell* 618-624. 805.

Farmers. Circumstance of the farmers being almost always opposed to the setting out of allotments, *Wetherell* 770-776. 794. 877-880. 936.

Fuel Allotments. Absence of any power of interference in Parliament as regards fuel allotments in respect of common rights, *Wetherell* 687-690.

G.

Garden Allotments. See *Allotments.*

Godley, George. (Analysis of his Evidence.)—Is clerk of Pyecombe parish, Sussex, 1724-1727——Complains of the proposed inclosure of Worstenbury-hill in the parish, as depriving the inhabitants of Pyecombe, Hurst, Brighton, &c., of the use of the land for recreation, 1728 *et seq.*——Hardship also in connection with the Dale Inclosure, as many poor persons will no longer be allowed to cut underwood for fences, &c., 1746-1749. 1778-1780.

Grunty Fen Inclosure. Very full allotment in the case of Grunty Fen Inclosure, though it was complained of as insufficient, *Darby* 93, 94.

H.

Health. Beneficial effect of some inclosures on the score of health, as well as of increased production, *Tremenheere* 1445-1448.

Home Office. Action of the Home Office adverted to as being merely ministerial, it resting with Parliament to sanction or reject the provisions of inclosure in any case, *Darby* 57, 58. 65-67——Absence of power in the Home Office to interfere with the Inclosure Bills introduced through the office, *ib.* 370-372.

I.

Inclosure Bill, No. 1. Recommendation by the Committee that this Bill should be allowed to proceed, but that Wisley Common Inclosure and Withypool Inclosure be omitted from the Schedule of the Bill, *Rep.* vi.

Inclosure Commission. Greatly increased responsibility of the Inclosure Commission since the passing of the Act of 1845, *Rep.* vi—— Beneficial effect anticipated as regards the action generally of the Commission, from the alterations suggested by the Committee in the law, *ib.*

See also *Allotments. Commissioners. Inclosures. Local Inquiry. Recreation Ground.*

Inclosures. Rule of the Commissioners to facilitate and sanction all inclosures when the conditions of the Act as to the application and Provisional Order are complied with, *Darby* 132-135——Particular circumstances under which the Commissioners would probably submit that inclosure should not take place, as being detrimental to the public health, &c., *ib.* 210-215——Belief that there have been some cases in which the Commissioners have advised that inclosure should not take place at all, *ib.* 213, 214—— Decision of the Commissioners upon each application for inclosure according to its particular circumstances, there being no general rule adopted, *ib.* 232-235——Duty of the Commissioners as to the carrying out of inclosures, irrespectively of the sufficiency of allotment to be awarded, *ib.* 242——Conclusion as to the beneficial effect of the inclosures, and as to the improved condition of the people, even in those places where the population has decreased or has remained stationary, *ib.* 355-359. 420-422. 435-437. 467-469. 471.

Local feeling generally in favour of the inclosures, *Wetherell* 784——Tendency of the inclosures to improve the character of the adjacent population, *ib.* 796, 797——Large additional value of the land through inclosure and allotment among the lords and commoners, *ib.* 828, 829——General considerations as to the quality of the land, the local health, &c., by which witness is guided in reporting upon the expediency of any inclosure,

Report, 1869—*continued.*

Inclosures—continued.

closure, *Wetherell* 920 ——Approval by witness and the Commissioners of inclosures generally, including inclosures of commons in proximity to game preserves, without entering into the question of the future mode of dealing with the inclosed land, *ib.* 1084–1091. 1141 ——Witness can hardly imagine a tract of uninclosed land which could not be inclosed with advantage, *ib.* 1086. 1091.

Interpretation of a certain report by witness to the effect that, on the whole, the poor have been greatly benefited by inclosures, but that, through the defects in the law, they have frequently suffered greatly, *Tremenheere* 1358–1368 —— Circumstances under which inclosure interferes prejudicially with the labouring poor, it being desirable that in such cases Parliament should not sanction inclosure, save on certain conditions, as to the allotment land to be reserved, *ib.* 1404–1414. 1458–1475——Advantage of the facility and economy of inclosure since the Act of 1845, *ib.* 1439. 1458.

See *also* the Headings generally throughout the Index.

Inquiry. See *Local Inquiry.*

K.

Kirton Marsh (*Lincoln*). Explanation relative to the non-allotment in the case of Kirton Marsh of any ground for recreation or for the labouring poor, *Darby* 352–354——Importance of Kirton Marsh and other inclosures in the Bill before Parliament being sanctioned without delay, *ib.* 394, 395.

Consideration of the reasons for which no land was recommended to be set out in the case of Kirton Marsh; the land, being a marsh, is unfit for garden allotments, whilst the few cottages near the marsh are already provided with gardens, *Wetherell* 728–743. 798–803 ——Necessity of an embankment before any allotments could be utilised; expediency of inclosure and embankment not being delayed, *ib.* 744–752.

Kynance (*Cornwall*). Statement as to two acres having been reserved for recreation at Kynance Cove in respect of an inclosure there, in addition to a village green of four or five acres, *Wetherell* 983. 1118–1123.

L.

Labouring Poor. Consideration of the term, "labouring poor," as regards the allotments to be set out on inclosure; other classes besides agricultural labourers comprised in this term, *Darby* 33–48. 197. 376, 377—— Explanation that allotments are vested in the churchwardens and overseers of the parish in which the inclosure is situated, and are for the benefit of the labouring poor of the parish, and not of the manor, *ib.* 240, 241. 373–376. 462, 463——Very wide definition given by witness to the term, "labouring poor," *Wetherell* 574. 874–876.

See also *Agricultural Labourers.* *Allotments.* *Artisans.*

Landlords. Inexpediency of relying upon the landlords to provide garden allotments for an increased population, *Tremenheere* 1290–1301. 1418–1420.

Linton (*Devon*). Statement as to witness's report, in the case of the Linton Inclosure, having to some extent been overruled by the Commissioners, *Wetherell* 1075.

Local Inclosure Acts. Irregular and costly character of many of the inclosures effected previously to the Act of 1845, by means of Private Acts, *Darby* 68–70—— Limited power of the Commissioners as to interference with the procedure under Local Acts passed previously to 1845, *ib.* 246–248.——*See* also *Expense.*

Local Inquiry. Duty of the Assistant Commissioners to make a local inquiry, and to take into consideration the circumstances of each particular case before reporting to the Commissioners, and recommending the quantity of land to be set out, *Darby* 10–12. 138–187 ——Inquiry made by the Assistant Commissioners as to the size of the gardens attached to cottages, before making recommendations relative to the allotments to be set out, *ib.* 63, 64——Satisfactory representation of the interests of the labouring poor during the local inquiry by the Assistant Commissioner, *ib.* 183–187.

Very careful inquiry by witness in each case, whilst every facility is given to all persons interested to represent their claims, *Wetherell* 561–567—— Practice of witness as to taking minutes of the proceedings before him, *ib.* 562, 563——Very small attendance of labouring men at witness's meetings; question of increased facility in this respect, *ib.* 787–792. 897, 898——Probability of larger attendance if the meetings were held in the evenings, *ib.* 788–790. 897.

Further explanation as to the mode of representation before witness of the local demand for allotments and for recreation grounds, and as the inquiry instituted by him, in order to arrive at the real wants of the locality, *Wetherell* 861–874. 899, 900. 909–913 ——Sufficient

Report, 1869—*continued.*

Local Inquiry—continued.

——Sufficient evidence always taken by witness to justify him an reporting to the Commissioners, *Wetherell* 910, 911——Opportunity of witness for ascertaining from the rate-books, and from personal inquiry, the number and rateable value of the cottages in any parish, *ib.* 948–950——Very small attendance or representation of the labouring classes at the local meetings, save in exceptional cases, *ib.* 963. 1115——Doubtful advantage, if the local meetings were held after the hours of agricultural labour, *ib.* 995–1000. 1021–1024.

Right of the labouring poor, as well as of all others, to attend the meetings and represent their cases, there being, moreover, a personal investigation by witness in every case, *Wetherell* 1055–1061. 1064–1072——Varying number of cases dealt with yearly by witness, the inquiry in any case rarely extending into the second day, *ib.* 1066–1068. 1111–1114.

Belief that a full and accurate knowledge of the wants and wishes of the labouring poor has not always been acquired by the Assistant Commissioner under the present system of inquiry, *Rep.* iv.

See also *Claims. Commoners. Notice of Inclosure. Swaffham Inclosure. Withypool Inclosure.*

Lord of the Manor. Veto of the lord of the manor on the provisional order, so that without his assent there is an end of the proceedings, *Darby* 55–58. 67——Very satisfactory working of the Act as regards the protection by the Commissioners of the interest of the lords and of the commoners, *ib.* 77–80——Explanation in reference to the veto possessed by the lord of the manor, though, as a rule, he may obtain only one-fifteenth or one-sixteenth of the common, *ib.* 137–142.

Further statement as to the lord having an absolute veto upon each inclosure scheme, and as to there being good reasons for the possession of such veto, *Darby* 243, 244. 396–403——Ascertainment at an early stage of the proceedings whether the assent of the lord will be given, *ib.* 388——Clear intention of the Act of 1845 that justice should in the first instance be done to the lord and the commoners, *ib.* 410, 411——Liberality of the lords rather than of the commoners as to the amount to be set out for allotments, *ib.* 461.

Feeling of the lords of the manors and large landowners in favour of allotments, there being, however, many exceptions, *Wetherell* 771. 793–795.

M.

Maintenance and Letting of Allotments. Limited jurisdiction of the Commissioners as to the letting of the allotments, or the use made of them, *Darby* 7–9——Improvement suggested with respect to the proper maintenance of the allotments and recreation grounds, *ib.* 379–383. 438–448——Exceptional instances of difficulty in letting the allotment gardens, *Denton* 490, 491——Advantage if the Commissioners had additional power as to the use of the allotment ground after completion of the inclosure, *Wetherell* 768–770——Clause suggested in any amended Bill, with a view to facilitate the letting of land for allotment purposes when such land is already under lease, *Tremenheere* 1199, 1200——Improved regulations required in cases where the allotments or recreation grounds are not used, *Bonham-Carter* 1924.——*See* also *Allotment Wardens.*

Metropolitan Commons. Very slight extent to which commons within the metropolitan radius come before the Inclosure Commissioners, *Darby* 250, 251.

Mobbs, James. (Analysis of his Evidence.)—Resides at Swaffham, 1782, 1783——Considerable dissatisfaction in the town relative to the situation of the allotments reserved for the labouring poor upon the inclosure of Swaffham Heath; good grounds for this feeling, 1784–1796. 1815. 1843–1852. 1881–1884——Complaint also as to the five acres reserved for recreation, the situation and mode of access being very objectionable, 1797–1814.

Statement as to the Assistant Inclosure Commissioner having, at the local meeting, told those who were not owners that they had no legal rights, and that he could not entertain any claim from them; comment hereon, 1802–1807. 1816–1841. 1853–1861. 1875–1880——Explanation relative to the appearance of witness before the Committee in connection with the absence of proper representation or complaint before the Assistant Commissioner when at Swaffham, 1816–1849. 1860–1865. 1875–1880.

Privileges possessed by witness and by the inhabitants generally in regard to the use of the common, these privileges, such as the right of turning out cattle, and the right of cutting ling being now lost, 1828–1835. 1857–1859. 1872–1874. 1894–1896. 1902–1909——Grievance of the ratepayers in being called upon to maintain roads laid out in the inclosure, 1832, 1833. 1889–1891——Prejudicial effect of the inclosure ultimately as regards the labouring poor, though in the first instance it may be beneficial, 1866.

N.

Nazing Marsh Inclosure. Reasons for not reserving any garden allotments in the case of Nazing Marsh Inclosure, *Wetherell* 2070.

North Baddesley Inclosure. Explanation in reference to North Baddesley Inclosure, and the setting apart of to three acres for recreation, and two acres for the labouring poor, *Wetherell* 2072-2075.

Notice of Inclosure. Due care taken by the Commissioners to give full notice to all persons interested, *Darby* 89–91. 216, 217——Care taken by the Commissioners that due notice is given in the parish prior to the meeting held by the Assistant Commissioner for considering the application, *Wetherell* 557–560——More full notice generally given by the Commissioners than is required by the Act, *ib.* 693, 694.

Approval of the present means of circulating notice of inclosure, though it would be desirable to give more than fourteen days' notice, *Wetherell* 785, 786——Advantage of the use of hand-bills in giving notice of witness's meetings, *ib.* 885-887——Proof required by witness that due notice has been given of each meeting, *ib.* 903——Statement as to the practice in regard to notice when the meeting is adjourned, *ib.* 914-919——Approval of a suggestion that the sections of the Act relating to allotments be attached to the notices affixed to the church doors, &c., *ib.* 961–964. 1116, 1117.

Fuller notice suggested when inclosures are contemplated, *Browne* 1167, 1168——Expediency of every practical means being taken to disseminate notice of each intended inclosure, *Bonham-Carter* 1927–1929.

Amendments suggested by the Committee in connection with the notices of meeting given by the Assistant Commissioner, *Rep.* v——Greater means of publicity suggested with reference to the notices, *ib.*

Nottingham. Statement relative to a large inclosure near Nottingham, about twenty-five years ago, when some 125 acres were set apart for recreation purposes; approval of the operation of the Act under which this inclosure was effected, *Browne* 1142–1150——Numerous inclosures round Nottingham in former years, without the reservation of any land for recreation, *ib.* 1151. 1156–1159.

P.

Parliamentary Control. Full right of the House of Commons to reject any Provisional, Order, but not to alter it after its terms have been agreed to by the lord and commoners, *Darby* 263——Conclusion as to the unfairness of any alteration of an Inclosure Bill or Provisional Order by Parliament, unless such alterations is submitted to the lord and commoners for their assent before the Bill becomes law, *Wetherell* 1001–1006. 1018–1020. 1042-1045——Examination upon the question of the lords and commoners being required to come to Parliament in order to carry out inclosure, *Tremenheere* 1390, 1391. 1433-1438. 1469. 1476-1479. 1484.

Expediency of fuller details being furnished to Parliament in order to enable it to judge of the grounds on which the enactments of the provisional orders are based, *Rep.* iv, v——Suggestion that no inclosures should be sanctioned by Parliament in future Sessions until such of the recommendations of the Committee as Parliament may approve shall have been embodied in the Inclosure Act, *ib.* vi——Conclusion that the constant attention of Parliament will still be required on the annual introduction of the Inclosure Bill, *ib.*

See also *Reports of Commissioners.*

Petersfield. Particulars relative to an inclosure near Petersfield in which, out of about 200 acres, forty-six acres were reserved for recreation ground; private arrangement with the owners under which this was effected, *Bonham-Carter* 1914–1917. 1959–1963.

Population (Amount of Allotments):

Reference had to the existing population near the land, but not to the prospective population, in deciding upon the amount of allotment to be set out, *Darby* 14. 31, 32——Statement showing that in a considerable number of the largest inclosures there has been no increase in the population as between 1851 and 1861, *ib.* 14–22. 96, 97. 131——Difficulty if the Commissioners were to consider, in each case, the wants of the prospective population, *ib.* 95–97.

Further statement as to the inexpediency of assigning allotments prospectively with reference to increase of population; difficulty as to the custody or ultimate sale of unappropriated allotments, *Darby* 188–196. 223–225——Difficulty in making any allowance for prospective population, as regards the amount of recreation land to be set out, *ib.* 234, 235——Further statement as to the Commissioners having no right to apportion

Report, 1869—*continued.*

Population (Amount of Allotments)—continued.

apportion the allotments with reference to prospective increase of population in the neighbourhood, *Darby* 429-432. 458-460——Corroboration of Mr. Darby's statement, that in agricultural parishes the population is not on the increase, *Denton* 496.

Reference had by witness to the population, not only in the parish, but in the neighbourhood, before recommending how much ground shall be set out for recreation, and for the labouring poor, *Wetherell* 568, 569——Limited extent to which consideration is given by witness to the probable use of recreation ground by persons coming a distance by road or railway, *ib.* 570-573. 591-596——Statement that in setting out allotments no reference is had to the question of increase of population, *ib.* 630. 844, 845——The land reserved for recreation is limited according to the population, *ib.* 710——Evil in the allotment of large pieces of ground for future generations, there being no provision for utilising the ground in the meantime, *ib.* 743. 757. 780. 835-845——Belief that the Act never contemplated any prospective allotments, *ib.* 931.

Expediency of the allotments being generally on a more liberal scale, and having reference to the increased population which may be called into existence by the inclosure and cultivation of the land, *Tremenheere* 1185——Grounds for the belief that the Act contemplated provision being made, not only for the existing population, but for future generations, and that the views of the Commissioners on this point cannot be sustained, *ib.*——Exceptions taken to the view that the population of agricultural districts is on the decrease, and that therefore it is unnecessary to make allowance for the prospective population adjacent to inclosures, *ib.*——Way which the amount of land to be set apart as deferred allotments for a prospective population might be arrived at in each case, *ib.*

Further evidence in favour of increasing the amount reserved for allotment, with direct reference to the increased population likely to be employed per 100 acres inclosed, *Tremenheere* 1230-1245——Conclusion as to the insufficiency of the aggregate allotment ground set apart by the Commissioners; that is having reference both to the existing and the prospective population, *ib.* 1245-1247. 1373-1389——Further conclusion as to the expediency of making allowance for the prospective population to be employed in the cultivation of the inclosed land; dissent from the views of Mr. Darby on this point, *ib.* 1280-1308. 1314-1321. 1369-1372——Opinion as to the Act having contemplated provision for a future population, *ib.* 1289. 1305, 1306.

Explanation that witness does not propose any allowance for town or mining populations likely to spring up near any inclosure, *Tremenheere* 1321-1325——Understanding as to the Act of 1845 making provision for the wants of the existing poor population, further provision being required for the future population, *ib.* 1348——Probable causes of the decrease of population in parishes where inclosures have taken place, *ib.* 1405-1417.

Recommended abolition of the restriction in the 30th section of the Act, as to the quantity of land for purposes of exercise and recreation, having reference to a scale varying with the population of the parish, *Rep.* iv.

Preservation of Open Spaces. Doubt as to the preservation and management of commons as recreation grounds tending to improve the character of the surrounding population, *Wetherell* 933-935.

Private Allotments. Instances of abuse of the system of allotment gardens set out by private owners, *Denton* 501-503. 518-520.

Promotion of Inclosures. The Commissioners do not promote inclosures, and only act when put in motion by local persons, *Darby* 76.

Provisional Orders. Particulars set forth in the provisional order made by the Commissioners for each inclosure; necessity of the document being signed by two-thirds of the parties interested, *Darby* 55. 72.

See also *Parliamentary Control.* *Reports of Commissioners.*

Public, The. Clauses 30 and 31 of the Act adverted to as intended to secure certain public advantages in return for the facilities given by the Act to those having defined rights, *Darby* 81-85——Very few complaints as to the working of the Act or the system of allotments, *ib.* 415, 416. 428——Due attention paid to all complaints and representations which come before the Commissioners, *ib.* 415. 453-455.

Argument that although the lord and commoners have entire legal rights in respect of every common inclosed, there is also an equitable right in those living in the neighbourhood which should in equity be considered in the setting out of land for allotments, *Tremenheere* 1279-1288. 1343-1346. 1390, 1391. 1425-1438. 1459-1479——Effect of inclosure in preventing any further use of commons by the public at large, *Wetherell* 1078-1081——Suggestion that before inclosures are effected, there should be a clear recognition of the public right to go over common or open land, *Browne* 1152-1155.

Report, 1869—*continued.*

Public, The—continued.

Confidence placed by the public in the Inclosure Commissioners and in the Assistant Commissioners, so far as witness's experience extends, *Bonham-Carter* 1912. 1935–1941.

Publicity. See *Local Inquiry.* *Notice of Inclosure.*

Q.

Quality of Land. Statement that as a rule the better land has already been brought under the Inclosure Act, *Darby* 226——Comparatively inferior character of the land now brought forward for inclosure, *ib.* 228, 229——Inclosure previously to 1845 of almost all the tracts of good land, *Wetherell* 617——Very inferior quality of the land now left for inclosure, *ib.* 921, 922——Impression as to there being much land of a very fair character still uninclosed, *Tremenheere* 1347.

Quarter Sessions. Suggestion that each inclosure before it is finally completed should be laid before the quarter sessions or some other local body, *Browne* 1154, 1155.

R.

Recreation Ground:

Reference to clauses 30 and 31 of the Inclosure Act as specifying the land out of which allotments may be set apart for exercise and recreation, *Darby* 2——Restriction upon the Commissioners under the 30th clause, as to the quantity to be set out for exercise and recreation, the amount being limited according to the population, *ib.*——Reference had to the amount of proximity of the population in setting out recreation ground, *ib.* 49——Maximum of ten acres of recreation ground in any case, *ib.* 49, 50——Practice as to the allotment of the herbage and as to the levelling and fencing of the ground set apart for recreation, *ib.* 52–54——Limitation of recreation allotments to the wants of those living in the neighbourhood; definition of this term, *ib.* 107–109.

Discretion exercised by the Commissioners in not providing recreation allotments in certain cases where the population is engaged in agricultural or open air employment, and is not within a certain distance, *Darby* 113–120——Discretion necessary in each case as to the distance of recreation allotments from the population, *ib.* 200——Serious defect in the Act, in there being no power to enforce the proper maintenance of the recreation ground, *ib.* 237. 426. 438–448——Opinion as to the sufficiency of the recreation ground generally set out, *ib.* 423.

Non-recognition by witness of the present use made of any common for recreation as not conveying any legal right, *Wetherell* 591–596——Advantage if the Act permitted a larger amount than ten acres for recreation, so as to provide better for those cases where there are towns in the vicinity, *ib.* 597, 598——Expediency of power in the Commissioners to set out enlarged spaces for recreation, after existing rights have been satisfied, *ib.* 811–814. 822–828. 832–834. 929, 930——Due consideration paid by witness to the use already made of any common as recreation ground, *ib.* 890.

Approval of a liberal view being taken in the setting out of recreation ground, *Wetherell* 923—— Particular instances cited as showing the liberal allowance made by witness and the Commissioners for recreation purposes when demanded by local circumstances, *ib.* 982–985. 1048. 1118–1123——Further expression of opinion that the Commissioners should not be limited as to the ground to be set out for recreation, *ib.* 986. 1037, 1038. 1046, 1047—— Expediency of setting out those portions of a common for exercise and recreation which have in time past been so used, *ib.* 1048.

Very inadequate representation of the claims of the public in regard to recreation ground, *Browne* 1165, 1166.

Legal decisions in certain cases cited as showing that the use of commons for recreation purposes does not necessarily constitute an actual right, *Wetherell* 1169——Practice of witness to recommend the reservation of recreation ground irrespectively of the mode of occupation of the people, *ib.* 2067, 2068.

Total of 1,742 acres appropriated for purposes of recreation under the Act of 1845, *Rep.* iii.

See also *Local Inquiry.* *Petersfield.* *Population.* *Public, The.* *Rights of Way, &c.* *Selston Common.* *Swaffham Inclosure.* *Towns.* *Village Greens.* *Wisley Common.* *Withypool Inclosure.* *Worstenbury Hill.*

Reed, James. (Analysis of his Evidence.)—Is parish clerk of Withypool, and supplies sundry particulars in reference to the inclosure of Withypool Common, the adjacent population, and the use formerly made of the common for exercise and recreation, 1485 *et seq.*——Submits that the reservation of only one acre for recreation purposes is altogether inadequate, and that there are several acres of suitable ground close to the village which might have been reserved, 1487 *et seq.*

Rent-

Report, 1869—*continued.*

Rent-Charge. Several modes of disposal of the money or rent-charge derived from the allotments set out for the labouring poor, *Darby* 3——Considerable difficulty in cases where the rent-charge has to be divided among the allottees, *ib.*——Occasional complaints made that the valuers employed by the Commissioners place too high a rent-charge upon the land, *ib.* 4——Responsibility of the churchwardens and overseers or allotment wardens for the payment of the rent-charge, *ib.* 5–7——Suggestion whether the rent-charge in respect of the allotments might not be largely reduced, *ib.* 427.

Considerable difficulty in consequence of the rent-charge being too low; facility of buying the rent-charges at fifteen years' purchase, *Denton* 477, 478. 483–485——Circumstance of the rent actually paid by the occupiers of allotments being frequently double the amount of the farm rent put upon the land by the valuers; instances of this, *ib.* 478. 492–494.

Doub[t] as to its being necessary to alter the Inclosure Act in the way of reduction of the rent-charges upon allotments, *Wetherell* 753–755——Frequent instances of the poor allotments being let at a rent much in excess of their agricultural or farming value, the surplus after certain charges going in aid of the local rates; expediency of some limit as to the amount of rent, *ib.* 965–974——Direction in the Act that the rent shall be according to the agricultural value, *ib.* 970. 972. 1129.

Recommendation that the Commissioners be authorised to require the trustees of the recreation ground and the allotment wardens to furnish every three or five years reports of the state of the land, and the rents paid by the tenants under the management, *Rep.* v, vi.——Recommendation that further powers be vested in the churchwardens and overseers, and in the allotment wardens in reference to the rents paid, and the appropriation of the residue, *ib.*

See also *Surplus Rents.* *Valuers.*

Reports of Commissioners. Examination relative to the information contained in a certain table or "statement of the proceedings which have taken place since the inclosures have been sanctioned;" facility of supplying further details in connection with each inclosure, *Darby* 143–156——Explanations as regards a table of "applications for inclosures not yet sanctioned," *ib.* 157–160——Reference to a certain table showing the cases in which there has been no allotment for recreation or for the labouring poor, and as containing information relative to the abandonment of applications, *ib.* 161–171.

Consideration of the means of the Commissioners for supplying a detailed statement showing the amount of inclosure since 1845, and the proportion between the allotments made and the land subject to allotment; readiness of witness to afford all possible information to the Committee on this and other points, *Darby* 172–182——Examination in reference to each inclosure dealt with in the Report of the Commissioners for the present year, and in explanation of the course adopted in each case as regards allotments for recreation and for the labouring poor, *ib.* 264 *et seq.*——Statement relative to the omission from the report of certain particulars in some of these cases, so that Parliament has not full means of comprehending the decisions arrived at, *ib.* 272–301. 343–354——It is only where no land at all is allotted that the Commissioners are required to give the reasons in their Report, *ib.* 346, 347.

Non-objection to more explicit information in the Bills before Parliament, *Wetherell* 1007–1010——Paper submitted in illustration of the mode in which the results of the operation of the Inclosure Act might be shown from year to year in the Commissioners' Reports; sundry explanations and suggestions hereon, *Tremenheere* 1185——Further statement as to the want of an improved form for the annual reports, *ib.* 1421–1424——Erroneous conclusions which may be drawn from the Inclosure Commissioners' Report as to the course pursued in setting out recreation ground and allotments, a personal examination being essential in each case before judging whether the land set apart has been sufficient, *Bonham-Carter* 1912. 1934.

Opinion of the Committee that the Reports of the Commissioners presented to Parliament should contain more precise and minute statements of the information on which they have framed the provisional orders, *Rep.* iv, v.

Responsibility. See *Commissioners.*

Rights of Way, &c. Continued existence of a public right of way, irrespectively of inclosure, *Darby* 252, 253. 470——Recognition not only of rights of way but of the right of holding fairs and markets, whilst there is no recognition, in the way of compensation, of any right of riding or walking on the common, *Wetherell* 815–821. 830, 831. 925, 926.

Conclusion that, in certain cases, provision should be made to secure to the population such rights of way or other privileges over the commons as may, as far as possible, diminish their loss of enjoyment, *Rep.* iv.

See also *Trespass.*

Rogate Inclosure. Reservation of allotment ground in the case of Rogate inclosure, in consequence of Mr. Wetherell's anxiety on the subject, whereas the ground has not yet been taken or broken up; belief that this is not owing to any excess in the rent demanded, *Bonham-Carter* 1918. 1930–1933. 1949–1955.

Report, 1869—*continued.*

S.

Sale of Allotments. Suggestions that the allotment wardens be empowered to sell as well as to exchange land, subject to the approval of the Commissioners and to the re-investment of the proceeds in more suitable land, *Tremenheere* 1189-1192. 1212-1215. 1253. 1309-1313. 1455——The proceeds from sale should then be re-invested in land more conveniently situated, *ib.* 1189. 1190. 1213.

Saxlingham Inclosure (*Norfolk*). Statement as to only one acre being given for allotments, in the case of this inclosure, whilst there is no explanation on the subject in the Commissioners' Report, *Darby* 343-348——Explanation, as regards Saxlingham Common, that there were only four cottages near the common with insufficient gardens, and that one acre was set out for allotments, *Wetherell* 717-726.

Selston Common (*Notts*). Very inadequate space reserved for recreation upon the inclosure of Selston Common; large population adjacent, *Browne* 1160-1166.

Shrewsbury Castle Common. Great distance of the cottages from Shrewsbury Castle Common, whilst they were already provided with gardens, so that no allotments were set out, *Wetherell* 603, 604.

Skyborrah Hill Inclosure. Examination relative to the non-reservation of any allotment for recreation, or for the labouring poor, in the case of Skyborrah-hill inclosure, *Darby* 265-277——Particulars relative to the Skyborrah-hill inclosure; the chief reason for not setting out allotments in this case being the steep ascent from the cottages to the hill, and the difficulty of conveying manure up, *Wetherell* 599-602. 605-617.

Statistics of Allotments. Opportunity of providing certain statistics relative to allotment gardens once in five years, for a moderate sum, *Tremenheere* 1185——Further approval of statistical returns every five years relative to the allotment land, the estimated expense being from 3,000 *l.* to 4,000 *l.*, *ib.* 1257-1259.

Recommendation that a column be added to the Agricultural Returns of Great Britain, showing the acreage employed in cottage gardens and allotments, *Rep.* vi.

Surplus Rents (*Allotments*). Approval of any surplus from the allotments being appropriated towards the local rate, *Darby* 384.

Very unsatisfactory practice in different places, as to the disposal of the surplus derived in respect of the allotments, *Denton* 478-483——Proposition that the surplus derived by the parish authorities beyond the rentcharge placed upon the allotments be made available for an extension of the allotment garden system; suggestions in detail for the working of this scheme, *ib.* 493. 496. 541-553——Contemplated adoption of witness's plan of garden allotment, not only in parishes where allotments are already set out under the Inclosure Act, but in parishes generally, *ib.* 493——Proposed lease of land in the first instance, by local authorities, such land to be let in garden allotments, at an increased rent, and the surplus to be applied towards an extension of the system, *ib.* 493. 541-553——Direction by the Inclosure Act that any surplus derived from allotments be applied towards the parochial rates, *ib.* 494, 495.

Grounds for objecting to Mr. Bailey Denton's proposal for letting allotments at a rent which should admit of a surplus to be devoted to an extension of the allotment system, *Wetherell* 846-853. 942-947.

Evidence in favour of power in the allotment wardens to let the allotments at rents in excess of their farming value, *Tremenheere* 1193-1198. 1480-1483——Advantage of capitalising the net proceeds derived from allotments let beyond their farming value, such proceeds to be used for extending the allotment system, *ib.* 1213-1215——Further statement that the allotment wardens should be empowered to apply the rents otherwise than in aid of the local rates, *ib.* 1402, 1403.

Unsatisfactory mode of appropriation of the residue of the rents, *Rep.* vi——Proposal that such residue might, in some cases, be employed in improving or fencing the ground, or in hiring or purchasing land either larger in extent or more conveniently situated, *ib.*

See also *Deferred Allotments.*

Swaffham Inclosure. Circumstance of the land allotted for the labouring poor at Swaffham Heath being about a mile distant from the cottages and being very inferior; there is good access to this land and the land nearer the village is still more unsuitable, *Wetherell* 953-960.

Considerable dissatisfaction in the town relative to the situation of the allotments for the labouring poor upon the inclosure of Swaffham Heath; good grounds for this feeling, *Mobbs* 1784-1796. 1815. 1843-1852——Complaint also as to the five acres reserved for recreation, the situation and mode of access being very objectionable, *ib.* 1797-1814——Statement as to the Assistant Inclosure Commissioner having at the local meeting told those who were not owners, that they had no legal rights, and that he could not

Report, 1869—*continued.*

Swaffham Inclosure—continued.

not entertain any claim from them; comment hereon, *Mobbs* 1802–1807. 1816–1841. 1853–1861. 1875–1880.

Explanation relative to the appearance of witness before the committee in connection with the absence of proper representation or complaint before the Assistant Commissioner when at Swaffham, *Mobbs* 1816–1849. 1860–1865. 1875–1880——Privileges possessed by witness and by the inhabitants generally in regard to the use of the common, these privileges, such as the right of turning out cattle and the right of cutting ling, being now lost, *ib.* 1828–1835. 1857–1859. 1872–1874. 1894–1896. 1902–1909——Grievance of the ratepayers being called upon to maintain roads laid out in the inclosure, *ib.* 1832, 1833. 1889–1891——Prejudicial effect of the inclosure ultimately as regards the labouring poor, though in the first instance it may be beneficial, *ib.* 1866.

Positive denial as regards Swaffham inclosure that witness refused to hear certain persons because they had no legal rights, *Wetherell* 2048, 2049——Explanation as to the land reserved at Swaffham Common for recreation and for the labouring poor being so far from the town; facilities given for exchange in this case, *ib.* 2050–2060. 2066.

Statement by Mr. Wetherell, dated 23 June 1869, in explanation of the setting out of an allotment of fifty acres for the labouring poor, *App.* 127.

Inconvenience experienced in the Swaffham inclosure adverted to by the committee; recommendation on the subject with a view to remedying the recurrence of similar inconvenience by means of exchanges, *Rep.* v.

T.

Tir Abbot Ucha (*Denbigh*). Statement as to more full particulars on the subject of this inclosure, and the non-reservation of allotments, not being given in the report to Parliament, *Darby* 295–301.

Towns. Advantage of setting out larger allotments in the proximity of large towns; facilities in this respect, *Wetherell* 808, 809——Due consideration given by witness to the neighbourhood of large towns in reporting as to the amount of land to be set out for recreation, *ib.* 1034–1036——Considerations as to the allowance to be made for the inhabitants of neighbouring towns or villages before inclosure is effected, *Tremenheere* 1429–1432.

Tremenheere, Hugh Seymour. (Analysis of his Evidence.)—Is one of the Commissioners for inquiring into the question of applying the principles of the Factory Act to children employed in agriculture, 1170——Effect of garden allotments in better enabling agricultural labourers to educate their children, 1171, 1172——Substantial accuracy of a table prepared by witness, showing that out of 320,000 acres inclosed since 1845, only 2,119 acres have been assigned as allotments for the labouring poor, 1173–1175.

Statement in detail to the effect that the total amount assigned by the Inclosure Commissioners in garden allotments, though comparatively very small, is such as amply to satisfy the proportions indicated by the Act of 1845; 1176–1180——Several questions proposed by witness for consideration in connection with the limited reservation of garden allotments, 1179——Evidence in support of the conclusion that the limitation by Act of each garden allotment to a quarter of an acre is inexpedient, and that from one third to half an acre may be given in numerous instances with great advantage, 1180–1185.

Calculated employment of three men per 100 acres, rather than of two men per 100 acres, in order to arrive at the total quantity of allotment land to be reserved, 1180——Absence of any definite rule as to the proportion set aside for the labouring poor out of the land inclosed; several instances cited on this point, 1185——Expediency of the allotments being generally on a more liberal scale and having reference to the increased population which may be called into existence by the inclosure and cultivation of the land, *ib.*

Arguments opposed to the course pursued by the Commissioners in not setting out allotments where the labouring poor have gardens already, 1185——Grounds for the belief that the Act contemplated provision being made not only for the existing population, but for future generations, and that the views of the Commissioners on this point cannot be sustained, *ib.*——Suggestions with a view to the Commissioners being kept periodically informed by the allotment wardens as to the use made of the allotment gardens, *ib.*——Opportunity of providing certain statistics relative to allotment gardens once in five years for a moderate sum, *ib.*

Paper submitted in illustration of the mode in which the results of the operation of the Inclosure Act might be shown from year to year in the Commissioners' reports; sundry explanations and suggestions hereon, 1185——Exceptions taken to the view that the population of agricultural districts is on the decrease, and that therefore it is unnecessary to make allowance for the prospective population adjacent to inclosures, *ib.*——Way in which the amount of land to be set apart as deferred allotments for a prospective population might be arrived at in each case, *ib.*——Enlarged powers proposed in the allot-

Report, 1869—*continued.*

Tremenheere, Hugh Seymour. (Analysis of his Evidence)—*continued.*

ment wardens in connection with the present use of deferred allotments, and with the rents derived therefrom, 1185.

Advantage of a system of deferred allotments, as enabling the allotment wardens to hire other land, and to let it out on the plan proposed by Mr. Bailey Denton, 1185—— Necessity of an amended constitution of the board of allotment wardens, *ib.*——Objection to the overseers and churchwardens acting as wardens, *ib.*——Suggestion that the board of wardens should consist of the clergyman of the parish, of two members nominated by him, and of an elected member, 1185–1188.

[Second Examination.] Statement in support of the conclusion that the question of allotments bears very directly upon the condition and education of the labouring classes, 1189——Twofold object to be gained by bringing the allotment wardens into more direct communication with the Inclosure Commissioners, *ib.*——Suggestion that the allotment wardens be empowered to sell as well as to exchange land, subject to the approval of the Commissioners, and to the re-investment of the proceeds in more suitable land, 1189–1192. 1212–1215. 1253. 1309–1313. 1455.

Evidence in favour of power in the allotment wardens to let the allotments at rents in excess of their farming value, 1193–1198. 1480–1483——Clause suggested in any amended Bill with a view to facilitate the letting of land for allotment purposes, when such land is already under lease, 1199, 1200——Statement in further support of an amended constitution of the board of allotment wardens, increased powers being at the same time given to the board, 1200–1215.

Advantage of capitalising the net proceeds derived from allotments let beyond their farming value, such proceeds to be used for extending the allotment system, 1213–1215 ——Moral and social benefit by the labouring classes having as large allotments as they can conveniently cultivate, 1217–1220——Increase of produce by an increase of allotments, 1221, 1222——Great value of allotments for artisans engaged in sedentary occupations, 1223–1226. 1342——Large portion of the agricultural labouring class unprovided with garden ground, 1227–1229.

Further evidence in favour of increasing the amount reserved for allotment, with direct reference to the increased population likely to be employed per 100 acres inclosed, 1230–1245——Examination to the effect that agricultural labourers and artisans, who have been residing in the neighbourhood of a common about to be inclosed, should be provided with allotments irrespectively of their employment on the inclosed land, 1232–1245. 1348——Conclusion as to the insufficiency of the aggregate allotment ground set apart by the Commissioners; that is, having reference both to the existing and the prospective population, 1245–1247. 1373–1389.

Twofold objection to the course pursued in not providing allotment land for cottagers who have gardens already, 1248, 1249——Increased weight likely to be attached by the allotment wardens to the suggestions of the Commissioners, if the former body were in more direct communication with the latter; doubt as to the expediency of a general coercive power in the Commissioners, 1250–1256——Further approval of statistical returns every five years relative to the allotment of land, the estimated expense being from 3,000*l.* to 4,000*l.*; 1257–1259——Several ways in which a garden allotment of half an acre might be beneficially used by a labourer, 1260–1267.

Explanation that witness does not blame the Commissioners for their action in the reservation of allotment land, though he condemns as delusive the system of averages upon which the quantity of allotment is based, 1268–1271——Doubt as to the labour required for the cultivation of garden allotments having any effect in inducing parents to keep their boys from school, 1272–1276——Improbability of much objection being made to the clergyman nominating two members of the board of allotment wardens, 1277, 1278.

Argument that although the lord and commoners have entire legal rights in respect of every common inclosed, there is also an equitable right in those living in the neighbourhood, which should in equity be considered in the setting out of land for allotments, 1279–1288. 1343–1346. 1390, 1391. 1425–1438. 1459–1479——Further conclusion as to the expediency of making allowance for the prospective population to be employed in the cultivation of the inclosed land; dissent from the views of Mr. Darby on this point, 1280–1308. 1314–1321. 1369–1372—— Inexpediency of relying upon the landlords to provide garden allotments for an increased population, 1290–1301. 1418–1420—— Opinion further expressed in favour of a definite rule as to the proportion of land to be reserved, whilst it should be in the discretion of the Commissioners to provide allotment gardens of more than a quarter of an acre, 1302, 1303. 1307, 1308. 1314–1320. 1357.

Great variation in the practice of the Commissioners as to the proportion of land reserved, 1303. 1314–1316——Explanation that witness does not propose any allowance for town or mining populations likely to spring up near any inclosure, 1321–1325—— Importance of further improvements in agriculture as tending to prevent decrease of the agricultural population, 1326–1339——Contemplated temporary letting of deferred allotments,

Report, 1869—*continued.*

Tremenheere, Hugh Seymour. (Analysis of his Evidence)—*continued.*

ments, 1340, 1341. 1349–1352——Impression as to there being much land of a very fair character still uninclosed, 1347.

Understanding as to the Act of 1845 making provision for the wants of the existing poor population, further provision being required for the future population, 1348——Conclusion that any competition for garden allotments should be limited to the labouring poor, 1352–1356——Interpretation of a certain report by witness to the effect that on the whole the poor have been greatly benefited by inclosures, but that through defects in the law they have frequently suffered greatly, 1358–1368.

Examination upon the question of the lord and commoners being required to come to Parliament in order to carry out inclosure, 1390, 1391. 1433–1438. 1469. 1476–1479. 1484——Special importance of allotments for artisans on the score of health, 1394, 1395——Doubt as to the practicability of a system of co-operative farming of allotment ground, 1396–1401——Further statement that the allotment wardens should be empowered to apply the rents otherwise than in aid of the local rates, 1402, 1403.

Circumstances under which inclosure interferes prejudicially with the labouring poor, it being desirable that in such cases Parliament should not sanction inclosure save on certain conditions as to the allotment land to be reserved, 1404–1414. 1458–1475——Probable causes of the decrease of population in parishes where inclosures have taken place, 1415–1417——Further statement as to the want of an improved form for the annual reports, 1421–1424——Considerations as to the allowance to be made for the inhabitants of neighbouring towns or villages before inclosure is effected, 1429–1432.

Advantage of the facility and economy of inclosure since the Act of 1845; 1439. 1458——Approval of the working o fthe Act, save that a larger amount of allotment land should be reserved, 1440–1444——Beneficial effect of some inclosures on the score of health, as well as of increased production, 1445–1448——Very small deduction from the proportion of land allotted to the lords and commoners by a moderate increase in the reservation of allotments for the labouring poor, 1457.

Trespass. Want of further power in the valuer to prevent trespassing whilst his work is being done, *Darby* 428——Argument that the mere riding or walking over commons, as in the case of Wisley Common, is a trespass rather than a legal right, and cannot be taken into account in dealing with the inclosure, *Wetherell* 982, 983. 987–994. 1028–1033——Statement as to the public not having any right of going upon commons, though they are never warned off as trespassers nor proceeded against if they go merely for recreation; proceedings, however, are often taken under suspicion of poaching, where the land is reserved for sporting purposes, *ib.* 1076, 1077. 1105–1110. 1124–1128. 1130–1132. 1134–1140.

Tufnell, Edward Carleton. (Analysis of his Evidence.)—Has had great experience as to the habits of the labouring classes; is now one of the Commissioners for inquiring into the employment of women and children in agriculture in connection with the question of education, 1964, 1965. 1985——Belief as to the system of garden allotments being very advantageous to labourers, 1966——Conclusion that as a rule no allotment should exceed a quarter of an acre, whilst an eighth of an acre would generally be sufficient; large mass of evidence adverted to in support of this view, 1966–1969. 1972–1990.

Prejudicial effect as regards education if large allotments were provided for labourers, 1969. 1977. 1979, 1980. 1987——Decided objection to the alteration suggested by Mr. Tremenheere in the constitution of the board of allotment wardens, 1970, 1971——Comparatively small use of an allotment if more than half a mile from the labourer's cottage, 1978——Disapproval of the cultivation of fruit trees on garden allotments, 1990.

U.

Uninclosed Land. Total of about 7,000,000 acres of land in England still uninclosed and subject to rights of common, *Wetherell* 1083.——See also *Quality of Land.*

Use of Allotments. Suggestions with a view to the Commissioners being kept periodically informed by the allotment wardens as to the use made of the allotment gardens, *Tremenheere* 1185.

V.

Valuers. Practice as to the appointment of a valuer, after the proceedings have been sanctioned by Parliament, and as to the investigation of claims and objections, *Darby* 72——Several steps taken by the Assistant Commissioner before a valuer is appointed, *ib.* 385,

Report, 1869—*continued.*

Valuers—continued.

386—— Further statement as to the circumstances and conditions attending the appointment of valuer, *Darby* 389-393.

Duty of the valuer under the Act to assess the allotments for the labouring poor at the productive farming value, *Denton* 474, 475——Positive instructions under which the valuer acts in placing a rent-charge upon the allotments, *ib.* 476——Practice as to the appointment of the valuer; belief that the lord of the manor never reserves the appointment as a condition of his assent to the inclosure, *Wetherell* 1011–1017——Want of increased control in the Commissioners over the valuer, *Bonham-Carter* 1925, 1926.

Village Greens. Doubt as to the expediency of a power to extinguish common rights over village greens when used as substitutes for recreation grounds, *Darby* 464–466——Explanation of the practice of the Commissioners in dealing with village greens as recreation grounds, and in extinguishing the rights of common in such cases, *Wetherell* 891–896——Special exemption of village greens from inclosure, *ib.* 1049, 1050.

W.

Wetherell, Nathan. (Analysis of his Evidence.)—Has been an Assistant Inclosure Commissioner since the passing of the Act of 1845, his duties being now confined to the south and west of England, 554, 555——Commencement of the action of the Assistant Commissioners on receiving from the Commissioners the form of local application for inclosure, 556, 557——Care taken by the Commissioners that due notice is given in the parish prior to the meeting held by the Assistant Commissioner for considering the application, 557–560——Very careful inquiry by witness in each case, whilst every facility is given to all persons interested to represent their claims, 561–567.

Practice of witness as to taking minutes of the proceedings before him, 562, 563——Stop put to the proceedings unless it can be clearly proved that one-third in value of the persons interested have assented to the application, 564——Ample opportunities of witness for ascertaining the requirements of the labouring poor in regard to allotments, 566, 567——Reference had by witness to the population not only in the parish but in the neighbourhood before recommending how much ground shall be set out for recreation and for the labouring poor, 568, 569.

Limited extent to which consideration is given by witness to the probable use of recreation ground by persons coming from a distance by road or railway, 570–573. 591–596——Very wide definition given by witness to the term "labouring poor," 574——Detailed report made by witness to the Commissioners, the latter sometimes overruling the recommendations arrived at, 575–577——Statement explanatory of witness's report upon Wisley Common, and of his recommendation that there should be no allotment for the labouring poor, and that only two acres should be set out for recreation, 579–595. 691–716. 835–845.

Non-recognition by witness of the present use made of any common for recreation as not conveying any legal right, 591–596——Advantage if the Act permitted a larger amount than ten acres for recreation, so as to provide better for those cases where there are towns in the vicinity, 597, 598——Particulars relative to Skyborrah-hill inclosure, the chief reason for not setting out allotments in this case being the steep ascent from the cottages to the hill, and the difficulty of conveying manure up, 599–602. 605–617——Great distance of the cottages from Shrewsbury Castle Common whilst they were already provided with gardens, so that no allotments were set out, 603, 604.

Inclosure previously to 1845 of almost all the tracts of good land, 617——Very unsuitable character of the land at Fairbourn Heath for allotments, whilst the cottages already have gardens attached, 618–624. 805——Application for inclosure in several instances in order to prevent the use of the land by tramps, 625——Details in explanation and defence of the recommendation by witness that out of Withypool Common, comprising 1,904 acres, only five acres should be set out for the labouring poor, and only one acre for exercise and recreation, 626 *et seq.*

Statement that in setting out allotments no reference is had to the question of increase of population, 630. 844, 845——Grounds for concluding that an allotment of one eighth of an acre is, on an average, as much as a labouring man can properly cultivate, 639–643. 761–764. 835, 836. 718—— Absence of any power of interference in Parliament as regards fuel allotments in respect of common rights, 687–690——More full notice generally given by the Commissioners than is required by the Act, 693, 694.

Explanation as regards Saxlingham Common, that there were only four cottages near the common with insufficient gardens, and that an acre was set out for allotments, 717–726——Consideration of the reasons for which no land was recommended to be set out in the case of Kirton Marsh; the land being a marsh is unfit for garden allotments, whilst the few cottages near the marsh are already provided with gardens, 728–743. 798–803——Conclusion as to its being very mischievous to set out allotments prospectively, with

Wetherell, Nathan. (Analysis of his Evidence)—*continued.*

with a view to a supply of garden ground for any cottages erected in future by the land owners, 732-743. 842-845.

Evil in the allotment of large pieces of ground for future generations, there being no provision for utilising the ground in the meantime, 743. 757. 780. 835-845——Necessity, as regards Kirton Marsh, of an embankment before any allotments could be utilised; expediency of inclosure and embankment not being delayed, 744-752——Doubt as to its being necessary to alter the Inclosure Act in the way of reduction of the rent-charge upon allotments, 753-755——Frequent instances of neglect on the part of allotment wardens, the land set out for the labouring poor being often improperly used or not used at all, 756-759.

Opinion that a quarter of an acre is almost invariably more than a cottager can use with advantage, 913; data for the conclusion rather that an eighth of an acre is ample, 760-767. 835-838——Advantage if the Commissioners had additional power as to the use of the allotment ground after completion of the inclosure, 768-770——Absence of proposal for allotments in any of the applications for inclosure in the present report of the Commissioners, 770, 771——Circumstance of the farmers being almost always opposed to the setting out of allotments, 770-776. 794. 877-880. 936——Feeling of the lords of the manors and large landowners in favour of allotments, there being, however, many exceptions, 771. 793-795——Desire of the labouring classes for allotments if they are sufficiently near, and if the ground is suitable, 777. 779. 783.

Great advantage if exchanges could be effected so as to provide allotments near the cottages; exceptional instances of this being possible, 777, 778. 888——Uselessness of an allotment if more than a mile from the labourer's home, 779. 783——Local feeling generally in favour of the inclosures, 784——Approval of the means of circulating notice of inclosure, though it would be desirable to give more than fourteen days' notice, 785, 786——Very small attendance of labouring men at witness's meetings; question of increased facility in this respect, 787-792. 897, 898——Effect of inclosure in largely enhancing the value of the commoner's interest, 794. 828.

Tendency of the inclosures to improve the character of the adjacent population, 796, 797——Inexpediency of the Commissioners being required by Act to set out in all cases a certain quantity of land in proportion to the size of the inclosure, 798-803——Advantage if there were a power of clearing the ground set out for garden allotments, out of the general expenses of the inclosure, 804, 805——Belief as to the commoners and the public being adequately protected under the present system of dealing with inclosures, 806-808.

Advantage of setting out larger allotments in the proximity of large towns; facilities in this respect, 808, 809——Completion of the work of the Assistant Commissioner when the inclosure is completed, 810——Expediency of power in the Commissioners to set out enlarged spaces for recreation, after existing rights have been satisfied, 811-814. 822-828. 832-834. 929, 930——Recognition not only of rights of way, but of the right of holding fairs and markets, whilst there is no recognition, in the way of compensation, of any right of riding or walking on the common, 815-821. 830, 831. 925, 926.

Large additional value of the land through inclosure and allotment among the lords and commoners, 828, 829——Grounds for objecting to Mr. Bailey Denton's proposal for letting allotments at a rent which should admit of a surplus to be devoted to an extension of the allotment system, 846-853. 942-947——Due consideration given to the right of taking clay or gravel, and to rights of common generally, in the setting out of commoners' allotments, 854-860.

Further explanation as to the mode of representation before witness of the local demand for allotments and for recreation ground, and as to the inquiry instituted by him in order to arrive at the real wants of the locality, 861-874. 899, 900. 909-913——Equal recognition by witness of the claim of a shoemaker as of an agricultural labourer as regards the setting out of garden allotments, 874-876——Practice in regard to approaches to allotments, the cost being thrown upon the inclosure generally, 881-884——Approval of the use of hand-bills in giving notice of witness's meetings, 885-887.

Equal benefit of allotments for the labouring poor at the present time as compared with twenty-five years ago, 889——Due consideration paid by witness to the use already made of any common as recreation ground, 890——Explanation of the practice of the Commissioners in dealing with village greens as recreation grounds, and in extinguishing the rights of common in such cases, 891-896——Statement of the number of cases in which the allotments have been sufficient, the number of cases in which insufficient, and the number in which they have not been used at all, 901, 902.

Proof required by witness that due notice has been given of each meeting, 903——Way in which witness is satisfied at the meeting that one-third of those interested assent to the application for inclosure, 905-908——Sufficient evidence always taken by witness to justify him in reporting to the Commissioners, 910, 911——Discretion exercised by witness upon the question of allotments, irrespectively of the feeling in the neighbourhood,

Report, 1869—*continued.*

Wetherell, Nathan. (Analysis of his Evidence)—*continued.*

912, 913——Statement as to the practice in regard to notice when the meeting is adjourned, 914–919.

General considerations as to the quality of the land, the local health, &c., by which witness is guided in reporting upon the expediency of any inclosure, 920——Very inferior quality of the land now left for inclosure, 921, 922——Approval of a liberal view being taken in the setting out of recreation ground, 923——Inquiry instituted in cases of disputed claims to rights of turbary, &c., 927, 928——Belief that the Act never contemplated any prospective allotments 931.

Doubt as to the preservation and management of commons as recreation grounds tending to improve the character of the surrounding population, 933–935——Disapproval of compulsory powers of exchange, 937–939——Facility of providing by special enactment for the temporary use of any allotment land set out in the case of Wisley Common, 940, 941——Opportunity of witness for ascertaining from the rate-books, and from personal inquiry, the number and rateable value of the cottages in any parish, 948–950.

[Second Examination.]—Further explanation on the subject of the cost of approaches, and the source when the expenditure is defrayed, 951——Circumstance of the land allotted for the labouring poor at Swaffham Heath being about a mile distant from the cottages, and being very inferior; there is good access to this land, and the land nearer the village is still more unsuitable, 953–960——Approval of a suggestion that the sections of the Act relating to allotments be attached to the notices affixed to the church doors, &c., 961–964. 1116, 1117——Very small attendance or representation of the labouring classes at the local meetings, save in exceptional cases, 963. 1115.

Frequent instances of the poor allotments being let at a rent much in excess of their agricultural or farming value, the surplus, after certain charges, going in aid of the local rates; expediency of some limit as to the amount of rent, 965–974——Direction in the Act that the rent shall be according to the agricultural value, 970. 972. 1129——Exceptions to the rule of landlords in providing cottages where additional labour is required in cultivation, 977–981. 1051–1054——Particular instances cited as showing the liberal allowance made by witness and the Commissioners for recreation purposes when demanded by local circumstances, 982–985. 1048. 1118–1123.

Argument that the mere riding or walking over commons, as in the case of Wisley Common, is a trespass rather than a legal right, and cannot be taken into account in dealing with the inclosnre, 982, 983. 987–994. 1028–1033——Furlher expression of opinion that the Commissioners should not be limited as to the ground to be set out for recreation, 986. 1037, 1038. 1046, 1047——Doubtful advantage if the local meetings were held after the hours of agricultural labour, 995–1000. 1021–1024.

Conclusion as to the unfairness of any alteration of an Inclosure Bill or provisional order by Parliament, unless such alteration is submitted to the lord and commoners for their assent before the Bill becomes law, 1001–1006. 1018–1020. 1042–1045——Nou-objection to more explicit information in the Bills before Parliament, 1007–1010——Practice as to the appointment of the valuer; belief that the lord of the manor never reserves the appointment as a condition of his assent to the inclosure, 1011–1017——Considerable improvement in the provision of cottage accommodation throughout the country, 1025–1027.

Due consideration given by witness to the neighbourhood of large towns in reporting as to the amount of land to be set out for recreation, 1034–1036——Ample powers under the Act, as to the amount to be set out for garden allotments, 1039–1041——Expediency of setting out those portions of a common for exercise and recreation which have in time past been so used, 1048——Special exemption of village greens from inclosure, 1049, 1050.

Examination to the effect that though the labouring poor are not dealt with as having any vested right in the land, every consideration is given to their general claim to allotments, 1055–1064. 1072——Right of the labouring poor, as well as of all others, to attend the meetings and represent their cases, there being, moreover, a personal investigation by witness in every case, 1055–1061. 1064–1072——Varying number of cases dealt with yearly by witness, the inquiry, in any case, rarely extending into the second day, 1066–1068. 1111–1114——Instances of the Commissioners having varied the recommendations of witness, though, as a rule, they adopt them, 1073–1075.

Statement as to the public not having any right of going upon commons, though they are never warned off as trespassers, nor proceeded against, if they go merely for recreation; proceedings, however, are often taken, under suspicion of poaching, where the land is reserved for sporting purposes, 1076, 1077. 1105–1110. 1124–1128. 1130–1132. 1134–1140——Effect of inclosure in preventing any further use of commons by the public at large, 1078–1081——Total of about 7,000,000 acres of land still uninclosed and subject to rights of common, 1083.

Approval by witness and the Commissioners of inclosure generally, including inclosures of commons in proximity to game preserves, without entering into the question of the future

Report, 1869—*continued.*

Wetherell, Nathan. (Analysis of his Evidence)—*continued.*

future mode of dealing with the inclosed land, 1084–1091. 1141——Difficulty as to exchanges further adverted to; advantage if, in some cases, the lord and commoners were required to promote exchange as a condition of inclosure, 1092–1096. 1133——Further statement as to no allotments having been proposed by the applicants, in the twelve cases in the present report which were investigated by witness, 1097–1104.

[Third Examination.]—Legal decisions, in certain cases, cited as showing that the use of commons for recreation purposes does not necessarily constitute an actual right, 1169.

[Fourth Examination.]— Further statement, in detail, explanatory of the data by which witness was guided in setting out only one acre for recreation in the case of Withypool; ample inspection and inquiry before arriving at this conclusion, 1991–2047——Positive denial, as regards Swaffham Inclosure, that witness refused to hear certain persons because they had no legal rights, 2048, 2049——Explanation as to the land reserved at Swaffham Common, for recreation and for the labouring poor, being so far from the town; facilities given for exchange in this case, 2050–2060. 2066.

Excess, by witness, of his duty if he refused to forward any inclosure, unless an exchange could be effected, 2058, 2059——Approval of the desirability of exchange being mentioned in the Report laid before Parliament, 2060–2064——Practice of witness to recommend the reservation of recreation ground irrespectively of the mode of occupation of the people, 2067, 2068——Reasons for not reserving any garden allotments in the case of Nazing Marsh Inclosure, 2070.

Explanation in reference to North Baddesley Inclosure, and the setting apart of three acres for recreation and two acres for the labouring poor, 2072–2075——Circumstance under which only two acres were set out for the labouring poor and two acres for recreation, in carrying out the inclosure at Alderholt, in Dorset, 2077——Advantage of an enlarged discretion in the Commissioners as to exchanges, the limitation of acre for acre in the case of common land not being desirable, 2078, 2079.

Wetherell, Mr. Desire always evinced by Mr. Wetherell to consider the local claims to garden allotments, whilst every facility is given to representations on behalf of the poor, *Bonham-Carter* 1920, 1921.

Conclusion of the Committee that, in the matter of public allotments, Mr. Wetherell has generally put himself in the position of the advocate of the public and the labouring poor, and that he has shown an earnest desire to discharge effectually this as well as the other branches of his duty, *Rep.* iv.

Wisley Common. Evidence in explanation and defence of the course pursued in the case of Wisley Common Inclosure, where only two acres are reserved for recreation ground, whilst there is no allotment for the labouring poor, *Darby* 322–341.

Statement explanatory of witness's report upon Wisley Common, and of the recommendation that there should be no allotment for the labouring poor, and that only two acres should be set out for recreation, *Wetherell* 579–595. 691–716. 835–845——Very few cottages in the parish, whilst these have gardens already, *ib.* 581. 695–699. 716——Unsuitable character of the land for spade cultivation as garden ground, *ib.* 581. 585–587. 706–708——Statement that only three persons attended the meeting held by witness, and that he never heard of any public rights over the common, *ib.* 582–584. 691–693. 699–701.

Circumstance of the Select Committee of the House of Commons having recommended that ten acres should be reserved for garden allotments, and six acres for recreation ground; comment upon these proposals, *Wetherell* 702–705. 709–716——Ten acres would provide very many more allotments than there are cottages in the parish, *ib.* 704. 715, 716. 839–842——The Commissioners had not power to set out more than four acres for recreation, *ib.* 709–712——Facility of providing by special enactment for the temporary use of any allotment land to set out in the case of Wisley Common, *ib.* 940, 941.

Recommendation by the Committee that Wisley Common Inclosure be omitted from the schedule of the Inclosure Bill, No. 1, *Rep.* vi.

Withypool Inclosure:

1. *Explanation and Defence of the Action of the Inclosure Commissioners as to the Recreation Ground and Garden Allotments.*
2. *Exceptions taken to the Course pursued by the Commissioners, more especially as to the Amount of Recreation Ground.*
3. *Conclusions of the Committee.*

1. *Explanation and Defence of the Action of the Inclosure Commissioners as to the Recreation Ground and Garden Allotments:*

Inability of witness to supply off-hand a detailed explanation of the Withypool Inclosure, in which out of 1,904 acres only one acre was allotted for recreation; allotment in

WITHYPOOL INCLOSURE—continued.

1. *Explanation and Defence of Action of Inclosure Commissioners, &c.*—continued.

this case of five acres for the labouring poor, *Darby* 98–106——There was a former report in this case by Mr. Rawlinson, as Assistant Commissioner, in which two acres were recommended for recreation and four acres for the labouring poor, *ib.* 102, 103. 105. 227.

Further particulars in connection with the setting out of only one acre for recreation ground in the case of Withypool Inclosure, *Darby* 227. 302–321——Scattered character of the population, there being in fact no use made of the ground for recreation, *ib.* 227.

Details in explanation and defence of the recommendation by witness, as Assistant Commissioner, that out of Withypool Common, comprising 1,904 acres, only five acres should be set out for the labouring poor, and only one acre for exercise and recreation, *Wetherell* 626 *et seq.*——Very scanty population in the neighbourhood, the common being never resorted to for recreation, *ib.* 627, 628. 644. 675, 676——Statement as to witness not having been at all guided by any prospective increase of population, *ib.* 629, 630. 650. 652——Witness considers that five acres would give forty allotments, which is far more than the number of cottages, *ib.* 639–643——Very small portion of the ground which is suitable for recreation, *ib.* 645–649——The matter of the inclosure was thoroughly ventilated, every one in the parish having had notice, *ib.* 664.

Further statement in detail explanatory of the data by which witness was guided in setting out only one acre for recreation in the case of Withypool; ample inspection and inquiry before arriving at his conclusion, *Wetherell* 1991–2047——Witness inspected the land, and believes that more land could not have been reserved for recreation save at an increased slope, *ib.* 1991–1995. 2022–2026. 2046, 2047——The common had been but little used for recreation or exercise, and witness considered that one acre was enough for the requirements of the local school, *ib.* 1996–2005. 2008–2014. 2022——Very few cottagers having any rights over the common, *ib.* 2016, 2017——Evidence received by witness when at Withypool to the effect that one acre was sufficient, *ib.* 2027–2045.

Doubt as to any blame attaching to Mr. Wetherell, in connection with Withypool Inclosure, and the reservation of only one acre for recreation, *Bonham-Carter* 1944–1948.

2. *Exceptions taken to the Course pursued by the Commissioners, more especially as to the Amount of Recreation Ground:*

Conclusion as to the insufficiency of the land reserved for the labouring poor, *Tremenheere* 1382–1386.

Witness, who is parish clerk of Withypool, supplies sundry particulars in reference to the inclosure of Withypool Common, the adjacent population, and the use formerly made of the common for exercise and recreation, *Reed* 1485 *et seq.*——Submits that the reservation of only one acre for recreation purposes is altogether inadequate, and that there are several acres of suitable ground close to the village which might have been reserved, *ib.* 1487 *et seq.*——The total population of the village is from 120 to 150, there being about thirty houses, *ib.* 1488, 1489.

Frequent use now made of the common for recreation, *Reed* 1493–1497. 1503–1505. 1551–1553——Except the common there is no other ground near the village which the people may use for recreation, *ib.* 1498–1500. 1539–1545——Dissatisfaction of the inhabitants that so little recreation ground has been reserved; statement hereon, as to this feeling not having been represented when the Assistant Inclosure Commissioner held his meeting at Withypool, *ib.* 1507–1524. 1530–1538. 1548–1551. 1561–1575.

Complaint as to the reservation of only one acre for recreation purposes upon the inclosure of Withypool Common; sundry details in support of the conclusion that a much larger recreation allotment should have been set out, *Bushen* 1578 *et seq.*——Description of the situation and character of the ground set apart; respects in which objectionable, *ib.* 1578–1588. 1617–1622——Means of setting out seven or eight acres of ground, just as suitable as the one acre reserved, the slope being the same, *ib.* 1589–1600. 1646, 1647. 1681, 1682.

Use made of the common by witness's scholars, for whom one acre of play-ground will be quite inadequate, *Bushen* 1601, 1602. 1623–1630. 1636–1638. 1691–1694——Statement as to representations not having been made by the inhabitants, previously to the provisional order, due notice having been given of the meeting held by the Assistant Commissioner, *ib.* 1603–1616. 1623, 1624. 1639–1645. 1652–1654. 1695–1700——Witness considers that the reservation of only five acres of allotment land for the labouring poor is also inadequate, *ib.* 1648–1651. 1655–1660. 1719–1722——Absence of facilities as regards the use of neighbouring commons for recreation purposes, *ib.* 1684–1690. 1713–1718.

Report, 1869—*continued.*

Withypool Inclosure—continued.

3. *Conclusions of the Committee:*

Review of the Withypool case by the Committee; conclusion that the recreation-ground allotted in this case is insufficient, *Rep.* iv.

Recommendation that Withypool Inclosure be omitted from the schedule of the Inclosure Bill, No. 1, and be referred back to the Commissioners, *Rep.* vi.

Worstenbury Hill. Witness complains of the proposed inclosure of Worstenbury Hill as depriving the inhabitants of Pyecombe, Hurst, Brighton, &c., of the use of the land for recreation, *Godley*, 1728 *et seq.*

SPECIAL

REPORT

FROM THE

SELECT COMMITTEE

ON

METROPOLITAN COMMONS ACT 1866 AMENDMENT BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed,*
19 *July* 1869.

Monday, 31*st May* 1869.

Ordered, That the Metropolitan Commons Act (1866) Amendment Bill, be read a second time, and committed to a Select Committee.

Wednesday, 16*th June* 1869.

Select Committee nominated of—

Mr. Knatchbull-Hugessen.	Sir Henry Selwin-Ibbetson.
Mr. Frederick Stanley.	Mr. Charles Reed.
Mr. Bonham-Carter.	Mr. Rowland Winn.
Mr. Knight.	Mr. Henry Samuelson.
Mr. Buxton.	Colonel Barttelot.
Lord George Hamilton.	Mr. Thomas Chambers.
Mr. Andrew Johnston.	

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Ordered, That Five be the Quorum of the Committee.

Thursday, 24*th June* 1869.

Ordered, That the First and Second Reports from the Select Committee on Open Spaces (Metropolis) 1865, and the Report from the Select Committee on Wisley Common, 1869, be referred to the Committee.

Thursday, 1*st July* 1869.

Ordered, That the Suburban Commons Bill be referred to the Committee.

Wednesday, 7*th July* 1869.

Ordered, That Mr. *Cowper* and Mr. *Gerard Sturt* be added to the Committee.

Monday, 19*th July* 1869.

Ordered, That the Committee have leave to make a Special Report, and have power to report the Minutes of Evidence taken before them to the House.

PROCEEDINGS OF THE COMMITTEE - - - - p. iv
MINUTES OF EVIDENCE - - - - - - - - p. 1

SPECIAL REPORT.

THE SELECT COMMITTEE to whom the METROPOLITAN COMMONS ACT (1866) AMENDMENT BILL and the SUBURBAN COMMONS BILL were referred;——HAVE agreed to the following SPECIAL REPORT:—

WHILST the evidence taken before your Committee shows that some amendments in the Metropolitan Commons Act (1866) Amendment Bill are desirable, sufficient time has not elapsed since the passing of that Act to enable such a fair judgment of its working to be formed as would justify your Committee in recommending the application of its provisions to a wider area than that to which the Act at present applies.

Considering the larger question involved in the Suburban Commons Bill, your Committee have refrained from taking evidence thereupon, which could not have been satisfactorily concluded during the present Session, and they report the said Bill without amendment to the House.

Your Committee have considered the Metropolitan Commons Act (1866) Amendment Bill, and have amended the same by the omission of the Clause referring to the extension of the area, and in other particulars.

REPORTS.

METROPOLITAN COMMONS ACT (1866) AMENDMENT BILL.

THE SELECT COMMITTEE to whom the METROPOLITAN COMMONS ACT (1866) AMENDMENT BILL was referred, have considered the said Bill, and taken Evidence thereon, which they have agreed to report to the House, and have gone through the Bill, and made Amendments thereunto.

SUBURBAN COMMONS BILL.

THE SELECT COMMITTEE to whom the SUBURBAN COMMONS BILL was referred, have agreed to report the same, without Amendment.

PROCEEDINGS OF THE COMMITTEE.

Thursday, 24*th June* 1869.

MEMBERS PRESENT:

Mr. Bonham-Carter.	Mr. Johnston.
Mr. Stanley.	Mr. Knight.
Mr. Reed.	Colonel Barttelot.
Sir Henry Selwin-Ibbetson.	Lord George Hamilton
Mr. Knatchbull-Hugessen.	Mr. Winn.
Mr. Samuelson.	

Mr. KNATCHBULL-HUGESSEN was called to the Chair.

The Committee deliberated.

[Adjourned till Thursday, 1st July, at Twelve o'clock.

Thursday, 1*st July* 1869.

MEMBERS PRESENT:

Mr. KNATCHBULL-HUGESSEN, afterwards Mr. CHAMBERS, in the Chair.

Sir Henry Selwin-Ibbetson.	Mr. Johnston.
Mr. Chambers.	Mr. Samuelson.
Mr. Winn.	Mr. Stanley.
Mr. Bonham-Carter.	Mr. Reed.
Mr. Buxton.	Mr. Knight.

Motion made, and Question, "That Mr. *Chambers* do take the Chair of the Committee"—(Mr. *Knatchbull-Hugessen*)—put, and *agreed to*.

Mr. CHAMBERS took the Chair.

Mr. *George Ridley* and Mr. *Benjamin Scott* were severally examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 5*th July* 1869.

MEMBERS PRESENT:

Mr. CHAMBERS in the Chair.

Mr. Knight.	Mr. Buxton.
Mr. Johnston.	Lord George Hamilton.
Mr. Samuelson.	Colonel Barttelot.
Mr. Bonham-Carter.	Mr. Stanley.
Mr. Winn.	

Mr. *Benjamin Scott* further examined; Mr. *William Wyke Smith* examined.

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 8*th July* 1869.

MEMBERS PRESENT:

Mr. CHAMBERS in the Chair.

Mr. Reed.	Mr. Samuelson.
Mr. Johnston.	Mr. Winn.
Mr. Bonham-Carter.	Colonel Barttelot.
Mr. Knatchbull-Hugessen.	Mr. Knight.
Mr. Cowper.	Sir Henry Selwin-Ibbetson.

Mr. *P. H. Lawrence* examined.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 12*th July* 1869.

MEMBERS PRESENT:

Mr. KNATCHBULL-HUGESSEN in the Chair.

Mr. Reed	Sir Henry Selwin-Ibbetson.
Mr. Johnston.	Mr. Cowper.
Colonel Barttelot.	Mr. Stanley.
Mr. Bonham-Carter.	Lord George Hamilton.
Mr. Winn.	

Mr. *R. Cecil Austin*, Mr. *James Bell*, Mr. *William Worsfold*, Mr. *Henry Marshall*, and Mr. *Samuel Smith*, were severally examined.

[Adjourned till Thursday next, at Twelve o'clock.

Thursday, 15*th July* 1869.

MEMBERS PRESENT:

Mr. COWPER in the Chair.

Mr. Sturt.	Mr. Winn.
Mr. Johnston.	Colonel Barttelot.
Mr. Bonham-Carter.	Mr. Stanley.
Mr. Knatchbull-Hugessen.	Mr. Buxton.
Mr. Knight.	Lord George Hamilton.

Mr. *Richard Ellis* examined.

The Committee deliberated.

METROPOLITAN COMMONS ACT (1866) AMENDMENT BILL.

Preamble *postponed.*

Clause 1 *agreed to.*

Clause 2 amended, and *agreed to.*

Clause 3 *disagreed to.*

[Adjourned till Monday next, at Three o'clock.

Monday, 19*th July* 1869.

MEMBERS PRESENT:

Mr. COWPER in the Chair.

Colonel Barttelot.	Mr. Samuelson.
Mr. Knatchbull-Hugessen.	Lord George Hamilton.
Sir H. Selwin-Ibbetson.	Mr. Winn.
Mr. Johnston.	Mr. Knight.
Mr. Bonham-Carter.	

METROPOLITAN COMMONS ACT (1866) AMENDMENT BILL.

New Clause: "A scheme may be made, under the principal Act, on a memorial in that behalf presented to the Commissioners by any six or more ratepayers or inhabitants of the parish or district in or near to which the common is situate, or of the Metropolis, as well as by any such person, persons, or body, as is or are described in Section 6 of the principal Act"—(Mr. *Johnston*), brought up, and read the first time, read a second time, and amended.

Question put, That the Clause, as amended, be added to the Bill.—The Committee divided.

Ayes, 5.	Noes, 4.
Mr. Bonham-Carter.	Colonel Barttelot.
Lord George Hamilton.	Sir Henry Selwin-Ibbetson.
Mr. Knatchbull-Hugessen.	Mr. Knight.
Mr. Johnston.	Mr. Winn.
Mr. Samuelson.	

Preamble *agreed to.*

Ordered, To report, together with the Minutes of Evidence.

Motion made, and Question, "That the Chairman be directed to move the House for leave to make a Special Report"—(Mr. *Knatchbull-Hugessen*)—put, and *agreed to.*

SPECIAL REPORT proposed by Mr. *Knatchbull-Hugessen*, read a first and second time, amended, and *agreed to.*

Ordered, To Report.

SUBURBAN COMMONS BILL.

Ordered, To report the Bill, without Amendment.

MINUTES OF EVIDENCE.

LIST OF WITNESSES.

MINUTES OF EVIDENCE.

Thursday, 1*st July* 1869.

MEMBERS PRESENT:

Mr. Bonham-Carter.
Mr. Buxton.
Mr. Thomas Chambers.
Mr. Andrew Johnston.
Mr. Knatchbull-Hugessen.
Mr. Knight.
Mr. Charles Reed.
Mr. Henry Samuelson.
Mr. Henry Selwyn-Ibbetson.
Mr. Frederick Stanley.
Mr. Rowland Winn.

THOMAS CHAMBERS, Esq., in the Chair.

Mr. George Ridley, called in; and Examined.

Mr. *G. Ridley.*

1 July 1869.

1. *Chairman.*] What office do you fill?—I am one of the Copyhold Inclosure and Tithes Commissioners.

2. You have been for some time in that office, have you not?—I was appointed in 1860.

3. Are you familiar with the operation of this Act of 1866?—We have the administration of that Act, and I can describe what has taken place under it, which is very little at present; we have had, in fact, only seven applications altogether under that Act, and one of those was an application made to us under a Private Bill for the city of Norwich, into which were incorporated the provisions of the Metropolitan Commons Act, 1866, for the purpose of enabling them to deal with some lands in the neighbourhood of Norwich, about which there were, I believe, great disputes.

4. How could that be an application under this Act?—It was a local Act incorporating the provisions of that Act; it never proceeded any further after a few letters and correspondence; there were great disputes between the parties. The only scheme which we have sent in to Parliament, under the Act of 1866, at present, is one relating to Hayes' Common, and that, I believe, has now received the Royal Assent.

5. Do you attribute the fewness of these applications to any defect in the provisions of that Act?—I do not know that I should attribute the fewness of the applications to that cause; but certainly I should say that when we come to administer that Act with reference to these schemes, we find that the machinery provided is deficient.

6. Have you formed any opinion as to the changes which could be desirable in the provisions of this Act of 1866?—I think that the machinery provided for the Commissioners is deficient in these ways. In the first place, I think that it is extremely desirable that when we come to entertain an application under that Act, it should be remitted to us to ascertain, and that we should have power at once to ascertain the boundaries of the lands proposed to be dealt with, whether there is any dispute or whether there is not. I think that upon a map being sent in to us we should, after we have decided to entertain the application, and have made up our minds that a draft scheme should be prepared, have power at once to go, as has been done in the case of Disafforesting Acts, and ascertain the boundaries. For that purpose we should, of course, have power given to us to enter upon the lands, and to order a survey to be made, and the parties who applied to us would have to bear the expense of all that.

7. In that respect your power is defective at present?—Yes; there is no reference in the Act of 1866 to any such power as that. The power which we have under the General Inclosure Act relating to boundaries is, where a dispute arises between the boundaries of adjacent manors and parishes and hamlets; but there we do not interfere until a dispute has arisen, and it is represented by the valuer. I think that in the case of the metropolitan commons, assuming that this Act is to be the method of proceeding with them, we ought to have power at once to define and lay down the boundaries of the commons, subject of course to some appeal, if any parties felt themselves aggrieved, or if any public interests were overlooked.

8. If no dispute arises with reference to the boundary, is it not right to assume that there is an ascertained and agreed boundary?—To a certain extent it is no doubt so, and perhaps it might be said that what I have suggested should only be done where we thought it right to do so; but

Mr. *G. Ridley.*

1 July 1869.

in some cases there are little edges of land, an irregular bit here, and an irregular bit there, and the question is whether they are part and parcel of the large tract to be dealt with, or not. I think that in some of those cases it would be right that we should have the power of ascertaining the boundaries as a fact, if we thought it proper to do so, and therefore, of course, we ought to be able to enter the lands. The Metropolitan Commons Act of 1866 has not incorporated the powers of inquiry which we have under the Inclosure Acts, and they are somewhat different; and as our duties and powers are all statutory we hold that we cannot exercise, under the Metropolitan Commons Act, the powers which we have of making regulations and determinations under the General Inclosure Acts. For instance, under the Metropolitan Commons Act we have no power to summon witnesses, or to call for public records, or public documents, court rolls, and such other things as we have power to call for under the Inclosure Acts. Our powers, which are exercised either by ourselves or by the Assistant Commissioner whom we send to make an inquiry under the Act of 1866, are only to examine such people as may offer to give evidence, as you will see if you refer to section 11 of the Act of 1866. We considered that point, and our assistant commissioner who holds these meetings, and is very well acquainted with the law, has decidedly held (and we have agreed with him) that he cannot summon anybody. He cannot call for court rolls, and he cannot conduct so efficient an inquiry under that Act as he can do under the General Inclosure Acts. I therefore think that in that respect the Act is deficient. I also think that it would be very advantageous to take the opportunity of ascertaining what people have rights of common over these lands. There is no power under the Act for us to do it, and to determine it, as we do under the Inclosure Acts. I refer to claims of rights of common. We are directed to frame a scheme, and to state in the scheme what rights claimed by any person, or class of persons, are affected by the scheme, and in what manner, and to what extent, they are affected thereby. Now, it is extremely difficult for us to be able to ascertain that, and to state it with accuracy, as was, of course, intended, unless we have power to call the people before us, and to ascertain from them what claims they have, in the same way as we do now with ordinary inclosures. I can only refer to the lord of the manor, or to any commoners, the names and residences of whom I may be able to ascertain, and say, "What right do you claim"? But the number of people who claim, and the nature of their right, is a thing which is altogether beyond our power.

9. Mr. *Winn.*] Then, how do you practically ascertain it?—Practically we have ascertained it in this way: where we have passed a scheme we have taken what the parties have stated, and the assistant commissioner, when he has held his inquiry, has taken what evidence he could as to what rights were claimed.

10. In the same way as he would in an ordinary inclosure?—He has taken the best evidence that he could get, but we have not ascertained all the claims, and we do not under this Act make a determination upon claims, which is what we do under the Inclosure Act, and yet we are required to state what rights are claimed, and the nature, and the extent to which they are affected by the scheme, and I always feel that there is very considerable difficulty in endeavouring to put that down with proper accuracy in the scheme unless we have further power to make inquiry.

11. *Chairman.*] But would you not think that a statutory power to inquire upon certain points, and to receive evidence and information, would give you all the necessary power to investigate?—No, I do not think that it does; it does not give power to summon witnesses and to enforce the production of documents.

12. The words are that you are "to take and receive any evidence and information offered" to you?—Yes.

13. You would propose that all the powers which you have incidental to any inquiry under the general Acts should be given to you for the purpose of this inquiry, under the Metropolis Commons Act?—Just so, so far as regards ascertaining the rights of parties and determining them, and being able to summon witnesses and to call for court rolls; such a power as is provided in the Inclosure Acts.

14. Is there any other suggestion which you desire to make?—There are some two or three points, of which I have made a note. One point arises in this way: we hold, upon the construction of this Act of Parliament of 1866, that it applies only to lands which are waste of a manor; that is under the 3rd section of the Act, namely, the interpretation clause. We do not think that it applies to lammas lands, or half-year lands.

15. In your judgment is it desirable that the interpretation should be enlarged?—I think that perhaps the interpretation should be made more clear and specific. If it is decided by Parliament to enlarge the lands which are to be dealt with under this Act, I think that it should be stated specifically. At present we hold that it applies only to the waste of manors, and certainly my own opinion is that it ought not to apply to half-year lands.

16. Mr. *Winn.*] What do you call half-year lands?—I mean by half-year lands, lammas and shack lands.

17. *Chairman.*] Lands which at particular times are subject to the rights of a certain portion of the public, and at other times are held in severalty?—Yes; the distinction between the two is, that lammas land is open arable or meadow land.

18. Mr. *Winn.*] That is to say, what in many cases is called open field land?—Yes; for six or, perhaps in some cases, eight months in the year, the lands may be shut up; after a certain date they are thrown open, after the crops are gathered, and there are rights of common for the remainder of the year belonging to people in lammas lands, other than those who own the right in severalty; in the case of shack lands, I believe that the distinction is, that the rights of common only then belong to those persons who are owners of them in severalty, and not to other people at all.

19. *Chairman.*] It is proposed in the Bill which is referred to this Committee, to enlarge the interpretation of the word "common," by introducing the following words: "And any open space which has been enjoyed or frequented by the public for not less than 20 years before the passing of this Act"; in your judgment, would the addition of those words include the lands to which you have just been referring?—No, certainly not.

20. As I understand, the Commissioners interpreting

preting the Act of 1866, hold that it does not include the lands which you have been describing?—It does not in our judgment.

21. And that being the practical interpretation given to the Act, do you think that it would be necessary in any respect to amend the interpretation of that Act in any other particular than the one to which I have alluded?—Yes, if you intend to include lands of the description to which I am referring, and I certainly do not think that the terms of the Bill which is now before the Committee would include those lands.

22. Then in your judgment it would not be expedient that the provisions of any such measure as this should apply to such lands?—I really think not, because they are held in severalty for a large portion of the year. These words in this Bill would, I think, put under the Metropolitan Commons Act lands which are not intended or were ever contemplated to be put under it, such as Hyde Park and Regent's Park, or other places enjoyed or frequented by the public for not less than 20 years before the passing of the Act; it appears to me that it would subject those lands to having a scheme applied to them.

23. The public parks to which you have been alluding, you think would be affected by this definition?—Yes; though they are Royal parks, they have been enjoyed and frequented by the public, it is true under a license from the Crown, but they are open spaces which have been enjoyed or frequented by the public for more than 20 years.

24. Do you think that any practical inconvenience could arise from the circumstance that the definition was wide enough to include such places?—No; practically it would not have that effect, the words would carry it, but I do not think that they would carry the lammas lands, or the half-year's lands.

25. Is there any other amendment of the Act of 1866 which you can suggest?—Yes; referring to the point which I have mentioned, that in our judgment the interpretation clause of the Act of 1866 applies only to waste of a manor, I think that we ought to have the power of being able to ascertain upon inquiry, on application made to us, whether these lands are waste of a manor, or are not; in some cases we should have a difficulty or doubt about it; a part may be waste of a manor, and a part may not be waste of a manor, and I think that in that case it is desirable that we should be cautious, and not attempt to deal with lands which are not in reality meant to be within our jurisdiction; I do not remember at the present moment any other deficiences in the powers of that Act; I should think that probably the powers which I have been recommending might be embodied in two or three clauses.

26. Then, as I understand, the amendments which you suggest are amendments of your powers as a tribunal of inquiry?—Quite so. I have had a map prepared in the Survey Department of the Inclosure Office, for the use of this Committee; it is rather a large affair, but I will explain what it is. This map has been drawn to show the 5-miles radius, the 10-miles radius, the 15-miles radius, the 20-miles radius, and the 25-miles radius.

27. Mr. *Knatchbull-Hugessen.*] Can you compare that with the metropolitan police district?—The metropolitan police district on this map is marked green.

28. *Chairman.*] The circular lines represent the distances which you have mentioned?—Yes. The parts of the map marked red are the open commons and spaces mentioned in the Return made to the Order of the House in 1865. Upon marking those upon this map, it struck the person who did it that there were on this map great portions of land marked as common which were not referred to in that Return; therefore, in order to make it a little more perfect (I do not know how the inaccuracy may have occurred), we proceeded to mark in the blue colour the portions of land which we found marked on the map as common, and, as far as we have had time to do it, we have tested the accuracy of what we have done by reference to the tithe map and apportionments. We have not had time to do it entirely, but as far as we have tested the blue colour, we have found that those are open spaces, waste of a manor. The parts coloured green are the existing parks, Richmond, Greenwich, and Windsor, and such like Royal parks. If the Committee should wish anything further to be tested as respects the lands marked blue, of course it can be done on a future day.

Mr. *G. Ridley.* 1 July 1869.

29. Is there any distinction between the character of the lands coloured red, and of those coloured blue, or are they of the same class and description?—As far as we know, we only intended to mark lands which were waste of a manor.

30. Some are marked red, and some are marked blue; the blue are those which were not included in the return of 1865; is there any distinction between the class of lands marked blue, and those marked red?—We believe them to be the same.

31. How is it that those which are marked blue, were omitted from that Return?—I am unable to say.

32. All those lands ought, in conformity with the Order of Parliament, to have been returned?—Yes; we do not at all intend to dispute, or to account for what is left out in the Return, which was moved for by Mr. Locke in 1865. I suppose that it was made out by the Ordnance Survey Department. I see that it is dated from the War Office; very likely they took it from the parish maps, and were not able to ascertain the whole at that time, and gave the best information which they could. We finding on the Ordnance map when we looked at it, other lands marked as common, for instance, one common which I happen to know, called Cobham Common, which is certainly not inclosed, and not finding it in the return, said that there might be others, and we proceeded as far as we could to supplement it on that map.

33. Probably they returned what they were certain about, and what they were not certain about they did not return?—I think that there very likely was some feeling of that kind.

34. Have you any other observations to make with regard to that map?—The area of land, coloured pink on the map which I have shown, includes 38,459 acres; that is the amount taken from the Return. Those parts marked blue, contain a computed area of 13,000 acres.

35. Over what extent of surface are they scattered; have you ascertained the number of square miles?—The calculation has been made, that within the 25-miles radius, there are comprised 1,256,320 acres.

Mr. *G. Ridley.*

1 July 1869.

36. Does that include the area to which you alluded when you mentioned the former items of 38,459 acres, and 13,000 acres?—Yes; they are dispersed over that area. Therefore it shows, that out of the 1,256,320 acres, there is one-twentyfifth part of the entirety uninclosed, namely, one acre in 25; or (to go, perhaps, a little closer), if you take out of that area the land built upon and covered with houses in London and other places, it will be one acre in 20 to 23. I believe that to be as close as it can be given.

37. I assume that that area which you have mentioned includes the whole of Epping Forest, or very nearly the whole of it?—It certainly includes a very large portion of it, if not all; I will point out Epping Forest. Most of this land still unenclosed within the 25-miles radius is in the southern and western portions. This is Epping Forest (*pointing to the map*).

38. Of those commons which are marked are there any with reference to which applications have been made under the Metropolis Commons Act?—An application was made in the case of Wimbledon Common to deal with it under a scheme. In the case of Wimbledon Common, when we inquired into it, we found that there was a very great litigation; there was a bill filed in the Court of Chancery, and there was an answer to that bill, and upon being furnished with a copy of the answer to that bill, we considered that Lord Spencer, so far as his claims were concerned, denied that there now exists a right of common at all. Therefore, if it was the fact that there was no right of common, it was not a thing within our jurdisdiction, and as the matter was the subject of a suit in Chancery, and as a bill was filed and the answer delivered, we consider that we were not justified in proceeding further in the matter. It was before a court of law which was competent to determine the question whether there was a right of common or not.

39. Supposing that the amended words proposed in this Bill were adopted, it would give you jurisdiction over such a space as that; the words are, "And any open space which has been enjoyed or frequented by the public for not less than 20 years"?—It might be enjoyed or frequented by license.

40. How would the Commissioners, having to carry out this Bill, supposing that it were an Act of Parliament, interpret that?—We should be puzzled to do so.

41. So long as there was pending litigation, of course the Commissioners would not think it right to proceed?—No, because the Act says, "land over which there is any right of common."

42. That is not the amended interpretation?—No, but the Act of 1866 says so.

43. Supposing that the suggestion in this Bill had the sanction of the Legislature and that the interpretation were amended by adding the words which I have read to you, would you then consider that over such spaces as that the Commissioners would have authority?—I should be unwilling to decide positively, and to give an off-hand opinion upon an Act of Parliament in a hurry.

44. There might be cases in which you might consider it doubtful?—Yes; I think that the words in the Bill are not sufficiently explicit, they are open, I think, to several interpretations.

45. Take the case of an Inclosure Act, which was passed in the year 1800, and assume that from that time to this there has been no actual inclosure, and that the public have had the same rights, whatever they are, over the land in question since 1800 as they had before, the land would fall within such a description as this: "any open space which has been enjoyed or frequented by the public for not less than 20 years"?—Yes; but that land would have been enjoyed and frequented by the public, not as exercising a legal right, but merely by going over it; it is a permissive right, or used adversely to the owner of the soil.

46. The definition does not propose to touch the question of the nature of the right, but only to describe the fact that the public have enjoyed and frequented such spaces?—Yes; without any consideration whatever as to whether that fact has any validity in respect of legal right.

47. But treating that fact as so significant as to warrant the legislature in giving the protection which the Metropolis Commons Act gave to other commons?—It is possible that upon those words we might hold that Wimbledon Common might be within our jurisdiction, but I do not think that it would be so long as the litigation was going on.

48. I suppose that any scheme suggested with reference to such lands would be capable of being opposed in the usual way in the courts of law, by raising the question as to whether this Bill, supposing that it became an Act of Parliament, would apply?—Yes; the question of our jurisdiction in entertainining the application originally might be raised by an injunction in the Court of Chancery, prohibiting us from proceeding. The question of our jurisdiction in a particular case is now raised before the Court of Queen's Bench, in which case we have a mandamus moved against us to compel us to go on with the inclosure; it is a case in which a dispute has arisen as to the ownership of the soil.

49. So that no wrong could be done to parties without the usual remedy being available?—I do not see how a wrong would be done in that way; of course the parties could stop us by application to the Court of Chancery for an injunction.

50. Have you formed any opinion as to whether it is expedient or not, to enlarge the radius mentioned in the Act of 1866, considering the increase of the metropolis?—In my humble opinion, it is not expedient to enlarge that area, and in my humble opinion also, the method of dealing with the open spaces near the metropolis under the Act of 1866, is not the best way of dealing with them.

51. Do you desire to suggest any alternative scheme?—I would rather suggest another course of proceeding; in the first place, I quite admit that it is extremely desirable that near the metropolis, spaces should be left open for exercise and recreation, and also for fresh air to blow upon the metropolis; but I must remember at the same time, that these lands which are wastes of a manor, are all private property. Sitting as a Commissioner, I cannot do otherwise than hold that, for the law says that they are so.

52. Considering that the Act provides for the compensation of all persons who may be deprived of rights under the Act, do you think that that is material to the inquiry, where you provide a compensation?—I think so, where these lands are private property.

53. And

53. And yet, notwithstanding that the Act provides that they shall be compensated for any rights of which they may be deprived?—I know that clause perfectly well, but I do not think that it is the best way of dealing with these commons. There is no doubt that certain of them should be kept open. I presume that the object of this Bill is not only to keep open spaces for the refreshment of air, so that in the immediate outskirts of the metropolis the ground shall not be over-crowded; but also that there shall be a space for exercise and recreation. I think that the better way would have been to make a selection of all those commons which are immediately near to the metropolis, and which are within such a distance of the metropolis, as that they can be easily reached by any men, particularly the working classes, by whom they are most wanted, upon any day or any half-day, on which such a man is able to go and enjoy himself, and wants fresh air and exercise. The Metropolitan Board of Works perhaps might do so. Let them give notice to the lord of the manor, and to the commoners in some way, that it is their intention to apply for leave to take those lands for public objects, and in a public point of view as to health; and then I would rather let them apply under an Act of Parliament, which would order us to receive the application and to make the inquiries, and to ascertain the rights and to consider the terms for compensating the lord of the manor and the common-right owners; and I would have all that drawn up in a Provisional Order (which is the ordinary term), and that Provisional Order having been submitted to the proper parties, and a proper amount of assents having been received, it should be laid before Parliament for confirmation.

54. Do you not think that, considering the present facility of railway accommodation, a radius of 25 miles satisfies your opinion of nearness to the metropolis for practical purposes?—No; in my opinion that is not so. I think that, as a principle, you want such a space as the people who work in the neighbourhood of the metropolis can reach on any day or any half-day on which they can go out, at a very little expense. A 25-miles radius may be very useful, and very agreeable upon certain great holidays, but I do not think that that radius is required for exercise and recreation for the metropolis, taking it all the year round.

55. Mr. *Winn.*] You think that that radius is larger than is necessary?—Yes.

56. *Chairman.*] You would not adopt the principle of a radius at all, but you would specify certain commons?—Yes; and I would then provide a machinery by which the rights of people having been ascertained, they should be compensated. That compensation could be given either in the shape of a small allotment to the lord, or you might give him a rent-charge, and so with the commoners. The reason why I make that suggestion is that I think that it is a far better way of dealing with these matters than the present system, which I think is unsatisfactory and inconclusive. There is nothing to say that these schemes, even when confirmed by Parliament, are to be prohibitory of parties doing other things with their land; and yet, if they proceeded to do them, it might be a subject of great litigation; parties objecting might put in a scheme confirmed by Parliament, and say, "Parliament has decreed that this shall be done with the land." I should ask "What are you going to do; are you going to dig away the soil, and to remove the trees, and so on"? The lord would be exercising his right, and then you have an unsatisfactory and unsettled state of things.

Mr. *G. Ridley.*

1 July 1869.

57. Has any practical illustration of that remark arisen?—No; the only scheme which we have recommended to Parliament is one which merely received the Royal assent a few days ago, and therefore nothing whatever has been done with it.

58. Assuming that under the "Metropolitan Commons Act," the commons within the enlarged radius would be protected under the 5th clause, who would be wronged; that clause merely prevents the Inclosure Commissioners from interfering in the scheme for inclosure; things would be left in *statu quo*?—Quite so; but the lord has certain rights of soil, and if he is owner in fee, and is able to get the assent of the other people who have rights of common over the land, he can inclose without coming to Parliament. It is very seldom that that occurs, and by reason of the difference of the interests in the parties who own the rights, and who own the soil over which there are these rights, it is necessary to apply to Parliament for the inclosure; they are not *sui juris*. The honourable Chairman asked me a question with reference to the grounds of objection, and whether I thought it objectionable to extend this provision to a 25-miles radius. There are other grounds irrespective altogether of the question of the private right to these lands, which I think are deserving of very serious consideration. These lands may be required for various reasons, some perhaps for building, some perhaps for planting; it is possible that a great many may be required for sanitary purposes. I know a case in Epping Forest where land is required for sanitary purposes, and compulsory sanitary purposes.

59. How would the enlargement of the radius affect such a question as that, because Parliament must give its sanction?—I am going to explain that. In that particular case they will have to expend a very large sum of money for the supply of water, and for sanitary purposes and sewerage; it is a small town, they will have to provide this money, and to pay it out of their rates. They say, "There are certain waste lands of the manor, and if they are dealt with we shall be able to effect this great improvement, and we shall have something to pay it with, but otherwise we shall have a very large increase thrown upon our rates, and we shall not be able to improve the land in our immediate neighbourhood which would enable us to pay for it."

60. But any such scheme must require the sanction of Parliament?—No doubt.

61. And requiring the sanction of Parliament, of course, any enlargement of the Act of 1866 would not stand in the way?—I do not know about that; we should be able at this moment to entertain, *qua* the extent of our jurisdiction, an application for the inclosure of the land of which I am speaking. I do not know that under the Inclosure Act we should be able to carry out all the objects of that scheme, but we should be able to carry out some of them.

62. You could go a certain distance in favour of the projectors of any such scheme, but their scheme in the entirety could not be carried out without the sanction of the Legislature?—Yes, the particular scheme I think would in some particulars be beyond the Inclosure Act. I would

Mr. *G. Ridley.* July 1869.

further remark that we know, as a fact, the very large increase of expense which is now yearly put upon the rates and taxes for all parochial purposes; they are very much increasing, perhaps more in the metropolis and the metropolitan counties than in any other part of the kingdom. All those rates and taxes fall upon the land, either upon the owners, or upon the occupiers, and when you put that increase upon them, are they not entitled to say, "Allow us to enlarge the depth and the length of our purses by increasing the value of our land."

63. You would enrich the landowner in order to meet the burthen of the rates?—Is there anything unfair in that?

64. Is not a very small rate comprehended within this Act of Parliament, so long as the lands remain open; and supposing the lands to be inclosed, are not the rates increased?—Yes, if they are inclosed and dealt with, they then become assessed and rated at the value of the inclosed lands, and that would amount to a very considerable sum of money, because the rating of uninclosed lands is very small indeed; I think that in a public sense that is rather an argument against extending this radius of 25 miles. I have a return of the increase of rates in the metropolitan counties; I have taken it from the last Report of the Poor Law Board; I find that in Surrey, extra metropolitan, the rates increased in the year 1867 over the year 1866 14 per cent.; it goes generally under the name of the poor rate, but under that rate there are county rates, and rates for police and roads.

65. Such as are chargeable upon the same property as the poor rate?—Yes.

66. Mr. *Reed.*] At what date was the reassessment?—That I am unable to say. In Middlesex, extra metropolitan, the increase in 1867 over 1866 was 9 per cent; in Kent, extra metropolitan, it was 6 per cent; in Essex, extra metropolitan, it was 10 per cent.; in the county of Hertford it appeared to be 4 per cent. You have a large increase of these rates which are charged upon land. Surely it is not very unfair for the landowners, many of whom have to pay these rates quite compulsorily, to say "There are new things required, these rates are all right, but do not impede us in increasing the value of that out of which we have to pay these increased rates."

67. *Chairman.*] In the present state of the law the lord is able to inclose without the consent of Parliament?—That only arises, in most cases, from the nature of his interests. Practically, there are few cases where the lord of the manor is the owner of the fee, and all the rest of the parties consent.

68. But they will be able to inclose by coming to Parliament, even if this Bill should enlarge the radius?—They will be able to do it by applying for a private Act of Parliament.

69. They are not excluded from the right to inclose; but they would be entitled to inclose with the sanction of the Legislature now?—Yes; but they must proceed by a private Bill.

70. And not under the General Inclosure Act?—And not under the General Inclosure Act.

71. Is there any other observation which you desire to make to the Committee?—I would make this further remark, namely, that however desirable it may, and in my opinion it is, to keep near the metropolis certain spaces open for the purposes required, there are other views very strongly expressed by other parties, that not only should the Legislature facilitate the inclosure of all waste lands, that is to say, dividing and allotting in severalty, but those parties hold that the Legislature ought rather to make it compulsory. I have seen that argument very strongly urged; I mention that before the Committee to show that there are other parties, perhaps not immediately belonging to the metropolis (though I have read these cases in metropolitan papers), who entertain that opinion very strongly.

72. You are possibly sufficiently acquainted with the Inclosure Acts to know that while the policy of the Legislature in the earlier Acts was in favour of inclosure upon the grounds set forth in the preambles of the statutes, yet the Legislature is now taking a different view of that question, especially in the neighbourhood of large towns?—Yes; I am quite aware of the opinion of the Legislature, and that in former days a great many people would have gone in very strongly for compulsory inclosure, and I am perfectly aware that there is now an alteration of the policy, or of the particular method of dealing with that subject. There is another ground which I think is worthy of consideration, namely, that if you do not inclose any of these lands at all you are keeping out of the land market all this number of acres of land, and which can never come into the market to be sold or to be used for any purpose at all. It is true that if I am the lord of the manor I can sell my estate and the waste of that manor to anybody else who is willing to buy it if I have the power to sell, but that waste of the manor can never be sold, except in a lump, and therefore these 50,000 acres, or whatever their extent is, are excluded from the market.

73. It is obvious that the very intention of this Bill is to keep open these spaces?—Yes; no doubt the object of the Legislature in providing this legislation is for a great public purpose; but there are other public purposes for which you require lands to be taken, and you at once proceed to compensate the people for what you take from them. If it is necessary to take a man's land for a railway, or a hospital, or a county lunatic asylum, or anything else, he is obliged to give it up.

74. Has it ever occurred to you that, whilst the prohibition from inclosing land may, in some cases, be a hardship upon the lord of the manor, the fact of the inclosure may, in certain cases, be a serious detriment to the neighbouring proprietors, and that the argument is not all on one side?—I dare say that it is not, but there is also this consideration, that the non-inclosure of these lands will give a very greatly increased value to the old inclosed lands in the neighbourhood at the expense of the owner of the uninclosed.

75. Mr. *Knatchbull-Hugessen.*] In the case of these schemes, I think that you do nothing until you are set in motion by a memorial from the locality?—Nothing.

76. You have stated that you wish for more power to ascertain boundaries; is clause 7 of the Act of 1866 insufficient for you, which provides that, "On the presentation of any memorial under this Act the Commissioners (if, on consideration of the memorial, they think fit) may make such examination and inquiry as they think necessary or proper in relation to the subject-matter of the memorial"?—We may make an inquiry, but we have no power so to conduct that inquiry

inquiry as to lead us to such certainty or accuracy as may be necessary; I cannot, under this Act, summon people or call for records or documents.

77. Then all that you require is the power to summon parties and to call for documents?—Yes, such as we have under the General Inclosure Act.

78. You mentioned seven schemes as having come to you under the Act of 1866?—Yes.

79. Have the reports in those seven cases been presented to Parliament or not?—No, we have only proceeded with one case, and the report in that case has been presented to Parliament.

80. Have you that scheme, and your report upon it, with you?—Yes.

81. Have you any objection to putting it in?—No. (*The Witness handed in the same.*)

82. Under the 21st section of the Act of 1866, do you, in your annual report, set forth the grounds of your approval of the scheme, and the objections which have been made, and so on, more fully than you do under the General Inclosure Act?—That report, which is the only one that we have made, is very full indeed.

83. The Act of 1866 requires you to make fuller reports than you are required to do under the General Inclosure Act?—We have done so in that case.

84. Have you calculated the extent of uninclosed lands, or of lands which would be subject to the operation of this Act, between the metropolitan district which is now subject to the Act, and the 25-miles radius?—I have not.

85. With regard to the Bill, do you, as a public officer, consider it objectionable to have words which are not very explicit?—Yes, I certainly do.

86. And you think that these words would cause some confusion, "And any open space which has been enjoyed or frequented by the public for not less than 20 years before the passing of this Act"?—I do not think that those words are sufficiently explicit or definite for the purpose of enabling us to administer the Act.

87. Supposing that I had some open space over which my private rights were undoubted, but which for some reason or another I had allowed the public to frequent for the last 20 years, would not these words operate rather injuriously to my private rights?—It might be construed to be an admission that you had ceded your private rights to the public by allowing them to go over that space without interruption.

88. Then, do you think that a proviso, that those words should not refer to such a case as I have mentioned, would be sufficient to cure the defect?—I think that I should rather prefer to have defined more precisely the lands which are intended to be dealt with.

89. Do you think that the interpretation clause, in the Act of 1866, is sufficient to include all those lands which should be dealt with under the extension of the Act?—Yes, all waste of a manor.

90. Do you think that a wider interpretation than "waste of a manor" is necessary or desirable?—I do not think that it should be extended to the half-year lands.

91. Are there other classes of common lands which the waste of a manor, and the half-year lands, and the lammas lands, would not include?—I do not think so; I do not think that the words in the Bill could operate upon any lands which are not included within the present interpretation, namely, "waste of a manor."

Mr. *G. Ridley.*

1 July 1869.

92. Then, if so, these words would be unnecessary?—I do not see the necessity of them. If you intend to confine the Act to the waste of a manor, I think that those words are not necessary.

93. The Chairman put it to you, that under this Bill no wrong could be done to anyone without his having a legal remedy; but is not one of the objects of our English law that no man should suffer a wrong without having a legal remedy?—I think that it would be difficult to say that under any scheme, some right or other may not be injuriously affected, even though it is framed as carefully as we can frame it.

94. Are you locally acquainted with the commons in the vicinity of the metropolis within 25 miles, or any number of miles?—I cannot say that I know them accurately; I know some of them more or less; but I cannot say that I have gone over them, or studied them with any great care.

95. You have said that you have only had seven applications?—Yes.

96. Have you reason to believe that the applications are likely to be increased in number?—I am inclined to believe that there are some commons relating to which applications will come before us. We have had an application lately from the Metropolitan Board of Works, and I had the pleasure of seeing the solicitor of the Metropolitan Board in relation to that scheme, and he mentioned some others with which he thought that they would proceed, but we have not had any further application from them.

97. In the cases with which you have already dealt, has the question of compensation arisen?—No.

98. If persons interested in the waste of manors are not very certain of receiving ample compensation, would not it probably prevent their agreement to any scheme which would come before you, and therefore prevent any scheme from coming under this Bill?—Certainly. If the owner of any right of a beneficial character which is going to be injuriously effected did not feel that he was likely to get proper compensation, it would, of course, interfere with his agreement to any such scheme.

99. But you cannot give us any idea how that compensation clause works?—It has never come into operation at all. The scheme which we have sent to Parliament, is one as to which there was no dispute by any parties having a right.

100. You do not doubt that private rights exist in these commons, neither do you doubt that there may be objects for the sake of which these private rights should be surrendered, but you think that in overriding them, compensation should be given to those persons who suffer?—Quite so.

101. Mr. *Bonham-Carter.*] In fact, you think that there may be cases in which these open spaces may be utilised for the benefit of persons living in the metropolis, and may be converted, more or less, into parks for which those who enjoy them, should in some sense pay?—Yes.

102. And you think that the feeling should not prevail in the minds of the persons from whom a sacrifice was required, that they were not adequately compensated?—Certainly not;

Mr. *G. Ridley.*

1 July 1869.

nor do I think that it should be left in an indefinite manner.

103. I underetand that as the Legislature has decided that a certain area should be excepted for a special purpose from the general operation of the Acts under which your Commission was constituted, you think that the Act of 1866 is not sufficiently defined, but you think that it would be better to put in the commons and open spaces, rather than having it in the present indefinite way?—Yes; that is a matter which I have very often thought over.

104. Have you turned your attention to a map of those spaces which may be fairly supposed to have the definition of commons?—Waste of a manor.

105. And commons, other than waste of a manor, as far as you can ascertain them from the map: would not the natural inference be that if you wish to supply parks to this area they should be in some relation to the centre, and that they should be accessible in all directions, and not merely in one particular quarter of this district of 25 miles?—Certainly.

106. Should you think it quite just upon the owners, that is to say the possessors of rights, the lords of the manors and the commoners, in one district in which there was a very large proportion of waste land which would not in all probability be purchased for parks, the whole of the land in that particular district should be subject to the operation of the Act, which would prevent the lords and the commoners making use of it, when there was another district over which the same rights which are conferred by this Act would be supposed to be exercised, but which practically would not operate?—My view of dealing with the thing was, that all sides of the metropolis should be considered. There are commons north, east, west, and south of the metropolis sufficiently near to be approached. My object is to provide those commons which are near and which can be approached, and not that they should be in any particular portion of the radius more than in another.

107. Would not the effect of the extension of the existing Act to 25 miles be to suspend the rights, as they at present exist under the General Inclosure Act, of the owners of a very large area of commons in the south-west district: the map which you have prepared shows us where there would be no prospect of those commons being utilised in the way in which it is proposed to utilise those within the present area?—There is no doubt whatever from this map, that the south-western district would be the quarter most affected by the extension of that radius, because in that quarter there is more open and uninclosed land than upon any other side of London.

108. Are there not already several public parks available for the metropolis in that direction, to which persons can go out of London for recreation?—No doubt; there is Richmond Park and there is Bushey Park, and Hampton Court to a certain extent. I do not at the present moment remember any others.

109. So that in the direction in which at the present moment there are parks available for the public, there is the greatest amount of common which would come under the operation of such an extension as is now proposed?—There is no doubt that there is more open uninclosed land in that direction from the metropolis than in any other; the next largest is in the north east direction towards Epping.

110. The question was asked you whether you did not think that the access to open spaces from the metropolis by railway ought to weigh with those who desire the interest of the metropolitan public in conferring these additional powers of control over property adjoining those railways: will you tell me whether the owners of these commons would have any *locus standi*, if their land was not actually taken by a railway company, to control the introduction of a railway into their district?—I do not know precisely now what the Standing Order of the House may be as to *locus standi*. At the time when I was very much occupied in sitting as Chairman of Committees upon Railway Bills, the Committee certainly had a discretion to admit people whose property, I think, was not actually going to be touched, under representations of special circumstances.

111. So far as you recollect the practice, would it have been competent for the lord and the commoners, say of Cobham, for instance, to have appeared and to have said, "This railroad will inevitably bring a population for recreation, who will set up rights which will be injurious to us"?—The question is, whether they would have had a *locus standi* to oppose it or not. I fancy that under the discretion given to committees, at the time which I am referring to, those parties might have been heard; whether such a ground of opposition would have been admitted by the Committee is very doubtful.

112. You have stated that you see objections to the words, "Any open space which has been enjoyed or frequented by the public for not less than 20 years;" would not questions arise upon the word "open"?—A question would arise as to whether that land might be lammas land, for instance, or not. A question arises, for instance, in London Fields.

113. Suppose the case of two coterminous commons, in one of which all the rights of the commoners are vested in the lord, and in the next of which certain common rights still remain: that is to say, two commons of vicinage, of which one by the gathering in of the rights is vested in the lord, would not both the commons be open to the construction that they were "open spaces"?—Yes. I must take an open space to be one not inclosed and allotted in severalty. By inclosing, I do not look at the word "fencing"; by inclosure I mean allotting the land in severalty.

114. But the word "open," in this Bill, might be subject to the construction of anybody getting from the high road on to the land without going over a fence?—Yes; I apprehend that that is meant to be the reading of that word in the Bill; that is to say, that there is no impediment of a wall, or gate, or that sort of thing, which presents an impediment to anybody going to the land in question, as in the case of Wandsworth Common, or any commons of that character.

115. Then, the fact of whether the owner of a space of that kind had put up a fence or not would bring it within, or leave it without, the operation of this enactment?—No doubt, it might be a subject of dispute. An owner might have put a fence round some land in the last five or 10 years, and with a perfect right, and yet it might be said, "This is an open space"; there might be that dispute.

116. Then, in fact, the words "open space" imply that every owner of property, in order to exclude

exclude the operation of this Act, would have to fence the property?—A great number of persons might very likely do so upon reading that provision, but I do not know whether they would do so or not.

117. Do you know of any legal construction having been put upon the word "enjoyed" for any such easement as to roaming or travelling over the ground; are you aware of any case in which a court of law has decided upon what is meant by the term "enjoyed?"—No, I do not, unless it is the great case which is called the Aberdeen case, namely, the case of Dyce *v.* Lady Jane Hay. There was a case also which occurred in Essex, which was tried before the late Mr. Justice Wightman, where the question arose, and he directed the jury (and I believe that his direction was never disputed) that a claim of anybody and everybody to go over a space of ground was not a thing which could be upheld in law. I have not his lordship's precise words.

118. Would not difficulties arise as to the construction of the word "public," taking the words "enjoyed by the public"?—I should take it as a fact, any number of people having been in the habit of going over the ground.

119. But I presume that some proof would be required of what "the public" were?—The public are distinguished from any private individuals who go on actually with a knowledge of right.

120. Are you aware of any case in which rights of this kind have been exercised, and decisions given, in favour of the public for such a right as enjoying and frequenting, otherwise than the public within the area of the manor or of the parish?—No; I believe that the decisions of the courts of law confine it to the parish, or the manor over which the people have gone and exercised this leave to walk about and amuse themselves.

121. With the exception of the exercise of some supposed right, such as playing golf, which requires a considerable area, or running a race, are you aware of any recent case, since the evidence was given by Mr. Cooke in 1865, which extends, by the decision of a court of law, the rights of the public beyond the decisions which were referred to at that time, namely, the case of Dyce *v.* Lady John Hay, and others?—I do not remember any such case; I think that the Carlisle race-course case was settled before that time.

122. In dealing with the rights which are brought under your cognizance, have you any other rights with which you can deal in the case of a manor or of a parish, or of some subdivision of a parish, beyond some definite rights, such as turning out a particular number of cattle; are there any instances in which you can consider the rights of the public beyond those which are defined by the governing clause of the Act of 1845, with regard to the neighbourhood of large towns?—There are public rights and interests, which we very often have to consider, in an inclosure under the Act of 1845, independently of exercise and recreation; there are other public rights which we have to look after and provide for. For instance, I remember one case where the parties proved in the middle of an inclosure that the fishermen of a certain place on the seashore had always had the right of drying their nets upon land which was going to be inclosed. When that circumstance was brought to our notice, we sent down and inquired into that question. Another right of that sort would be the right of holding a fair on some particular land; that, of course, would be recognised as a right, and would be provided for.

123. *Chairman.*] And these are rights which do not attach to the inhabitants of the particular locality?—In the case of the fishermen, the right did attach to the inhabitants of the locality.

124. Mr. *Bonham-Carter.*] Those rights with which you have to deal are rights upon that specific account, such as drying nets?—Yes; and I think the right of holding a fair, and I daresay that there are others, but I do not now bear them in mind.

125. I ask you that question in reference to the phrase which is used in the Bill, namely, "enjoyed or frequented by the public;" I understand you to say that there are cases where the public have exercised definite rights, which have been brought under your notice, and to which you have given consideration in deciding upon the inclosure?—Yes; of that nature which I have described.

126. Do you not think that it would involve rather a long inquiry to ascertain (if there was opposition) what "enjoyed or frequented by the public" could be held to mean under this clause?—I think that probably a court of law would be called upon to give an interpretation of the words of the Act.

127. It would probably involve an expensive litigation on the part of those persons who are now owners of private rights, which are at present acknowledged, and not attacked?—No doubt if a question arose upon it, there would be the expense of the inquiry, which we should have to make. There might be a decision which we should give, and then perhaps there would be an appeal to a court of law, to say whether our interpretation of those words of the Act was correct or not.

128. If we give to an important body, such as the Metropolitan Board of Works, with large funds at its disposal, and with an organisation, the power of setting up schemes, to take possession of a common which might not be of very large extent, but might be owned by the lords and three or four commoners, it would be in fact giving the lever of saying to these parties, "You must either give us up this common, or contest this question in a court of law"?—It is possible that the course of the proceeding might involve it in litigation, but I do not know that it would, and my own impression rather is, that in proceeding in somewhat the manner which I have ventured to sketch out, the Metropolitan Board of Works would probably not be put in any very great difficulty; they would be better able to come to terms, or to make a good arrangement with the lord of the manor and commoners.

129. Is it not a question whether you would put upon private individuals the pressure which this Act would bring to bear upon them of having to oppose so important a body having public funds?—Of course it would be much more difficult for any private person who thought himself injured by any proposed scheme to oppose the Metropolitan Board of Works, or any other body with money at their command.

130. In the case to which you have referred, as having devised a scheme under the Act of

Mr. G. Ridley. July 1869.

1866, did you require any deposit or any security for the costs at an early stage?—Yes, we always take a deposit for the security of our costs under any application which comes into the office: that was done in pursuance of a resolution of the House of Commons which was passed last year, and which was followed by a Bill, in which Bill we were ordered not to entertain any application for an inclosure under this Act, or anything which required the services of an Assistant Commissioner to conduct the inquiry without first taking security for his costs; that was because the House of Commons said, "The operations of your Commission are for the benefit of private persons to whom these properties belong, and therefore it is not right that the costs of your Commission should be defrayed by the public revenues."

131. Wisley Common is within 25 miles of London?—Yes.

132. Was the resolution to which you have referred operative with regard to the expenses of Wisley Common?—Yes, I think that it was. I think that the parties who applied to us for the inclosure of Wisley Common made a deposit.

133. Supposing that an inclosure took effect before the Bill which you have mentioned was carried, would the subsequent stages of the inclosure be subject to the fees?—All the subsequent inclosures are subject to the fees.

134. I understand that the Act of last year rendered the inclosures subject to department fees?—Yes.

135. Some inclosures were in progress at the time?—Yes.

136. Were the subsequent stages of those inclosures made subject to the fees?—Yes; upon the confirmation of an inclosure award now, even although that Inclosure Act had proceeded before the passing of last year's Act, we take the office fees under that Act of Parliament, the Treasury authorities having sanctioned the table of the fees. By the 5th section of the Act of 1866 it is provided that, "after the passing of this Act the Commissioners shall not entertain an application for the inclosure of a metropolitan common, or any part thereof; but nothing in this Act shall interfere with the carrying on, and completion of proceedings under any provisional order of the Commissioners confirmed by Act of Parliament passed before, or in the present Session; and notwithstanding any proceedings taken under any Act, other than this Act, or any provisional order of the Commissioners made, but not already confirmed by Act of Parliament, proceedings may be taken under this Act in relation to any metropolitan common"; therefore, any common within the metropolitan police district, the inclosure of which had been authorized by Parliament previously to the passing of the Act of 1866, undoubtedly goes on; but if we had been conducting an inquiry into an inclosure within that limit before the passing of the Act, but had not issued our provisional order, then that inclosure would certainly have had to stop.

137. Are you aware of the report of the Committee who inquired into the case of Wisley Common?—I have read it.

138. Does not that report propose to suspend the completion of the inclosure, conditionally upon the passing of the Bill which is now under consideration?—I am not sufficiently conversant with it to say; but I believe that you are right. I see that in the report it is stated; "if no progress should by the middle of June have been made with the Extension Bill, the Committee recommend that subject to the modifications hereinafter mentioned, the Inclosure Bill should be passed." Then the Committee suggest modifications of the provisional order.

139. Whatever expenditure has been incurred, including the fees in the recent action upon Wisley Common would be sacrificed by the promoters of that inclosure, if this Bill were to pass without any compensation?—No doubt.

140. *Chairman.*] What is the amount of the fees?—I should think that they may be 12 *l.* or 15 *l.*; I think not more, the average costs of all inclosures in preliminary inquiries are under 20 *l.*, but I certainly should not return the money to the people in Wisley; I should keep it, because I have incurred the expenses; I should not return the money except the balance.

141. Mr. *Bonham-Carter.*] Are you aware that the departmental expenditure bears a very small proportion to the cost of carrying out the inclosure?—Certainly.

142. Would not the whole of the expenses already incurred be sacrificed if the inclosure of Wisley Common was given up?—I understand the object of the question of the honourable Member. The parties have incurred an expense of 12 *l.* or 15 *l.* in the office; but they have incurred a certain expenditure, of which we at present have no knowledge or cognizance; there are always preliminary expenses.

143. Are not all the accounts of the valuers submitted to you?—They are submitted to the landowners, and they come to us afterwards.

144. Are you not aware that the accounts which pass through the hands of the valuer for an inclosure, are usually many times the amount of those which are departmental?—Yes; it depends upon the size of the inclosure; there are the formation of public roads, and other things.

144*. And whatever outlay has been already incurred would be sacrificed, supposing that the suspension of Wisley Common from the Schedule in the Act, in the early part of the Session, was continued, and that Wisley Common was excepted?—There is no doubt that whatever has been expended upon that inclosure of Wisley Common will be lost to the parties; but our departmental portion of those expenses will be very small.

145. Sir *Henry Selwin-Ibbetson.*] The Bill which has been referred to us is an extension of the Act of 1866?—Yes.

146. You said in the beginning of your evidence, that you considered that the Act of 1866 was essentially imperfect in its machinery?—I think so.

147. Then you doubt the policy of passing a Bill extending the machinery under which you have found that the Act cannot be properly worked?—I think that my answer was, that assuming that the Metropolitan Commons Act of 1866 to be still adopted for the purposes for which it was enacted, and also to be extended by the Bill now before the Committee, I thought that the machinery by which we had to administer it should be altered in certain respects.

148. You said that, in your opinion, this Bill which is now before us should contain alterations carrying out those recommendations?—Yes; I do

do not think that we can, with satisfaction to the public, work the Act as it now is.

149. With regard to the lammas lands, I think that you stated that it was only a partial enjoyment which the public had over them?—I do not think that the public can be said to have any right over lammas lands; that is to say, not over lands strictly occupied and used as lammas lands.

150. They would be, for a certain period of the year, open spaces?—Yes, for the benefit of certain people who could turn their cattle on; lammas lands, and open arable fields, or shack lands, are generally surrounded by an outside fence.

151. There are the same rights over those lands for a part of the year as there are over common lands during the whole year, are there not?—No; they vary. The rights of common over lammas and half-year lands, I think, vary in different districts, just as the cultivation of those lands varies in different districts.

152. You think that if those words were introduced into this Act, they would not be held to take in lammas lands which are cultivated for a portion of the year?—I think not. I think that it would be better to say that they are not to be included, provided that the Legislature do not intend it.

153. With regard to an open space which has been enjoyed, or frequented by the public, that, I suppose, would clearly give the right if the public had been tacitly permitted to use it for a number of years?—Yes. If the words had run somewhat in this way, "Any open space which the public has had the right of enjoying or frequenting;" I think that it would have been better.

154. This would be availing themselves, on the part of the Legislature, of the generosity of the owner as against him?—Yes; what you would call a permissive right (which I believe is the term in law) would undoubtedly be interpreted to be a thing which, by long usage and custom, had attained a legal validity.

155. I think that you have said that no question of compensation arose under the one inclosure which you have mentioned?—No such question arose; nothing of the kind arose in the proceedings before us, nor do I know that any such question is likely to arise. The scheme is drawn, as nearly as possible, in the words of the Act, namely, that it is not injuriously to affect any beneficial right.

156. As far as the Act of 1866 goes, you have had no practical experience in that respect?—Not as regards compensation.

157. *Chairman.*] You state that seven cases have been before you, and that no question of compensation has been raised in any one of them?—Yes.

158. Mr. *Knight.*] Previously to those cases coming before you, was an arrangement made with regard to those rights?—No, I do not recollect any such question in any of those cases.

159. Sir *Henry Selwin-Ibbetson.*] The only remedy of the landowner would be an injunction in the Court of Chancery to stay your proceedings?—He would probably move for such an injunction.

160. Do you think that his only protection should be a Chancery suit?—Is not that the case now? In the cases of one or two Inclosures the courts have been moved to stop us from going on.

161. That must be a very expensive proceeding on the part of a landowner?—If he goes beyond moving the court for an injunction it will undoubtedly become a very expensive thing.

162. With reference to what was stated with respect to the number of the commons in the south western district as compared with the other parts, have you any idea of the proportion of commons in the metropolitan radius; and whether they are more equally distributed over the present area than they would be over the future area or not?—Yes, to a certain extent. Taking the Metropolitan Police boundary, there is a little more land on the south west of London.

163. But not in the same proportion?—No, I think that the proportion would not be the same.

164. A number of landowners in the southern district would suffer under this Bill, whereas only a few would suffer if your suggestion was carried out?—Yes.

165. Mr. *Buxton.*] I understand that you do not deny that, in the neighbourhood of great centres of population, it is of great importance that open spaces should be preserved for the enjoyment and recreation of the people?—I do not deny that at all.

166. You acknowledge that that is an object of very great importance, and which the Legislature is quite justified in endeavouring to obtain?—Yes.

167. But you think that when you get to a considerable distance from any centre of population, the same motive does not hold good for keeping a large extent of country open?—I do not think that it does hold good; I think that what you want is to provide a daily or a very easy mode of exercise and recreation for that purpose.

168. As a matter of fact, there are enormous stretches of waste between 15 and 30 miles from London, are there not, especially in Surrey?—In Surrey there are particularly, and also, I think, in Berkshire.

169. May you not ride for 20 miles over waste land in some portions of Surrey and Berkshire?—I think that the honourable Member is better able than I am to answer that question.

170. You may be aware that, as a matter of fact, it is almost unknown that people come down from London, except possibly an individual, now and then for enjoyment upon those stretches of waste land?—I do not think that that is a general practice, or one which is very frequently adopted. There are certain great holidays when we know that the masses flock out of London, such as Whit Monday and Whit Tuesday, and a few others; but as a rule I do not think that the population of London requiring exercise and recreation go that distance for their day's enjoyment; they may do so sometimes. I think that where they go to a greater distance than is readily accessible, and that when they have to run by railway, they go to other places, such as places by the seaside and places which are objects of interest, rather than going down to an open common. We know that, to a certain extent, they go to Epping upon great holidays, and I believe that Epping is also used a good deal for ordinary exercise and recreation; I am informed so.

171. Is not Epping within an easy range of London?—Yes; there is a very large population upon

Mr. *G. Ridley.*

1 July 1869.

upon that side of London, which I have no doubt have used it; to what extent it is now used I am unable to say.

172. But Epping offers great advantages in that way, namely, that it is very near to London?—It does.

173. Is it not also the fact that the Londoners will not go to any place where they will find the country quite wild, and where they do not find any accommodation for eating and drinking, and conveniences of that sort?—I think that probably upon those occasions when a great mass of people go down for their day's holiday to any of these distant places, they take their own provisions and hampers with them. I do not suppose that they look out for a hotel or a public-house which is capable of finding them refreshment.

174. The experience as to Epping would not apply to more distant places from London to which people would not be likely to run down, and which would offer no great attractions like the seaside?—I should say that the practice of using Epping for that purpose would not be applicable to other commons 25 miles from London.

175. Is it not the fact that in those wild parts of the country the peasants are very much less civilised, and are for the most part poorer, and more squalid than in the more highly cultivated parts?—That certainly was the opinion expressed in former days by a very great number of witnesses upon an inclosure inquiry, and I have had that opinion expressed to me now.

176. Would it not be for the advantage of the peasantry residing in the neighbourhood of a large expanse of waste land, if it were cultivated, and if there were an increase of wealth in that neighbourhood?—I certainly think so. I think that that is the argument (and a very good argument) which was held in former days, when the population and industry of this country first took that great rise, and when waste land began to be used. Soho, which is a great manufactory near Birmingham, I believe, was built upon waste land.

177. Is it not the fact that large tracts of land which were formerly waste land are now brought into cultivation so as to pay a large interest upon the capital employed?—There is no doubt that that can be proved. I do not mean to say that that land is necessarily brought into arable culture, but you can improve the nature of the herbage, and of the pasturage, and a portion of the land can be used for arable cultivation. Some of it may be used to great advantage for planting, and some may be used for building. In the neighbourhood of the metropolis many people have advocated very strongly the formation of what they call suburban villages. Now, if they are to be erected at a small cost, they must probably be placed upon lands not now inclosed, because you must give a very high price for inclosed land.

178. The fact that such immense tracts of land are now lying idle, large portions of which might be brought under culture, is so much loss, is it not, to the wealth of the whole community?—That is decidedly my view, and I think that it is a very great pity that so much of that land should be idle.

179. And the expense of obtaining private Acts, to inclose these separate commons, would in most cases be so considerable, would it not, as practically to render that inclosure impossible?—I think that the cost of obtaining a private Act for inclosures, during the existence of the Metropolitan Commons Act of 1866, or its extension by this Bill, would be very great, because I apprehend that any persons proceeding by private act to inclose during the existence of that Act, would probably meet with very considerable opposition. An unopposed Inclosure Bill in former days was, I think, calculated to cost the party 300 *l.*; if it was opposed of course we do not know what the cost might be.

180. You think that, upon the whole, the highly important object of supplying people in populous towns with places of recreation and enjoyment, and of getting access to country pleasures, would not be really obtained by the proposed Bill, and that the advantages which would be sacrificed are of a considerable kind?—I think that they are. There are two public advantages; there is undoubtedly the maintenance of open spaces near the metropolis for ordinary recreation, and on the other hand there is a great public advantage, of a national character, by facilitating, as much as you can, the inclosure of lands whereby their value and productiveness in every way are very much increased.

181. Do you not think that a reasonable course would be, that any spots which are of real value for the enjoyment of the people should be selected and still kept open; and that whatever other arrangements which were thought desirable might be made, there should be no attempt to obtain that end by stopping the inclosure of all this vast amount of waste land over such an enormous area?—That is the view which I ventured to suggest, namely, that there should be a different procedure from that which is now adopted under the Metropolitan Commons Act.

182. Mr. *Johnston.*] Were you not examined before the Committee of 1865, upon this question?—Yes.

183. Did not you agree with the principle of the Act of 1866, and suggest your office as the machinery for carrying it out, instead of having a special Board, as was originally suggested by the framers of the Act?—I do not remember making any such suggestion.

184. Are you not aware that the objection of the framers of that Act, to making the Inclosure Commissioners the authority for carrying it out, was that their leanings and antecedents were in favour of inclosure, and does not that fear appear to you to be justified?—No, I do not think so at all; I do not remember making that suggestion at all.

185. Are there not cases where the lord has no intention of inclosing, but will not take the trouble to defend the common against all sorts of trespass and disfiguration, but where the inhabitants are willing to take the management of it; and is not the Act of 1866 likely to be very useful in such cases?—It might be so; I had a gentleman with me a few days ago, who complained of the injury which was done to a very small piece of common in his neighbourhood, and I recommended his looking to the "Metropolitan Commons Act of 1866," and he said that he had never heard of it.

186. A great deal has been said about the large proportion of commons which will be taken in the south-west; are you not aware that that is also the district which is much the most thickly inhabited in the neighbourhood of London, taking the

the south-west of London generally?—I am not aware that the south-west of London is the most thickly populated.

187. Are you not aware that the land is much more valuable in that direction than in other directions?—I am not.

188. Are you not aware that land 20 miles off London, on the London and South Western line, is worth as much as land only ten miles off on the Great Eastern line?—By way of residential value, that very likely may be the case; I very often go down to Kingston, and I know that that line of country is very much frequented by those persons who wish for villa residences, and who wish to go backwards and forwards to business in London.

189. Does not that arise from there being more desirable residences there?—No doubt it is a very favourite side of London for people to go to and obtain houses, who wish to go backwards and forwards.

190. Have not the landlords in that direction been very much benefited by the increase of population?—I do not know that they have benefited by the increase of population; they have no doubt benefited by the increase of railway accommodation. The owners who have sold those lands for residences have benefited, no doubt.

191. Have they any right to complain that they are called upon to make provision for the benefit of the population which has quadrupled the value of their land, or much more than quadrupled it?—I do not see how that question applies.

192. The vast increase of population in that neighbourhood has more than quadrupled the value of the land in that neighbourhood; supposing that some of those landlords were called upon to make some sacrifice for the benefit of that population, would they have any right to complain?—If those are the same people to whom these open waste lands in that neighbourhood belong, I apprehend that, although they have an increase from other circumstances in the value of their land, there is no reason for taking away the further increase which they may derive to the value of their property.

193. *Chairman.*] But it is from the same circumstances?—Yes; but in one case it is that the increased metropolitan population have bought land of these landowners to erect their residences, and, on the other hand, the other increased metropolitan population is not going to buy any land of them, but are merely going to have the land left open for them to go down to, and walk about on.

194. Mr. *Knight.*] Do you know, as a fact, whether land within 25 miles of London, in Surrey, has been quadrupled in value or not?—I do not know about its being quadrupled in value, but certainly land on that line has been enormously increased in value.

195. Mr. *Johnston.*] For instance, land near Walton Station, which has been sold at 15 *l.* within living memory, is now sold at 300 *l.*, that is 20 times the original amount; you have laid down broad rules not to entertain schemes under the Act of 1866 so long as litigation is going on with regard to the commons to which they refer?—It is not quite so; we found, in the case that I have mentioned, that there was a distinct denial on the part of the lord of the manor in his Bill in Chancery that there existed any rights of common, and we said that we could not come to any other conclusion. We said that it was a question before a court which was competent to decide it, and, therefore, we said that we must hold our hands; and I think that if we had attempted to proceed, the lord of the manor, in that case, would probably have moved against us in the Court of Chancery for an injunction.

196. Is that the case at Plumstead?—No.

197. You had a scheme with regard to Plumstead, had you not?—I do not remember it. At Walthamstow we had one.

198. Mr. *Reed.*] Referring to lammas land, is there much lammas land near London?—I think that there are undoubtedly some lammas lands which are close to London; to what extent they are I cannot undertake to say, but in the north and east of London I think that there is a good deal of lammas land. There is a tract of land in London, namely, the London Fields, out towards Bethnal Green; there is no doubt that that is lammas land. I think that Hackney Downs are lammas lands, and I think that there is another small tract of land out there which is also lammas land.

199. You mean Hackney Marshes?—Yes.

200. I understood you to say that the public had no enjoyment of the lammas land?—I did not say that with reference to those lands in London. The honourable Member asked me the question whether the public did not use these lands after the crops were removed. My answer was that the public may perhaps go over them, but I do not think that they will very much do so with ordinary lammas land. At times of the year the rights of common which are enjoyed over lammas lands, and where they are open, are enjoyed by those persons who live in the neighbourhood of those lands. I do not think that the public would very much go upon them. There is generally an outside boundary fence, but that observation would not apply to such a place as the London Fields.

201. Are you aware that the London Fields are used by thousands of people every day over the common ground?—Yes, I am quite aware of that.

202. And that there are no fences?—No; the fences there are the houses round the land.

203. With regard to that land, and the land on the marshes, do you not think it desirable to protect those lammas lands for the benefit of the people?—There is no doubt that those lands, such as London Fields and Hackney Downs, should be dealt with in some way, and that they should not be allowed to remain in the position which they are now; they are in the centre of a very large population, and certainly some portion of them should be left as open ground.

204. Is it your opinion that clauses should be inserted in this Act protecting such lands from inclosure?—You must require the owners to become parties to the terms upon which they would agree to such a dealing with their property.

205. I refer to protecting those lands from inclosure without a special Act?—They could not inclose them now without a special Act, because they are certainly within the present radius, with reference to which we cannot entertain an application under the general Act. If the common right owners, say of London Fields, wanted to inclose those lands, and to allot them in severalty, I apprehend that they must either go to

Mr. *G. Ridley.* July 1869

to Parliament for a private Bill or proceed under some of the other Acts relating to arable fields.

206. Do you think that there would be any practical objection to a provision that the word "commons" should apply to lammas lands?—As there is a right to shut them up for six or eight months in the year for a corn crop or a hay crop, I think that it is not desirable.

207. Are you acquainted with the provisions of the Act of Geo. 2?—I believe that that Act is still in force; I am not very well acquainted with its provisions.

208. In your opinion, should such lammas lands as have been open to the public for many years, such as the London Fields, be protected from inclosure?—I do not think that it would be advantageous that, situated as the London Fields are, all that land should be built upon, but in dealing with it you must consider those to whom it belongs.

209. Sir *Henry Selwin-Ibbetson.*] And in dealing with it you must also include all the lammas lands over the country?—Yes; no doubt, the custom of lammas lands varies in certain localities.

210. Mr. *Samuelson.*] You have said that you think that the addition of these words to the interpretation of the word "common," namely, "and any open space which has been enjoyed or frequented by the public for not less than 20 years before the passing of this Act," might possibly be considered to make the Act apply to the Royal Parks?—I think that possibly it might, but practically I think that it would have no such effect.

211. Would not the fact that the parks are not thoroughly open to the public at all hours prevent that application; if the public are excluded at certain hours, can the parks be said to be open to them?—Yes; they are open to the public in the daytime; it is under regulation, and being in the neighbourhood of a large population, the regulations are extended to the night; whether, or not, the parks are altogether shut at night, I am not aware, some are not; the Mall is always open in the night.

212. Do you think that the same objection would apply to words like these, "enjoyed or frequented by the public as of right, without restriction"?—I think that that, perhaps, would make it more definite; but it is very difficult at the moment to give an opinion as to the words which should be introduced in a Bill before Parliament; framing an Act of Parliament is a thing which I have found, more or less, requires consideration.

213. Do you not think that it is the case that the health of the metropolis is very much benefited by the air which circulates over these uninclosed spaces around it, even apart from the advantage which the poor may derive from exercise thereon?—There is no doubt that there is an advantage from letting the air circulate through.

214. And therefore, do you not think that it would be a great disadvantage if those spaces should be inclosed, and, perhaps, sold for the purpose of erecting factories, and be used for purposes which might render the air impure?—Within a certain distance of the metropolis, I think that it is extremely desirable that those spaces should be kept open; but I think that there is a more satisfactory way of doing it than under the Metropolitan Commons Act.

215. Is it not the case that the lords of the manor obtain very little benefit from the commons?—Undoubtedly they do not enjoy any very large amount of benefit from the commons in the neighbourhood of London, but still the soil is theirs.

216. Is it not the case that if the soil is inclosed and is used for building purposes, they will enjoy enormous benefits?—Undoubtedly they will; no doubt they would obtain a large profit upon the selling of that land for building purposes. At the same time the metropolis is likely to increase in population; you cannot stop it, and you want more houses; and if the land which is available for building houses for the population of the metropolis is to be very much circumscribed, you must raise the price of land which is available in the market for that purpose.

217. While the lords of the manors have certain rights on these commons, have not the public on their side certain rights also which are equally well defined?—Not equally well defined.

218. But have they not a prescriptive right?—No; it is merely a permissive right. I cannot say that the public rights are quite so well defined as the lord's right is.

219. Would it not be for the public advantage, if these commons were inclosed at all, that they should only be inclosed as allotments for the poor?—If the land was bought, those who bought it would undoubtedly be able to use it.

220. Instead of allowing it to be sold for building, in which case the lords of the manor make enormous profits, might they not be compelled to sell it at a very small price if it was to be inclosed at all?—Then at what price would you sell it to those who were to have it, and for what purpose would they be allowed to use it?

221. For garden allotments?—I have no doubt that in many cases that would be a very advantageous use, provided the land was sufficiently near. You cannot expect the population of London to go out 25 miles to cultivate an allotment after a day's work.

222. I did not refer to the population of London, but to the population surrounding the commons?—A labouring man would buy his little allotment out of that common of 100 acres, and when he has bought that, what is there to prevent his building upon it? He has bought it with his own money, and it is his own property.

223. Mr. *Winn.*] Is there a sufficient population round any of these large commons to enable the people to use the land as gardens, even if it was allotted to them?—In some cases there may be, but not in all.

224. Take the large commons to the south-west of London?—There is certainly not sufficient population to use the whole of the land as garden allotments.

225. It has been said that the land has been largely increased in value in the neighbourhoods of those commons, from the building of villas and residences?—The value of the land in the south-west part of the country from London has, no doubt, largely increased in value, but I intended to say, and I think that I said it, that that increased value arose more from the facilities of reaching the land by railway, and that there was therefore given to it a residential value. I do not think that that increased value has arisen from

from the fact of there being the open and uninclosed lands to the south-west of London.

226. Is that the reason why these large spaces should be left open after the land has increased in value?—No, I have already said that I do not think that that is a good reason for leaving the land uninclosed.

227. The people who have built these villa residences, I suppose, are not the persons who would use these commons if they were left open?—I imagine that a great many of them would not have any interest in these common lands.

228. They have not been in the habit of using those recreation grounds?—No; there may be some few who have done so; but it is not the residents in villas who use these commons very much. Of course, if a common is inclosed it will somewhat detract from the pleasantness of some of these villa residences; that may be the case, but I do not see that because I have a villa residence, which, perhaps, I hire, I have, therefore, a right to complain of the common near me being inclosed, and so enabling my neighbour to increase the value of his property.

229. With respect to the lammas lands, I understood you to say that they were usually inclosed lands, and not lands over which the public had been in the habit of going?—I should think that in the majority of cases the public will not have used the lammas lands very much by going over them, except upon defined public footpaths. Lammas lands are almost necessarily shut for six months in the year, that is, where they are cultivated either with arable cultivation, or for hay. Such an observation would not apply to the London Fields. The lammas lands are both arable and meadow; they are owned in severalty for a part of the year. I hold that a person who has a right to shut up the land and to cultivate several acres of that lammas land, owns that proportion of it in severalty for so many months in the year.

230. Of course, if that land were allotted, it would be allotted with the public footpaths?—Certainly; the consideration of the public rights of way, footpaths, and roads, is always a part of the first duty of the valuer in dealing with an inclosure.

231. Mr. *Knight.*] Can you see any reason why the lord of the manor should not enjoy the increase of the value of his land, from the increase of the population in his neighbourhood, as well as any other landed proprietor?—It follows, as a matter of course, that he does, and I see no reason why you should take any steps which should prevent his increasing it more. I do not see why you should interfere with the productive employment of land any more than you would interfere with the productive employment of capital in any other way. I think that it is a public advantage that land should not lie idle; that is my view, subject to the observations which I have made, as to the desirability in the neighbourhood of the metropolis of keeping open certain spaces.

232. Much of that open land in Surrey, on the south-west of London, is of very little value as agricultural land, is it not?—At present I believe it to be of very little value; but I am informed by those who are acquainted with it, that it is capable of being made very much more valuable, perhaps not so much for arable cultivation as for increasing the value of the pasturage and the herbage. I have a further proposition which I wish to make to the Committee upon the subject of the alteration in the Inclosure Acts, which I consider is applicable to the subject into which they are inquiring. I wish to draw the attention of the Committee to what are called the regulated pasture clauses under the General Inclosure Act. Under the General Act there is a power, when an inclosure is authorised by Parliament, for two-thirds of the parties in value to apply that the land shall not be inclosed, in its ordinary sense; that is to say, allotted and divided, but shall be set out as a regulated pasture; and, therefore, under that provision the land is not cut up, and divided, and fenced in various ways, but it remains open, and the rights of common over it are regulated by the award. If a man has been turning on before 16 animals, the award perhaps gives him 10. As the Act now stands, there is a difficulty, where people wish to make a regulated pasture of the waste of a manor, in applying to us for a regulated pasture; they must go through the process of applying to Parliament for an Inclosure Act, in the ordinary sense of the word, and then at a certain stage they may apply for a regulated pasture. I think it extremely desirable that provision should be made to enable those parties to apply to us *prima facie* for the conversion of that waste of a manor into a regulated pasture. I should say that this application should be accompanied with the same provisions as an application for an inclosure.

Mr. *G. Ridley.* 1 July 1869

233. *Chairman.*] This bill proposes to extend the area within which your jurisdiction is excluded?—Yes; but I say, if you do that, let the people have the power to apply to us, not for an inclosure, but for a regulated pasture. That is under the 113th and following clauses; they would require some little alteration.

234. You think that such a scheme as that might be a compromise for the public?—Yes, *quâ* keeping the land open, so that it could not be built upon. The case which has been put by an honourable Member as to keeping the ground open for air, and so forth, would be met, and there might be other provisions which I am not now prepared to lay down or define. I think that that would apply to some of the commons in the neighbourhood of London. I remember people coming to us once from Wandsworth, and asking us whether we could allow a regulated pasture to Wandsworth Common; it was about four or five years ago, and we said we could not.

235. Mr. *Knight.*] Cannot the owners of a regulated pasture fence against each other?—No, the soil becomes theirs, but they cannot fence.

236. Mr. *Winn.*] They are common rights?—Yes.

237. Mr. *Johnston.*] I will call your attention to a passage in the Report of the Committee on Open Spaces in 1865. Mr. Wingrove Cooke stated that the Inclosure Commission Office has great facilities for carrying out the objects which the Committee may have in view; has your attention been called to that passage?—I do not remember it; we have the powers and machinery applicable to the matter, but I think that our powers are too much restricted.

238. Mr. *Bonham-Carter.*] If I understood your proposal rightly, it was that in certain directions where commons now exist, the best way of fulfilling the objects which appear to be in view in the case of the Metropolitan Commons Act, was by selecting particular commons, and operating upon those

Mr. *G. Ridley.*

1 July 1869.

those commons so as to preserve open spaces?—Yes.

239. Under the Act, I think that you have now no power of making an arrangement by which a part of the common can be sold; the schemes do not provide for sale?—They do not.

240. Are you aware that in the case of Wimbledon Common, Lord Spencer proposed to sell a portion of it?—Yes, under his private bill.

241. Am I to understand you that in your proposal you would take the whole of the common, or should you think it desirable to make a provision by which what might be deemed to be a sufficient portion for a park, or open space, should be reserved, and the remainder might be sold for building purposes or otherwise dealt with, which power would perhaps enable you more fully to carry out the object by the increased value of the remaining ground?—I think that in the case of the parties who might apply to us under such a provision as I have suggested, power should be given to them to sell as much of the land as might be necessary to defray the expenses of obtaining the provisional order and the sanction of Parliament. Supposing for instance that the Metropolitan Board of Works applied to us for some such scheme, to arrange with the lord and the commoners, and that they had expended 300 *l.* or 150 *l.*, I think that they should in that scheme be authorised to sell as much of that land as would defray the expenses of the application, including compensation which they may have to pay.

242. The question appears to be, how best to satisfy the requirements of the metropolis in an inclosure with no undue infringements of private rights; if a park of 200 or 300 acres was set out in one of these large commons, and dedicated for ever to the public, and was subject to proper arrangements and care, would not the immediately surrounding land be very much enhanced in value for building purposes?—I should certainly expect to hear that it was.

243. And might not some such arrangement as that be feasible, which in the same way would effect the object in view under the Metropolitan Commons Act consistently with no great sacrifice, if any, by the lords and the commoners; take a large common, the whole of which it might not be desirable to dedicate for ever as an open space to the public, would it not be desirable to provide for taking a portion of that common as a park and enabling the remainder of the common to be inclosed with the result of a greatly enhanced value of that portion which was not a park or common to be thereafter dedicated to the public?—If I understand the honourable Member's question he would propose, having taken a common of 150 acres, to apply 100 acres for a park or space to be kept open, and to sell the other 50 acres with the view of preventing the enhancement of the value of the neighbouring land.

244. Mr. *Knatchbull-Hugessen.*] Do you see anything in this Act which prevents the sale of a portion of the land?—Yes; because the 6th section of the "Metropolitan Commons Act of 1866" says, "A scheme for the establishment of local management, with a view to the expenditure of money on the drainage, levelling, and improvement of a metropolitan common, and to the making of bye-laws and regulations for the prevention of nuisances, and the preservation of order thereon, may be made under this Act;" I doubt very much whether we should not be exceeding our jurisdiction, if we put into our scheme a power of selling 50 acres of that land in any way.

245. Have you taken a legal opinion upon that point?—No.

246. The question has not been raised before you?—It has not.

247. Supposing your view to be right, do you think that an alteration in the Act, giving the power which you think would be right, would be an advantageous alteration?—I think so; in the scheme which I have ventured to suggest to the Committee, I think that there should also be a power to lease from the lord and the commoners.

248. Mr. *Bonham-Carter.*] Are you aware that in inclosures which come under your cognizance, it is a very common practice to sell a portion of the inclosed land for the purpose of the expenses?—It is very common.

249. Have you any knowledge whether the portions of land sold for that purpose fetch or do not fetch an increased price, much beyond the original value?—I am not able to answer that question; I do not know the value which the land may fetch after it has been bought, and after we have conveyed it; we do not know what is done with that land afterwards.

250. Does not the valuer in his report to you, return the acreage which is sold, and the amount which is obtained for that acreage?—Yes; he reports the value for which he has sold the land, but I cannot speak of the increased value of it afterwards.

Mr. Benjamin Scott, Chamberlain of the City of London; called in, and Examined.

Mr. *B. Scott.*

251. *Chairman.*] You reside, I think, at Weybridge, in Surrey?—I do.

252. Which is about 19 miles from London?—It is about 19 miles by railway from London.

253. You are very well acquainted with that neighbourhood?—I am.

254. And also being especially connected with the City of London, you are very well acquainted with the metropolis?—I have been acquainted with the City of London for more than 40 years.

255. I believe that you were examined as a witness before the Committee which sat this year upon the subject of Wisley Common?—I was examined before that Committee, but I do not attend to add to the evidence which I gave upon that occasion, as it is in print, but I rather propose to speak upon the general question of metropolitan inclosures.

256. I believe that you have given a good deal of attention to the subject of the population, and the statistics of London generally?—Yes; I have published a book upon that subject.

257. Have you also had your attention drawn to the necessity and importance of open spaces being reserved in the neighbourhood of the metropolis?—I have taken a great deal of interest in that subject since the year 1865, when my attention

attention was first very forcibly drawn to it. I had occasion to visit, on one Sunday morning, a brother who lived in the region of Epping Forest, and so great was the crowd, on a fine morning early in October, that I was detained for three or four hours before I could obtain a seat in any carriage to convey me down to the Forest, so large was the number of persons, men, women, and children who were finding their way down to the open spaces in the neighbourhood of the Forest. It was at the time when the blackberry season was at its height; that was the attraction at that particular time. My attention was then drawn to a matter to which I had not at all given attention before, namely, the very great desire existing in the minds of the working and trading classes to get out of the Metropolis, not into a park, not into Victoria Park, but to get out into some open space where some traces of nature remained undisturbed, and where they might enjoy the delights which nature affords.

258. Was the wildness of nature always the attraction, or was there anything peculiar on that particular Sunday?—I found that it was more particularly from that time, being the blackberry season. I made it a point to mingle and converse with many parties of them, and I found that it was the wildness and the openness of the forest which brought them out. They carried their provisions in handkerchiefs, and they partook of them under the trees, without the interference of anybody to find fault with them, which, of course, is the case in the parks.

259. Are you familiar with the provisions of the Act of 1866?—Yes; I am tolerably familiar with those provisions.

260. In your judgment, might that Act be advantageously amended in some particulars?—I am of opinion that it requires amendment in three particulars, in order to make it more useful to the Metropolis. In the first place, some definition of the word "common" is required, so as to include all open spaces. For very many years spaces have been frequented by the public which, I believe, are not commons in law, but are commons in fact. In the second place, I think that the limits of the operation of the Act should be somewhat extended; I am not prepared to say precisely what should be those extensions, but I am sure that it would be very beneficial to the Metropolis that the limits should be extended, which are described by a very irregular line now. In the third place, I am very strongly of opinion that some further publicity should be given upon the introduction of a scheme to inclose a common, so that persons in the immediate neighbourhood should be made aware of any such application being made to Parliament. In the case of Ockham and of Wisley, I found that none of the inhabitants of the neighbourhood knew of any inclosure being proposed. As in the case of railway Bills, I think that all parties should have public notice. Those are the three points upon which I propose to give evidence to the Committee.

261. In the first place, you say that you think that some further definition of the word "common" is required; can you illustrate that?—In the neighbourhood of Weybridge there are several commons which are very largely frequented by the people in the neighbourhood and by the inhabitants of Weybridge, and none of those commons are protected by this Act. The neighbourhood petitioned with reference to Wisley Common. They petitioned again when there was a question of open-spaces raised under the Educational Endowment Bill, and they succeeded; they did not petition again in the present instance, because they thought that my appearance here was sufficient. Weybridge has a common of 75 acres, Walton-on-Thames has a common of 200 acres, and Byfleet has a common of 40 acres. There are certain rights of the poor over those spaces, but they are not strictly commons; they are portions of commons which have been inclosed, which were allotted to the poor. In the year 1800 Acts were passed with relation to all those three commons which I have mentioned. Under those Acts the lords of the manors were compensated with portions of land; the commoners also were all compensated, and these portions were left open for the use of the poor, that they might cut fuel as they had been accustomed to do. They are now, I believe, called, in legal language, "poor's lands," but I contend that they have been designedly dedicated to the use of the parishes and the neighbourhood. In point of fact, they have been open from time immemorial, no doubt from the Conquest. The lord of the manor has been satisfied, the commoners have all been satisfied, and the people in the parish have been satisfied in respect of their rights; and there is now no other owner of these lands, except a very limited number of poor persons, who rent cottages of 5 *l.* value.

Mr. *B. Scott.*

1 July 1869.

262. Was there any power in the Inclosure Acts to inclose these portions which were left open?—There were powers to set out and ring-fence them, and powers to sell portions of the land for the purpose of fencing; but the Commissioners 70 years ago failed to fence; the poor have never made any attempt to fence, and the trustees of the poor, of whom I am one, in Weybridge have never made any attempt to fence. The land is as open as a public road, and designedly left so by all parties. Therefore I contend that they were portions of large open spaces which were left divested of all other rights, and the poor have only a right of cutting fuel upon them.

263. Mr. *Winn.*] Who gets any benefit from them now?—The poor, under the Act of Parliament of 1800, still cut heath and furze, and the Scotch fir trees, which grow self-sown on those wastes. They cut them and consume the wood in the winter time. In the case of Weybridge, and also, I think, of Walton, there has been a scheme to regulate the cutting, and it is let to a baker or some person who wants that kind of fuel, and the proceeds are distributed. The fuel fetches 30 *l.*, 40 *l.*, or 50 *l.* a year. We are of opinion, in our neighbourhood, that those spaces are extremely beneficial for the neighbourhood, and for the poor and their families to ramble upon. On Walton Common there is a very extensive convalescent institution placed there for no other purpose than to allow the convalescents from the hospitals to have free range over that waste or common; and I am of opinion that, as those places are within three-quarters of an hour to an hour from London, they are very desirable places for the teeming population of London occasionally to visit, and to obtain fresh air and recreation; and therefore we submit that this is an opportunity upon which Parliament might introduce, in some form or another, a protection for these commons, so that they should not

Mr. *B. Scott.*

1 July 1869.

be ruthlessly given away or sold; as we feel that another common in the neighbourhood has been made away with; I contend that these are open spaces which should be freely enjoyed by the public without restriction.

264. You have stated that there are four commons; you have mentioned Weybridge, Walton, and Byfleet; which is the fourth, is it Egham? —I refer to the common at Egham, a little further down the South Western line; it was a common of 280 or 300 acres in extent; it was referred to by Mr. Erle, the Charity Commissioner, in his evidence, in 1865, before the House of Commons Committee on Open Spaces (Metropolis). Mr. Locke King asked him this question, "Will you state what occurred in the case of Egham?" in answer to which he said, "It was represented to us in the strongest terms that the whole of the land at Egham was producing no benefit whatever which had been allotted to the exclusive use of the poor. The trustees, and a large number of influential parishioners, represented to us, that a sale of the land would be much more beneficial to the poor, who got comparatively nothing for it as it was, and they asked for our authority to sell the land: we enabled the trustees to sell the land, if they should think proper, and they did sell it." Then he is asked, "Do you know the extent of the land that was sold?" and he said, "The Inclosure Act authorised an allotment of from 280 to 300 acres to the poor; it is by far the largest quantity which has been dealt with in that way, and it produced about 7,000 *l.* on its sale." Then he was asked, "Was there a unanimous feeling on the part of the inhabitants in favour of the sale?" and his reply was, "I think we had no strong objection to the sale, and all the trustees were, I believe, quite in favour of it." There was also a reference to the land at Weybridge, upon which Mr. Locke King requested an opinion; Mr. Locke King asked the question of Mr. Erle, "Have you any reason to know whether the poor were anxious for the sale of land at Egham?" Mr. Erle's answer was, "I do not remember that they made great objection." The next question is, "You would recollect that, in a similar case, when it was proposed to inclose at Weybridge, the poor were thoroughly opposed to it?" The answer is, "Yes; we received a representation convincing us that it was undesirable in that case to exercise powers which are discretionary, and we refused to do it." The next question is, "You found that the poor were desirous of having it left as an open space?" To which the answer is, "Quite so; and we were glad to find that we were justified in leaving it alone. It is not a power that we have any desire to exercise, unless, according to the best of our judgment, this was required."

265. *Chairman.*] The land there was sold for 7,000 *l.*; do you know who bought it?—No; I always understood that the neighbouring landowners had it offered to them, and that they took it.

266. When was it sold?—In or about 1863 or 1864. I am not a resident of Egham, and therefore I am merely speaking of what I have heard in the neighbourhood; I do not speak from personal knowledge as I should in the case of Weybridge.

267. Have you formed any opinion as to whether or not an adequate price was given for that land?—I was very much surprised to read in 1865, that the land was sold for 7,000 *l.*, I considered it worth a great deal more money. It is not first-class arable land, but it is a very pretty land, with a good deal of timber, and it is very prettily situated between the town of Egham and Sunningdale, which is a very picturesque place, and Virginia Water; it lies between those places. I should have thought that that land was then worth 100 *l.* an acre; it is worth a great deal more now.

268. Mr. *Winn.*] I suppose that you do not know who bought that land?—I understood that it was bought by the neighbouring landowners.

269. In lots?—Yes.

270. *Chairman.*] Was it put up to auction?—It was not; I have always regarded it as a most desirable open space, within a hour and a quarter's ride of the Metropolis.

271. Mr. *Winn.*] Who sold that land?—The trustees of the poor, under the sanction of the Charity Commissioners, as Mr. Erle stated in his evidence in 1865.

272. *Chairman.*] Is this an example of the evils against which you wish to provide?—Yes; and it has caused a doubt with regard to the remaining common. We fear that any one of these open spaces may be one day sacrificed without coming to Parliament for an Act. I may tell the Committee how the proceeds of the 7,000 *l.* have been applied. From what I hear, they do not do much good in the neighbourhood. I should say that the charity produces about 254 *l.* a year, and the Virginia Water district receives 40 *l.* a year for the poor; Sunningdale receives 10 *l.*; Egham parish receives 30 *l.*; the Dispensary at Egham receives 25 *l.*; Englefield Green National Schools, 15 *l.*; and the clerk for managing the charity, 5 *l.*; that makes 125 *l.* a year. The balance is accumulated for the formation of a building fund, and afterwards to maintain the boys, girls, and infants' school in Egham. With respect to the doles to the poor, it is hardly necessary for me to say, that not much good is done in that way with the money. The public would have been very much more benefited by having a free range over this ground with their families as was intended when it was appropriated and left open to them.

273. Then your judgment upon this matter is, that it was an unadvised arrangement altogether? —Yes; I am clearly of opinion that it was a sacrifice of a very valuable open space near the Metropolis, and that if it was desirable to deal with it, it should have been dealt with by Parliament.

274. Mr. *Winn.*] Is it within the 25 miles radius?—Yes; it is between the 20 and the 25 miles radius.

275. *Chairman.*] Then it is without the limit of the existing Act?—Yes.

276. But it is within the proposed extension? —I think so. Had it been within the limits, and had it been dealt with after this Act passed, it must have come as a special scheme before Parliament, and the rights of all parties would have been considered, and the value of the land would have been provided for by public sale; and I do not think that the inclosure would have taken place under such circumstances.

277. Is

277. Is any recreation ground reserved?—I believe not; there is nothing in the scheme relating to it. I have been told by an inhabitant of the parish that when the inclosure of the common took place, it was allotted so far from Egham, that the poor did not take recreation on it. That is an abuse of the Inclosure Act; the Commissioners appointed by the Act allotted the land for the poor at the furthest extremity of the parish from the town, so that it required a considerable walk to get to it.

278. Mr. *Winn.*] Was there any particular reason for that?—I am sorry to say that in every act of inclosure which I have looked into connected with our County, it is the same; it is the same at Weybridge, and at Byfleet, and at Walton-on-Thames.

279. I understood you to say that it was for cutting turves?—Whether it was for cutting turves, or whether it was intended that the parties should have access to the land for recreation, it has been in all cases reserved in an inconvenient portion of the parish furthest from the residences of the poor.

280. *Chairman.*] Can you state the dates of those Inclosure Acts?—The Inclosure Acts for Weybridge and Walton-on-Thames, and Byfleet, were all passed in 1800; the other Act was in the 54th year of George the Third.

Mr. *B. Scott.*

Mr. Knatchbull-Hugessen.
Mr. Knight.
Mr. Henry Samuelson.
Mr. Frederick Stanley.
Mr. Rowland Winn.

THOMAS CHAMBERS, Esq., in the Chair.

Mr. Benjamin Scott, called in; and further Examined.

Mr. *B. Scott.*

5 July 1869.

281. *Chairman.*] You were saying on Thursday last, when you were examined before us, that you had, from circumstances, been induced to turn your attention very much to the expansion of the Metropolis, and the growth of its population?—Yes, I have.

282. Have you any evidence upon that subject which you would like to lay before the Committee?—I would wish to lay a few figures before the Committee, respecting the increase of the population as reported by the Census Commissioners in 1851. Those Commissioners went very largely into the subject of the population, and the rates in which it was increasing in the Metropolis, and from their figures, I am enabled to give the following evidence, with regard to the population of the Metropolitan Police District (that is the district marked pink on that map), including about 15 or 16 miles on the average from Charing Cross. In 1801 that population was 958,000; in 1811 it was 1,138,000; in 1821 it was 1,378,000; in 1831 it was 1,654,000; in 1841 it was 1,948,000; in 1851 it was 2,362,000; in 1861, the next decennial period on a somewhat enlarged district, a few parishes having been added, it was 3,222,000; in 1871, the next census period, the population (calculated on the same ratio of increase as has prevailed since 1801), will be 3,854,000, that is nearly 4,000,000. Calculating at the same ratio, which has been very constant indeed all through the period, namely, the ratio of 19·6 per cent. for every decennial period. that is to say, nearly 20 per cent.; in 1891 the population will be 5,513,000; in 1911 it will be 7,886,000; and in the census of 1921, which will be just 52 years hence, there will be 9,532,000 persons; that is possibly within the lifetime of some of those gentlemen who are now present, Fifty-two years is no very extended period for statesmen to look forward to, and at that period there will be 9,500,000 persons, within the Metropolitan Police area, assuming that the population increases at the rate of 19·6 per cent. every 10 years; and indeed the population of London will then be equal to rather more than one-third of the population of England and Wales at the present time.

283. Mr. *Winn.*] But not of the population to that time?—No, but of the population at the present time. There will be crowded within those limits, according to the ratio of increase, which has been very constant for 50 years past, a population equal to one-third of the inhabitants of England and Wales at the present time. Then, I wish to put before the Committee some evidence from the same Report of the Census Commissioners of 1851, respecting the "Density of population," and the increasing proximity of their dwellings, which is a very important matter to look to, with reference to providing fresh air for the people, or securing to them not less than now exists. As regards the "Density of population," there were, on an average, in 1801, nearly 394 square yards of land to every person in the Metropolis. This had fallen in 1851 to 160 square yards, being much less than half. In the half century the amount of land divided between the population had been reduced by considerably more than half. Then, as to the "Density of the dwellings" of the people, there were, on an average, in 1801, 2,784 square yards to every inhabited house in the Metropolis. This had fallen in 1851 to 1,234 square yards, being much less than half. As regards the "Proximity of the houses," a calculation has been made, that on an average the mean distance from house to house in 1801, distributing the houses equally all over the Metropolis, was 57 yards. This had fallen in 1851 to 38 yards.

284. You mean throughout London?—Yes, over the Metropolitan Police District. Then, as regards the "Proximity of individuals," the calculation is that, on an average, the mean distance of one person from another, placing them as soldiers would be posted, was, in 1801, 21 yards. This had fallen in 1851 to 14 yards. I have not had time to make a detailed calculation of what would be the proximity of dwellings and individuals at the present time, but I am now speaking of that which was in existence 18 years ago. In 18 years a very considerable change has taken place in the same direction, and I may say that if a calculation were made at the present time, it would be shown that both as regards houses and individuals, there is a considerably increased proximity. I calculate that in about 32 years, supposing that the same causes went on operating without any check (which I do not anticipate), houses would

would be, in fact, touching one another. The natural effect will be, not that persons will remain building in that district until that result is brought about, but that they will crowd out into the surrounding districts; and that is the principal reason why I urge upon the Committee the importance of extending the area of protection of open spaces, because 32 years hence, and long before that period, there will be a considerable demand for space for building outside the area which is protected by the Act of 1866. If the Committee will allow me, I will put before them diagrams by the Census Commissioners of 1851, in order to show upon paper the increased proximity of persons and dwellings between 1801 and 1851. (*The Witness produced the same.*) It is impossible to represent upon the same scale the existing proximity of individuals or of dwellings.

285. *Chairman.*] Have you considered the protection of the present Act as regards the map, so as to show how the Metropolitan Police District is situated with reference to the present limit?—(*The Witness referred to the large map exhibited.*) The Committee will see that it is not a uniform district; it extends protection rather more to the west than it does to the east. The outer circle, which is described on the map, represents a circle of 20 miles from the centre of London; the inner area, coloured pink, represents the Metropolitan Police District, which is identical with the limits of Commons' protection; it will be seen that it protects rather more on the western side of London than it does on the eastern side. The boundary is also very irregular north of the Thames; it extends to 20 miles, whereas south of the Thames it extends only about 16 miles. North of the Thames, in Middlesex, it extends to the extreme bounds of the parish of Staines, which touch, or very nearly touch, the 20 miles circle; they touch it within 200 yards. South of the Thames it is 16 miles, and in some parts it falls to 15 miles; and in others it is rather more than 15 miles from Charing Cross to the boundary. I thought that it would be desirable and fair to the Metropolis, that whatever the limits prescribed, or protected were, they should be to some extent uniform, and that perhaps the geometrical circle described on the map would be more equitable than the arbitrary limits of the Police District.

286. Mr. *Winn.*] Would it not be more important to have the limits with reference to the railways, because it might be more convenient to have a place 30 miles off, it it was conveniently situated with regard to railways?—That is a point which I have not myself considered, but it is a point which is worthy of consideration; but railroads are continually extending, and will very soon cover the whole of that district like a network. There is another statistical table which I wish to place before the Committee. The Census Commissioners in 1851 gave the relative "Proximity of the population" in the 11 census districts of England and Wales, and it will be seen that the Metropolitan District has a density of population which is quite unparalleled in any other part of England. The proximity of persons as to the distance of one person from another would average in

Wales	157 yards.
Northern division of England	142 „
North Midland division	128 „
Eastern division	127 „
South Western division	124 yards.
South Midland district	120 „
South Eastern district	118 „
Yorkshire district	107 „
West Midland district	100 „
North Western division (Lancashire and Cheshire)	67 „
London (the Metropolitan Police District)	14 „

So that the scale runs from 157 yards down to 14 yards, the latter of which is London, and which is considerably below any other district on the list. The object is to shew that London is the most necessitous district in this respect, and therefore should be treated exceptionally, as it has been treated by former legislation.

287. *Chairman.*] You have incidentally alluded to the circumstances that persons are likely to go to a greater distance from London to reside in consequence of the pressure of population; I believe that the recent Reform Act has acknowledged that circumstance in having extended the limit?—Yes; the Act for the Amendment of the Representation of the People, which was passed last Session, extended the limits for voting in London from 7 miles to 25 miles from the place of voting, and that was done avowedly by the House of Commons upon the speech which was made by Mr. Crawford, who showed that at the passing of the first Reform Bill, seven miles might be travelled in about an hour by the ordinary road conveyance, but that now a person could go out 25 miles in an hour; upon that reasoning Parliament extended the limits of residence of voters in the City from 7 miles to 25 miles from London. The same argument will apply as to reaching the Commons. Any one can reach them now within 20 miles of London by an ordinarily quick train in an hour from the centre.

288. In your judgment, would an extension of the radius to a distance of 25 miles be a reasonable extension for the prospective wants of the Metropolis for some time to come?—I think that it would be very reasonable, and I think that in all probability an extension to 25 miles would suffice for half a century. I am not contending for an absolute radius of 25 miles. I think that that is a matter which may be very fairly considered with reference to Commons and open spaces; but even an extension to 23 miles would be a very great boon to the inhabitants of London if they could have these open spaces protected by special legislation.

289. You are aware that formerly the policy of Parliament was to encourage inclosures for improving the cultivation of the soil?—Yes, that was the invariable policy; I see by all the Acts that it was so. The Act of 1836 was "An Act for facilitating the Inclosure of Open and Arable Fields in England and Wales," and the preamble of that Act says, that "it would tend to the improved cultivation and occupation of all the aforesaid lands within such parishes," and so on, cultivation is dwelt upon. The Act of 1854 recites, that "it is expedient to facilitate the inclosure and improvement of commons and other lands now subject to right of property which obstruct cultivation, and the productive employment of labour." In the Act of 1852 there was something like a reversal of the policy; there was a restriction in the first clause of that Act with

Mr. *B. Scott.*
5 July 1869.

regard to wastes of manors being inclosed. Some additional restrictions were placed, marking, as it were, a turn in the tide. The first clause of the Act of 1852, putting it briefly, provides that no lands are to be inclosed without the previous authority of Parliament; the words are, that "notwithstanding the provisions in the said firstly recited Act, it shall not be lawful for the Inclosure Commissioners, after the passing of this Act, to give notice of their intention to proceed with the inclosure of any lands without the previous direction of Parliament, and no land shall be inclosed under the said recited Acts, and this Act, without the previous authority of Parliament in each particular case, as in the said firstly recited Act provided with reference to any waste land of any manor on which the tenants of such manor have rights of common, and other lands therein particularly mentioned."

290. Mr. *Knight.*] What is that Act?—It is the 15th & 16th of Vict. c. 79. There was a manifest expression of the opinion of Parliament in 1845, that however inclosures might be desirable (and that Parliament has never questioned) in agricultural districts, yet it was not desirable to inclose lands near to very populous places. That Act is the 8th & 9th of Vict. c. 118. The 14th clause of that Act is, "Provided also, and be it enacted, that no lands situate within 15 miles of the City of London, or within two miles of any City or Town of 10,000 inhabitants, or within two miles and a half of any City or Town of 20,000 inhabitants, or within three miles and a half of any City or Town of 30,000 inhabitants, or within 3½ miles of any City or Town of 70,000 inhabitants, or within four miles of any City or Town of 100,000 inhabitants, shall be subject to be inclosed under the provisions of this Act, without the previous authority of Parliament in each particular case." Then came the inquiry by the Select Committee of 1865, in which the report was very decided against inclosing near London; and then came the Act in 1866, founded upon the recommendations of that Committee, which is the Act which is now laid before this Committee for amendment, or rather which is brought before Parliament for amendment and extension. That Act provides, not for extending 15 miles in a circle as recommended by the Committee of 1865, but it provides for protecting the Metropolitan Police District. The Act is the 29th & 30th Vict. c. 122. Perhaps I may be allowed to refer briefly to the report of the Committee, in order to show what was their opinion. It was a very important Committee, consisting of 21 Members, and they recite that, "in early times the great extent of the commons and waste lands in England was regarded as prejudicial to the public, on whose behalf it may be fairly assumed that the Legislature acted in facilitating their inclosure, in order that agriculture might be promoted and the whole country benefited by an increase in the produce of the land;" further on they state, "The long continuance of the practice of the inhabitants of London to resort to open spaces for recreation, and its decided tendency to promote their health and happiness, and to draw them away from pernicious amusements, appear to your Committee sufficient reasons, apart from the mere legal questions of the case, why the Legislature should decline to sanction any measures which may indirectly deprive the public of the advantages they have so long enjoyed, and the necessity for which is daily increasing. Altered circumstances and increased population may well justify an extension of the law; and whereas formerly, in a comparatively thinly-populated country, nothing was thought of but the advantage to be derived from increased culture, now, in consequence of the rapid growth of towns, the public interest in keeping open such commons as exist near towns deserves the attention of the Legislature no less than the purely agricultural interest of former times." "As to the rights of commoners, they appear to them to have been, and to be, the great safeguard against inclosures, and not to have been detrimental to the public. For these reasons, in the case of the Wimbledon Common, your Committee reported in favour of their maintenance, and they recommend the same course with respect to the open spaces generally in the Metropolitan area, and your Committee would recommend that some system of registration for the rights of commoners should be devised, so that they may not lapse by non-user." "Various witnesses have concurred in the opinion that these commons are most suited for public enjoyment in their natural state without the appearance of artificial cultivation." The Committee conclude by saying, "That the powers which they recommend Parliament should confer are not those of sale or compensation, as contemplated by Sir John Thwaites and Mr. Wingrove Cooke, nor are they disposed to recommend the levy of an additional tax on property, or on the inhabitants of the Metropolis, without having first tested the capabilities of the various localities." They recommend, in short, that the thing should be left in a condition of *statu quo*, as regards the rights of the lords of the manors and the commoners, the rights of the commoners are beneficial as tending to keep open these places, and that in every case of inclosure within the protected district, a special Act of Parliament should be obtained; in fact, it leaves the rights just as they now are.

291. *Chairman.*] That is to say, subject to an application to Parliament?—Yes.

292. What opinion have you formed with reference to the sufficiency of the publicity which is given to a proposed inclosure?—My experience with reference to several open spaces, in which I have had a personal interest, is that no sufficient publicity is given, and that the first really public notice is the appearance of the Bill when it is proposed to be read a first time in the House of Commons.

293. Mr. *Winn.*] Surely you do not mean to make that statement with reference to ordinary inclosures?—I am rather speaking of Metropolitan inclosures; I am not giving any evidence upon the ordinary policy of inclosure. A common very nearly adjoining my residence, namely, Ockham Common, was inclosed in 1863, and I have not yet found any inhabitant aware of the subject, although it has been a matter of discussion for six months past. The practice is to put notices on the church doors, and if the church is frequented only by the rural community, then the outside world hear nothing of the matter until the Act is passed. In the case which I have mentioned, it is only put in the schedule of the Act.

294. Mr. *Knight.*] Was Ockham proposed to be inclosed by a special Act, or under the general Act?—Under a general Act.

295. How many miles is Ockham from London?—Measuring by the radius it is about 20 miles;

I gave evidence before the Committee on the Wisley Common Inclosure. Wisley Church is a wooden structure inclosed by a farmyard, and only attended by some of the labouring classes. No sufficient publicity was given in that matter.

296. Is Ockham Common of any value as agricultural land?—No, it is only valuable as occupation land; it is picturesque land, but it is poor land. The inclosure of Ockham is effected, and an application has been made in the case of Wisley; I do not attend to give any evidence in those cases, but on the very much larger question; I think that Wisley might be treated as an exception, because the parties gave their notices and incurred expenses; but there are a great many open spaces in the neighbourhood which are frequented by the inhabitants of the Metropolis, who come down on a Sunday and spend a very much quieter day there than they would do by frequenting places of amusement and refreshment in the Metropolis, and I think it extremely desirable that those places which afford the means of fresh air and recreation, and of communing a little with nature, should be preserved to the poor.

297. *Chairman.*] Is Egham in your neighbourhood?—No; I have not any great personal knowledge of Egham. I told the Committee all that I knew of it at the last meeting. Weybridge, and Walton-on-Thames, and Byfleet Commons are in my immediate neighbourhood, and they require protection.

298. Mr. *Bonham-Carter.*] Have you been able to obtain the titles of the Acts to which you referred in your former evidence, in which large spaces have been set aside for the poor?—I have laid my hands upon the Weybridge and Byfleet Acts, but I may state that I believe that the Walton Act is almost identical. I have not been able to lay my hand upon that Act. I have the Act of 1800, which is the 39th & 40th George 3, chapter 87, "An Act for dividing, allotting, and enclosing the open common, fields, meadows, and pastures, commons and waste lands, in the parishes of Byfleet and Weybridge, and manor of Byfleet, with its members in the county of Surrey."

299. Mr. *Knight.*] What was the extent of waste land to be inclosed?—It is not recited in the Act, but it was very large indeed, and I can state that the map which was exhibited to the Commissioners does not show these inclosures at all.

300. The amount was several thousand acres?—I think so, certainly.

301. Will you read the preamble of that Act?—"Whereas there are certain open common, fields, meadows, and pastures within the parishes of Byfleet and Weybridge, and manor of Byfleet, with its members in the county of Surrey, and also divers commons and waste lands in the said parishes and manor, but the parts and proportions thereof belonging to the respective parishes are unknown or lie intermixed and open to each other, but are all within the said manor: And whereas the King's Most Excellent Majesty, in right of his Crown, is lord of the said manor of Byfleet with its members, subject to a grant or lease thereof now vested in his Royal Highness Frederick Duke of York: And whereas his said Majesty is patron of the rectories of Byfleet and Weybridge aforesaid, and the Reverend George Sewell, clerk, is rector of the parish and parish church of Byfleet aforesaid, and as such is entitled to all the tithes, both great and small, arising within the said parish, or to certain compositions in lieu thereof, and likewise to a rectory house and glebe lands in Byfleet aforesaid, and right of common in respect thereof, and the Reverend Francis Haultain, Doctor in Divinity, is rector of the parish and parish church of Weybridge aforesaid, and as such is entitled to all the tithes, both great and small, arising within the said parish, or to certain compositions in lieu thereof, and likewise to a rectory house, and glebe lands at Weybridge aforesaid, and right of common in respect thereof: And whereas his said Majesty (subject to certain grants or leases heretofore made and now subsisting) and his said Royal Highness Frederick Duke of York, the Right Honourable Charles Earl of Portmore, Robert Sparks, and George Paine, Esquires, and several other persons, are owners and proprietors of the said open common fields, meadows, and pastures, and of divers messuages, cottages, lands, tenements, and hereditaments in the said parishes of Byfleet and Weybridge, and in respect thereof, or otherwise, are entitled to right of common upon the said commons and waste lands: And whereas the lands and grounds of the respective proprietors on the said open common fields, meadows, and pastures, lie intermixed and dispersed in small parcels, and the same, and also the said commons and waste lands in their present state, are incapable of much improvement, and it would be of great advantage to the several persons interested if the said open common fields were divided and inclosed, and the said meadows and pastures divided, and specific parts allotted to the several proprietors thereof in proportion to their respective property therein, and if the said commons and waste lands were divided and inclosed, and specific parts allotted to the several persons interested therein, according to their respective rights, and if allotments were made in lieu of the tithes of the said commons and waste lands in manner hereinafter mentioned, but such division, inclosure, and allotment cannot be established without the aid and authority of Parliament."

302. Mr. *Bonham-Carter.*] Can you tell us the area which was dealt with by that Act?—It is not stated in the Act, but I have no doubt that it was many thousand acres; it extended, I believe, over St. George's-hill.

303. The Crown was lord of the manor?—Yes.

304. And that proves what you have stated, namely, that the Act not only dealt with commons waste of the manor, but with common fields as well?—Yes; and they are dealt with separately in the Act.

305. Is the allotment which is set out for the poor set out in respect of the common waste of the manor, or of common fields?—It is provided for by the 35th clause, which is as follows: "And whereas it is intended to give and allow to such poor as are real and true occupiers of cottages within the said parishes, a share and interest of and in the said commons and waste lands in respect of their occupation thereof and residence therein only, as hereinafter mentioned." It then directs 40 acres to be set out in Byfleet, and 75 acres in Weybridge, to the use of the poor.

306. Will you read the words?—"Be it therefore further enacted, that the said Commissioners shall, and they are hereby required, in the next place, to set out and allot distinct parts and parcels of the said commons and waste lands hereby directed

Mr. *B. Scott.*

5 July 1869.

directed to be inclosed, exclusive of all roads and ways in and over the same, in the several proportions following; that is to say, in the said parish of Byfleet 40 acres, in one or more piece or pieces, and in such place or places as the said Commissioners shall think proper; and in the said parish of Weybridge 75 acres, in one or more piece or pieces, and in such place or places as the said Commissioners shall think proper, which said distinct parts and parcels of the said commons and waste lands so to be set out and allotted shall be and remain to and for the use of the real and true occupiers only of cottages standing and being within the said parishes respectively, the yearly rent of which shall not exceed 5 *l.*, and having no other house or place of residence, and such occupiers for the time being shall at all times afterwards have the sole and exclusive right of using the said parts and parcels of the said commons and waste lands so to be set and allotted for the purpose of pasture and of cutting turf, furze and heath for fuel, in equal proportions, according to the number of the said houses and cottages, without paying anything for such use;" and then the allotments are made over.

307. They are vested in trustees?—Yes, who are to be elected, and so on, and there are clauses which provide for inclosing and ring-fencing the several portions of the manor which are thus set out for the poor, and for other parties, and for charging for the expense of such ring-fencing; and there are powers in the Act for selling some of the land to pay for the ring-fencing; but the fact is that such lands have never been inclosed.

308. Is that power of selling this land still operative?—No, I think not; there are no powers which are operative. The Commissioners were to inclose and to ring-fence, and to raise the money; they are all gone; their report was made 50 years ago, and there is no power left. The land is literally, as to the soil, without an owner, because the Act recites that all the rights of the Crown, as lord of the manor, shall be satisfied by the proportion of land which the Crown is to receive. Therefore it is a piece of land which is subject to the rights of the poor, as regards cutting fuel, and so on.

309. Was it not vested in the trustees?—Yes.

310. Then they are the legal owners?—Yes.

311. And in your opinion they would be bound to maintain the rights of the poor?—Yes, but they have no powers of ring-fencing under this Act, and such powers have never been attempted to be put in operation, and what I am contending before the Committee is, that either by neglect or by intention (we cannot know which), the Commissioners did not ring-fence the poor's land, but left it open. The poor have never sought to have it inclosed. The trustees have never sought to have it inclosed; and here is a piece of open land left which is of a very picturesque character, but very worthless for the purpose of cultivation; in fact it is a heath, and we think that it ought to have the protection of such an Act as this, and that it should be included by some terms in the Act, so that it should not be wantonly leased away, and that the public should not lose the chief benefit of it. It is a breathing space within an hour's ride of the Metropolis.

312. Mr. *Knight.*] What is there upon that land?—There are heath and gorse, and fir trees grow naturally upon it; they are self sown; they are always springing up, and the poor cut them down.

313. Mr. *Bonham-Carter.*] These are open spaces, one of them, as you state, at Weybridge, being near to a station?—The railroad runs through the middle of them.

314. You stated that there were no owners; can you state to whom the railway company who took this land paid the money?—I believe that it was paid to the then existing trustees, and that they appointed one or two persons to administer it. I have heard from Mr. Locke King that he is one of the trustees.

315. Then, would there not be a money fund at this moment available for the improvement of the common?—There is a small money fund now in existence.

316. Would not it be available for fencing?—I do not think that it could be legally applied to that purpose; I imagine that it must be given to the poor.

317. Are not the words of the Act, that it is for the use of the "real and true occupiers of cottages," at or under 5 *l.*?—They are the only beneficiaries.

318. Are not the words of the Act that "such occupiers for the time being shall at all times afterwards have the sole and exclusive right of using the said parts and parcels of the said commons and waste land so to be set and allotted for the purpose of pasture, and of cutting turf, furze, and heath for fuel"?—The poor are the sole beneficiaries; there is no pasture, but they exercise the right of cutting turf and fuel.

319. In fact, these wastes were set out specially for the sole use of the poor of those two parishes?—Yes.

320. Are there many persons who are beneficially interested at the present time by being occupiers of cottages under 5 *l.*?—Not very many; but I state that, as a practice, the whole of the inhabitants of the district have ranged freely over these commons, and I contend that they have acquired those rights.

321. As against that Act of Parliament?—As against that Act of Parliament, by an implied dedication for that purpose by all parties declining to inclose.

322. Do you give that opinion as being in the legal profession?—No, I am not giving it as a legal opinion.

323. Here is an Act of Parliament which distinctly states that these waste pieces of land are to be fenced in, in the first instance, by trustees?—No, it is provided that they may be fenced in at the discretion of the Commissioners, but the Commissioners did not exercise that discretion of fencing.

324. Then am I to understand that, in your opinion, the laches of the Commissioners have in fact forfeited the rights of the poor?—No; the laches of the Commissioners and the laches of the trustees through all these years have prevented the inclosure of the space. There were on a valuable common the rights to cut turf and fuel, but all that remains is a dole to the poor.

325. Mr. *Knight.*] What would that land let for, supposing that it were let?—There is no doubt that it is now very valuable building land, and it is very likely to be looked after, and that is a reason why Parliament should protect it. I contend that it is a fortunate circumstance for

for the Metropolis that there are particular pieces of land without owners who can deal with the soil.

326. Mr. *Bonham-Carter.*] But does not the Act state, in the first instance, that these parcels of commons and waste lands "shall be and remain to and for the use of the real and true occupiers only of cottages within the said parishes"?—Yes, for the purposes stated.

327. In the first place, the Act states that without limitation, does it not?—No, I think that it is limited by the words that follow. It has never been contended that the poor have any right whatever except from doles, or the right of cutting fuel, or the right of turning out a donkey, or anything of that sort, upon the common; that is the only right which has been exercised since the passing of that Act; no one has claimed to exercise any right over the soil.

328. I believe that there was a proposal made by some of these parties to inclose one of these commons?—Five or six years ago there was correspondence with the trustees upon the subject. I was one of the trustees, and I refused to entertain anything of the kind, and I think that Mr. Locke King also refused.

329. As a trustee of the poor of one of these two parishes, you thought that it was a fair exercise of the trust, that the land should be kept open for the general public?—Yes.

330. You considered the general public as being beyond the parishes for whom you were trustee of the property?—I looked at it in a broad way; I apprehend that, in a legal point of view, the inhabitants of Weybridge would have a prior claim to the land.

331. Were not you a trustee for the poor?—Yes.

332. In this case there was reason to believe that the poor did not desire the inclosure?—Yes.

333. But supposing that the poor had desired the inclosure, and that this property, which you say is worth many thousand pounds, would, in your opinion, have been benefited by the inclosure, would you not have advocated that view?—No; I think that the poor are not really benefited by this arrangement. I think that the doles do a great deal of harm; they go to squatters, who are thus encouraged to come upon the land.

334. The original dedication was for the advantage of the poor of these parishes?—Yes.

335. And your opinion is, that without any payment to the poor, the public of the Metropolis ought to have a right to go freely over this ground in any number, because no fences have been put up either by the Commissioners or by the trustees, for a period of 70 years?—I think that the poor of Weybridge and Byfleet have the first right to range over that ground, and to use it in every proper and legal way, but I think that the inhabitants of the Metropolis may also use it without any detriment to the poor of Weybridge and Byfleet.

336. Supposing that you, as trustee of the poor, had been approached by certain of the poor, who said that the frequenting of this place by large numbers of people interfered with the rights of the poor, should you not, as trustee, have felt bound to prosecute any person so coming on the ground?—The matter has never been so entertained by the trustees. They have power to expend a portion of the poor's rates for protecting the land, but I have never heard of anything of the sort being done.

337. Then would not the simplest way of attaining the object be to fence the land?—The Act of Parliament provides another fund for fencing it. The charge upon the poor rate is for managing it, and I think that the words are "for preventing nuisances." Towards the close of the 35th clause of the Act of 1800, it is enacted that a majority of the trustees, "shall have full powers to make orders and regulations for the use, management, draining, levelling, and other improvements of and for the stints of the commonage thereof, and for the protection and preservation of the herbage, turf ground, and soil thereof, and for the employments and appointments of proper persons to execute such rules and orders, and to overlook the said lands, and to impound cattle which shall be found trespassing thereon contrary to such regulations, and to order payment of all necessary expenses thereby incurred, not exceeding in any one year the sum of 10 *l.*, out of the rates made for the relief of the poor of the said respective parishes."

338. Then do you, as a trustee, think that the power which is given by that clause for the maintenance and preservation of this space, would not entitle you to spend what money you had for preventing a nuisance by inclosing it?—It has never been contended that the trustees have such a power.

339. Is it your opinion that that clause does not give you that power?—It has been so contended; and I may add that if it has given the power to the trustees it is a stronger evidence that they did not mean to inclose, but rather to dedicate the land to the free range of the inhabitants of the parish.

340. I observe that, in your former evidence, you contended that these poor's lands had been designedly dedicated to the use of the parishes and the neighbourhood?—Yes.

341. I was anxious to elicit whether there was anything in the Act which defined the parishes or the neighbourhood; I understood that the right was given to certain cottages?—Yes.

342. Then are you right in saying that the neighbourhood was at all included under the Act?—Yes; it comprehends all parties within the manor of Byfleet, which extends over both parishes.

343. Are the occupiers of cottages who have this right in Weybridge also cottagers in Byfleet?—I apprehend that in setting out the lands there is a division or distinction, so that the rights of the cottagers in Weybridge are enjoyed and exercised in Weybridge, and that the rights of cottagers at Byfleet are exercised at Byfleet.

344. At present there is a cutting of turf, regulated by the trustees?—A cutting of fuel; there is no turf; it is a sandy heath; they cut the heath and the gorse, and sell it to the bakers for heating their ovens There are self-grown Scotch fir trees; it is fuel, as Parliament has stated by clause 35 of the Act of 1800, which contains the words, "cutting turf, furze, and heath for fuel"

345. Is not the turf pared in the usual way in which it is pared in open wastes for fuel?—Turf is only found on the sides of the roads, and it is usually cut for the purpose of laying down gardens, and I am told that the produce goes to the fund for the poor.

Mr. *B. Scott.*

5 July 1869.

346. Are you not aware that in many parts of England the surface has been taken for two or three yards, and that that is called turf?—That is not the case in this dry heath; I do not contend that the inhabitants of the Metropolis have any right to cut anything upon the common, but I contend that they have the right, as it has been kept open for nearly 70 years, of free range, and that no action of trespass would lie against anyone for so doing.

347. You are one of the trustees for the poor, under certain defined rights set out by the Act of Parliament?—I was a trustee a few years ago; I am not certain whether I am so now. There has been a scheme adopted, the legality of which has been disputed in the neighbourhood.

348. There is clearly no right to build upon this ground?—There is no power to do so.

349. Does not it appear from the Act of Parliament that whilst the ground is kept in its present state for the purposes of the cottagers, the trustees ought to proceed against trespassers who may injure the rights of the cottagers?—That question has not arisen; the land is such that walking over it or pic-nicing upon it does not injure it; there is nothing there which would receive any injury from any member of thousands of people. The volunteers are exercised upon that ground, and they have occasionally sham fights there in the summer months.

350. Are there not a large number of self-sown firs upon it?—Yes, Scotch firs.

351. Then, if at this period of the year a thousand people came down from London and walked over the common, do you mean to say that the growth of those young shoots would not be liable to very considerable damage?—I do not think so; they are self-sown, and they spring up faster than the cottagers can cut them down.

352. Will not that common hereafter, unless the trees are cut, become probably one wood?—They are constantly being cut away, they grow self-sown, and they are always being cut down.

353. Am I to understand you to say that from the nature of the soil, and the products of the soil, any number of persons going over it can do it no harm?—I do not think that any moderate use of that common would do it any harm; it would still be a wild heath.

354. When you say any "moderate use," how can you draw any distinction between a hundred people of the parish going upon it, and an excursion train bringing down a thousand persons from London?—At present no damage whatever has been done; I have seen 200 persons upon it.

355. Should you not feel that the poor, being the persons who are your cestui que trust, you should see that their property is not damnified by the inundation of large bodies of people?—If that difficulty arose, no doubt the trustees would feel some responsibility with respect to it.

356. Are not the trustees bound to protect the poor from such interference as may prevent their being deprived of the full value of this common which is allotted to them?—I apprehend so; but they have no powers to inclose, those powers having expired.

357. Then, am I to understand you that the clause which enables you to drain and level, and to prevent nuisances, does not inferentially give the power to fence, if it is for the benefit of the parties?—In my opinion it does not; I never heard of any power to inclose; it provides the amount of 10*l.* a year only.

358. Then, whatever rights the poor had at first in those two commons, you think that, partly by the laches of the Commissioners, and partly by the laches of the trustees, those commons are liable to be freely walked over by the general public from London, or by anybody else?—Yes; I have no hesitation in saying that that is my opinion.

359. Are you quite sure that an action of trespass would not lie?—I am quite of opinion that it would not, or it would long since have been tried. With reference to Walton Common, a society in London has built a very large Convalescent Institution there, the front of which is on the common, and that is the recreation ground of the poor creatures who come from the hospitals; it is a very delightful space for them, they do no harm, and they get an immense deal of good there.

360. Then, in your opinion, these commons, which were intended to be for the benefit of the poor, have, by some lache or other, inured to the general public?—The poor can cut fuel, and they also have the interest which has been given to them in doles; and in Walton parish they have some small portion set out in allotments, which they cultivate, but the remainder has never been inclosed, but is set out as waste land.

361. You said that these lands were designedly set out for the neighbourhood; what was the design?—The Commissioners have not inclosed; the trustees have never inclosed; and the poor have never asked for inclosure; and I believe that all parties desire those lands to be kept open for recreation, and I believe that all parties derive advantage from it.

362. Quite admitting the importance of maintaining open spaces, is there not another open space to which you have referred, namely, Wisley Common?—Yes.

363. You were examined before the Committee on Wisley Common, which sat this year?—I was.

364. And at that time the question was more with reference to the rights of the neighbourhood?—I gave evidence with reference to the rights of the neighbourhood, and also with reference to what I considered to be the rights of the inhabitants of the metropolis, or what was to the advantage of the metropolis; I did not put it in the way of right.

365. You have given us evidence as to the immense and rapid increase of the population of London?—Yes.

366. Is not the result of that immense increase an immense enhancement of the value of land in London?—It is raising the value of land in London, and all round London; no doubt that is the operation of the increase of the population.

367. Might not the inhabitants of a parish 20 miles from London think it very hard that land which is worth many thousand pounds an acre, should not, if the inhabitants of London desire recreation ground, pay for that recreation ground?—That is a question upon which I have not given any evidence at present, and I have given very little consideration to that subject. The report of 1865, opposes the idea that there should be any purchase of ground, but rather suggests that Parliament should leave as they are the rights of lords and commoners, in order to keep these places open as long as they could, and that they should not grant them undue facilities for inclosure.

368. You

368. You state that Wisley Common is frequented by persons who go there for recreation?—That is so.

369. But not very much from the Metropolis, as I have understood from your evidence?—Not very largely, it is two and a-half to three miles from Weybridge Station, and about the same from Walton Station.

370. Should you be surprised if I told you, that on Saturday afternoon I was there, and that I did not see a single person in the whole length of Wisley Common?—I think that it is quite possible that at times it is deserted in that way. There is no doubt that it is not very largely frequented. If a railroad were made near it, it would be a very favourite place with the inhabitants of the Metropolis. Saturday last was the annual Walton regatta, which drew away the people in another direction.

371. Do you think that the introduction of a railroad into a district from London gives the public an additional right or claim to the use of an open space?—I think that it gives the inhabitants of such a densely peopled Metropolis as this, not a right, but a claim upon Parliament, that they should not be too free in making inclosures. I think that it gives them a claim upon Parliament, that Parliament should not take away a common from anybody who possesses it.

372. In Question 368 in your evidence before the Wisley Common Committee, you stated that "in the spring and summer months the whole of the inhabitants of the neighbourhood, who have carriages and horses, take exercise there"?—Yes.

373. Do you think that the inclosure of these commons should be refused for the sake of persons who have carriages and horses?—No, I have put it upon the broad ground of a very large, and dense, and increasing population, and that on that account there should be no undue inclosure of these commons, which, I might almost say, providentially, are placed round London as breathing spaces. There are certain reasons which distinguish Wisley Common from other commons; parties have taken steps under the existing law to inclose it, and have expended money in so doing.

373*. We are inquiring into the operation of an Inclosure Act, as to inclosing lands within 25 miles of London; is there anything so exceptional with regard to Wisley as that what operates within the same distance upon other commons, should not operate upon it?—Yes, because they have permitted the owners to apply and to take certain steps, and to expend money, which in other cases has not been done, and therefore you are called upon as legislators to consider whether you should not afford protection to commons where no expenditure has been made. I think that it might be a fair question, whether if you extended the limits, Wisley Common should not be made an exception. I think that it would come within the 21 miles limit.

374. In your evidence before the Wisley Common Committee, you state that it is principally used by the inhabitants of the neighbourhood, who have carriages and horses, and take exercise there; and in the next answer you say that there are gentlemen who use it even more than you do; gentlemen who hunt upon it?—Yes.

375. Do not gentlemen hunt upon private inclosures as well?—They are not so convenient for hunting as an open space; I believe that I said that, because some gentlemen were present who were accustomed to hunt over it, and I believe that they had been successful, more or less, during the last winter upon Wisley Common.

376. Do you advance that as an argument why the public should be considered in such inclosure?—I think that all these things should be considered by Parliament; I am not opposing any rights of the lords and commoners; I merely contend that you should consider all these points.

377. You stated that the land, if inclosed, would probably be worth 500 *l.* an acre?—No, 100 *l.* an acre; I said that some land close to the railroad at Weybridge, was worth 500 *l.* an acre. I think that I estimated the land at about 100 *l.* an acre, which estimate was confirmed by the surveyor of the Board of Works; that is to say, for occupation land, not for agricultural purposes.

378. Supposing that a small number of the commoners comply with the requirements of the Act of 1845, and by so doing are empowered by the existing law to realise a property which may be worth from 100 *l.* up to 500 *l.* an acre, do you not think that it is rather hard to step in at the present time, and prevent them from inclosing a common which you say is not frequented from the Metropolis?—I have not proposed anything to prevent their inclosing, they can inclose if they have agreed to inclose.

379. Am I to understand you that you wish to exempt these commons from the operation of the Act of 1845?—Yes.

380. Would not the effect of that exemption be to prevent the owners of these commons from being the possessors of property, which may be worth as much as 500 *l.* an acre?—No, they would still have the power to do so; my proposal only says that if they want any power from Parliament, they shall come to Parliament with a special Bill.

381. It would prevent them in so far as the expense of a special Bill in Parliament would be a bar?—With reference to land which is so valuable, I think that the expenses of an Act of Parliament does not deserve consideration. I think that the public are entitled to the requirement that there should be an application to Parliament for the purpose; I think that there is a good deal of misunderstanding as to what is proposed by this Bill; it is not proposed I am sure by myself, and I have not heard of anyone else who proposes it, to take away any existing right from any lord or commoner, but merely that in a general Bill you should not give them powers, which in a matter of this importance should be sought in a private Bill.

382. Has not the practice for nearly the last 25 years been, that unless there has been some miscarriage of justice, the inclosures which have gone through the proceedings laid down by Parliament, have, as a rule, been made?—There have been very many complaints about the practice; I cannot bring them before the Committee, but I have had many letters upon the subject.

383. You state that Wisley Common is a very retired common?—Yes.

384. And that there is nothing to be compared to it in respect to its picturesque beauties, and retired advantages; how can the retired ad-

Mr. *B. Scott.* 5 July 1869.

vantages co-exist with the influx of a large number of people?—I have not stated that a large number of people resorted to it. Until it is further developed, and, until a railway approaches it, it is too far from a railway station for any great number of persons to frequent it.

385. Would not those retired advantages be entirely lost if it was brought within access of a great number of people?—I think not, because there are very beautiful clumps of firs which make it desirable for the visit of pic-nic parties, and so on.

386. But has not the lord of the manor the right to cut all those firs?—Yes, the lord or the commoners.

387. Would you confer upon the public the right of maintaining a different standing?—No; I am merely contending for leaving all rights just as they are. I should be perfectly satisfied if everybody was left to his rights, and if Parliament did not interfere.

388. Do you contend that the public have the right of free access to the whole of Wisley Common at the present time?—I think so.

389. Do you think that an action of trespass would not lie against onyone going over the soil of Wisley Common, otherwise than over the highway?—I am quite sure that such an action would not be successful. It has been common land since the time of the Conquest, and nothing of that sort has ever been attempted.

390. Do you mean that, supposing you were to go upon that common, for instance, to sport, you could not be prevented from doing so?—I do not include sporting. I do not contend that the public have any right to sport upon the common, but they have the right of ranging over it, and walking across it, that is to say, the inhabitants of the immediate neighbourhood, they cannot carry a gun.

391. You do not think that their ranging and walking over the common would be any infringement of the right of the lord?—I do not think that it would be any infringement of the right of the lord, or any of the commoners.

392. With regard to Wisley Common, you state that the lowest figure which it would be worth would be 37,000*l.*, if inclosed?—I consider it of that value.

393. You think that, practically, the public have the right, when the Inclosure Act has authorised the inclosure of these commons, subject to the opinion of the House of Commons, to step in and say that the four or five owners of this common shall not realise this 37,000*l.*?—I have not said that; I say that if they are the sole owners, they have the full right to inclose the common, they can do so without coming to Parliament, but what I contend is, that if there is any disability, or anything which requires an Act of Parliament, Parliament should be very careful in conceding those powers.

394. But would you keep the common practically open, or would you say, "We give you certain privileges in this common, but the whole of it must not be inclosed"?—I should prefer the common being kept open, and the commoners being left to their rights.

395. Do not the owners of the adjoining properties now give the public very free access?—Yes, they are extremely liberal in that matter, and Mr. Buxton particularly.

396. Your objection is that that may he put an end to at any time?—Yes.

397. But you think that the public have acquired such a right over Wisley Common, and other similar commons, that you think that Parliament ought not to allow those commons to be inclosed upon the satisfaction of all the rights which could be maintained in a court of law?—I have contended not that the inhabitants of the Metropolis have a right, but that they have a claim, upon the consideration of Parliament in conferring these powers which are sought.

398. Mr. *Buxton.*] Is it not the fact that there are no persons, or very few indeed, who have any legal right at Weybridge over the enjoyment of that common, because the rents of all the houses are more than 5*l.* a year?—There are very few persons left who have tenements of 5*l.* a year or under.

399. Do you know whether there are any at all?—Yes, there are some.

400. But they are very few in number?—Yes.

401. Did not the Act of Parliament give certain specified rights for the poor?—It did.

402. It defined what those rights were to be? Yes.

403. Will you read again what the rights of the poor were to be?—"And such occupiers for the time being shall at all times afterwards have the sole and exclusive right of using the said parts and parcels of the said commons and waste lands, so to be set and allotted for the purpose of pasture, and of cutting turf, furze, and heath for fuel, in equal proportions, according to the number of the said houses and cottages, without paying anything for such use."

404. Therefore, the Act of Parliament did not give those poor persons any right to the freehold of the common?—No, I apprehend not.

405. It gave them certain advantages which were laid down specifically?—It gave them what in law is called the usufruct.

406. There is no claim in law founded upon anything beyond the advantages which that Act defines?—No, I apprehend that the freehold is in the trustees.

407. Do you not think that those few persons who live in houses in Weybridge of a rental below 5*l.*, would really suffer by having the land fenced in and sold for building land; that it would give them an enormous annual dole which would make it unnecessary for them to engage in any sort of industry, and would probably demoralise them exceedingly; and do you not think that it would probably have the effect of drawing a flood of paupers into the district, if such a thing was in prospect?—I think that that would be the effect of it; that the doles would be so large that it would draw in paupers from all the districts around; that is to say, squatters, who would build hovels; in fact, it has operated in that way in Walton parish to a large extent. With reference to that question, a Bill, I believe, has gone through this House, namely, the Endowed Schools Bill, which renders those doles applicable to educational purposes; but I should state that that Bill excepts the soil, and does not allow the soil to be dealt with; it states that no inclosure of open spaces shall be made under that Act.

408. Is it not a great inducement to wealthy people to live at Weybridge because there is so much uninclosed land?—Yes, it is an attraction to such persons, and the poor are supported and employed by the wealthy inhabitants.

409. So

409. So that the poor do derive advantage from the open land?—Yes; that question was discussed at a vestry meeting, and it was put before the poor, namely, that the great advantage to them was from the wealthy inhabitants coming and spending money amongst them, and employing them.

410. So that the poor derive advantages from a proper arrangement with regard to that common?—Yes.

411. You do not think it likely that any vast multitude of people would come down to destroy the young trees, and to kill all the heather, or anything of that sort?—We have never experienced anything of that kind, and the only thing that I can conceive possible would be a prize fight; and that is so public a place that I do not think that that is likely to occur.

412. Are you aware that noblemen and gentlemen near London have allowed the public to go into their parks, and to go there for many years, and have never indicated that they have found any reason to be dissatisfied with it?—That is the case particularly in the neighbourhood of Weybridge. Lord Ellesmere did so during his life, and Lady Ellesmere allowed free range over St. George's Hill, subject to proper restrictions. The same thing is done to a certain extent by Captain Egerton, and the same thing is done by Mr. Buxton.

413. Are you aware that Lord Salisbury allows any persons who please to come into Hatfield Park?—I have understood so.

414. And are you aware that no damage has been done?—I have never heard any complaint except at times a brass band has come down, and regulations have been made preventing the allowance of anything of that kind on the ground.

415. So that there is no reason to think that the interests of the poor suffer?—I have not any idea that they suffer, or that they make the least complaint of the kind. I have one of these poor people in my employment.

416. Mr. *Johnston.*] Are you aware that almost 20 years ago there were so few cottages in Walton of a rental under 5 *l.* a year, that the late Sir Henry Fletcher built cottages at that rent in order that they might be inhabited by poor people who might qualify for those doles?—I have heard so.

417. You say that there are still some persons in the neighbourhood of London who pay these small rents; do you not think that in a few years there will be none at all?—That would be the case if there were not parties who let cottages at such a rent that the occupiers may have the advantages of the dole.

418. Would it not be an absurdity to give to so very few persons the exclusive benefit of this land?—It would be absurd, because it would lift them from indigence to competence, and they would cease to be "poor." The effect would be to bring a large number of squatters into the neighbourhood, as has been the case to some extent already.

419. Who was it that, five or six years ago, wanted you to inclose these commons; was it a building speculation?—No; I think that it proceeded from some person in the parish who was in communication with the Charity Commissioners, and they thought that it would be beneficial to make a charity of it.

420. You have mentioned the Report of some Committee who recommended the establishment of a registry for commoners of their rights?—It was the Committee of this House in 1865.

Mr. *B. Scott.* 5 July 1869.

421. Has anything been done in that respect?—No.

422. Lord *George Hamilton.*] From your general experience, you think it desirable to extend the Metropolitan Commons Act?—Yes, to such a limit as the Committee think fit.

423. Do you suggest to the Committee that they should except certain commons?—I have only mentioned Wisley Common as an exceptional case. The parties interested had acquired some right, and I thought that they might be exempted if the limits were extended so as to include Wisley. I think that then Wisley might be an exceptional case.

424. You think that if the Metropolitan Commons Act were extended there would be cases where it would be prejudicial to the neighbourhood?—No, I have not expressed an opinion to that effect. I do not think that it is desirable to inclose any of these open spaces. I think that the population is so rapidly increasing as to make all open spaces round London very valuable, and that it is better to leave the rights of the parties to the decision of the courts, according to the existing law, and that there should not be any fresh law for that purpose.

425. Colonel *Barttelot.*] I wish distinctly to understand your opinion upon this point: do you think it right that where speculators (I do not use the term offensively) build houses to a large extent in the neighbourhood of London, and make large fortunes, and where there is a common within 20 miles of London, the inhabitants of those houses should have the benefit of going down to that common and taking away the rights, as it were, of the lord and of the commoners?—No, I do not think that there is any taking away of the rights of the lord and of the commoners. I think that if there is any interference with the rights of the lords and of the commoners, the parties infringing those rights should be restrained. I am contending that it is not desirable for Parliament to give the lord and the commoners any fresh rights which they do not now enjoy.

426. You know perfectly well that if the lord and the commoners all agree they can now inclose a common?—Yes, and I am not at all contending against that right, but I think that if they cannot agree, or cannot find out the existing rights of parties, Parliament should not be too free in giving that which they have not got, and I think that within a certain radius, the land, under those circumstances, should be left open.

427. Are you not aware that the Act of 1845 was passed in order to do away with special Acts?—Yes.

428. So as to enable a common to be inclosed more economically than by a special Act?—Yes; but the growth of the Metropolis requires an extension of the limit which is stated in that Act.

429. But do you not think that the lords and commoners ought to be fairly compensated if, for the benefit of a large city like London, you recommend taking away their common?—I do not propose taking away the common from anybody, but if a desirable case of taking away a common is put, I think that the parties should be amply compensated.

430. You are seeking to take away the power which

Mr. *B. Scott.* 5 July 1869.

which was given to those parties by the Act of 1845 to inclose their common, and you are anxious that by no possible means should they be enabled to inclose their common?—No; we merely say that it should not be included in a large group of commons which are proposed to be inclosed, but that a special application should be made to Parliament in that matter, because a common near the Metropolis is more important than a common situated in an agricultural district. The open spaces near London have acquired a fictitious value in consequence of their proximity to the Metropolis, and we think that there should be a special application to Parliament with reference to such inclosures; but we do not propose that any existing rights, either of lords or of commoners, should be interfered with.

431. But do not you think that if a man has been fortunate enough to possess a common in the immediate neighbourhood of London, which is more valuable than other commons, he should receive compensation for it?—If it was intended to take away any right then under the Lands Clauses Act, he should receive compensation, but it is not proposed by myself, or by any party acting with me, to take away any right whatever. I merely say that before Parliament gives what is not a right now, the matter should go before a Select Committee, so that they might consider the whole circumstances.

432. Who do you propose should pay the extra expense of such an Act of Parliament?—The parties proposing to make a benefit out of it; it is quite clear that in every case near the Metropolis some of the parties would make a large sum of money, and I say that when they are taking steps to convert common land into building land they should pay for that application; or I think that the public might pay for it out of the public funds; but that is a very small question compared with the larger question of the commons being preserved.

433. Do you not think that it would be a very fair proposition, supposing that a common of that sort was to be inclosed for the benefit of certain parties, that a jury should be empannelled to assess the damages occasioned by that common being inclosed?—I think that that would be a very fair proposition.

434. You have made a statement with regard to the meetings as to these commons; you said that the notice was only placed upon the church door, and that nobody knew anything about it until after the Bill was in the House of Commons?—That was practically the effect with regard to the Ockham Inclosure and the Wisley Inclosure.

435. Do you not know that it is advertised in the local papers?—A local paper was put in before the Wisley Common Committee, but I never saw it before, and do not think that I am likely to see it again.

436. Do you not think that there is a considerable time before an inclosure takes place, and that there is always a considerable consultation in the neighbourhood about it?—Nothing transpired in the neighbourhood with reference to those two commons; there was nothing like a public notice.

437. How would you suggest that such a notice should be given?—In such a place as London, I think that the notice should be given in the "Gazette" and in some London paper; I think that if this matter were treated as applications for private Bills are treated, it would meet all the requirements of the case.

438. With regard to the doles of which you have spoken, does not Mr. Forster's Bill deal with this matter, so that you will now have nothing more to do with the poor in the 5*l.* cottages?—The Bill as it now stands limits the application of those doles to education, but the Charity Commissioners are to make a scheme. As the Bill first stood, it was to be absolute, it is now permissive; but the Bill protects the land, and says that unless there are other powers, it is not to be inclosed under that Bill.

439. You said that, in your opinion, the rights of the commoners should be registered?—That is recommended in the Report of the Committee of 1865.

440. That is your opinion also?—Yes, because it would tend to the regulation of commons when they were dealt with. That is a matter which has been recommended by a Select Committee, and I will not pretend to discuss it.

440*. Mr. *Winn.*] You said, with regard to Weybridge and Byfleet Commons, that you had not heard of anyone trespassing upon them?—I never heard of anyone being charged with trespassing; I meant to say that I had not heard of anybody causing any damage.

441. Your words were that you had not heard of anyone trespassing?—I meant trespassing so as to damage the common.

442. What did you mean by "anyone trespassing"?—I meant that I had not heard of any complaint of damage; I never heard of anyone being charged with trespassing; under this Act there is a clause by which anyone may be fined for damaging or injuring the common, but I never heard of anyone being charged with trespassing upon the common in the sense of walking across the common, or using it.

443. By the Act which you have quoted, it seems that this land was set apart for the poor for pasture, and for cutting turf, and cutting timber?—Timber is not mentioned, but that right is exercised. When this Act was passed, it included nearly the whole of the parishes of Byfleet and Weybridge, and there was a good deal of pasture land in those parishes; but this poor's land is set out upon the heath, and there is no pasture, and there would not be sufficient food for more than two donkeys, or a few geese.

444. That is to say in 200 acres?—Yes; it is sand covered with heath and gorse, with fir trees which are self-sown, and are constantly springing up; it is what is called geologically the "Bagshot sand formation;" it is peculiar to the growth of that fir.

445. Do you mean to say that 2,000 or 3,000 persons a week would not damage that pasture?—There is no pasture there; there was a large pasture to be allotted under this Act, but as that has been allotted to the lord of the manor, and the persons entitled to it, what is left is merely suitable for cutting turf, firs, and heath.

446. Does not the inclosure award distinctly state what this inclosure is to be for?—Yes.

447. Have you read it?—I have seen it; there is a map, and an award.

448. Does not it distinctly specify what these 200 acres are to be used for?—They are merely to be used for the purposes of the Act of Parliament. The Commissioners were merely to apportion the land; the rights are specified by the Act of Parliament.

449. You

449. You say that you are a trustee for one of these commons?—For Weybridge Common. All parties rated to the extent of 100 *l.* a year are trustees, and I have always been rated to that amount.

450. Therefore the soil of these 200 acres is in yourself as one of the trustees?—It is in the trustees. Weybridge Common is 75 acres only.

451. Do you not consider that in dealing with those 200 acres you are bound to make the most of them that you can for those persons who benefit, or ought to benefit, from them?—Yes, I think that we are bound to exercise the best judgment that we can, and I am satisfied that the fresh air is better for the people than the doles, and that is certainly the prevailing feeling in the neighbourhood. There would be no objection to regulating the ground or putting paths upon it, or putting seats upon it, or anything which made it better for the poor; but if it were inclosed, I apprehend that it would be against the intention of the Commissioners who allotted this land, and did not fence it.

452. You said that there were no funds for fencing this land, if it was thought desirable to fence it?—Just so.

453. If there had been fences made, no doubt by this time they would have been worn out; where would the money have come from for re-fencing?—That is a hypothetical case, which I have not taken into consideration; I merely contend that there has never been ring-fencing under the Act. The Commissioners having made their award, and having departed this life, the land has been dedicated to the free use of the inhabitants of the neighbourhood.

454. Surely, if there had been the power of fencing, there must have been the power of maintaining that fence, and the same money which would have been expended in maintaining the fence could have been expended in erecting the fence?—But the facts are against that hypothesis; there could not be a fence to maintain if no fence was made.

455. If, under other circumstances, you might have had the power of maintaining a fence, would you not now have the power of erecting a fence?—I cannot admit that that is the state of the law.

456. Mr. *Knight.*] If a fence had been erected, you would not have supposed that this general right of the public would have accrued?—If a fence had been erected by the Commissioners, under the powers of this Act, then I apprehend that such a right would not have accrued; the land would have been the private property of the poor.

457. It is simply an act of trespass by the public, as against the rights of the poor, because the Commissioners have not put up a fence, according to their duty?—I contend that there has been an implied dedication to the public from about the year 1800.

458. I have before me a circular of the "Surrey Commons Preservation Society"; are you one of that body?—I was on the committee who assumed that name, but I was no party to that circular.

459. This body asserts, by way of direction to Parliament, that "Wisley Common, so far as the soil is concerned, is public property"; is there no lord of the manor of Wisley Common?—The lord of the manor, I apprehend, is Lord Lovelace.

460. Are you not aware that the soil belongs to the lord of the manor?—I am not the party who issued that circular.

461. Is "Charles Jones" the secretary of that body which has given itself the name of "The Surrey Commons Preservation Society"?—He was the secretary of that society.

462. But you do not adhere to what was published under the name of your secretary?—I do not adhere to that broad statement, that Wisley Common is public property; it is the property of the lord of the manor, over which the lord has certain rights.

463. It is stated in this document, that "additional parks and breathing spaces are being provided for the people, at very considerable expense to the ratepayers"; I suppose that in the case of Battersea Park and Victoria Park, and so on, the rights of the owners were compensated, were they not?—Yes.

464. I quite agree with the statement, that large spaces ought to be preserved if possible; but do you not think that the lords of the manors, or the commoners who have distinct rights, ought to be compensated in the same way?—Yes. I have already stated that I think that every right ought to be compensated. I am the owner of property myself, and I think that the rights of property should be protected to the fullest extent. With reference to that paper, I may say that it was an act of haste and zeal, and that it was objected to afterwards; it was not adopted by any committee. When Wisley Common was proposed to be inclosed, nobody knew anything about it, and the Bill was pressed to a second reading within a few days of its introduction; and that paper was put out to arrest the attention of the public, but it was not authorised in any way. I must repudiate any sentiment of the kind which is there expressed as to the common being public property.

465. *Chairman.*] You have been asked about the parks which have been lately purchased in London; do you know whether they were private property?—I believe that in most cases they were private property.

466. And therefore they are not analogous to the commons and open spaces, which we are discussing?—No.

467. Some allusion has been made to the speculative building in London; it is your opinion that people come to London because houses are built, or that the houses are built because people require them?—There is no doubt that the supply follows the demand.

468. Are you aware that 7,000 houses in London must annually be built in order to accommodate the population?—Yes, there is something like that amount required.

469. Mr. *Knatchbull-Hugessen.*] You have been asked a question with regard to the probability of a railway coming near Wisley Common; I suppose that it is your opinion that the advent of a railway into a district generally tends to an increase of population?—Yes.

470. And would you not say that the greater the increase of population, the greater the public necessity of preserving open spaces?—Yes.

471. And that if the interest of the public demands that open spaces should be reserved, the fact that speculators are incidentally benefited should not preclude the consideration of the public interests in that particular?—No.

Mr. *B. Scott.*
5 July 1869.

472. Do you think that more care ought to be exercised in the inclosure of commons near the metropolis than in an agricultural district?—Decidedly so.

473. But you do not want to deprive anybody of any legal right?—Certainly not.

474. Do you think that in agricultural districts, where the legal rights do not conflict with the general public interests, the application of the General Inclosure Act is desirable?—Yes.

475. Can you state any reason why a legal right should be exercised where it is less valuable, and should be restricted in its exercise as soon as it becomes more valuable by its vicinity to a large town?—I think that Parliament should be more jealous of granting concessions near large towns, because the interests of large towns require an open space. On the contrary, the interest in an agricultural district is that as much land as possible should be cultivated.

476. Then, as I understand you, it is entirely with a view to the public interests that you advocate the keeping open of these spaces?—Yes.

477. And you would think it a justifiable course of proceeding, that while on the one hand Parliament should so far interfere with the interests of the lords and of the commoners as to keep these spaces open, they should on the other hand take care that the rights of the lords and of the commoners were compensated out of some public fund?—Yes, if their rights were interfered with under this Act; but I do not assume that any rights would be interfered with.

478. You are probably aware that the general Inclosure Act was passed for the purpose of facilitating inclosures, at the same time protecting the interest of the lords and commoners, as well as of others?—Yes; but the object was to increase the value of the soil by cultivation, but that argument does not apply to open spaces near the metropolis.

479. The cultivation of the soil tends to the production of a greater supply of food?—Yes.

480. And it would therefore be in the public interest?—Yes; that is recited by the General Inclosure Act, the preamble of which says, "Whereas it is expedient to facilitate the inclosure and improvement of commons and other lands now subject to rights of property, which obstruct cultivation and the productive employment of labour." This Act exempts all property within 15 miles of the City of London, and all commons within the neighbourhood of populous towns; therefore Parliament has to watch over two interests, namely, the interests of London and the interests of populous towns and cities.

481. The lords and the commoners who would require rights in severalty by an inclosure, would receive a benefit from an increased facility in the cultivation of the land, would they not?—Yes.

482. But if they would have an increased value by the cultivation of their lands under inclosure, they would to a certain extent have the value of their rights lessened, if that inclosure were denied, would they not?—I do not so consider it; I do not consider that either of the parties have such a right in the matter; the inclosure is a boon in both cases, and I think that Parliament should prescribe the terms of it. If a man has a defect in its title, and cannot build without coming to Parliament, he is asking a benefit from the Legislature, and I think that it is the duty of the Legislature in both cases to see how the public will be benefited. Where the land is agricultural, I think that Parliament should look to the matter, and see how a man will be benefited by the increase of the value of the soil; but where the land is urban I think that the public right should be looked to.

483. Then you think that the public right should come before the rights of the lords and the commoners?—Yes; I think that the rights of the lords and the commoners should be left where they are, and that in respect to these commons the rights of the public should be considered.

484. Are you aware that very many important inclosures were made before 1845?—Yes, by separate Acts.

485. And therefore one intention in the passing of the Act of 1845 was to reduce the expense of inclosure, and to take something in return from the lords and the commoners as a gift to the public?—No doubt that was so.

486. But you think that if a legal right is fairly made out on the part of the lords and commoners, and if a diminution of that right can be proved, they are entitled to some compensation?—Yes; I have no doubt upon that point.

487. Does not the Act, the extension of which we are now considering, contain something of the sort in the 15th clause, namely, the compensation clause?—Yes, I think that that clause contemplates such compensation.

488. Are you aware that that clause has never yet been put in force?—No, I am not aware of the circumstances under which the Act has been put in force.

489. If that clause has not been put in force, do you think it possible or probable, to judge with regard to the persons who have estates, rights, or interests in these commons, whether they will be sufficiently compensated, or will be restricted under this Act?—I have not considered that point.

490. Can you suggest any such improvement of the law as by convincing those persons who have rights in open spaces within 25 miles of the Metropolis, that their rights would be fairly considered, *qua* compensation, would induce them to be anxious that some scheme should be adopted which should secure these open spaces to the public?—I have rather been interested in considering how their rights should not be compensated, and should not be reconciled. I agree with the Committee of 1865 that their rights are in a very beneficial position as they now stand; that the best thing for the public would be that the lands should be uninclosed; and I think that the objection made by Mr. Ridley, that there had only been seven applications under this Act, is its best recommendation.

491 In your opinion, it is undesirable to have any schemes for inclosure, but it is desirable to keep the commons as open as they are?—Within a certain limit of London, I think that the best thing is to leave the matter as it is, and to leave it to the operation of the law.

492. You think that it is rather a good Act which obstructs people from bringing forward any scheme such as is proposed by the Act itself, and which, however beneficial an inclosure might be to the neighbourhood, prevents an open space from being inclosed?—Yes, I think that the Act of 1866 was a disenabling Act, so as not to give facilities for inclosures near the metropolis.

493. By a disenabling Act, you mean restricting

stricting persons from exercising rights which they can exercise in other parts of the kingdom? —Excepting them from the operation of the law which exists in another part of the kingdom where the circumstances differ.

494. Are you aware that in these open spaces within 25 miles of the Metropolis, as in other spaces, it may happen that a number of poor persons are commoners, having rights of common? —I know that there are some cases of that sort, but in my own immediate neighbourhood I have not made particular inquiry.

495. They probably would be very frequently benefited by the preservation of an open space? —In many cases they would; but in some cases they would prefer a money compensation.

496. I suppose there would be no great difficulty in satisfying their rights out of public funds?—No, I apprehend not.

497. Supposing that London goes on increasing according to the ratio of population which you have given in, do you see any limit hereafter at which this Metropolitan Act of 1866 should stop? —I have stated that if it was extended to 25 miles, I think that it would suffice for half a century, and that that is a period which it would be sufficiently large for this Committee to consider at present.

498. Taking the question of compensation, have you ever considered out of what fund any compensation should be given?—I have not considered the question of compensation, as I have not contemplated the interfering with any rights, but I think that there can be no possible objection to levying on the Metropolis for anything which would be for the advantage of the Metropolis; and I think that the limits of the Metropolis for such a purpose might be extended to the limits of the area protected.

499. Do you not think that when you propose that a right shall be exercised in a remote part of the country, and at the same time propose that it shall not be exercised near the Metropolis, that is an interference with a right, and that it is better to take the broad ground, not of denying the interference, but of saying that the interference is justified by public necessity?—The spirit of the legislation of Parliament, as I have explained, has been anciently to encourage the inclosure of commons; but since the year 1845, Parliament has exempted commons within 15 miles of the city, and in the neighbourhood of all populous towns, and therefore Parliament has considered that these were not rights to be dealt with, but that there were two classes of commons to be dealt with in different ways. I think that claims may be spoken of in this matter, but not rights. No person has a right to come to Parliament for an inclosure; it is a boon in every sense; it is so stated in the Report of the Committee of 1865.

500. Then, may I sum up your evidence in this way, that you are of opinion that the public interests demand the preservation of the open spaces near the Metropolis, but that you have not given much consideration to the question of compensation which might arise in carrying out any such change?—I have not given my attention to the question of compensation, but I think that I expressed an opinion before the Wisley Common Committee, which I still entertain, that it would be a fair thing to levy a small amount of taxation on the inhabitants of the Metropolis, who are the parties to be benefited, and I think that the limits of the metropolis for that purpose might be very fairly extended to the limits of the Inclosure Act; for instance, the pink district on the map, the Metropolitan Police District, might very fairly be taxed.

501. Mr. *Johnston.*] Mr. Knatchbull-Hugessen has spoken of the disadvantage to commoners of preventing an inclosure. Are you not aware that the commoners near London, from the rapid change of ownership, and from other causes, are very much reduced in number, and in some cases hardly exist at all?—Yes; and I have considered it very beneficial that those rights should remain.

502. Mr. *Bonham-Carter.*] The common rights, generally speaking, are appurtenant to the land? —Yes.

503. The rights are, I presume, taken away by the absence of user?—No doubt, in some cases.

504. If the land which had rights still existed, and the user continued, the rights would exist?— I would rather decline to go into a discussion of that question, which would become a somewhat subtle legal question.

505. If the land which had the rights still existed, and if the user continued, the rights would exist, would it not?—I presume that it would.

506. Then the rights have failed from the want of user if they have failed at all?—Yes; if they have failed at all.

507. May it not be possible that the user may have been rendered valueless by a population of this kind passing over the wastes to such an extent that the pasturage would be worthless?— That may possibly be so in lammas lands where there are exclusive rights of pasturage during a portion of the year, but I do not think that that would apply to ordinary commons; it is proposed, I believe, by a clause in this Bill that lammas lands should be affected if words could be discovered for protecting them for the use of the public.

508. Mr. *Winn.*] You have spoken of Epping Forest; you have said that it is a very large space, and I understood you to say that it is very desirable to leave it open?—Yes; in its natural wild condition, and not to attempt to make a park of it.

509. Is it very near a railroad?—Yes, there is a railroad; the Great Eastern system of railway touches that forest.

510. Do you know the extent of it?—I do not; it has been very greatly reduced of late years by encroachment. The Report of the Committee of 1865 recommended that the Crown should take steps to prevent further encroachments.

511. Are the inhabitants of London very much in the habit of going to Epping Forest?—Yes; in suitable weather. In 1865, evidence was given that on one day 200,000 persons had gone down by the railway and in other ways; that, I believe, was on a Whit-Monday.

512. Mr. *Knight.*] That was the day of the Epping hunt?—It was.

513. *Chairman.*] Is there any further observation which you wish to make?—I should like to read two lines from the report of the Committee of 1866; they are at paragraph 2 of page 7. "Mr. Burrell stated distinctly, that he considered

Mr. *B. Scott.* 5 July 1869.

the granting of an Inclosure Act of Parliament a boon which Parliament might justly refuse at discretion." I have read those words in reference to a question of an honourable Member as to the right of inclosure. That Committee deemed that it might be beneficial to certain parties to apply for an inclosure, but that no one had any right to inclose unless all the parties agreed.

514. Mr. *Knatchbull-Hugessen.*] The words which you have read were an individual opinion which was given?—Yes, by Mr. Burrell, indorsed by the Select Committee.

Mr. William Wyke Smith called in; and Examined.

Mr. *W.W.Smith.*

515. *Chairman.*] You are, I believe, Solicitor to the Metropolitan Board of Works?—I am.

516. The Metropolitan Board is, I see, the the local authority as regards certain commons, that is to say, commons within the metropolis under the Act of 1866?—It is so.

517. Do you know whether the Metropolitan Board has ever taken any steps, under that Act, for the purpose of dealing with such commons?—Yes; they have certainly not taken so many steps as they would have desired, but I rather think that they have taken all the steps which were practicable under the circumstances. They have exchanged a contract within the last few days, but the matter has been depending for some time with regard to a large tract of ground called Tooting Beck, which consists of about 150 acres of land in the parish of Streatham, and which is a very beautiful spot; I dare say that honourable Members are very well acquainted with it. For that land the Board have agreed to give 10,000 *l.* for all rights which would have been at all interfered with, except those of Mr. Phillips, perhaps, and that was regarded as a beneficial thing for the public; it was considered that it was a valuable arrangement on the part of the public, because there were a great many questions depending, which probably would have had the effect of excluding the public, or of partly doing so, under all the circumstances. The Board of Works after a great deal of consideration deemed it a judicious and wise thing on every ground, to secure that land, and they contracted to secure it. The actual vendors to the Board were Mr. Drew and Mr. Flower, two gentlemen who lived in the neighbourhood, and who tried to secure this land for the public; they offered it to the Board for the benefit of the public, and the Board dealt with it on that footing. It is fully described in the Report of the Committee of 1865; it is a large tract of ground just at the corner of Streatham.

518. It is within the pink part?—Yes.

519. It is south-west?—Yes.

520. Is it within the green part?—Yes.

521. Mr. *Frederick Stanley.*] The green is the limit of the Board of Works?—Yes; it is the Board of Works limit, but not the police limit; the Board has a certain control over the pink.

522. *Chairman.*] Were any commoners to be compensated in that case?—Yes. The gentlemen who sell are the representatives of the lord of the manor, there are certain persons claiming common rights, and we have bought with a knowledge that there is a claim of those rights; we do not recognise them, and shall probably have to dispute them; of course we shall desire to deal fairly with them.

523. You have not bought upon the terms that the vendor shall settle with the commoners, but you have only bought the lords' rights?—Yes; and whatever rights exist we shall compensate them unless they can be preserved. Our scheme is to preserve all rights, if we can. The scheme of the Act is not to buy up rights. We wish that, if possible, all rights shall remain in the ordinary state of things, and not that we shall buy the property right out, but merely to leave the common in its existing state. If it should ever occur that the enjoyment of the common by the public should invade the rights of any private person, of course that private person must be compensated under the 15th section of the Act.

524. Then in the event of any scheme leaving the existing rights as they were, no purchase takes place?—No purchase takes place.

525. In the event of any scheme, which you contemplate under this Act of Parliament, interfering with the well-ascertained rights of any parties, you consider that they should be compensated?—Yes. If you turn to the 6th section of the Act, you will see that it does not contemplate more than that; it contemplates the ground being levelled, drained, and improved, but not much change of ownership, or probably at all. I should like to allude to the cases which have been more specially cases of some anxiety with the Board, namely, Hampstead Heath, which is a large space of 250 acres; Wimbledon Common, which is a large common of 1,000 acres; Putney Heath, 412 acres; Blackheath, 267 acres; Plumstead Common, 154 acres; Peckham 50 acres.

526. Is that Peckham Rye?—I believe that it is; then there is Wandsworth, 183 acres; then Streatham and Tooting Commons are in this paper bracketed, but you will have to exclude the portion of 150 acres to which I have alluded. Then there are Clapham and Battersea Commons, which are 331 acres. I will allude to each of these cases; in the case of Hampstead Heath, long before this Metropolis Commons Act which is under the consideration of the Committee was passed, the Board had been most desirous to secure the full benefit of that common to the public, and negotiations had been going on for years with that object. Sir Thomas Maryon Wilson, who was then the lord of the manor, entered into certain negotiations, and those negotiations were pending even at the time of the passing of this Act. I believe that this Act is a very valuable Act, and it was hoped that under it we might secure Hampstead Heath. Sir Thomas Maryon Wilson asked a very large sum for his interest in the common. The very year after the passing of this Act negotiations were renewed, but we found it scarcely possible to approach Sir Thomas, for we regarded the price which he demanded as so utterly inconsistent with the interests of the public, that the negotiation was suspended. A suit was then instituted by a number of gentlemen.

527. Were those negotiations strictly private and confidential?—I think that they were. To the best of my recollection I think that the sum exceeded 150,000 *l.*; it was a very large sum. Then

Then a suit was instituted, which practically had the effect of stopping the Board's operations, and the same has been the case with regard to many other commons. The view which the Inclosure Commissioners took of the construction of this Act was, that when a suit was instituted raising the whole question of right, or largely raising the question of right to the property, it would be inexpedient to deal with the subject; that it might perhaps only be raising an issue which would have to be determined in another way. The Commissioners thought that they could not go on with those cases, but hoping, I suppose, that these suits would very soon be disposed of; honourable Members, however, know that Chancery suits hang about for a considerable time; that has been the cause of the delay regarding Hampstead Heath. Sir Thomas Maryon Wilson died some few months ago, and I believe that an action at law which has been directed to be tried in the Court of Exchequer, would have been tried two or three months ago, but that the death of Sir Thomas Maryon Wilson caused an abatement. I believe that either the will has not been proved, or the parties have not taken the matter up, and the cause has not yet been tried.

528. That was a suit in which the rights of the lord, as such, I suppose were brought into contest?—Yes, the immediate object of the suit was to restrain Sir Thomas Maryon Wilson from building upon certain parts of the heath, and to have a declaration of the rights of the owners in that property. Of course the Board felt that it would be very advantageous to lie by, and to see what was done by the Commissioners, because it would save the public a considerable sum of money if that suit was determined in their favour; and we hoped that that suit would go on rapidly. That I believe is all that I need trouble the Committee with as regards Hampstead Heath, and it will illustrate two or three other cases.

529. Hampstead Heath of course would be included in this Act of Parliament?—Certainly, we should most undoubtedly deal with it at the very first instant that we could.

530. Mr. *Knight.*] Are the rights of the present Baronet the same as those of the late Baronet?—I believe so, as regards the common; as regards certain lands adjoining, I think that there may be some limitation.

531. Lord *George Hamilton.*] Is not the will of Sir Thomas Maryon Wilson contested?—I rather think that it has not been proved, it is therefore possible that it may be contested.

532. *Chairman.*] Does the present owner take as the devisee of the late owner?—No, it is under a very old limitation.

533. He is the reversioner?—I believe so; I believe that the present owner is either tenant in tail, or may soon become so by the birth of a child, or other event. There may be something rather in favour of the public, with regard to the accident of death. I will now go to the case of Wimbledon Common; that is somewhat in the same position. The whole of that common is not in the pink area; there is a very small portion of it which would just give the Board jurisdiction as to a part; in that case unfortunately there is the same thing as in the case of Hampstead Heath; when I say, "Unfortunately," I do not mean it in the slightest degree offensively to anybody. I have no doubt that the parties who instituted the suits did so in perfect good faith. We have been in communication with Lord Spencer upon the case of Wimbledon Common; and it is merely fair to his Lordship to say, that I think that he has shown a kind feeling, and a great desire to advance the interests of the public, so far as he could; but looking to the rather extreme view which either party takes as to the rights of the commoners on the one hand, and of the Earl on the other, I may say, I fear that it will be a very long while before these questions are determined. With regard to Putney Heath, I do not think that there has been any litigation yet in that case; no great steps have been taken with regard to it, and I am not at this precise moment in a position to state what the parties wish to do with respect to it. This Act stops inclosure, and therefore no mischief has gone on except the natural building, and the destruction thereby of all open spaces within the Metropolis.

Mr. *W. W. Smith.* 5 July 1869.

534. There is a very rapid covering of these open spaces?—Yes; that is a point to which our Board rather earnestly call your attention. Parliament intended that they should be breathing places for the Metropolis, but looking at the rapid way in which building is going on round London, as every honourable Member sees, in all directions, even if it does not actually interfere with the commons, the bad air and the taking away of all the natural advantages are very great drawbacks.

535. Mr. *Knight.*] Do you think that the Metropolitan Board of Works would be willing to purchase all these other commons, upon the same terms as those on which they have purchased the first common which you have mentioned?—If the Metropolitan Board were prepared to buy all these commons, the amount which would be requisite in order to buy them would be enormous. The fee-simple value of all the commons within 25 miles round London would be immense.

536. In the case of Hampstead Heath, Wimbledon, Putney Heath, and Peckham, would that remark apply?—The Metropolitan Board of Works would be anxious to change the rights as little as possible. The great object which the Board wants to promote is that the public shall be able to go over these commons, but the Board does not wish to take away the rights of cutting fuel, the rights of digging gravel, and so on. I am afraid that under the present law we cannot interfere with them. Take the case of Blackheath; we have been extremely anxious about it; the right of the soil is partly in the Crown, partly in Lord Dartmouth, and partly in the trustees of Sir Gregory Page Turner, and somebody else. We have prepared a draft memorial to the Commissioners to give effect to the Act, and we have adopted, as nearly as possible, the language of section 6, that is to say, that a body shall be appointed (we suggest the Metropolitan Board of Works if no more convenient body can be found) for the making of bye-laws and regulations for "the prevention of nuisances, and the preservation of order thereon." Now, it appears to the Board that that was the scheme, and object of Parliament, as much as possible, to preserve these spaces as open as they are, and not to inclose them, or make parks of them, or make private fields of them, but to give the public the advantage of roving over them as far they can, but not to interfere

Mr. *W. W. Smith.*

5 July 1869.

interfere in the slightest degree with private rights.

537. How can you distinguish that from making a park of them?—For this reason, that if you make a park you inclose it, and you exclude everybody else; the owner of a common has a qualified right; the lord of the manor, for instance, has no right except in some particular cases, to inclose the property; he may have to get the consent of the homage to the inclosure, or 50 things may occur before he can inclose, but supposing that we found a case where the prejudice to the public would be very great by the lord inclosing, we could buy up the land under section 15 of the Act.

538. *Chairman.*] With regard to Blackheath, what became of the proposal?—We asked the Commissioners to interfere; that memorial has never been practically presented, but we sent it round to a great many persons who were interested in the matter; Lord Dartmouth received it with great kindness; he much liked the plan. At Blackheath on a Sunday the people go riding on donkeys, and they gamble, and it is very difficult to control them; the police hardly like to interfere, and it is a place which is very much neglected, and it is almost a scandal; therefore, Lord Dartmouth was anxious to assist the Board in every way that he could with regard to keeping order and putting the place under some authority. Then some question arose with regard to gentlemen inclosing. The districts around asked the Board to make some variation in the plan, and that plan is under consideration. But I am quite in hopes that under what is shadowed forth in section 6 of the Act, we can bring about some good under this Act of Parliament with regard to Blackheath.

539. What is the case with regard to Plumstead?—Plumstead is precisely in the same situation as Hampstead; we were solicited a very short time ago to prevent a very large inclosure which was threatened there for building purposes, and so on. The Board instantly took the matter up; they felt that it was a most pressing case, and that if it fairly came within the Act, it was their duty to lay it before the Inclosure Commissioners, and we did so; the Commissioners considered the matter, but they thought that as there was a suit, and as certain steps had to be carried on in order to determine the rights of all parties, they must defer going on with the matter until the termination of that suit. I have been constantly waiting upon the solicitors who are concerned, for the purpose of ascertaining the state of this suit; and I hope that early in November it will be disposed of.

540. What is the case with regard to Peckham Rye?—I am not quite able to state how that is.

541. Has not the scheme taken effect there?—I rather think that something has been done.

542. The next case is Wandsworth?—With regard to Wandsworth Common, it is in precisely the same position as Wimbledon, except that I believe that that is about the worst case of a common near the Metropolis; I would rather that that statement should not rest upon my authority. In the Report of the Committee of 1865, you will find that a very full account is given of that common, and it is a most unusual one. I myself went with an officer of the Board to look over it. I saw Lord Spencer's solicitor; Lord Spencer was exceedingly reasonable and kind about it; he admitted that the common ought to be dealt with in some way by such an authority as the Metropolitan Board of Works. I believe that there is no doubt that he felt that the refuse of the gaols, and persons who have no place to go to, constantly sleep upon that common. There is no doubt that it is quite an abomination.

543. Have you submitted any scheme to the Commissioners?—We have been deterred in the same way as with regard to the other commons which I have mentioned. We have prepared a scheme, and I certainly hoped that we might have carried a limited scheme, so as to have acquired the protection of the common, at any rate, pending this suit. I was courteously furnished with a copy of the answer of the Earl to the Bill which had been filed; but when I found that the Earl took such a very different view of his rights from that which was otherwise taken, it appeared perfectly hopeless to go on with the matter until the suit was over.

544. Was it a suit between the lord and the commoners?—Yes, the commoners denying largely the rights of the lord, and asserting rights of their own, and asserting that encroachments had been largely made, which had been made by the Earl; and the Earl, on the other hand, asserting that those encroachments were perfectly consistent with the law of England. At all events, that is the difficulty which has been interposed with regard to these larger commons to which I have called the attention of the Committee. I think that that will pretty well dispose of the larger commons. Now there are other commons in the Metropolis which the Board have also been most desirous to deal with, if they could. One of those commons is an interesting common, which is called the London Fields, at Hackney; it is a tract of ground which most certainly ought to be secured by somebody; there are lammas lands there. It has been suggested by the Inclosure Commissioners that a difficulty arises upon the construction of this Act, and that it cannot positively apply to lammas lands. Of course, I must speak with all possible respect, but I confess that the difficulty rather staggers one, and yet to a certain extent we have felt it to be our duty to yield to the difficulty, at all events, pending a Bill, on the back of which is the name of the Chairman of this Committee. In the 3rd section of the Metropolis Commons Act of 1866 the definition of the word "common" is "land subject at the passing of this Act to any right of common." Now, it did appear to our simple minds that it was hardly possible that those general words were not designedly and carefully used in order to prevent any misapprehension. I never saw such extremely strong words. I believe that no one denies that lammas land is a right in a common or right of common. Mr. Wingrove Cooke, and every authority, I believe, who has written upon this subject, clearly treat a lammas right as a right of common. It is said that in one or two of the sections of the Act, there are the words, "lords of the manor," with reference to commons, and that that creates a difficulty, and it is therefore said that unless you find a lord of the manor concerned, and a common where there is a lord of the manor, the Act does not apply. What the Board thought it right to do was this: of course it is our duty, so far as we possibly can, to concur with all bodies who have the same object as ourselves

ourselves; the moment that this difficulty was made the Board determined to have the best advice which they could get; and if the difficulty had been persisted in, and if this Bill had not been pending, it would have been an absolute duty on the part of the Board to have tried this question by a mandamus, because to have given up this point, upon such a construction, would hardly have fallen within the duty of the Board. But this Bill, which has been brought in, gave the Board an opportunity of considering whether the Act should not be amended if the Board desired it. We desire, by no means, to give up this point, and if this Bill should be delayed, or should not pass, the Board reserve their right to have this clause interpreted in the way in which they conceive that it should be interpreted. But we now respectfully submit to the Committee that a clause should be introduced into this Bill to make clear that which in the mind of somebody may be a little doubtful, and, therefore, we propose that there should be introduced into that Bill a clause to the following effect:—"The term 'common,' in 'The Metropolitan Commons Act, 1866,' shall be deemed to include all such lands as are described in section 11 of the general Act to facilitate the inclosure and improvement of commons passed in the Session of the eighth and ninth years of Her Majesty's reign (chapter 118), and the power by 'The Metropolitan Commons Act, 1866,' vested in the Commissioners, of making a scheme, may be exercised on a memorial in that behalf presented by any person claiming any estate or interest in the soil of a common as well as by any such person or body as is described in section 6 of that Act."

545. The general Act which is there referred to is the Act of 1845?—Yes. This is the section which was introduced into the Act of 1845, and I am assured that the rest of this clause after the first few words was struck out, because it was not considered necessary: "And be it enacted, that all such lands as are hereinafter mentioned (that is to say), all land subject to any rights of common whatsoever, and whether such rights may be exercised or enjoyed at all times, or may be exercised or enjoyed only during limited times, seasons, or periods, or be subject to any suspension or restriction whatsoever in respect of the time of the enjoyment thereof; all gated and stinted pastures in which the property of the soil, or of some part thereof, is in the owners of the cattle gates, or other gates or stints, or any of them; and also all gated and stinted pastures in which no part of the property of the soil is in the owners of the cattle gates, or other gates or stints, or any of them; all land held, occupied, or used in common, either at all times or during any time or season, or periodically, and either for all purposes or for any limited purpose, and whether the separate parcels of the several owners of the soil shall or shall not be known by metes or bounds, or otherwise distinguishable; all land in which the property or right of or to the vesture or herbage, or any part thereof during the whole or any part of the year, or the property or right of or to the wood or underwood growing, and to grow thereon, is separated from the property of the soil; and all lot meadows and other lands, the occupation or enjoyment of the separate lots or parcels of which is subject to interchange among the respective owners in any known course of rotation or otherwise, shall be land subject to be inclosed under this Act." We venture to suggest that the words which I have read might be very usefully introduced, in order to prevent doubt in the Metropolitan Commons Act, which is now before Parliament. That is a simple copy of the Act as it is before you, except the latter part.

Mr. *W. W. Smith.* 5 July 1869.

546. That is a description in detail of every kind of land subject to the rights of parties?—Yes; I believe that that is really what passed in the mind of the gentleman who drew this Bill; perhaps he has tried to be rather too short.

547. Your first suggested amendment, with reference to the Act of 1866, is that there should be some clearer and more conclusive definition of the word "common," so as to make it wide enough to include lammas lands among other things?—Yes.

548. And your mode of doing that would be by inserting the words which you have read?—Yes.

549. Can you suggest any other amendments in the Act of 1866?—Yes; at present all inclosures under this Metropolis Commons Act are stopped. The form which must be gone through is, that a memorial must be presented to the Inclosure Commissioners, and then the Inclosure Commissioners, if they think fit, and only if they think fit, may prepare a scheme; no doubt it is in very good hands with them, but looking at the very large interests involved, it is a question whether it should not be compulsory upon the Commissioners to prepare a scheme; it can only be a question of expenses, and if they are indemnified, that question cannot arise. If the local authority are enabled to provide against expenses of that kind, it occurs to us that there might be a very advantageous change in this Act by providing that the Commissioners should be compelled to prepare a scheme; at all events this might be done; at present the Commissioners have only the power to hear any explanation, and to receive any information which parties may be willing to give. Now certainly that is a most unsatisfactory state of things; we are ourselves repeatedly met with this objection; we are particularly desirous to ascertain the property and the holding; we cannot get it; the parties by design conceal it from us; the deeds are very often not registered. Now if the Inclosure Commissioners had given to them clear and distinct power to obtain that information, it would be a great benefit; and why they have not that power I cannot conceive, because they have it under the Inclosure Acts. They may call for witnesses like Commissioners in Bankruptcy, and in the same way; in the Court of Appeal upon a rate, parties may be compelled to produce books in order that those books may be examined, and if that examination tends to injure anybody, the presiding judge will of course take care to confine it within proper and practical limits.

550. Does it not occur to you that it is expedient to refrain from inquiring into these doubtful rights; you do not propose to interfere with them?—There may be cases where we must compensate the parties, because there may be rights which we must try to get rid of, or to buy up.

551. But does it not occur to you that the proof of a right where there may be compensation, rather devolves upon the person claiming it than upon you who wish to preserve in *statu quo* all rights?—I quite agree with you there; the Act goes the length of enabling the Commissioners

Mr. *W.W.Smith.* 5 July 1869.

sioners to desire all information, and to a certain extent makes it imperative upon them to do so; they are to hold meetings after they have a scheme, and they may invite any persons to come before them in order to state their rights, which we must pay for under section 15 of the Act, if we take them away or interfere with them; therefore, in practice there are rights which it is most desirable that the public should possess, or to a certain extent clear away, and consequently, unless there is a compulsory power, we are not able to ascertain them satisfactorily. In one case we are negotiating within a few miles of this building, to see whether it would not be worth our while to buy up the property.

552. An unascertained right, for the purpose of taking action under this Act, is no right at all, and why should the local authority, whatever that authority be, take pains to ascertain and define unascertained and undefined rights for the purpose of giving compensation?—It is not for the purpose of giving compensation. I dare say that I have not made myself understood. In the case of common rights there is, perhaps, a right which we cannot get at, and how can we ascertain it without compelling the production of books?

553. Why should you do so?—It might be a very profitable thing for us to buy the rights of that party. Supposing that he has an unlimited stint over the common, he may say, "You shall not come over the common at all." We may say, that if we can get rid of that interest for a few hundred pounds we will not have a litigation going on between the claimant of that interest and the public, but that the public shall have the full enjoyment of that common. But at present, when a scheme is prepared, we cannot compel the parties to state their right either from books or from other evidence. There is a power in some Commissioners to compel the production of information, but we have no such power.

554. Does not the onus lie upon any person who claims such a right to prove it, and in the absence of that proof, would not the duty of any local authority under this Act be not to touch anybody's rights, but to prepare a scheme for management under the Act?—One of the sections of the Act of 1866, namely section 14, states, "Every scheme shall state what rights (if any) claimed by any person or class of persons are affected by the scheme, and in what manner and to what extent they are affected thereby." So that the obligation is really thrown upon us; and when you read section 15, you will see that it is so, we having to ascertain what money we have to spend, and what right we have to litigate. I quite agree with you that it is for the party, before he can establish a claim against any local authority, to make out his own case, but I am looking at sections 14 and 15 of this Act.

555. I will put a case to you. You propose a scheme with reference to a common, and there is the ordinary right in the soil which the lord of the manor has, and he may have other rights as to digging gravel, and so on. The commoners may have a right to stint, or otherwise. Your scheme proposes to leave the lord his rights, and also to leave the commoners precisely as they are, how does the 14th or 15th section of the Act come into operation at all?—In that case it would not come into operation. In one case the lord might dig gravel advantageously, but in other cases it might be extremely advantageous to dedicate only a part of that common for digging that gravel, and for making roads and other things. In working that matter out, it requires great care. What we have to look to in these cases is the money. In small villages, and districts, and towns, the people find a moderate sum of money, but not a large sum. We find it so here. We shall have to be very careful that we do not pay more than we ought to pay, or we shall be very much blamed, and we shall make the Act of very little use if the expenses are to be so very great. We must take care not to compensate anybody whose rights are not distinct.

556. The more you increase the machinery, so as to ascertain undefined rights, the larger you increase the expense?—No doubt.

557. In nine cases out of ten, may not a scheme of management under this Act steer entirely clear of such a question?—Some schemes may do so, and some may not. In practical experience, we find that it cannot be done in all cases. The scheme of the Commissioners is generally made from the memorial. In our memorial we generally set out, as far as we can, the exact state of the property, and to whom it belongs, and we pray that the matter may be inquired into. When the Commissioners inquire into it, and look at the Act, they say, "We can help you so far as to receive the information which parties are inclined to give us, but no farther."

558. Then, to this extent you agree with Mr. Ridley, that under this Act, the powers should be as great as under the General Inclosure Act?—Yes, but only where we ask for those powers, for the purpose of necessary explanation. I was not aware that Mr. Ridley had suggested anything of the kind.

559. That is your clear opinion, notwithstanding the views which I have been putting to you?—I think so.

560. Is there any other point upon which you think that the Metropolitan Commons Act requires amendment?—I have thought that it is a question whether we should not have some more rapid and satisfactory tribunal than the Court of Chancery.

561. When are you driven to the Court of Chancery?—We are only driven to that Court by a section of the Act which enables that Court to send any issue to trial.

562. It would be difficult in an Act of Parliament to deprive the parties of their right to go to a court of law?—Certainly; and I do not propose it, but I think that in the Act of Parliament there are clauses for summoning juries.

563. That is appointing another tribunal for ascertaining the rights?—Yes; I would take care to reserve the power of the superior courts to interfere in cases where it became absolutely necessary, but I think that the powers of the Act of Parliament should not be actually stayed during the progress of suits of this kind.

564. In your opinion has there been as much action taken under the Act of 1866 as could reasonably have been expected?—From what I have explained to the Committee, I think that these suits have been the chief cause of the hindrance.

565. In point of fact, I suppose that more than half of the schemes which might have been perfected under the Act of Parliament have been stopped by reason of suits in Chancery?—I think that I may say much more than that; we begin with Hampstead Heath and Wimbledon Common; this

this does not apply to Blackheath; the case of Plumstead Common has been delayed by these suits; the same thing applies to Wandsworth Common; we are going on with the case of Streatham Common. Those are all the cases of large commons.

566. As regards the lammas lands, they are not supposed to come within the Act?—Just so; and even if they did so, when we talk over the matter with the Commissioners as to how it is possible to get the information, they say very properly that they have not the power to compel the parties to give the information.

567. In your, judgment, considering the rapidity with which the population of the Metropolis is increasing, it is desirable that Parliament, acting on the policy of the Act of 1866, should more or less increase the radius over which the protection extends? — That is a question which almost lies upon the surface; if it is good to embrace an area of 15 miles, it will necessarily follow that it is almost essential that you should extend the area to 25 miles, when we see how London is being pushed out. The people do not obtain the advantages which it was supposed that they would get even when that Act of Parliament was passed. If you take the case of the South Western Railway; it is my fate to come up and down by it every day; for three miles that district is being built on, almost in a line. As regards spots which formerly were valuable, from the smoke and other causes these places become comparatively inaccessible, and therefore, when you see the thorough enjoyment of the people in going out to these spots, and how necessary they are as an element of morality, one may say, and certainly of health, and of comfort and enjoyment, the Metropolitan Board of Works, to whom it is a matter of great interest, would feel satisfaction in executing the duty, if Parliament thought it right to impose it upon them.

568. The proposal is to extend the Act of 1866 over a larger area, including all open spaces comprised within it. It has been suggested that a better plan would be to select certain open spaces on different lines of railway all round the Metropolis, and to purchase all the rights in them, and to inclose them by making them parks, and that that would insure the health and enjoyment of the people to a greater degree, and on a better principle, than is proposed by this Bill. Do you concur in that opinion?—Most assuredly not. I think that it would be defeating the whole object and everything which is stated in the Report of the Committee of 1865, and everything which is contained in the Act of 1866. What the parties want is to roam about ground which is in a state of nature. The Board have bought up two large parks, and having bought up all the interests, they have set them apart to the public at large. That is quite a different thing. What the Board and the local authorities would desire to do is to leave the ground in a state of nature, as far as one can do so, injuring nobody, and leaving open spaces where certain public rights are attached to them. It would never do for the Board to seize upon a plot of land, and to give it to the public. This Act of Parliament does not do that. This Act of Parliament only deals with the land where there are some public rights.

569. The regulations in a park are more or less rigorous, such as preventing the picking of flowers or the touching of shrubs and trees, and even to some extent wandering over the turf?—Yes, you must have the bye-laws very carefully settled by the Secretary of State, and there must be police officers. Certain parts are set apart for cricket and other things, which are absolutely essential to a park in the Metropolis.

Mr. *W. W. Smith.* 5 July 1869.

570. You attach importance to the freedom with which people can range over open spaces?—Yes; if I may say so, I do not see that there is any affinity between an open space and a park.

571. Mr. *Knatchbull-Hugessen.*] You have said that you would not like a plan, which I think was suggested by Mr. Ridley, that certain parks should be created in preference to this Bill, because it would not preserve the wild sports?—Yes; that is the idea which occurs to me upon the matter, and that is the general view of the Board as far as I know it.

572. Under clause 6 of the Act of 1866, there is power to make a scheme for promoting drainage, levelling, and so on; is that a scheme likely to preserve wild sports, or would it not rather render them the reverse of wild?—It would have that effect; I take it that the reason of section 6 is, that you may drain the commons, and may keep order and may make regulations and bye-laws so as to prevent these open spaces and commons being made use of for political purposes, and gambling, and debauchery, and all sorts of things which are clearly inconsistent with the enjoyment of the people in open spaces.

573. Do you entertain the opinion which appeared to be entertained by the last witness, that his Act, having for one of its intentions the making of schemes for the regulation of these metropolitan commons, best carries out the object of its promoters by preventing such schemes being made, and causing the commons to be left just as they are?—I did not hear the whole of the evidence of the last witness. I think that an excellent principle is shadowed forth in the Act of 1866; I think that the principle shadowed forth in that Act is a most just one, and a most valuable one on sanitary grounds, and with regard to the health and comfort of the people; and I think that if this Committee should be of opinion that there are certain advantages involved in the due working out of this Act to the extent of 15 miles, it would be a very valuable thing, and a very great boon to the community to extend it 10 miles further.

574. *Chairman.*] It now practically goes 20 miles?—Yes, in some cases.

575. Mr. *Knatchbull-Hugessen.*] You think that London is so extending that the provisions applicable to the metropolitan district might well be extended?—I think so, after seriously looking at the matter. We are brought so much into the different districts by the constitution of the Board, that I think that there is a very strong feeling that Parliament would confer a benefit upon the Metropolis if the Act were extended.

576. What was the size of Tooting Beeke?—I think that it was 150 acres.

577. Under what section of what Act did you purchase it?—We should buy it under the provisions of the Act of 1866, sections 14 and 15; we should consider that these are rights which would interfere with the rights of the public, and that we should extinguish those rights, and vest them in the Board.

578. Has your scheme been sanctioned?—No; the matter has been pending for a long time. There was a suit with regard to this very common

Mr. *W. W. Smith.* 5 July 1869.

mon which delayed the Board in its proceedings; that suit was dismissed. Mr. Carpmael, a member of the Board, and a most excellent and worthy man, first effected the purchase of Tooting Beeke, but he died.

579. Can you state the cost to the Metropolitan Board of Works of that purchase?—A sum of 10,000 *l.* for the main purchase has been agreed to, but that is subject to the approval of Parliament. There is a clause that if Parliament should not sanction the scheme in a given time, the parties may abandon it, paying the expenses.

580. Out of what rate will that money come?—From the whole of the metropolitan rate.

581. Do you think that it would be an amendment if it was provided that a portion of the land to be dealt with should be sold to defray those expenses?—If I speak on my own account, I have a great objection to sell such land. I think that these lands have such interest in themselves, that it is a pity to do anything of the kind; but, possibly, there might be circumstances where it would ease the burden of the purchase by selling certain parts of the land, and where you might advantageously sell them. I do not think that you can lay down any rule with regard to it, but, speaking generally, I think that it is almost a pity to cripple these useful places by any attempt to build upon them, because the real advantage is to keep them open.

582. Are you aware that in the Act of 1866 there is no power to sell any land?—I am.

583. Do you think that such a relaxation as would leave the power of sale to any local authority would be a desirable measure?—If you did that, I think that it would be extremely desirable to limit the exercise of that discretion to some small portion of land. I think that it would be a pity to give a large discretion to any authority. I think that if you did so, you would neutralise the object.

584. The dispute in the Wimbledon case was not between the lord and the commoners on the one side, and the public on the other, but it was between the lord and the commoners?—Yes, and that has been so in almost every case.

585. Lord Spencer's wish, as I believe, and as he expressed, was to promote a settlement of the subject, and to get rid of certain nuisances which had been very much complained of, and to obtain the recognition of his rights of property, and to put all rights upon an equal footing?—Lord Spencer gave a general expression of willingness to assist the Board; he thought that the object was so valuable a one, at all events as to police regulations, and regulations which should be applied to that common, that I have no doubt that his Lordship would have concurred in that scheme; but when we saw the answer which was filed the other day, which claimed such very large rights, it appeared to us that while this Bill was pending, we could hardly expect the Inclosure Commissioners to go on with the matter, until the suit was heard and disposed of, unless you gave us an interim remedy, which I think is well worthy the consideration of the Committee.

586. You are inclined to doubt the interpretation which is put upon this Act by the Inclosure Commissioners, and you think that it does apply to lammas and half-year lands?—Yes, I think myself that the words were intended to apply to every common. If Parliament had intended to cut down the general words, they would have done so decidedly. In a pretty long experience of Acts of Parliament, I have not often seen more general words in my life.

587. The words are, "the term 'common,' means land subject at the passing of this Act to any right of common"?—Yes.

588. Might not a subsequent question arise upon that, as to whether it is a right of common, extending throughout the year, or whether it applies to lammas land, which is not common throughout the year?—I think that that would be a very narrow construction of the Act. It goes on to say, "the term 'commoner,' means a person having any such right of common." The Act defines every word; it then proceeds to say, "the term 'manor' includes reputed manor; and those terms, as used in this Act respectively, refer to any particular common to which this Act applies, and to every person having a right of common in, over, or affecting that common, and to the manor of the wastes whereof that common is part."

589. Then you think that a person who has a right of common for two, three, or four months in the year, would be included in that description, although he has no right for the remaining eight months of the year?—I think that all the legal books which I have ever read treat lammas land as a clear right of common.

590. Are you aware that lammas land is land in which for six or eight months of the year, the right of inclosure exists while the crops are sown and gathered, and that the only right of common upon it is after the crops are sown and gathered?—Yes. It varies very much; lammas lands are different in different parts of England. The lammas land right supposes a right of soil in the owner of the lammas land, that is the general impression; but still I believe that all lawyers, in conveyancing and dealing with these matters, hold that it is a common right. The last edition of Mr. Wingrove Cooke's book certainly treats it so.

591. Then you do not think that any words are necessary to be added to the Act to define more clearly what the Legislature meant?—I would recommend that this Committee should be so good as to introduce a clause of this sort, because when a body like the Inclosure Commissioners have entertained a doubt, there is sure to be something in which somebody else will participate. I should have thought the point to be very plain, but it would be a most unwise thing to get into litigation, and to imperil the beneficial operation of this Act when we have the opportunity of correcting it by a short clause. Therefore I think that it would be a great advantage to amend the Act in that respect, rather than argue the matter before a court of law where the litigation might last for years.

592. You have said, I believe, that you think it right to make it compulsory upon the Commissioners to prepare, or to sanction, a scheme?—Yes; I think something of that sort would be desirable, at all events to exercise the extent of their preparing a scheme as far as the power which they, I think, should possess, of citing parties before them, and making them do that compulsorily which, at present, the Commissioners are only empowered and required to seek from them if volunteered.

593. Do you think that it would be well that the Commissioners should take the initiative in these cases, instead of waiting, as they are now required to do, for local action?—I have not considered that point, but I think that the local action would be pretty effectual, because I think that the

the interest of parties is getting pretty well aroused upon these matters; and I think that a great deal would have been done except for the long litigation which has been subsisting; and I think that a great deal will be done after the litigation is determined.

594. Then, you think that it should be compulsory upon the Commissioners to prepare a scheme after a memorial had been presented to them?—Yes.

595. You do not think that it is desirable that some independent body in London should take the initiative in preparing these schemes?—I should be very sorry to see any body excluded, but as the principle of local self-government is so rational a one, I think that the people would prefer to send persons themselves to suggest the matter to the authority.

596. Do you think that persons at a remote part of the area which you tax are at all wronged, if against their inclination they are taxed for a common at the other end of the district?—I think that it is a common benefit.

597. It is a common benefit for those who go on to the common?—If Parliament is wise in fixing upon an area of 25 miles, or rather adding something like 10 miles to the existing area, I do not think that there can be a hardship in taxation; it will interchangeably work round so that all will be benefited.

598. If the power of sale was exercised here or there, the locality would be relieving the general body of taxpayers?—Yes; and that is worthy of grave consideration.

599. Do you not think that that is a reason why a discretion should be left somewhere?—Yes; that, no doubt, is an important reason.

600. With regard to the compensation, do you think that the powers which are given are sufficient to enable you to find out what the proper compensation is in these cases?—I think not, and that is why I have ventured to suggest that the Commissioners should have the power of compelling parties to disclose the grounds upon which they claim their rights, if they require it; they of course would be very careful not to require it, except in cases where they really wanted it; because it is for the claimant to make out his case.

601. If due and full notice of an intended scheme is given, and if full opportunity is given to everybody to put in his claim to common rights, and if anybody neglects to do so, do you not think that he should suffer from his own neglect, and that the promoters of the scheme should not be afterwards called upon to consider his case?—Certainly; but that is not the point where I suggest a remedy; I suggest it at an earlier stage. I suggest that, at the moment when a memorial has been presented, we should be able to say to the Commissioners, "We require such-and-such information, and we want to know the character of the interest," and anything which we think it right to ask the party for.

602. Then, in short, you think that the powers under the seventh section of the Act of 1866, which enables the Commissioners to "make such examination and inquiry as they think necessary or proper in relation to the subject matter of the memorial," should be extended?—Yes.

603. Mr. *Bonham-Carter.*] You are the solicitor of the Metropolitan Board of Works?—Yes.

604. You advise them upon legal matters?—Yes.

605. Are you aware of a petition which was presented from the Metropolitan Board of Works with regard to Wisley Common?—Yes.

606. May I ask whether you personally advised upon that petition?—I dare say that it fell to my lot to have to draw it, or settle it. I did not originate the petition; I have no doubt that the instructions were given to me to prepare the petition.

607. This was a petition to Parliament?—I recollect it perfectly.

608. Will you kindly inform the Committee what steps the Metropolitan Board of Works took to ascertain whether the statements which they made with regard to Wisley Common were facts or not?—I believe that any duty upon that matter was confined to my preparing the petition which the Board directed me to prepare. What steps they took I do not know, but I know that their chief surveyor, or an assistant surveyor, went down to view the common.

609. Are you aware that that petition stated, "That such land is not correctly described by the Inclosure Commissioners in their 24th Report, as 'pasturage of very small value,' but is of great increasing value as building land, being intersected by a high road throughout its whole extent"?—I cannot charge myself with that; I will read the petition; I know nothing of the facts; I get my instructions, and I act upon them.

610. You are not aware what steps were taken before a statement of facts, with regard to the common, was submitted in a petition to Parliament?—I recollect this case because I was invited to go and look at this common, which I should very much have wished to do, but from my engagements I was unable to go; but a gentleman in the surveyor's office was directed to go, and I know that he went down and looked at the common, and to the best of my belief he reported upon it.

611. Are you aware that, as a matter of fact, the statement that the land is intersected by a high road throughout its whole extent is not true?—I never saw Wisley Common, and I know nothing about it; I was simply instructed to prepare that petition.

612. Will you read the next clause; did you advise the Metropolitan Board of Works that they should present a petition, asking for this common to be "disposed of to the highest bidder, and the proceeds applied in procuring additional parks or open spaces for the use of the people, or in the reduction of taxation for parochial relief"?—I gave no advice whatever upon the subject; if you are acquainted with the proceedings of a Board like that, you will be aware that a resolution is carried, and that the solicitor receives instructions to prepare a petition, and that is all that I did.

613. Was it not within your competence to advise that such a statement was entirely contrary to the existing state of the laws with regard to the rights of property?—If I did prepare such a petition (which I do not recollect), I knew nothing of the facts; the petition was sealed that afternoon and was presented, because it required the greatest dispatch. The attention of one or two members of the Board was called to this inclosure: a resolution was carried that a petition be presented to Parliament, and I suppose that the Board stated the facts according to their then information and impression; but I cannot be responsible for the facts, for I knew nothing about them.

614. *Chairman.*]

Mr. *W. W. Smith.*

5 July 1869.

614. *Chairman.*] You acted ministerially?—Entirely.

615. Mr. *Bonham-Carter.*] This petition, in fact, petitions Parliament to dispose of this common to the highest bidder, and to apply the proceeds in purchasing parks?—I see that it does.

616. Is that consistent with the practice of the Board with reference to Tooting Beeke?—The opinion which is expressed in the words of the petition, I suppose, was the opinion of the gentlemen who moved the resolution to petition.

617. Is it consistent with the practice of the Board in the case of Tooting Beeke; did not the Board in the case of Tooting Beeke, in fact, purchase the rights of the lord?—Clearly.

618. Then, in fact, the practice of the Board does recognise the duty of purchasing existing rights, with the object of obtaining places of recreation for the people?—Yes, clearly; the Board cannot help themselves; they are compelled to do so under section 15 of the Act of 1866, which is framed for the express purpose, and which states that, "No estate, interest, or right of a profitable or beneficial nature in, over, or affecting a common, shall, except with the consent of the person entitled thereto, be taken away or injuriously affected by any scheme, without compensation being made or provided for the same." Therefore it is not a question of practice, it is compulsion.

619. Did you not, in fact, purchase the right of veto of the lord, which exists and is recognised under the Act of 1845?—Yes, it was to get rid of all claims which would have impeded the enjoyment of this common by the public.

620. And, it in fact, gave you the power of inclosing, or preventing the inclosure, of that space?—Yes, as regards prevention.

621. And that you paid for?—Certainly.

622. But you say that to do it on a larger scale would involve millions of money?—I speak haphazard but it must occur to the mind of anybody that, if you took that map and bought up the fee simple of all that land, the price would be enormous.

623. Mr. *Winn.*] Do you not think that it would be more important to fix upon some large spaces which might be obtained for public use rather than to give a deficient area of 25 miles radius. Supposing that there were a large desirable space beyond the 25 miles radius, would it not be more desirable to obtain it, supposing that it was particularly accessible to railways Supposing that a place 30 miles off was particularly accessible to railways, would it not be more desirable to secure it rather than some place not so accessible within 25 miles?—It would be a very valuable thing to do, but you must have some guide; there must be either an area defined, or a certain distance. The principle of securing those open spaces, whether done by a radius, or by scheduling the names of places, would no doubt be equally valuable to the public, and perhaps your idea could be carried out by having some special places in addition to the radius.

624. The district is so differently furnished by railways, that some places even further from London might be exceedingly accessible?—Yes; that is an important idea; I think that it might be desirable to have that as an appendix to the other; perhaps the same object would be attained if the Bill of Mr. Cowper were passed, but I think that it would be a very great comfort and advantage, if we could begin by securing the 25 miles radius.

625. But what Mr. Ridley suggested, was that certain places should be taken out?—I think that it would come to very much the same thing, because any local authority which was inclined to do its duty, and which was careful, would suggest very much the same space.

626. In one direction out of London there are a great number of such desirable spaces, and in other directions there are a small number of them, that was the ground upon which Mr. Ridley made that suggestion?—We should get authority under the Act if that radius was taken, and therefore we should select the places according to the expediency of the case, and the benefit which would be conferred upon the public.

627. What has been proposed by Mr. Ridley is that some commons should be excepted?—It would seem almost a pity to except them if they came within the benefit and scope of this Bill; the matter is always controlled by public opinion.

628. If this Bill passed, those commons could not be inclosed, even if they were not wanted for the public, without a special Act of Parliament?—Certainly; if you extend this Act to any radius upon which you may determine, it may be so comprehensive that it may include anything, and you would depute it to a public body.

629. Without its being of any service to the public, might you not be preventing the possibility of inclosing other spaces if you adopted a radius of 25 miles, because there might be some spaces so small as that it would not be desirable to have them as open grounds, and where it would not be worth while to obtain a special Act?—No doubt; that point is very well worthy of consideration.

630. You said that you gave 10,000 *l.* for the lord's rights over the 155 acres of land at Tooting, is it not likely that in the case of other commons; even though you bought out the lord's rights you might have the owners of instituted rights of common coming in, and saying, "Before we submit to admit the public to the free use of this ground, you must compensate us"?—Yes; but I think that you must treat Tooting Beeke as a very exceptional case; it is within a very few miles of the Metropolis, and the Board considered they had made a very good bargain.

631. Suppose the case of another common?—I think that another case of that kind will hardly ever occur. That is a very peculiar case; I doubt whether the Board would hastily proceed to deal with another common in the same way as they have dealt with that common. It was considered of the highest importance to secure that common at once, because if they had not secured it at once, they perhaps would never have secured it at all. With regard to other commons, probably the Board will not feel themselves justified in interfering with them unless there is a public right in them, because we do not propose to deal with any case where there is not some right of the public.

632. But you propose to admit the public to an unlimited use?—No, not to an unlimited use, but only to ranging over the commons. This Act in the 6th section says, "A scheme for the establishment of local management, with a view to the expenditure of money on the drainage, levelling, and improvement of a metropolitan common, and to the making of bye-laws and regulations for the prevention of nuisances and the preservation of order thereon."

633. Might you not have commoners coming and

and saying, "We will not consent to the public using these grounds in this unlimited manner, unless you compensate us for the damage done to our pasture"?—Yes, and we might be compelled to pay such compensation, and it might be very prudent to do so; in some cases, no doubt, we should have to do so; if you treated the matter as buying up land, it would be a very serious thing. The common has very often been little used, and the rights have been disused, and the lord of the manor has, perhaps, never kept up his rights. I believe that I could mention one or two cases, within six miles of this place, where the lord of the manor has no court rolls, and has very much neglected his interests, and so have the tenants, and so have the copyholders.

634. Lord *George Hamilton.*] From your experience can you offer any suggestion to the Committee with regard to Hampstead Heath, by which you think that a satisfactory arrangement might be made with the lord of the manor?—I think that that matter had better be dealt with by the declaration of a court of law rather than in any other way. When we see what the practice of the lord, and of the Commissioners is, we can very much better suggest what should be done. The commoners say that the lord has no right to dig gravel, and has scarcely any rights which should interfere with them; on the other hand, the lord says to the commoners, "You have disused the common so long that I will take every one of my rights." That suit, no doubt, is perfectly justifiable, and may turn out to be very useful, because any rights which exist must be dealt with and decided upon.

635. In a case like that where the lord of the manor asks a large sum for compensation, you would not suggest that any small part of the common should be sold?—That point would require a great deal of consideration. The public, I think, would be so jealous of any part of Hampstead Heath being sold, that it would give great dissatisfaction if any part of it was sold. Before Sir Thomas Maryon Wilson died, I learnt that possibly something of that kind might be done, and that other land might be given up to the family, if the rest were given to the public; but I do not think that it ever assumed the shape of a definite plan.

636. Mr. *Johnston.*] Have you any doubt as to the advisability of the purchase of the rights over Tooting Beeke?—I think that it has been considered by all parties concerned in it as a very important thing.

637. Has it not been held to have prejudicially affected the case of the inhabitants against the lord of the manor of Tooting Graveney?—I think not, nor do I think that it can do so.

638. Was not the general opinion of your Board somewhat unfavourable to the Act of 1866 when it was introduced; but since it has been passed, have you not found its advantage, and promoted schemes under it?—So far as my recollection or knowledge goes, the Board always looked upon this Act as being a valuable one; not as being perfect, and not as conferring all the good which it might have done, but they thought that the principle was valuable.

639. What schemes have the Board actually presented to the Inclosure Commissioners under that Act?—I have stated the cases which have been under consideration, but we have actually not carried out a single one.

Mr. *W. W. Smith.* 5 July 1869.

640. What schemes have you presented?—Plumpstead, I think, is the only one. There are several schemes prepared, and which would have been carried out except for these suits, but I think that the only scheme which was actually presented was Plumpstead; London Fields, Hackney, is another case.

641. You know that a scheme has been presented for Wimbledon Common by other parties?—I believe so; but it was never acted upon. I believe that the Commissioners were obliged to suspend their proceedings upon that case on account of litigation.

642. Are you aware that the plaintiffs in the various Chancery suits now pending pray the Court to clearly define the rights of common vested respectively in lords and commoners, in order that schemes under this Act may be obtained?—I am quite aware that they ask that the rights of all parties may be determined, but I am not aware that they pray that a scheme may be carried out under the Act

643. If a scheme were prepared for a common which would not injuriously affect any rights exercised by the commoners, in your opinion would it be necessary to give compensation to anyone?—None whatever; that is what we are most particularly desirous to be careful about in our proceedings, namely, that we may not compensate parties who have no right to compensation.

644. Is it not the fact that at Blackheath no rights are exercised beyond the right of common of pasturage, the Crown and Lord Dartmouth having waived their right to dry gravel?—From what we have seen and heard, I think that no one would assume that they have given up their rights; I rather think that those rights have been disused by the Crown for some time; I am not able to speak with confidence upon that subject; I recollect that it was stated in the Report of the Committee of 1865 that the Crown derived a rental.

645. Any lord or commoner of a manor may present a scheme to the Inclosure Commissioners equally with your Board as the local authority?—Clearly.

646. Mr. *Bonham-Carter.*] One of the witnesses who have been before us has stated that he would be glad if the operation of the Act were such that the commons should remain in their existing state; from your experience of the London commons, and especially with regard to what you have said with respect to Wandsworth Common, are you not anxious, as representing the public, that the commons should remain exactly as they are, but that under that Act there should be some beneficial control to prevent nuisances, and to change the present state of things with regard to the public user of the common?—Precisely so; in point of fact I would make the commons what everybody would desire, that is to say, I would make them useful, and I would drain them, and I would prevent nuisances, and so on.

Thursday, 8th July 1869.

MEMBERS PRESENT:

Colonel Barttelot.
Mr. Bonham-Carter.
Mr. Thomas Chambers.
Mr. Cowper.
Mr. Andrew Johnston.
Mr. Knatchbull-Hugessen.
Mr. Knight.
Mr. Charles Reed.
Mr. Henry Samuelson.
Sir Henry Selwin Ibbetson.
Mr. Rowland Winn.

THOMAS CHAMBERS, Esq., in the Chair.

Mr. Philip Henry Lawrence, called in; and Examined.

Mr. P. H. Lawrence.

8 July 1869.

647. *Chairman.*] You are Solicitor to the Commissioners of Her Majesty's Works?—Yes.

648. You formerly took a great deal of interest in the preservation of commons in the neighbourhood of the metropolis, did you not?—I was professionally engaged for several commoners, and persons interested in several commons in the neighbourhood of London:—Wimbledon, Hampstead, and other places.

649. You have been so engaged for some years past?—I began to address myself to that subject in the year 1865, when the general movement took place.

650. You have therefore formed some opinion as to the means of protecting the commons in the neighbourhood of the metropolis?—Certainly.

651. And you have formed an opinion as to the most expedient mode which Parliament could adopt for accomplishing that object?—I have considered that question.

652. Have you any particular evidence to give to the Committee, or any suggestions to make with reference to the two Bills which have now been referred to this Committee as to any improvement in the machinery, or any extension of the area over which Parliament should give protection to open spaces?—I am not personally acquainted with many of the spaces lying between the area of 15 miles, and that of 25 miles radius, which, I believe, is proposed by this Bill; the only such space which I can at this moment remember, with which I am familiar, is Epping Forest, and therefore I should hardly like to give any opinion upon the expediency of extending the present area, founded upon my actual knowledge. The Committee can judge better than I can of that expediency, on general grounds of policy. As to the working of the Metropolitan Commons Act of 1866, I may state that I had the honour of assisting Mr. Cowper, who was then First Commissioner of Works, in the preparation of that measure, and he paid me the compliment of consulting me during its progress, on certain points connected with it; there were certain objects which I, at that time, should have proposed to have had incorporated in the Act, and amongst others I may state that I thought that it would have been perhaps better if an independent Board could have been appointed to deal with this question as a new question; that was not thought expedient by Parliament, and the machinery was placed in the hands of the Inclosure Commissioners; now the Inclosure Commissioners are a very able and most highly respectable body of persons, both as to their legal attainments and in every other respect; but the object of the Inclosure Commissioners has always been to carry out the policy of the Inclosure Acts as laid down in Parliament, and they have never yet had their attention distinctly drawn to the necessity of providing for the recreation of the public in the neighbourhood of large towns; I do not mean to say that those gentlemen would not regard that object, but it is foreign to their former duties, and I think that their machinery, and, perhaps, their habit of mind rather is to regard that object as a less important object than what was the paramount object in 1845, for which they were constituted, namely, increasing the production of the country by the growth of corn, and by other agricultural cultivation of these commons throughout the country. It is obvious that in the neighbourhood of a place like London, not much advantage can be gained to the country from the cultivation of such places as the commons within, say, 15 miles round London; the amount of corn, or other produce, which might be grown upon them, if they were capable of being so cultivated, would be very trifling, taking it in comparison with the whole area; and, therefore, I understand Parliament to have decided the question that those places should be, as far as possible, preserved for the purposes of recreation. That policy has been declared by several Acts of Parliament, and I think that it is that policy which ought now to be carried out by the Inclosure Commissioners with reference to all metropolitan commons.

653. For those reasons you would consider that, upon the whole, the Inclosure Commissioners were not the body who were best adapted to carry out the Act of 1866?—Yes; that was my opinion at the time, and I only mention it with a view to make a distinction between the general policy of Parliament, with reference to these commons, and Inclosure Acts generally. I think that an expression of opinion from a Committee, or from Parliament, might be of use, with a view to guide the policy of the Inclosure Commissioners in dealing with the Act now under consideration. Various objections have been raised

raised to carrying it out, as to certain schemes with which I have had to deal; and I mentioned, with great humility, that I differed in the construction of that Act (as perhaps is natural, I having been in some measure concerned in framing it), from the view which was taken by the Inclosure Commissioners. The Inclosure Commissioners considered that they could not carry out the provisions of that Act in any case where litigation was going on with regard to the rights of the parties. Now the object of the Act was not to determine those rights in any way, and it is possible that it might be useful to put a clause into this Amendment Act (if it is thought desirable to reconsider the policy of that Act,) enacting that any scheme to be authorised under the Metropolitan Commons Act should not have the effect of interfering with any rights whatever in litigation, or otherwise. That probably might obviate the difficulty which the Inclosure Commissioners feel in dealing with these schemes.

654. Your opinion is that the objects of the Act of 1866 might have been carried out, leaving all parties who claimed rights in precisely the same condition as that in which the Act found them?—Yes.

655. And you think that, inasmuch as the Inclosure Commissioners have not acted upon such an impression, it would be better to provide in any subsequent Act that the rights of parties should be unaffected by any proceeding under the Metropolitan Commons Act?—Yes.

656. Mr. Ridley, who is one of the Inclosure Commissioners, considered that the provisions enabling them to hold an inquiry to ascertain and decide upon rights were insufficient; in your judgment, is it desirable that there should be any such inquiry, with a view to ascertaining, and defining, rights which may be in dispute?—Parliament decided that it was not expedient to give those rights of inquiry to the Inclosure Commissioners, because, in the first place it was insufficient in practice, and, secondly, it often led to a trafficing in these rights, which was inexpedient. I think that some misconception has existed with reference to the intention of the Act. There may be a doubt whether the intention of the Act is sufficiently expressed by its language; but from my personal knowledge, while this Act was passing through Parliament, I may state that the intention of this Act in Clause 14, which provides that "every scheme shall state what rights claimed by any class of persons are affected by the scheme," was not to direct that wide character of inquiry which has been assumed by the Inclosure Commissioners to have been prescribed. The policy of the Act, which was founded upon the Report of the Committee of 1865, was to provide a machinery in all cases where open spaces existed, without reference to the question, who were the persons entitled to the rights upon those spaces; and that they should be so taken care of as to prevent their falling into decay, and becoming places of public nuisance. It was thought by the Committee that the inhabitants were the fittest persons to guard the physical condition of the common, and that in all cases they should be encouraged in that work, and that the inhabitants should be allowed a share in the management if they were willing to assume it. By law the inhabitants *qua* inhabitants had not a right to interfere with the common; and certain lords of manors, for instance, Lord Spencer, who is quoted here, gave evidence before the Committee that in consequence of the increase in the population and the increased number of houses, and the many changes in respect to the common, very considerable nuisances had arisen, and that within the last six or seven years, he had had very considerable complaints connected with the common as to encroachments, and rubbish, and gipsies' camps, and various other matters. It was thought by the Commitee that without reference to any rights whatever, where such an open place existed, the inhabitants living in the neighbourhood might be allowed to manage the place, so that it should not be a public nuisance, if they were willing to bear the expense of management without interfering with any person's rights, and without regard to the question of any right to inclose it, and without regard to any rights of the lord or of the commoners; and that the inhabitants might have the liberty of appointing conservators to watch over the physical condition of the common in order to prevent nuisances and irregularities, and rubbish being put upon it. The Act of 1866 followed that recommendation of the Committee, and provided for those objects giving power to the conservators under a scheme to manage the common. Then the Act went a step further, and provided that they might also have the liberty to drain in certain cases, paying the expense and possibly of improving and levelling, or planting trees. That was to be done under bye-laws. It was suggested that the drainage would be an interference with the right of the lord of the manor, because the soil being his you could not open the soil without interfering with his rights, and also that the planting of a tree might to a certain extent injure the herbage, and prevent the grass from growing underneath, and that however little the grass might be wanted, yet it could not be used if there was an interference with it; therefore in order to guard the interests of all parties it was provided that that interest should be represented and inquired into, and reported upon by the authorities; and with that view, in order to guard those interests, the 14th clause of the Act was put in, which provides that "Every scheme shall state what rights (if any) claimed by any person or class of persons are affected by the scheme, and in what manner and to what extent they are affected thereby, and whether or not the scheme has been in relation thereto consented to by that person, or class of persons, or any of them." Now the Inclosure Commissioners have rather taken a wider estimate of the purview of that clause, and they have thought that where rights were in litigation between the lord and the commoners, they were bound to inquire into those rights, and that if they could not determine them they ought to hold their lands and not prepare a scheme. Now I speak under correction, but I think that that was not the intention which the Legislature had in passing this clause, but that it was intended simply to guard those minor interests which were not intended actually to be affected, but which might by possibility be affected by any improvement which was undertaken. The 6th clause of the Act describes what those improvements are; that clause is as follows: "A scheme for the establishment of local management, with a view to the expenditure of money on the drainage, levelling, and improvement of a metropolitan common, and to the making of bye-laws and regulations for the prevention of nuisances and the preservation of order thereon may be made under this

Mr. *P. H. Lawrence.*

this Act." Those were the objects; and it was apprehended that any action under this section could not but benefit the persons entitled, except in the limited way which I have mentioned. If the commoners said that the drainage of a common would make it too dry to grow grass, it might possibly be an objection; or the lord of the manor might say, "I will not allow you to open the soil for the purpose of drainage;" I believe that those were the minor objects contemplated by that clause, and by the two following clauses, and I humbly submit that they are all which need be provided for in cases of this kind.

657. Then would you suggest an amendment of the 14th Clause or something which would qualify the 14th Clause?—If the Committee agree with the view which I have presented, I should suggest that the Inclosure Commissioners might have distinct powers to hear and decide on any proposal as to drainage or planting, and to report whether it interfered with any beneficial rights as practically exercised, and if it did to disallow it. I take it that if, on such an inquiry, the Inclosure Commissioners found practically that there was no great amount of damage to the persons affected, in case those persons should captiously object to any such improvement, the Commissioners would exercise their discretion, and so disregard the objection. I take that to have been the object of Parliament in passing that clause. There is another matter which generally comes into question, with regard to these commons, which I think wants a certain machinery to regulate it, namely, the digging of gravel and sand. There are questions which constantly arise between the persons interested, namely, the lord and the inhabitants, and the commoners, as to the mode and extent of digging gravel and sand. In some places the commoners have the right to dig a certain quantity, and it is highly inconvenient that they should be allowed to dig where they please. There is a sort of obligation to dig gravel and sand fairly, but not to interfere with the rights of pasturage. It is very easy to lay down that as a general principle, but it may be difficult to carry it out. I would suggest that the operation of the gravel digging might form a subject to be inquired into by the Inclosure Commissioners, and specially reported upon, but without giving them the liberty to decide whether such rights existed or not, if they were disputed, because then the question must always be referred to the courts of law.

658. Supposing the rights, both of the lord and of the commoners, to be admitted, you would make such a regulation as to the exercise of those rights as should not at all be in derogation of the public convenience, but should subserve the public convenience, or the use of the common for other purposes?—Precisely so; the only other alteration which occurs to me, after stating that no scheme should affect rights, is this: I should prefer saying that no scheme should by any possibility affect anybody's rights, so that no person should complain of it excepting in these trifling particulars. I think that that being so, it would not be contrary to public policy and to the law to allow the inhabitants of the place, whether they were commoners or not, to memorialise the Commissioners for a scheme. I take it that the policy of this Act is for the public and for the inhabitants, who are concerned to see that an open space of that sort does not degenerate into a public nuisance; and that, therefore, there would be nothing contrary to public policy or to private rights in allowing the inhabitants of a place, as well as the commoners, to memorialise. With these exceptions, I think that the Act would work extremely well. Formerly, before I took office, I passed a scheme under this Act, which has received the sanction of the Legislature, proving to Parliament that such a scheme is possible; that was in the case of Hayes; and I also had the satisfaction of convincing the Inclosure Commissioners that if that scheme was carried out it would be an advantage. That scheme contained the following clause:—"Saving always to all persons and bodies politic and corporate, and their respective heirs, successors, executors, and administrators, all such estates, interests, or rights, of a profitable or beneficial nature, in, over, or affecting Hayes Common, or any part thereof, as they, or any of them, had before the confirmation of this scheme by Act of Parliament, or could or might have enjoyed if this scheme had not been confirmed by Act of Parliament." I think that with those safeguards, this Act would work very, beneficially, and might be made a most useful Act.

659. Is there any other remark with reference to this Act, or to this subject, which you desire to make to the Committee?—I presented a scheme for the management of Hackney Commons pursuant to some instructions which I received from that quarter, and it was objected to by the Inclosure Commissioners; they held that Lammas lands which are in Hackney were not subject to the operation of this Act; I ventured respectfully to differ with them in opinion upon the construction of the Act, because I find that the interpretation clause says that the term "common" means land "subject at the passing of this Act to any right of common." And as Lammas lands are subject to some rights of common, though only for a portion of the year, I thought that that objection was not well founded, and I was supported in that view by the opinion of counsel; but I, of course, bow to the decision of the Inclosure Commissioners in that respect; I merely submit to the Committee that that point might be made clear. That Lammas lands are such lands as Parliament intended to be included in this Act, I think may be fairly inferred from the provision of the Act of the 6 and 7 Will. 4, c. 115, relating to the inclosure of open and arable fields, section 55 of which Act provides, "That nothing in this Act contained shall authorise the inclosure of any open or common arable fields, or of any open or common meadow, or pasture lands, or fields, situate and being within 10 miles of the City of London;" showing that the Legislature at the time when that Act was passed, namely, in 1836, had in view the interests of the inhabitants with reference to these Lammas lands, and actually forbade their inclosure at that time of day.

660. Are Lammas lands there specifically mentioned?—The whole Act relates exclusively to open or common arable fields, or open or common meadow or pasture lands or fields, Lammas land is of that description; Lammas land is not a term known to Parliament, or known in the legal text books.

661. Lammas lands are held in severalty for a portion of the year?—Yes.

662. And they are subject to rights of common during the other portion of the year?—Yes.

663. What do you understand to be the right of common over these particular lands?—We will take London Fields, which is a portion of the

the Hackney Meadows; as it was explained to me (and I have every reason to believe it to be correct), that portion of land was entitled to be held in severalty, though not to be inclosed during the portion of the year between Lady-day and Lammas-day, which is the 1st of August, and it has been stated to me that the 1st of August was fixed with a view to the crop of corn; it is said that in former times the seasons were so different from what they are now that corn might reasonably be expected to be reaped by the 1st of August, which is very seldom the case at present.

664. That would be the 13th of August under the old style; the commoners in general, as I understand it, were let in after the 1st of August; there was a general right of common after the 1st of August; but up to the 1st of August the different owners were allowed to cultivate the land in severalty?—Yes.

665. Were those persons who were entitled to the right of common after the crop had been reaped, the same persons as those who had held the land in severalty for the purpose of reaping the crop, or were they the lord and the commoners, or were they the commoners exclusive of the lord?—The right, as I understand it, was the right of the whole commoners. In this particular instance I believe that I am right in saying (and I have been at some trouble to investigate that particular matter), that it applied to the whole of the commoners, and that it went so far as to say that the whole of the inhabitants, and that every parishioner in the vestry had a right; that is rather wider than is generally the case in most neighbourhoods, and whether it could be sustained at law or not, I am not in a position to say, nor could anyone say until it was decided, if it ever comes to be decided.

666. But at all events, whatever may be the decision in that respect, there is a right wide enough to justify you in calling it a common right?—Yes; it is alleged that those rights exist in every parishioner; that is contrary to a maxim of the law which says, that a person must have an estate before he can take such a right; I am not at all sure what would be the ultimate decision of such a question if it came to be argued; I do not think that it will ever be argued, but the practise has the authority of certain decisions, and of Acts of Parliament in times gone by, and it is now more interesting, as an antiquarian subject, than for any practical object.

667. The new scheme under this Act, would leave that right unaffected?—I think so.

668. Colonel *Barttelot.*] Is it those persons only who hold certain estates in the manor who would have the right after the crop is cleared, and not all the commoners?—I think not; after Lammas-day I believe that the land is common to all the commoners.

669. That is only so far as you know?—The practice may vary in different manors. In Hackney it is certainly not so represented, and it is in fact represented as being very much wider.

670. *Chairman.*] Do you know the distinction between what is called Shack land and Lammas land?—I should be very sorry to be asked to define it, for those terms are terms which are not known to the law, and they have arisen from local practices. If the courts of law were to be called upon to decide the customs, I do not say that they would not give the lands those particular names, but the names are not found in the legal text books.

671. It is local usage?—It is local usage. The local usage is very dissimilar in different districts, and it varies in each case, so that it is impossible to lay down any general rule which should apply to every place all over England. I do not think that there is any variety of form of common right which is not known in some place or other. A common right may be either restricted or unrestricted, it may be stinted at certain times of the year as to a certain number of beasts. It is a right of the most variable kind. I have had occasion to investigate a great many customs of manors, and I have never met with two which were precisely alike.

Mr. *P. H. Lawrence.*
8 July 1869.

672. Whatever these terms may mean they are all of them varieties of the mode in which the right of common may be exercised?—Yes. The Shack and Lammas lands are stinted in point of number and in point of time.

673. Is there any other matter to which you desire to draw the attention of the Committee?—No.

674. Mr. *Knatchbull-Hugessen.*] I understood you to say that you thought that the policy of the Inclosure Commissioners required guiding?—I perhaps might be considered presumptuous in using such an expression, but hope that the Committee will not misunderstand me upon such a matter. What I mean to say is that the policy of this Act, I take it, is something perfectly different from the policy under the Acts beginning with the year 1800, and culminating in the legislation of 1845, which the Inclosure Commissioners have had to carry out; of course, no more capable men than the Inclosure Commissioners could be selected for such a duty, but I think that it ought to be distinctly understood that if this Act is to work properly the specific rights in those commons ought not to enter into their calculation with a view to any division, or any appropriation of land, such as is contemplated by those Acts; that is all that I venture to say.

675. May I interpret your answer as having this meaning, that you think that the intention of this Act should be more explicitly declared for the guidance of the Inclosure Commissioners?—I think so, with all respect to them.

676. Mr. *Knight.*] I apprehend that you consider the one policy to be a national policy, and the other a suburban policy?—I think that they are both national policies. May I read the following passage from the Report of the Committee on Open Spaces. Mr. Wingrove Cooke stated, in his evidence before the Committee of 1865, "The office with which I am connected (the Inclosure Office) has great facilities for carrying out the objects which the Committee may have in view. We have facilities for ascertaining the proper compensation, and we have facilities also for apportioning that compensation when the amount is determined. We are also in the daily habit of selling lands, and there is scarcely any modification which can take place in order to attain any object which this Committee may have, and which may be sanctioned by Parliament, to effect which our office could not bring to bear its machinery." In reference to this the Committee state, "Without deciding as to the fitness of the various existing bodies who have been suggested for the office, your Committee would observe that the powers which they recommend that Parliament should confer, are not those of sale or compensation, as contemplated by Sir John Thwaites and Mr. Wingrove Cooke, nor are they disposed to recommend the

Mr. *P. H. Lawrence.*

8 July 1869.

levy of an additional tax on the property, or on the inhabitants of the metropolis, without having first tested the capabilities of the various localities." The Committee go on to say, "There would, no doubt, be a certain saving of expense, and a certain convenience in conferring the requisite powers on an existing Board; on the other hand, many of the views expressed by your Committee, and which, in their opinion, the public are interested in maintaining, are so new and special, and are likely, if adequately performed, to require so much attention, time, and care, that your Committee think they would probably be better and more vigorously carried out by an entirely new Board, having no views, interests, or traditions which might possibly clash with the paramount object of preserving for the public use, so far as may be possible, and by every legitimate means, the forests, commons, and open spaces in and around the metropolitan area." I did not mean to carry my observation further than that.

677. Mr. *Knatchbull-Hugessen.*] You have told us, and no doubt correctly, that the object of this Act was not to determine, in any way, the rights of persons interested in commons. But, looking at the 14th Clause, which says that the scheme shall state the rights which are to be affected thereby, and looking at the 15th Clause, which provides for compensation of rights, and looking at the 30th Clause, which gives power to any person having a right to appoint an agent, do you not think that it is absolutely necessary that rights should be determined before any satisfactory scheme can be carried out?—I do not think that it is necessary that definite rights should be ascertained; and I may remark that some of those clauses were not in the original Bill as drawn, but were put in to satisfy other parties. I think that they are rather contrary to the general intention of the Act, and I think that they have led to certain misconstruction in the carrying out of the Act. Of course it is not for me to quarrel with what Parliament in an Act has thought proper to do, but if you ask me the question, I am bound to say, that I think that those clauses go a little beyond the spirit of the Act, and that it would have been better that the clause, as originally drawn, should have been in the Act, namely, that no scheme should affect any rights whatever, and that would have prevented any misconception. I think that without deciding upon the rights, the Commissioners would be very competent to deal with the provisions of any scheme, and to say, whether in their judgment such rights as were known to exist were interfered with, or whether the rights of any person who claimed were injured, or were at all prejudicially affected. The only thing which could happen in the way of interference, would be in respect of draining and planting. If any person said that the planting injured his herbage, it would not be necessary to institute an elaborate inquiry into rights to determine that matter. But with regard to the main objects of the scheme such as preserving the grass and removing rubbish from the common, they must improve the common. Levelling generally improves the pasturage, and it is very hard to say, how there could be any serious damage to anybody from a scheme honestly framed under this Act.

678. If you interfere for good, or for evil, with existing rights, is it not necessary to ascertain the extent of those rights, in order to judge of the extent to which you are going to interfere with them?—If you benefitted those rights, I should submit that it was hardly necessary to judge of their extent under what might be a very difficult inquiry, and might lead to very little profitable result; but if the Committee think otherwise, it is not for me to interpose my opinion.

679. As the Committee have to deal not with the intentions of the framers of the original Bill, but with the Act as passed, am I to take it as your opinion, that those provisions, to which reference has been made, are so inconsistent with the intentions of the original framers of the Bill, that those clauses should be struck out or altered?—Not necessarily. I think that the law may be worked as it is.

680. Are you of opinion that many schemes are likely to be projected under this Act, and to come before the Inclosure Commissioners?—Yes; before I was in office I presented, I think, five or six schemes to the Inclosure Commissioners, and more would have been presented if they had not refused to consider cases where the parties were in litigation. I endeavoured to argue that point with them.

681. I understand you to question their discretion in that respect; you think that they might have gone on, although the rights were in litigation?—I think so; but I wish to pronounce that opinion with very great respect; I think that the view taken by the Inclosure Commissioners is contrary to the spirit, and the intention, and the letter of the Act.

682. Then you think that while certain rights are under consideration by a court of law, it is wise to deal with them under the provisions of this Act, or other Acts?—I do not think that it is wise to deal with them under the Act. Without at all interfering with any person's rights, I think that the measure deals with a physical evil, and there is abundant evidence before this Committee, and there was abundant evidence before the Committee of 1865 to show that large open spaces in the neighbourhood of a town are liable to demoralise the population, and to become public nuisances, unless they are properly regulated. If there is litigation concerning them, I think that they want that protection all the more, and I think that the Legislature might guard against prejudicing the rights of any persons over those places. If it be fairly and legitimately done, I cannot conceive why the existence of any amount of litigation or quarrels which may occur, as they have occurred, with regard to these places for hundreds of years should interfere with the public necessity, for a sort of police jurisdiction, a jurisdiction of management in the interest of the public at large, who are greatly interested in seeing that those places do not become a public nuisance, just as much as you are interested in seeing that your neighbour does not set his house on fire. The nuisance of which there is evidence with regard to many of these places is very great, and I understand this measure to be simply intended as a conservative measure, which, so far from injuring the rights of anyone, should improve the property and keep up the rights; in most manors there are disputes as to whether copyholders have certain rights, and what are the rights of the freeholders, but I think that those questions may go on, and that yet the place may be improved without interfering with those rights, and therefore I do not see why the Act should not be applied in spite of the pending litigation.

683. Do

683. Do you think that it is for the advantage of the public that the scheme which is set forth under this Act should be generally proposed and adopted?—Certainly.

684. In preference to keeping the commons as they are?—Yes; I think that schemes for supervision are very beneficial; I may speak as an inhabitant in the neighbourhood of a large common; we should be very thankful for the rubbish, and so on, to be removed.

685. Do you know of any places where it is desirable, in the opinion of some of the inhabitants, that a scheme should be set forth, but where the facilities granted by this Act are insufficient, and there is something which hinders that scheme from coming before the Commissioners; do you think that sufficient facilities are now given under this Act to bring schemes before the Commissioners, or that they may be stopped, owing to the fear that there may be insufficient compensation to parties having rights, or from any other cause?—As a rule, I think that the persons most interested are the persons living in the immediate neighbourhood of the place in question, and technically they may not have the rights, which, under this Act, would entitle them to present a scheme; I think that Parliament might very fairly give them such a right, inasmuch as such a scheme is not to interfere with, or take away, the right of any other person, and I think that they might be considered entitled to have the benefit of it for improvement of their own prospect.

686. Do you think that local action might be stimulated by the operation of this Act, or would you, irrespectively of local action, give to the Inclosure Commissioners, or to any other body, the power to initiate operations?—I have not considered that question sufficiently to give an answer to it; I think that if the inhabitants had the power, Parliament might very fairly wait to see whether they would not exercise it.

687. Has the operation of the 15th clause of the Act, namely, the compensation clause, come under your notice?—No; no proceedings, so far as I am aware, have been taken under that clause.

688. If the compensation which the parties thought necessary was not, in their opinion, sufficiently secured to them, might not that operate to prevent their bringing this question before the Inclosure Commissioners, they alone having the power of doing so; if they had rights, and if they felt that under this Act there was no security for adequate compensation, is it not possible that that might operate as a bar to their application for a scheme?—I have no doubt it would do so if that were the case; but it is not the case; this Act provides for the compensation of every right, and, in my opinion, rather encourages a claim for compensation; the great misfortune is, that it has led certain persons rather to look for compensation, and I think that that is a pity, because I do not believe that it is necessary to compensate any person under this Act, inasmuch as it is not necessary to take away his rights.

689. If a person under the General Inclosure Act would have had considerable rights, the value of which would have been increased by inclosure, and if Parliament passes an Act which deprives him of the power of obtaining the enhanced value of those rights, do you not think it proper that if he is so deprived for the sake of the public interests, compensation should be secured to him?—That assumes, I think, that he has a right to inclosure; I have always looked upon inclosure as being a boon to the landowner, which has been granted by Parliament in return for a benefit to the public from the increased production of the country; I think that the history of our Inclosure Acts points very much to that conclusion.

Mr. P. H. Lawrence.

8 July 1869.

690. Does the preamble of any Inclosure Act lead you to such a conclusion, or is it only a general theory?—The first general Inclosure Act was passed in 1801, and that Act was passed after, and in consequence of three very elaborate reports from a Select Committee appointed by the House of Commons, over which Sir John Sinclair presided, in the years 1795, 1797, and 1800. These Reports were printed at a time when there was a great scarcity of corn, and they all have reference to the increase of the produce of the country. The preamble of the first of these Reports, which goes very elaborately into the whole question, recites, "A copy of the Resolutions of the Board of Agriculture on the subject of cultivating the waste lands and commons of the kingdom, together with various other communications from that Board; in particular, an Address from its President, on which the Resolutions above mentioned were founded; and also extracts from the printed reports of the different surveyors employed by the Board in furnishing accounts of the present agricultural state of the various counties in these kingdoms, and the means of their improvement. From the consideration of which, your Committee are deeply impressed with an opinion, that a general system of facilitating the division of waste lands and commons is an object not only anxiously to be wished for, as the means of removing a material obstacle to improvement and of promoting the prosperity and general interests of the kingdom, but more particularly as being one of the most effectual measures that can possibly be suggested for preventing any risk of suffering under the pressure of scarcity in future." Then the resolutions are, as to inclosure and the cultivation of potatoes, and other matters connected with agriculture. These Reports form the foundation of the Inclosure Acts, which are the subject of our present legislation. I have always considered (whether rightly or wrongly) that all the modern Inclosure Acts were formed upon the policy of that Report, which was intended to provide for an increased cultivation of the land for the benefit of the community.

691. If that is the case, and if, according to your showing, an inclosure is a free gift, by the Legislature, to certain persons, why should that free gift be confined to persons calling themselves lords and commoners, and why should not it be given to all the inhabitants?—I am unable to answer that question.

692. Does not that answer imply that there are rights in certain persons?—There are undoubtedly rights of many kinds.

693. Do you agree with the observation of a former witness, that, whatever rights may exist, with regard to inclosures, the public interests demand that, in the vicinity of the metropolis, these spaces should be kept open?—I understand that to be the policy of Parliament. I do not think that my opinion on that point is worth much to the Committee. I think that I am less qualified to speak upon that point than others. I have been professionally concerned in fighting these questions, and my opinion would not be worth much.

Mr. *P. H. Lawrence.*

8 July 1869.

694. Your opinion is a rather valuable one; you think that compensation should not be given, where the public interest is consulted, in such a case as this?—I think that compensation ought to be given whenever any valuable right is taken away or interfered with. I do not include in that statement any speculative right which has no pecuniary value.

695. If the public interests demand interference with some one who thinks that his rights are going to be interfered with, though you may think that they will not be interfered with, is it not just that the question whether his rights are going to be affected or not, should be referred to some independent tribunal?—Certainly.

696. With regard to the Lammas lands, is there any reason, in your opinion, why the Lammas lands should not be dealt with by this Act?—I think not. If they were used in the way in which they were formerly used, and in accordance with the technical rights which exist over them, then no scheme such as this would admit of any interference with the persons who cultivated them in severalty during a portion of the year. I can imagine that a scheme, even during the time that they held the Lammas lands in severalty, might provide against nuisances. Those Lammas lands are not inclosed, and I believe that in Hackney they have never been inclosed; and therefore the proprietors would not have the same facilities of watching and protecting them against thieves and vagrants as they might have on their own private lands, and the operation of the Act might assist them in protecting their property.

697. But, as regards Lammas lands, you know that they may be inclosed during the time for which they are held in severalty?—That depends upon the custom.

698. In either case you do not see why they should not be subject to the provisions of this Act?—No, guarded as I have mentioned.

699. Then if that is the case, and if the expressions "Lammas lands, half-year lands, and shack lands," exhaust the descriptions, of lands subject to rights of common other than those which are waste of a manor, would it not be well to name them in the clause, in order to prevent the possibility of misconstruction?—I think that doubts might very well be removed by the Legislature, even though they are not well founded.

700. If it is the opinion of the Committee that, in the Bill before the House, those lands should be included, do you not think that such a special description would be better than the words in the new Bill, namely, "any open space which has been enjoyed, or frequented by the public, for not less than 20 years before the passing of this Act"?—I think that the words as they now stand would not quite meet the case of these lands.

701. Have you turned your attention to the desirability of extending the operation of this Act to a radius of 25 miles from the metropolis?—I do not think that I can give any useful information to the Committee upon the nature of the lands between the two areas, with this exception; inasmuch as Epping Forest is cut in two, it seems to me that as this Act applies to the greater part of Epping Forest, it might just as well include the whole; there is a very small portion outside. I do not think that the map which is now before the Committee is correctly drawn as to Epping Forest, because that red line does not show the boundary of the area of the Metropolitan Commons Act; the area of the Metropolitan Commons Act is the police area, and it has a jagged boundary; there is a little portion of Epping Forest outside the area, although within the radius of 15 miles from Charing-cross; the metropolitan police area goes outside the circle in some places, and comes inside it in other places.

702. Are you in a position to state that the character of the lands which would be included by the proposed Bill varies to any extent from the character of the commons which are now under the operation of the Act of 1866, or are they of an identical character?—Not having inspected them, I am not able to say; but the further you go from London, the more agricultural the lands must be.

703. With regard to the Suburban Commons Bill, which is referred to this Committee, have you considered the subject of the application of the provisions of this Act to commons other than metropolitan?—I have had the matter generally under consideration.

704. Have you formed any opinion which you would like to express to the Committee upon that subject?—I am not able to carry it much further than the evidence which was given by Mr. Blamire, the Inclosure Commissioner, in the year 1844, previously to the passing of the Inclosure Act of 1845. I should state that the report of that Committee was the foundation of the important Act, the Inclosure Act of 1845. Mr. Blamire was asked, "Have you had your attention drawn to the cases of inclosures on those commons which are in the neighbourhood of manufacturing towns?" to which he answered, "I have known instances where inclosures have taken place in the vicinity of populous places, undoubtedly;" then he was asked, "Do not you perceive that there is a very great difficulty in giving the inhabitants of such districts those fair means of recreation, and of getting something like fresh air, which no allotment could produce?" His answer was, "There ought to be the greatest possible care taken to provide adequate ground for the recreation of inhabitants of towns; I conceive that the health and the pleasurable purposes of such inhabitants would be very much increased generally, if it were practicable to drain and to level those commons, and to define the distinct rights of pasturage upon them, without authorising any inclosure of them. The inclosure of commons in the immediate vicinity of populous towns, and where the allotments in respect of the several properties must necessarily be of a very minute extent, and where they are not valuable for the purposes of cultivation, invariably leads to a public nuisance, by holding out a facility for parties to set up their temporary huts, to the great annoyance of the whole district; those inconveniencies constantly arise where the allotments are of so small and limited an extent, as not to be available for the purposes of ordinary cultivation."

705. *Chairman.*] Will you give us your own opinion upon the subject?—I have no special information with regard to commons near large towns, which would justify me in expressing an opinion as to the desirability of their inclosure or otherwise; the Committee are best able to judge for themselves of the desirability on public grounds.

706. Mr. *Knatchbull-Hugessen.*] Have you ever lived

lived in a town out of London?—Yes; I lived at one time in Liverpool.

707. Did you ever live in a town of 5,000 inhabitants?—Yes, for a short time.

708. Did you ever go out for a walk of five miles to a common?—I am not aware that I did.

709. Do you consider that that is a good limit to put with regard to such a town, or do you think that it is too large a one?—I am hardly competent to answer those questions, which are not in my province.

710. You merely state, as we should all agree, that open spaces in the neighbourhood of a crowded population wherever you may find them, are very desirable?—Yes, that is my private opinion, for what it is worth.

711. Do you think that cases might occur, in which the provisions of this Act might possibly be injurious to the inhabitants of a town; take, for instance, a common which is of a marshy and low character, and not at all suited for walking, or recreation, but which might be reclaimed and adapted for agricultural purposes; do you not think that the provisions of a Bill which prevented the inclosure and drainage of that land would be decidedly prejudicial?—I look upon it, that this Bill would not prevent that operation, and that the moment that the necessity of an inclosure was recognised, a Bill could be brought into Parliament to inclose that land, and that Parliament would judge of the expediency of its inclosure.

712. Then you would pass a general Act with a view to having exceptional cases dealt with by special legislation?—Parliament has already decided that exceptional precautions should be taken with regard to an area round certain large towns. The Legislature is not at all prevented by this legislation, or by any other legislation, from dealing as it pleases with commons in the neighbourhood of large towns, by inclosure or otherwise.

713. Is it so? Parliament, in the Act of 1866, has stated, that, "after the passing of this Act, the Commissioners shall not entertain an application for the inclosure of a metropolitan common, or any part thereof;" then it goes on to say that schemes for certain purposes may be made; is not the object to prevent inclosure?—The object is to prevent inclosure in the regular way, and to restore parties to the same position as they were in before the Act of 1845. Under the Act of 1845 the Inclosure Commissioners had large powers to deal with inclosures without coming to Parliament; and there is an exception in the case of all commons within a certain distance of large towns. That, I take it, was with a view of drawing the special attention of Parliament to any cases within a certain distance of those large towns, and making them the subject of special application. Subsequently to the Act of 1845 (I cannot remember the exact year) the power of the Commissioners to deal with any cases on their own authority, without coming to Parliament, was taken away, and therefore the two classes were equalised; but the present Act does no more, in spirit and effect, than the Act of 1845; it necessitates that parties shall come to Parliament by a special application, rather than under the general powers of the Inclosure Act. The Committee are of course aware, that in the case of a proposal for an inclosure under the Inclosure Act, the parties go before the Inclosure Commissioners, and practically never go before Parliament at all. The inclosures are put into a Bill, and, unless particular attention is drawn to them, they pass as a matter of course. It was expressly with a view to hinder that application of the Act as to commons round London that that clause was put into the Metropolitan Commons Act; of course, it would not be possible to take away the power of Parliament to inclose any common as they did before 1845.

Mr. *P. H. Lawrence.*

8 July 1869.

714. Is it not the fact, that the object of this Act is to prevent these commons being inclosed in the neighbourhood of the metropolis, but to sanction certain schemes for their regulation without their being inclosed?—Yes.

715. Then Parliament is not able to proceed to the inclosure of any common near the metropolis, except by special legislation overriding this general Act?—Yes, in the same way as before 1845; the special system of inclosure began in 1710, and continued down to 1845 by special inclosure measures, and in 1845 the General Inclosure Act was passed; but that Act does not in the least degree prevent the inclosure of a common which is well-adapted for purposes of cultivation, and which is ill-adapted for recreation, being brought before Parliament; and, practically, it might be just as well inclosed as though this Act had not been passed.

716. Are you aware that a Committee has recently been sitting upon inclosure Bills?—Yes.

717. Is not that a proof, that under that system inclosures do come before Parliament?—No doubt; but that is an exceptional case.

718. Mr. *Bonham-Carter.*] Will you look at this publication (*handing a document to the Witness*), with reference to the commons near the metropolis, which at the end has what appears to be the imprimatur of the Association of which you were the honorary solicitor; have you seen that document before?—No; but I see my name mentioned here.

719. Am I right in inferring that that document was issued with the authority of the society to which you were acting as solicitor?—I really cannot say. I see the names of the Right Honourable William Cowper, one of the members of this Committee, and of Mr. Shaw Lefevre, in conjunction with my own; but I have no personal recollection of the publication.

720. This is a small pamphlet, stating the quantity of commons and open spaces near London, and which is apparently admitted by being placed in conjunction with the prospectus (I do not mean the prospectus in a commercial sense) of the Commons Preservation Society; are you able, from your connection with that society, to say whether the statement that rather over 17,000 acres of open spaces are within a radius of 15 miles from St. Paul's is correct?—I should not like to answer that question from memory; I believe that a Return is before Parliament which gives the number of acres; I did not think that it was as many as 17,000.

721. You took a very active part in this association?—I believe that I advised, when I was called upon to do so. I do not know that I was more active than any other professional man could have been in the discharge of his duty.

722. You are not sufficiently acquainted with this document for me to ask you any questions upon it?—Certainly not. The secretary of the society is in the room, and he says that he had nothing to do with the publication of that document, and that the prospectus at the end was intended as an advertisement which was paid for. I think

Mr. *P. H. Lawrence.*

1 July 1869.

I think that it was an injudicious thing to publish names without the consent of the persons.

723. There are a large number of private rights involved in the inclosure of those commons?—Certainly.

724. Is it not natural that when documents, apparently bearing the imprimatur of such a respectable society as the Commons Preservation Society are issued to the public; persons should rather gather the intentions of the society from the statements in those documents?—I can conceive nothing more natural than that it should be so; it might not always be just.

725. One of the phrases used is, that the thing to be prevented is collusion between the lord of the manor and the commoners; is not that language which would naturally lead lords and commoners to think that there was some design to infringe upon their rights?—I would rather not answer that question. I am not in the least responsible for that document. I am not now at all connected with that society. I was formerly connected with it. I held the position of adviser to that society; and I gave them the best of my humble advice upon the questions on which I was asked. I had no authority to bind them, even at that time, and I certainly have no authority to do so now; I trust that I have not overstepped the bounds of propriety in anything which I have done, but I cannot answer for others; nor would I even answer for that society, respectable and honourable as the members of that society are. I think that they are quite able to answer for themselves.

726. I think that in your evidence you have expressed that the object which you have in view is most entirely consistent with a respect for the maintenance of private rights?—Certainly.

727. You stated that you had taken considerable part in the arrangements under the Metropolitan Commons Act with regard to Hayes Common?—Yes; I prepared the scheme for the inclosure of Hayes Common under instructions from the rector, the churchwardens, and the inhabitants of that parish.

728. Are you in any way cognisant of the state of things which led to the bringing of that common under the operation of the Act?—Yes; I investigated the whole case.

729. Are you aware of the fact, that the rights of the lord of the manor were so exceedingly doubtful with reference to the boundaries of the common, that, practically, he was unable to proceed against trespassers?—I investigated the boundary of that common, and I believe that the boundary was perfectly well defined; the question was of a different character, namely, whether the lord of the manor had, or had not, the right of a superior lord; all these questions are under the old feudal rights; the lord of the manor has certain tenants under him, who are his commoners; it must be always the case that the lord is a tenant of the sovereign, but it sometimes happens that the lord is not the immediate tenant of the Crown, but is a tenant of another lord who is a tenant to the Crown; and in the case of Hayes, the question was whether there was a superior lord in the manor of Baston, or not; but that did not affect the scheme, because I advised the parties that they had only to do with the inferior lord; I distinctly advised them that the inferior lord of the manor, in that case, was the proper person to give his consent to the scheme, and I think that in every case the inferior lord is the person who has to do with it.

730. Does not the Statute of *Quia Emptores* define the position of the lord?—Since that Statute, no inferior lord could be created; the lord might sell, but he could not create a sub-infeudation, as was done in the case of Baston.

731. Therefore, this superior lord had created a sub-infeudation before the Statute of *Quia Emptores*?—Yes, but that was not very clearly established; the steward of the superior lord was communicated with, and he said that he did not claim anything.

732. You have stated, that in all probability several commons would have been brought under the scheme, if it had not been that they are under litigation?—In one case I presented a memorial, and its consideration was declined on that ground. I had other similar cases, which, but for that refusal, would probably have been brought forward.

733. Is it within your experience, or belief, that this litigation arose in consequence of the persons who were interested, or the public wishing to oust the jurisdiction which was created under this Metropolitan Commons Act?—No; a litigation arose in consequence of the Metropolitan Commons Act; but in consequence of the lord of the manor wishing to approve or inclose under his alleged powers as lord of the manor.

734. Then you do not believe that litigation has arisen in consequence of the desire to ascertain rights in reference to this scheme?—Certainly not, and I do not see how it is possible.

735. You have stated, that there is a great variety of rights in manors; from your experience in connection with the Commons Preservation Society, have you formed any opinion whether the usage within the metropolitan common area is very various or not?—Certainly.

736. Does not the nature of the usage very much affect the advantages which are to be obtained by the commoners, and the lord, upon the inclosure?—No doubt, and that has to be taken into consideration by the Commissioners upon every inclosure.

737. Would it not be a very great boon to the lord, and to the commoners, in the case of a common, in which there were very numerous rights, and rights of very various kinds, to give them the power of inclosing under the Act of 1845, and to give them the same power as in a case which might occur with Shack lands, where the common was defined, and where the rights were very few; would not the advantage which is given by the Act of 1845, be very much more valuable in one case, than in the other?—It would be entirely a question of the extent of common, and of the nature of the interests, and the number of persons.

738. Supposing the case of a lord and three or four commoners, and the case of a lord and 500 commoners, would not the difficulty of obtaining consents for inclosure, without an Act, be very much greater in the one case than in the other?—Yes; the expense would no doubt be greater.

739. So that the power which is given by the Act of 1845, to inclose upon the consent of two-thirds, would be a very much more valuable power in the case of a large common with various rights, than in the case of a common in which the interest was vested in four or five hands?—Yes.

740. As the general belief is that the authority claimed on behalf of the public for allowing an inclosure under the Act of 1845, was a ground for asking for recreation grounds, and other concessions

cessions for the public, the power which is given by that Act would be exceedingly valuable in one case, and not in the other?—I suppose that it would be more valuable in the case which you have described.

741. We have been told that an unopposed Inclosure Act might cost 400*l.* or 500*l.*, and that as far as regards the proceedings of the Inclosure Commissioners, it might cost 40*l.* at the outside?—Yes, I believe so.

742. The proposal is to extend the Metropolitan Commons Act to a very much larger area; are you not withdrawing from commons which are very near the point at which they can be inclosed without an Act of Parliament at all, the power which is given to them by the Act of 1845, and at the same time withholding it from other cases where it might be more valuable?—You withdraw the facilities from those commons, whether it is right or not is another matter.

743. You say in fact to the owners, namely, the lords and the commoners, of a very large quantity of commons, "You shall not have the power of proceeding under the general Act, but shall go to the expense of a private Act"?—Certainly.

744. Have not a very great number of commons been inclosed between the limits of 15 and 25 miles?—I am not competent to answer that question, but I believe that the returns are before Parliament.

745. If a great many commons have been inclosed upon a policy which was avowedly made operative in 1845, is not it very hard that that boon should be withdrawn from a man, when perhaps his next door neighbour has availed himself of that boon?—That is a question for Parliament to determine.

746. Then, considering the policy which you have advocated in connection with this society, you would rather not express any opinion whether or not the radius should be extended beyond 15 miles?—Throughout my professional life, I have endeavoured to preserve the character rather of an adviser than an advocate.

747. Looking at those powers which exist for improving the metropolitan commons within the area, have you considered whether they might be extended beyond the area without rendering it necessary to withdraw the power given by the Act of 1845?—I do not quite understand the proposition; I think that you must either withdraw the Act or keep it in force.

748. Certain powers are given by the Metropolitan Commons Act; that is, to a certain degree, compulsory, because you have within that radius withdrawn the power of using the Act of 1845?—Then you mean that you might apply the Act except as to clause 5; it would be quite competent for Parliament to do that.

749. You believe that the Act which has had at present a small operation, and only in the case of Hayes Common, might in some respects be made useful outside that area, without withdrawing the power of inclosing under the Act of 1845?—It would be quite competent for Parliament to do that.

750. With regard to Hayes Common, are not the rights almost entirely vested in the lord?—Yes, except in cases where the loppings belong to the tenant; the stem of the tree is almost invariably in the lord.

751. Then, in your proposition of planting, would you make arrangement to withdraw the ownership of those trees from the lord?—If you plant the trees, my impression is that you make them a present to the lord; but I hardly think that an ornamental tree, planted under such circumstances, would be cut down by the lord.

752. But, as a matter of fact, the law of the land would vest it in the lord?—Yes.

753. Are you aware that the question of the planting of trees is a question of great dispute in the New Forest?—Yes; no doubt, where the trees are thick; but that is hardly to be considered the same case as the planting of a few trees near London.

754. But it would practically lead to disputes? — There may be disputes on such matters.

755. You would give the inhabitants, in some cases, a *locus standi* to propose schemes?—Yes, I suggest that.

756. How would you define the inhabitants; would you limit them as being ratepayers?—Yes, I think so. It is usually proposed in these cases that the ratepayers should bear the cost of management. It is their interest to have a decent nice-looking place before their doors, rather than a bear garden.

757. Have you any notion what are the commons within the metropolitan area which are Crown commons?—There are very few. I think that there is only Blackheath.

758. Was Chigwell Common a Crown Common? — I think not. The Crown had forestal rights there; but I do not think that Chigwell Common was a common vested in the Crown. I may be mistaken.

759. Have you any information which enables you to say whether there are many commons within the area in which the lord of the manor has been divested of his rights; we have had our attention called to allotments from poorer commons, inclosed many years ago, and vested in trustees; are you aware whether that exists?—I am not able to say.

760. Should you apprehend that trustees, or other parties concerned, with reference to inclosure (the lord having been previously divested) would be put in the position of the lord; in the case of several inclosures large allotments have been vested in trustees for the benefit of the poor; do you think that, by this transference (the lord's rights having been satisfied previously) the trustees would stand in the position of *loco boni*?—I should doubt it. If there are allotments, that is practically an inclosure.

761. You have mentioned that you consider that, in 1845, there was rather a reversal of the policy with regard to inclosures?—I think not. I rather think that there was an express intention of giving effect, to a policy which, to a certain extent, had been lost sight of, but which had always been contemplated by the Legislature in all the important changes made by the Inclosure Acts; because I find that, in the Act of 1845, a difference was established between metropolitan and other commons; and I also find that, in the evidence of Mr. Blamire, he foreshadowed precisely the nature of the provision which is carried into effect by the Metropolitan Commons Act of 1866.

762. Sir *Henry Selwin-Ibbetson.*] This Bill is a Bill to increase the area of the commons within the reach of the metropolis, and its purpose is to give the inhabitants of the metropolis greater freedom with regard to open spaces; have you any experience as to whether the population really use the commons which now are at the extreme

Mr. *P. H. Lawrence.*

8 July 1869.

extreme distance from London of the present area?—I have no reliable facts upon which I can give evidence before this Committee as to the extent to which those commons are now used.

763. Many of the commons which are now inclosed within the present area are only to be reached by railway service from London?—I suppose that that is so.

764. And therefore they are used by the population only on one or two holidays in the year?—I am not able to speak to the extent of the use; I have not investigated it with reference to these particular commons.

765. If these commons are only used on one or two days in the year, would you think it desirable to enlarge the area of the commons, depriving the lords of the rights which now exist, merely for the purpose of those holiday enjoyments on one or two days in the year?—I think that the increase of the radius must be a question for the Committee to consider.

766. Mr. *Johnston.*] In the case of a marshy common, is it not obvious that if parties in the interest of the public went to the expense and trouble of getting a scheme, they would be sure to drain the place, and make it healthy?—I should think so, and I should expect so.

767. The facilities granted by the Act of 1845 were granted on considerations of national advantage; if it appears in any case that the national advantage is the other way, is it not obviously right and fair that those facilities should be withdrawn?—That is a question for Parliament, and it is quite in their power.

768. Is it your opinion that liberty to inclose under the Inclosure Acts is a boon, because whatever rights there may be over a common, those rights are not sufficient to enable the persons who possess them to inclose without the assistance of Parliament?—I consider that it is a boon. It was reported to Parliament by various Committees previous to general legislation in this direction, that there was no power to inclose commons otherwise than by coming to Parliament; and the objects stated in the Reports of those Committees, so far as I have understood them, pointed to the increased production of corn and other agricultural produce for the benefit of the country, and the inference which I draw is, that the object which Parliament had in view was the benefit of the country at large, but that incidentally a benefit to individuals accrued as the consequence, and not the moving cause, of Parliamentary action; therefore, if the inclosure benefited individuals it may be termed a boon to them.

769. On what grounds do you understand that the Commissioners have refused to entertain schemes for inclosure where litigation is in progress—As far as I understand their reasons, I think that those reasons proceeded from the construction which they put on the 14th clause of the Act, which provides, that every scheme shall state what rights claimed by any person are affected by the scheme; and I believe that they felt it to be a difficulty that they could not state what rights were affected by that scheme until those rights were determined by a competent tribunal.

770. I understood the view, as it was explained to us by the Commissioner, to be this: the Act says that a common is "land subject to any right of common," and I understand that in the case of Wimbledon, for instance, the lord of the manor denied that there were any rights of common, and that until that point was cleared up the Commissioners could not decide whether it was a common at all or not; and that therefore they could not decide whether they ought to go on under the Act or not; did you understand that to be their view?—That may possibly have been their view. But I do not think that the legislature meant them to determine that question.

771. Would you recommend words being added to clause 2 of the Bill which is now before us, to this effect: "or over which rights of common are claimed"?—The Bill says, "any open space which has been enjoyed or frequented by the public for not less than 20 years before the passing of this Act," which, I think, would include that. I cannot see any possible objection to these words.

772. Would you recommend the introduction of such words as I have mentioned, namely, "or over which rights of common are claimed"?—I do not think that they could do any harm; I think that those words might be added.

773. Would they not enable the Commissioners to get over the difficulty which they now feel in entertaining schemes?—I am not sure that those words would be as good as the words which are already in this Bill; the object of this measure, and of the former measure, is to take care of any space which is now open, and not to inquire into any rights upon it. If in the neighbourhood of a large town there is an open space, the Legislature seems to think that it requires some protection and management, and therefore the test is whether it be open, and not whether rights are claimed; I should rather deprecate going into claims of rights any more than is expressed by this Act, the reference to rights has led to some misconstruction already; I think that the act is intended to refer chiefly to the physical condition of the common.

774. Do you approve of the suggestion that a registration of the rights of commoners should be provided?—I think that it might be a useful measure, with a view to their protection.

775. The honourable Member for Winchester spoke of alarming lords and commoners; does not your experience lead you to suppose that the commoners within the radius of the Act of 1866 are almost invariably opposed to inclosure, and would be thankful for any means of opposing it?—I think that, as a rule, the commoners are against inclosure; where they are inhabitants they are certainly so.

776. Mr. *Reed.*] Are the London Fields an open space in the sense of the answer which you have given to the last question but two?—The honourable Member calls my attention to a question which has been asked with regard to the London Fields; the London Fields is practically an open space; I have seen the place; it is inclosed by a post and chain fence; I presume that it would be considered to be an open space, but I am not sure that a question might not arise even upon that; however, such a place as the London Fields would be intended by this enactment, and if there was any doubt about its condition, it would be set at rest by a few words in this clause.

777. Are you familiar with the survey of Hackney in 1652?—Yes, I have read that survey.

778. Do you think that there would be any difficulty in inserting words into this Bill sufficient to protect Lammas lands?—Not the slightest difficulty.

779. Would you see any difficulty in the word "common" being held to include Lammas lands?—No; I think that it would be very desirable.

780. Within your knowledge has a scheme been

been proposed by the inhabitants of Hackney with respect to Lammas lands?—Yes, I was instructed to prepare one, and I did so.

781. In what state is it now?—It is in abeyance, because the Inclosure Commissioners considered that Lammas lands were not within the purview of the Metropolitan Commons Act.

782. Mr. *Samuelson.*] You have said that, as a rule, the persons most interested in these commons are persons living in the immediate neighbourhood, and that it would be a good thing for Parliament to give them this right?—Yes, I have expressed that opinion.

783. Would not the conferring of those technical rights upon the inhabitants seriously interfere with the rights of the lords of the manors and otherwise?—No; I would not confer any technical rights upon the lords, or upon the commoners, if they were rights which they had not got, but I would not affect anybody's rights.

784. Are there not many rights existing, but which are in abeyance, and from which no actual benefit is obtained by their owners in the present uninclosed state of commons?—Certainly.

785. Do you think that the owners of those rights have any claim for compensation with respect to them?—I think that that question is practically decided; when a railway company goes across a common, the purchase money for the land which the railway company takes is, practically, divided amongst the commoners, whether their rights have been used or not.

786. They would, in fact, receive compensation?—Certainly.

787. That is to say compensation for what is of no use to them at the time?—For what they do not avail themselves of; if a man has the right to put a cow upon a common, and does not avail himself of it, the law does not necessarily take it away.

788. Is not the result of levelling and removing gorse, and planting, and draining, to take away from the commons all their natural beauties?—I think that that is entirely a question of discretion and taste; I should not myself advocate the removing of gorse from commons.

789. Would it not have the effect of making them into uninclosed parks?—I do not think that that is the intention. The Committee, in 1865, went very thoroughly into the question, and they thought that these places were generally better as commons than as parks.

790. *Colonel Barttelot.*] Have you seen the Bill which is now before this Committee?—I have.

791. The principal object of that Bill is, in the second clause, to keep open any open space?—Yes.

792. Will you define what you understand by "any open space"?—I was a little puzzled just now to know whether a space, inclosed in the way which I mentioned, was technically quite open; but I think that the Committee might make it clear by a few words.

793. In what way?—In whatever way they pleased; it is not for me to presume to dictate to the Committee.

794. In your opinion, should a portion of ground be declared to be an open space if it is within rails?—I think that the London Fields is eminently a place which was intended to have the benefit of the provisions of this Act, and the mere fact of there being a fence between it and the road, of a character from which I think the Committee would hardly consider that the space was intended to be an inclosure, but that it was practically open, should not prevent the application of the Act. As far as I understand the intention of the Act, it would include such an inclosure as that.

795. Does not the very fact of that fence being there, show that the owners thought that they had a right to keep things on the road without trespassing over the land?—It would be a very bold thing to say what was the meaning of a fence, without inquiry; it may be that it hangs on a question of right, but without inquiry you could not go into the question of the meaning of that fence; you must go into the question of when it was put up, and who put it up, and a variety of things.

796. If clients of yours, who were interested in Lammas lands, asked you whether you thought that they had any rights, or whether the public had any right to deprive them of those rights, what answer should you give them?—I should certainly say that if they had rights the public had no right to deprive them of those rights.

797. Then surely you would not include Lammas land in the same category as open common land?—I think that you might include them under the provisions of a Bill of this nature, as it does not injure the existing rights of any person over those lands.

798. You have stated distinctly that, as you understand Lammas lands, certain persons have distinctive rights between certain dates?—Yes.

799. If you throw those lands open, do you not at once do away with those distinctive rights?—The lands are open already, and they are allowed to be walked over by everybody at certain seasons of the year. Supposing even the case of Lammas lands, where cultivation actually takes place during the period mentioned, no provisions of this Act (which is not to interfere with private rights), could possibly authorise the public to interfere with that process of cultivation, the provisions of the Act would simply come into operation to restrain trespassers from going upon those lands during that time, and afterwards during the time when they were in common to preserve them as in the case of other commons.

800. So that in a case like that of the London Fields you would make an enactment making them open whether they were Lammas lands or not; and in the next parish you would reserve the right to a man who exercised his rights over such land?—I would reserve the right in both cases. Under this Act I would not interfere with any person's rights in any degree whatever.

801. How can you explain that, when you say that you would allow these lands to be common lands, and to be used as common lands, a person having the power to use those Lammas lands because he could have a crop of hay off them?—I should allow him, most unquestionably, to do so.

802. Then you would say that they should be reserved to him from the month of May to the month of August?—Yes; he has that right at present, but he does not exercise it. If circumstances should occur in cases where those rights are really valuable and capable of being exercised, there is nothing in this Act to take away the right of such a man, which he would have had if this Act had not been passed.

803. Supposing that a man grew a crop of grass upon the London Fields, supposing them to be Lammas lands, and had not grown a crop until then for a number of years, do you think that the public, having been allowed to go over

Mr. *P. H. Lawrence.*

8 July 1869.

the land for a number of years, would respect his rights?—That is another question. All I can say as to the operation of this Act is, that it seems to me that it would rather assist such persons than otherwise in making the public respect their rights.

804. Then, after all that you have said, we ought to be very careful in inserting in any Act of Parliament the words "any open space"?—If I understand the question rightly, I should rather draw the contrary conclusion; but I am not sure that I quite understand the question.

805. With regard to the 3rd clause in the Bill, taking a radius of 25 miles from Charing Cross, that is an extension of the present area from 15 to 25 miles, have you turned your attention at all to that point?—I have already said that I am not familiar with the circumstances attending the commons between those two areas.

806. Then you know very little with regard to that point?—Yes.

807. Looking broadly at the matter, do you think that the people of London would use most of these commons, supposing that they were reserved for their use, 10 miles further than they now are?—That is hardly a question for a lawyer. I prefer that the Committee should form their own opinion upon that point, and I am sure that they are more capable than I am to do so.

808. Do you know the Act of 1845?—Yes.

809. Will you read the first few words of the preamble?—"Whereas it is expedient to facilitate the inclosure and improvement of commons and other lands now subject to rights of property, which obstruct cultivation and the productive employment of labour."

810. Was not that Act passed with the intention of inclosing land generally throughout the country?—Certainly.

811. By the present Bill, which is referred to this Committee, the intention is to take away that privilege from land situated between a radius of 15 miles and a radius of 25 miles from London?—Yes, to take away the privilege of that Act.

812. Therefore you would be inflicting, to a certain extent, an injury upon those persons who have rights and privileges in the commons which are situated between the 15 and 25 miles line?—You would be depriving them of the benefit of that Act.

813. And consequently you would be injuring to a certain extent their property?—I would rather not draw an inference, but the fact is that you would be depriving them of the benefit of that Act.

814. Supposing that it was considered desirable to extend the radius to 25 miles, might it in your opinion be more valuable to select certain commons for the London public, and to pay the parties what was considered right with reference to those commons, and to leave the rest under the Act of 1845?—That is a question for the consideration of Parliament, but the policy of the present Legislation is not the paying of compensation at all, but simply a conservative policy, without purchasing or compensating rights in any way.

815. It is a great question whether in doing what you say ought to be done in making these commons available for the public, you do not trench very much on the rights of the lords and commoners?—I think that you pursue a policy which has been recognised by the Legislature, and if I rightly understand the justification for the extension of the Act, it is the increased population of the metropolis, and whether that is reasonable or not is a question of degree.

816. I will take another case which I wish to put to you; supposing that a common is very much frequented by people from London, and that you wish to improve it in the way which you state, and that it is improved in the way that you state, do you think it fair and right that the roads should be kept up by a rural parish, and that those roads should not be repaired in some other way than by the people of that parish?—It seems to be reasonable, that if rural roads are used to any extent by an urban population, the town should contribute, to some extent, to the repair of the roads.

817. Does not that show you the difficulty of dealing with these questions, unless you purchase up the rights of those persons who are interested, and make the land the property of the town?—I think that the question of purchase is a very difficult one.

818. I quite admit the difficulty, but is not the other a very great difficulty also?—I cannot myself see the difficulty of the Conservative policy which was adopted in 1866, and which I think is likely to prove beneficial; I think that other minor matters will, in all probability, right themselves.

819. Have you at all turned your attention to Mr. Cowper's Bill which has been referred to us?—Yes, I have seen that Bill.

820. It is there stated, "The term 'Suburban Common' means a common (not being a Metropolitan Common), any part whereof is situate within five miles of a city or town in England of 5,000 inhabitants or upwards, or within ten miles of a city or town in England of 30,000 inhabitants and upwards; your knowledge of England is very great, is it not, and of towns with 5,000 inhabitants?—I do not know that my knowledge of England is greater than that of others.

821. You know that class of towns?—Yes.

822. Do you not know that generally speaking, in a town of 5,000 inhabitants there may only be 3,000 inhabitants actually in the town, and that 2,000 may be situated merely in the parish, and not in the town at all?—Yes, but the population of towns has increased so much in the last 20 years, that it is almost impossible to judge of what a town may become from what it now is; I presume that these provisions are always intended to provide to a certain extent for the future; Parliament has always, apparently, gone a little further than the time present; in the Act of 1845 it was enacted, "that no lands situate within 15 miles of the city of London, or within two miles of any city or town of 10,000 inhabitants, or within two miles and a-half of any city or town of 20,000 inhabitants, or within three miles of any city or town of 30,000 inhabitants, or within three miles and a half of any city or town of 70,000 inhabitauts, or within four miles of any city or town of 100,000 inhabitants, shall be subject to be inclosed under the provisions of this Act, without the previous authority of Parliament in each particular case. That was rather an extension of the Act of 6th and 7th of William 4, because there the radius was as follows: "That nothing in this Act contained shall authorise the inclosure of any open or common arable fields, or of any open or common meadow or pasture lands or fields situate and being within 10 miles of the City of London, or of any open or common meadow or pasture lands or fields situate and being within one mile of any city or town

town of 5,000 inhabitants, or within one mile and a half of any city or town of 15,000 inhabitants, or within two miles of any city or town of 30,000 inhabitants, or within two miles and a half of any city or town of 70,000 inhabitants, or within three miles of any city or town of 100,000 inhabitants," so that the Act of 1845 seems to have increased on the Act of 1836. Then there was a great question as to area in the Session of 1865, when the whole question of open spaces was considered. The Committee state in their Report, "The first question your Committee had to determine was the limit to which their enquiry should extend. The limit of 15 miles had been first suggested, but several important spaces being situate immediately outside that area, they judged it expedient to extend their enquiry to 22, and subsequently to 25 miles round London, measured from the General Post Office, according to the Ordnance survey. Whilst, however, they have admitted evidence in respect of certain open spaces in this extended area, this was done in the first instance for the purpose of enquiry, and not to prejudge the question as to what might fairly be considered the proper limit of a metropolitan area, beyond which these open spaces should be considered and treated more with reference to their agricultural capabilities than as directly affecting the interests of the inhabitants of the metropolis as places of recreation. Possibly no exact circle of a definite radius can be drawn which may not appear to embrace too much in one direction, or too little in another; and any area which may now be fixed may be found too small in some years' time; but looking to the necessity of fixing some area, they are inclined to recommend that the district of 15 miles radius from the General Post Office, according to the Ordnance Survey (the limit prescribed by the General Inclosure Act of 1845), be adhered to for the present as the metropolitan area, to which special legislation, with a view to the inhabitants of London, should in the first instance be directed. As the metropolis extends, it will always be in the power of Parliament to extend this legislative area. In the case of a proposal to inclose any spaces beyond the prescribed area in which the metropolis is interested, Parliament will have the opportunity of considering the requirements of that particular case, upon the Bill for its inclosure."

823. I am referring specially to the case of a town of 5,000 inhabitants; in your opinion, is not the distance of five miles from a town of that sort much too great a distance?—I would rather not give any opinion upon such a point, because I think that my opinion would not be worth much; it is not a matter upon which I am competent to speak from any special knowledge which I have, professionally or otherwise.

824. Mr. *Winn.*] You have said that the Act of 1866 might have been carried out, leaving all questions of litigation or otherwise unaffected by a scheme for inclosure?—Yes.

825. What do you mean by "otherwise"?—I mean questions of dispute which had not reached the stage of litigation. I believe that there is no common in the kingdom, which has not from almost all time been the subject of disputes as to the extent of the rights between the commoners, amongst themselves, and with the lords. My investigation upon these matters has shown me that there have been disputes from the very earliest periods. There always will be disputes going on, and the word "otherwise," meant disputes which had not reached the stage of litigation.

Mr. P. H. Lawrence.

8 July 1869.

826. You said that you thought that the inhabitants of a district might be empowered to make bye-laws for the regulation of these commons?—Certainly; the bye-laws are to be made under a special provision of the Act after the scheme; the bye-laws are to be made by the conservators in the first instance, and they are to be approved by a Secretary of State before they become law.

827. I think that you said that in those bye-laws you would include the drainage of the common, the planting of trees, and most things which tended to make the common more useful for the public?—Yes, those objects which were desired and rendered necessary by the circumstances of the case.

828. Might not the lord of the manor, and still more the commoners, object to it upon the ground that those were claims which never existed before?—The lord of the manor would always be consulted in these cases, and if there was any substantial objection on his part, it would, no doubt, be considered; but I will suppose that the lord did not object (and I can hardly imagine that he would object) to the planting of a few trees, which would become his property, or to the drainage which might improve the welfare of the neighbourhood. The operation is, that the lord of the manor would be consulted upon the scheme, and he would state his objections; and substantially, if his beneficial rights were at all affected, the scheme could not take place without his consent.

829. I understood you to say that you would admit the inhabitants adversely to the rights of the commoners, and of the lords?—I would admit the inhabitants not adversely, but certainly substantively, to propose a scheme, and to remove nuisances, whether the lord objected or not, seeing that his interest could not be prejudicially affected by the removal of the nuisances; when you come to an improvement it is a different thing; if any improvement substantially affected his rights, it could not take place without his consent; but if it did not affect his rights, it could not be objected to; I would require his consent to any substantial infraction of his rights; there might be a technical interference with his rights as regards drainage; you cannot open the soil without going upon the land of the lord of the manor, and it is a question for Parliament whether they would not give the power, under certain restrictions, to pursue that drainage if the health of the district required it, even against the consent of the lord of the manor; that is a very fair question for discussion, and it is one which would have to be considered on the carrying out of any scheme.

830. Would you give the power for this drainage without prejudice to the rights of the soil?—Yes.

831. You said that you thought that compensation should be given where any valuable rights were interfered with, but not where any speculative rights were interfered with; what did you particularly refer to?—I meant by the interference with a speculative right a mere interference with the soil by the opening of drains, without depriving the lord of any substantial rights. Although the opening of the soil might be construed to be an interference with the right of the lord, I think, that in the case of a real and necessary public advantage it might not be unreasonable to enact that that should be done without any compensation to the lord.

Mr. *P. H. Lawrence.*

8 July 1869.

832. Then in what cases would you give compensation?—I think that it would be safer to omit compensation altogether; but a case in which compensation might arise would be the case of gravel digging; I will illustrate that by the case of Blackheath; the Crown is the lord of the manor of Blackheath, and it was given in evidence before the Committee of 1865 that the Commissioners of Woods were in the habit of digging gravel; the people complained of the operation of that right as affecting the general comfort of the inhabitants and the enjoyment of the common; supposing that that right to dig gravel were found injuriously to interfere with the public, and with the inhabitants, and that an arrangement could be made with the lord of the manor to forego it, it would, of course, be reasonable that he should have compensation; there would be the deprivation of a substantial benefit; the Commissioners of Woods got 65 *l.* a year in the case of Blackheath. After the report of the Committee of 1865, the Crown gave up that right, and in the Act of 1866 there was an express power for the Crown to forego that right for the benefit of the public; that could not be expected to be done in the case of a private individual, and, therefore, in a case of that sort, if there was a restriction, it would only be fair that compensation should be awarded; but I take leave to observe upon that matter, that it might be settled by private arrangement without any provision in the Act, and I think that under this Act the principle of compensation has been open to a great deal of misconstruction, as extending to what it was not intended to extend to.

833. You do not think that the lord and the commoners would have any right to land which was intended to be inclosed; suppose a case in which you had given a large sum for the manorial rights, because of a proposed inclosure, you do not think that you would be entitled to any increased compensation on that account?—I should not be entitled to any compensation for any rights which were not taken away; the whole principle of this Bill is not to take away any rights.

834. If you admit the public over the common, you practically deny its use for certain purposes?—I do not admit the public at all. There are certain open spaces which, in fact, are used by the public, and which require protection.

835. Then you would not admit the public to any open spaces of which they had not hitherto made use?—Certainly not.

836. As to Epping Forest, you said that you thought that the whole of Epping Forest ought to be included within the limits of this Bill?—I hope that I did not use the word "ought"; but I was asked to make a suggestion, and I stated that as the greater portion of Epping Forest is already included, it would be convenient if you extended the limits so as to include the whole.

837. In the interest of the public, do you think that it is desirable that a hard line, say, of 25 miles, should be drawn around the metropolis, or that certain commons should be scheduled in the Act as commons, which should not be inclosed without a special Act of Parliament?—That is rather a question of policy, and practice; practically, I think, that you would find that it would be considered invidious to pick out particular commons, instead of making a general law for a district; and I think that Parliament has always defined a district, and made a general law within that district, rather than making a special law, applying to certain selected places; if I were proposing a measure to Parliament which I was interested in carrying I could forsee a far greater difficulty and objection in the one case than in the other.

838. Might there not be spaces beyond the 25-miles radius, which, in consequence of railway communication, would not be further practically for the public than many other spaces which would be geographically nearer?—Yes; but then the parties could go to Parliament. If the general policy is right to include a certain area within the law which you make, then the necessity for an exception must be proved to Parliament in the cases where a particular space is proposed to be taken out of that area, and the only objection to that course would be the expense.

839. Might there not be some spaces which would be so small that it would not be worth while to have a special act for them?—Yes.

840. And which it would be of no great importance for the public to use?—That would be entirely a question of opinion.

841. You stated that the commoners generally were opposed to the inclosure of open spaces; do you mean that to apply to the whole of the kingdom, or only to the next metropolitan district?—In all the great cases of contest with the lords of the manor who have endeavoured to inclose, the commoners, have in fact, practically fought the battle of keeping the commons open, and I had those cases in my mind when I answered that question, but I think that it would be hazardous in me to pronounce any opinion on behalf of the commoners generally.

842. Mr. *Knight.*] You are probably aware that the lord and the commoners, if combined, and claiming the fee, have a common law right of inclosing a common?—That is generally so considered.

843. Do you think that it would not be at all interfering with those rights, if the public were to expend a large sum of money on a scheme of this kind?—No; I think that the public do it entirely at their own risk; if you limit the scheme, as has been done in the case of Hayes, the public, in expending their money, do it at their own risk, and I do not think that they would ever get a sixpence back in case at any future time the common was inclosed.

844. Supposing that the lord and the commoners thought fit to apply for a private Bill to inclose the common after you had spent a large sum of money upon the scheme, do you think that they would have the same chance of getting an Act of Parliament, as they would have had originally?—I think that that must depend upon circumstances; I do not think that the persons who spent their money would have any right, upon that ground, to oppose the inclosure; upon other grounds they might urge general policy, but where there is a distinct clause that no rights are to be affected, I do not think that they could afterwards urge any expenditure upon such a plan as a ground for opposing the inclosure in any way.

845. You think that the Act of 1866 was an Act rather opposed to the principle of compensation; how do you account for clause 15, which gives compensation?—Clauses 15 and 16 were put in at a very late stage of the Bill, by a noble lord who opposed the Bill to a certain extent; they were put in for his protection, and were not in the Bill as originally drawn. Although I do

not

not consider that those clauses in any way destroy the effect of the Act, yet I am quite of opinion that the presence of those clauses has created in the minds of many persons a misconception of the objects of the Act; I think that they are unfortunate clauses in the Act; I do not think that they are required for its operation, and I rather think that they tend to prejudice the view which might otherwise be taken by persons having to carry out the Act.

846. Even with the view of protecting the present rights of the owners of the commons?—That might have been done by putting in a short clause protecting any right. I should say that under no circumstances should any right be affected.

847. Then you would allow gravel pits to be dug, or minerals to be obtained?—It is not at all competent at the present moment for any person to dig gravel pits to the prejudice of the commoners; it is all a question of degree, how far gravel may lawfully be dug, but it must remain subject to the operation of the law as it is now. The lord of a manor cannot dig gravel pits to the detriment of the pasturage, but he might come to an agreement with the commoners, and the other manorial operations might be carried on; all that is now prescribed by the law, though there is no definite arrangement for carrying it out, and if the Inclosure Commissioners adjusted the matter, I think that it might be better carried out. But that is hardly within the purview of the scheme.

848. The Commissioners could hardly adjust these rights without making an allotment of land, could they?—I should not propose that; but in cases of difference, I think that it might be decided where a gravel pit should be dug, it being an acknowledged principle that it should be dug at a place where it occasioned the least injury to the pasturage. That is a point of some dispute under present circumstances, and the difficulty arises from the fact that in former times the lord and his court was the judge in those matters; whereas all that machinery is now done away with, and the dispute cannot be settled except by private arrangement.

849. Mr. *Cowper.*] My Bill was originally drawn in such a way that no rights should be taken away unless with consent?—Yes, no beneficial rights. It was always contemplated that there should be the power of drainage, but it was considered that drainage would not take away anything, but would rather add to the value of the land.

850. Was this proviso, by which rights of a beneficial character as to the common might be taken away, put in not by the promoters of the Bill, but by some persons who were afraid that it might act prejudicially to their interests?—Yes.

851. Do you think that the good working of the Act of Parliament would be rather promoted by providing that no person's right should be taken away, whether beneficial or otherwise, without his consent?—Yes, that is the result of my experience.

852. You have been asked whether the operation of this Metropolitan Commons Act, which gives the lords of the manor and the commoners the power of protecting the common under the care of the Inclosure Commissioners, does not deprive the lords of the manor of their property; will you inform the Committee what right of property this Metropolitan Commons Act takes away from any lord of the manor; does it deprive him of any right which he has over the common itself?—Certainly not.

853. Does it deprive him of any power which he might have of inclosing the common with the assent of the commoners by means of the common law?—Certainly not.

854. Does it deprive him of any opportunities and powers which he may have of inclosing the common by the customs of the manor?—No.

855. Does it deprive him of the power of applying to Parliament for a private Act?—Certainly not.

856. Does the matter merely consist in this, that he is deprived of the facilities which the Inclosure Act of 1845 gives to him?—That is so.

857. What is your opinion as to the principles of the Inclosure Act of 1845; does it appear to you that the intention of the Act was to increase the private property of any individuals, or was it for purposes relating to the public good?—The purposes seem to me to have been entirely directed to increasing the produce of the country, and to continuing the policy which was dictated by the Committee of 1800 regarding the increased production of the country by cultivation of the waste lands, and with a view to adopting a more convenient machinery, and saving the expense to various parties of separate applications to Parliament.

858. There were several Committees to which you can refer as preparing the way for the Inclosure Act of 1845; was there one in the last century?—A Committee sat in three sessions of Parliament, in the years 1795, 1797, and 1800, under the presidency of Sir John Sinclair, and the Reports are printed under the head of "Poor" in the Reports of the Committees of the House, and have been reprinted by order of the House. The Reports relate chiefly to the exportation of corn and grain, the employment of the labouring poor, and incidentally to the cultivation and improvement of waste lands; and the result of the consideration of the Committee is, that, with regard to the employment of labour, and with regard to the increase of the productiveness of the country, and to avoid scarcity, and so forth, a great portion of the waste lands might be advantageously cultivated. They instanced that out of the total extent of the whole country, which is something like 46,000,000 acres, there were 7,000,000 acres of waste land in England and Wales; and they instanced the inclosures which had taken place from the commencement, the first being in the reign of Queen Anne. In England and Wales there were uncultivated 7,888,777 acres, and there were cultivated 39,027,156 acres, the total being 46,915,933 acres. The Committee drew the conclusion that it would be very desirable to bring a great portion of that waste land into cultivation. They contemplated that at the close of the war there would be a great number of disbanded soldiers, and that it would give them a great field of labour, and increase the productiveness of the country, and render England less dependent upon foreign countries for the importation of grain. No one can read these reports without seeing that that was the chief thing in the minds of the Committee; they instance the expense of inclosures by private Acts.

859. You state that the object of the Committees which sat previously to the Inclosure Act was to increase the food of the people; do you

Mr. *P. H. Lawrence.*

8 July 1869.

you find anything in the Reports of those Committees, or in the preamble of the Act, to lead you to suppose that the main object, or any important object, was to increase the rights of property of private individuals?—Certainly not.

860. You have said that you find that by the 14th section of the Act of 1845, suburban commons, or commons in the neighbourhood of towns, are dealt with in a different manner from the rest of the country; are you of opinion that the advantages which were intended to be gained by the country at large, do or do not apply at the present moment to the inclosure of those commons which are contiguous to towns; do you think that those general advantages which were aimed at by the Inclosure Act, practically apply now to the inclosure of commons in the vicinity of towns?—I think that it is perfectly evident that the commons in the vicinity of towns are not available to the same extent for agricultural purposes, and that it would be almost impossible so to devote them.

861. Has your experience of the matter led you to suppose that the object sought for in the inclosure of commons in the vicinity of the metropolis, is for the purpose of building, and not for the purpose of tillage or pasture?—Certainly.

862. Consequently any public policy which might relate to agriculture would not apply to these spaces in the neighbourhood of London where no agriculture is in view?—Yes.

863. Will you state whether you consider, from looking back to the ancient history of England, that the private right which the lord of the manor has in a common, or in the waste of a manor, is exactly the same as the private right which he has over his own domain, which he may inclose against all comers?—I think that that is a difficult question; it is a legal question upon which a great many different opinions have been expressed. I think that, historically, it can hardly be doubted that the nature of the enjoyment of lands which were taken into a lord's domain was a very different one from the dominion which he exercised over the waste and uninclosed lands within his territory of the manor. We all know that in old times the business of the country was carried on by lords of the manors, with their courts, through the country; the lord of the manor was a kind of sovereign; in some cases he had the power of life and death; he, at all events, had a jurisdiction in all cases of crime in early times, and his courts were the courts to which all the persons in his district resorted for justice; he had, moreover, to lead them to battle in time of war, and he was answerable for the well-being, for his own sake, of the whole of the community; he was answerable to his sovereign for the due performance of the military and other services required of him; and he was dependent upon his tenants for their assistance in defending his rights. It was a matter of necessity at that time to have these commons and open spaces; and there is not a single manor in England without a common over which the tenants had their rights of pasturage or wood in early times. Then came the Statute of Merton, which said that in many cases these wastes were so large as to be beyond any purposes for which they could be used by the tenants; it gave the lord liberty to cultivate portions of the waste provided he left enough for the tenants of his manor; that Act was in the year 1235, and it was afterwards amended by the Statute of Westminster, in 1285. Then, in 1549, in the reign of Edward the Sixth, the Acts of Merton and Westminster were renewed, from which we may infer that they had been disused; when we get down to the present century we find that the rights of the lord to inclose under the Statutes of Merton and Westminster are practically at an end. We find that in the year 1795, when Sir John Sinclair's Committee sat, they said, "It is hardly necessary to remark how insufficient these statutes were, for bringing any considerable portion of waste lands into a state of cultivation. It was seldom that any common was sufficiently extensive, to afford a surplus of any moment, after the claims of those who had a right of common on it were satisfied. It was hardly possible, indeed, in many cases, to ascertain what was a sufficiency of pasture; and where a common of turbary or esteovers existed, the lord could not improve any part of that waste." The right of approval (as it is sometimes called) was considered to be at an end at that time; it had probably then been disused for a long time; and the fact of those statutes being practically defunct, gave rise to the present legislation, which has now lasted in an unbroken course from the year 1709 until the year 1801, when there was a General Consolidation Act, and until the Inclosure Act of 1845 was passed.

864. Then, originally, the lord of the manor stood in relation to the wastes of the manor in rather an administrative and judicial and representative character than as a private owner?—I consider so, as a matter of history.

865. And when subsequently it became necessary to alter the state of things which existed by the common law, the General Inclosure Act was passed for public objects?—According to the recitals in the Acts of Parliament and the reports of the Committees of the House I take it that it was so.

866. Do you think now that the objects of public policy, owing to the different circumstances, are on the other side of the question of inclosure, as regards the commons in the neighbourhood of the metropolis and of other towns?—I can hardly say that they are on the other side, because I find in 1845 distinct evidence that the policy of the Act of 1866 was recommended by Mr. Blamire, the Chief Inclosure Commissioner, as being thought necessary at that time. Mr. Blamire used almost the exact words which we have used; he said that a large open space of ground should be put into such a condition as would augment, and not diminish, the means of enjoyment in the neighbourhood, and he seems to have shadowed out the very policy which dictated the Act of 1866.

867. While a waste of a manor remains uninclosed, have the public at large the power of wandering over it, without being practically stopped?—That is a question of law; I do not know whether you ask that as a question of law, or as a question of fact.

868. I ask it as a question of fact?—As a question of fact we all know that there is no restriction to persons going over an uninclosed common.

869. From your legal knowledge and experience, is there practically any power of bringing any action against persons who wander over a common, in a case where there is no inclosure. Does the fact of the absence of an inclosure practically prevent the success of an action for trespass?—I do not believe that any such action would

would practically succeed at law, if defended; but if it did, I do not believe that any jury would give any damages beyond nominal damages. I differ with many persons who think that such an action might be maintained. I do not think that such an action could be legally maintained.

870. Have the courts of law come to any decision which would enable you to say whether the public have anything which could be called a right, with regard to wandering over an uninclosed waste of a manor?—There has been a sort of decision; but there have been no authoritative decisions which would enable one to give a short answer to such a question. I have my own view with regard to it; but perhaps it would not be well to trouble the Committee with all the legal bearings of that question. I think that there can be no doubt that politically and practically commons have always been considered to be open places, and persons have gone upon them.

871. Mr. *Knight.*] Are you speaking of commons near the metropolis, or not?—Yes, I think that commons which have never been subject to cultivation have been practically used. When I was a boy I always went over them when I had the chance, and I have never heard of any person being stopped. With lands which are inclosed or tilled it is a very different thing.

872. Are you aware that many commons are strictly preserved, and that the gamekeepers warn persons off them?—Yes, as to game, certainly.

873. Mr. *Cowper.*] Is it the case that the operation of the Metropolitan Commons Act upon lords and commoners is not so much to deprive them of any right of property as to deprive them of the privilege of having the machinery of the General Inclosure Act to give them the advantage of dividing their interest in inclosing the land?—That is so.

874. Although Hayes Common is the only common which has yet been brought under the operation of this Act, are there other commons within the metropolitan police district in which persons connected with them, or residing near them, will probably have to invoke the action of the Commissioners at some future time?—Certainly. I have had a good many communications on the subject. Before I was in my present office I heard of a great many cases, and I have no doubt that they are contemplated.

875. Therefore you would not think that we have any reason to suppose that in future years our commons within the metropolitan police district may not be brought within the operation of the Act in the same way as Hayes Common has been?—I have no doubt that when the operation of the Act comes to be better understood, and when the fears which have been entertained (as I cannot help thinking), even by many honourable Members of this Committee, have been dissipated, which have no foundation whatever, that Act will be very extensively applied. I think that it is a most valuable provision.

876. Do you attach great importance to that portion of the Act which enables the inhabitants of a place to contribute money, which would preserve the surface from injury, and would enable them to provide the means of enforcing bye-laws and regulations for going on the common?—Certainly; I think it a very wholesome thing. If a man has provided money for a certain object he will take care to see that the object is carried out; and I do not think that the expense would be very heavy. I think that the knowledge that an authority existed, and that a person in authority was walking about a common, would, in most cases, be quite sufficient to prevent irregularities, nuisances, and disturbance. Of course drainage might be an expensive thing, it would be a luxury, and planting would also be a luxury.

Mr. *P. H. Lawrence.*

8 July 1869.

877. Therefore you say that the means used to preserve a space for those persons who wished to take recreation upon the common, would also be beneficial to any commoners, or any lord of the manor, who were to exercise their common rights?—Yes.

878. Mr. *Knatchbull-Hugessen.*] In the case of a wet and unhealthy common near a town, if parties went to the expense of a scheme, would they not be sure to drain it, and to make it healthy, but if the advantages which are held out by this Bill to persons having rights in such commons, were not such as to induce them to promote a scheme, would not the result of the exclusion of such a common from the General Inclosure Act be, to leave it in its present unhealthy state?—Not necessarily; it would entail a greater expense on the parties who promoted the inclosure, because they would then have to go to Parliament for a separate Act, instead of applying to the Inclosure Commissioners.

879. Are you aware how many private Acts have been applied for since the passing of the Act of 1845?—I should doubt whether there had been any; there certainly have not been many.

880. Was not the object of that Act to prevent the expense of private Acts?—Yes, one object.

881. Are you quite sure that you can apply now for private Acts?—Certainly.

882. I understood you to say that, judging from the history of England, the rights of the lord of a manor over the waste land were formerly mainly of an administrative character?—Yes; he, in olden times, took no benefit from it himself; he had his own domain and park; he always had the right of soil, but the rights of common were in the commoners. The best illustration of that being so is, perhaps, the practice of the Inclosure Commissioners, which ought not to be confounded with law. The practice of the Inclosure Commissioners, according to a rough estimate of the rights, has always been to give the commoners about 15-16ths of the common, or something of that sort, reserving the 1-16th to the lord for his seigniorial rights.

883. That is as between the lords and the commoners, and it has nothing to do with the general public?—Just so.

884. As to the history of England, will you refer me to any decision of a superior court of law which maintains the interpretation that the rights of the lord are merely of an administrative character?—The word "administrative" must be understood in the sense in which I have explained it, and further than that, it is of very litte value. Honourable members understand that subject, and they study the history of England as well as I do, but I ventured to express the opinion that the lord himself did not exercise any beneficial use of the common as a general rule, except in the matter of game, or in the matter of trees, but that the use was generally by the commoners.

885. In fact, your opinion as to the rights of the lord has been gathered from a general idea of English history, and not from any study of the decisions

Mr. *P. H. Lawrence.*

8 July 1869.

cisions of courts of law upon the subject?—Just so.

886. Mr. *Cowper.*] Was not the period of which you are speaking, antecedent to the decisions of the courts of law, with regard to which the honourable Member has been asking you?—I began by referring to a period prior to the Statute of Merton.

887. Mr. *Bonham-Carter.*] Mr. Cowper asked you whether the public had not the power of going over these open spaces; did I rightly understand you to say in your answer that they physically had the power, or that they legally had the power?—I answered that they had the physical power. I declined to answer any other question.

888. *Chairman.*] You mean that they practically had the power?—Yes.

889. Mr. *Bonham-Carter.*] Are you not aware that it has been held that a commoner has no right to go upon a common, except for the purposes of commonage, and that if he has a right of pasture, that is only a right to turn out his cattle, or only to see that there is pasture at the time of turning out, and that it would be trespass if he went upon the common for any other purpose?—I certainly dispute that as a proposition of law. I should not like to answer that question without going into the whole law upon the subject, and I am afraid that it would be too long a chapter for the Committee to hear.

890. We will take a case where the right of sporting is clearly preserved; I will suppose that I give notice to a person who is not detected in a breach of the actual law, that he shall not trespass upon that common; is it not the practice that I can prosecute that man for trespass, and that it is constantly done in the county court after notice?—Do you mean for going upon the common at all?

891. Yes?—I have not heard of such a case.

892. The Act of Parliament requires the consent of two-thirds of the parties before it admits the lord and the commoners to participate in the benefit of the Act of 1845?—Yes.

893. Do you not think that there are many cases in which it is not desirable that so large a majority should control the minority in matters of property?—I have never thought it at all within my province to question the general policy of the Inclosure Act.

894. In many cases the common is held only between the lord and the commoners?—That is a difficult question.

895. Are there not cases of Shack lands in which the right of property in the common is only between the lords and the commoners, as to the Shack common rights?—I think that that is very likely.

896. That being a property, do you not think that it is very desirable that a very small minority of the owners of such property, who are as it were joint owners, should not control the majority, and certainly not so large a majority as two-thirds, in their realising that which is vested in them as joint owners?—I am quite unable usefully to give an opinion upon such a point.

897. Mr. *Johnston.*] Has not a perusal of the court rolls led you to come to the opinion which you have come to, as to the rights of the lord of the manor being of an administrative character originally?—Yes, in many cases.

898. Mr. *Reed.*] You have quoted the report of Sir John Sinclair's Committee; what proportion of land has been inclosed since that date?—I have no record of inclosures between 1801 and 1845; since 1845 there have been 614,804 acres inclosed. I cannot find the particulars as to the gap which exists between 1800 and 1845, though I have been looking for them. Up to 1800, 2,837,873 acres were inclosed under private Acts, and from that time to 1845, there were, I believe, about 2,000 Acts passed, but I cannot find the acreage.

899. *Chairman.*] Probably fully three-fourths of that uninclosed land have been inclosed since?—I should not think so much.

900. Mr. *Winn.*] You said, as I understood you, that it was the practice of the Inclosure Commissioners to allot 15-16ths to the commoners, and about 1-16th to the lord of the manor?—Yes.

901. Do you not know that that 1-16th is only for his right in the soil?—Yes, for his right in the soil, or his seigniorial rights, or whatever you may call them.

902. What will his seigniorial rights be; is it not simply for his rights in the soil?—As owner of the soil and everything else to which he is entitled.

Monday, 12*th July* 1869.

MEMBERS PRESENT:

Colonel Barttelot.	Mr. Andrew Johnston.
Mr. Bonham-Carter.	Mr. Charles Reed.
Mr. William Cowper.	Sir Henry Selwin-Ibbetson.
Lord George Hamilton.	Mr. Frederick Stanley.
Mr. Knatchbull-Hugessen.	Mr. Rowland Winn.

EDWARD H. KNATCHBULL-HUGESSEN, Esq., IN THE CHAIR.

Mr. ROBERT CECIL AUSTIN, called in; and Examined.

Mr. *R. C. Austin.* 12 July 1869.

903. *Chairman.*] You wish to give evidence respecting a common which is within the metropolitan area?—Yes.

904. What common is it?—It is called Fairmile Common; it is in the parish of Cobham, next Claremont, which has been lately given to Her Majesty.

905. Is it a common which is under the provisions of the Act which we are now considering, or is it a common which would be brought under these provisions by an extension of the Act?—It is one which would be brought into it under the extension of the Act; that is my object in giving evidence to-day. The Bill of Mr. Chambers, the Common Serjeant, would include Fairmile.

906. Do you attend here by the wish of any body of persons, or simply as giving your own opinion? — I attend as giving my own opinion as regards the common itself, which is attempted to be inclosed; and I moreover speak in behalf of my richer neighbours around. I speak in behalf of gentlemen of very large property around the neighbourhood. I may say that I represent them.

907. Then you are not here to-day as an advocate of the poor resisting an inclosure, but you are here as an advocate of rich gentlemen?—Hardly that, because I think that I should explain that I only advocate the interests of the poor which are attempted to be destroyed. The land consisted of about 1,300 acres originally, but an Act of Parliment was passed in 1793.

908. Where is the common?—It is situated about 16 miles from London; it is in the parish of Cobham, and near to Esher; it is three miles from Esher Railway Station. By an Act of Parliament which was passed in 1793, an inclosure was made of 1,000 acres of land, but from what I can gather 303 acres were then left out, for the purpose described by the Act of Parliament. It was left to a certain number of poor persons for the purposes of pasturage, cutting turf and heath for fuel; but I shall place the Act of Parliament before the Committee, which will describe it in its own language. The inclosure of 1,000 acres was made, leaving out the 303 acres. I believe that there were as many as 132 cottagers who would benefit by the 303 acres being left out. The persons to benefit must be so poor that they must really be occupiers of cottages not exceeding 6*l.* and 10*l.* in annual value; and I wish to observe here that the owners of the cottages had no rights whatever, but that the rights vested in the occupiers.

909. Is that under the Act of Parliament?—This is under the Act of Parliament, which I shall presently place before the Committee. As time went on, these cottages came into the possession, as they now are, of many persons of large wealth. I may mention that the Countess of Ellesmere holds two of these rights, and that Lady Moore holds one or more. I have the names of the owners of rights. The rights are now in the hands, as I maintain, of an entirely different class of persons from those to whom they were left for the purpose of benefiting.

910. Will you be kind enough to state what these rights were which were left to these 132 persons?—The tenants of the cottages have the sole right of pasturage, and cutting turf and heather for fuel.

911. Over the whole of the 303 acres?—Over the 300 acres, the odd three acres being left out for digging gravel for the repair of the roads.

912. Then, as I understand you, that which was reserved in 1793 for poor persons, has somehow or other come into the possession of a rich class of persons?—I think so, and I shall be able to prove that to the Committee.

913. Do you mean to say that those houses which formerly were only worth 6*l.*, 8*l.*, or 10*l.* a year, have risen so much in value that they are inhabited by a different class of persons?—No; many have been pulled down altogether, and do not exist at all; but the rights over the common exist, and I may say that the largest farmer is Mr. Thomas Bennett, who possesses, I believe, as many as 12 of these rights. The rights were originally allotted to the tenants of the cottages of a value of not more than 6*l.* or 10*l.* a year. Perhaps it would assist the Committee if the Act of Parliament itself were read; I have got a copy of the Act, the date of it is 1793.

914. Is it only with regard to these 300 acres that you are now giving evidence?—Yes; the other portion has been inclosed.

915. This Act, which appears to be an ordinary private Act for the inclosure of the common, sets forth in this clause, "And be it further enacted, that the said Commissioners, or any two of them, shall, and they are hereby required, after setting out roads and ways, bridges and drains, and ground for gravel pits as aforesaid, to set out and allot 150 acres of Fairmile, 70 acres of Chatley Heath,

Mr. *R. C. Austin.*

12 July 1869.

Heath, being the least valuable part for cultivation of the said commons or waste lands, 20 acres of Poynter's Green and Downside Common, 20 acres of Little Heath, 20 acres of Old Common, and 20 acres of the Tilt, Leigh Hill, and Brook Hill, making in the whole 300 acres, in as many different allotments as to the said Commissioners shall appear expedient, and which allotments shall include the private roads necessary to be left for access to the different cottages and houses situated on such commons or waste lands, for the use of the occupiers of houses or cottages now standing and being within the said manor and parish, without more than one rood of land belonging to and used with the same as garden or orchard ground within the said manor, the yearly rent of which, at the time of passing this Act, shall not exceed 6 *l.*; and for the use of the occupiers of houses or cottages and gardens, orchards or land together, within the said manor, the yearly rent of which, at the time of passing this Act, shall not exceed 10 *l.*; and the occupiers of such houses or cottages and tenements for the time being, shall at all times afterwards have the sole and exclusive right of using the said parts of the said commons or heaths so to be set out and allotted for the purpose of pasture, and of cutting turf and heath for fuel in equal proportions, according to the number of the said houses and cottages without paying anything for such use; and the said Commissioners, or any two of them, are hereby required to set forth and describe all such cottages or houses with their respective rents, in the award to be made by them as hereinafter directed; and in case any other person or persons not holding cottages, houses, and tenements of such yearly value and descriptions as hereinbefore mentioned, shall at any time or times turn out sheep or cattle of any sort, or cut any heath or turf on the said commons or heaths so to be set out and allotted as next before mentioned, every such person so offending, being thereof convicted before one justice of the peace for the said county of Surrey, upon information thereof upon oath before any such justice, shall forfeit and pay for each such offence the sum of 40 *s.*;" and then there is a distribution of the penalty, half to the informer, and half to the poor; according to this enactment these 300 acres were to be for the use of the occupiers of lands and buildings of a certain value?—Yes.

916. What has become of the land in cases where the houses and cottages have ceased, and the occupation has also ceased?—The land is now in the possession of about 43 persons; of these 43 persons the chief is Mr. Charles Combe.

917. Is it held that those allotments cannot be parted with?—It has never been so held yet.

918. But has that practically been the case?—Practically, the cottages which these rights represented, fall into the hands of such persons as Mr. Charles Combe and Lady Ellesmere and Lady Moore; the two ladies have signed a petition against this attempt to inclose the common. Some of these 43 persons are now attempting, by means of law, having applied for a mandamus, to compel the lord of the manor to show cause why he refuses to give his sanction to the inclosure of this common, which he has always resisted.

919. Who is the lord of the manor?—The Rev. Mr. Mount; he has always resisted the inclosure, and a mandamus has been applied for, which is to be argued next term, for him to show cause, with the Inclosure Commissioners, why these 303 acres should not be inclosed,

920. Who is promoting the inclosure?—It has been promoted by Mr. Charles Combe and by Mr. Worsfold, and by persons who possess these rights, into whose hands these poor cottages have fallen as their property.

921. I understood you to say that you represented some of those persons who are opposed to the inclosure?—All the persons whom I represent are opposed to the inclosure.

922. But some of them have these rights?—Yes; the Countess of Ellesmere has these rights, but she is opposed to the inclosure, and so is Lady Moore.

923. Then among those persons who claim to have these rights, there is a difference of opinion as regards the inclosure?—Certainly.

924. What is the number of persons who have these rights?—About 43.

925. Then is the state of the case this, that those of the commoners who wish it are going for some power at law to compel the inclosure?—Yes.

926. Are you aware of any case in which such a proceeding has been taken before?—I speak as a barrister professionally, and in my opinion such a step is unprecedented.

927. Is it not the case that under the General Inclosure Act the lord of the manor has a positive veto upon an inclosure?—I have always understood so; but that is a case which has to be argued.

928. Were the rights of the lord of the manor supposed to be ousted by the Act of 1793, and was his claim compensated for then?—No; he, I believe, maintains that he has still an interest under this Inclosure Act; and that will be one of the questions before the Court of Queen's Bench next term.

929. There will be a question whether, in fact, the Act of 1793 did or not take the lord of the manor out of his position as lord of the manor with regard to the 300 acres?—That, I imagine, will be one of the questions submitted to the Court.

930. Then, in fact, in this case, instead of, as has been represented to us as sometimes the case, a lord of the manor rather promoting an inclosure against the interests of the poor, a lord of the manor is opposing an inclosure against the interests of the poor?—Yes; it is, I think, the first case of the kind on record.

931. Will you proceed with your statement?—I should maintain that, when the common is inclosed, the very persons for whom the 303 acres were left out, in order that they might be benefited, would be most seriously damaged. But, on another bearing of the question, all those persons who have built their houses overlooking Fairmile Common, such as Mr. Poulett Scrope, who is my next neighbour, and who for a great many years was a Member of this House, and Mr. Price, a gentleman within a very little distance from my own house, and who possesses large property, and many other similar persons, all around this common would be seriously damaged by its falling into the hands very likely of persons who would use it for great public buildings, or cottages, or some other nuisances, and we cannot tell what might occur by the proposed inclosure.

932. Do you know what proportion of the 43 persons are opposing the inclosure?—I am only able

able to say that all the persons who now possess the rights would so greatly benefit by the realisation of this land, that with the exception of the Countess of Ellesmere and Lady Moore, I do not think that there would be many others that I am aware of objecting to the inclosure. I am not aware personally of any others who are against the inclosure who themselves possess rights.

933. That being your view, and you being opposed to the inclosure, you are here to advocate the extension of this Bill to a radius which would include this common, and would prevent its being inclosed?—Yes.

934. Have you general evidence to give upon the matter?—No, except that I am speaking generally on behalf of all those around me, and I believe that Parliament will be petitioned, and in fact a petition is in the course of signature, so as to facilitate the Bill of Mr. Chambers the Common Serjeant, as we should be within the limit of 25 miles.

935. What is the character of this common?—It is at present a wild country of heather and gorse; it is of no value for agricultural purposes, but only for the purposes which the Act of Parliament stated, namely, for the purposes of fuel, &c.

936. Has any of it ever been used for garden ground?—No. I believe that there would be no power for the poor to use it beyond what the Act of Parliament specifies.

937. Has it been used to any great extent for the purpose of pasture?—I believe that many of the poor occasionally turn out their cows.

938. For nothing?—Yes, and they cut their fuel for nothing.

939. Are there many poor in the neighbourhood still left?—I ought to have mentioned that the 303 acres are not all together in the parish. I can give the Committee the proportions; they are in the Act; 150 acres at Fairmile, 70 acres at Chatley Heath, &c. I can say that poor people use the common at Fairmile.

940. But where there are poor, they would feel the proceeding to be a hardship?—I do not see that they would be at all benefited by the inclosure.

941. Have they now rights of which they would be deprived by the inclosure?—Yes; it is the occupiers, and not the owners who now possess the rights.

942. Are people in the habit of walking over this common; is it much used as a place of resort?—It is one of the most beautiful spots near London, and is much frequented; it is a nice walk from Esher of about a mile and a half, or two miles.

943. What is the population of Esher?—I cannot say.

944. Are there any other commons round Esher which are uninclosed?—I know that there is one where the rifle corps have their butt; but I do not know why it was not inclosed, or any circumstances connected with that common.

945. Nor, perhaps, do you know its size?—Nor do I know its size.

946. What is the distance from London; how would you get to this common from London?—Fairmile Common is 16 miles from Hyde Park Corner by road; but as the crow flies it would be within a distance of 15 miles. It is a question to be argued at law whether we are not even now within the radius as to some part of the common.

947. Have you anything further to state in order to elucidate your case?—No; I shall be very happy to answer any questions which may be put by Members of the Committee.

948. Sir *Henry Selwin-Ibbetson.*] You stated that you appeared for a number of people who were going to petition in favour of this Bill of Mr. Chambers?—Yes.

949. Are any of those people among the 43 owners of rights on the common?—Yes; they have taken this step, namely, to petition the Inclosure Commissioners against proceeding to inclose this common, and showing them the statement which I have endeavoured imperfectly to make to the Committee; the effect of that is embodied in a petition to the Inclosure Commissioners, which bears the signatures of all my neighbours of whom I speak.

950. Among those neighbours and those people who intend to petition, and have petitioned, are there any of the 43 owners of rights of common, or are they simply persons residing in the neighbourhood?—They are chiefly persons residing in the neighbourhood, but the Countess of Ellesmere and Lady Moore have rights on the common.

951. In answer to another question, you said that these 300 acres were land which could not be applied with advantage to agricultural purposes?—Yes.

952. A part of this same common has already been inclosed to the extent of nearly 1,000 acres?—Yes.

953. Is it profitably cultivated?—I bought two acres with my house about 10 years ago. The land is very poor, and chiefly consists of sand.

954. In fact this land was reserved as being the least valuable part of the common?—Yes, and as I imagine, being too valueless to be inclosed, and therefore it was given over to these poor people.

955. Mr. *Bonham-Carter.*] Am I to understand you that this common is outside the area which is comprised within the operation of the Metropolitan Commons Act?—We understand that it is outside the area of the operation of the Metropolitan Commons Act.

956. What steps have been taken before the Inclosure Commissioners?—A petition is going to be presented to the Inclosure Commissioners to prevent the inclosure, and if I have it here I will put it before the Committee.

957. You do not quite apprehend my question. What steps have been taken under the Act of 1845 to bring the subject of this inclosure before the Commissioners?—I cannot say whether any steps have been taken to bring it before the Inclosure Commissionors until recently.

958. You are aware that the proceedings before the Inclosure Commissioners of 1845 commence with a representation to the Commissioners of the desirability of the inclosure, by at all events one-third of the ostensible rights?—Yes; I have no doubt that that is properly done, but I was always kept in the dark as respected any steps which the parties took with regard to inclosure, because my house abuts upon two sides of the common, and naturally any steps which they would take so as to put the Inclosure Commissioners into action, with a view to inclose that common, would be kept most secret from me.

959 Are you not aware that part of the proceeding of the Inclosure Commissioners is affixing

Mr. *R. C. Austin.* 12 July 1869.

a notice to the church doors?—I have not seen that notice, but I have no doubt that you will find from the examination on the other side, whether that requirement was complied with or not. I do not mean to say that it was not done.

960. You reside there, and I understand from you, that a very considerable amount of interest is excited on the part of people who do not desire the inclosure to be carried out?—Yes.

961. You, being so much interested in the matter, would you not have known whether the first step in an application to the Commissioners, namely, a public notice being affixed to the church door, had been fulfilled or not?—I have never myself heard that point noticed, or talked of. If I had known that you wished for that evidence I should have come prepared with it.

962. Mr. *Johnston.*] I imagine this to be a somewhat parallel case to the inclosure at Walton and Weybridge, which has been already before the Committee; have you studied that case at all?—No; Wisley would be in the same category; it is all within the same district within a few miles.

963. It is part of an old inclosure, of which a certain portion was set apart for the use of the poor?—Yes; 303 acres were left out of the 1,300, the other portion being inclosed.

964. Are you aware that a similar reserve for the poor was made in the case of the Walton and Weybridge Inclosure?—No.

965. Do you know the open pieces of ground near Weybridge Station, and also near Walton Station?—Yes, from going down the line.

966. Are you not aware that in those cases they are vested in trustees for the poor?—I am not.

967. Are there no such trustees in this case?—I am not able to answer that question; I should think not.

968. You say that many of the cottages to which the rights were assigned have been pulled down; I presume that there is still a poor population whom you would consider the equitable successors of those persons to whom those rights were assigned?—I quite concur in that. What I maintained was, that they were not in the hands of those persons; and that instead of being in the hands of the tenants of these cottages of 6*l.* or 10*l.*, they are now in the hands of an entirely different class of persons, numbering about 43; and the persons are now wishing to inclose, because the land has become more valuable; the land near me is worth about 500*l.* an acre. Mr. Powlett Scrope, I believe, bought some lately at 500*l.* an acre, adjoining his residence.

969. I believe that these 132 cottagers to whom these rights were originally assigned, really represented all the poor inhabitants of Fairmile?—The Act is dated in 1793; and I could not state, even by imagination, what Cobham was then.

970. Do you not imagine that the intention of Parliament in passing that Act was to reserve those rights in perpetuity for the use, under certain restrictions, of the poor of that manor?—Undoubtedly; and for the poor only. That is, in one word, why I am here before the Committee to-day.

971. With regard to the position of the common, do not you know of any iron posts in that neighbourhood which define the limit of the metropolitan police district?—No, I am afraid not; I have never seen one myself. There are, of course, the mile-stones along the road; it is the high road to Portsmouth.

972. Has not a branch railroad to Cobham been talked of for many years, and, in your opinion, will it not sooner or later be made?—There was a meeting once held, and on behalf of gentlemen opposed to the railway I attended the meeting, and opposed the bringing of a railway there to the utmost of my ability; and that opposition appears to have been successful, as I have heard no further talk of bringing a railroad there.

973. Mr. *Reed.*] Has not land been inclosed under the Act of 1793?—Yes; 1,000 acres were inclosed, and it is to protect the 303 acres that I am here to give evidence to-day.

974. Do you consider that land to be within the jurisdiction of the Inclosure Commissioners?—I do not think that the Inclosure Commissioners could now inclose this land without a special Act of Parliament. In saying that, I speak as a lawyer.

975. Colonel *Barttelot.*] In what position are these 43 persons who now claim the rights?—I shall be very happy to answer the question, and to go through the list, which I have here. The number of owners of the cottages having rights, is about 43 persons, who are chiefly farmers to small holders.

976. When the 132 poor people who were originally to be benefited received their rights, I suppose that they were each living in a different cottage?—I think that that must be so by the Act which the Chairman has read.

977. It was the occupancy of a cottage which gave the rights?—Yes, solely.

978. Do you suppose that at that time these poor people owned those cottages?—No; clearly none of them did so, but it was the right of the occupier, and the Act distinctly shows that it could never have been the possessors who were intended, because the words "tenant" or "occupier" is put in.

979. Have a great number of these cottages been pulled down?—I have a letter from the largest and the richest person about there on the subject.

980. Is it within your knowledge that there are 132 cottages there now, or not?—No, some are pulled down.

981. Then of course the rights of the cottages which have been pulled down have lapsed?—No, they have not lapsed; they have come into the possession of wealthy persons. I can give you the class of persons.

982. There must have been some particular description in that Act of Parliament which gave the right to certain people?—Yes.

983. Do these cottages still exercise that right, or not?—If they are pulled down, I maintain that the whole Act of Parliament and its designs are frustrated.

984. You have stated that, originally, these cottages did not belong to the poor people?—It would be impossible to say whether any of them were the possessors of their own houses, as well as being the occupiers of them, or not. The Act of Parliament, which has been read by the Chairman, would seem rather to show that they were only the poorest of the poor, paying a rent of 6*l.* or 10*l.* Further than that, rights were given of fuel and feeding over the common, and rights which were intended, not for the enjoyment of any rich gentlemen, but for the poor.

985. It must have been one of two classes of rights,

rights, either that the person owning the house could put in a tenant who could exercise the right, or it must have been for a certain number of poor people living in the district. As far as I understand, it is only for the people living in those cottages, according to your showing?—It is not my showing, but it is the Act of Parliament which shows the class of persons exercising those rights; it speaks of the rental as authorising a particular class of persons, and it shows the object of the rights.

986. Of course, if the number of these houses have decreased, and if the rights have passed into fewer hands, those people who now own the rights have the right, have they not; is it not in their hands?—I do not think so at all; I cannot see that; that is not the inference which I should wish the Committee for one moment to deduce from my evidence.

987. Somebody must have the rights?—Yes.

988. And you have shown us that these rights have diminished in number from 132 to 43?—Forty-three has been mentioned, as possessing the cottages with the rights. I say that the persons who now possess these rights do not at all represent the class for whom Parliament intended to legislate, and did legislate, for their benefit.

989. Do these people exercise the rights themselves, that is to say, does Mr. Combe himself turn out any animals upon this common, or do the poor people, who are tenants under him, turn out any animals upon the common?—Mr. Combe would have no right to turn out any animals upon the common; the tenants of the cottages only have the right; but Mr. Combe could not turn out any animal unless he occupied one of these cottages.

990. Then it amounts to this, that the poor in that neighbourhood have diminished, from 132 occupiers of houses, to 43, who now beneficially exercise the rights under the Act of 1793?—The poor people occupying these cottages must be less in number than they were, because some of the cottages have been pulled down; but the Committee can have the exact evidence as to the number pulled down, and the exact number of cottages now occupied.

991. Mr. *Winn.*] I understand you to mean that there may be now more than 43 cottagers occupying at a less rent than 6*l.*, and that you consider that this common ought to belong to them?—Yes; that it is the poor who have the right, and they only.

992. And that this right does not attach to particular cottages unless they are below 6*l.* rental?—£. 6 and 10*l.*

993. Therefore, if you had a cottage which, some years ago, was rented at 5*l.*, it, as I understand you, would have a right on this common?—Yes.

994. But if you increased the rent above 10*l.*, it would not be so?—I should say that, if the rent was over 6*l.* or 10*l.*, the party would lose that right.

995. Mr. *Bonham-Carter.*] The Act specifically says that it is 6*l.* at the time of the passing of the Act?—Yes.

996. Mr. *Winn.*] Then, according to that, if the rent was afterwards increased, the right would still belong to that particular house?—Yes. If you look at a cottage now of 6*l.* or 10*l.* annual value, you would certainly be asked, at the least, 100*l.* in addition for this right on the common since attempts have been made to inclose it.

997. If one of these cottages was pulled down, do you contend that the right to occupy the common would cease?—Yes, as far as the cottage was concerned, and then it would be doubtful whether the right would lapse into the hands of the landowner. I submit that, by the attempted inclosure, and allowing that to be done, the Act of Parliament is frustrated, it never having intended that that right should lapse to the landowner. The intention was to keep these 303 acres for the poor and their successors; in fact, I maintain that, without a special Act of Parliament, it would be an absolute robbery of the poor to inclose that common, and I am sure that it is a step which should never be taken until Parliament says that it is lawful and just.

998. To what extent have the public used this common?—By walking over it. It is one of the most picturesque places in Surrey.

999. Do the poor use it, or is it the better class of people who use it?—There are certain paths across it for the poor to use in going to their work; there are footpaths and rights of way.

1000. Have the London poor used it at all?—I should think not, to any extent, because of the distance from London. It is 16 miles from London. We want to bring it within Mr. Chambers' Bill.

1001. *Chairman.*] Has your attention been called to a clause in the Act of 1793, which states that the allotment given to the lord shall be "in lieu of all claims, right, title, or interest of the said Thomas Page as lord of the said manor of Gobham, and of his heirs or assigns, of, in, or to the soil of the said commons, heaths, and marsh and waste lands;" and has your attention been called to a subsequent clause which saves all the other rights of the lord?—No; I must confess that I have not looked into the law, nor have I read it.

1002. If all the other rights of the lord are saved in a subsequent clause, it is very possible that the lord may consider his right of veto as one of those rights and privileges?—Yes, I believe that the lord of the manor still considers that his interest has not been paid out, and that is another reason why he has refused to inclose.

1003. Mr. *Bonham-Carter.*] Supposing that this were a common which could be inclosed under the Act of 1845, would not the rights of way which you have mentioned as being valuable, and which ought to be saved, be saved under the practice of that Act?—The right of way, I think, would be protected, because I have been engaged as counsel in a case in which an attempt has been made to inclose a portion of a common at Chobham; in that case there was a right of way, and then it was a question of law as to whether a certain grant of land having been made, and cottages having been placed upon it, the cottages had been legally placed there or not; and, subject to an application for a new trial, the right of way has been established.

1004. You have mentioned that one of the objects which those persons who did not desire inclosure had in view, was the saving of right of way?—No, I think that you must have misunderstood me there. The rights of the poor in that respect across the common are a bagatelle. I was only saying that the common could be used

Mr. *R. C. Austin.*

12 July 1869.

by them for walking, in getting to their homes or returning from their work, and for recreation.

1005. Have you been giving your advice professionally in this matter?—No.

1006. It has been as *amicus curiæ*?—Yes; I have only done so as a matter of neighbourly feeling.

1007. Being a barrister, have you at all advised your neighbours as to the person or corporation in whom the fee is vested?—No; that question will come out in the law courts. I, being a professional man, they have naturally placed sufficient confidence in me to speak to me, and ask an opinion.

1008. Have you an opinion as to the party in whom the fee is vested?—I have not at present.

1009. You have not given any opinion upon that point?—No, I have never been called upon to do so. I think that the Act of Parliament will explain the difference between 6 *l.* and 10 *l.* I can give evidence as to the feeling which exists at Chobham, which is a few miles distant, and which would be within Mr. Chambers' Bill, namely, 25 miles; there is a very strong feeling in favour of keeping that common open.

1010. *Chairman.*] Do you represent any persons in that neighbourhood?—No; but having been concerned as counsel, I know the strong feeling which exists in that neighbourhood.

1011. Mr. *Cowper.*] Is it in contemplation to make an inclosure of Chobham?—I think not; but the case has arisen in this way: the lord of the manor, with the consent of the homage, has been making a certain grant, say of two acres of land, and I have got some idea of the feeling of the people from being engaged as counsel, not exactly to oppose the grant, but to maintain that there was a right of way across a certain proportion of these two acres of land which were inclosed; and, so far as the judgment of the court goes, I succeeded in establishing that there was a right of way, and, therefore, the law has been placed in force, and those cottages may have to come down.

1012. Was there any opposition made to the right claimed by the lord of the manor with the homage to inclose?—It is a question which is still to be disputed, and a new trial is to be asked for, on the ground that the proceedings of the lord of the manor, with the consent of the homage, and without a special Act, is not sufficient.

1013. The intervention of the Inclosure Commissioners has not been called for in the case of Chobham?—I think not.

Mr. James Bell, called in; and Examined.

Mr. *J. Bell.*

1014. *Chairman.*] Have you a statement to make with regard to the inclosure of Cobham Commons?—Yes; about six years ago I presented a memorial to the Inclosure Commissioners, of which this is a copy (*producing the same*), as required by the Inclosure Act of 1845.

1015. That was the first step towards the inclosure of the commons?—Yes.

1016. This memorial is signed by persons having 96 shares or rights on the commons?—Yes, out of 132; and since that time nearly 20 more have come in.

1017. So that as far as this memorial represents certain rights upon the commons, a large majority desire the inclosure?—Yes, a very large majority; only three people, I believe, oppose it, namely, the Countess of Ellesmere, her tenant, and Lady Moore, and the lord of the manor opposes it.

1018. What is the extent of the rights of the lord of the manor?—Fourteen cottages belong to him, having rights attached, but we say that he has no rights beyond what he has by virtue of these cottages. I will put in the award. We call them all Cobham Commons, but Fairmile is one of them.

1019. I see that in this statement you say that the common is about 19 miles from London?—It is 20 miles from London Bridge to Cobham; that is the known distance.

1020. Is the land now made use of in any way?—It is now utterly useless, except a small common of about 20 acres, which is a recreation ground, and which we should not wish in any way to disturb; the other is up to the knees in gorse and ling; and if there were 132 cottages there, with cottagers to occupy them, they could not make any use of these commons at all.

1021. Could not they clear away the ling and heather?—They could clear it away, but it would grow again. There is a dispute amongst the parties. So large a proportion want the land to be inclosed, that if the other portion wanted to make any use of this land, I expect that they would try to prevent it.

1022. That is with respect to those persons who have rights of common?—Yes.

1023. Is there a large population there of those who have not rights of common?—I should think that the population, except as to the gentry, is about the same now as it was at the time of the passing of the Inclosure Act. There are a great number of gentry who have built houses adjoining this common, and the whole opposition which I have ever heard of, proceeds from them.

1024. Are there any labouring poor in the neighbourhood of the common?—There are the average number of labouring poor, but not above the average.

1025. Are the labouring poor in the habit of walking much over the common?—I have ridden over that common for nearly 20 years continually, and I have never seen anyone on the common, except a gentleman riding across or hunting; there are only a few tracks across the common; I have ridden across this common, and I have shot across it.

1026. I suppose that one of the objects of inclosing this common would be to build upon it?—A part of it is very valuable building land, and which is sold at the rate of 500 *l.* an acre.

1027. Therefore, it would be a very great advantage to those who have rights of common that it should be inclosed?—Yes.

1028. But the public having no rights of common, would not participate in that advantage?—I have never seen a single picnic party, or anything approaching to a picnic party there. I am clerk to the magistrates of Kingston-upon-Thames, and the only way in which I have to do with the common is, that we frequently have poachers brought up before the magistrates. The commons are so extensive that they rather do a damage to the labouring poor instead of a benefit; they cannot use the commons, and by this inclosure we are quite prepared to grant a portion to the vicar

vicar and the churchwardens for poor allotments. We wish to obtain our own rights, but at the same time to promote the real benefit of the poor.

1029. Supposing that the restriction which, under the present law, might prevent your giving a very considerable recreation ground to the poor, were removed, you would give 20 acres upon the common, and, perhaps, even more?—Yes; I think that that is an absurd restriction, and that it might be very advantageously removed.

1030. Is this land which, if cultivated, could be made productive?—I should think that a great part of this land is quite as good as the land which was inclosed 70 years ago, and which is now all under cultivation, and is valuable land.

1031. Are there many cottages there now in the neighbourhood which did not exist at that time?—I scarcely recollect any.

1032. I see that in your application to the Commissioners, you state that the lord of the manor has no rights whatever, except as the owner of several houses entitled to shares. Has your attention been called to the clause at the end of the Act?—Yes; and I am advised that those rights are nothing at all. We are advised that the soil of the common is really and truly vested in these commoners. When that petition was presented, an inquiry was held; the Assistant Commissioner came down, and held an inquiry.

1033. Who was the Assistant Commissioner?—I forget.

1034. Was it Mr. Wetherell?—I think that it was. After the inquiry I heard from the solicitor to the Commissioners that as the lord of the manor objected to the inclosure, the Inclosure Commissioners could proceed no further. I have had many communications with the solicitors of the lord; at first they said that if the lord had one-sixteenth given to him he would consent. We said that the lord had already had it; but after that he refused, and said that he would consent to no terms whatever. They then said "We do not want to get into litigation; will you consent to a special case to be submitted to the court?" My clients said "Yes," and when the lord of the manor saw the special case he refused to agree to it, and of course we could not then go any further. I then took the opinion of equity counsel. The common law counsel said that the lord of the manor had no rights; and my counsel, Mr. Denman, said that we must apply for a mandamus against the Inclosure Commissioners, and I hope that we shall bring it on next November.

1035. Supposing that you were under the provisions of this Act, could not you then agree upon a scheme which would answer equally well the purposes of those interested?—I think that it is perfectly impossible, because the lord of the manor claims the right of sporting, which we are distinctly advised that he has not.

1036. If you were under this Act of 1866, do you think that you could not obtain a scheme without the consent of the lord of the manor?—We could not do so without litigation, most probably, for this reason, that he is the owner of rights. If he were only the lord of the manor I should say that we could probably do it; but he is the owner of 14 cottages of his own.

1037. Where do you find in the Act of 1866 that the consent of every person is necessary?—I do not find it; the parish of Cobham is too small, it could not bear the expense of being rated for a scheme.

1038. Then is it your opinion that the passing of the present Bill would be injurious to this common?—Yes, because there are so many poor people that they could not subscribe the necessary money to get a private Act.

1039. And you do not think that that loss would be compensated for by keeping open what you propose to inclose?—The common is of no use to them. As far as the poor go, there are very few of them who can keep a cow, and as to cutting fuel, perhaps they may cut some of the fuel, but that is very trifling; but we propose to give an allotment to the poor of a recreation ground, and by that they would be far more benefited than by the non-inclosure.

1040. If this inclosure were made, would not there be a good deal of building on that common?—I doubt it. It is understood that a part of this land should be sold to the gentry round the common so as to protect their dwelling-houses; they are the only opponents. If this inclosure were carried out we should give them sufficient land to protect their houses from buildings being placed too near them. If a railway came some of the land might be built upon.

1041. Did I not correctly understand you to say that 500 *l.* an acre had been given for building land?—Yes.

1042. Is it not possible that some of these gentlemen might sell it at that price to persons who were desirous of building?—It is possible, but there are 2,000 acres and more of Crown land adjoining this common, 800 acres of which are common, and there is an immense amount of common land there.

1043. Is it difficult to get building land there?—No, I could sell 600 or 700 acres of land for building, but there is no bid for it.

1044. Is building progressing there now?—Very slowly; it is principally large houses which are built; it is a very pretty place.

1045. Is the price which is demanded considerable?—Yes, I should ask 200 *l.* or 250 *l.* an acre. Further off the Esher Station I am asking 100 *l.* an acre; it is better land for farming, but it is not so good a situation; it is near the river. In my opinion it will not at all check building.

1046. In the number of 96 are there many poor persons?—Yes, and some of them reside actually in the cottages.

1047. They might be tempted to sell land for building at a cheaper rate?—Yes.

1048. Then there is a great probability that there might be building there?—Yes, but still there is so much land for building there, that I do not think that that would be the result.

1049. Looking forward to the increase of building round London, would there not be a large amount of building about there?—Yes, it is possible.

1050. Then would it not be desirable to have an open space as a lung?—Certainly; no one is more attached than I am to an open space, but I should sacrifice my feelings as regards a great many commons in Surrey, because there are so many of them.

1051. You think that the number of spaces which are more desirable to be kept open, are sufficient to preclude the possibility of the public suffering by this inclosure?—Yes, that is my contention. You must value the amount included

Mr. J. Bell.

12 July 1869.

cluded by this Bill by millions of acres, rather than by thousands. I say that if this Bill is passed there ought to be some measure to compensate the people affected by it.

1052. Are you able to state the number of acres in Surrey which would be affected by this proposed extension?—No.

1053. Is it very considerable?—Yes.

1054. Are you able to say that much of that land is of a character which is different from that of many metropolitan commons?—Little Heath would make very fair land. I have marked them in red ink. (*The Witness explained the matter to the Committee upon a map.*)

1055. You have spoken of rights which you think ought not to be affected or taken away without compensation?—Yes; I think that Parliament, having sanctioned an Act of Parliament with regard to the Cobham Commons, it is not fair to put the parties to a great expense in obtaining another Act of Parliament now to sanction another inclosure.

1056. Do you not think that the intention of that Act was to allot these 300 acres to the labouring poor?—No; if you refer to the award you will see that scarcely one of the labouring poor gets the right, and I am advised by counsel that the allotment to the owners, although for the use of the occupiers virtually, carries the ownership with it. That is a legal point with which I do not wish to trouble the Committee.

1057. I suppose that if it were 200 or 300 miles from London, you would not have very much difficulty with this inclosure?—Just so.

1058. And you have not been able to discover a reason why what is a right 300 miles from London, should be a wrong when it is only 20 miles from London?—I think that the Inclosure Act itself should be repealed, which lays down certain conditions before any exceptional legislation takes place.

1059. And, in your judgment, if the extention of this Act should prevent the inclosure of this common, there should be compensation?—Yes; I am advised by counsel that the owners of 132 cottages are the owners of this common, and that you are taking away their freehold rights.

1060. Mr. *Bonham-Carter.*] Your opinion, from a knowledge of the circumstances, is, that this property is now vested in 43 persons?—I do not think that there are above 30 or 35 persons; I cannot exactly say how many; I have a list here, which I believe to be correct, by which it appears that there are 30. I should say that there are not more than 37 rights.

1061. Your opinion is that these persons are practically the joint owners of that property?—We admit that the lord is the bare trustee; that is to say, that the soil is vested in him as a bare trustee, but that the court will direct him, as such bare trustee, for the commoners to convey the soil to them; that is the position which we take.

1062. How do you proceed in the case of trespass?—It is impossible to proceed. If the 132 persons, or 50 or 60 of them choose to proceed, I do not see who is to bring an action against them; I only see endless litigation.

1063. Supposing that these 30 persons were to agree, what right would be invaded by their proceeding?—It is impossible to say that. The Act itself is very confused and uncertain, and it is only for a court of law to say how those rights can be exercised.

1064. Your belief is, that there is at present a very great latent value which the inclosure under the Act of 1845 would develope?—Exactly so, and it would be for the benefit of all parties, rich and poor, that the land should be inclosed.

1065. Do you not think that the persons who have built residences in that neighbourhood have built in ignorance of the law, on the assumption that these commons could not be inclosed?—I cannot, of course, answer that question; but we are prepared, in case of this inclosure taking place, to take care to add such a portion of land as shall free their residences from any damage.

1066. Have you been connected with other inclosures?—Not directly.

1067. Are you aware that, in practice, instructions are given to the valuer at the first meeting?—We should give those instructions to the valuer.

1068. And those instructions, as a rule, protect what are called frontage interests?—Yes; that is what we intend fully to give.

1069. Have you any reason to suppose that, if this were held to be an inclosure under the Act of 1845, those frontage interests would be injured?—Certainly not.

1070. If gentlemen came into that country who were not fully aware of the operation of the Act of 1845, and built in the neighbourhood of commons, they might be disappointed if the commons were inclosed, but they would have no legal right to complain?—Just so. Most of the buildings were not erected before I took these proceedings. Mr. Austin's house, and one or two others, were built before that time.

1071. You have incidentally given an opinion that the inclosure of a great portion for recreation ground is unnecessary?—I think so.

1072. But you would not object to a large portion of recreation ground being set out by the Commissioners, if all the parties consented?—Yes; I think that it ought to be left exclusively to the Inclosure Commissioners.

1073. Your opinion is that, if property of this nature is exceedingly trifling in value in its present state, its inclosure is a matter of public policy, and should not be restrained?—Yes; it adds to the wealth of the State.

1074. Have you any idea of the value of the commons in question now, as compared with what it would be if they were inclosed?—I should value these commons of 300 acres at 30,000*l.*

1075. What do you consider that the rights, which could be valued in money, now actually in use, would be estimated to produce?—If the parties sold their rights, I think that they would ask about 100*l.* a piece for them.

1076. What is the value of the actual user at the present moment?—I would not give 6*d.* for it; I understand that only one person uses the common, and that is the tenant of Lady Ellesmere; if the common were inclosed, it would, of course, be more valuable.

1077. Mr. *Johnston.*] Have you studied the case of the Walton and Weybridge Commons, and Byfleet Inclosure?—I have been a little mixed up with the Walton Inclosure; in that case there is an allotment to certain trustees for the poor, and I believe that it is a very beneficial thing; the case of Walton is different from that of Cobham; if instead of allotting these 300 acres in the way in which I have mentioned, they had been allotted to the occupiers, it would have been different, and

and there would have been an end of the inclosure.

1078. Do you not imagine that the intention of Parliament is the same in both cases, namely, that there should be a perpetual provision for the exercise of the rights of the poor in that neighbourhood?—You must look at the different dates; I suppose that then, instead of 500*l.* an acre, you could buy the land at 5*l.* an acre.

1079. Do not you suppose that the intention of Parliament was the same in both cases, namely, that this should be a perpetual provision for the benefit of the poor in the cutting of turf and fuel?—I can only look at the Act of Parliament, and I say that it gives the land to the owners and not to the occupiers; I cannot tell what the intention of Parliament might have been; I can only construe the Act as it exists.

1080. Am I to understand you to say, that you think that the labouring population is not increased?—I would rather not answer the question; other witnesses are beter informed.

1081. Has not an increase of the resident gentry almost invariably increased the number of labourers?—Knowing Cobham well, I may say that I do not recollect any new cottages there, which seem to bear the impress of having been erected in the last 10 or 15 years.

1082. Do you propose to set out allotments for the labouring poor in one place, or in all the six places?—In my opinion, in order to meet the demand of the localities and the cottages, there ought to be an allotment in each place, according to the number of the cottages round.

1083. You say that the lord claims the right of sporting?—I believe that he does; there is no game there.

1084. As far as you are aware, his keepers do not warn persons off?—There are no keepers that I am aware of; he claims the right of sporting, I know.

1085. You are aware that the Act of 1866, which is proposed to be affected by this Bill, provides that a scheme may be made?—Yes; but this is too poor a place for a scheme; the common is too poor, and no scheme could be carried out; the funds could not be raised.

1086. Colonel *Barttelot.*] Originally, I think, there were 1,300 acres of common?—Yes; the Act of Parliament states it.

1087. Do you know whether it was all in one manor?—Yes, it was.

1088. Was the present lord, or his ancestors, the owners of the manor?—They were.

1089. And the whole of these six commons, although scattered, were in that manor?—Yes.

1090. Are there any other commons in the manor?—I think not; in fact, I feel sure that there are not any other commons in Cobham, except those as to which Mr. Mount would be the lord of the manor.

1091. You have lived in that neighbourhood for some considerable time?—For about 20 years.

1092. Is it, or is it not, the practice of the people from London to come down there in large numbers?—I do not believe that 10 people know the place; it is quite out of the way; it is four and a half miles from Esher station, and it is quite out of the way for any recreation parties; I never saw a picnic party there in my life.

1093. And the 20 acres which you would propose to reserve as a recreation ground, would be amply sufficient for that district?—I leave it entirely to the Inclosure Commissioners.

1094. But so far as you, as an inhabitant of that district are concerned, you would think that the 20 acres is a sufficient recreation ground?—Yes, and more than ample.

Mr. *J. Bell.*
12 July 1869.

1095. I have understood you to say that there should be allotments for the labouring poor in each of these six commons?—Yes.

1096. You were asked whether the labouring poor had increased or not, in that district, on account of the residential proprietors; do they employ much labour; do they farm at all?—Almost all of them are town gentlemen.

1097. What is the average amount of ground which is attached to each of those houses?—About two acres.

1098. Then they would not require much increase of labour?—No.

1099. What is the population of that parish according to the last census?—About 2,000 inhabitants.

1100. Do you know what it was in 1851?—I cannot tell.

1101. Has it increased?—I cannot say.

1102. I suppose it has increased as regards the higher class of persons?—Yes, decidedly.

1103. Has it increased or decreased with regard to the labouring poor?—I cannot say.

1104. Do you pay any attention to that subject as clerk to the magistrates?—Yes; as far as the rateable value of Cobham goes, it has a good deal increased.

1105. Is it within your knowledge that the rateable value of that land, irrespectively of the people who have come down from London, has increased or decreased?—I cannot say.

1106. You know those commons?—Yes.

1107. Are they frequented by people coming down from London?—I never saw any London picnic parties on them; I have seen people going about with dogs, and that is all that I have seen on these commons.

1108. Supposing that Parliament thought fit to pass such an Act as that now before us, do you think that those commons would be frequented by persons from London?—I do not think that any person would come upon them; the hardworking artisans of London, who ought to be protected, all go to Richmond Park, and Hampton Court, and those places which are much nearer London; I think you would do a great deal more good by inclosing these commons, and giving employment to the poor of the locality.

1109. Supposing that the commons were not inclosed, would it not inflict a great deal of injury upon the persons having rights on these commons?—Certainly it would.

1110. Could these rights be in any way compensated, the commons being left uninclosed?—It would be a very difficult matter to manage, they might be compensated, but it is a question I have never studied, as to how it would be possible to compensate them; you could only value the land as freehold land inclosed, and then of course the loss would be very considerable if the parties did not get their right.

1111. As I understand you, many people are both owners and occupiers?—A few are so; I will not say many.

1112. Supposing that the common could not be inclosed, it would be depriving the party, at any rate, of a very considerable right which he now possesses?—I have no doubt that it would

Mr. *J. Bell.*
12 July 1869.

be depriving him of a right which some would not sell for 200 *l.*

1113. Have you ever considered the Act as it now stands?—I have considered it slightly.

1114. Do you know the commons which are now situated within that area?—I know most of them.

1115. Are those commons very much frequented by people from London?—I have never seen a single London van, or a pleasure van, from the neighbourhood, on any of these commons.

1116. Those commons which are at present within the area in Surrey, are very considerable, indeed, are they not?—They are very large, indeed.

1117. Mr. *Winn.*] I think that this allotment of 300 acres was left to the poor to cut turf, was it not?—Turf and fuel; cutting turf and heather for fuel in equal proportions, according to the number of houses.

1118. If you left them only 20 acres, how would you propose to compensate them?—I should propose to give to the churchwardens and overseers, or trustees, by name, or the county magistrates, a certain amount of land in fee, so that a quarter of an acre, or half an acre, might be reserved to the poor for cultivation; the cutting of turf is actually useless to them.

1119. Mr. *Cowper.*] Do you mean to say that, as a matter of fact, nobody cuts turf for fuel?—I do not mean to say that; I have ridden across the commons, and I have found that the height of the ling is very great; it does not seem to have been cut in Fair Mile; it may have been burnt.

1120. In fact, you know nothing more upon the subject than you could discover by the operation of riding across the commons?—Just so.

1121. Are we, or not, to understand that you know personally that that right of turbary is not of value to those who are entitled to it?—I would rather not state anything definite upon that point, because I have not sufficient information upon it.

1122. You have mentioned that the common is covered with gorse, do you mean the Committee to understand that there is no ground for pasture left on account of the gorse, or only that it is covered to a great extent with gorse?—On Fair Mile Common there is scarcely a bare place, I have never seen a cow there; I may have seen a gipsy's horse there.

1123. Are there a great many tracks by which you walk through the gorse in many directions?—No, there are not many; of course it is an understood thing, that if this inclosure took place, the tracks would be preserved by the Inclosure Commissioners.

1124. Do you mean that the gorse grows in such a close and tangled way, that people cannot walk across the common in all directions?—I once walked across that common for shooting, and I made a vow that I would never do so again; it was a most tangled place, and with ups and downs, and pit-falls.

1125. Did all this trouble which you took lead to your getting a shot?—No.

1126. Supposing that you had not been moved by that ardent desire for sporting, and had been simply desirous of taking the easiest paths, do you think that then the gorse would have prevented your going in a great many directions?—I certainly should have kept to the beaten path, which we of course wish to preserve.

1127. What extent of the common was the subject of that memorial; was it the 300 acres?—Yes; the subject of this memorial was 150 acres of Fair Mile, 70 acres of Chatley Heath, 20 acres of Poynter's Green and Downside Common, 20 acres of Little Heath, 20 acres of Old Common, and 20 acres of the Tilt, Leigh Hill, and Brook Hill; making together 300 acres.

1128. Some of those heaths being at a considerable distance from the others?—They were all scattered about to meet the wants of the cottages at the time.

1129. How many persons signed that memorial?—In this memorial there are the owners of 96 rights; but the owners of 15 or 16 additional rights have since instructed me, and I consider that I represent about 114 rights out of 132.

1130. Can you state how many persons possess those 114 rights?—I think about 30.

1131. I suppose that when this Act was passed the 132 rights were assigned to 132 cottages?—I have the award here; all these allotments are made to owners virtually; one owner gets eight rights; another has four houses; another two houses, and so on; and there is one case in which an owner has 11.

1132. There were 132 cottages at the time?—Yes; but I should think that the number of owners was about the same as it is now; perhaps there might have been 50 instead of 35.

1133. Do you think that the 132 cottages are still standing?—No; many of them I know have been pulled down.

1134. Can you give any information as to the number which have been removed?—I cannot; that will, of course, have to be thoroughly gone into, if there is an inclosure.

1135. From your experience in the offices which you have filled, do you think that there are cottages in the parish which pay less rent than 6 *l.* a year?—That question I could not answer, because I did not look at the rate-books beforehand; but I should think that the value of a good many cottages would be about 4 *l.*, or 5 *l.*, or 6 *l.* a year.

1136. What is the distance between Fair Mile Heath and the town of Cobham?—I should think that it is as nearly three-quarters of a mile as possible; there are two Cobhams, namely, Cobham Street and Church Cobham; Fair Mile Heath is about half a mile from Cobham Street, and three-quarters of a mile from Church Cobham.

1137. *Chairman.*] Have you had any experience of the working of the Act of 1866?—I have not.

1138. Then your objection to its extension is merely that you are satisfied that the provisions of the general Inclosure Act are applicable and suited to your particular common?—Yes; and that it would be a great expense to us to apply for a special Act of Parliament.

1139. Mr. *Bonham-Carter.*] You stated that it was your intention to set out a certain portion of the land for the benefit of the poor inhabitants?—The owners of rights would no doubt be glad to do that.

1140. Is there any difficulty in making a scheme to do that under the Act of 1845?—I have not gone into that question. I have never studied the question of a scheme.

1141. Are you aware that the instructions to the valuer may include that very provision?—I have read the Act, but I forget that clause.

1142. Is

1142. Is it proposed that the cost of the inclosure should be defrayed by a rate, or by the sale of allotments?—There has been no definite proposition, but what conversation has taken place would tend to show that it would be by the sale of a certain portion of the common before or after the allotments were made, reserved for the especial purpose.

1143. Those allotments which were sold would have a Parliamentary title? — Yes, under the Inclosure Act.

1144. You said that there were certain owners and occupiers of cottages which had rights under the original Act, and I think you said that if you deprived these small men of the right of inclosure, you would probably deprive them of something of the value to them of about 200*l.*? —Yes. Mr. *J. Bell.* 12 July 1869.

1145. And that they would object to that being done for the purpose of strangers?—Decidedly.

Mr. WILLIAM WORSFOLD, called in; and Examined.

1146. *Chairman.*] WHAT are you?—A farmer.

1147. You live in the neighbourhood of this common?—Yes, at Cobham.

1148. Are you possessed of rights?—Yes.

1149. Of how many rights?—A dozen.

1150. Did you sign the memorial which was presented to the Inclosure Commissioners?—Yes.

1151. And are you anxious for this inclosure?—Yes.

1152. With regard to the labouring population existing on or near the common, has that population increased or decreased within your knowledge?—It has rather increased. I have been in Cobham all my life.

1153. Have the number of cottages increased?—No, we are very badly off for cottages.

1154. You require more cottages to be built for the labouring population?—Yes; if I have one to let I have 20 applications for it.

1155. Are those houses in the town of Cobham?—Yes, some are in the village; the parish is 4,000 acres.

1156. Are the occupiers at some distance there from their labour?—Some of them; it entirely depends upon circumstances; some are on the farms; there is no general rule about it.

1157. Do you know how many cottages have been pulled down since the passing of the Act of 1793?—Not a vast number have been pulled down; I should imagine not probably more than 20 in the parish.

1158. Are those 20 to be deducted from the 132 cottages?—Yes.

1159. But still you say that there would be no difficulty in finding occupants for the cottages?—Not the least.

1160. If that be the case, I suppose that it would be rather desirable that the occupants of those cottages should have some garden grounds, or allotments?—It would.

1161. With regard to the proposal to inclose this common, are the promoters of the inclosure ready to provide such allotments?—Yes, where they are near to the cottages; some portions of the common are so distant and poor that they would not be available.

1162. Is the land around in the hands of large landowners?—Yes, generally.

1163. And are the farms in that neighbourhood large?—Yes; there are some large farms; there are about half a dozen in the parish.

1164. And there are not cottages upon the farms?—Not sufficient.

1165. Supposing that the landowners and the farmers should become awake to the fact that it is very desirable to bring the labourer as close to his labour as possible, there would be a considerable increase in cottage building?—Yes. Mr. *W. Worsfold.*

1166. Would the cottagers who came into the neighbourhood in consequence of the inclosure of this common cause the loss of any right to the others?—I do not think that people coming into the neighbourhood would affect them at all. I look upon the common as being perfectly valueless to the parties mentioned in this Act; the right is for the purpose of fuel, which they never use. I do not think that one man who lives in a cottage now burns a piece of this turf, or cuts turf for fuel. I am well acquainted with their habits. We have a coal club in the neighbourhood, and coal can be bought much cheaper than it could be purchased at the passing of this Act.

1167-8. Do you agree generally in the estimate of the value of the common which was given by the last witness?—It is, no doubt, very valuable for building purposes.

1169. But it is valueless now?—Yes; to those who have the rights. If I bought a cottage worth 1*s.* a week, I should charge the man who went in 1*s.* I should not think that a house was worth any more money for having the right than one which had not it.

1170. Does your experience tally with the experience of the last witness, that no persons come down to that common?—I have known it for 45 years, and I never know one party come there. When I was quite a youngster I went to school across the common, and I have known it almost ever since.

1171. Is there any prospect of the common being cleared of its heath and ling, unless, by this inclosure, persons have an inducement to clear the heath and ling?—I think that there is none.

1172. Is there any game there for sporting?—No; there are too many poachers there; there are gipsies and tramps there.

1173. Is one reason of your desiring to make the inclosure to prevent this common being the resort of tramps and disorderly characters?—Yes, but not entirely.

1174. How much of this common do you think you would get by this inclosure?—I have about four rights, but my family relations have rights as well.

1175. How should you employ the land which you would acquire by that right?—I suppose that it would depend upon what portion was allotted to me.

1176. Supposing that you had 5, 10, or 15 acres, how could you turn it to advantage?—I should sell it for building.

1177. I suppose that that would be the general

Mr. *W. Worsfold.*

12 July 1869.

wish of the people who got their rights under the inclosure?—Some might wish to have a little bit of land to build upon themselves. I know that they are all anxious to have a piece of land.

1178. And which they would, no doubt, be anxious to dispose of for building?—Yes, many would do so.

1179. And then there would be a considerable increase of building?—Yes; I have no doubt of it, provided that the land was all allotted out to them. Some people suggest that the land should be put up and sold. Of course in that case it would depend upon the hands into which it fell; probably the whole lot might be disposed of without that power.

1180. It, no doubt, would add to the population of the neighbourhood?—No doubt of it.

1181. And you think that the open commons would afford a considerable amount of space so as to make the new buildings healthy?—Yes; there are much more attractive spots than this common.

1182. Are there not woods in the neighbourhood?—Yes, very pretty woods.

1183. And which afford a much more convenient and pleasurable place for picnicing?—Yes.

1184. Have you heard any complaints on the part of the poor of the neighbourhood with regard to that inclosure?—I rather think that they are in favour of it.

1185. Were you present at the meeting which was held by the Assistant Commissioner?—Yes.

1186. Was it very numerously attended?—Yes.

1187. At what time in the day was it held?—In the middle of the day.

1188. How many people were present?—I think from about 30 to 50.

1189. Was any objection then expressed to the inclosure?—Only by one person, namely, by Mr. Price, who has a house on the borders of the common.

1190. What was his objection?—I imagine that he thought that something objectionable might be brought to it.

1191. There was no objection on the part of the poor people?—No.

1192. Was the clergyman present?—No.

1193. How does he feel with regard to the inclosure?—He is in favour of it.

1194. Then, you and your co-holders of rights would be very vexed if, having taken the steps with regard to this inclosure which are authorised by law, you found that you were now taken out of the Inclosure Act, and were put under the provisions of the Metropolitan Commons Act?—Yes.

1195. Mr. *Johnston.*] You are possessed of these rights as owner?—Yes; as owner of the cottages.

1196. Colonel *Barttelot.*] How much land do you farm?—About 200 acres.

1197. Are the farms there large, or small?—They vary from 100 to 400 acres.

1198. On the average, how many men do you think that it takes to cultivate 100 acres?—Four or five; that is to say, constant men.

1199. What is the rate of wages now?—About 15 *s.* regular wages at this time of the year.

1200. And you pay extra at hay time and harvest?—Yes.

1201. Are the cottages in your district good or bad?—They are not very good.

1202. What is the rent of them in your district?—I let my cottages at 1 *s.* 6 *d.*, 2 *s.*, and 2 *s.* 6 *d.*; but they are very frequently let at 3 *s.* if there is any up-stairs to them.

1203. If any speculators built cottages there, and ran them up cheaply, they would have no difficulty in getting tenants?—No difficulty.

1204. Do you think it a good thing that a class of cottages of that sort should be built?—Not too many, but sufficient for the wants of the parish.

1205. Should you think it a good thing, in your locality, to have that class of cottages built in the expectation of getting an allotment of garden ground in the neighbourhood, they not having one?—I think that persons might speculate upon that; they must have the ground to build upon first.

1206. But up to the present time you have not had many cottages built in the neighbourhood?—Very few.

1207. In fact, you say that you want cottages?—Yes.

1208. Mr. *Winn.*] Do the rents which you get include any garden, or is it simply for the house?—My cottages have a little piece of garden.

1209. To what extent?—Enough to grow vegetables and potatoes; perhaps three rods.

1210. Supposing that these allotments were made from the common, for the use of the poor, could they be made in a position suitable for the poor?—They could not be fixed in one identical spot which would be useful for the whole parish, because it is so very wide; they must be scattered about.

1211. Do you propose that this land should be allotted for garden ground, or for recreation purposes?—Some for one, and some for the other.

1212. Mr. *Cowper.*] Did you say that there were some cottages in the parish which let for 1 *s.* 6 *d.* a week?—Yes.

1213. Are there a good many of that description?—No; that is unusually low.

1214. Are there a good many cottages in the parish which are without allotments or field gardens?—A good many.

1215. What is the distance from the railway station of the nearest point of these commons?—Esher and Fair Mile are the nearest, and they are 3½ miles.

1216. Did you mean to say that you knew of no instances of turf being cut in any of the commons, or only in one particular common?—Cobham Common; I do not believe that a piece of turf has been cut there.

1217. What is the soil of the commons; is it good for pasture?—No, it is very dry; it is a gravelly soil.

1218. Does the gorse generally grow so much as to prevent the use of the land for pasture, or is it only in particular places?—It is nearly all over it. I do not think that over the 300 acres there is a piece of grass which is worth 5 *s.*

Mr. HENRY MARSHALL, called in; and Examined.

1219. *Chairman.*] YOU are Clerk of the Peace for the county of Surrey?—I am.

1220. I think that you wish to give evidence, especially upon the subject of Wisley?—Yes; more particularly upon the evidence which has been given to this Committee. I have attended here to watch the proceedings of this Committee without any desire to oppose; but there is some evidence which I am afraid will not be understood unless it is explained. I wish, therefore, to state the custom of the manor.

1221. You do not agree with the statements which have been made respecting the rights of lords and commoners; or rather, the absence of rights, which has been stated by some witnesses?—No; and I am afraid that unless the statement is contradicted, and put right, it is liable to cause confusion hereafter.

1222. Will you state the particular points upon which you wish to give an opinion?—The facts are, that the lord of the manor, as proprietor of the soil, is entitled to the common, subject to the rights of the tenants; and if the tenants assert those rights contrary to and against the opinion of the lord, they (the tenants) must prove the rights which they possess.

1223. Are there not manorial courts held?—There are.

1224. Are not the tenants of the manor admitted by a certain form?—Yes, certain tenants; in some manors they are very limited, and the courts are held very seldom.

1225. I suppose that you hold to the old-fashioned view, which has lately been questioned, that the legal rights are exhausted between the lord and the commoners?—Yes.

1226. Have you any especial evidence to offer us, with regard to the extension of the Metropolitan Commons Act of 1866 to a larger radius?—I am prepared to answer any question which the Committee put to me upon it. I am willing to leave it to the Committee, whatever their discretion is about it, so long as there is no misunderstanding as to the facts. I was solicitor to Lord Lovelace, and I now give him advice upon occasions. The evidence which was given on Thursday last, I think, was very dubious and uncertain, and I am afraid would bear a different construction to what the Committee would wish to put upon it; and therefore I wish to show that it is not assented to by Lord Lovelace, or the other parties. I contend that the lord of the manor, being entitled to the soil of the manor, is entitled to all rights connected with it, excepting those which are enjoyed by the tenants.

1227. This Committee is sitting specially to determine whether or not the provision of the Metropolitan Commons Act of 1866 should be extended to a wider radius; will you kindly tell us whether, from the evidence which has been taken before this Committee, or from any other source of information, you have formed an opinion which is favourable or adverse to that extension?—My opinion is adverse to the extension.

1228. Does that arise from your belief that the Act works badly in the area to which it is now applicable, or is it because you think that the class of lands which would be included in a wider radius are such that the Act would not be applicable to them?—I think that the area at present is quite sufficient, and that an extension of it would have rather a bad effect than a good one.

Mr. *H. Marshall.* 12 July 1869.

1229. Do you hold that opinion because you believe that the character of the lands in the wider radius is different from the character of the lands in the narrower radius, or for other reasons?—I do not give that opinion from the character of the land but from the situation of it, I think that there is no occasion for the increased extent, because for all the purposes of the existing Act there is still ample room.

1230. You do not think that the population of the metropolis is growing so fast that in a few years time the circumstances which now exist in the limited area would still exist in the same degree in the wider area?—No, I do not believe that the extension is at all called for.

1231. Have you had before you the calculations made by Mr. Scott, as to the rapid increase of the metropolis?—Yes.

1232. Do you differ from his opinion?—I do not fall in with it, I think it wild; there will no doubt be a considerable increase.

1233. You do not deny that building is extending round London?—No.

1234. Have you any special reason for believing that the population will not increase as it has increased hitherto?—I think that the population will increase, but there is room for it.

1235. Do you not think that the Legislature, supposing that it decided upon preserving the open spaces around the metropolis, as it has done, would also be wise to look forward to such an extension of the population as would make a wider extension of the area desirable?—I think that the period for that would be so remote that it had better be left alone.

1236. But when that period did arrive there would be no open spaces to preserve?—I do not think that that period will arrive, at all events in our own time.

1237. You do not think that legislation should be made for the purposes of a future generation?—Only for a necessary purpose.

1238. With regard to the character of the land at a greater distance from the metropolis, even supposing that there are certain commons which it is very desirable to preserve as open commons, do you think that the extension to 25 miles would prevent the inclosure of certain tracts of land which are suited for inclosure?—I do not think that the land, in some cases, is of that quality which would be so essential for agriculture. If the land were used, it would be simply for building.

1239. Do you think that there is difficulty now in getting land for building purposes?—No; the price of land has, of course, increased.

1240. Supposing that Parliament thought proper to include this land within the operation of the Act, is it your opinion that it would be a practical limitation of the rights of the lords and commoners within that area?—I think so.

1241. You think that the preventing a man from obtaining the enhanced value of the land which he would get by its inclosure is a practical limitation of his rights?—As I understand the question, it would be a practical limitation of his rights. I think that there is a limitation and an injury in some cases.

1242. Do you see any reason why a right which can be exercised in one manor 150 miles from

Mr. *H. Marshall.*

12 July 1869.

from London should be limited in a manor within 25 miles of London?—In neither case should it be done except under public necessity.

1243. And do you think that in those cases compensation should be awarded?—I think that those who benefited by it should pay for it.

1244. Do you wish to give any local evidence?—No.

1245. Is there any other point upon which you wish to give evidence before the Committee?—No.

1246. Mr. *Cowper.*] You stated that, as agent to Lord Lovelace, you were acquainted with the customs of the manor?—Yes.

1247. Will you inform the Committee what proceedings the lord of the manor could take for inclosing this common if he had not the benefit of the operation of the Inclosure Act?—I believe that he and the tenants, who are all of one opinion, might do it of themselves without going to the Inclosure Commissioners; but that they thought it was right that they should go to the Inclosure Commissioners; all the homage were for the inclosure; it is a unanimous inclosure; in some instances it would not happen so.

1248. Has there been a meeting of the homage?—There was a general meeting called by the Commissioners of all persons having an interest in the common.

1249. By the customs of that manor, is there a court of homage?—Yes.

1250. And has there been a court of the homage?—No in no manors have I known so few courts held.

1251. Have you, by examination of the rolls, ascertained the date of the last meeting of the court of homage?—It was very remote; it was not in my time.

1252. Supposing that the court of homage could be assembled, do you think that then, by the custom of the manor, the lord of the manor, with the consent of that court, could inclose?—I think that, if all those persons who were interested as lord and tenants agreed, they could inclose.

1253. Then, are the Committee to understand that your general impression is, that the inclosure of Wisley Common can take place by other means than by the operation of the Inclosure Commissioners under the Act of 1845?—Yes; but I am not sure now that it would not be better to get it done under the Inclosure Commissioners, because some persons might have an erroneous opinion, and we might have some trouble.

1254. Supposing, as you just now said, that the lord can inclose with the consent of the commoners, do you think that he could be deprived of his inclosure in one way by the Commissioners, if he could not inclose in the other way?—I think that it would be better that he should proceed under the Inclosure Commissioners.

1255. What would be the advantage of his proceeding in that way?—I think that the people might go and knock down fences.

1256. But would not the lord of the manor have a remedy?—He would have a remedy, but not a very easy remedy.

1257. Have you any doubt that he would be successful?—None at all.

1258. Then the advantage to Lord Lovelace, by being placed under the Inclosure Act, is a matter of convenience, but not of primary importance?—It is a matter of convenience.

1259. And as the Metropolitan Commons Act does not interfere with any right which the lord of the manor and the commoners may have independently of the Inclosure Commissioners, an application of that Act to Wisley Common, would not be inflicting any injustice upon the lord of the manor and the commoners?—It would be a difficulty which could be got over, but at some expense.

1260. It strikes you that it would be rather a matter of expense than anything else?—Yes.

1261. Mr. *Bonham-Carter.*] Would not the advantage of inclosing under the Act be, to bar claims?—I do not think that in that case, there could be any claims; I quite agree that in some manors it would have the effect of barring claims more completely than by the parties inclosing by themselves.

1262. Would not the advantage of putting an end to the advancing of claims on the part of some very small rights (because you seem to have ascertained the main rights) be an advantage for which it would be worth while to go before the Inclosure Commissioners?—I think that it would be desirable, and I would recommend it.

1263. Under the Act, irrespectively of the inclosure, have not the Inclosure Commissioners the power of partition?—I do not quite understand your question.

1264. Supposing that there are four commoners who are joint owners of property, whether inclosed or common, have they not also the power of going to the Inclosure Commissioners, and asking them under their powers to make a partition between the parties?—I do not think that they would do it without the lord; you must have a certain consent.

1265. Mr. Scott, in his evidence, stated that he contended that the public have a free access at the present time to the whole of Wisley Common?—Yes.

1266. In your evidence, I think you have stated that the ownership of the common in fee, and of the common rights, is now vested in four persons?—Yes.

1267. And we have had evidence that these commons are not very greatly frequented?—Yes.

1268. Do you think that there is any justification for the statement that the public have a right to the whole of Wisley Common?—No, but quite the contrary.

1269. The same witness has stated that an action of trespass would not lie, and would not be successful?—On the contrary, I believe that it would be successful.

1270. Colonel *Barttelot.*] You know the commons of Surrey?—Yes.

1271. Are the commons which are now within the area of the Metropolitan Commons Act, much frequented by the public, or not?—No; some are frequented more than others; but I believe that, generally speaking, they are not much frequented.

1272. Taking it as a general rule, the commons are not much frequented by the London public?—Wimbledon would be much frequented.

1273. Outside the range of Wimbledon, or Hampstead Heath, are the commons much frequented or not?—I think not.

1274. Mr. *Winn.*] You say that the space which is now included within the radius of 15 miles, is amply sufficient?—I do.

1275. Do you know any open space beyond the

the radius of 15 miles, which is much frequented by the London public?—No.

1276. Do you know Epping Forest?—I do not know it intimately; I should not like to speak to it.

1277. Upon the whole, you think that a radius of 15 miles is all that is likely to be required within a reasonable time?—Yes.

1278. Should you say that, if another common, which was desirable, was discovered, it might be taken and paid for?—Yes.

1279. Mr. *Cowper.*] Have you ever known any steps taken to prevent the public from wandering over Wisley Common?—No; they have never wandered over it. At one period there was an attempt to cut turf upon the common, and a knowledge of the matter was brought to me, and I wrote to the parties, and it was stopped.

1280. As people who are not commoners do walk and ride over the common, I wish to know whether, in your recollection, any step was ever taken to warn them off, or to warn them from going upon the common?—I think not, unless in the case of game; the game has been generally let, and the keepers look out so as to prevent trespassers.

Mr. *H. Marshall.*
12 July 1869.

1281. *Chairman.*] You were asked whether you thought that it would be an injustice to deprive the lord of the manor of one particular means of inclosure. If Parliament, in its wisdom, has passed an Act, giving general facilities for inclosures to the lords of the manors and the commoners, do you not think that any individual who found himself excluded from participation in those facilities would feel himself to be under an injustice?—I think so; but whether it would be right for him to do so or not, I cannot say.

1282. Mr. *Cowper.*] Assuming that the facilities of the Inclosure Act were given for public objects, would there be any objection if those facilities were taken away for equally good public objects?—I think not; if the public objects were good, there would probably be no objection.

Mr. Samuel Smith, called in; and Examined.

1283. Mr. *Johnston.*] You desire, I believe, to apply the Act of 1866 to Stoke Newington Green?—Yes; we think that the Amendment Bill which is proposed would do so.

1284. What now prevents your doing so?—We have the idea that it is not a common; it might, perhaps, be described as a village green. As far as we know, no one but the inhabitants who exercise the *quasi* right of cutting verdure has any rights over this green.

1285. How large is the green?—One and three quarter acres; it is an ordinary square surrounded by houses.

1286. What words would you suggest to be added to the interpretation of the word "commoner" in order to give effect to your wish?—I would suggest, with great diffidence, that the following words should be added to the interpretation of the term "commoner" in the clause in the Act, namely, "an owner in fee, or for a term of not less than 21 years from its original creation of any land or premises abutting upon or immediately adjacent to any such open space as aforesaid." I should perhaps trouble the Committee with the ground of our requiring such an amendment. Under the Act of 1866, as applicable to commons proper, there are three authorities who may invite the action of the Inclosure Commissioners, namely, the lord of the manor, the commoners, and the local authority. Our idea is that this not being a common, probably can only be made a common by the Bill which is now under the consideration of the Committee; and there being no lord of the manor, nor any commoners, exercising any power in the ordinary sense of the word, there would only be one instead of three authorities who could invite the exercise of the authority of the Inclosure Commissioners; and inasmuch as a previous Act of Parliament enacted that any one of those three authorities might invite the action of the Inclosure Commissioners, we think that we should be put into the position in which a commoner was, or otherwise we should be dependent upon the pleasure and the will of the local authority, who might reject the proposal for any particular reason. We should prefer being put into another position.

1287. Do you think that besides the three parties whom you have named, the owners or occupiers of property abutting upon such a green, ought to be empowered to present a scheme to the Inclosure Commissioners?—It would be rather in substitution of the power which now exists. We are without a lord of the manor, and we say that the proper parties to exercise the rights of the commoners would be the persons who are interested in the preservation of this place. I only refer to the improvement of its condition, not to the exclusion of rights.

Mr. *S. Smith.*
12 July 1869.

1288. At present the green is managed after a fashion by a committee of the neighbours?—Yes; who are enabled by hard pressure to collect 60 *l.* a year, which is absorbed by a constable and his uniform. What we want is to invoke the aid of the Inclosure Commissioners for the preparation of a scheme.

1289. In what way would a scheme enable you to preserve the green from nuisance more than at present?—Because, under the terms of the Act of 1866, we find that there are powers to do things which are approved by the Inclosure Commissioners, and, inasmuch as a scheme by the Inclosure Commissioners, when approved by Parliament, would have all the effect of an Act of Parliament, we hope that that scheme will give us power to fix a maximum rate which shall be sanctioned by the scheme. The houses are very unevenly rated, and we shall ask the Inclosure Commissioners, if the Committee permits us, to fix a maximum rate, so that, in time, some 300 *l.* or 400 *l.* or 500 *l.*, shall be raised. But at present no persons have a sufficient interest in this place to contribute 40 *l.* or 50 *l.* for the maintenance of railings. We are bare tenants and we only get enough money to preserve order. If any honourable Member will imagine Hanover-square or Grosvenor-square divested of its railings, he will readily perceive that, as the population grows around it, it requires a different mode of dealing with it.

1290. *Chairman.*] Are you now under the Act of 1866?—No; we are under nothing in the world.

1291. You are within the radius?—Yes; we are about five miles from this building.

1292. Are you aware that under the Act of

Mr. *S. Smith.*

12 July 1869.

1845 a village green cannot be inclosed?—Yes, we do not desire to inclose this ground.

1293. What you want is to have it made quite clear that the scheme proposed under the Act of 1866 is applicable to your case?—Yes; that the Act is applicable. We thought that we might be met by the Inclosure Commissioners saying that we are not within the scope of the Act.

1294. Are there any claims made with regard to rights of common?—No. I have old accounts extending back to 1807, in which we find that the whole thing has been absorbed by the inhabitants, and that they have sold the grass and have exercised the powers of watching and lighting, and so on.

1295. You are a churchwarden of Islington?—Yes; I represent the committee which manages the affairs of this green on this point, and we think that we generally know the views of the inhabitants; most of the persons elected on that committee are owners as well as occupiers, and we think that we represent the substantial opinion of the inhabitants, but no steps have been taken to poll the inhabitants.

1296. Did I rightly understand you to say that you thought that in addition to those persons who have now the power of setting the Inclosure Commissioners in action under this Act, the occupiers of adjoining property should have that power?—Yes. The only power who could set the Inclosure Commissioners in action would be reduced from three to one; namely, the Board of Works. In the case of any ordinary common, there would be three authorities, namely, the lord of the manor, the commoners, and the local authority; and we say that if this Bill were passed, it would bring under the operation of the Act of 1866, the case of an open space which this Bill would declare to be a common, but which was divested of the lord of the manor or the commoners; and, therefore, instead of having three authorities, either of whom could set the ball going, you would have only one.

1297. Is your proposal to limit the application of the Act in such a case to places where from the want of other bodies the Act is likely to fail, or would you give the initiative authority to the owners of the adjoining properties, in addition to the three bodies you have mentioned?—I have not reflected upon that point, but I think that they have a perfect right to set the Inclosure Commissioners in action, so that it may be generally an improvement.

1298. Then, you think that in the cases where the local authority, lord of the manor, and persons having rights of common agreed to it, they might be authorised to apply to the Inclosure Commissioners, or to present to them such a memorial as is contemplated under this Act, and that where they did not think it desirable to do so, the adjoining owners should still have the power of setting the Inclosure Commissioners in motion?—I think that in what we propose we are considering the rights and wishes of the parties in the immediate neighbourhood; but if the Committee thought that what we ask is too large, I would request them to limit it.

1299. You would not say that the owners of adjacent properties, who have no rights, have a greater claim than those who have rights?—I perhaps have taken a limited view; I look to Wimbledon, and perhaps the owners of those sort of places have a very different right.

1300. Lord *George Hamilton.*] Do you know any other similar cases to that of Newington-green to which you have referred?—I do not know any other place which resembles Newington-green in its character; externally Islington-green resembles it very much, but it has been ascertained that that is a part of the waste of a manor; it has been conveyed to trustees.

Thursday, 15*th July* 1869.

MEMBERS PRESENT:

Colonel Barttelot.
Mr. Bonham-Carter.
Mr. Cowper.
Lord George Hamilton.
Mr. Andrew Johnston.
Mr. Knatchbull-Hugessen.
Mr. Knight.
Mr. Frederick Stanley.
Mr. Gerard Sturt.
Mr. Rowland Winn.

THE RIGHT HONOURABLE WILLIAM FRANCIS COWPER, IN THE CHAIR.

Mr. RICHARD ELLIS, called in; and Examined.

Mr. *R. Ellis.*
15 July 1869.

1301. *Chairman.*] YOU are the Vestry Clerk of Hackney?—Yes.

1302. And a resident there?—Yes.

1303. Are you prepared to give information to the Committee with regard to the open uninclosed lands in that parish?—Yes; for some years past we have had our attention called to the various open spaces which we have in the neighbourhood of Hackney, and I fancy that we have rather more than is usual round the metropolis; first of all, we have, in Hackney contiguous to the parishes of Shoreditch, Bethnal Green, and Hackney, a large open space, called the London Fields, which consists of some 27 acres; then, further on, north-eastward, we have the Downs, which, properly speaking, ought to be 50 acres; but I do not believe that they are so much now; we have then a piece called Hackney Common, which is further southward, of about seven or eight acres. Then there is Newington Common towards Stoke Newington, out northward, and there is Clapton Common, which is at Upper Clapton.

1304. Are all those commons in the parish of Hackney?—They are all in the parish of Hackney; added to all these are some very large open spaces in the Marsh consisting of about 300 acres. For some years past we have had our attention called to these commons; and, the parish wished to do something, but we find that there are certain rights attachable to them which have always prevented our doing anything at all. Previously to the year 1866, when the Metropolitan Commons Act passed, we prepared a scheme for Parliament, and gave our Notices to Parliament for dealing with the London Fields. I gave the Parliamentary Notices on behalf of the vestry, and of course it was a question, at that particular time, how we were to pay for getting possession of the the London fields, and we proposed to take one of two alternatives, either to sell the brick earth, which, it is supposed, lies very considerably under the London Fields, and to recoup the promoters of that scheme, and not to levy any expense at all upon the inhabitants; or else to sell a belt round the fields in order that we might pay for the remainder. Unfortunately, such a very great clamour was raised by the inhabitants with regard to this scheme, that we were forced to drop it; the Metropolitan Commons Act, of 1866 was then passed, and we immediately took steps as the Board of Works in the district; but under that Act, the Metropolitan Board is the local authority, and although we are the parties chiefly interested, we could not stir a step, except by pushing the Metropolitan Board forward in every instance; and we were forced to get up all the information for the Metropolitan Board which we first should have required for ourselves.

1305. To whom do you allude, under the name of, "We, who were the parties mostly interested"?—The local district board; I am also clerk to the local district board of the Hackney district; they then stirred in the matter immediately that the Metropolis Commons Act passed, and presented a Memorial to the Metropolitan Board, who are the local authority under the Act. The Metropolitan Board, after obtaining all the information which they believed to be necessary, presented a scheme to the Inclosure Commissioners, under this Act, for dealing with the London Fields and the Hackney Downs; and are of opinion, that they could not at present go further. That scheme is before the Commissioners, and we have been met with the objection that these lands are not common lands, such as were intended to be dealt with by the Act, but are what are called lammas lands; that the Act never intended to provide for such a state of things as that, and there we are stopped at the present moment.

1306. Will you state to the Committee what are the rights of common over the London Fields, and the Hackney Downs?—I take it that they are rather derived from two different sources; with regard to the London Fields, a few years ago, the London Fields belonged to five or six separate freeholders; we have never been able to see their conveyances, and therefore, until we go into their title, we cannot exactly see what their title is; but at the present moment their rights have all been bought up, and have come into the hands of one individual, namely, Mr. Corbett, who is lately deceased, and who is represented by Messrs. Frere of Lincoln's Inn-fields.

1307. Were there any rights of common belonging to the inhabitants independently of the freeholder?—The freeholder held the land from May till August, namely, for four months in the year, which was called the close time; he could shut

Mr. *R. Ellis.*

15 July 1869.

shut it up, or graze on it, and do anything that he liked with it. During the other eight months, which were called the open time, by some process or other, which nobody has ever been exactly able to explain, everybody seems to have had the right to rove over the land, and to do what he likes; but a few years ago, and before my time (I have heard of it), the land used to be valuable enough for the marsh drivers to allow a cowkeeper to put on a certain number of cows during the four months, and to receive 25 *l.* or 30 *l.* a year for it.

1308. During the open time is the common now greatly frequented by people?—It is very much frequented, both during the open and during the close time; it is impossible to close it; it is impossible to say that it is worth anything for herbage, or anything at all; it is the run of the riff-raff and vagabonds at the east of London during the whole season, night and day.

1309. Games are played there?—There are the most dissolute practices imaginable; cockshies are put up, sticks are put up, and it is just like a common fair; on Sundays the scenes are something very dreadful; there are itinerant lecturers, not the ordinary itinerant respectable preachers, but people who get up discussions.

1310. Are refreshments sold there?—There are only small itinerant sellers of ginger beer, and cakes, and that sort of thing.

1311. Have the police any power of regulating the use of the ground?—Whenever there is any fair attempted there, of course the police have to give certain preliminary notices, which notices take so long a time before they can be of any avail, that the fair is held, and swept off, before the police can do anything; we have tried that; I, as a lawyer, have had my attention directed to this particular point; it is of no use bringing an action of trespass against these rascals who go on the field, and if a respectable person tried it, it would take so long a time that it would not be worth doing.

1312. Practically are many fairs held there?—No, there have not been many lately; one was held about six years ago; the police then, somehow or other, stopped it.

1313. But you say that the games which ordinarily take place rather resemble what takes place at a fair?—Yes.

1314. Colonel *Barttelot.*] Can you point out where these fields are?—(*The Witness pointed out the same.*) It is the nearest open space on that side of London to the City.

1315. *Chairman.*] When the District Board of Works were preparing to obtain a Bill relating to the London Fields, will you state the objects and views which the District Board of Works had in view?—Their great object first, was to get the fields into a better state, and to keep them for a more respectable class of society than that by which they are now used; and the second object was to make it more of a park, so as to preclude the disreputable and lower orders from using it; they always found a difficulty there; they did not intend to shut it up merely as a park, and to exclude all games, and everything of that sort, but they wanted to keep the worst portion of the lower class out of it; in a somewhat similar way to what has been done at Kennington Common.

1316. Was there any intention of excluding the public from free access to the ground?—No, it was rather intended to keep it open, except at nights; that is to say, to keep open the paths at night, but to keep the inclosure closed at night if possible.

1317. And they desired to have an authority which might set the police in motion for preserving decency and good order?—Just so.

1318. Were the freehold rights in the London Fields put at the disposal of the District Board of Works?—No; they were attempted to be sold by auction, and I was directed to attend the sale; it was thought that they could be sold for a very large amount, but the auctioneer withdrew the sale, and they were not sold at that time.

1319. Mr. *Knight.*] Did they put a reserved price?—I do not know whether they had one or not.

1320. *Chairman.*] The District Board of Works do not in any way at present represent the freehold in the soil?—No.

1321. Was it contemplated to compensate those freehold rights?—Yes, *pro tanto*, whatever they might be worth. In these fields the first question seems to be, "What are you to pay?" and I have always told our vestry, and the people there, "You will have undoubtedly something to pay; you cannot expect to get these things without paying for them;" but the question is, how much; and my idea is that you might go before a jury, and get those rights limited to a a very small value; there can be no question that there is some value.

1322. You do not mean that the jury would not be free to form their own opinion of what the value was?—I think that the jury, after hearing evidence, should form their own opinion; I do not think that because a party says, "I gave 10,000 *l.* for this," it is worth 10,000 *l.*

1323. Your advice to the vestry was that they should afford to persons claiming rights in the soil the opportunity of having those rights assessed and determined by a jury as to their present value?—Yes, because I do not think that when you get the fields you can deal with them without having closed with all those parties. A party might start up, and say, "You cannot deal with my right;" and so on; and therefore you will have to get rid of them all. I have heard it said that it would be an advisable course to take possession of these fields subject to these rights, and to let them remain as they are; I must confess that I cannot see how you could deal with the ground without compensating the rights.

1324. You consider that the right must be small, since there is now no herbage upon the ground?—Yes, it appears to me that the right is a very small and valueless right: I have heard it said that a Chancery suit has been brought, and that a large sum of money has been given for it; but it is the opinion of some that two or three good lawsuits are bought at the same time.

1325. Was it the vestry or the District Board of Works who were preparing to take steps for getting these lands enclosed?—It was the vestry, because it was a parochial matter: the Board of Works rides over the other parishes as well; the marshes are very extensive, they are some 300 acres; there is a large extent of marshes by the side of the Lee.

1326. Have you the size of the Newington and the Clapton open spaces?—Clapton Common is nine and a quarter acres, Hackney Common is 30 acres, Stoke Newington Common is five and a half

a half acres, and the Downs are supposed to be 50 acres.

1327. The object of yourself and of those whom you represent, being to arrange that the London Fields might still serve the purpose which they at present serve, but with order and regularity, and proper enforcement of decent behaviour, are you desirous that the London Fields and the Hackney Downs should be dealt with under the Metropolitan Commons Act of 1866?—Yes; the Metropolitan Board have already presented a scheme, which is based very materially upon what we have informed them, but we are stopped by the particular question to which I have alluded.

1328. Have you been stopped by the Commissioners doubting whether they had power to deal with those fields under their legislative powers?—Yes.

1329. Do you think that it would be desirable that those doubts should be cleared up, and that the Inclosure Commissioners should clearly have a power to deal with this open space?—We wish Parliament to settle the matter, as there are doubts upon it; some lawyers say that the words would carry lammas lands.

1330. Mr. *Knatchbull-Hugessen.*] If I understand you rightly, your object is not so much to get an extension of this Act, as to get such an amendment of it as shall without doubt include you within its operation?—Locally, that is the case.

1331. I am speaking of the lands upon which you are giving evidence?—Yes, as regards these particular lands; I have not turned my attention to the question which you have before you, namely, whether it is desirable to extend the area to 25 miles, or not.

1332. Are all these Lammas lands which you have mentioned in different places, subject to the same rights?—They have always been considered as subject to the rights of the marsh drivers, who have always at certain times of the year dealt with the whole of those lands; they have marked the cattle, and have taken a toll for the cattle going on. I do not know whether all the commons are exactly held under the same titles, but the practice has been to deal with them in the same way.

1333. Have you yourself known them long?—I have known them for some 20 years.

1334. Is there any lord of the manor?—Mr. Tyssen Amhurst is the lord of the manor.

1335. Has he, or have the other persons who have common rights in these lands, ever attempted to proceed under the old Inclosure Act?—I have not heard that they have; I have never known within my time of their proceeding under it.

1336. Was there anything to prevent their doing so?—Yes; I think that the ordinary rights of the public would have precluded them from dealing with the land at the open time.

1337. You think that the Inclosure Commissioners would have made an objection, if persons having rights to a certain extent in these commons had made the formal application prescribed by the Act of 1845?—I hardly think that that Act was applicable to these particular lands inclosed in that way; I think that it would not be applicable, say, in Epping Forest, and places in which they have largely inclosed the lands.

1338. Are you acquainted with the provisions of the Act of 1845?—Not sufficiently to speak to that particular point.

Mr. *R. Ellis.*

15 July 1869.

1339. At all events, there has been no application, and no steps have been taken?—I think not; I have not heard of any, and I think that I should have heard of them if they had been taken.

1340. Has a scheme under the present Act been proposed by the persons having rights, or by some external authority?—There are two concurrent schemes at the present time; one was promoted by some gentlemen who got up the scheme, and the other was promoted by the authorities; both, I believe, are stopped.

1341. Are the commons now under no sort of regulation?—None at all.

1342. I suppose that if it was shown to you, that under the General Inclosure Act there were powers to deal with, and to place under proper regulation, these sort of lands, you would have no personal preference for this Bill over the General Act, so long as your object was obtained?—If we found that there was no other machinery for accomplishing the same object we should willingly avail ourselves of it.

1343. It has been proved that the Inclosure Commissioners think that under the Metropolitan Commons Act of 1866, they cannot deal with these lands; but it has not been proved that they consider that prior to the Act of 1866 they could not have dealt with them under the General Inclosure Act?—Prior to 1866 I fancy that the inclosure would have been for the benefit of individuals who inclosed; we wish to get an inclosure for the benefit of the outsiders; I may be wrong in my view, but I have always considered those Inclosure Acts to be for the benefit of the inclosers.

1344. Under the Act of 1845, would not wide powers have existed on the part of the Inclosure Commissioners to set aside ground for recreation, and to give public allotments to the poor?—Yes, if they had been able to allot the whole of it; but they would perhaps slice off portions, and allot those portions to the public in exchange for what they gave up to be inclosed for other purposes.

1345. You do not think that any legislation with regard to these commons would be satisfactory which did not in some way or other specially extinguish the rights of common, and appropriate the whole of the common to the use of the public?—I do not think that we could spare very much to be given up.

1346. You think that it would be right that the power should be given to go before a jury, and that they should decide the rights; that is to say, that they should judge of what was a fair compensation to be given to those who had established their claim to such rights?—I think that that would be a fair and equitable mode of proceeding; I think that you must do so.

1347. Do you find any such power given in the Metropolitan Commons Act of 1866?—I fancy that the Lands Clauses Act could be made use of in that respect.

1348. What is the clause in the Act of 1866?—The 15th.

1349. Do you know whether that has been done in any instance under this Act?—I am not aware of any instance of it.

1350. Do you know whether, on the part of those persons who have, or who claim to have, rights of common, there is a feeling of security with regard to this 15th clause providing compensation

Mr *R. Ellis.*
15 July 1869.

pensation to them?—Previously to the passing of this Act, I and Mr. Cheston, the Steward of the manor of Mr. Tyssen Amhurst, were examined upon this question, and the evidence which was given was, that he would be willing to meet the matters fairly; but that he did expect something there is no doubt.

1351. Do you think that he feels that this clause 15 gives sufficient security for compensation?—I do not know what his ideas are; I fancy that if a person once establishes his right, that clause is sufficient to give him a right to go before a jury.

1352. If the parties had doubts upon the subject, it might prevent their concurring in any scheme, might it not?—Probably it would do so.

1353. And if the owners, and those having property in commons within the metropolitan district, did not concur in the scheme it would practically render null and void the provisions of this Act, would it not?—I do not exactly take it in that way; I think that the Commissioner would have power to hear all sides, and that he then must determine.

1354. Is it not necessary that the memorial for a scheme as to a common should be presented by the lord of the manor, or by the commoners, or by the local authority?—Yes.

1355. If the lord of the manor and the commoners did not think that they were secure of receiving compensation, and did not present a memorial, it would rest entirely with the local authority, would it not?—Either one of the three parties having presented a scheme, I take it that the other two of course would be heard, but that if the Commissioners thought that they could not bar that place, they would not give their consent.

1356. Do you think that it would be well to give to other individuals than the three bodies who are here referred to, the power to initiate a scheme; I mean the general public?—That would very materially depend upon the parties on whom you placed the expense afterwards; the question of expense was one question with us; I always suggested that it would be a very good thing to go to the Metropolitan Board, because we should have had it paid for out of the metropolitan fund of the metropolis generally. If you are going to make it paid for locally, there is no reason why a local body should not have a right to ask for it.

1357. When you say that this is a resort of all the riff-raff at the east end of London, I suppose that they are not all riff-raff who go there, are they?—The paths are kept by the respectable portion of society, because it is a direct thoroughfare; but the fields themselves are very badly used.

1358. What do you suppose will become of this riff-raff, if you shut them out of the fields?—I would not propose to shut them out entirely, but I would propose to have them under supervision.

1359. How far is this land from Victoria Park?—About half a mile.

1360. Do all these lands lie pretty close together?—No, they are very largely apart.

1361. Are they all near Victoria Park?—Hackney Common is the only one which is close to Victoria Park; Clapton Common is about two and a-half miles from it; Newington Common is some three miles distant, and the Marshes are perhaps a mile off in some parts.

1362. Is Newington Common a place which is near any park, where these riff-raff could go, if they were excluded from these fields?—Yes, they would have to go a little further from the centre of London to get there.

1363. But even if people are riff-raff, I suppose that you would not exclude them from fresh air?—Certainly not; I do not use that term offensively.

1364. Do you think that the provisions of this Act, if they were made applicable to these particular lands, would be satisfactory to the inhabitants?—I think so; we propose to insert certain words which should include lammas lands, and also such words as would include those parts which are open for less than a year; it has been said, that this Act does not apply to those places which are closed for a part of the year.

1365. Have you the words drawn which you would suggest?—These are the suggestions of the vestry:

[*The Witness delivered in the following Paper:*—]

At a Special Meeting of the Vestry of the Parish of St. John at Hackney, held at the Town Hall, Hackney, on Monday, the 14th day of June 1869, Mr. Churchwarden *Russell* in the Chair.

Read Report of Parliamentary Committee, appointed by a Special Resolution of the Vestry, held on the 4th instant, to watch the progress of any Parliamentary measures affecting the Poor Laws, or other matters of parochial or municipal interest.

It was moved by Mr. *W. Green*, seconded by Mr. *Muscutt*, and Resolved—"That the Report be adopted so far as relates to the Bill to amend the Metropolitan Commons Act, 1866, viz.:—

"That, in clause 2, line 10, after the word 'for' omit '*not less than*,' and insert 'any portion of a year during the;' and that the following addition be made, 'and the word *common* shall be taken to include all lammas land.'"

1366. What does the proposed scheme do with regard to Newington Common?—We have not, at present, embraced Newington Common. Under the advice of the solicitor of the Metropolitan Board, we thought that it would be quite sufficient to deal with two large places at one time.

1367. You have said that Newington Common is the farthest from any park?—Yes.

1368. I suppose that no scheme is to be proposed which will inclose Newington Common in any way?—No, we do not propose to inclose any part of it.

1369. Those persons whom you represent wish to maintain these commons as open spaces, but under proper regulations?—Yes.

1370. And, with the amendments which you propose, you think that this Bill would be applicable to, and would be beneficial to, the community residing around the commons of which you speak?—I think so.

1371. Mr. *Bonham-Carter.*] I understood you to say that, before the passing of the Metropolitan Commons Act, you gave Parliamentary notices on behalf of the vestry?—Yes.

1372. Was a Bill drawn?—No, there were merely the notices and the plans lodged.

1373. Were those notices to the public in the "Gazette," or were they notices to the parties?—They were in the morning papers, and in the "Gazette."

1374. They were the ordinary preliminary notices?—Yes; they were no further than that; the second step, of giving notices to individuals, was not taken.

1375. Did

1375. Did you, without having given the notices, go into the question of who were the persons to whom the notices should be given?—Yes.

1376. Was the difficulty of finding out who those parties were, in any way, the ground for dropping the scheme?—No.

1377. So that, subject to rights which might have appeared afterwards, you were generally aware who the persons upon whom notices would be served were?—I think so; I think that we should have been prepared to go on with that question. We should have served what notices we might have been advised to serve.

1378. Can you tell us at all who those persons were; I do not mean by name, but generally?—Dealing with the London Fields, I should have first considered that there was the absolute freeholder itself, that is to say, Mr. Corbett, or his representatives. Then, there is the lord of the manor if he has any rights, and I should serve the lord of the manor under advice as representing the Court Baron. I should not have thought of serving each copyholder.

1379. When you were going into the scheme, was it supposed that the copyholders had actual rights in the common?—I have seen the court rolls; the Court Baron at one particular time threw it open to all parties occupying property of 10 *l.* a-year.

1380. So that, in fact, there were the lord, and a certain limited number of freeholders and of copyholders, who might be supposed to have definite rights?—Yes, and their tenants.

1381. That is to say, in respect of those copyholds?—Yes.

1382. Was there a very large number of copyholders?—I expect so.

1383. The freeholders, I apprehend, had the right for certain months of the year?—Yes, for four months of the year.

1384. And the exercise of the right of the copyholders accrued after the four months?—Yes, in the eight months.

1385. I understand you to say that the herbage of the common is let?—I think that I can give you a practical illustration; some 30 years ago the freeholders of Hackney Downs sowed their wheat, and the day arrived at which it ought to have been cleared off, and it was not cleared off, and the commoners put on their cattle who ate it off; there was a great noise about it, and there were actions about it.

1386. Were those actions compromised?—They were never carried through.

1387. You have mentioned marsh drivers?—Yes.

1388. Did those marsh drivers exercise authority over the whole of these commons?—As far as I have knowledge, I think that they did; I have never entered into the secrets of what they have been doing, but it is the general impression that they marked every head of cattle which went on to this common.

1389. They were officials of the lord?—Yes, appointed by the homage.

1390. Did you ever attend a homage yourself?—No.

1391. I have understood you to say that, with the consent of the homage, the rights were at one time let for something like 25 *l.*?—The London Fields used to produce that amount; and the Downs would have produced that sum years ago for the purpose of feeding cows during the time.

1392. The copyholders having the right of pasturage during the eight months, do they attend the homage?—I do not know; it was always a very close court.

1393. I understood you to say that the copyholders had rights of pasturage?—Yes; and there was a special resolution of the homage passed, throwing it open to all copyholders, and all tenants occupying to an amount of 10 *l.* a year in the manor.

1394. Then how did it happen that there was a letting?—That was for the four months.

1395. On the part of the freeholders?—Yes.

1396. The separate right of user for the four months was let on the part of the freeholder, and his rights were protected by marsh drivers?—I presume that they protected them; I presume that they would be the parties. I do not know how they did it.

1397. Am I to understand you that all these freehold rights are vested in one person, namely, Mr. Corbett?—Yes, with reference to the London Fields.

1398. So that as far as the London Fields are concerned, the rights for the four months are now in the hands of two persons, namely, the lord and Mr. Corbett; the lord has certain rights?—He asserts that he has a certain right over the brick-earth.

1399. Whatever rights the lord has still exists in him; he has done nothing to divest himself of those rights, has he?—I have never heard that Mr. Tyssen Amhurst has done anything to divest himself of the rights which he has in that manor, but I do not like to say that in the London Fields Mr. Tyssen Amhurst has any rights.

1400. Should you have served him with notice?—I think so, for safety.

1401. You say that at present the herbage is worth nothing?—It is perfectly worthless for the 12 months of the year.

1402. I understand you to say, that you recollect the time when there were definite rights which were worth money?—I recollect the time when a cowkeeper could have put a few cows on there, but he could not do so now.

1403. You have also said that the respectable part of the inhabitants generally keep to the paths?—Yes.

1404. Then, is it not a fair conclusion that it is by the inroad of the riff-raff, as you call them, who of course must exist in London, that the rights of the commoners, whatever they are, have been infringed upon, and rendered valueless?—Yes; it is by the constant running over the field that the herbage has been destroyed.

1405. I understand that what you would wish is, that whatever rights there are should be all fairly considered, but that the scenes which now occur should be put an end to?—I think that that is the fair way of looking at it.

1406. I think that you say that the steward, on behalf of the lord, expressed his willingness to have an arrangement come to?—Yes; that was the evidence of Mr. Cheston; he said that the lord had certain rights.

1407. Would it be possible to make a scheme by voluntary arrangement?—I think not; I have tried Mr. Cheston, but we can get at nothing definite.

1408. Did he object to selling this belt of land, which you proposed as one of the modes of deal-

Mr. *R. Ellis.*
15 July 1869.

ing with the matter?—He never would explain himself as to what would be his ultimate decision.

1409. Was the sale of that belt of land limited to one of these commons?—It only applied to the London Fields.

1410. At present the London Fields, I think, are nearly surrounded with houses?—They are nearly surrounded by houses; on one side by Shoreditch, on another side by Bethnal Green, and on another side by Hackney.

1411. Would there be any difficulty from the inhabitants of those houses, supposing that you built in front of them?—They themselves caused the difficulty; they said that they did not want their extended view closed.

1412. In your opinion, do those houses let at a higher rent in consequence of having the London Fields in front of them?—I think that they would do so, if the London Fields were in a decent state, but they are in such a bad state, that I think that it is rather detrimental to the lettings.

1413. You would not propose in any scheme to close any of these commons?—Not entirely to close them.

1414. But you said that a part of the scheme was to regulate the enjoyment, particularly in the case of persons who came on at night?—I would close them at night, and only keep the paths open.

1415. Then you would fence them?—Yes.

1416. And would appoint constables?—Yes; but I would leave them open for cricket, and trap-ball, and enjoyments of that sort.

1417. Mr. *Johnston.*] Has a portion of the London Fields been already built over?—That is a moot point which I would not like to answer, as to whether it is legally built over; a space of ground is partially built over, which it is said has been taken from the London Fields.

1418. Has your vestry, or anybody else, taken any steps against those people who are supposed to have illegally appropriated that part of the fields?—The vestry have gone as far as they could, but they have no authority *qua* the vestry to do it.

1419. I suppose that unless something is done, that building will continue to extend itself?—I do not see that; I do not see that there can be any more buildings.

1420. Why should not building continue for the same reason as that for which it has been begun, if no one should interrupt it?—Because the building which has been spoken of is in a space which has been inclosed for a very great number of years, and there may or not be a title to it; the other part is as open as can be, and the moment that anybody touched it, it would be resisted.

1421. Are you aware that the London Fields are a most valuable drill ground, being the nearest open space accessible to several large regiments of volunteers?—The militia and the police drill there, but I do not know that any of the volunteers go down there.

1422. You are not aware that the 1st Tower Hamlets Volunteers drill there?—I was not aware of it; it may be so.

1423. Colonel *Barttelot.*] Do you happen to know whether within the metropolitan area, that is to say, within the police district, there are many Lammas lands?—I cannot speak with certainty of other commons, but I have generally heard it asserted that the Hackney lands are the principal of the Lammas lands round London, and that it is not generally known where the other Lammas lands are.

1424. Then so far as you know, these are the only Lammas lands within a short distance of the metropolis?—Yes.

1425. All these lands, I think, are not Lammas lands?—There is a difference in the holding between some of them; in the Hackney Downs, for instance, I believe that in addition to the lord having a right over them as lord, he has strips which are his own freehold.

1426. That is not Lammas land; there is no doubt that the London Fields are Lammas land?—I think that there is no doubt of it.

1427. And you have very fairly said that in order to deal with those rights, you ought to have a special power to make some compensation to the owners?—I have no particular wish to benefit the owners, but I do not see how it can be done otherwise: I do not see how you can do it without compensating everybody, and therefore I say that, justly and equitably, you should pay every one, whatever his right may be.

1428. Would not it be a great advantage to that part of the metropolis?—Undoubtedly.

1429. And therefore you think that it would be no hardship upon that part of the metropolis fairly to pay what was owing to these people for their rights?—Yes, if they could establish them.

1430. All that you would wish to do would perhaps be, that, with regard to the Lammas lands in that particular district, you would desire to have some special Act?—I think that the proposed Bill might be so modified that we could come under it, and be assisted materially by it, without having a special Act for ourselves.

1431. Do you not think that the difficulty would be, that whereas in some of the other Lammas lands it would be a great hardship upon the owners; in the Lammas lands which you have named the hardship would not be so great?—I cannot conceive that there would be much more hardship to them than if a railway company compelled them to give up their rights. A railway across the Downs has already taken possession of some of the land, and has paid somebody.

1432. In the case of a railway company taking the rights, they pay full compensation?—Such as is awarded.

1433. And, generally speaking, that is very large?—It all depends who is on the opposite side to cut it down.

1434. Taking it in the ordinary way, that case would hardly apply to you, would it?—I would let any person who thought he had a right come in and be heard, and I would dispose of the question of value, and I think that the value would be so small that we should get it for very little.

1435. Supposing that there were any Lammas lands situated at a greater distance than these from London, they would not be of the same advantage to the metropolis?—No; the nearer they are to the heart of the metropolis, of course, the more valuable they become to the public to get hold of.

1436. It would not be fair to introduce into this Act of Parliament the doing away with the rights of Lammas lands, simply to secure the Hackney Fields?—Not simply to secure the Hackney Fields. As you get further out, I think

think that the Lammas lands would be a little more valuable, but nearer to London they are getting not to be so valuable; and I fancy that the owners of Lammas rights in London would not have the same value as the owner of Lammas rights 30 miles from London.

1437. Therefore it would be unfair to extend that right beyond those fields?—I would extend it; but the other man, perhaps, would get the advantage of being paid better, because he would get a more valuable piece of land.

1438. Do you know whether these metropolitan commons are much frequented?—Our marshes in the dry weather are very much frequented; they are the only open spaces between Victoria Park and the Forest; parties go across there to Lea Bridge on the Sunday afternoon; they are very largely frequented.

1439. Are there any other uninclosed commons in that neigbourhood in Essex?—Not near us.

1440. Do you know anything of the Surrey commons?—No.

1441. You know nothing of any commons on the south side of the river?—No.

1442. Then you are not able to state whether the present area of the Metropolitan Police District is sufficient for the accommodation of the London public, or not?—On our side of London we are very much curtailed for open spaces; excepting these open spaces, we have only Victoria Park and Finsbury Park, which will be shortly opened; but between those two parks we have nothing at all open to the public, except these commons which are getting into a very bad state.

1443. Mr. *Winn.*] You say that Lammas lands near London are of less value than they used to be formerly?—Yes.

1444. That is from the riff-raff using them a great deal more than they used to do?—I think that that is one of the incidents of being near the interior of a large city.

1445. The riff-raff run over these lands, and destroy the herbage?—Yes; they are the nearest fields for them to get at, and they go to the nearest place.

1446. And you would like to regulate the enjoyment of this land by sending the riff-raff further off, and leaving the land to be used by the more respectable inhabitants?—No; I would not exactly do that; I think that if these fields were better kept, and preserved, and if there were some conservancy over them, the population would be educated into a little better mode of using them.

1447. You have said that you think that that would have the effect of sending them rather further off?—Yes, as respects the particular parts which I speak of. A very great deal of immorality is going on upon those fields night and day.

1448. Is it not the very mode in which that land is used by those classes which has made it of less value than it used to be, and has in a great measure established the right of the public to it?—It is partly their mode of using it, but the principal thing is the cutting up of the herbage which has prevented the letting.

1449. That has been done by these very people?—Yes.

1450. They having gained this right, what you are now wanting is to exclude them by regulations which you propose making?—It is the object of everybody to get rid of a nuisance, as far as he possibly can.

1451. But you want to make use of what these people have done for you, in order to get the land at a reduced value from the people who originally had the ownership of it?—In paying for it I should make use of the argument that it had been so valueless for many years, that it would not be worth while asking much for it.

1452. You say that you would have a jury to assess the value?—Yes.

1453. You say that in some cases a considerably larger value has been given for some of these rights than they are now worth?—I have heard that these fields were bought for a very large amount of money, and with the idea of having one or two lawsuits at the end of it.

1454. Bought by whom?—By the freeholders.

1455. What was the reason they gave this large sum?—I do not know; they might have been advised to purchase them.

1456. Was it not some speculative value which they put upon them?—In my idea, from what I have heard, it was a speculative value. I have heard that some 6,000*l.* or 7,000*l.* has been given for them.

1457. Was that a speculative value for building purposes?—I do not know what the ultimate object was.

1458. You think that it would be fair, notwithstanding their having bought this land at a speculative value, that they should only have their rights as they now are, valued by a jury?—I do not think that it would be right to allow that speculative price which they have given, to be an element in the consideration of the value.

1459. I understand you to say that in your opinion the jury should value the land at its present value?—Yes.

1460. *Chairman.*] Supposing that the persons who are now guilty of improper conduct on the London Fields, were removed by police regulations, would there remain still a very large quantity of persons ordinarily frequenting them who do not come there for the purpose of improper and indecent conduct?—I think that there is a very large class surrounding that neighbourhood, to whom it would be a great boon to have that ground cleared of the parties who, least of all, would allow them to use it in a decent manner.

1461. Then is your complaint restricted to the manner in which the London Fields are used, and not to the number of people who come upon them?—I fancy that there would be more people on them if they were in a better state.

1462. Supposing that these London Fields were brought under the operation of the Metropolitan Commons Act, would not the parties claiming rights in them, have the same opportunities of having their rights ascertained, which persons whose land is taken by railway companies have; or in other words, would not the Lands Clauses Consolidation Act and the Lands Clauses Consolidation Acts Amendment Act apply in this case, as they do in the case of railways?—When I saw the Act of 1866 passed, my idea was, that when the parties had established a right, they could have it decided in the same way as if a railway company dealt with the land.

1463. You find that in the 15th clause of the Act of 1866?—Yes.

1464. Do you also find there that no right of a profitable, or beneficial nature, affecting a

Mr. *R. Ellis.*
15 July 1869.

common, is to be taken away without the consent of the party, unless compensation is given in the way which you have mentioned?—Yes, I think that that is the meaning of it.

1465. Have you, therefore, any doubts that persons claiming rights of a beneficial character in the London Fields would have the same opportunities of making out their claim to compensation as persons interested in railways have?—I think that they would under this section.

1466. You have stated that occupiers of houses of the value of 10 *l.* and upwards, have rights during the open months; will you state the limit of area in which the occupiers of such houses have the rights; is the limit the manor?—I believe that it is the manor.

1467. Is the manor as extensive as the parish?—There are three different holdings in that manor, but I think that the three holdings together are as extensive as the parish.

1468. Would the occupiers of such houses of a rental of 10 *l.*, be a very large number of persons?—No, not with us.

1469. Mr. *Bonham-Carter.*] I think that you stated, in answer to Mr. Winn, that the classes who frequented that common had rendered it valueless; did you consider the rights which would have to be compensated when you drew your scheme; did you propose in any way to recognise as a right the user by these people?—We proposed to ask Parliament to extinguish those rights upon this ground, that inasmuch as we were the parish itself going to Parliament, we were asking for the benefit of that particular parish, to extinguish those rights which had become worthless.

1470. Did you apprehend that the inhabitants of the parish, as inhabitants, irrespectively of being copyholders, had established any right of user over the common?—We always understood that the inhabitants had a right to put on their cattle in years gone by.

1471. As copyholders?—As copyholders, and the order of the homage to which I have referred threw it open to all parties and their tenants, so that it embraced almost every person in the place.

1472. Did you admit, in any way, that the public, namely, the riff-raff, who you say have principally destroyed the herbage, had acquired as a right?—Not as a lawyer.

1473. But practically it was done?—Yes.

1474. In your opinion they had not acquired a right, but had rendered the herbage valueless?—Yes; they had rendered it so valueless, that it was not worth while to put up barriers against them.

1475. *Chairman.*] Then you mean the Committee to understand that although the ordinary frequenters of these London Fields have not in that way a legal right, they have had such a user, that in their uninstructed minds they might consider that they had a right?—I take it that if any one attempted to shut out the public from the London Fields there would be a great noise, and the police would be required to be called in on a Sunday morning.

1476. Mr. *Knatchbull-Hugessen.*] I suppose that even an uninstructed mind, if it inhabited a body which had roved over these commons for 20 years, might imagine that it had a right?—Yes.

1477. Mr. *Johnston.*] Would it not be much better simply to reserve all rights as regards this open space?—Yes, if you could do so, but I confess that I cannot see how you could do so.

1478. Are you not aware that the only scheme which has been carried out under the Act of 1866, has been carried out in that way?—No.

1479. You have not studied that matter?—No.

1480. What would be the harm of reserving these rights of pasture, or growing crops, or whatever they are?—Supposing that you reserved to Mr. Corbett all those rights, those rights are pasturage for four months in the year, and supposing that the conservator put the place in decent order, and put up the fences very nicely, when the four months arrived he would naturally say, "I will do as I like with the fields;" when those four months had expired, the people having the rights of the eight months would say, "Why have you put up a fence here, and a gate there?"

1481. But you might have gates, and a gate would do no harm?—But the moment that you limit another person's rights, he says, "I will deal with it as I like."

1482. I would not limit his rights?—I have considered that scheme, but I do not see how it is possible to carry it out.

1483. Colonel *Barttelot.*] It would be utterly impossible to maintain the rights belonging to those gentlemen if you said that you guaranteed them their rights, would it not?—I do not see how you could maintain them; I think that it would be utterly impossible; other parties with wiser heads than my own have stated that it is possible to do it, but I confess that I cannot see it.

1484. And therefore the only practicable course is fairly to compensate the parties for those rights which they possess?—Yes, fairly on both sides.

1485. Mr. *Knight.*] Is it your opinion that clause 15 of the Act of 1866 governs, or should govern, the whole of the schemes made under that Act, namely, that the public should not take to a common under a scheme by this Act without first compensating the rights under the Lands Clauses Consolidation Act?—I think that whoever took up the scheme should take it up as a whole, and should have the sole proprietorship of it for the benefit of the public, and should exclude everybody else who had any rights at all in it.

TO THE

REPORT

FROM THE

SELECT COMMITTEE

ON

METROPOLITAN COMMONS ACT (1866) AMENDMENT BILL.

Ordered, by The House of Commons, *to be Printed,*
19 *July* 1869.

INDEX.

[*N. B.*—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; and the Numerals following *Rep.* to the Pages in the Report.]

A.

ALLOTMENTS (LABOURING POOR). Obstacle to setting out the large commons in Surrey, &c., in garden allotments for the adjacent population, *Ridley* 219–224——Very inconvenient distance from the population at which allotments have been reserved for recreation or for the local poor, in the case of commons inclosed in Surrey, *Scott* 277–279.

Area or Radius. Explanation in connection with a map prepared in the Inclosure Office for the use of the Committee, and showing the quantity of common or uninclosed lands within varying radii around the metropolis, *Ridley* 26–37——Opinion adverse to any enlargement of the radius mentioned in the Act of 1866; several grounds of objection to a twenty-five mile radius, *ib.* 50–64. 93, 94. 103–109——Effect of a twenty-five miles radius as regards the south-west of London chiefly, *ib.* 106–109. 162–164.

Expediency of some extension of the limits of operation of the Act, *Scott* 260——Very irregular character of the present limit of the Act; greater protection on the west and north than on the east and south, *ib.* 260. 285——Argument from certain statistics of the metropolis as to the importance of extending to twenty-five miles, or even to twenty-three miles, the radius within which open spaces should be protected by special legislation, *ib.* 281–288. 497.

Conclusion strongly in favour of extending the Act of 1866 over an area of twenty-five miles round the metropolis, *W. W. Smith* 567. 573–575——Witness is not in a position to give any decided opinion upon the question of extending the Act to an area of twenty-miles round London, *Lawrence* 652. 701, 702. 742–746. 762–765. 805–807——Statement as to its being quite competent to Parliament, in extending the area under the Act of 1866, to maintain at the same time the power of inclosure under the Act of 1845, *ib.* 742–749.

Admission that, on the extension of the radius from fifteen to twenty-five miles would be, as regards such extended area, a deprivation of the benefit conferred by the Act of 1845, *Lawrence* 808–813——Evidence showing that Parliament has always gone beyond the time present in dealing with the question of radius secured against inclosures, *ib.* 822——Progressive extension of area under the respective Acts of 1836, 1845, and 1866, *ib.*

Witness objects to an extension of the fifteen miles radius, and considers that a twenty-five mile radius is not called for by the rapid increase of the metropolis, *Marshall* 1227–1239. 1270–1278——The proposed extension of the area would be a practical limitation of the rights of the lords and commoners, and those injured thereby should be compensated, *ib.* 1240–1243——Very limited resort of Londoners to any commons outside the fifteen miles radius, *ib.* 1270–1275.

Amendment of the Bill by the Committee, by the omission of the clause referring to the extension of the area, and in other particulars, *Rep.* iii.

See also *Population.* *Selection of Commons.*

Austin, Robert Cecil. (Analysis of his Evidence.)—Supplies sundry details in connection with Fairmile Common at Cobham, and submits that, for several reasons, the proposed inclosure of this and other commons in the parish of Cobham should not take place, 903 *et seq.*——Fairmile Common is about sixteen miles from London, witness and other residents being desirous that the radius under the Act of 1866 should be extended so as to embrace the common, 905–908. 933, 934. 946——There were formerly 1,000 acres inclosed under an Act in 1793, and 303 acres were left uninclosed for the benefit of 132 cottagers; particulars hereon as to many of these cottages not now existing, and

Report, 1869—*continued.*

Austin, Robert Cecil. (Analysis of his Evidence)—*continued.*

as to the transfer of the rights to a richer class of persons who now seek inclosure, 907 *et seq.*

Limited number of persons possessing the 132 cottage rights originally set out, these persons being desirous of inclosure chiefly in order to sell the land for building purposes, 916-918. 931, 932. 968-970——Opposition of the lord of the manor to the proposed inclosure; nature of his rights in the matter, 918, 919. 927-930. 1001, 1002——Objection to the inclosure by some of the owners of rights, 921-925. 948-950——Use made of Fairmile Common by the poorer occupiers for pasturage and fuel, whilst it is much frequented for purposes of recreation, and is not adapted for cultivation, 935-945. 951-954. 998-1000. 1004.

Doubt as to the exact nature of the stepstaken by the promoters of inclosure, 956-961——Argument that the forty-three persons now possessing the rights given under the Act of 1793 to 132 cottagers do not at all represent the latter class; question hereon as to the rights of the latter having lapsed to the former, 968-970. 975-997——Robbery of the poor if Fairmile Common be inclosed without a special Act of Parliament, 997.

Statement as to a right of way having been established in the case of an attempted inclosure at Chobham, 1003. 1011, 1012——Very strong feeling at Chobham in favour of keeping open the common there, 1009, 1010.

B.

Bell, James. (Analysis of his Evidence.)—Steps taken about six years ago for the inclosure of Cobham Commons, including Fairmile Common, a large majority of the persons owning rights over the commons having signed a memorial to the Inclosure Commissioners, 1014-1017. 1127-1129——Objection by the lord of the manor, and a few owners of common rights, to the proposed inclosure; argument as to the limited rights of the lord, 1017, 1018. 1032-1036. 1061. 1083, 1084. 1086-1090——Uselessness of the commons for recreation, save one common of twenty acres which it is not intended to disturb, 1019-1022. 1028, 1029. 1071, 1072. 1091-1094. 1106-1108——Little, if any, use made of the commons by the labouring poor as regards fuel, &c., 1020-1025. 1028. 1039. 1117-1126.

Probable modes of disposal of the land if inclosed; doubt as to much of it being sold for building, 1026-1030. 1040-1049——Willingness of the promoters of inclosure to set apart a portion of the land for poor allotments; much greater advantage thereby to the labouring poor than by non-inclosure, 1028. 1039. 1080-1082. 1095-1105. 1118. 1139-1141——Suggested removal of the limit in the present law as to the proportion of recreation ground to be set out on inclosure, 1029.

Undue expense of a scheme under the Act of 1866, in the case of Cobham, 1037. 1085——Hardship if the expense of a private Inclosure Act were necessary for the Cobham Commons; serious injury to the owners of rights if deprived of the power of inclosure under the Act of 1845; 1038, 1039. 1055-1059. 1064. 1073-1076. 1109-1112. 1137, 1138. 1144, 1145——Large value represented by the commons in Surrey within the twenty-five mile radius, whilst they are rarely resorted to by Londoners, 1051-1054. 1113-1116——Necessity of some measure for the compensation of the persons affected by the present Bill, 1051. 1059.

Consideration of the rights respectively of the original cottagers at Cobham, and of the present owners; many of the cottages have since been pulled down, 1056. 1059-1064. 1077-1082. 1131-1135——Protection provided for frontage interests in the case of inclosures under the Act of 1845; 1065-1070——Beneficial effect of the poor allotment in the case of Walton Common, 1077——Number of acres comprised in each of the Cobham Commons, the total being 300 acres, 1127, 1128——Representation by witness of 114 rights out of 132; about thirty persons possessing the 114 rights, 1129, 1130——Contemplated sale of portion of the land in order to defray the cost of inclosure, 1142, 1143.

Blackheath. Explanation of the difficulties in the case of Blackheath, and of the action of the Metropolitan Board in the matter, *W. W. Smith* 536. 538——Belief as to the disuse of the Crown rights at Blackheath, *ib.* 644——Illustration in the case of Blackheath of the expediency of compensation in respect of gravel digging, *Lawrence* 832.

Blamire, Mr. (the late). Views of Mr. Blamire in 1844 as to the importance of the preservation of open spaces in the vicinity of towns, *Lawrence* 704. 866.

Boundaries of Commons. Want of power in the Inclosure Commissioners to define and lay down the boundaries of the commons proposed to be dealt with under the Act of 1866, *Ridley* 6-8. 76.

Building Ground. Great benefit to the lords of the manors if the commons were inclosed and built upon, *Ridley* 215, 216——Great disadvantage of the rapidly increasing buildings upon open spaces round London, *W. W. Smith* 533, 534.

Byfleet Common. See *Weybridge, &c.*

C.

Chancery Suits. Important improvement to be secured by preventing the stoppage of schemes through means of suits in chancery, *W. W. Smith* 560–565.

Chobham. Statement as to a right of way having been established in the case of an attempted inclosure at Chobham, *Austin* 1003. 1011, 1012——Very strong feeling at Chobham in favour of keeping open the common there, *ib.* 1009, 1010.

Cobham (*Fairmile Common, &c.*) Witness supplies sundry details in connection with Fairmile Common at Cobham and submits that for several reasons the proposed inclosure of this and other commons in the parish of Cobham should not take place, *Austin* 903 *et seq.*——Fairmile Common is about sixteen miles from London, witness and other residents being desirous that the radius under the Act of 1866 should be extended so as to embrace the common, *ib.* 905–908. 933, 934. 946——There were formerly 1,000 acres inclosed under an Act in 1793, and 303 acres were left uninclosed for the benefit of 132 cottagers; particulars hereon as to many of these cottages not now existing, and as to the transfer of the rights to a richer class of persons who seek inclosure, *ib.* 907 *et seq.*——Limited number of persons possessing the 132 cottage rights, originally set out, these persons being desirous of inclosure chiefly in order to sell the land for building purposes, *ib.* 916–918. 931, 932. 968–970.

Opposition of the lord of the manor to the proposed inclosure; nature of his rights in the matter, *Austin* 918, 919. 927–930. 1001, 1002——Objection to the inclosure by some of the owners of rights, *ib.* 921–925. 948–950——Use made of Fairmile Common by the poorer occupiers for pasturage and fuel, whilst it is much frequented for purposes of recreation, and is not adapted for cultivation, *ib.* 935–945. 951–954. 998–1000. 1004——Doubt as to the exact nature of the steps taken by the promoters of inclosure, *ib.* 956–961——Argument that the forty-three persons now possessing the rights given under the Act of 1793, to 134 cottagers, do not at all represent the latter class; question hereon as to the rights of the latter having lapsed to the former, *ib.* 968–970. 975–997——Robbery of the poor if Fairmile Common be inclosed without a special Act of Parliament, *ib.* 997.

Steps taken about six years ago for the inclosure of Cobham commons, including Fairmile Common, a large majority of the persons having rights over the commons having signed a memorial to the Inclosure Commissioners, *Bell* 1014–1017. 1127–1129——Objection by the lord of the manor, and a few owners of common rights to the proposed inclosure; argument as to the limited rights of the lord, *ib.* 1017, 1018. 1032–1036. 1061. 1083, 1084. 1086–1090——Uselessness of the commons for recreation, save one common of twenty acres, which it is not intended to disturb, *ib.* 1019–1022. 1028, 1029. 1071, 1072. 1091–1094. 1106–1108——Little, if any, use made of the commons by the labouring poor as regards fuel, *ib.* 1020–1025. 1028. 1039. 1117–1126.

Probable modes of disposal of the land if inclosed; doubt as to much of it being sold for building, *Bell* 1026–1030. 1040–1049——Willingness of the promoters of inclosure to set apart a portion of the land for poor allotments; much greater advantage thereby to the labouring poor than by non-inclosure, *ib.* 1028. 1039. 1080–1082. 1095–1105. 1118. 1139–1141——Undue expense of a scheme under the Act of 1866 in the case of Cobham, *ib.* 1037. 1085——Hardship if the expense of a private Inclosure Act were necessary for the Cobham commons; serious injury to the owners of rights if deprived of the power of inclosure under the Act of 1845, *ib.* 1038, 1039. 1055–1059. 1064. 1073–1076. 1109–1112. 1137, 1138. 1144, 1145.

Other open spaces in the neighbourhood much more suitable for recreation, *Bell* 1050, 1051; *Worsfold* 1181–1183——Consideration of the rights respectively of the original cottagers at Cobham and of the present owners; many of the cottages have since been pulled down, *Bell* 1056. 1059–1064. 1077–1082. 1131–1135——Number of acres comprised in each of the Cobham commons, the total being 300 acres, *ib.* 1127, 1128——Representation by witness of 114 rights out of 132, about thirty persons possessing the 114 rights, *ib.* 1129, 1130——Contemplated sale of portion of the land in order to defray the cost of inclosure, *ib.* 1142, 1143.

Witness is one of the promoters of the inclosure of Cobham Common, and submits that such inclosure, comprising allotments for the labouring poor, is very desirable in the public interests, *Worsfold* 1150 *et seq.*——The common is rarely if ever used for cutting fuel or for pasturage, and never for recreation by Londoners, *ib.* 1166–1173. 1216–1218——The inclosure would lead to much increase of building, additional cottages being much required, *ib.* 1175–1180. 1196–1215——There is a very general feeling in the locality in favour of inclosure, *ib.* 1184–1194.

Commoners. Opinion that as a rule the commoners are against inclosure, *Lawrence* 775. 841.——*See* also *Compensation. Rights of Common, &c.*

Commons and Open Spaces (*Interpretation Clause*). Objection to the proposal in the present Bill for putting under the Act "any open space enjoyed or frequented by the public for not less than twenty years;" difficulty in such case as to the jurisdiction of the Commissioners, *Ridley* 19–24. 39–49. 86–92——Evidence in further support of the conclusion that much difficulty and litigation might well arise from the proposed interpretation in the Bill of the word "common," *ib.* 112–127. 149–154. 210–212.

Want of an amended definition of the word "commons" in the Act of 1866, so that it may include all open spaces, *Scott* 260——Approval of the proposal that the Bill shall apply to "any open space which has been enjoyed or frequented by the public for not less than twenty years after the passing of this Act," *ib.* 771–773. 790–804.

See also *Lammas Lands.* *Parks.*

Commons Preservation Society. Explanation that, though at one time professional adviser to the Commons Preservation Society, witness is not prepared to adopt the statements in a certain pamphlet issued by the society, *Lawrence* 718–725.

See also *Wisley Common.*

Compensation. Importance of bearing in mind that the uninclosed lands which are waste of a manor are private property, *Ridley* 51——The compensation might be given in the shape of an allotment or of a rent-charge, *ib.* 56——Circumstance of the question of compensation not having arisen in any of the few cases hitherto under the Act of 1866, *ib.* 97. 155–158——Further statement as to the propriety of compensation to persons interested in the wastes of manors, *ib.* 98–102.

Expediency of full and fair compensation to all parties interested in common or waste land in the event of the compulsory preservation of such land from inclosure, *Scott* 429–433. 463–466. 473. 477. 486–490. 499, 500——Further expression of the opinion that any legal rights or claims interfered with by the preservation of open spaces near London should be compensated; for this purpose a small tax might be levied on the metropolis, *ib.* 477. 486–501.

Necessary recognition by the Metropolitan Board of the duty of purchasing existing rights over commons, it being essential to do so in some cases, *W. W. Smith* 617–621. 631–633——Great care necessary on the score of compensation, unless private claims can be clearly proved, *ib.* 643.

Undue encouragement given by the Act of 1866 to claims to compensation, *Lawrence* 687, 688——Approval of compensation when any valuable right is taken away, but not when merely speculative rights are interfered with, *ib.* 694. 831–833——Propriety of compensation if rights, though not used, are taken away; witness considers, however, that the schemes need not affect anybody's rights, *ib.* 782–789. 800–803. 831–834. 846——Circumstances under which the compensation clauses in the Act of 1866 were inserted; conclusion that their introduction was not necessary, and was a great mistake, *ib.* 845, 846. 849–851.

Necessity of some measure for the compensation of the persons affected by the present Bill, 1051. 1059——Expediency of compensation in the case of commons generally as well of Lammas lands, if beneficial rights are taken away, *Ellis* 1346–1351. 1462–1465. 1485.

See also *Lammas Lands.* *Lords of the Manors.* *Rights of Common, &c.* *Tax or Rate.*

Compulsory Inclosure. Circumstance of many persons being in favour of compulsory inclosure of waste lands, *Ridley* 71, 72.

Costs. Practice of requiring a deposit for the security of the costs of the Inclosure Office in the case of any application for inclosure, *Ridley* 130.

Crown Commons. Very few Crown commons within the metropolitan area, *Lawrence,* 757, 758.

Cultivation (*Commons and Waste Lands*). Effect of non-inclosure in keeping out of the market a large quantity of valuable land, *Ridley* 72–74——Inexpediency of restricting the inclosure and cultivation of extensive stretches of waste land beyond easy reach from London, though within the twenty-five miles' radius; loss to the community at large through this land continuing unproductive, *ib.* 167–181. 231, 232.

Former policy of Parliament to encourage inclosures as tending to improved cultivation; reversal of this policy in recent years, *Scott* 289, 290——Equal facilities at present as before the Inclosure Act of 1845 for special legislation with a view to inclosure of any common near London which may be well adapted for cultivation, and is ill-adapted for recreation, *Lawrence* 711–717——Grounds for the conclusion that the object of th Act of 1845 was to facilitate inclosure with direct reference to an increase of production by the cultivation of waste lands, *ib.* 857–859. 863. 865——Very limited extent to which the commons in the vicinity of towns are available for purposes of agriculture; inclosure in such cases having reference mainly to building purposes, *ib.* 860–862.

See also *Rates.*

D.

Disputed Rights. Contemplated operation of the Act of 1866 irrespectively, not only of litigation, but of disputes which have not reached the stage of litigation, *Lawrence* 824, 825.

Drainage. Suggestion whether drainage and the removal of nuisances might not be authorised irrespectively of the consent of the lord and without compensation, *Lawrence* 682–684. 829–831. 849——Explanation relative to the proposed power in the inhabitants near any common to propose a scheme, bye-laws on the subject of drainage, &c. being prepared after consultation with the lord of the manor, *ib.* 826–829.

E.

Egham Common. Complaint as to the course pursued in regard to Egham Common, some 280 or 300 acres having been sold for 7,000 *l.*, instead of being preserved as an open space, *Scott* 263–276——The land sold was worth much more than 7,000 *l.*, *ib.* 267——Modes of application of the 7,000 *l.* adverted to; very little benefit thereby to the local poor, *ib.* 272——The land in question is between the twenty and the twenty-five mile radius, *ib.* 274–276——The land allotted for the labouring poor was at a most inconvenient distance from the population, *ib.* 277.

Ellis, Richard. (Analysis of his Evidence.)—Is vestry clerk of Hackney, 1301, 1302——Several open spaces in the parish of Hackney; acreage of each, 1303, 1304. 1326——Steps taken by the vestry previously to the Act of 1866 for dealing with London Fields; necessary abandonment of the scheme on account of objections by the inhabitants, 1304. 1371–1377——Action taken by the local district board through the Metropolitan Board of Works, on the passing of the Act of 1866, for dealing with London Fields and Hackney Downs, by presenting a scheme to the Inclosure Commissioners, 1304, 1305——Refusal of the Commissioners to proceed in the matter, on the ground that the lands in question were Lammas lands, 1305. 1327, 1328.

Details on the subject of the existing rights over London Fields, &c., in respect of their being Lammas lands; conclusion that they are very limited in value, but that compensation should be awarded for such rights as can be established, 1306 *et seq.*——Practice as to the use of London Fields by the public, both during the open and close time; pressing want of regulations for the prevention of abuse, 1308–1313. 1444–1447. 1460, 1461——Object of the district board to make the fields more of a park, and to apply police regulations, 1316, 1317. 1357–1363. 1413–1416.

Statement as to its being impracticable to take possession of London Fields, and to regulate them without first extinguishing or purchasing existing rights, 1321–1323. 1345, 1346. 1427. 1477–1485——Want of such an amendment of the Act of 1866 as shall clearly bring Lammas lands within the Act; suggestion hereon by the Hackney vestry, 1327–1331. 1364, 1365——Doubt as to it having been feasible to deal with London Fields in the interests of the public under the Inclosure Act of 1845; 1335–1345.

Expediency of compensation in the case of commons generally, as well as of Lammas lands, if beneficial rights are taken away, 1346–1351. 1462–1465. 1485——Approval of power in the local public to initiate a scheme under the Act of 1866, if the expense is to be borne locally, 1352–1356——Statement as to its not being proposed to inclose any part of Newington Common, 1366–1370——Improbability of an illegal extension of buildings over London Fields, 1417–1420.

Question considered whether Lammas lands at a distance from London should, equally with the lands in Hackney, be included in the operation of the Act of 1866; approval of an extension of the Act to such lands, all rights being fairly paid for, 1423–1437——Want of open spaces in the north-east of London, it being very important to preserve those in Hackney, 1438, 1439. 1442——Limited sense in which the general public using the London Fields, &c., can be said to have acquired any rights, such rights not being of a legal character, 1469–1476.

Epping Forest. Statement in favour of the preservation of Epping Forest in its natural wild state, *Scott* 257, 258. 508–510——Very large resort of Londoners to the Forest, *ib.* 511, 512——Suggestion that the whole of Epping Forest might come under the Act, even though the present area be not extended beyond fifteen miles, *Lawrence*, 652. 701. 836.

Extension of Act. See *Area or Radius. Commons and Open Spaces. Lammas Lands.*

Report, 1869—*continued.*

F.

Fairmile Common. See *Cobham.*

Fees (Inclosure Office). Regulations under a certain Act in 1868 as to the payment of fees to the office under Treasury sanction, *Ridley* 133–136.

Frontage Interests. Protection provided for frontage interests in the case of inclosures under the Act of 1845, *Bell* 1065–1070.

G.

Gravel and Sand. Proposal that, in dealing with schemes, inquiry be made into the practice of digging gravel and sand, *Lawrence* 657——Way in which the right of taking gravel might be dealt with, irrespectively of compensation clauses, *ib.* 847, 848.

See also *Blackheath.*

H.

Hackney (London Fields, &c.). Use made by the public of London Fields and Hackney Downs, these being Lammas lands, and it being desirable to take steps for preserving portions of them as open ground, *Ridley* 198–208——Belief as to Hackney Marshes being Lammas land, *ib.* 198, 199——Obstacle to the inclosure of these lands without a special Act, *ib.* 205.

Expediency of steps being taken for securing to the public the use of the London Fields at Hackney, including the Lammas lands there, *W. W. Smith* 544——Statement in support of the conclusion that Lammas lands, as in the case of Hackney Commons or London Fields, are subject to rights of common, and should come within the operation of the Act, *Lawrence* 659–672. 776–781. 790–804——Presentation by witness of a scheme for the management of Hackney Commons; objection raised by the Inclosure Commissioners on the score that Lammas lands are not within the provision of the Act of 1866, *ib.* 659. 780, 781.

Several open spaces in the parish of Hackney; acreage of each, *Ellis* 1303, 1304. 1326——Steps taken by the vestry previously to the Act of 1866 for dealing with London Fields; necessary abandonment of this scheme on account of objections by the inhabitants, *ib.* 1304. 1371–1377——Action taken by the local district board, through the Metropolitan Board of Works, on the passing of the Act of 1866, for dealing with London Fields and Hackney Downs, by presenting a scheme to the Inclosure Commissioners, *ib.* 1304, 1305——Refusal of the Commissioners to proceed in the matter on the ground that the lands in question were Lammas lands, *ib.* 1305. 1327, 1328.

Details on the subject of the existing rights over London Fields, &c. in respect of their being Lammas lands; conclusion that they are very limited in value, but that compensation should be awarded for such rights as can be established, *Ellis* 1306 *et seq.*——Practice as to the use of London Fields by the public both during the open and close time; pressing want of regulations for the prevention of abuse, *ib.* 1308–1313. 1444–1447. 1460, 1461——Object of the district board to make the fields more of a park, and to apply police regulations, *ib.* 1316, 1317. 1357–1363. 1413–1416.

Statement as to its being impracticable to take possession of London Fields, and to regulate them, without first extinguishing or purchasing existing rights, *Ellis* 1321–1323. 1345, 1346. 1427. 1477–1485——Doubt as to it having been feasible to deal with London Fields in the interests of the public under the Inclosure Act of 1845, *ib.* 1335–1345——Improbability of an illegal extension of buildings over London Fields, *ib.* 1417–1420——Want of open spaces in the north-east of London, it being very important to preserve those in Hackney, *ib.* 1438, 1439. 1442——Limited sense in which the general public using the London Fields, &c. can be said to have acquired any rights, such rights not being of a legal character, *ib.* 1469–1476.

Hampstead Heath. Information relative to the negotiations with the late Sir Thomas Wilson on the subject of Hampstead Heath, and the suit eventually instituted in the interests of the public, but not completed; rights of the present lord of the manor adverted to hereon, *W. W. Smith* 526–533——Further reference to the case of Hampstead Heath; public objection to the sale of any portion, *ib.* 634, 635.

Hayes Common. The only scheme hitherto sent in to Parliament under the Act of 1866 is one relating to Hayes Common, which has recently received the Royal Assent, *Ridley* 4. 57. 79——Very full report made by the Inclosure Commissioners in the case of the single scheme proceeded with under the Act of 1866, *ib.* 80–83.

Illustration

Report, 1869—*continued.*

Hayes Common—continued.

Illustration, in the case of Hayes Common, of the satisfactory operation of the plan of proceeding proposed by witness for adoption generally, *Lawrence* 658——Particulars as to the inclosure of Hayes Common, and the rights of the lord of the manor in this case, *ib.* 727-731. 750.

I.

Inclosure Commissioners. Deficiency of the machinery provided for the administration of the Act of 1866 by the Commissioners, *Ridley* 5, 6, 145-148. 237——Want of similar powers of inquiry as under the General Inclosure Acts, together with a right to summon witnesses and to call for court rolls, &c., *ib.* 8-13. 76, 77——Want of power in the Commissioners to ascertain whether the lands to be dealt with are, or are not, waste of a manor, *ib.* 25, 26.

Opinion that it should be compulsory rather than optional upon the Inclosure Commissioners to prepare a scheme under certain circumstances, *W. W. Smith* 549. 592-595——Great benefit if the Commissioners had clear and distinct power to compel the production of information when rights are claimed, *ib.* 549-559. 566. 592. 600-602——Opinion formed by witness in 1866 that it would have been better if some other body than the Inclosure Commissioners had been appointed to carry out the Act, *ib.* 652, 653. 676.

Conclusion that the intention of the Act and the policy of Parliament in reference to open spaces near the metropolis should be more explicitly declared for the guidance of the Commissioners, *Lawrence* 652 *et seq.*——Objections of the Select Committee of 1865 to the Inclosure Commissioners as the body for dealing with open spaces near the metropolis, *ib.* 676.

See also *Litigation. Schemes.*

Inclosures (*Acts of* 1845, *&c.*). Circumstance of the Committee of 1865 having reported that the granting of an Inclosure Act was a boon, and not a right that could be claimed; concurrence in this view, *Scott* 499. 513, 514——Argument that inclosure under the Inclosure Acts is not a matter of right in the lords of the manor or other interested persons, but rather a boon granted by Parliament in return for the public advantage for an increased cultivation of the land, *Lawrence* 689-692. 768——Conclusion that in 1845 there was not a reversal of the policy of the Legislature in regard to inclosures, *ib.* 761.

Argument as to its being quite open to Parliament to withdraw the facilities granted under the Act of 1845, if such facilities do not operate to the public advantage, *Lawrence* 767, 768——Total inclosure of 2,837,873 acres previously to the year 1800, under private Acts, the inclosures since 1845 comprising 614,804 acres; doubt as to the amount inclosed in the interval between 1800 and 1845, *ib.* 898, 899.

Doubt as to its being just to complain of the withdrawal in certain cases of the facilities granted to individuals by the Inclosure Act, if such withdrawal be for the public good, *Marshall* 1281, 1282.

See also *Blamire, Mr. (the late). Compensation. Cultivation of Commons. Lords of the Manors. Parks. Publicity.*

Inquiry. Want of increased powers of inquiry in the Inclosure Commissioners under the Act of 1866, *Ridley* 8-13. 76, 77; *W. W. Smith* 549-559. 600-602——Propriety of inquiry when any person submits that his rights are threatened with injury, *Lawrence* 695.

Interpretation Clause. See *Commons and Open Spaces. Lammas Lands.*

L.

Lammas Lands. Belief that the Act of 1866 applies only to lands which are waste of a manor and does not include Lammas lands or half-year lands, *Ridley* 14. 20——Opinion that a more clear interpretation should be given to the Act, and that half-year lands and Lammas lands should be clearly excluded from its operation, *ib.* 15-18. 20-22. 149-152——Limited use made of ordinary Lammas lands by the public; expediency of due consideration of the rights of the owners, *ib.* 200. 204-209. 229, 230.

Grounds for dissenting from the conclusion of the Inclosure Commissioners, that the term "common," in the Act of 1866, does not comprise Lammas lands, *W. W. Smith* 586-591——Clause suggested in the present Bill for enlarging and simplifying the interpretation of the word "common," so that Lammas lands may, beyond all doubt, be included, *ib.* 544-548. 591.

Report, 1869—*continued.*

Lammas Lands—continued.

Evidence in favour of Lammas lands being clearly brought within the operation of the Bill, *Lawrence* 659–672. 695–700. 776–779. 790–804——Want of such an amendment of the Act of 1866 as shall clearly bring Lammas lands within the Act; suggestion hereon by the Hackney vestry, *Ellis* 1327–1331. 1364, 1365——Question considered, whether Lammas lands at a distance from London should, equally with the lands in Hackney, be included in the operation of the Act of 1866; approval of an extension of the Act to such lands, all rights being fairly paid for, *ib.* 1423–1437.

See also *Hackney* (*London Fields*), *&c.*

Lawrence, Philip Henry. (Analysis of his Evidence.)—Is solicitor to the Commissioners of Works, and has been professionally engaged for persons interested in several commons near London, 647–651——Assisted in the preparation of the Act of 1866; 652——Is not in a position to give any decided opinion upon the question of extending the Act to an area of twenty-five miles round London, 652. 701, 702. 742–746. 762–765. 805–807——Suggests that the whole of Epping Forest might, in any case, come under the Act, 652. 701. 836.

Opinion formed by witness, in 1866, that it would have been better if some other body than the Inclosure Commissioners had been appointed to carry out the Act, 652, 653. 676——Conclusion that the intention of the Act and the policy of Parliament, in reference to open spaces near the Metropolis, should be more explicitly declared for the guidance of the Commissioners, 652 *et seq.*

Dissent from the view of the Commissioners, that it was not their duty to consider schemes where the parties were in litigation, 653–656. 680–682. 769, 770——Argument that it was not the object of the Act to determine the rights of persons interested in commons, and that it is not necessary that definite rights should be ascertained before schemes are carried out, 653–657. 674–679. 769–773——Suggestion that it be provided that any scheme to be authorised under the Act should not have the effect of interfering with any rights whatever, 653–658. 677.

Proposal that in dealing with schemes inquiry be made into the practice of digging gravel and sand, 657——Suggestion that, under certain conditions, the inhabitants or ratepayers of any place, as well as the commoners, be authorised to memorialise for a scheme, 658. 685, 686. 755, 756——Illustration, in the case of Hayes common, of the satisfactory operation of the plan proposed by witness, 658.

Statement in support of the conclusion that Lammas lands, as in the case of Hackney Common or London Fields, are subject to rights of common, and should come within the operation of the Act, 659–672. 776–781. 794–804——Objections of the Select Committee of 1865 to the Inclosure Commissioners as the body for dealing with open spaces near the metropolis, 676——Nuisances in connection with many of the commons, the existence of disputed rights, or of litigation, being no good reason for refusing schemes for supervision, 682–684.

Undue encouragement given by the Act of 1866 to claims for compensation, 687, 688——Argument that inclosure under the Inclosure Acts is not a matter of right in the lords of the manors or other interested persons, but rather a boon granted by Parliament in return for the public advantage of an increased cultivation of the land, 689–692. 768——Policy of Parliament, that the open spaces near the metropolis should be kept open, notwithstanding existing rights in them, 693——Approval of compensation when any valuable right is taken away, but not when merely speculative rights are interfered with, 694. 831–833——Propriety of inquiry when any person submits that his rights are threatened with injury, 695.

Further statement in favour of Lammas lands being clearly brought within the operation of the Bill, 695–700. 776–779. 790–804——Expediency of open spaces in the neighbourhood of crowded populations generally being uninclosed, 703–710——Views of the late Mr. Blamire, in 1844, as to the importance of the preservation of open spaces in the vicinity of towns, 704. 866——Equal facilities at present, as before the Inclosure Act of 1845, for special legislation with a view to inclosure of any common near London which may be well adapted for cultivation and is ill adapted for recreation, 711–717.

Explanation that, though at one time professional adviser to the Commons Preservation Society, witness is not prepared to adopt the statements in a certain pamphlet issued by the society, 718–725——Contemplated maintenance of existing private rights concurrently with the use of the commons by the public, 726——Particulars as to the inclosure of Hayes Common and the rights of the lord of the manor in this case, 727–731. 750——Prevention of schemes, under the Act of 1866, by reason of litigation; origin of such litigation adverted to, 732–734.

Great variety of rights in respect of different commons within the metropolitan area, the facility of inclosure under the Act of 1845 being much more valuable to the lords and commoners in some cases than in others, 735–741——Statement as to its being quite competent to Parliament, in extending the area under the Act of 1866, to maintain at the same time the power of inclosure under the Act of 1845; 742–749——Question whether disputes

Report, 1869—*continued.*

Lawrence, Philip Henry. (Analysis of his Evidence)—*continued.*

disputes might not arise in respect of the right of the lord to any trees newly planted on the commons, 750–754.

Very few Crown commons within the metropolitan area, 757, 758——Doubt whether in cases where the lord of the manor has been divested of his rights, trustees for the poor should stand in the position of the lord, 759, 760——Conclusion that in 1845 there was not a reversal of the policy of the Legislature in regard to inclosures, 761——Public advantage if marshy commons were dealt with under the Act and were drained, 766——Conclusion as to its being quite open to Parliament to withdraw the facilities granted under the Act of 1845, if such facilities do not operate to the public advantage, 767, 768.

Approval of the proposal that the Bill shall apply to "any open space which has been enjoyed or frequented by the public for not less than 20 years after the passing of this Act," 771–773. 790–804——Further deprecation of the Act going into claims of rights, 773——Probable advantage of a registration of the rights of commoners, 774——Opinion that as a rule the commoners are against inclosure, 775. 841——Propriety of compensation if rights, though not used, are taken away; witness considers, however, that the schemes need not affect anybody's rights, 782–789. 800–803. 831–834. 846.

Contemplated maintenance of the open spaces as commons rather than as parks, 788, 789——Admission that an extension of the radius from 15 to 25 miles would be, as regards such extended area, deprivation of the benefit conferred by the Act of 1845; 808–813——Approval of the policy of preserving the open spaces generally within an extended radius, rather than of a policy of compensation for non-inclosure in each special case, 814, 815. 837–840——Question considered, whether difficulty would not arise as regards the maintenance of roads in commons when much frequented by town populations, 816–818.

Statement to the effect that witness is not prepared to admit that the radius of five miles under the Suburban Commons Bill is any too extensive, 819–823——Evidence showing that Parliament has always gone beyond the time present in dealing with the question of radius secured against inclosures, 822——Contemplated operation of the Act of 1866 irrespectively not only of litigation, but of disputes which have not reached the stage of litigation, 824, 825.

Further explanation relative to the proposed power in the inhabitants near any common to propose a scheme, bye-laws on the subject of drainage, &c., being prepared after consultation with the lord of the manor, 826–829——Suggestion whether drainage and the removal of nuisances might not be authorised irrespectively of the consent of the lord and without compensation, 829–831. 849——Illustration in the case of Blackheath of the expediency of compensation in respect of gravel digging, 832——Contemplated non-admission of the public to any open spaces of which they have not hitherto made any use, 835.

Difficulty and expense of dealing with selected commons by special legislation as compared with the plan of a fixed radius round the metropolis, 837, 838——Risk incurred by the public in expenditure upon any scheme, if subsequently the lord and the commoners combine in applying for a private inclosure Bill, 842–844——Circumstances under which the compensation clauses in the Act of 1866 were inserted; conclusion that their introduction was not necessary and was a great mistake, 845, 846. 849–851——Way in which the right of taking gravel might be dealt with irrespectively of compensation clauses, 847, 848.

Advantage of the Act providing that no person's beneficial rights should be taken away except with consent, 849–851——Statement that the Act does not deprive the lord of the manor of any right over the common, nor of the right of applying for inclosure, and merely withdraws the facilities under the Act of 1845; 852–856. 873. 878–881.

Grounds for the conclusion that the object of the Act of 1845 was to facilitate inclosure with direct reference to an increase of production by the cultivation of waste lands, 857–859. 863. 865——Very limited extent to which the commons in the vicinity of towns are available for purposes of agriculture, inclosure in such cases having reference mainly to building purposes, 860–862.

Statement showing that originally the right of the lord of the manor in a common, or in the waste of a manor, was chiefly of an administrative character, and was very different from his right over his own domain, 863, 864. 882–886. 897——Opinion that the public have so far a right to wander over uninclosed commons that an action at law could not be successfully prosecuted for trespass, 867–872. 887–891——Probability of many commons within the fifteen-mile radius being in course of time brought under the operation of the Act of 1866; 874, 875.

Advantage of bye-laws and regulations for the prevention of nuisances in the interests not only of the public but of the lord and commoners, 876, 877——Circumstance of its being the practice of the Inclosure Commissioners to allot only one-sixteenth of any inclosed common to the lord for his seigniorial rights, whilst the commoners get fifteen-

Report, 1869—*continued.*

Lawrence, Philip Henry. (Analysis of his Evidence)—*continued.*

sixteenths, 882, 883. 900–902——Total inclosure of 2,837,873 acres previously to the year 1800, under private Acts, the inclosures since 1845 comprising 614,804 acres; doubt as to the quantity inclosed in the interval between 1800 and 1845; 898, 899.

Litigation. Dissent from the view of the Inclosure Commissioners, that it was not their duty to consider schemes when the parties were in litigation, *Lawrence* 653–656. 680–682. 769, 770——Prevention of schemes under the Act of 1866 by reason of litigation; origin of such litigation adverted to, *ib.* 732–734.

See also *Schemes.* *Wimbledon Common.*

London Fields. See *Hackney.*

Lords of the Manors. Great expense to the lord of the manor in taking legal proceedings for stopping the action of the Inclosure Commissioners, *Ridley* 159–161.

Statement that the Act of 1866 does not deprive the lord of the manor of any right over the common, nor of applying for inclosure, and merely withdraws the facilities under the Act of 1845, *Lawrence* 852–856. 873. 878–881——Evidence showing that originally the right of the lord of the manor in a common, or in the waste of a manor, was chiefly of an administrative character, and was very different from his right over his own domain, *ib.* 863, 864. 882–886. 897—— Circumstance of its being the practice of the Inclosure Commissioners to allot only one-sixteenth of any inclosed common to the lord for his seigniorial rights whilst the commoners get fifteen-sixteenths, *ib.* 882, 883. 900–902.

See also *Compensation.* *Inclosures.* *Private Acts.* *Rights of Common, &c.*

M.

Marshall, Henry. (Analysis of his Evidence.)—Is Clerk of the Peace for Surrey, 1219——Submits that in the case of Wisley Common the lord of the manor is entitled to all the rights, except the rights of the tenants, 1220–1226——Objects to an extension of the fifteen-mile radius, and considers that a twenty-five mile radius is not called for by the rapid increase of the metropolis, 1227–1239. 1270–1278——The proposed extension of the area would be a practical limitation of the rights of the lords and commoners, and those injured thereby should be compensated, 1240–1243.

Further statement relative to the right of inclosure possessed by the lord of the manor and commoners in the case of Wisley; absence of any rights in the public inconsistent with inclosure, 1246–1269. 1279, 1280—— Belief as to the right of the lord and commoners to inclose irrespectively of the Inclosure Act; advantage, however, in proceeding under the Act, 1247–1264—— Very limited resort of Londoners to any commons outside the fifteen-mile radius, 1270–1275——Doubt as to its being just to complain of the withdrawal, in certain cases, of the facilities granted to individuals by the Inclosure Act, if such withdrawal be for the public good, 1281, 1282.

Marshy Commons. Public advantage if marshy commons were dealt with, under the Act and were drained, *Lawrence* 766.

Metropolis. Respects in which there is a claim, on the part of the metropolis upon the Legislature, not to facilitate the inclosure of open spaces around London, although such facilities may well be granted as to inclosures generally, *Scott* 371. 373. 393. 397. 422–433. 469–493. 499——Policy of Parliament that the open spaces near the metropolis should be kept open notwithstanding existing rights in them, *Lawrence* 693.

See also *Area or Radius.* *Inclosures.* *Population.*

Metropolitan Board of Works. The applications for dealing with the commons might be made by the Metropolitan Board of Works, *Ridley* 53——Question considered whether private individuals would not be placed at a great disadvantage in opposing inclosure if promoted by the Metropolitan Board, *ib.* 128, 129.

Witness submits that the Metropolitan Board have taken all practicable steps under the Act of 1866, in the interests of the public of the Metropolis, *W. W. Smith* 516 *et seq.*——Explanation that it has not been sought by the Board to buy up the commoners' rights, but rather to leave the commons in their existing state, *ib.* 522–525. 536, 537—— Willingness of the Board to deal fairly with existing rights, and to compensate all rights interfered with by the public use of the commons, *ib.* 522, 523. 525.

N.

Newington Common. Statement as to its not being proposed to inclose any part of Newington Common, *Ellis* 1366–1370.

Nuisances. Nuisances in connection with many of the commons, the existence of disputed rights or of litigation, being no good reason for refusing schemes for supervision, *Lawrence* 682–684. 826–831——Advantage of bye-laws and regulations for the prevention of nuisances, in the interests not only of the public, but of the lord and commoners, *ib.* 876, 877.

O.

Ockham Common (Surrey). Inclosure of Ockham Common in 1863, without sufficient publicity previously, *Scott* 293–296. 434–436.

P.

Parks. Statement that the proposed definition in the Bill of the word "common" would probably comprise the public parks, *Ridley* 22–24. 210, 211.

Great desire evinced by the people to get out of the metropolis, and to roam about in Epping Forest and similar places, rather than in the parks, *Scott* 257, 258. 508–510—— Opinion that it is far preferable to preserve the commons and open spaces in their existing wild state, instead of inclosing them and converting them into parks after buying up all the rights, *W. W. Smith* 567–573. 646——Contemplated maintenance of the open spaces as commons, rather than as parks, *Lawrence* 788, 789.

Planting of Commons. Question whether disputes might not arise in respect of the right of the lord of the manor to any trees newly planted on the commons, *Lawrence* 750–754.

Plumstead Common. Suit pending as regards a projected inclosure at Plumstead Common, *W. W. Smith* 539.

Poor, Trustees of. Doubt whether in cases where the lord of the manor has been divested of the rights, trustees for the poor should stand in the position of the lord, *Lawrence* 759, 760.

Population. Importance of preserving open spaces in the neighbourhood of the great centres of population, *Ridley* 165–167. 213, 214. 231.

Statistics relative to the rapid increase in the population of the metropolis; calculation that the census of 1921 will comprise about 9,500,000 persons, *Scott* 281–283—— Particulars as to the great increase since 1801 in the density of the population of London, as well as in the density of the dwellings, the proximity of the houses and the proximity of individuals, *ib.* 283, 284——Very close proximity of the population of London as compared with other parts of the country, *ib.* 286.

Immense number of houses required to be built annually in London for the increasing population, *Scott* 467, 468——Increased necessity for the preservation of open spaces according to the increase of population, *ib.* 469–471——Expediency of open spaces in the neighbourhood of crowded populations being uninclosed, *Lawrence* 703–710.

Private Acts. Right of the lord of the manor to inclose by means of private Act, even though the radius under the Act of 1866 be enlarged by the Bill, *Ridley* 67–70—— Explanation that witness does not propose to deprive the lords of the manors or the commoners of any existing rights of dealings with the land, but contends that a special or private Act should be necessary in each case of inclosure near the metropolis, *Scott* 367. 378–382. 387. 393. 424–433. 472–493——Approval of the disenabling character of the Act of 1866, *ib.* 490–493——Very valuable principle of the Act of 1866, *W. W. Smith* 573. 638.

Risk incurred by the public in expenditure upon any scheme if subsequently the lord and the commoners combine in applying for a private inclosure Act, *Lawrence* 842–844 ——Private Acts may still be applied for as regards the inclosure of commons within the area of the Act of 1866, *ib.* 855. 881.

See also *Inclosures. Metropolis.*

Public, The. Statement as to the right of the public over the commons being not prescriptive but permissive, *Ridley* 217, 218——Argument that more consideration should be given to the rights of the public, as compared with the rights of the lords and commoners, in the case of commons near cities than of commons in agricultural districts, *Scott* 472–493.

Explanation that it is not proposed by the Metropolitan Board to deal with any common where there is not some public right, *W. W. Smith* 631——Proposal that the public shall merely have the right of ranging over the commons, *ib.* 632.

Contemplated non-admission of the public to any open spaces of which they have not hitherto made any use, *Lawrence* 835——Opinion that the public have so far a right to wander over uninclosed commons, that an action at law could not be successfully prosecuted for trespass, *ib.* 867–872. 887–891.

See also *Parks.*

Publicity (*Inclosures*). Necessity of greater publicity in connection with schemes for inclosures of commons, *Scott* 260——Instances of insufficient publicity given to intended inclosures, *ib.* 292–295. 434–436——Suggestions for increased publicity of notices of inclosure, *ib.* 437.

Purchase of Commons. Enormous sum necessary if the Metropolitan Board had to buy up all the commons within the prescribed area, *W. W. Smith* 535. 622.

See also *Compensation.*

Putney Heath. Very limited action hitherto of the Metropolitan Board as regards Putney Heath, *W. W. Smith* 533.

R.

Radius (*Extension of Act*). See *Area or Radius.*

Railways. Probability of persons interested in wastes of manors having a *locus standi* as regards Bills proposing to bring railways into the locality, *Ridley* 110, 111.

Rates. Increasing burden of the rates on land around the metropolis adverted to; expediency on this score of facilities for inclosing and increasing the value of common land, *Ridley* 62–66.

Recreation Ground. Inconvenient distance from the adjacent population at which recreation ground has been set apart upon the inclosure of commons in Surrey, *Scott* 277–279——Suggested removal of the limit in the present law as to the proportion of recreation ground to be set out on inclosure, *Bell* 1029.

Registration of Common Rights. Concurrence in the recommendation of the Select Committee of 1865, that the rights of the commoners should be registered, *Scott* 439, 440——Probable advantage of a registration of the rights of commoners, *Lawrence* 774.

Regulated Pastures. Suggestion that facilities be provided for enabling parties to apply for the conversion of the waste of a manor into a regulated pasture, *Ridley* 232–236.

Regulations (*Open Spaces.*) Regulations proposed for the prevention of nuisances and the preservation of order, *W. W. Smith* 632. 646.——*See* also *Nuisances.*

Ridley George. (Analysis of his Evidence.)—Is one of the Copyhold, Inclosure, and Tithe Commissioners, 1, 2——Very few applications to the Commissioners under the Metropolitan Commons Act of 1866, whilst only one scheme has been sent in to Parliament under the Act, 3, 4. 57. 78, 79——Deficiency of the machinery provided for the administration of the Act by the Commissioners, 5, 6. 148. 237——Want of power in the Commissioners to define and lay down the boundaries of the commons proposed to be dealt with, 6–8. 76——Want also of similar powers of inquiry as under the General Inclosure Acts, together with a right to summon witnesses and to call for court rolls, &c., 8–13. 76, 77.

Belief that the Act of 1866 applies only to lands which are waste of a manor, and does not include lammas lands or half-year lands, 14. 20——Opinion that a more clear interpretation should be given to the Act, and that half-year lands and lammas lands should be clearly excluded from its operation, 15–18. 20–22. 149–152——Objection to the proposal in the present Bill for putting under the Act "any open space enjoyed or frequented by the public for not less than twenty years;" difficulty in such case as to the jurisdiction of the Commissioners, 19–24. 39–49. 86–92——Want of power in the Commissioners to ascertain whether the lands to be dealt with are, or are not, waste of a manor, 25, 26.

Explanation in connection with a map prepared in the Inclosure Office for the use of the Committee, and showing the quantity of common or uninclosed lands within varying radii round the metropolis, 26–37——Application in the case of Wimbledon Common to deal with it under a scheme; obstacle on account of the litigation involved, 38. 195——Opinion adverse to any enlargement of the radius mentioned in the Act of 1866; several grounds of objection to a twenty-five miles radius, 50–64. 93, 94. 103–109.

Sundry exceptions taken to the method provided by the Act of 1866, for dealing with the open spaces near the metropolis, 50–53. 56–58. 180, 181——Importance of bearing in mind that the uninclosed lands which are waste of a manor are private property, 51——Suggestion that instead of adopting a radius, there be a selection of commons within easy reach of the metropolis, and that notice be given to the lords and commoners that it is intended to take such commons for purposes of exercise and recreation, subject to compensation for existing rights, 53. 56–64. 103–109——The applications for dealing with the commons might be made by the Metropolitan Board of Works, 53.

Probability of some of the open land being required for sanitary purposes, 58, 59——Increasing burden of the rates on land around the metropolis adverted to; expediency on

Report, 1869—*continued.*

Ridley, George. (Analysis of his Evidence)—*continued.*

on this score of facilities for inclosing and increasing the value of common land, 62–66——Right of the lord to inclose by means of private Act, even though the radius be enlarged by the Bill, 67–70——Circumstance of many persons being in favour of compulsory inclosure of waste lands, 71, 72——Effect of non-inclosure in keeping out of the market a large quanity of valuable land, 72–74.

Very full report made by the Inclosure Commissioners in the case of the single scheme proceeded with under the Act of 1866; 80–83——Prospect of some further applications to the Commissioners under the Act, 95, 96——Circumstance of the question of compensation not having arisen in any of the cases under the Act of 1866; 97. 155–158——Further statement as to the propriety of compensation to persons interested in the wastes of manors, 98–102——Effect of a twenty-five miles radius as regards the south-west of London chiefly, 106–109. 162–164——Probability of persons interested in wastes of manors having a *locus standi* as regards Bills proposing to bring railways into the locality, 110, 111.

Evidence in further support of the conclusion that much difficulty and litigation might well arise from the proposed interpretation in the Bill of the word "common," 112–127. 149–154. 210–212——Question considered, whether private individuals would not be placed at a great disadvantage in opposing inclosure if promoted by the Metropolitan Board of Works, 128, 129——Practice of requiring a deposit for the security of the costs of the Inclosure Office in the case of any application for inclosure, 130.

Statement as to the deposit for costs, and as to the local expense incurred in respect of the proposed inclosure of Wisley Common, the expenditure being lost if inclosure be disallowed, 131–144*——Regulations under a certain Act in 1868 as to the payment of fees to the office, under Treasury sanction, 133–136——Great expense to the lord of the manor in taking legal proceedings for stopping the action of the Commissioners. 159–161.

Importance of preserving open spaces in the neighbourhood of the great centres of population, 165–167. 213, 214. 231——Inexpediency, however, of restricting the inclosure and cultivation of extensive stretches of waste land beyond easy reach from London, though within the twenty-five-mile radius; loss to the community at large through this land continuing unproductive, 167–181. 231, 232——Admission that the Act of 1866 may be useful as a means of guarding against trespass, &c., on commons, 185.

Probability of an especially large increase in the value of land on the south-west of London, this, however, being no reason why the open spaces in this direction should be uninclosed, 186–195. 225–228——Use made by the public of London Fields and Hackney Downs, these being lammas lands, and it being desirable to take steps for preserving portions of them as open ground, 198–208——Limited use made of ordinary lammas lands by the public; expediency of due consideration of the rights of the owners, 200. 204–209. 229, 230.

Great benefit to the lords of the manors if the commons were inclosed and built upon, 215, 216——Statement as to the right of the public over the commons being not prescriptive, but permissive, 217, 218——Obstacles to setting out the large commons in Surrey, &c., in garden allotments for the adjacent population, 219–224.

Suggestion that facilities be provided for enabling parties to apply for the conversion of the waste of a manor into a regulated pasture, 232–236——Advantage also of facilities for the sale of portions of commons as a means of meeting the expense of devoting the remainder to the public, 238–250.

Rights of Common, &c. Conclusion as to the limited character of the commoners' rights in the case of commons near London, *Scott* 494. 501–507——Statement that the great object of the Metropolitan Board is to promote the public use of the commons, and to prevent inclosure, without interfering with existing rights, *W. W. Smith* 522–525. 536, 537.

Argument that it was not the object of the Act of 1866 to determine the rights of persons interested in commons, and that it is not necessary that definite rights should be ascertained before schemes are carried out, *Lawrence* 653–657. 674–679. 769–773——Suggestion that it be provided that any scheme to be authorised under the Act, should not have the effect of interfering with any rights whatever, *ib.* 653–658. 677——Great variety of rights in respect of different commons in the metropolitan area, the facility of inclosure under the Act of 1845 being much more valuable to the lords and commoners in some cases than in others, *ib.* 671. 735–741——Common rights may be restricted or unrestricted, and are of the most variable kind, *ib.* 671.

Contemplated maintenance of existing private rights concurrently with the use of the commons by the public, *Lawrence* 726——Further deprecation of the Act going into claims of rights, *ib.* 773——Advantage of the Act providing that no person's beneficial rights should be taken away, except with consent, *ib.* 849–851.

See also *Compensation.* *Gravel and Sand.* *Lords of the Manors.* *Public, The.* *Registration of Common Rights.*

Report, 1869—*continued.*

Roads. Question considered whether difficulty would not arise as regards the maintenance of roads in commons, when much frequented by town populations, *Lawrence* 816–818.

S.

Sale of Land. Advantage also of facilities for the sale of portions of commons, as a means of meeting the expense of devoting the remainder to the public, *Ridley* 238–250——Very limited extent to which witness would approve of the sale of any portion of a common for building, in order to defray the expenses, *W. W. Smith* 581–583. 598, 599.

Sanitary Purposes. Probability of some of the open land near the metropolis being required for sanitary purposes, *Ridley* 58, 59.

Schemes (Act of 1866). Very few applications to the Inclosure Commissioners under the Metropolitan Commons Act of 1866, whilst only one scheme has been sent in to Parliament under the Act, *Ridley* 3, 4. 57. 78, 79——Prospect of some further applications to the Commissioner under the Act, *ib.* 95, 96.

Suggestion that, under certain conditions, it be compulsory upon the Inclosure Commissioners to prepare a scheme, *W. W. Smith* 549. 592–595——Very limited number of schemes presented to the Inclosure Commissioners under the Act of 1866; difficulty through litigation, *ib.* 630–642——Power of any lord or commoner to present a scheme to the Commissioners, *ib.* 645.

Suggestion that, under certain conditions, the inhabitants or ratepayers of any place, as well as the commoners, be authorised to memorialise for a scheme, *Lawrence* 658. 685, 686. 755, 756——Probability of many commons within the fifteen-mile radius being in course of time brought under the operation of the Act of 1866, *ib.* 874, 875.

Proposal that the occupiers of adjoining property should, as well as the lord of the manor and the commoners, have power to present a memorial to the Inclosure Commissioners for a scheme, *S. Smith* 1286, 1287. 1296–1300——Approval of power in the public to initiate a scheme, under the Act of 1866, if the expense is to be borne locally, *Ellis* 1352–1356.

See also *Hackney. Hayes Common. Litigation. Metropolitan Board of Works.*

Scott, Benjamin. (Analysis of his Evidence.)—Has taken considerable interest in the question of the preservation of open spaces near the metropolis, 251–257——Great desire evinced by the people to get out of the metropolis, and to roam about in Epping Forest, and similar places, rather than in the parks, 257, 258——Want of an amended definition of the word "commons," in the Act of 1866, so that it may include all open spaces, 260——Expediency of some extension of the limits of operation of the Act, *ib.*——Necessity of greater publicity in connection with schemes for inclosure of commons, *ib.*

Statement in support of the conclusion that the commons at Weybridge, Walton, and Byfleet require protection from Parliament against inclosure, 261–263——Existence merely of fuel rights over these commons, the lords of the manors and the commoners having been compensated many years ago, 261–263. 280——Complaint as to the course pursued in regard to Egham Common, some 280 or 300 acres having been sold for 7,000 *l.*, instead of being preserved as an open space, 263–276——Very inconvenient distance from the population at which allotments have been reserved for recreation or for the local poor, in the case of commons inclosed in Surrey, 277–279.

[Second Examination.] Statistics relative to the rapid increase in the population of the metropolis; calculation that the census of 1921 will comprise about 9,500,000 persons, 281–283——Particulars as to the great increase since 1801 in the density of the population of London as well as in the density of the dwellings, the proximity of the houses and the proximity of individuals, 283, 284——Argument from the foregoing facts as to the importance of extending to twenty-five miles, or even to twenty-three miles, the radius within which open spaces should be protected by special legislation, 284–288. 497——Very close proximity of the population of London as compared with other parts of the country, 286.

Former policy of Parliament to encourage inclosures, as tending to improved cultivation; reversal of this policy in recent years, 289, 290——Report of the Select Committee of 1865 adverted to, as showing the decided opinion of the Committee adverse to the inclosure of open spaces near the metropolis, 290——Recommendation by the Committee of 1865 that facilities be given for preserving the rights of the commoners, and that a special Act be necessary before inclosure within the Metropolitan Police District, 290, 291.

Instances of the insufficient publicity given to intended inclosures, 292–295. 434–436.——Question whether Wisley Common should not be treated as an exception if the limits of the Act of 1866 be extended, 296. 373, 373*, 423——Numerous open spaces in Surrey

Report, 1869—*continued.*

Scott, Benjamin. (Analysis of his Evidence)—*continued.*

Surrey which should be preserved in the interests of the people of the metropolis, 296 ——Sundry details on the subject of Weybridge, Byfleet, and Walton Commons, witness submitting that there are forcible reasons for preserving them against inclosure, 297 *et seq.*

Quotation of, and explanations upon, portions of the Act 39 & 40 Geo. 3, c. 87, with reference to the allotment and inclosure of the commons in the parishes of Byfleet and Weybridge, 298 *et seq.*—— Conclusion that several thousand acres were dealt with by the Act 39 & 40 Geo. 3; 299, 300. 302–304——Directions in the Act for the setting out of forty acres in Byfleet and seventy-five acres in Weybridge for the use of the small occupiers in those parishes, 305, 306. 340–343.

Examination to the effect that the trustees in whom the land for the poor occupiers was vested have no power to ring-fence, or inclose, or sell the land, the original Commissioners having failed to ring-fence the land, and inclosure not having been sought by any of the parties concerned, 307. 446–457 *et seq.*——Exercise by the cottagers of the right of cutting fuel, there being no claim to exercise any right over the soil, 308. 312. 318. 327. 344–346.

Conclusion that there having been a failure during seventy years to inclose the land in question, there is now a right in the local inhabitants and also, though to less extent, in the people of London to range over the land, 311. 320–324. 334–339. 358–361. 446–457 ——Statement as to the trustees for the poor allotments in Weybridge having never taken any steps towards inclosure, nor having ever warned off trespassers from the common, 328–339. 347–357——Improbability of any injury to Weybridge Common if largely frequented, 349–356. 411–415. 440*–445.

Grounds for the conclusion that it is very desirable not to facilitate the inclosure of Wisley Common, and that the people of London, as well as the local inhabitants, have a right of access to the common, 362 *et seq.*——Explanation that witness does not propose to deprive the lords of the manors or the commoners of any existing rights of dealing with the land; but contends that a special or private Act should be necessary in each case of inclosure near the metropolis, 367. 378–382. 387. 393. 424–433. 472–493 ——Limited use now made of Wisley Common by the people of London, 368–370. 384.

Respects in which there is a claim on the part of the metropolis upon the Legislature not to facilitate the inclosure of open spaces around London, although such facilities may well be granted as to inclosures generally, 371. 373. 393. 397. 422–433. 469–493. 499——Very few cottages in Weybridge paying rentals of less than 5 *l.* a year; injury rather than benefit to this class by inclosing and selling the common and by giving them large doles annually, 398–410. 416–418. 438. 451—— Expediency of full and fair compensation to all parties interested in common or waste land in the event of the compulsory preservation of such land from inclosure, 429–433. 463–466. 473. 477. 486–490. 499, 500.

Suggestions for increased publicity of notices of inclosure, 437——Concurrence in the recommendation of the Select Committee of 1865 that the rights of the commoners should be registered, 439, 440—— Dissent from a statement in a circular of the Surrey Commons Preservation Society that the soil of Wisley Common is public property, 458–464——Reference to the immense number of houses required to be built annually in London for the increasing population, 467, 468——Increased necessity for the preservation of open spaces according to the increase of population, 469–471.

Argument that more consideration should be given to the rights of the public, as compared with the rights of the lords and commoners, in the case of commons near cities than of commons in agricultural districts, 472–493——Further expression of the opinion that any legal rights or claims interfered with by the preservation of open spaces near London should be compensated; for this purpose a small tax might be levied on the metropolis, 477. 486–501——Approval of the disenabling character of the Act of 1866; 490–493.

Conclusion as to the limited character of the commoners' rights in the case of commons near London, 494. 501–507——Circumstance of the Committee of 1865 having reported that the granting of an Inclosure Act was a boon and not a right that could be claimed; concurrence in this view, 499. 513, 514——Further statement in favour of the preservation of Epping Forest in its natural wild condition, 508–510——Very large resort of Londoners to the forest, 511, 512.

Select Committee of 1865. Report of the Select Committee of 1865 adverted to as showing the decided opinion of the Committee adverse to the inclosure of open spaces near the metropolis, *Scott* 290——Recommendation by the Committee that facilities be given for preserving the right of the commoners, and that a special Act be necessary before inclosure within the Metropolitan Police district, *ib.* 290, 291.

Selection of Commons. Suggestion that, instead of adopting a radius, there be a selection of commons within easy reach of the metropolis, and that notice be given to the lords

Report, 1869—*continued.*

Selection of Commons—continued.

lords and commoners that it is intended to take such commons for purposes of exercise and recreation, subject to compensation for existing rights, *Ridley* 53. 56–64. 103–109.

Question considered whether, instead of embracing all commons within a certain area, it would not be better to specify the commons to be protected by the Act, *W. W. Smith* 623–629*——Approval of the policy of preserving the open spaces generally within an extended radius rather than of a policy of compensation for non-inclosure in each special case, *Lawrence* 814, 815. 837–840——Difficulty and expense of dealing with selected commons by special legislation as compared with the plan of a fixed radius round the metropolis, *ib.* 837, 838.

Smith, Samuel. (Analysis of his Evidence.)—Local feeling in favour of Stoke Newington Green being clearly placed under the Act of 1866; 1283–1295——Advantages anticipated in the management and condition of the Green if a scheme could be applied to it under the Act; suggestion hereon for an amended interpretation of the word "commoner," 1286. 1293, 1294——Proposal that not only in the case of Stoke Newington Green but generally the occupiers of adjoining property should, as well as the lord of the manor and the commoners, have power to present a memorial to the Inclosure Commissioners for a scheme, 1286, 1287. 1296–1300.

Smith, William Wyke. (Analysis of his Evidence.) — Is Solicitor to the Metropolitan Board of Works, 515——Submits that the Metropolitan Board have taken all practicable steps under the Act of 1866, in the interests of the public of the metropolis, 516 *et seq.*——Agreement on the part of the Board for securing the use of Tooting Beeke for the public, by payment of the sum of 10,000 *l.*; 517–523. 576–580——Explanation that it has not been sought to buy up the commoners' right, in the case of Tooting Beeke, or other commons, but rather to leave the commons in their existing state, 522–525.

Willingness of the Board to deal fairly with existing rights, and to compensate all rights interfered with by the public use of the commons, 522, 523. 525——Information relative to the negotiations with the late Sir Thomas Wilson on the subject of Hampstead Heath, and the suit eventually instituted in the interests of the public, but not completed; rights of the present lord of the manor adverted to hereon, 526–533—— Considerable difficulty in the case of Wimbledon Common; willingness evinced by Lord Spencer to advance the interests of the public in the matter, 533. 584, 585——Very limited action hitherto as regards Putney Heath, 533.

Great disadvantage of the rapidly increasing buildings upon open spaces round London, 533, 534—— Enormous sum necessary if the Metropolitan Board had to buy up all the commons, 535. 622——Further statement that the great object of the Board is to promote the public use of the commons, and to prevent inclosure, without interfering with existing rights, 536, 537——Explanation of the difficulties in the case of Blackheath, and of the action of the Board in the matter, 536. 538—— Suit pending as regards a projected inclosure at Plumstead Common, 539.

Great difficulty experienced in the case of Wandsworth Common, some controlling authority being much required; obstacle through the conflicting claims of Lord Spencer and of the commoners, 542–544——Expediency of steps being taken for securing to the public the use of the London Fields, at Hackney, including the lammas lands there, 544 ——Grounds for dissenting from the conclusion of the Inclosure Commissioners, that the term "common" in the Act of 1866, does not comprise lammas lands, 544. 586–591—— Clause suggested in the present Bill for enlarging and simplifying the interpretation of the word "common," so that lammas lands may beyond all doubt be included, 544–548. 591.

Opinion that it should be compulsory, rather than optional, upon the Inclosure Commissioners to prepare a scheme, under certain circumstances, 549. 592–595——Great benefit if the Commissioners had clear and distinct power to compel the production of information when rights are claimed, 549–559. 566. 592. 600–602——Important improvement to be secured by preventing the stoppage of schemes through means of suits in Chancery, 560–565.

Conclusion strongly in favour of extending the Act of 1866 over an area of twenty-five miles round the metropolis, 567. 573–575——Opinion that it is far preferable to preserve the commons and open spaces in their existing wild state, instead of inclosing them and converting them into parks, after buying up all the rights, 567–573. 646——Very valuable principle of the Act of 1866; 573. 638——Very limited extent to which witness would approve of the sale of any portion of a common for building, in order to defray the expenses, 581–583. 598, 599——Fairness of taxing the metropolitan district generally for the preservation of any open space, 596, 597.

Part taken by witness in preparing the petition from the Metropolitan Board to Parliament, on the subject of Wisley Common, 603–608——Question whether the petition was not inaccurate in stating that the common was intersected by a highroad throughout its whole extent, 609–611——Statement that witness had nothing to do with the proposal in the petition for selling the common to the highest bidder, and applying the proceeds to the purchase of parks, 612–616.

Report, 1869—*continued.*

Smith, William Wyke. (Analysis of his Evidence)—*continued.*

Necessary recognition by the Board, of the duty of purchasing existing rights over commons, it being essential to do so in some cases, 617-621. 631-633——Question considered whether, instead of embracing all commons within a certain area it would not be better to specify the commons to be protected by the Act, 623-629——Peculiarity of the case of Tooting Beeke, the outlay contemplated by the Board being very advisable, 630, 631. 636, 637.

Explanation that it is not proposed by the Board to deal with any common where there is not some public right, 631——Regulations proposed for the prevention of nuisances and the preservation of order, 632. 646——Proposal that the public shall merely have the right of ranging over the commons, 632——Further reference to the case of Hampstead Heath; public objection to the sale of any portion, 634, 635.

Very limited number of schemes presented to the Inclosure Commissioners, under the Act of 1866; difficulty through litigation, 639-642——Great care necessary on the score of compensation, unless private claims can be clearly proved, 643——Belief as to the disuse of the Crown rights at Blackheath, 644——Power of any lord or commoner to present a scheme to the Inclosure Commissioners, 645.

Stoke Newington Green. Local feeling in favour of Stoke Newington Green being clearly placed under the Act of 1866, *Smith* 1283-1295——Advantages anticipated in the management and condition of the Green if a scheme could be applied to it under the Act; suggestion hereon for an amended interpretation of the word "commoner," *ib.* 1286, 1293, 1294——Great difficulty at present in the management of the Green, and in raising funds for the purpose, *ib.* 1289.

Suburban Commons Bill. Statement to the effect that witness is not prepared to admit that the radius of five miles under the Suburban Commons Bill is any too extensive, *Lawrence* 819-823——The provisions of the Bill are doubtless intended to provide to a certain extent for increase of population, *ib.* 822.

The Committee report this Bill without amendment to the House, *Rep.* iii,

Surrey. Difficulty as to setting out the large commons in Surrey in garden allotments for the adjacent population, *Ridley* 219-224——Numerous open spaces in Surrey which should be preserved in the interests of the people of the metropolis, *Scott* 296——Large value represented by the commons in Surrey within the twenty-five mile radius, whilst they are rarely resorted to by Londoners, *Bell* 1051-1054. 1113-1116.

See also *Cobham* (*Fairmile Common, &c.*). *Egham Common.* *Ockham Common.* *Weybridge, Walton, and Byfleet Commons.* *Wisley Common.*

T.

Tax or Rate (*Acquisition of Commons*). Opinion that where compensation is necessary it might be provided out of metropolitan taxation for the purpose, the tax being spread over the area embraced in the Act of 1866, as amended, *Scott* 498. 500——Fairness of taxing the metropolitan district generally for the preservation of any open space, *W. W. Smith* 596, 597.

Tooting Beeke. Agreement on the part of the Metropolitan Board for securing the use of Tooting Beeke for the public by payment of the sum of 10,000 *l.*, *W. W. Smith* 517-523. 576-580—— Explanation that it has not been sought to buy up the commoners' rights, in the case of Tooting Beeke or other commons, but rather to leave the commons in their existing state, *ib.* 522-525——Peculiarity of the case of Tooting Beeke, the outlay contemplated by the Board being very advisable, *ib.* 630, 631. 636, 637.

Trespass. Admission that the Act of 1866 may be useful as a means of guarding against trespass, &c. on commons, *Ridley* 185.

V.

Value of Land. Probability of an especially large increase in the value of land on the south-west of London, this however being no reason why the open spaces in this direction should be uninclosed, *Ridley* 186-195. 225-228.

W.

Walton Common. See *Weybridge, &c.*

Report, 1869—*continued.*

Wandsworth Common. Great difficulty experienced in the case of Wandsworth Common, some controlling authority being much required; obstacle through the conflicting claims of Lord Spencer and of the commoners, *W. W. Smith* 542–544.

Waste Lands. See *Commons and Open Spaces. Cultivation of Commons. Inclosures.*

Weybridge, Walton, and Byfleet Commons. Statement in support of the conclusion that the commons at Weybridge, Walton, and Byfleet, require protection from Parliament against inclosure, *Scott* 261–263——Existence merely of fuel rights over these commons, the lords of the manors and the commoners having been compensated many years ago, *ib.* 261–263. 280.

Sundry details on the subject of Weybridge, Byfleet, and Walton Commons, witness submitting that there are forcible reasons for preserving them against inclosure, *Scott* 297 *et seq.*——Quotation of, and explanations upon, portions of the Act 39 & 40 Geo. 3, c. 87, with reference to the allotment and inclosure of the commons in the parishes of Byfleet and Weybridge, *ib.* 298 *et seq.*——Conclusion that several thousand acres were dealt with by the Act 39 & 40 Geo. 3, *ib.* 299, 300. 302–304——Directions in the Act for the setting out of forty acres in Byfleet, and seventy-five acres in Weybridge, for the use of the small occupiers in those parishes, *ib.* 305, 306. 340–343.

Examination to the effect that the trustees in whom the land for the poor occupiers was vested, have no power to ring-fence, or inclose, or sell the land, the original Commissioners having failed to ring-fence the land, and inclosure not having been sought by any of the parties concerned, *Scott* 307, *et seq.* 446–457——Exercise by the cottagers of the right of cutting fuel, there being no claim to exercise any right over the soil, *ib.* 308. 312. 318. 327. 344–346.

Conclusion that there having been a failure during seventy years to inclose the land in question, there is now a right in the local inhabitants, and also, though to a less extent, in the people of London, to range over the land, *Scott* 311. 320–324. 334–339. 358–361. 446–457——Statement as to the trustees for the poor allotments in Weybridge having never taken any steps towards inclosure, nor having ever warned off trespassers from the common, *ib.* 328–339. 347–357.

Improbability of any injury to Weybridge Common if largely frequented, *Scott* 349–356. 411–415. 440*–445——Very few cottagers in Weybridge paying rentals of less than 5*l.* a year; injury rather than benefit to this class by inclosing and selling the common, and by giving them large doles annually, *ib.* 398–410. 416–418. 438. 451.

Beneficial effect of the poor allotment in the case of Walton Common, *Bell* 1077.

Wimbledon Common. Application in the case of Wimbledon Common to deal with it under a scheme; obstacle on account of the litigation involved, *Ridley* 38. 195——Considerable difficulty in the case of Wimbledon Common; willingness evinced by Lord Spencer to advance the interests of the public in the matter, *W. W. Smith* 533. 584, 585.

Wisley Common. Statement as to the deposit for costs, and as to the local expense incurred in respect of the proposed inclosure of Wisley Common, the expenditure being lost if inclosure be disallowed, *Ridley* 131–144*.

Insufficient publicity as regards the intended inclosure of Wisley Common, *Scott*, 295. 434–436——Question whether Wisley Common should not be treated as an exception, if the limits of the Act of 1866 be extended, *ib.* 296. 373, 373*. 423.

Ground for the conclusion that it is very desirable not to facilitate the inclosure of Wisley Common, and that the people of London, as well as the local inhabitants, have a right of access to the common, *Scott* 362 *et seq.*——Limited use now made of the common by the people of London, *ib.* 368–370. 384——Dissent from a statement in a circular of the Surrey Commons Preservation Society, that the soil of Wisley Common is public property, *ib.* 458–464.

Part taken by witness in preparing the petition from the Metropolitan Board to Parliament on the subject of Wisley Common, *W. W. Smith* 603–608——Question whether the petition was not inaccurate in stating that the common was intersected by a high-road throughout its whole extent, *ib.* 609–611——Statement that witness had nothing to do with the proposal in the petition for selling the common to the highest bidder, and applying the proceeds to the purchase of parks, *ib.* 612–616.

Witness submits that in the case of Wisley Common the lord of the manor is entitled to all the rights, except the rights of the tenants, *Marshall* 1220–1226——Further statement relative to the right of inclosure possessed by the lord of the manor and commoners in the case of Wisley; absence of any rights in the public inconsistent with inclosure, *ib.* 1246–1269. 1279, 1280——Belief as to the right of the lord and commoners to inclose irrespectively of the Inclosure Act; advantage however in proceeding under the Act, *ib.* 1247–1264——The public have never wandered over the common, *ib.* 1279——The game is let, and keepers are employed to prevent trespassers, *ib.* 1280.

Report, 1869—*continued.*

Worsfold, William. (Analysis of his Evidence.)—Is a farmer at Cobham, and is possessor of a dozen rights over the common, as an owner of cottages, 1146–1149. 1195——Is one of the promoters of the inclosure of the common, and submits that such inclosure, comprising allotments for the labouring poor, is very desirable in the public interests, 1150 *et seq.*——The common is rarely if ever used for cutting fuel, or for pasturage, and never for recreation by Londoners, 1166–1173. 1216–1218——The inclosure would probably lead to much increase of building, additional cottages being much required, 1175–1180. 1196–1215——There is a very general feeling in the locality in favour of inclosure, 1184–1194.

REPORT

FROM THE

SELECT COMMITTEE

ON THE

NEW LAW COURTS;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND APPENDIX.

Ordered, by The House of Commons, *to be Printed,*
30 *July* 1869.

381.

Tuesday, 22*nd June* 1869.

Ordered, THAT a Select Committee be appointed to inquire into the Site and Charge of the New Courts of Law.

Monday, 28*th June* 1869.

Ordered, THAT the Committee do consist of Seventeen Members.

Committee nominated of,—

Mr. Chancellor of the Exchequer.
Lord Stanley.
Mr. Layard.
Lord John Manners.
Mr. W. Cowper.
Mr. Hunt.
Earl Grosvenor.
Mr. Mowbray.
Mr. W. Gregory.
Mr. Hope.
Mr. Tite.
Mr. Bentinck.
Viscount Enfield.
Mr. Goldney.
Mr. Torrens.
Mr. Russell Gurney.
Mr. Osborne Morgan.

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the Committee.

Thursday, 1*st July* 1869.

Ordered, THAT all Petitions, Reports, and Papers relating to the Sites of the New Courts of Justice, which have been presented to this House during the present Session, be referred to the Committee.

Monday, 12*th July* 1869.

Ordered, THAT the Petition of the Metropolitan and Provincial Law Association against the Courts of Justice (New Site) Bill be referred to the Committee.

Wednesday, 14*th July* 1869.

Ordered, THAT the Petition of Mr. Rigby Wason [presented 6th July], against the Sites proposed for the New Law Courts, and in favour of erecting them at Whitehall, be referred to the Committee.

Tuesday, 20*th July* 1869.

Ordered, THAT Mr. Gregory be discharged from further attendance on the Committee, and that Mr. Watkin Williams be added thereto.

Thursday, 22*nd July* 1869.

Ordered, THAT the Petition of the Members of the Legal Profession, in favour of the Courts of Justice (New Site) Bill, be referred to the Committee.

Monday, 26*th July* 1869.

Ordered, THAT the Petition of William Lechmere, in favour of the Courts of Justice (New Site) Bill, be referred to the Committee.

Wednesday, 28*th July* 1869.

Ordered, THAT the Petition of Members of the Legal Profession, in favour of the Courts of Justice (New Site) Bill, be referred to the Committee.

Friday, 30*th July* 1869.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, to The House.

MINUTES OF EVIDENCE - - - - - - - - - - p. 1
APPENDIX - - - - - - - - - - - - - - p. 113

REPORT.

THE SELECT COMMITTEE appointed to inquire into the Site and Charge of the NEW LAW COURTS;——HAVE considered the matters to them referred, and have agreed to the following REPORT:—

1. YOUR COMMITTEE have taken into consideration the matters referred to them, and have examined professional and other witnesses of experience and eminence.

2. They find that, in 1842, a Select Committee was appointed "to consider the expediency of erecting a building in the neighbourhood of the Inns of Court for the sittings of the Courts of Law and Equity, with a view to the more speedy, convenient, and effectual administration of justice."

3. Inquiries were renewed, by direction of Parliament, from time to time, and a Royal Commission issued in 1859, whose recommendations all tended to that object.

4. In accordance with the Report, made in 1860, of the Royal Commission, which included the present Lord Chancellor, Sir J. T. Coleridge, and the late Sir G. Cornewall Lewis, an Act was passed in the year 1865, authorising the purchase of a large area, since cleared, lying between the Strand and Carey-street, and containing 7½ acres.

5. By a second Act, of the same Session, the cost of the site to be thus acquired, and of the buildings to be erected upon it, was provided for partly by 1,000,000 *l.* of Stock, standing to the credit of the Suitors' Fund in the Court of Chancery, and partly by a redemption annuity, extending over a period not exceeding 50 years, to be levied by fees on suitors.

6. The acquisition of the property and its clearance have occupied a period of nearly four years, and the cost of the purchase and clearance has amounted to a sum exceeding 800,000 *l.*

7. A Royal Commission, dated 29th June 1865, was issued appointing the Lord Chancellor and many of the Judges, and other persons, "to advise and concur with the Treasury as to the plan and arrangements of the intended New Courts;" and during the period which has been occupied in acquiring and obtaining possession of the site, the Commissioners have, from time to time, recorded their opinion as to the courts and offices necessary or desirable to be provided for.

8. Under the Thames Embankment Act, passed in 1862, a space of ground lying between Norfolk-street, Surrey-street, Arundel-street, and the River, was reclaimed and directed to be set apart for the use of the public as ornamental ground.

9. Upon this ground, and the space lying between it and the Strand, a scheme was proposed early in the present Session for erecting new Courts of Law and Offices, instead of erecting them on the Carey-street site, acquired under the Act of 1865. This design was subsequently limited to an area comprising the houses and buildings to the south of Howard-street, and about 1¼ acre of the reclaimed land, and involving, for the sake of approaches and air, the demolition of part of the houses on the north side of Howard-street.

10. Mr. Street, whose plans for the building on the Carey-street site had been sanctioned by the Royal Commission, was directed by the First Commissioner of Works to prepare a set of plans adapted to the lesser Embankment area, consisting of six acres; and likewise plans on a reduced scale suited to the $7\frac{1}{2}$ acres of the Carey-street site.

11. Thus the Committee had before them, on the north of the Strand, $7\frac{1}{2}$ acres, forming the Carey-street site, already purchased and cleared, and from which upwards of 4,000 resident occupiers had been removed, and on the south of the Strand, below Howard-street, a site to the extent of 6 acres, about $4\frac{1}{2}$ acres of which are still covered by houses and buildings.

12. From the fullest consideration of all the circumstances of the case, and of the facts stated in evidence before them, your Committee have come to the following conclusions:—

13. They are of opinion that the Carey-street site, upon the whole, affords the best opportunity of concentrating the courts and offices in the centre of the great legal district lying between and nearly equi-distant from Lincoln's Inn and the Temple; and that it would be greatly to the public advantage that this site should be adhered to, and the New Law Courts and Offices erected thereon, as sanctioned by Parliament in the Act of 1865.

14. The evidence received by your Committee has satisfied them that the convenience of the public cannot be separated in the main from that of the legal profession, and that the economy of time which would result from placing the Law Courts in immediate proximity to the chambers of the practising barristers and solicitors, would tend to the direct advantage of the suitors. On the other hand, the placing of the Equity Courts on the Embankment site would, in the judgment of your Committee, be of serious detriment to the public and the profession, and materially diminish, if not destroy, the benefit which has accrued from the transfer of the Chancery Courts from Westminster to Lincoln's Inn.

15. With regard to facility of access, your Committee are impressed with the conviction that for all ordinary purposes connected with the Courts no great additional expenditure need be incurred should the Carey-street site be adopted; while they desire to call attention to the fact that the increased accommodation likely to be afforded by the Embankment, the river, and the contemplated railway must be taken into account as available, in the case of strangers, for the Carey-street site, to nearly the same degree as for that of Howard-street.

16. The Carey-street site admits of a building the same size as that proposed to be placed on the Embankment site, with an area available for improved approaches.

17. The reasons for any improvement in the approaches that may be desirable upon the north of Carey-street would equally apply if the building were erected on the Howard-street site.

18. It is alleged that the shape of the Carey-street site presents certain inconveniences, from the irregular shape of the western boundary; but your Committee believe that the site may be made available for the reduced scheme without any additional purchases, by a give and take arrangement with Clement's-Inn, and that if any additional purchase of ground were found necessary, the cost of such purchase might be met by the sale of a portion of the ground already acquired.

19. Mr. Hardwick and other witnesses have stated their opinion that no difficulty whatever would exist in securing purity of air, adequate ventilation, and sufficiency of light in buildings erected on either site.

20. The Carey-street site, then, being in the opinion of your Committee the most convenient for the accomplishment of the main objects of the proposed concentration, they proceed to consider whether, with relation either to cost or architectural effect, it would be wise to abandon the present Parliamentary site.

21. Your

21. Your Committee have carefully weighed the conflicting statements laid before them regarding the question of cost.

22. The estimated expense of acquiring the Howard-street site and widening Essex-street, which Mr. Street and Mr. Hunt concur in regarding as indispensable, would be as large as that already expended on the Carey-street site as it now stands.

23. If the Carey-street site were abandoned, a considerable loss must inevitably occur on its re-sale, which Mr. Pownall, Mr. Hardwick, and Mr. Oakley agree in putting as high as 436,000 *l.*

24. Mr. Hunt, indeed, says in his evidence, that he has been in communication with a gentleman representing, according to his own statements, some very responsible persons who are willing to take the Carey-street site and lay it out for building purposes at an ultimate rent equivalent to 3 ½ per cent. on 780,000 *l.*; but that, although the ultimate rent will be 3 ½ per cent., there must be a period of time when all the rent cannot be obtained, and so Mr. Hunt puts it at 3 per cent.

25. Even assuming that all Mr. Hunt's expectations could be realised, the very least amount of loss which can be calculated on is 34,000 *l.* per annum for four years for interest of money.

26. The evidence has satisfied your Committee that the area already acquired, and which is ready for the commencement of building, is sufficient for the erection of the Courts of Law and the Offices on the reduced scale contemplated in the plan prepared for the Howard-street site by direction of the First Commissioner of Works.

27. If at any future period additional accommodation should be required, the ground in the neighbourhood of the Carey-street site would be obtained at a probably lower price than that in the neighbourhood of Howard-street; the latter site being bounded by King's College on the one side and the Temple on the other, any extension would have to take the direction of the very expensive block of buildings on the south side of the Strand.

28. There is so much difference of opinion in your Committee as to the comparative advantages of the two sites in point of architectural effect, that they are unable to report upon that subject.

29. Looking at the delay that has occurred since the passing of the Act, and the further suspense that would be unavoidable in obtaining the powers for, and the compulsory purchase and clearance of, another site, and considering that no paramount reasons have been submitted to the Committee for a change in the original design, your Committee recommend that the Carey-street site be retained, and that the New Law Courts and Offices be erected thereon.

30 *July* 1869.

PROCEEDINGS OF THE COMMITTEE.

Thursday, 1*st July* 1869.

MEMBERS PRESENT:

Mr. Goldney.	Viscount Enfield.
Mr. William Gregory.	Lord John Manners.
Mr. Mowbray.	Earl Grosvenor.
Mr. Tite.	Lord Stanley.
Mr. Torrens.	Mr. Chancellor of the Exchequer.
Mr. William Cowper.	Mr. Osborne Morgan.
Mr. Layard.	Mr. Beresford Hope.

Lord *Stanley* was called to the Chair.

The Committee deliberated.

[Adjourned till Monday next, at Twelve o'clock.

Monday, 5*th July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Lord John Manners.	Mr. Tite.
Mr. Mowbray.	Mr. Goldney.
Mr. Hunt.	Earl Grosvenor.
Mr. Layard.	Mr. Cowper.
Mr. Osborne Morgan.	Mr. Bentinck.
Mr. Beresford Hope.	Mr. Torrens.
Mr. Russell Gurney.	Mr. Chancellor of the Exchequer.
Lord Enfield.	Mr. Gregory.

Mr. *Field*, examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 9*th July* 1869.

MEMBERS PRESENT.

Lord STANLEY, in the Chair:

Mr. Layard.	Mr. Chancellor of the Exchequer.
Lord John Manners.	Mr. Osborne Morgan.
Mr. Russell Gurney.	Mr. Beresford Hope.
Lord Enfield.	Mr. Bentinck.
Mr. Goldney.	Mr. Hunt.
Earl Grosvenor.	Mr. Gregory.
Mr. William Cowper.	Mr. Torrens.
Mr. Mowbray.	

Mr. *Field*, Mr. *Burnett*, and Mr. *Street*, were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 13*th July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Mr. Bentinck.	Lord Enfield.
Earl Grosvenor.	Mr. Goldney.
Lord John Manners.	Mr. Chancellor of the Exchequer.
Mr. Mowbray.	Mr. Hunt.
Sir William Tite.	Mr. Gregory.
Mr. Layard.	Mr. William Cowper.
Mr. Beresford Hope.	

Mr. *Street*, further examined.

The Committee deliberated.—*Resolved*, That the Committee will not take evidence on the subject of any other site, except those on Carey-street and the Embankment respectively.

Mr. *Hunt*, examined.

The Committee deliberated.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 16*th July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Mr. Layard.	Mr. Goldney.
Lord John Manners.	Mr. Bentinck.
Lord Enfield.	Sir William Tite.
Mr. Mowbray.	Mr. Osborne Morgan.
Earl Grosvenor.	Mr. Chancellor of the Exchequer.
Mr. Torrens.	

Mr. *John Fowler*, Mr. *H. Freshfield*, Mr. *Dudley Baxter*, Mr. *H. Trelawny Boode*, Mr. *H. W. Cole*, Mr. *Samuel B. Robertson*, Mr. *Charles S. Whitmore*, and Mr. *Henry Vallance*, were severally examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 20*th July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Lord John Manners.	Mr. Cowper.
Mr. Mowbray.	Earl Grosvenor.
Mr. Layard.	Sir William Tite.
Mr. Beresford Hope.	Mr. Hunt.
Lord Enfield.	Mr. Chancellor of the Exchequer.
Mr. Goldney.	Mr. Osborne Morgan.

Mr. *Philip Charles Hardwick*, Sir *Roundell Palmer*, Q.C., a Member of the House, and Mr. *George Denman*, Q.C., a Member of the House, were severally examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 23*rd July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Mr. Mowbray.	Mr. Hunt.
Mr. Layard.	Mr. Chancellor of the Exchequer.
Lord John Manners.	Mr. Cowper.
Mr. Beresford Hope.	Mr. Osborne Morgan.
Lord Enfield.	Sir W. Tite.
Mr. Watkin Williams.	Mr. Bentinck.
Mr. Goldney.	Earl Grosvenor.

Mr. *J. Young*, Mr. *Nathaniel C. Milne*, Mr. *Richard Kinder*, Lord *Romilly*, Master of the Rolls (attending by permission of the House of Lords), Mr. *Charles Horwood*, and Mr. *John Oakley*, were severally examined.

The Committee deliberated.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 27*th July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Mr. Beresford Hope.	Mr. Russell Gurney.
Lord John Manners.	Earl Grosvenor.
Sir William Tite.	Mr. Hunt.
Mr. Goldney.	Mr. Watkin Williams.
Mr. Layard.	Mr. W. Cowper.
Mr. Chancellor of the Exchequer.	Mr. Osborne Morgan.
Lord Enfield.	Mr. Torrens.
Mr. Mowbray.	Mr. Bentinck.

Dr. *Bayford*, Mr. *Pennethorne*, Mr. *Ward Hunt*, a Member of the Committee, and Mr. *George Pownall*, were severally examined.

The Committee deliberated.

[Adjourned till Friday next, at Four o'clock.

Friday, 30*th July* 1869.

MEMBERS PRESENT:

Lord STANLEY, in the Chair.

Mr. Mowbray.	Mr. Torrens.
Sir W. Tite.	Mr. Bentinck.
Mr. Layard.	Mr. Chancellor of the Exchequer.
Lord John Manners.	Mr. Hunt.
Mr. Goldney.	Mr. Russell Gurney.
Mr. Beresford Hope.	Earl Grosvenor.
Mr. Cowper.	Mr. Osborne Morgan.
Lord Enfield.	Mr. Watkin Williams.

DRAFT REPORT proposed by the *Chancellor of the Exchequer*, read the first time, as follows:

"Your Committee have decided to limit their inquiry to the subject which seems to be practically in issue, that is the respective merits of the site already purchased north of the

the Strand for the erection of Courts of Justice, and the site south of the Strand, which the Government propose to purchase for the same purpose.

"They propose to compare the two sites under the following heads:

1. Shape, buildings, and elevation.
2. Light, air, ventilation, and quiet.
3. Surroundings and approaches.
4. Convenience of public and of legal profession.
5. Expense.
6. Architectural capabilities.

"1. *Shape, Buildings, and Elevation.*

"'Nothing,' in Mr. Street's opinion, 'can be less convenient than the outline of the Carey-street site as it stands at present, and no one can,' he thinks, 'have sanctioned the purchase of such a site with the impression that the purchases were to terminate with those which were already completed.'

"The shape of the Carey-street site, especially towards the west, is inconvenient, and necessitates some new arrangements.

"Nevertheless, your Committee are of opinion that the same quantity of Courts and offices can be placed on either site, and that these Courts and offices are sufficient to answer the purpose which Parliament had in view in 1865.

"The slope from Howard-street to the river is more rapid than the slope from Carey-street to the Strand. The height of Howard-street above the Embankment road is 21 feet. This, however, is not, in Mr. Street's opinion, any disadvantage. It adds very slightly to the expense, and it gives the opportunity of making approaches to the building at many different levels.

"2. *Light, Air, Ventilation, and Quiet.*

"In all these respects the Howard-street site is decidedly superior to Carey-street. The wide open space in front of the proposed building secured by the river, the movement in the air produced by the perpetual rise and fall of its waters, the vicinity of the Temple Gardens, the superior character of the buildings east, west, and north, and the long distance that separates Howard-street from the noisy thoroughfare of the Strand, appear to establish these points beyond doubt or dispute.

"3. *Surroundings and Approaches.*

"Taking the Carey-street site as it stands without the purchase of more land, it is difficult to conceive a site more difficult of access, and placed in a more objectionable neighbourhood. From the north the Carey-street site can only be approached by narrow streets. Thus:

	Ft.	*in.*	
Little Queen-street is, at the narrowest part	27	8	wide.
Great Queen-street	26	0	„
Portsmouth-street	18	0	„
Portugal-street	—		„
Serle-street	26	10	„
Duke-street	12	0	„
Chancery-lane	20	0	„

(Street, 701, 702.)

"The only remaining approach is by the Strand, which is perhaps the most crowded thoroughfare in London.

"The access to the Howard-street site is really admirable. 1. The Embankment road, 100 feet wide, from Westminster to Blackfriars, and thence to the very heart of the City by the new street from Blackfriars to the Mansion House, the river with its steamers, Waterloo and Blackfriars Bridges about equi-distant, a carriage road from Wellington-street by the Terrace of Somerset House, an approach from the Strand by four streets—Norfolk, Arundel, Surrey, and Essex streets—and a railway with a station close to the building, which brings the Courts in direct communication with the City, the Houses of Parliament, the City, and the suburbs that surround London,—seem to leave little to desire.

"As regards its surroundings the Carey-street site is most unfortunately placed.

"The plan proposed by Mr. Street for building at Carey-street without purchasing further ground, leaves in one place only 10 feet between the Courts and unbought buildings, and hardly anywhere leaves the distance of 60 feet between the Courts and property of the most objectionable description. To the west, Clare-market and its neighbourhood are highly offensive and objectionable, and Bell-yard is a place quite unsuited to the neighbourhood of a great public building. If the Carey-street site is selected, we think it quite obvious that very extensive purchases, north, east, and west, must at once be made. Howard-street is separated from the Strand by four streets, consisting of clean, substantial, and respectably inhabited houses; on the east it is close to the Temple and the Temple Gardens; on the west it is flanked by King's College, and Somerset House

with its terrace; and on the south is fronted by the Embankment road and the river. As regards approaches and surroundings, the superiority of the Howard-street site over the Carey-street site, supposing no purchases to be made in addition to either, is great and unquestionable.

"4. *Convenience of Public and Legal Profession.*

"For the above reasons the Committee are satisfied that, regarding London and its suburbs as a whole, and the Courts of Law as places to which everyone may be obliged to resort, the Embankment site offers the greatest amount of convenience to the public, by its accessibility, and by the greater comfort it will afford to those who resort to it. But it has been strongly urged upon the Committee, on behalf of the Royal Commission and the Law Institution, that all this is a delusion, that the legal profession should alone be considered, that the legal profession resides mainly to the north of the Strand, and that the fact that Carey-street is more acceptable to them that Howard-street, is conclusive of the whole controversy. The facts on which this statement rest will not bear investigation. It appears from a Paper handed in by Mr. Baxter, of the firm of Baxter, Rose, & Norton, that there live north of the Strand—

Barristers - - - - - - - - - -	895
Attorneys - - - - - - - - - -	1,342

	Barristers.	Attorneys.
In the City - - - - -	14	1,270
Temple - - - - - -	1,107	248
Westminster - - - - -	56	200
	1,177	1,718

"So that the numbers largely preponderate against those practitioners who profress to represent the legal profession. Moreover, the interests of the more numerous class are identified with those of the public. They are, as a rule, Common Law Barristers, and carry with them jurors and witnesses, who are seldom seen in Courts of Equity. But the Committee think that it is not on grounds like these that this question must now be decided. We are building for posterity, and for a nation. It is our duty to do what is best for the public at large, in the full confidence that the legal profession will adapt their residence to whatever site may be decided upon, and will not permanently suffer by whatever may be for the general interest of the public. The Committee regret to observe, that the claim which they have just been obliged to disallow has been supported by the circulation among Members of Parliament of plans professing to represent the Carey-street and Howard-street sites, which were found, on examination by a Committee of the Courts of Justice Commission, to be, as Mr. Street had pointed out, extremely inaccurate as to the shape and available area for building purposes on the two sites.

"5. *Expense.*

"The Carey-street site, already purchased, has cost somewhere about 780,000 *l.* Mr. Hunt estimates the cost of the Howard-street site at 600,000 *l.*, including the purchase of the houses on the north side of Howard-street. Mr. Street suggests the purchase of Essex-street for the purpose of widening it, improving the gradients, and making a road from the Railway Station to the Strand. However desirable this purchase may be, the Committee do not regard it as a necessary adjunct to the purchase of the Howard-street site. The expense would be lightened by the sale of very valuable building sites in an improved street, but, even without this, Howard-street would be excellently provided with approaches. Beyond this there is no suggestion of any contingent purchase arising from the purchase of Howard-street. The case of Carey-street is very different. On the north and east Mr. Street is of opinion that all the land which was required for the larger scheme recommended by the Royal Commission will be required. On the west probably less would be wanted for the smaller building. A portion of the property purchased might, perhaps, be resold, though it is impossible to say how much, or whether, when once acquired, there would be a disposition to sell any of it. Old streets must be widened, new ones laid out, all the property between the Courts and Chancery-lane and from the Law Institution to Fleet-street must be acquired. These various expenses Mr. Hunt, founding himself on an estimate by Mr. Pownall, estimates at 1,000,000 *l.*, that is 600,000 *l.* for the purchase of property, and 400,000 *l.* for approaches, an estimate which appears to us by no means unreasonable. But after this expense has been incurred, Carey-street would still be, as to light and ventilation, quiet, surroundings, and approaches,

very

very inferior to Howard-street. As regards the site, therefore, the matter would seem to stand thus:—

	£.
Carey-street site - - - - - - - - -	780,000
Approaches and surroundings, &c. - - - -	1,000,000
	1,780,000
Howard-street - - - - - - - - -	600,000
Saving - - -	£. 1,180,000

"From this, however, some deduction may be made if any of the property be resold. The land between Howard-street and the Strand is estimated to be worth 1,000,000 *l.*, and if any such sum could be expended, it would appear to be much better spent by clearing a portion of this away up to the Strand, than by dealing imperfectly with all the surroundings of Carey-street; on all other sides, with the single exception of King's College, extension is impracticable. This puts a clear and definite limit to the expense which can be incurred. The Carey-street site, on the other hand, has no such limit to its extension. It is almost encompassed by property, the very existence of which is a considerable nuisance, and the tendency to buy up which, within a rather long radius, will be almost irresistible. The buildings on the two sites Mr. Street estimates at 900,000 *l.*, and Mr. Hunt at 800,000 *l.* each; but when it is considered that Mr. Street's plan has not yet undergone the revision of the Board of Works, the two estimates are perhaps not very divergent. It is said that the foundation of the Howard-street Courts will be very expensive. Mr. Street allows 50,000 *l.* for concrete foundations for the whole building; and Mr. Fowler, who has the best practical experience on the subject, thinks the foundations provided for by Mr. Street would be sufficient. Against this expense is to be set the great convenience and cheapness of carrying all the building materials by water, which has been estimated at 5 per cent. on the whole cost of the building. It is urged that against the Howard-street site should be set the cost of reselling the land already acquired in Carey-street, a loss estimated by Mr. Pownall at 440,000 *l.* But Mr. Hunt is in possession of an offer by which the Carey-street site would be taken off the hands of the Government at an ultimate rent at the rate of 3½ per cent. on 780,000 *l.*; and it is very probable that, considering the value which the vicinity of the Law Courts must impart to the estate, better terms may be obtained.

"Upon the whole, the Committee think that the Howard-street site may be acquired, built upon, and provided with all necessary access, for 1,600,000 *l.*; that the Carey-street site cannot be built on and provided with necessary access for less than an ultimate outlay of 2,580,000 *l.*, and that even then the surroundings, air, quiet, light, ventilation, and approaches will be very inferior on the Carey-street site, and will lead to even greater expense hereafter.

6. *Architectural Capabilities.*

"The site north of the Strand offers, undoubtedly, a fine elevated position for a public building; but this is marred by its surroundings. From nearer streets it would be little seen, and as part of a more remote view it would be darkened by smoke, and obscured by the lofty buildings which might be expected to rise to the height of (*e. g.*) Messrs. Smith's warehouses on the south side of the Strand. The building on the Embankment site would be visible from the river, from the Embankment road, from Waterloo, Blackfriars, and Westminster Bridges, and from the Houses of Parliament.

"Your Committee are of opinion that one great incidental advantage of the selection of the Howard-street site will be the facility it would afford for making, at very small cost, a great new artery from north to south just where it is most wanted. The prolongation of Essex-street to Holborn would be very easily accomplished, and would give access to the Embankment roadway at the most convenient point for the whole north of London.

"Your Committee are of opinion that, on the grounds of superior light and quiet, of better access and surroundings, of economy, public convenience, and architectural effect, the Howard-street site is greatly to be preferred to the site between Carey-street and the Strand; and they recommend that the Standing Orders be suspended, and the Bill introduced by the Government be proceeded with without delay."

DRAFT REPORT proposed by Mr. *Goldney*, read a first time, as follows:

"1. YOUR Committee have taken into consideration the matters referred to them, and have examined professional and other witnesses of experience and eminence.

"2. They find that, in 1842, a Select Committee was appointed 'to consider the expediency of erecting a building in the neighbourhood of the Inns of Court for the sittings of the Courts of Law and Equity, with a view to the more speedy, convenient, and effectual administration of justice.'"

"3. Inquiries were renewed, by direction of Parliament, from time to time, and a Royal Commission issued in 1859, whose recommendations all tended to that object.

"4. In accordance with the Report, made in 1860, of the Royal Commission, which included the present Lord Chancellor, Sir J. T. Coleridge, and the late Sir G. Cornewall Lewis, an Act was passed in the year 1865, authorising the purchase of a large area, since cleared, lying between the Strand and Carey-street, and containing 7½ acres.

"5. By a second Act of the same Session the cost of the site to be thus acquired, and of the buildings to be erected upon it, was provided for partly by 1,000,000 *l.* of Stock, standing to the credit of the Suitors' Fund in the Court of Chancery, and partly by a redemption annuity, extending over a period not exceeding 50 years, to be levied by fees on suitors.

"6. The acquisition of the property and its clearance have occupied a period of nearly four years, and the cost of the purchase and clearance has amounted to a sum exceeding 800,000 *l.*

"7. A Royal Commission, dated 29th June 1865, was issued appointing the Lord Chancellor and many of the Judges, and other persons, 'to advise and concur with the Treasury as to the plan and arrangements of the intended New Courts;' and during the period which has been occupied in acquiring and obtaining possession of the site, the Commissioners have, from time to time, recorded their opinion as to the courts and offices necessary or desirable to be provided for.

"8. Under the Thames Embankment Act, passed in 1862, a space of ground lying between Norfork-street, Surrey-street, Arundel-street, and the river, was reclaimed and directed to be set apart for the use of the public as ornamental ground.

"9. Upon this ground, and the space lying between it and the Strand, a scheme was proposed early in the present Session for erecting new Courts of Law and Offices, instead of erecting them on the Carey-street site, acquired under the Act of 1865. This design was subsequently limited to an area comprising the houses and buildings to the south of Howard-street, and about 1¼ acre of the reclaimed land.

"10. Mr. Street, whose plans for the building on the Carey-street site had been recommended by the Royal Commission, was directed by the First Commissioner of Works to prepare a set of plans adapted to the lesser Embankment area, consisting of six acres; and likewise plans on a reduced scale suited to the 7½ acres of the Carey-street site.

"11. Thus the Committee had before them, on the north of the Strand, 7½ acres, forming the Carey-street site, already purchased and cleared, and from which upwards of 4,000 resident occupiers had been removed, and on the south of the Strand, below Howard-street, a site to the extent of 6 acres, about 4½ acres of which are still covered by houses and buildings.

"12. From the fullest consideration of all the circumstances of the case, and of the facts stated in evidence before them, your Committee have come to the following conclusions:—

"13. They are of opinion that the Carey-street site, upon the whole, affords the best opportunity of concentrating the courts and offices in the centre of the great legal district lying between and nearly equi-distant from Lincoln's Inn and the Temple; and that it would be greatly to the public advantage that the site should be adhered to, and the new Law Courts and Offices erected thereon, as sanctioned by Parliament in the Act of 1865.

"14. The evidence received by your Committee has satisfied them that the convenience of the public cannot be separated in the main from that of the legal profession, and that the economy of time which would result from placing the Law Courts in immediate proximity to the chambers of the practising barristers and solicitors, would tend to the direct advantage of the suitors. On the other hand, the placing of the Equity Courts on the Embankment site would, in the judgment of your Committee, be of serious detriment to the public and the profession, and materially diminish, if not destroy, the benefit which has accrued from the transfer of the Chancery Courts from Westminster to Lincoln's Inn.

"15. With regard to facility of access, your Committee are impressed with the conviction that for all ordinary purposes connected with the Courts no great additional expenditure need be incurred should the Carey-street site be adopted; while it desires to call attention to the fact that the increased accommodation likely to be afforded by the Embankment, the river, and the contemplated railway must be taken into account as available, in the case of strangers, for the Carey-street site, to nearly the same degree as for that of Howard-street.

"16. The Carey-street site admits of a building the same size as that proposed to be placed on the Embankment site, with an area available for improved approaches.

"17. The reasons for any improvement that may be desirable upon the north would equally apply if the building were erected on the Howard-street site.

"It

"18. It is alleged that the shape of the Carey-street site presents certain inconveniences, from the irregular shape of the eastern boundary; but your Committee believe that the site may be made available for the reduced scheme without any additional purchases, by a give and take arrangement with Clement's Inn, and that if any additional purchase of ground were found necessary, the cost of such purchase might be met by the sale of a portion of the ground already acquired.

"19. Mr. Hardwick and other witnesses have stated their opinion that no difficulty whatever would exist in securing purity of air, adequate ventilation, and sufficiency of light in buildings erected on either site.

"20. Carey-street, then, being in the opinion of your Committee the most convenient site for the accomplishment of the main objects of the proposed concentration, they proceed to consider whether, with relation either to cost or architectural effect, it would be wise to abandon the present Parliamentary site.

"21. Your Committee have carefully weighed the conflicting statements laid before them regarding the question of cost.

"22. The estimated expense of acquiring the Howard-street site and the widening of Essex-street, which Mr. Street and Mr. Hunt concur in regarding as indispensable, would be as large as that already expended on the Carey-street site as it now stands.

"23. If the Carey-street site were abandoned, a considerable loss must inevitably occur on its re-sale, which Mr. Pownall, Mr. Hardwick, and Mr. Oakley agree in putting as high as 436,000 *l.*

"24. Mr. Hunt, indeed, states in his evidence, that he has been in communication with a gentleman who represents, as he represents to him, some very responsible persons who are willing to take the Carey-street site and lay it out for building purposes at an ultimate rent equivalent to 3½ per cent. on 780,000 *l.*; but that, although the ultimate rent will be 3½ per cent., there must be a period of time when all the rent cannot be obtained, and so Mr. Hunt puts it at 3 per cent.

"25. Even assuming all Mr. Hunt's expectations could be realised, the very least amount of loss which can be calculated on is 34,000 *l.* per annum for four years for interest of money.

"26. Your Committee are of opinion that, in an architectural point of view, a building of the dimensions proposed, standing on the Carey-street site, would, from its elevation, be as great, if not a greater ornament to the metropolis than a building of a similar character placed on the lower level of the Embankment, which, although presenting a fine river front, would not be seen so generally from other parts of London.

"27. Both sites possess great advantages in point of architectural effect, but, upon the whole, your Committee consider that those of Carey-street preponderate. The elevation at which this site stands above the river, equal to that of St. Paul's, is a signal advantage. The irregularity of outline which the area presents at the western side, may, in the hands of an architect of Mr. Street's acknowledged talent, be converted into a means of producing much picturesque effect, while the view of the whole building, including the southern and western façades from the southern side of the Strand, cannot fail to be signally effective. On the other hand, from the increased elevation, the upper portion of the building, with its varied line of roofs and towers, will be conspicuous from the bridges, from many parts of the Embankment, and, owing to the curvature of the river, from the Palace of Westminster. Both sites possess the advantage that their principal façade looks to the south; but the northern façade of a building planted on the Carey-street site will be seen to much greater advantage than the corresponding one of a building placed upon the Embankment. Among the objections which have been offered to the Embankment site, may be mentioned that its line projects 50 feet beyond that of Somerset House to the west, and beyond the Temple to the east, and that the relation of the building, rising from the level of the Embankment roadway to Somerset House, which is placed upon a terrace, would be incongruous.

"28. The evidence has satisfied the Committee that the area already acquired, and which is ready for the commencement of building, is sufficient for the erection of the Courts of Law and the offices contemplated as necessary by the Royal Commission, and provided for by the Acts now in force.

"29. If at any future period additional accommodation should be required, the ground in the neighbourhood of the Carey-street site might be obtained at a much less price than that in the neighbourhood of Howard-street; the latter being bounded by King's College on the one side and the Temple on the other, any extension would have to take the direction of the enormously expensive block of buildings on the south side of the Strand.

"30. Looking at the delay that has occurred since the passing of the Act, and the further suspense that would be unavoidable in obtaining the powers for, and the compulsory purchase and clearance of, another site, and considering that no paramount reasons have been

been submitted to the Committee for a change in the original design, your Committee recommend that the Carey-street site be retained, and that the new Law Courts and Offices be erected thereon."

MOTION made, and question proposed, That the Draft Report proposed by the Chancellor of the Exchequer, be now read a second time paragraph by paragraph—(Mr. *Chancellor of the Exchequer*).—Amendment proposed, to leave out, the words, "the Chancellor of the Exchequer," in order to insert the words, "Mr. Goldney"—(Mr. *Goldney*)—instead thereof.—Question put, "That the words, 'the Chancellor of the Exchequer' stand part of the Question"—The Committee divided:

Ayes, 5.	Noes, 8.
Earl Grosvenor.	Mr. Bentinck.
Sir W. Tite.	Mr. Cowper.
Mr. Layard.	Lord John Manners.
Mr. Chancellor of Exchequer.	Mr. Mowbray.
Lord Enfield.	Mr. Hunt.
	Mr. Beresford Hope.
	Mr. Goldney.
	Mr. Torrens.

Words added.—Main Question as amended put, and *agreed to.*—*Resolved,* That the Draft Report proposed by Mr. Goldney be now read a second time paragraph by paragraph.

Paragraphs 1—25, amended, and *agreed to.*

Paragraph 26, *disagreed to.*

Paragraph 27, amended.

Another Amendment proposed, after the word "advantages," to insert the word "but"—(Mr. *Goldney*).—Question put, "That the word 'but' be there inserted"—The Committee divided:

Ayes, 8.	Noes, 8.
Mr. Cowper.	Mr. Bentinck.
Lord John Manners.	Mr. Watkin Williams.
Mr. Mowbray.	Sir W. Tite.
Mr. Hunt.	Mr. Layard.
Mr. Beresford Hope.	Mr. Chancellor of Exchequer.
Mr. Goldney.	Lord Enfield.
Mr. Osborne Morgan.	Mr. Russell Gurney.
Mr. Torrens.	Earl Grosvenor.

Whereupon the Chairman declared himself with the Noes.

Amendment proposed, to leave out the words, "but, upon the whole, your Committee consider that those of Carey-street preponderate"—(Mr. *Russell Gurney*).—Question put, "That those words stand part of the paragraph"—The Committee divided:

Ayes, 8.	Noes, 8.
Mr. Cowper.	Mr. Bentinck.
Lord John Manners.	Mr. Watkin Williams.
Mr. Mowbray.	Sir W. Tite.
Mr. Hunt.	Mr. Layard.
Mr. Beresford Hope.	Mr. Chancellor of Exchequer.
Mr. Goldney.	Lord Enfield.
Mr. Osborne Morgan.	Mr. Russell Gurney.
Mr. Torrens.	Earl Grosvenor.

Whereupon the Chairman declared himself with the Noes.

Amendment made.—Question put, "That the paragraph, as amended, stand part of the Draft Report"—The Committee divided:

Ayes, 8.	Noes, 8.
Mr. Cowper.	Mr. Bentinck.
Lord John Manners.	Mr. Watkin Williams.
Mr. Mowbray.	Sir W. Tite.
Mr. Hunt.	Mr. Layard.
Mr. Beresford Hope.	Mr. Chancellor of Exchequer.
Mr. Goldney.	Lord Enfield.
Mr. Osborne Morgan.	Mr. Russell Gurney.
Mr. Torrens.	Earl Grosvenor.

Whereupon the Chairman declared himself with the Noes.

Paragraphs

Paragraphs 28 and 29, amended, and *agreed to.*

Amendment proposed, after paragraph 29 to insert the following paragraph,—"There is so much difference of opinion in your Committee, as to the comparative advantages of the two sites in point of architectural effect, that they are unable to report upon that subject"—(Mr. *Russell Gurney*).—Question put, "That the proposed paragraph be inserted in the Draft Report"—The Committee divided:

Ayes, 8.	Noes, 8.
Mr. Bentinck.	Mr. Watkin Williams.
Mr. Cowper.	Earl Grosvenor.
Lord John Manners.	Sir W. Tite.
Mr. Mowbray.	Mr. Layard.
Mr. Hunt.	Mr. Chancellor of Exchequer.
Mr. Russell Gurney.	Lord Enfield.
Mr. Goldney.	Mr. Torrens.
Mr. Osborne Morgan.	Mr. Beresford Hope.

Whereupon the Chairman declared himself with the Ayes.

Paragraph 30, *agreed to.*

Question put, "That this Report, as amended, be the Report of the Committee to The House"—The Committee divided:

Ayes, 9.	Noes, 7.
Mr. Bentinck.	Mr. Watkin Williams.
Mr. Cowper.	Earl Grosvenor.
Lord John Manners.	Sir W. Tite.
Mr. Mowbray.	Mr. Layard.
Mr. Hunt.	Mr. Chancellor of Exchequer.
Mr. Beresford Hope.	Lord Enfield.
Mr. Goldney.	Mr. Russell Gurney.
Mr. Osborne Morgan.	
Mr. Torrens.	

Ordered, To Report, together with the Minutes of Evidence, and an Appendix.

LIST OF WITNESSES.

MINUTES OF EVIDENCE,

Monday, 5th July 1869.

MEMBERS PRESENT:

Mr. Bentinck.
Mr. Chancellor of the Exchequer.
Mr. W. Cowper.
Viscount Enfield.
Mr. Goldney.
Mr. Gregory.
Earl Grosvenor
Mr. Russell Gurney.
Mr. Beresford Hope.
Mr. Hunt.
Mr. Layard.
Lord John Manners.
Mr. Mowbray.
Mr. Osborne Morgan.
Lord Stanley.
Mr. Tite.
Mr. Torrens.

THE RIGHT HON. LORD STANLEY, IN THE CHAIR.

Mr. EDWIN WILKINS FIELD, called in; and Examined.

Mr. *E. W. Field.*

5 July 1869.

1. *Chairman.*] WE understand that you were Secretary to the Commission which sat upon the subject of the New Law Courts?—Yes. That Commission is still sitting.

2. How long ago did that Commission begin its sittings?—In the year 1865, immediately after the passing of the Act for the building of the New Courts; and the first meeting was on the 5th of July 1865.

3. Has it sat continuously since that time?—It has.

4. I believe it has not as yet made its report?—No; it has had a report in draft for a year or two, and it has waited until the Treasury said that they thought it was convenient to make it. We told the Treasury two years ago that the Commission would be ready with its report whenever it was thought that it would be convenient to the public service that it should be made; but it was supposed that the most convenient time for making the report would be when the Treasury were passing a Bill through Parliament to carry out the final plans which should be resolved upon.

5. Then the length of time which this inquiry has occupied is not due to the Commission?—It has not been at all due to the Commission, who have been very active. It has been owing partly to the difficulty of the subject, and partly to the uncertainty as to the views of the Treasury and of the other persons interested.

6. You examined various witnesses, I suppose, representing the legal profession?—No; we did not examine any witnesses at all; excepting, that in the first instance there was a certificate required to be given by the Commissioners before any proceedings could take place under the Building Act; and upon that occasion witnesses were examined, but only upon that occasion. At the first meeting several witnesses were examined, and evidence was taken of the sufficiency of the Parliamentary site.

7. What was the precise subject referred to the Commission?—The Commission is rather a long one. First of all, the Act for the purchase of the site enacted that no contracts should be entered into for the purchase of any property until a certificate in writing should have been received by the Commissioners of the Treasury, signed by the major part in number of the Courts of Justice Building Act Commissioners, stating that they were satisfied that the lands to be acquired under that Act, of which a plan had been laid before Parliament, were sufficient for all the purposes of the intended New Courts and buildings connected therewith; and that the probable cost would not exceed the amount of the funds provided in the Courts of Justice Building Act. That preliminary certificate was the first subject-matter which came before the Commission. The Commissioners took evidence upon that, and they gave their certificate, which has been laid before Parliament and printed some years ago. Then there were a good many other subjects which were left to them. They were to advise upon the sufficiency of the lands for the New Courts and buildings, and from time to time to report as to other buildings, and the plans and other legal erections and provisions which would be proper to be made concurrently with and in addition

Mr. *E. W. Field.*
5 July 1869.

addition to the courts, which up to that time had been the subject-matter of the Act of Parliament, and of the reference. They were to report as to the future custody of the courts, and as to the formation of some board or bench to take care of them. They were to report upon what consolidation of offices should take place. They were to report as to the many changes in legal practice which would have to be made in the law, in consequence of the concentration of all the courts in one block. They were also to report upon ways and means, and upon fees to be levied upon suitors for the building of the courts. I suppose I need hardly state that the scheme of the two Acts for building the courts was, that the funds should be provided by the suitors, and not out of public funds; and the Commission were to report in what way that could best be done.

8. As I understand it, the question of the concentration of the Courts of Justice was not referred to the Commission, but it was taken for granted?—It was declared by Act of Parliament that that should be carried out.

9. Nor had you to consider the question of a site?—Not at all. The Commission, of which I was a servant, were to consider in what way certain courts should be placed, and the most convenient arrangement, and Parliament, in the passage of the Bill through Parliament, added to it a provision that no court should be built until the plan had been approved by this Commission who were to represent the law and legal wants.

10. Mr. *Chancellor of the Exchequer.*] Of what section are you speaking now?—All the sections of the Acts of Parliament which bear upon the duty of the Commission are very fully recited in the Commission.

11. What is the section according to which nothing was to be done without your approval?—The 4th section of "The Courts of Justice Building Act, 1865." I will take the marginal note first: "Plan of building, and arrangements for care and maintenance of the building." "The plan upon which the said buildings shall be erected, and the necessary arrangements for the proper and convenient accommodation of all the courts and offices to be provided for therein, and for proper accesses thereto" (that was added in Parliament), "shall be determined upon by the Treasury, with the advice and concurrence of such persons as Her Majesty shall think fit to authorise in that behalf; and after the completion of the said buildings Her Majesty may, by Order in Council, from time to time nominate and appoint such persons as she shall think fit, with such powers to superintend and regulate the said buildings, and to provide for the proper care and maintenance thereof, and also (if it shall be found necessary) to vary from time to time the internal arrangements of the said buildings, and the purposes to or for which any part thereof may be used or appropriated, as to Her Majesty shall seem proper and expedient." The Commission were to approve of the plan, and they were to advise Her Majesty what sort of body ought to have the ultimate custody of the building; because it is very obvious that some one would have, from time to time, to remove the judges and officials from one court to another, and there might be a great deal of jealousy in this sort of movement.

12. The words "they were to approve of the plan" are not in the Act, are they?—Yes, the first part of the 4th section says: "The plan upon which the said buildings shall be erected, and the necessary arrangements for the proper and convenient accommodation of all the courts and offices to be provided for therein, and for proper accesses thereto, shall be determined upon by the Treasury, with the advice and concurrence of such persons as Her Majesty shall think fit to authorise in that behalf."

13. The words "approve of the plan" are not in the section, are they?—No; the words are: "which shall be determined upon by the Treasury, with the advice and concurrence." Approving the plan was supposed to be the way in which they were to give advice.

14. The words are not there, are they?—No.

15. *Chairman.*] Was it considered, when the Commission first began to sit, that the Carey-street site had been decided upon?—Yes; the two Acts together provide means for purchasing a particular site defined in particular maps and plans which had been deposited in the usual way for the purchase of lands. The Office of Works had previously deposited their plans and given their usual notices, and that Act was passed. This Act, to which I am now referring, was to enable buildings to be put upon that site.

16. Then you had nothing to do except to consider how to make the best of that site?—And to consider what should go upon it. It was supposed in Parliament (and the Bill was altered in consequence of that supposition) that the scheme which the Government brought before Parliament would have to be enlarged; for instance, there was no provision made in the original scheme for an Appellate Court; it was supposed that it might be very desirable to have some Appellate Court.

17. Do I understand that the exact limits of the site were fixed for you, or had you any discretionary power as to diminishing or increasing the area of the buildings?—We had nothing to do with the site at all, more than to settle what was the best building to put upon it; and if the site were to be altered at all, as the Commission soon found it should be, all they could do was to report to the Government what they thought; and it was for the Government to make any change if they thought fit.

18. Did the Commission, in the course of that inquiry, come to the conclusion that the site already appropriated was not sufficient?—That it was not sufficient for the additional courts and offices, and the future extension of the law to the extent to which the Commission thought that provision ought to be made; and in that view the Treasury concurred.

19. Mr. *Layard.*] I understand that the acreage of the original site was determined by the deposited plans before the question was referred to the Commission; was that so?—Yes.

20. And therefore the Commission only had to deal with a certain site, which was limited by the deposited plans?—Yes; and which was not very convenient in shape.

21. *Chairman.*] Did it afterwards appear to the Commission desirable that provision should be made for a larger amount of buildings than had been contemplated in the original plan?—They thought it was necessary if the New Courts and offices, which they reported it to be proper to make a provision for, were to be included.

22. Do you recollect what was the precise amount of acreage in the original plan?—It is measured on the Ordnance map as seven and a-half

half acres; it has been no part of the business of the Commission to look nicely to acreage; they have been looking at the offices which were to be put thereon, and to the best distribution of those offices. The part marked yellow on the Ordnance map is the exact quantity of land which was included in the Government Bill, and it is all that has been up to the present time purchased by the Government. It will be seen that the land comes rather up to a point on the north-west, and that has been the difficulty which all the architects have found.

23. It is not rectangular?—No, it is very much longer at the top; even the most extended plans which have been before the Commission do not propose, I believe, to use the land quite up to that further north-west corner.

24. Mr. *Layard.*] I understand that besides being limited to an actual area for site, the Commission were limited to a certain amount for the expense of acquiring that site, and for building; was that so?—The Commission had nothing to do with either acquiring the site or the cost of the building; they were only to design a plan, and it was for the Office of Works or for the Government to find out what it would cost.

25. But I understand that the Commission under the Act were to give a certificate that the site was to cost 750,000 *l.*, and that the building was to cost the same?—That was for the objects which were in view by Parliament and the Government at the time the Act was passed, but not for enlarged objects or accesses; the accesses were added afterwards; the certificate does not apply to the accesses.

26. But I want now to limit you to the original step first taken by the Commission; that step consisted, I understand, in giving a certificate that the site would cost 750,000 *l.* and the building 750,000 *l.*?—Exactly.

27. And they were required by the Act to give that certificate, were they not?—They were; the certificate is in the minutes of the Commission.

28. Will you be good enough to produce that certificate?—The original certificate was given to the Treasury, I have only a copy in my minutes; this is a certificate which was given after the evidence (*handing in the same*).

29. May I ask you upon what evidence that certificate was given? — The evidence is not printed in our Commission minutes. The short-hand notes of it were furnished to the Treasury, and, I think recently to the Office of Works, but I have not brought them with me. There were several witnesses examined; there was, I think, Mr. Pennethorne, and, if I remember rightly, Mr. Abraham, who had prepared plans previously by the direction of the Lord Chancellor or the Government, and there was Mr. Waterhouse, who built the courts at Manchester, and I fancy another witness or two; but the exact answer I would give on a future occasion if the Committee wished to have it, when I have had the short-hand notes of the evidence before me; it is now four years ago.

30. I understand that you have been secretary to the Commission from the very first?—Yes, I have; this was the commencement, this was their first Act.

31. And you are perfectly acquainted with all its proceedings?—Yes, but it is four years ago.

32. But surely that first step in giving the certificate was a very important one, was it not?—Yes, certainly.

33. Are you not aware upon whose evidence the Commissioners were led to give that certificate?—I should not like to state positively at four years' interval who the witnesses were.

34. Did not Mr. Abraham make very full and detailed plans?—Yes, he had done so some years previously.

35. So fully, that he made a claim, I think, for no less than 3,135 *l.* for his expenses in preparing those plans? — That I know nothing about. I know that he made the plans, because the Government paid for them, and placed them in the hands of the Commission, and we have them, I think, now. The quantity of accommodation which the Commission considered they were bound to find, and which the land would afford, was determined upon the contents of Mr. Abraham's plans. What may be called the schedule, or index, to Mr. Abraham's plans, gave the quantity of accommodation which the Governmet then considered that they were bound to buy a site for; and upon the Commission being satisfied that there was room for that accommodation upon the site they then gave the certificate, and added to the foot of it a minute, signed by Lord Cranworth, who acted as chairman of the Commission, stating that the certificate they had to give was only to show that the land was sufficient for the scheme as then before Parliament, and not for any accesses or extensions of that plan which might become necessary under the provisions inserted in the Act during its passage through Parliament, which required the Commission to consider, and report, and concur with the Treasury as to putting other legal offices and legal buildings within it, such as the Appellate Courts.

36. But what I wish to know is this: the Act required that a certificate should be given as to building and as to site, and that that certificate should certify that the expenditure upon the site should be limited to 750,000 *l.* and to the same sum upon the building; upon what evidence did the Commission give the certificate, both as regards buildings and the site? — My answer to that is, that I request the Committee to allow me to attend another time, and bring the evidence with me. I would rather not speak upon mere memory at this distance of time. Excepting to make a copy for the Office of Works, I have not looked at it from that time until now. As the Committee will see, there were Lord Cranworth, Mr. Gladstone, Chief Justice Cockburn, Sir William Erle, Vice-Chancellor Kindersley, Vice-Chancellor Stuart, the present Lord Chancellor (then Vice-Chancellor Wood), Baron Martin, Mr. Keane, Mr. Southgate, Mr. Bennett, Mr. Manley Smith, all Masters of the Courts of Common Law, Mr. Rogers, Registrar, Mr. Justice Mellor, Mr. Justice Montague Smith. The Right honourable W. Cowper, Sir Roundell Palmer, Sir R. Phillimore, Mr. John Young, Dr. Bayford, Mr. Rothery, Mr. Williams, Mr. Anderson (of the Treasury), Mr. Hume, the Taxing-master, Mr. Cookson, and Mr. Walton, the Master of the Exchequer. All those gentlemen formed the body who examined witnesses, and who satisfied themselves and gave and signed the certificate.

37. We do not doubt the fact of the certificate having been given, but upon whose estimates was that certificate given; have you reason to believe

Mr. *E. W. Field.* 5 July 1869.

believe that Mr. Abraham was the chief adviser as regards the architectural part? — No, I think not. If you will allow me to bring the minutes they will speak for themselves; you are asking me as to the contents of a writing at four years' memory.

38. Do you also forget who gave the estimate as to the probable cost of the site upon which the certificate was founded?—I am not certain; but unless there is any special reason for pressing my memory, the answer can be accurately given if you will allow me time.

39. Can you tell me where the plans of Mr. Abraham are?—They are either with the Office of Works or at Kensington.

40. Are you aware whether Mr. Pennethorne also prepared a plan?—Yes, he did, certainly.

41. Was that produced before the Commission? — It was produced before them at this meeting.

42. Is that plan with the Commission now?—I think not. I think it never came into the hands of the Commission.

43. Did those plans of Mr. Abraham's and Mr. Pennethorne's show the courts on a level with Carey-street?—I do not recollect. If I remember rightly, Mr. Pennethorne's was all on the level of the ground. I do not think there was any upstairs, but this is a mere vague recollection on my part.

44. Are you aware whether 500 *l.* was paid to each of the architects for their plans?—Do I understand that you mean the plans which were laid before the Commission at the first meeting?

45. I mean the plans upon which the certificate was founded?—The Commission had nothing in the world to do with it, but Mr. Abraham's plans were found valuable, and at the request of the Commission the Treasury paid him something (it might have been 500 *l.*) for them, and they were very useful in preparing the instructions for the architects. In fact, they were extremely valuable plans, as the first starting-point of an idea as to laying out the works.

46. I believe that Mr. Waterhouse was appointed architectural clerk, was he not?—He was early in the time.

47. He afterwards resigned, did he not?—He afterwards resigned on an intimation that if he remained in that position he would not be allowed to compete.

48. Who was next appointed architectural clerk?—Mr. Burnet.

49. Do you know upon what grounds he was appointed?—I made inquiries for a good man, and Mr. Drake or his partner was the principal person who recommended Mr. Burnet to me, and I have been most highly satisfied with him.

50. Is he an architect by profession?—Yes; he is here, I think, and he will tell you what his previous occupations were, but he had been an architectural clerk or assistant in the General Land Drainage Company.

51. How long had the Commission sat when they gave that certificate?—This was the first day's sittings. On the 5th July they met and took evidence. The very first thing they did was to take evidence as to the sufficiency of the site and the probable sufficiency of the funds; a certificate under the 19th section of "The Courts of Justice Concentration Site Act" was agreed to by all the Commissioners present, and signed, and ordered to be transmitted to the Treasury.

52. That, I understand you to say, was drawn up upon the first day of their meeting upon the evidence then submitted to them?—Yes; they took evidence at considerable length; they were an hour or two at work before they gave that certificate. The first question was, whether they were bound to certify that there would be room for all future courts, and for such extensions as might be hereafter found necessary. That seemed to them impossible. All that they considered could be meant was, that they must show that there was enough to carry out the plan which had been before Parliament; and at the foot of the certificate was a memorandum, written to state, that they gave that certificate upon that basis, and upon that construction of the Act.

53. Do I understand you to say that the 750,000 *l.* for the building, and the 750,000 *l.* for the site was not at that time contemplated to include any expenditure for access and for clearing away the surrounding buildings?—No; perhaps I might read the paper which accompanied the certificate, because it is the correct and legitimate answer to the Right honourable Member's question. There were two Acts, one to buy the land, and the other to arrange for the building upon it. Of the Building Act I have read the 4th section. The 19th section of the Site Act says: "No notice shall be given of the intention to take any property under this Act, nor shall any contract be entered into for the purchase of any property until a certificate in writing shall have been received by the Commissioners of Her Majesty's Treasury, signed by the major part in number of the persons appointed by Her Majesty under 'The Courts of Justice Building Act, 1865,' to advise and concur with the Commissioners of Her Majesty's Treasury, with reference to the plan and arrangements of the buildings to be erected upon the lands hereby authorised to be taken, stating that they are satisfied that the lands to be acquired under this Act, of which a plan has been laid before Parliament, are sufficient for all the purposes of the intended New Courts and buildings connected therewith, and that the probable costs of the said lands and buildings will not exceed the amount of the funds provided under 'The Courts of Justice Building Act, 1865,' for those purposes." That certificate was given, and then at the foot of it, the following minute was agreed to, signed by the chairman, and ordered to be entered on the minutes of the Commission, and a copy transmitted to the Treasury, "In dealing with the subject referred to them by the 19th section of 'The Courts of Justice (Site) Act, 1865,' the Commissioners have considered that the buildings coming within the scope of that clause are those of the Superior Courts of Law and Equity, the Probate and Divorce and Admiralty Courts, with their offices, and also the Land Registry Office. They believe that the means provided are sufficient to enable the erection of buildings sufficient for the accommodation of the Bankruptcy Court and any other offices likely to be added; but they have not considered the Act of Parliament requiring them to take this court, or those possible and prospective, but not necessary additions, into account. In estimating the probable cost of the intended new buildings, the character of the materials to be employed, and the amount of architectural decoration, particularly of the exterior, are necessarily of great importance, and according as more or less costly plans may be adopted the expense will of course be greater or less,

less, but any excess of expenditure which might be the result of the deliberate adoption for the sake of architectural effect, of plans or materials unnecessarily costly, is of course incapable of being calculated beforehand; and the Commissioners have thought it most consistent with the nature and objects of the duty now imposed upon them to inquire whether the proposed buildings can be erected with a reasonable regard only to architectural beauty and appearance, as well as internal accommodation and convenience, with the means provided by Parliament, which means they understand to be such part of the total sum of 1,500,000 *l.* as may not be required for the purchase of the site, or for providing proper furniture and accesses, according to the 3rd section of 'The Courts of Justice Building Act, 1865.'"

54. Mr. *Russell Gurney.*] The word "accesses" is there, is it not?—Yes, but they did not certify about accesses; they were not required to do so.

55. I understood that in making the certificate they stated that that was their understanding?—They thought there would be enough, but they have not included it in their certificate; that memorandum was not the certificate; that was signed only by the chairman as explaining the certificate which had been signed by the Chancellor of the Exchequer, among others.

56. Mr. *Goldney.*] I believe that there is a separate clause in the Act with regard to accesses?—Yes, there is.

57. Giving a permissive power and not a compulsory one?—Yes.

58. Mr. *Layard.*] Did the Commission contemplate the possibility of further sums being required for accesses?—Certainly they thought it might be possible; a provisions for tunnels had been inserted as the Bill went through Parliament, if I recollect rightly in the 14th section: "The Commissioners may, for the purpose of improving the approaches, or of providing convenient roads, bridges over, or tunnels under streets, or other modes of access to the proposed Courts of Justice and the offices connected therewith, acquire by purchase or otherwise any lands or interest in lands or easements, and for the purposes of such acquisition the said Lands Clauses Consolidation Act shall be deemed to apply, with the exception of so much thereof as relates to the purchase of lands otherwise than by agreement."

59. Did that include approaches to the site by streets from the north, east, and west?—If the Commissioners thought it essential to the completion of the works.

60. Mr. *Chancellor of the Exchequer.*] Are the Commissioners the Commissioners of Works who are spoken of in that section?—Yes.

61. It is not the Advising Commission?—No.

62. Mr. *Layard.*] Can you state when the Commission considered it necessary to increase the expenditure above 750,000 *l.* for the site?—The first movement for increase came from the Treasury to the Commission. The very first proposal to buy more land than was included in that map (*pointing to a map on the wall*), was a proposal made to the Commission emanating from the Treasury and the Office of Works, and by them sent to the Commission for their views upon the subject.

63. Mr. *Beresford Hope.*] At what date was that?—It is the 8th of December 1865, a letter written by Mr. Childers.

64. Mr. *Layard.*] Is that in the minutes of the Commission?—Yes, at page 37; Mr. Childers was then in office at the Treasury, and, in fact, had more to do with the whole arrangements connected with the land than any person whatever; he acted as deputy-chairman of the Commission afterwards for, I think, a year. The beginning of his communication I think with the Commission was this letter: "I am directed by the Lords Commissioners of her Majesty's Treasury to acquaint you that my Lords have had under consideration a proposal which has been made by the First Commissioner of Works for the purchase of a plot of ground in Carey-street, which is considered necessary to the formation of proper approaches to the New Courts of Justice. The price demanded is 18,600 *l.*, towards which the Incorporated Law Society is willing to give 5,000 *l.*, the Metropolitan Board of Works 5,000 *l.*, and the District Board of Works 1,600 *l.*, leaving 7,000 *l.*, which it is proposed shall be granted from public funds. I am to state that my Lords are disposed to assent to the purchase, but on the condition that the amount required will be considered as a charge on the vote of 700,000 *l.*, taken in the last Session of Parliament for the purchase of the site for the New Courts of Justice; but before coming to a final decision my Lords request that they may be furnished with any observations which the Courts of Justice Commissioners may wish to make on the subject."

65. Can you tell the Committee where that piece of land was?—It is the widening of the further end of Carey-street, towards Chancery-lane.

66. Mr. *Russell Gurney.*] Is it opposite the new bank?—Exactly. I think that probably the lines upon the Ordnance map will show you the point.

67. Mr. *Layard.*] It is the north-east corner, is it not?—It is between the north-east corner of the site and the Rolls.

68. Mr. *Osborne Morgan.*] It is just opposite the Union Bank, is it not?—It is.

69. Mr. *Layard.*] Do you state to the Committee that that was a suggestion coming from the Treasury and from the Commissioner of Works without any previous suggestion on the part of the Commission?—Certainly, entirely so. I do not think that the Commission ever heard of it until that letter came; and the answer of the Commissioners was, that they thought that it was desirable, but that in making the purchase, and in widening Carey-street, "It is desirable that reference should be had to the following subjects: (1.) That the quietness of the Carey-street front of the New Courts should be preserved, as far as it reasonably can, by the regulation of the traffic. (2.) That the intended bridge may be erected over Carey-street, from Lincoln's-inn to the New Courts, and that a subway may be constructed, if necessary, through the said piece of ground, and under Chancery-lane to the Rolls. (3.) That the Commission considers it has not power to take any part in, or to offer any opinion upon the application of the funds voted by Parliament."

70. I understand, then, that this piece of land was merely required in order to improve the access to Chancery-lane?—Yes. "(4). That the purchase money of the piece of ground referred to was not included in the estimate on which the certificate of the Commission of the 5th day of July last was based."

Mr. *E. W. Field.* 5 July 1869.

71. At that time was the Law Institution contemplating a building on that site, or an increase of their building?—I suppose if they gave money for it they must have been contemplating something of the kind, but I had nothing to do with the negotiation. In fact, the Commission had nothing to do with the purchase, as this minute says. The Law Institution at that time owned most of the frontage northwards to the new street, which was widened.

72. Then after this certificate had been granted, and this further expense incurred, I believe instructions were drawn up for those architects who were to compete for plans and elevations?—Yes; that came on in course of time.

73. Who drew up those instructions?—Mr. Burnet's was the hand which ultimately drew them up. The first step towards it is in page 15 of our minutes. I was desired by Sir Roundell Palmer, then Attorney-General, to consider and draw up a memorandum for the consideration of the Commission as to the *modus operandi*, and I say, "It would seem clear that the only way in which the Commission can itself effectually consider, or usefully report and advise (as the Acts of Parliament require), upon the plans and arrangements of the New Courts and offices, and the proper accesses thereto, is by having drawn up, under their instructions, proper floor or block plans and sections of the buildings and arrangements they advise, showing not only the quantity of courts and rooms, and space required, but also their proper collocation in the buildings; plans which would be improvements upon the ground plans produced by Mr. Abraham at the first meeting. They would be, of course, mere floor maps, and would contain no kind of architectural design or elevation." The mode which the Commissioners took preparatory to the preparation of the Book of Instructions to Architects was to examine carefully Mr. Abraham's plans, to begin to make out new lists of all the offices, to examine officers and others, and to satisfy themselves how far the contents of Mr. Abraham's maps were really consonant with what the public interest required, and it ultimately took the shape of a Book of Instructions.

74. Was that done by a committee?—By committees constantly meeting; we had sub-committees constantly meeting.

75. Was it called the Requisition Committee?—The Requisition Committee was a committee to examine the claims of all the different officers of the courts for accommodation; every officer of every court sent in a claim for so much accommodation.

76. I understand that the Requisition Committee sat, and the instructions to the architects were drawn up by Mr. Burnet?—Yes; but by the Commission also; they were engaged on it for a very long time.

77. Will you hand in a copy of those instructions?—Certainly; they have been laid before Parliament and printed. The first proof was issued on the 6th of February 1866, the revise on the 26th February 1866; the second revise on the 12th March 1866, the third revise on the 23rd March 1866; and it was finally settled and signed by the Lord Chancellor, as chairman of the Commission, on the 17th April 1866. During that time all the Commission and almost all the officers of the Commission were engaged in looking it over.

78. Mr. *Goldney.*] In addition to this committee there was a sub-committee of solicitors and a sub-committee of counsel, was there not?—There was; there were a good many committees appointed.

79. Mr. *Layard.*] Did the instructions contemplate a large increase in the amount of accommodation to be given?—A considerable increase; I can produce a table which will show what are the changes which have been made by those instructions, as compared with Mr. Abraham's first plans.

80. What was the date of those instructions?—They were issued to the architects I think on the 17th of April 1866; that was after six weeks' work, and very hard work.

81. Then between the time when they issued the certificate upon which they obtained from Parliament the power to proceed, and the time of issuing those instructions, they found that a very considerable increase was necessary in order to give the necessary accommodation to the courts; was that so?—The increase was not necessary for the courts which were originally comprised in the scheme of the Government, but it was necessary for the accommodation of additional courts, such as the Appellate Courts, for instance. At one of the early meetings of the Commission that matter came forward, and the question was considered, whether there should be any provision made for such a contingency as the possible future fusion or union of our two ultimate Courts of Appeal; and whether, in that case, their sittings would be within this building, and the matter was discussed at considerable length.

82 But how is that consistent with the terms of the Act of Parliament, which expressly limit the whole expenditure to 1,500,000 *l.*?—It limited the expenditure for the scheme then before Parliament to 1,500,000 *l.*, but not for any extension of that scheme which might be found advisable. The Treasury had themselves proposed to buy other land, and had themselves passed an Act to authorise the extension of the scheme by the purchase of that land. There was a subsequent Act passed to make it quite clear that the funds already voted might be applied for the purchase of lands other than those which were within the original schemes laid by the Government before Parliament.

83. Mr. *Russell Gurney.*] It is stated in the preamble of the Act to which you refer, that the Courts of Justice Commissioners have advised the Commissioners of Her Majesty's Treasury, that it is desirable that part of the money should be appropriated to other purposes; have you a copy of any communication which you made to the Treasury containing that advice?—I think it is at page 41: "That the Secretary do further inform the Treasury that the Commission do think it very desirable to purchase the plot of ground on the east end of Carey-street; but that in making such purchase, and in widening Carey-street, it is desirable that reference be had to the following subjects: (1.) That the quietness of the Carey-street front of the New Courts should be preserved as far as it reasonably can by the regulation of the traffic. (2.) That the intended bridge may be erected over Carey-street from Lincoln's Inn to the New Courts, and that a subway may be constructed, if necessary, through the said piece of ground, and under Chancery-lane to the Rolls. (3.) That the Commission considers it has not power to take

any

any part in, or to offer any opinion upon the application of the funds voted by Parliament. (4.) That the purchase-money of the piece of ground referred to was not included in the estimate on which the certificate of the Commission of the 5th day of July last was based."

84. Was that the only communication which you made before the passing of the Act of 1866? —Yes; but after the Act passed, we made another communication. There was no provision made in the Act which the Right honourable Member has before him about the securing of quiet or any control over the traffic. The Commission pointed out this omission to the Treasury; but it was not rectified.

85. I was only asking what were the communications previous to the Act?—I have read one, and I am aware of no other.

86. Mr. *Layard.*] I think that in 1866 it was contemplated by the Commission to purchase an additional site at a cost of 448,000 *l.*?—The Commission had really nothing to do with the cost.

87. Were not plans deposited in 1866 for acquiring additional land?—I think there were; but the Commission had nothing to do with the deposit of the plans.

88. But was not a Bill introduced in the Session of Parliament in 1867, and afterwards withdrawn?—I only know what has taken place between us and the Treasury. I, of course, have known about the Bills, but the Commission was no party to them.

89. Did the Commission in 1866 ask for an increase of land, and upon that demand was not a Bill prepared, and were not plans deposited?—I have no doubt that that was so; but it was done by the Office of Works.

90. But it was done on the recommendation, I presume, of the Commission?—And it was approved by the Treasury. The Treasury took a very active personal part in investigating the matters.

91. Can you produce the recommendation of the Treasury upon which recommendation this Bill was introduced and those plans were deposited?—I see that on the 23rd December 1865, the new purchases which were proposed were discussed with the Treasury in conference with Mr. Childers (Mr. Childers acting for the Treasury), and Sir Roundell Palmer and some other members acting for the Commission.

92. Mr. *Bentinck.*] It would be a few days after Mr. Childers' proposal then, would it not?—"23rd December 1865. Interview of subcommittee (appointed to confer with the Lords of the Treasury), with Hugh C. E. Childers, Esq., M.P., and W. George Anderson, Esq." (who was a member of the Commission, and also an *ex officio* member appointed by the Treasury). "Present: Mr. Justice Montague Smith, the Attorney General, the Sub-committee, the Secretary, the Architectural Clerk. Discussed: The extent of, and mode of, obtaining the concurrence of the Commission and Treasury in the plans and arrangements for the new buildings, as required by the Act. Arranged, that a Treasury minute should be drawn up on these points. Discussed: The question of additional purchases for securing proper accesses and approaches, and rights of light and air, to the new buildings, and the necessity of settling this matter at once, in order to enable the architect to prepare his plans with reference to them."

93. Mr. *Layard.*] Then I understand that this application for additional land was in contemplation before the instructions were given to the architects?—Yes.

94. Then, when the application to Parliament was made, and afterwards withdrawn, in 1866, you had not received the plans of the competing architects?—No, the architect's plans came in in January 1867.

95. Was not the Bill withdrawn, and another Bill prepared for acquiring additional land for site in 1868? — No doubt the Right honourable Member is right; I did not know that I was going to be examined upon the dates when the Office of Works deposited plans, but I can look them out.

96. It turned out that the additional cost estimated in 1866 was not sufficient, and an additional sum was to be asked for in 1869, which amounted to 668,000 *l.*, was that so?—The Commission had nothing to do with the funds.

97. But I presume it was upon the advice of the Commission that the Treasury were prepared to introduce a Bill into Parliament authorising the Commission to acquire additional land?—Certainly, and the Treasury and the First Commissioner of Works looked into the question of funds which was much more their affair than ours.

98. But I presume that the Treasury acted upon advice given by the Commission?—The advice of the Commission was, that if they were to have buildings large enough for all the purposes for which it would be wise for the nation to provide, they must have more land; the advice of the Commission, and most emphatically Mr. Childers' advice, was that a good deal of land should be bought which was not wanted for the purpose of buildings and accesses, but which it was very desirable that the Government should hold as landlord; that comes down to 1868. I have here the draft of a letter in Mr. Childers' handwriting: "In proposing to the Treasury to take powers in the Bill for the above land, it being suggested as an economical arrangement in view of the position of the remaining houses, and the probability that they may be at some future day required, when their value will have become greatly augmented, that power to take them may be included, but without any intention to pull them down until required for public purposes, Government becoming landlord." This is written in 1868.

99. But upon what evidence furnished by the Commission were the Treasury induced to prepare the Bill which it would have been my duty to introduce in Parliament, supposing that I had been authorised to do so?—The question of what additional lands were wanted has been under discussion, as the facts stated show, for some years; but the whole matter was, first of all, discussed previously to the architect's competition being disposed of, and then it was thought better to wait until the final plan was approved. Then there was a re-discussion with the Treasury, and ultimately the Bill for which notices were given by the Office of Works was agreed to by the Treasury. It was over a period of years, but the whole of the communications between the Treasury and the Commission as to the purchase of additional lands are printed, and the only plan is for me to give you a reference to each step from the minutes as it took place.

100. The Treasury were induced to prepare a

Mr. *E. W. Field.* 5 July 1869.

Bill, which was to be introduced in the House, authorising an increased expenditure of 668,000 *l.* upon a site; upon what communication from the Commission was the Treasury induced to authorise the preparation of that Bill?—It was not one act. It was a matter of long deliberation between the Commission and the Treasury, during the time Mr. Childers was in office, Mr. Childers acting on their behalf; and after Mr. Childers went out of office, he was nominated by Mr. Disraeli, a Commissioner, he acted as a sort of medium of communication between the Commission and the Treasury. The question I have been asked requires that a good many facts should be stated, in order that I may answer it correctly and fully.

101. Mr. Childers was a Member of the Commission, was he not?—At last he was; but at first, and up to the time when Lord Derby's Government was formed, he was acting only as representing the Treasury, and as a Member of the Government.

102. Mr. *Osborne Morgan.*] He was vice-chairman, was he not?—He was. After Lord Derby's Government was formed, it was found that he had such knowledge of the subject, and I suppose there was such confidence felt in him, that Mr. Disraeli came to the Commission (as the Chancellor of the Exchequer has power under the Commission to do), and he and the Lord Chancellor for the time being proposed that he should be added to the Commission, and he was so added; and immediately Lord Chelmsford requested him to act as a sort of deputy-chairman, and he took the control and management of the Commission down to the time of the present Government.

103. Mr. *Layard.*] But you did not answer my question; upon what communication from the Commission was the Treasury induced to authorise the preparation of the Bill to which I have referred?—I am trying to explain that; the Treasury was induced to do so, not so much by any one formal communication from the Commission as by perpetual deliberation and on carefully-obtained information as to the grounds on which the proposed addition was to be made. The first formal communication after that interview of which I have read the minutes, seems to have been a minute of the Treasury, drawn up by Mr. Childers, which will be found in page 49, I think, in the minutes of the Commission.

104. Lord *John Manners.*] The interview was on the 23rd December 1865; what was the date of the Treasury minute?—On the same day.

105. To what additional land does that minute refer?—To none at all.

106. What is the purport of the minute of the 23rd of December?—It was as to the mode of preparing and completing the instructions; and as to the mode of having the competition carried on. The instructions, which were approved equally by the Treasury and by the Commission, expressly state that additional purchases will be made. That must not be lost sight of.

107. Mr. *Layard.*] When was the draft report of the Commission prepared?—At page 156 of our minutes, I think, is the first reference to it. The date is the 2nd February 1867. "Read passage in the Royal Commission, commanding the Commissioners to report to Her Majesty as soon and as often as the same could reasonably be, their several proceedings, by virtue of that Her commission, and their opinion touching the premises. Resolved, That a report be prepared of the proceedings of the Commission up to the present time, and that a committee be appointed to settle such report. The following Commissioners were nominated members of this committee: The Right honourable the Lord Chancellor, The Right honourable the Lord Cranworth, The Right honourable the Chancellor of the Exchequer, The Right honourable Lord Justice Sir Hugh M. Cairns, the Right honourable the First Commissioner of Works, the Honourable Mr. Justice Montague Smith, the Attorney General, Sir Roundell Palmer, Knight, M.P., Hugh C. E. Childers, Esq., M.P., W. S. Cookson, Esq." Then the next step about the report is the resolution of the 8th May 1867: "That the draft proposed report which has been prepared be placed in the hands of each Commissioner; but the question, whether or no a Report should be made at present, is to depend on the resolution taken by the Government as to proceeding with the further purchase Bills this Session."

108. I understand, then, that the draft report was prepared after mature deliberation, but that report has not been presented to the Treasury?—No, it has not been presented; copies of the draft have been given to the Treasury, and in fact some of the members of the Treasury, the Chancellor of the Exchequer and others, nominated as members of the Commission, had copies of all those resolutions.

109. In that report are these words to be found at page 8, paragraph 42: "Besides the courts and rooms which, as above mentioned, appeared to us to be necessary by way of addition to those included in the scheme laid before Parliament, it was further contemplated by Parliament (*see* Site Act, section 14, and the Courts of Justice Act, 1866), and it was by us considered quite essential, that additional purchases of land should be made, not for the purpose of extending the site of the new building, but to secure proper accesses and approaches thereto; and further to ensure that the new buildings might be erected without any difficulty arising with reference to the rights of light, air, and other easements of the surrounding property?—That is in the draft.

110. Does the draft report further go on to say: "A sub-committee, of which the Honourable Mr. Justice Montague Smith was chairman, visited the site and examined the whole neighbourhood with great minuteness. The principal part of the surrounding property consists of old dilapidated houses, which cannot stand many years. Most of the buildings are of a small class, chiefly held on separate titles, and occupying very small areas, and are altogether such, that if separately rebuilt on their present sites, they would not subserve the general legal purposes to which the neighbourhood of the metropolitan Courts of Justice would otherwise be naturally devoted"?—Yes.

111. Therefore, when that draft report was drawn up, it was the opinion of the Commission, was it not, that it was absolutely essential, in order to obtain proper light and air, and the necessary accesses and approaches, that additional property should be acquired around the Carey-street site?—Yes; for the extended building which they had contemplated.

112. How does that appear?—They having settled

settled that it was to be a larger scheme, of course more land would be required about it.

113. I presume that no change has taken place in the property surrounding the Carey-street site since that report was drawn up?—No change has taken place in the way of rebuilding. It is just what it was.

114. It still consists of low, mean, dilapidated houses, does it not?—It is just what it was.

115. Are you of opinion that if Mr. Street's reduced plan of the Carey-street site be adopted, no additional land will be required for light, air, and approaches?—I have not myself considered Mr. Street's reduced plan for the Carey-street site in such a way as to be able to speak to that. It has not been before the Commission in any way. I have only looked at the reduced plan, but I can tell the Committee what I think about it if they think proper.

116. Have you produced any plan of a building to be put upon that site?—No; Mr. Street's plan, which was approved by the Commission, appropriates a part of the Bell-yard block to make a footway from Chancery-lane into certain of the courts, and it would have proposed to build up part of it into chambers to be let off, leaving a way to certain of the courts from Chancery-lane from east to west.

117. Putting aside Mr. Street's plan, do you not think that any building placed upon that site sufficiently large to contain the courts and necessary offices, would require to be cleared around it for light, air, and approaches?—If by "the courts," you mean the courts which are in Mr. Street's reduced plans, I do not think it would.

118. Take any number of courts; would or would not any building occupying the present Carey-street site require the clearing away of the houses around, which you describe to be dilapidated and mean houses?—I do not think it would, unless it was for questions of light; unless there was a chance of blinding ancient lights, and getting into difficulties in that way.

119. Supposing the building to be placed upon the blank space, which is the actually cleared space of the Carey-street site (I will not say on Mr. Street's or Mr. Burnet's plan), will you explain to the Committee how you would get at that building, in the first place, from the north?—I believe one of the greatest delusions is the notion about access being wanted by the public in general; I believe it is a most wild idea, and that is my firm conviction.

120. What is the "wild idea"?—That there will be any great amount of access wanted by the public in general.

121. Do you consider it necessary to have approaches to the building?—I do not think more approaches are necessary than exist now. It was even a question whether, if the courts had been put there, it was wise to widen the end of Carey-street.

122. Supposing that a person were coming from the north of London to a building on the Carey-street site, how would he get there?—I come from the north of London every day to Lincoln's-inn-fields; I get down at Holborn, and I put up my horse (I do not like to drive across Holborn), and I go across Lincoln's-inn-fields, and into court at Lincoln's-inn.

123. I am asking about Carey-street, and not about Lincoln's-inn; how would you get from the north to Lincoln's-inn Fields?—It is the same thing; I am aware of no difference.

124. But when you have got to Lincoln's-inn-fields, how can you get to the south of the Carey-street site?—There are several streets; Serle-street, and others; I go every business-day in my life along those streets.

125. But you cannot ride or drive through the Turnstile, can you?—I never want to ride or drive through the Turnstile; nobody drives to the courts.

126. Supposing that a judge were to live in the north of London, how would he get to his court on the Carey-street site?—He would drive just as he now does to Lincoln's-inn-fields, and then down Serle-street. The judges find no difficulty, I believe, at present, in getting down to Lincoln's-inn.

127. Will you be good enough to point out to the Committee by what streets you get to Serle-street in a carriage?—If I came from the north-west, I should come down the west side of Lincoln's-inn-fields.

128. But how would you get to the west side of Lincoln's-inn-fields?—Along Holborn.

129. But how would you get from Holborn to Lincoln's-inn-fields?—Through Queen-street; there is a vast amount of railway van traffic going along there every day through Lincoln's-inn-fields, because of Carey-street having been widened.

130. You go from Holborn to Queen-street—Yes.

131. How do you get from Holborn into Queen-street?—There is Little Queen-street.

132. What is the size of Little Queen-street?—I do not know; it is a small street, and not a good street.

133. Do you consider that there is a proper carriage approach, such as would be required for a building, like the Law Courts, from the north?—I think it would be desirable to have a better access to the north-west side of Lincoln's-inn-fields, but I think that it is a very great mistake to think that there is any amount of carriage access required worth talking of.

134. But is there, or is there not, a proper approach from the north?—I think there is for any carriages which are likely to go.

135. Will you kindly answer the question categorically?—I cannot answer the question without an explanation. If you ask me whether there is balloon access I can answer the question at once; but for all the carriage access that is required, I think the present streets are sufficient.

136. I simply ask you whether from the north there is a sufficient access?—Sufficient for all the purposes of the law now, if the courts were on the Carey-street site. I do not believe that we should find any great difficulty if the courts were there, as the streets are now. I think those streets ought to be improved, and that they would be sure to be improved; but whether they were improved or not, I do not think it is necessary for the due carrying on of the business of the law.

137. At present I believe only the Equity Courts are in Lincoln's-inn, and not the Common Law Courts?—No.

138. Will you explain how a judge would get from the west to Carey-street?—Along Long-acre, but I very constantly go through the Duke-street archway (which I admit is very inconvenient and very bad) into Lincoln's-inn-fields.

139. Then he would have to go through very small,

Mr. *E. W. Field.*

5 July 1869.

small, bad streets, would he not, until he got into Lincoln's-inn-fields?—Yes.

140. From the eastward, how would he get to the Carey-street site?—Along Holborn: he would turn down Chancery-lane and round this new opening which the Office of Works have made.

141. What sort of street is Chancery-lane?—It carries the railway van traffic up it.

142. Is it not generally blocked by the present traffic?—I would not say that; but whether it is or not, it does not stop our work for the law. I have tried to make out how many of the cabs now going to Lincoln's-inn are going to the courts, and I find that their number is very small indeed, as those that come are almost all going to the offices and chambers of solicitors and counsel.

143. It is to the Common Law Courts that the general public, witnesses, and jurors chiefly go, is it not?—Yes.

144. They do not go so much to the Equity Courts, do they?—They would not go so much to the Equity Courts, for curiosity, as to the Common Law Courts, but there are many more parties to a suit in equity, than to an action at Common Law.

145. Are jurors or witnesses required in the Equity Courts?—There are a few witnesses, but the witnesses almost always come to the solicitor's office, and go with him to the court.

146. You stated, did you not, that on the north, east and west, the approaches are by no means such as they should be?—They would not stop the carrying on of the law as it is now, and if the courts were now on the Carey-street site, we should get on very well.

147. Is the Strand at its narrowest part, where the courts are to be erected?—It is inconvenient now; the number of cabs which we want for legal purposes is very considerable now, because, the courts being at Westminster, we are obliged to take cabs down the Strand to Westminster, but if the courts were concentrated on the Carey-street site, you would do away with a great deal of that requirement of cab traffic.

148. But I thought that you stated that the requirements of the law were so very small?—Just as we have been obliged to come here to-day, with papers and maps in one or two cabs, the solicitor and his clients are now obliged to take two or three cabs to get to Westminster for the law district, but if this Committee had happened to have been sitting in Carey-street, we should not have wanted those cabs.

149. Do you mean to say that the present block in the Strand is occasioned by cabs employed by lawyers?—To a certain extent doubtless that is the case. No doubt any of the leaders of the bar (such as Sir Roundell Palmer, for instance) are a great deal up and down between Lincoln's-inn and Westminster in cabs, and everyone who has much to do with Parliament is a great deal up and down between Lincoln's-inn-fields and the Houses of Parliament; and so far as regards people who come from the Temple to the Courts of Law at Westminster, I have no doubt there are a great number of cabs used; indeed, I know it of my own knowledge; my own clerks and numbers of people go up and down the Strand in cabs constantly.

150. But a great many Parliamentary agents and lawyers and others occupy the south and west parts of London, do they not?—Yes; and they come straight to the Parliamentary district, and have nothing to do with Lincoln's-inn-fields at all.

151. But if all the courts were concentrated in Carey-street, they would all go there, would they not?—No, not the Parliamentary agents; they have nothing to do with Lincoln's-inn-fields.

152. But might they not require to go to the courts?—But that is a very rare occurrence.

153. Have you examined the site commonly called the Howard-street site, on the Thames Embankment?—I have looked at it, and I have seen the maps.

154. Have you considered the approaches to the Howard-street site?—I think that if many cabs had to go there, as far as I understand it, it would be a very inconvenient site.

155. It appears by what you have just stated that you think the convenient approach for the Carey-street site is the Strand; in the case of the Howard-street site, you would have the Strand as the northern approach, would you not?—But I must beg leave to say that you are speaking of access for persons who do not want access. Access is wanted for the lawyers, who are almost the only people who go to the courts; and I cannot help thinking, when you talk about Howard-street, of that access which alone is worth considering. You are using the word "access" in one meaning, and I am using it in another. I am speaking of the access required by people who have legal business to transact at the courts, and you are speaking of an access, which I say is so entirely non-existent that it is quite a delusion to call it by the name of "access." That is my firm conviction.

156. Then, in your view, it is not desirable that the public, as distinct from the lawyers, should come to the Courts?—I think that very few of them do come, and that a great many of those who do come would be better away. We found, with reference to ventilation, that one of the greatest difficulties was the dirty people who sat in the courts all day. If you go to Guildhall, the usher there will show you men who are cracking nuts there all day long, every day of the year, when the courts are sitting, and they are a great nuisance. The old witnesses on this subject as long ago as 1841, in the early Committees of this House upon the subject, told your then Committe that the public need not to be taken into account, that it is quite a mistake to think of the outside public in the selection of a site.

157. Mr. *Tite.*] A plan has been proposed, and is referred to in a Report which I hold in my hand, dated the 21st of June, by Mr. Burnet, in which the diminished space, as shown in the reduced plan, is 475 feet from north to south, and 520 feet in the other direction, which is equal practically to 27,544 yards, and that plan is placed upon the Carey-street site; is that diminution of space obtained by abandoning any portion of the space of the larger plan, or is it obtained by compressing anything in the original requirements which you gave to the architect?—By the abandonment of several courts and by compression also.

158. What was the plan?—If you do not object, I should prefer your asking Mr. Burnet that question, as it was not done under my directions.

159. Does Mr. Burnet know what was originally demanded?

demanded?—He knows quite as well as anyone can know. The wish of the Commission was to know how far the fewer courts and offices which were included in the Howard-street plan could be placed on the Carey-street site without abandoning the quadrilateral system of distribution of offices and courts which had been approved by the Commissioners, and which, even to this day, Mr. Street considers the best. As I understand, that was the object. They wished to ascertain how far, if the internal areas were diminished, and Carey-street was not made so wide, and if in other respects the distances occupied by Mr. Street's approved plans were reduced, you could, without departing from that quadrilateral arrangement which the Commission had thought the most convenient, and which all the officers and people connected with the law had thought most convenient (and which Mr. Street was understood still to think was most convenient), get the accommodation which you wanted on the Carey-street plan, and the plan was made by Mr. Burnet.

160. But you omitted something?—Yes; in the first place, courts were taken off because they have been taken off in the Howard-street plan (*producing the plan and describing the same*). Then it was as difficult to get the judges' corridor running round, as is mentioned in that paper issued this morning; there was another mode suggested of treating Mr. Street's plan, whereby the same set of courts and offices were still put upon the site, and the same quadrilateral arrangement was still adopted. It would seem to our uninitiated non-architectural minds that there would be no difficulty in adopting Mr. Street's admirable arrangement (which I believe is perfect) and applying it to the site.

161. Do you leave out the Registrars?—No.

162. Do you leave out the wills?—Yes, in all the plans that you are comparing the wills were left out.

163. From the moment the large scheme was stopped?—From the moment the large scheme was stopped; every single office is here that is in the Howard-street plan, so far as I know.

164. But my object is to compare what you would have upon this diminished site with what was originally asked of the architects when they competed?—The probate department, that is to say, the wills, and the search place, and the bankruptcy. The appellate and bankruptcy courts are omitted.

165. Nothing else?—Nothing else at all; there are some of the rooms upon this plan which are reduced in size (*further describing the same*). I believe there has been another plan sketched out in which Carey-street is left of the same width as it is opposite the Union Bank all the way through, which plan would leave all the internal areas unaffected; but the Commission wanted to know how far without throwing away all their labours about the quadilateral arrangements Mr. Street's scheme could be made to stand upon that site, leaving the outer blocks of offices and the inner blocks of courts; and I understood him to admit that that quadrilateral system was the most convenient method.

166. How came Mr. Burnet to be employed to modify a plan of Mr. Street's?—He is our architectural clerk, and it was not done by him as an architect, but only as it were to see how far the Chinese puzzle could be put into the box.

167. Mr. *Gregory.*] Are you aware that Mr. Street quite disapproves of this alteration, and that he says it has marred his plan both as to architecture and as to arrangements, and has made it a complete failure?—I cannot say I think that is so.

Mr. *E. W. Field.* 5 July 1869.

168. You gave Mr. Street credit for great ability a short time ago, did you not?—I gave him the fullest credit for the admirable way in which really all the conveniences and necessities of the law are met in that quadrilateral arrangement.

169. Do you now put your architectural opinion in competition with Mr. Street's?—It is not an architectural opinion, it is simply a matter of convenience.

170. Mr. *Tite.*] This plan which I hold in my hand is the plan accepted on the Carey-street site of what might be carried out on the Thames Embankment site, is it not?—Yes, it contains all that the Thames Embankment site contains, but it is suggested for putting that on to the Carey-street site without departing from the quadrilateral arrangement, which has been approved by the Commission, and in outline so far approved by the Treasury of last year as to lead them to direct the further plans to be drawn up upon it.

171. Are you aware that one of the objections pointed out was that the judges will have to go upstairs to their retiring-rooms?—It is to go to their courts; I consider it of the essence of the thing that a court should be upstairs; I do not believe that you will ever have good courts if you do not put them upstairs.

172. Mr. *Layard.*] Are you aware whether a sub-committee, appointed by the Commission, has reported that a plan, previously prepared I believe by Mr. Burnet, is so inaccurate that it ought not to be quoted in evidence?—I was not aware of such a report; if you are speaking of the black spotted plan; I have begged to have, and the Commission have confirmed me in having, a plan perpared which will show with absolute accuracy where all the profession of the law is situated, and which will show the inaccuracy of the black plan so far as it is inaccurate.

173. Mr. *Tite.*] In the reduced plan the judges will have to ascend staircases to their rooms, will they not?—I must beg for an explanation before I answer the honourable Member's question: if it means that there will be stairs between their courts and their rooms, it is not correct; if it means that their courts and rooms will be upstairs, it is correct; on that plan the judges will all go upstairs. The scheme of Mr. Street (and I am satisfied from all I have seen that it is the only scheme that ever should be adopted) places the Courts of Justice on the first floor, and the judges' rooms and their retiring-rooms on the level of the bench.

174. In the altered scheme of Mr. Burnet, is that changed?—Not in the slightest degree in any respect; I think I might put in the map, preparing under my direction, showing the position of the whole of the legal profession in London. It is a most important map, and if I am to give any useful information to the Committee, I ought to have that map in my hand. This map (*producing a map*) truly and absolutely represents the position of the whole of the legal profession (*describing the same*). In these marks there is one stroke for every attorney or barrister, taken from the Law List with the greatest care. It is being extended over the whole of London,

Mr. *E. W. Field.*
5 July 1869.

and that map is as accurate, I believe, as a map can be. The density of colour shows pretty well what is the density of legal population.

175. Mr. *Gregory.*] Does that include the City, or the West-end?—No; we have the same thing done for the whole of London, but there are other sheets at present detached, of which this is a part. In the Index map we are going by tints exactly to show the result of it; but this will show you, without cavil or question, every single man.

176. Who drew up this map?—Mr. Burnet.

177. Was there not a previous map drawn up by Mr. Burnet?—Yes.

178. Was not that map entirely incorrect?—I am going to show you.

179. But will you be good enough to answer my question; was not that map entirely incorrect?—I cannot say that it was entirely incorrect.

180. Was not Mr. Burnet's plan pronounced by the sub-commission to be incorrect?—If you will allow me, I will read what the sub-committee said, and that will be the best answer I can give to the question: That it was incorrect, I can tell you, because now having the absolutely true map, by those red marks I am able to show what was incorrect in it.

181. If you will allow me, I will read you a passage from the report of the sub-commission, and then I will ask you whether that map is, or is not, correct. "That original map (1845) did not, of course, represent the boundaries of the now purchased site in Carey-street, or of the proposed site in Howard-street; and such sites appear to have been inaccurately delineated on the new or reproduced map; for instance, although everyone agrees, and it is so stated on the map itself, that the purchased site in Carey-street contains seven and a half acres, the dimensions of the site, as delineated on the map when measured by the scale upon it, do not produce that result. That map, therefore, cannot be relied upon as an accurate representation of the shape and dimensions of the proposed sites." Is that correct or not?—Quite correct.

182. Have you been instrumental in any way in circulating these inaccurate maps, or is it without your sanction that they have been circulated for the benefit of members of this House?—Certainly not; I have had nothing to do with the circulation of the maps.

183. Then who circulated those maps?—No doubt the Incorporated Law Society; I was out of town at the time.

184. Did they employ Mr. Burnet to draw up this map?—Mr. Burnet gave what help he could.

185. Then who asked Mr. Burnet to do it?——Some of them; I have always told Mr. Burnet from the beginning, and you will see in almost the beginning of the Commission that the orders given to me by Lord Cranworth, who was then acting as Chairman, were: "Nothing that you do is to be secret, you are to invite all the assistance, and give every help you can to everybody." That has been the arrangement we had with Mr. Burnet, and he, having this map, no doubt would give every help he could do to them. Now, I am able to tell you exactly what is wrong in this map. Whether Mr. Burnet made a mistake or not can be of no great moment, but what is true, or what is false, is of the very greatest moment. The Law Institution came to me and said, "Is there any map which shows where the law quarter is?" I said, "Yes. The House of Commons have such a map prepared by Sir Charles Barry, about 1842 or 1843." They asked where they could get it, and I said (you will find it in the Report): "Mind, you will find that a great many of the offices have been moved in the last 20 years, and the map is therefore very inaccurate." The inaccuracies of the original map have been revised to a considerable extent by the reproduction, so far as it is a reproduction. The red marks on this plan (*producing a plan*) are law offices, which ought to have been black, and the blue marks show which of the old black marks are not now law offices. The amount of inaccuracy is best given you in figures. The quantity of places that ought to be marked black, as compared with the quantity improperly marked black, is in the proportion of 99 to 73, and therefore (though I am in no way answerable for that map) no false impression upon the minds of people who looked at it has been produced, and this new map, before the Committee next meet, shall be so dealt with that it shall show you upon the index of it over all London where all the lawyers are. It is that, applied to what I said about the access, that makes me feel that it is all a delusion to think you are to look for access for the general public. It is the people whose offices are marked black,—the law people, who go to the courts, and, so to say, nobody else.

186. But by whose authority was the incorrect map circulated?—The Law Institution circulated it, without a doubt. I was out of town myself. They took the responsibility of it.

187. Lord *John Manners.*] The Royal Commission gave their certificate, as you have told us, and at the time the certificate was given, the ground was sufficient for the courts and offices which it was then proposed to place upon it, was it not?—Quite so.

188. Can you state how many courts and offices have been proposed to be added since the certificate has been given?—It will appear pretty well summarized in the draft report (which has never been issued), to which the First Commissioner of Works alluded. There is a good deal of it altogether, and the question cannot be answered in a word. In the appendix to the part of the draft report, to which the First Commissioner of Works referred just now, which has never been signed, but which I have no doubt is nearly accurate, will be found, in parallel columns, a summary of all the courts, offices, and accommodation, proposed by us to be provided, and the number and area of the rooms contained in the scheme before Parliament; and then it goes on to state at considerable length the general additions and changes from the original scheme that they have proposed.

189. The additions are very considerable, are they not?—They are very considerable. There are a great many improvements in the courts and departments. There are such things as waiting rooms for women, for instance. Our Courts are scandalously deficient in any provision for female witnesses. That is only one instance, and there are a great many other things of that kind. When it was looked over, the Commission felt that it was not decent. One of the judges, I remember, stated some very distressing case of the death of a witness at the Old Bailey, I believe, arising from want of convenience of that kind.

190. Was it in consequence of those additions

that it appeared to the Commission and to the Government, that additional land ought to be bought?—It so appeared to the then Government, and to the present Commission.

191. You have stated that Mr. Childers was made a member of the Commission on the accession of Lord Derby to office; did he continue to act as a Commissioner up to the termination of Mr. Disraeli's Government?—He did: indeed he has not ceased to act now, although he has not attended the Commission since he was appointed a member of the present Government. But I am bound to tell the Committee that there is no other knowledge of the subject, that I am aware of, that is to be put in comparison with Mr. Childers's knowledge; certainly not my own; upon this particular part of the subject.

192. Can you inform the Committee whether, in addition to his services as a Member of the Commission, Mr. Childers acted as a Member of sub-committees from time to time?—He was put on every sub-committee, and attended most of them; in fact, he gave me my orders. During the time that he was acting my work was quite light, for he did my work almost as much as his own; he gave directions about it all.

193. Previously to his being appointed a Member of the Commission, I think you have said that he acted on behalf of the Treasury?—I did; he was the one officer of the Treasury who had the control and management of the affair from the beginning, practically.

194. Therefore, from 1865 up to the present time, in fact, you would say that Mr. Childers is thoroughly conversant with all the proceedings?—Certainly.

195. You have been asked how people would get from the north to the Carey-street site; may I ask you how, in your opinion, they would get from the north to the Howard-street site?—I suppose they would come the same way as they do now to Carey-street, first they cross Holborn and then they cross the Strand and run another risk of being run over. We lost one of the principal officers of the Court of Chancery a short time ago by similar means, in Chancery-lane, from his being run over.

196. The Howard-street site is nearly opposite the Carey-street site, is it not?—Yes.

197. Would it not, therefore, appear that whatever difficulty there may be in arriving at the Carey-street site from the north, must be equally felt with respect to the Howard-street site, with the addition of the crossing of the Strand?—Certainly, with this very great addition, that the access to the courts beyond all possible question is as 90 to 10 from the offices and chambers of the law, and a good half of all this 90 lies north of the Carey-street site; and then when you come to calculate the area of access by the people who want that access, you will find that by going across the Strand to Howard-street, you have marvellously increased the difficulty. It is not a question, I submit, of how one single person, be he a suitor or be he a man who goes from curiosity, gets from, say Euston-square, to either of those two sites, but of how the great bulk and run of people who are always going to and from the courts get there and back. If this Committee would be so good as to refer to all the evidence which was given before Committees of the House of Commons in 1841 and 1842 from some very great and wholly unbiassed people at that day, they will find that the whole view of all the witnesses, I may say without exception, was that the true access to be cared for was the access of the servants of the suitors, *i.e.* of the profession, and that there was no other access worth discussing. I am perfectly certain that it is a great delusion which people have now got in their heads that there are a host of cabs and carriages and such things coming from all parts. It is no such thing. It will be found that for all purposes of public utility, the people who want to get to the Law Courts are professional people; and so said the witnesses in 1841 and 1842.

Mr. *E. W. Field.* 5 July 1869.

198. You have stated that in the reduced plans accommodation for the wills, for an Appellate Court, and for Bankruptcy was struck off; will you tell the Committee how the Royal Commission arrived at the decision to omit those courts?—They have not arrived at any decision to omit those courts. If the Treasury say that they will have them omitted, the Commission cannot help omitting them. They would concur in building the courts which were within the original scheme, because that embraces the infinitely more important part of the concentration; but they have not arrived at any decision that it is wise to omit those courts; and, of course, it is not for me to know what they would say, but I do not think they would say it was wise.

199. Has any communication been made to the Commission from the Treasury that those offices and courts shall be omitted?—I cannot say that there has. The Chancellor of the Exchequer attended the Commission and made an oral statement to them, to the effect that they had indulged in such extravagant ideas that they must stop, or something to that effect. The Chancellor of the Exchequer will say if I am misrepresenting his views. But there has been no official intimation received from the Treasury that they have changed their minds about their old assents and conclusions, and that they will no longer concur in those things, but that they would concur in certain other things. Therefore the Commission have not done anything more than to hold one meeting, as to which it was a question whether it was regular or not; but it was held, as was understood, with the sanction of the Chancellor of the Exchequer, to see what alternative or reduced plans could be suggested for the Carey-street site; and at that meeting that plan which has been before the Committee was produced.

200. Then so far as the Royal Commission know, the materials are not now in existence which will guide this Committee as to the courts which are or are not to be concentrated?—The Royal Commission, I think, at their last meeting, held on the 23rd of June, passed a resolution in which they say that they are willing to concur in the reduced plans for the Carey-street site. This is the resolution: "Change of site and plans.—Referred to former proceedings of Commission on this subject, Min. pp. 276 to 284. Considered Report of Committee appointed to ascertain measurements and dimensions, pp. 277 to 283. Referred to Mr. Street's Report of the 24th May 1869, to the First Commissioner of Works. Inspected Ordnance map of the Parliamentary site, and neighbourhood, on which the architectural clerk had shown, by means of lines and colours, the offices of the law, the chambers of the legal profession, and places of business connected with the law, now existing in a portion

Mr. *E. W. Field.*

5 *July* 1869.

a portion of that neighbourhood. Moved by Sir Roundell Palmer, and seconded by Vice-Chancellor Sir Richard Malins, '1. That in the judgment of this Commission, the substitution of the proposed Howard-street site for the Parliamentary Carey-street site would be an obstacle to the attainment of the advantages contemplated as likely to arise from the concentration of the courts and offices mentioned in the Act of 1865; and, in particular, that great loss of time and inconvenience would arise to the barristers and others practising in the Courts of Equity by the removal of the courts in which they practise to so great a distance as that proposed on the Howard-street site, without any corresponding gain or convenience to any other class of the members of the profession.' To which it was moved as an amendment, by Mr. Greenwood, 'That the resolution proposed by Sir Roundell Palmer raises a question which is not properly before the Commission, whose functions are to advise and concur with the Treasury upon the erection of Courts of Law upon a defined site, and not to advise upon the eligibility of one site rather than another.' The amendment having been put, was lost by nine noes to three ayes. The original motion was then put and carried by nine ayes to two noes."

201. Mr. *Layard.*] Who were present when that suggestion was made?—Sir John Stuart, Sir Richard Malins, Sir Roundell Palmer, the President of the Law Society, Mr. Rogers, the Registrar, Mr. Benett, Dr. Bayford, Mr. Bliss, Mr. Hume (the Chancery Taxing Master), Mr. Cadogan Rothery, Mr. Greenwood, Mr. Amphlett, and Mr. John Young.

202. Mr. *Chancellor of the Exchequer.*] Who were the minority?—The minority of two were Mr. Rothery and Mr. Bliss. Mr. Bliss is the representative of the Temple, and the Temple Bench, certainly is rather pleased with this Howard-street scheme.

203. Then who were the minority?—The minority of three were Mr. Greenwood, Mr. Bliss, and Mr. Rothery, but Mr. Greenwood would not vote at all on the second division. Mr. Greenwood has a very great knowledge of the subject, and as he is no longer practising in the profession, and is a bencher of the Middle Temple, I cannot help thinking that he would give very valuable evidence upon the subject to this Committee. The other resolution is this: "That it is, in the opinion of this Commission, practicable and expedient to erect upon the Carey-street site already acquired all the courts and offices contemplated by the Act of 1865; and that this Commission are prepared to assent to a plan limited to that object, understanding as they do, that the Lords Commissioners of her Majesty's Treasury do not agree to the extension of that site by the acquisition of any further land."

204. Lord *John Manners.*] That resolution refers to the original plan of concentration, does it not?—They are prepared to assent to the plan limited to the object of the original plan, which was brought in when Mr. Cowper was First Commissioner. No doubt that contains the most practical and important offices and courts.

205. You have had now considerable experience in these matters, will you tell the Committee whether in your opinion it is feasible to erect all the courts and offices contemplated in the original plan upon the existing Carey-street site?—I should have thought that it was decidedly so, but I am reminded (what I do not wish to forget) that I am not an architect; however, my own opinion is that it might be done, and with land to spare, if there was any use in having land to spare.

206. Mr. *W. Cowper.*] You stated that the first occasion upon which the Commission had to consider the amount of accommodation required in the building to be erected, was at their first meeting, when they had to give a certificate, and that then two plans were put before them; one by Mr. Abraham, and the other by Mr. Pennethorne; are you aware whether Mr. Abraham's plan had been prepared previously to the passing of the Bill, and had been generally seen by persons interested in the subject?—Certainly it had; they had been some years about the plans which were brought before the Commission.

207. Do you consider that the amount of concentration which was proposed by Mr. Abraham represented that which at that time was generally considered to be necessary for the purposes of the Bill?—I think it did; it had been prepared after very long consultation with the officers of the courts, and with everybody who was likely to be able to help them; but it had no such things as retiring-rooms for women, and for a great many objects of that kind which are enumerated in the draft report of the Commission, and which, undoubtedly, when one comes to think it over, it was very wrong not to provide.

208. Will you explain to the Committee the steps by which other views were entertained by the Commission; was it not the fact that sub-committees were appointed to go very minutely and carefully into the question of what number of courts, departments, and rooms should be placed in the new building?—Yes, that was so; it is very much to be regretted that the Commission have not made their Report, because they have summarised what they did, the sub-committees into which they divided themselves, and the steps they took. They sent all over Europe, and we obtained from every country the best information which could be got through the Foreign Office, as to the arrangements abroad, and in every direction we inquired what existed, with a view of finding out what ought to be provided. We found, with reference to the courts abroad, I believe, without one single exception, that in every court on the Continent, or, at any rate, every court to which we were referred, as being at all convenient, the judges were all upstairs, the height above the street being about the same as that of the House of Commons from Westminster Hall. I am not aware that there was a single one out of all of the courts, which were called good by the Ministers of Justice of the different countries, where the judge was not placed upstairs, the rooms under him being utilised for waiting-rooms, and such purposes. We got either maps or details of all the best courts in this country, and the judges at two assizes made very particular inquiries at all the assize courts as they went round their circuits, and their clerks and officers, and associates also did the same, in order to find out any convenience, or anything which it seemed desirable to avoid. We obtained, in fact, all the experience which they could get, and over about a twelvemonth we were working very hard in all directions to find out what could be done in the way of a better system than had been heretofore in use; and I have no doubt that those quadrilateral

plans

plans are as perfect as they could be made on the site. I am quite sure that we really knew nothing about it before we collected all this information.

209. Did the Committee take about 12 months for the consideration of this subject?—They took more than 12 months in considering it; because we were considering it during the time that the architects were drawing their plans.

210. Did the Commission, as a whole, approve of the various reports of those committees?—I think they were unanimously approved, as far as I can recollect. There were always very large meetings, as the Minutes of the Commission will show.

211. Were those committees composed of members of the legal profession, or were there other persons upon them not belonging to that profession?—There were a few who did not belong to the legal profession, but not many; the First Commissioner of Works was upon them, and some members were nominated by him; the Chancellor of the Exchequer was upon the Commission, and a member nominated by him, and the present Lord Mayor was upon it. It was thought desirable that there should be some one member of the Corporation, and he was selected as being himself largely engaged in building, and he attended pretty frequently, so far as I remember, and in some of the sub-committees. But every branch of the law was represented: there were three common law puisne judges, the three chiefs, three officers of the common law courts, selected by the three chiefs, there were all the judges of the Courts of Chancery, except the Master of the Rolls, who declined to serve, and I think all the Lords Justices, and a number of the officers of the Chancery Courts, and three solicitors.

212. While those Committees to which you have alluded were considering what would be desirable for the convenience of those who were administering the law, did they also turn their attention to the question of finance or of the area of the sites?—They turned their attention to the question of finance; they were required by the Commission to report in what way the suitors should be taxed to provide the fund.

213. But did they consider what would be the cost of the buildings which they were recommending to be adopted, or did they consider that to be beyond their province?—They considered that beyond their province, and they always requested that the Government would take upon themselves the responsibility of that. They considered it quite within their province to determine in what way the suitors should be taxed in order to provide the money; and they also anxiously considered whether the taxation upon the suitors would be onerous as the purchase money to be paid for the convenience which the suitors would get by having better courts. To that part of the story they paid great attention; and in fact, an Act of Parliament was passed through Mr. Childers, only I think, last Session, which was the result of two or three years' discussion between the Commission and the Treasury, as to the mode of taxing the suitors, and as to the way in which to relieve the suitors, as far as possible, from the burden of having to make this building. That Act was Mr. Childers's Act in fact, and he drew it.

214. Was it the view of the Commission that if their proposals led to an expense much greater than was contemplated when the two Acts were passed, that additional increase of expense would be provided for by taxing the suitors and not out of any public funds?—Yes; they were quite satisfied about it; and they were also satisfied that the arrangement, considered as a buying by the suitors of extra convenience, would be an advantageous one to the suitors. They were satisfied that the suitors would gain by having this taxation put upon them, in having more convenient machinery and in getting the work much more quickly and better done.

215. Did they consider that the future suitors would gain pecuniarily by the concentration of the Courts as much or more than they could lose by the payment of fees?—Certainly, a great deal more. That has been the leading thought all through. They have considered that a very slight acceleration of the business would much more than repay the suitor for the cost which he would be put to in additional fees. That was more considered by the Commission of 1860, when I myself went into a great deal of inquiry, with a view of ascertaining what would be likely to be the additional taxation of suitors, and what per-centage it would be on the cost which he now incurs in the carrying on of his business. I have not the slightest doubt in the world, that if you only give the most convenient building in the most convenient place (and this surely is the dominant idea, what is that which is most for the convenience of the suitors?) nothing can be done but what will be advantageous to the suitors. Speaking as the representative of a good many men who employ me, I am quite sure I should be making a very good bargain in submitting to that tax, if the whole attention was turned to this one dominant thought, the convenience of the suitors, and not to any mistaken ideas as to the decoration of London.

216. So that the Commission were not considering merely the convenience of the legal profession, but the convenience of suitors through the instrumentality of the legal profession?—Certainly; they looked upon the legal profession merely as the workmen of the suitors.

217. You were asked just now about accesses from the north; will you inform the Committee whether it has not been long pressed upon public attention that it would be desirable to open an access to Lincoln's-inn-fields from the north, either by the removal of the houses in Great Turnstile or by Gate-street?—Certainly; that has been talked of. My idea is with Mr. Street as to what is wanted as to access; his views are quite right, I think, as to what is required for the convenience of the neighbourhood; that though it would be very desirable to have a way through Great Turnstile, a road that would come out more by Corbyn's, which would just run on the north of Lincoln's-inn Hall and Gardens, would be more convenient; but, however, that is more for the general traffic, and it would not make much difference to the work of the law.

218. Has not the feeling of the residents in Lincoln's-inn-fields, and persons living in Lincoln's-inn, been rather against the opening of the Turnstile, for fear of bringing an amount of traffic which would produce noise and inconvenience?—I am one of the trustees of Lincoln's-inn-fields, and we claim, under the old Act of Parliament, a right (until it is taken away from us) to stop new streets being made into the Fields; there was a meeting of the trustees, and they

Mr. *E. W. Field.*

5 July 1869.

they decided that they would be quite willing to have an opening made at Great Turnstile if it was in any way guarded; but they are frightened by this great railway traffic that has come in upon them from the widening of Carey-street, and they would not like to encourage any general traffic.

219. Supposing that the Courts of Justice were built either on the Carey-street site or on the Howard-street site, and that it was found that there was not sufficient access for the want of the public on the north, would there not be a pressure upon those who have the charge of metropolitan improvements to open either Gate-street or the Turnstile for the public communications of the metropolis?—That was the view of the Commission; and they have always reported that a number of things might be very desirable, but that they thought they were metropolitan improvements, and not such conveniences as were so important to the suitors that they ought to be asked to pay for them. They rather doubted whether it might not be advisable to propose to throw upon the suitors the cost of opening Great Turnstile; but after great consideration they thought it was scarcely worth while doing it.

220. You have stated that the communications from the north are nearly identical for both sites, Carey-street and Howard-street; are not the accesses from the south nearly identical in both cases?—I should think they were, because I do not look upon the Thames Embankment as being an important access for anybody, except they come from the railway, when it is finished, and that I should think a very doubtful thing indeed in the present state of the Railway's affairs, unless the Government is kind enough to make it for them; but except so far as they must come by railway, they must come over Waterloo-bridge, as a great number of people do now, and then they would have to come up the Strand.

221. Supposing that a person came by railway to the new underground station at the bottom of Norfolk-street, or by steamer to a pier near it, would his access to the Carey-street site be up Norfolk-street?—To the Carey-street site it would probably be up Essex-street, I should think. If the Embankment were made with no buildings upon it Norfolk-street would be used, but I should be sorry, indeed, if that happened. Then I suppose they would come up Norfolk-street, because I understand that by the Embankment Act there is to be an inclined plane, leading to Norfolk-street; but even that street slopes a little too much to the west.

222. But is not the Metropolitan station to be placed very near the bottom of Norfolk-street? That was so by the Acts for the construction of the railway; but I understand from Mr. Street's map, and from general report, that there is some arrangement in contemplation for bringing it nearer to the Temple.

223. Then would the difference between the two sites, as regards the Underground Railway and the steam packets, be just the length of either Essex-street or Norfolk-street, and the crossing of the Strand?—Yes, I suppose it would be; but I should be very sorry to give any of these answers without always qualifying them by saying that I believe very few people will come direct to the courts that way; they will nearly all come from the chambers of the law. We have hunted and hunted and counted in every direction, and we can find very few persons coming from any direction except those who do come from the chambers of the law, and we believe you are providing access for people who do not want it.

224. Earl *Grosvenor.*] With regard to light and ventilation, do you not consider the Howard-street site infinitely preferable to the Carey-street site on those points?—Of course there would be more light and air from the river, and so there would be if the courts were at Kensington, but I think you will destroy a great deal of the chance of future law reform and law improvements if you move the courts to the Howard-street site. It is essential, as Sir James Wigram, and everybody else said in 1841, that the chambers of the solicitors and counsel should touch the courts as nearly as possible; the reason why the Lincoln's-inn-fields site, which was originally thought of, was abandoned, was that it did not come in contact with the Temple as well as with Lincoln's-inn. No doubt when Lincoln's-inn-fields were thought of, Gray's-inn was more alive; I remember seeing a number of barristers in wigs and gowns crossing Holborn when I first came into the profession, but I do not suppose such a thing has been seen these 25 years as a man in his wig and gown crossing Holborn from Gray's-inn.

225. Mr. *Bentinck.*] You are aware in 1859 the Society of Lincoln's-inn, with a view to provide accommodation for the Chancery Courts, offered to advance a sum of 100,000*l.* in building new courts in Lincoln's-inn, and it will also be within your knowledge that the question was discussed before a Committee of this House, of which I myself was a member, and which sat in 1861, presided over by my right honourable friend the Member for South Hants. Mr. Abraham, who at that time was the architect of the Law Courts, was examined before that Committee, and at question 182, I asked him: "I suppose that you considered that the Equity Courts are at least one-fourth of this projected building"? and his answer was: "Yes, I think they would be with their offices." Do you consider, from your great knowledge of this subject, that the answer given by Mr. Abraham to my question was a correct one?—With time I could give you that answer with perfect accuracy. I should think the proportion would be certainly more than one-fourth, but by reckoning up the table of contents we could ascertain it to a square foot.

226. Then, if anything, did Mr. Abraham understate it?—I should say it was more than one-third.

227. You are also, perhaps, aware that that proposition of 1859 has been lately renewed by the Society of Lincoln's-inn?—So I have heard.

228. And that they have presented a petition to this House, which is, I believe, referred to this Committee, and which I hold in my hand; if that proposition of the Society of Lincoln's-inn were adopted, would not the Carey-street site be more than amply sufficient for all that you require?—Of course, it would.

229. Do you see any objection to the adoption of the Lincoln's-inn proposition?—It seems to me that the Judicature Commission in their late report have pointed at the inevitable future of our English law. All we have been doing of late years is to unite, in fact to fuse, the common law and equity jurisdictions, so as to make them all into one great court of judicature, and to give to every judge full jurisdiction, and the duty to complete

complete cases that come before him, and I cannot imagine that that can ever be carried out, unless you put all the courts and offices of common law and equity into one building. In this plan of Mr. Street's we have always had in view the certainty that the offices themselves will be largely fused; that a registrar, for instance, will have to draw up orders for common law as well as for equity, and if you were to separate the courts in the way that the Society of Lincoln's Inn propose, it seems to me that you would throw an obstacle in the way of such a fusion and improvement. If you built them you would before long have to give them up, that is my belief. I think that upon all these law matters we may very well look at America, as generally showing what we are going to do first. In law reform almost all we are doing they have done first. They have been very acute and clever indeed in all their legal doings, and undoubtedly what Lincoln's-inn is now proposing is diametrically opposite to what they have been doing. Certainly you must upset the Judicature Commission's Report if you were to do it.

230. But are there not three courts at least in Lincoln's-inn which are very good courts?—Undoubtedly, you have good courts there; but if you want to have law made into and treated as the one single thing, which it really is, you must not have one court here and one court there. Formerly they were different shops, and every judge made as much in the shape of fees as he could, and they ran in rivalry with one another. That has been in my day. A Committee of this House in 1833 was the first to knock that system upon the head, by saying that they would not have any more fees, but that they would put them all on salaries. All that has been done has been to get rid of this division and dealing out of justice as you deal out a pack of cards, and so to throw it into one great department and judicial establishment, which is to divide the work among themselves according to convenience. The idea of keeping up any separation seems to me altogether so false that I should deeply regret to see it continued. A great deal of suitors' money would certainly be saved by the fusion. The Master of the Rolls' Court is now rather inconvenient, from its being so far away from the others; and if he had not a wonderfully clever staff in his chambers, I do not believe that, with all his ability and rapidity as a judge, the business done in his court would be anything like what it is. I am quite sure that the old Equity Exchequer, which was a capital court, failed because it was removed to a distance. I am satisfied that you must treat law as an integral thing; but the answer I am giving is an answer rather as a law reformer than anything else.

231. First of all, are not those courts close to Carey-street?—Certainly. I think I can save all further answers by saying at once that if you desire to keep up the separation of law and equity, your scheme is the right one, and ought to be carried out.

232. Are not those courts admirably adapted for any civil purpose?—No doubt they are fair courts; but I think the offices of the chief clerks and others ought to be immediately adjoining. I think the clerk of the judge (as Mr. Street's original plan proposes) and every officer of the judge should be so close to the court that really the clerk could be fetched in and out, as the judge wanted him, in a minute; you cannot do that very well at Lincoln's-inn.

233. The three courts to which I referred, and which are made out of the Old Hall and the Vice-Chancellor's Court, are very good courts, are they not?—They are good courts, as far as they go.

234. They would be very serviceable for any civil judge, would they not?—Certainly; if a court was a distinct thing, and if a judge did not want registrars and officers, and did not want a great many other workmen, all of whom help him in his manufactory, so to speak, I should quite agree with your view.

235. I have understood that the offices of the registrars are very convenient, is not that so?—But they are too far away; there is perhaps a long, heavy case, going on before the judge not wanting the registrar; by Mr. Street's quadrilateral plan he could come out of his court into his office, and he could look after any pressing business and go back into his court in a minute when wanted. You cannot do that as the equity courts are now; I cannot entertain a doubt that all the offices of the judges, and chief clerks, and registrar, and indeed all the offices of law, ought to be touching the court, if you care to have your law well done.

236. But you admit that it would save a great deal of money?—I do not deny that at all; but I think it would save it very indiscreetly.

237. Are you acquainted with the Rolls Estate, upon which the Rolls House and the Record Office stand?—Yes.

238. And you know that that estate is bounded on the south by Serjeants'-inn, and on the north by Clifford's-inn?—Yes.

239. Have you ever had before your Commission a proposition to appropriate a part of that estate for the use of the Law Courts?—Our Commission had nothing to do with the site, but we have had to consider it in this way: it seemed to the Commission that it would be very wrong to build the courts in such a way that, in future days, if extension were wanted, there should be no place to which you could go and no facility for getting there; Howard-street has no power of extension. The Rolls Estate was near to this Carey-street site, and that was one reason operating, I think, upon Mr. Childers's mind, and indeed, I should say, upon the minds of all the Commission, why it was so advisable that Government should become the landlord of that bit of land at the south of the Law Institution, and between Bell-yard and Chancery-lane. The Chief Justice of England, at one of the meetings of the Commission, stated that Serjeants'-inn might be considered, so far as regarded common law judges, as really defunct; that they really do not care to meet; that they were distinguished from the whole of the Equity Judges, who continue to belong to their several Inns after being raised to the Bench; that it is of no use keeping up the order of Serjeants; that there would be no difficulty in making Serjeants'-inn, Government property, if it was felt at any future time that any more land was wanted; that the adjoining Rolls Estate and judges' chambers belonged to the Government already, and that putting the courts on the first floor in Carey-street, with a bridge over Chancery-lane, would carry the whole of the business from Carey-street into Serjeants'-inn. The site itself, of course,

Mr. *E. W. Field.*

5 July 1869.

was not considered by the Commission, but it was considered by the Commission of 1860.

240. Was there not a suggestion as regards the part of the Rolls Estate which is now, I think, occupied by the Master of the Rolls' chambers, and which fronts Chancery-lane, and on the south side of the archway into the Rolls Buildings, that at some future time that might be adapted either for the reception of legal records or of wills?—I do not think that was before our Commission. It was only thought that there was a great piece of land which belonged to the Government, which was already dedicated to legal objects, and to which it was very desirable to secure an access, and that that was one reason why it was very desirable that the Government should buy this Bell-yard piece of land; but the question of the use was never before the Commission, nor was it referred to them in any way.

241. That plot of ground would only be available in the event of the Law Courts being built upon the Carey-street site, would it?—No; and it would not be very well available unless the Courts were put (as I am perfectly sure that they must be) upon the first floor, and then a bridge could connect the Courts with the Rolls Estate without interfering with the street traffic of Chancery-lane. As I have stated, we have lost one of the most important officers of the Chancery Court, Mr. Kenyon Parker, within 12 months or so, by his being killed in crossing Chancery-lane. It is much against the Rolls Court, that it is on the east side of the lane, and Chancery-lane is becoming a great thoroughfare now.

242. To what purpose were the lofty towers recommended by the Commission to be erected, and which we saw forming part of all the designs, intended to be dedicated?—To the reception of wills.

243. Are they in the present plan?—No; there are not to be towers. I understand that all the schemes are to proceed on the assumption that Doctors' Commons is to remain where it is for will purposes. The Government have been making very large buildings there lately. I do not know, but I should think 70,000*l.* or 80,000*l.* must have been spent upon the depositories for wills in Doctors' Commons in the last few years.

244. Then the towers would be perfectly useless, would they not?—They would not have been formed unless the wills came there, and they are now proposed to be abandoned; I understand the new scheme is to give up the wills coming to this place altogether, and if so, there are no records to come there. The records of all the courts go almost immediately over to the Record Office in the Rolls, which is close by, and that again is a reason, I should have thought, for putting the courts near the place where all their records are, and will continue to be, deposited.

245. Do you happen to know that the Victoria Tower of this building was fitted up for records?—I have heard so.

246. Are you aware that the attempt to put those records there was a failure?—I was not aware of that.

247. *Mr. Chancellor of the Exchequer.*] I see that in the second resolution carried by Sir Roundell Palmer, the Commission express an opinion that the Carey-street site would contain all the courts and offices contemplated by the Act of 1865?—Yes.

248. And you have also given it as your opinion that it would contain all the offices planned by Mr. Street for the Howard-street site?—I think the substantial scheme of that plan might be adopted; I cannot doubt it, if Mr. Street says it is so.

249. Is there any great difference between Mr. Street's plan for Howard-street and the original plan for Carey-street?—The arrangement is totally different.

250. I am not speaking of the arrangement, but of the number of offices?—The difference, I think, is nothing material.

251. Is it substantially the same as what the Commission approved?—Substantially; I cannot doubt that everything that Mr. Street proposes to put in Howard-street can be put, and is put by the suggested Commission plan on Carey-street.

252. Is it pretty much the same as what was contemplated in 1865?—It is a little more extensive; both Howard-street, and the scheme that is on that rolled-up plan, are a little larger than the 1865 Parliamentary plan.

253. What is the rolled-up plan?—Mr. Burnet's cutting of Mr. Street's plan.

254. The scheme alluded to by the Commission in this resolution is the same thing, is it?—I imagine so.

255. Then may we take it that they are substantially the same, but that there is a little more in Howard-street?—No, rather less; I think there is a little more in both Howard-street and in Carey-street than in the original Parliamentary plan.

256. What construction did the Commission put upon those words, "advise and concur with the Treasury"?—That they were to have such plans, and do all they could to facilitate the making of such plans as they would think would promote the conveniences of the law.

257. But what relation did they think themseves to stand in to the Treasury?—They were to advise the Treasury as to anything the Treasury asked them, and to approve any plans the Treasury laid before them, or to prepare plans, and lay them before the Treasury, in case that course was thought most convenient, but not to deal with the funds.

258. Did they consider that they had a veto on the Treasury?—Certainly, as regards questions of convenience; undoubtedly, that was what Parliament meant, because the speeches that introduced the arrangement were to that effect.

259. You have repeatedly said that you had nothing to do with the sites?—No; the Carey-street site was directed by Parliament to be bought before the Commission was appointed.

260. The Act of Parliament does not refer to the sites, does it?—Not at all.

261. Then by what authority did the Commission pass the second of those resolutions in which they condemn one site and approve another?—That was the matter that was discussed upon the amendment first. It was understood that you, a Chancellor of the Exchequer, had stated to Sir Roundell Palmer that the Commission ought to lay before you some plan that would come upon the site, and be no larger or not much larger than the original plan, and they sought to convince you that they thought the original plan and design was the right thing, and that the Howard-street site was a mistake.

262. And, as I understand, they condemned the Howard-street site because they were asked

to

to modify their plan on the Carey-street site; was that it?—No; they condemned the Howard-street site because they thought it was altogether a mistake. They would have condemned the Howard-street site if there had been no Carey-street plan.

263. But they did these things solemnly as a Commission, in full meeting, on the motion of Sir Roundell Palmer; I want to know where there is any authority for this?—Perhaps I might venture to suggest that Sir Roundell Palmer should answer that question himself.

264. I think not; I ask you the question as secretary to the Commission?—I cannot say anything about it. If I were to speak my own mind, not as secretary to the Commission, I cannot help feeling that the amendment as proposed, if it had been made when they first began to discuss it at the first meeting at which the subject was broached, took substantial ground.

265. You do not think it was *ultra vires*?—I do think it was strictly *ultra vires*.

266. You say that the Howard-street buildings, or what was intended in 1865, can go upon the present Carey-street site?—I have no doubt of it.

267. Do I understand you distinctly to state that it would not be necessary, in your judgment, to purchase more land for the purpose?—I think it can be done without purchasing.

268. But in a manner satisfactory to your own mind?—I entirely agree with Mr. Childers, that it would be most unwise not to buy all those old houses down Bear-yard.

269. Why would it be unwise?—Because, first of all, you will have questions of light arising. They are a set of wretched houses; every one of them, or almost every one of them, having a separate title; so that they never can be properly built and thrown together. There must be a compulsory purchase. Even the Cook's-court people, who have very good houses to deal with, really find that they cannot get a proper title, because there is some lunatic or other who cannot sell one of the houses. You can never deal properly with that site without buying compulsorily. Taking our own data of what the present site is to cost, there is not the slightest doubt that it would be a very profitable investment. If you look at the original map of 1845, which has been talked of, you will see that Sir Charles Barry always proposed to buy strips on each side, and make chambers. He knew very well that it was a wise thing to do.

270. Then the purchasing of the land-ground does not depend altogether upon the size of the building, but upon other considerations?—Certainly; and so Mr. Childers's letter which I read said; he said that it was a matter of prudence, and not for use.

271. If it is asserted that the Carey-street site can be used properly for these courts without any fresh purchase of land, that is a delusion, is it?—Not at all, it is quite true; but I think they would be very foolish to do it.

272. But how would it be true if you required some other purchases?—We do not require them; but if I were a dictator, I should buy them.

273. But speaking not as a dictator, but with regard to the necessities of the public service, what is your opinion on the matter?—The necessities of the public service involve the question whether you would have a better street and a straighter street. I cannot help feeling that the public would rightly desire to have decent surroundings to such buildings as this. No doubt you can do your law with wretched hovels, such as some of the houses are opposite to the courts, and the courts will do their work very well; but I cannot think that the public service would justify such a mode of dealing with the matter. That, however, is a question for the Treasury and for the First Commissioner, and not for our Commission. Unquestionably the Commission of which I am secretary are of opinion (and I am perfectly certain their opinion is a true one) that all that is necessary in Mr. Street's quadrilateral plan to satisfy the requirements of Mr. Cowper's original scheme, can be put upon the site with roads all round it. Adopting the general outline of the admirable scheme which Mr. Street first prepared, all that can be done upon that site without buying another bit of ground.

Mr. *E. W. Field*
5 July 1869.

274. What distance would that be from those houses which you consider so bad?—Thirty feet from Bell-yard.

275. They are houses of a very low, bad character, are they not?—Yes; Mr. Street's own quadrilateral plan has not a thoroughfare through Bell-yard.

276. I ask you, as a man of the world and of experience, whether you consider it a reasonable, or, speaking in ordinary language, a possible proposition, that we should erect a great ornamental public building within 30 feet of some of the lowest property in London without purchasing that property?—Not if the Fates have determined that these should still remain so. It seems to me that you have no right, in the interest of the law, to put the courts in any other place than on the Carey-street site.

277. Will you kindly answer the question?—You ask me my view, and I say that the courts are bound to be put where alone the work can be done; and if the courts must stand in back slums, be it so.

278. I am asking you not as to the question of the site of the courts themselves, but as to the accessorial question of their surroundings; I ask you again, whether it is in accordance with your notions of public duty to place such a building at such a distance from such property as you have described?—No; I think that, beyond all doubt, you ought to purchase such property.

279. *Chairman.*] If I understand your view of the matter, you consider the purchase of this additional land to be not absolutely essential, but very desirable?—I have not a doubt of it. In proposing to buy the Bell-yard block Mr. Childers said, "I am going against all my antecedents, but I am so convinced that that purchase would be most desirable and beneficial from the improvements which must arise in the property, when the courts are put there, because of the impossibility of the present owners using them beneficially themselves, that I shall certainly press on the Commission to recommend the purchase of the whole of that block to the south of the fire-office, and I am sure that it will pay."

280. Mr. *Torrens.*] I understand you to say, that although you do not think that approaches for the public in general are necessary, there might be with advantage improved access for the members of the profession to the Carey-street site, from Holborn, for instance?—I think there is no doubt that there might be improved approaches,

Mr. *E. W. Field.*

5 July 1869.

proaches, but I do not think that there is anything which the suitors ought to pay for.

281. The access at present for the profession dwelling or having chambers north of Holborn is through the Great Turnstile, or through the Little Turnstile, is it not?—Yes, but more so down Chancery-lane.

282. There is a carriage-way from the corner of Lincoln's-inn-fields about half way to Holborn, is there not?—Yes.

283. Is not that wide enough for carriages already?—Yes.

284. What is the length of the narrow part which is only a foot-way?—That is 155 feet.

285. There is a similar roadway or carriage-way to the other Turnstile from Lincoln's-inn-fields, is there not?—Yes, at Gate-street.

286. What is the length of the narrow gut from that which is only a footway to Holborn?—One hundred and fifty feet.

287. Then we may take them as being about the same?—Yes.

288. Do you know the property at each side of those narrow ways?—Yes, I know the Great Turnstile pretty well; I went over it at the request of the Commission.

289. Have you any idea of what would be the expense of opening those footways and carriage-ways?—There was a report made at the desire of the Government about Great Turnstile; and I can give the exact figures at the next meeting of the Committee, if they please; Gate-street I do not think has been surveyed, but Mr. Pownall was employed by the Government to report upon the Great Turnstile.

290. I presume that you are of opinion that the expense would not be very great?—No, but I do not think that the suitors ought to pay for it.

291. If those two ways were opened to Holborn, would there not be a sufficient access to Lincoln's-inn-fields, not only for the professional community residing in Gray's-inn, Bedford-row, and Russell-square, but also for that portion of the professional people having some place of business in the City, who would approach Lincoln's-inn-fields over the new viaduct across Holborn valley?—I think Mr. Street's was a better plan; Mr. Street's plan took a sloping way, not through Great Turnstile, but more to the north-east.

292. But for all purposes of necessary access for the profession, would not that suffice?—I think so; my own feeling is, as I have stated several times, that the access story is a very great mistake; we are deluding ourselves about the access.

293. I understand you to say that you do not think it desirable that the Courts of Justice should be in the centre of, or very near, a great thoroughfare?—I do not; I am speaking purely of the suitors and of the law interests; but I do not think it would have been any harm at all, so far as the law goes, if they had not gone down to the Strand. It must come down so as to touch the Temple a little; that cannot be helped; but I do not think that the Strand running alongside the courts is any gain at all.

294. You were asked by an honourable Member how a judge living at the West-end, and having to approach Lincoln's-inn-fields, would go, and you say by Long-acre, and I think by Queen-street?—I should think so; but I do not know in what way the Lord Chancellor's carriage comes now; I do not think many come along the Strand.

295. With the exception of the immediate entrance into Lincoln's-inn-fields, are not Long-acre and Queen-street streets of the ordinary width and convenience?—They are not good streets, but they are very fair.

296. Could not four carriages pass abreast in them?—I suppose they might in Long-acre.

297. Except the bit going into Lincoln's-inn-fields?—The judges stated over and over again before the old Committees, that it was really immaterial to them where the courts were placed, and I believe it to be almost the same now.

298. Mr. *Beresford Hope.*] Did I rightly understand you to state, in answer to the Chancellor of the Exchequer, that the motion proposed by Sir Roundell Palmer, and seconded by Vice-Chancellor Malins was *ultra vires*?—It was my own private opinion. They thought otherwise, and they are great men, and I am nobody; but it seemed to me that it was *ultra vires*. It is not very becoming in me to criticise my masters, but I did not think that the Commission was appointed to choose the best site, but only what building, to be paid for by the suitors, they would recommend should be put upon the site which Parliament had already determined upon.

299. You have taken a great deal of trouble in this matter; supposing that you had taken the trouble of arranging the Law Courts on the site of Carey-street, and that the House of Commons, by a resolution or otherwise, blotted out your work, and decided on the Howard-street site, you would, according to the tenor of your last answer, have had nothing to do with getting again to work, and arranging the Howard-street site?—Precisely so; you might just as well have them at Kensington.

300. But that is not the case; you think that the Commission is not "the slave of the lamp"?—I think not; I am happy to say, that this day twelvemonths I shall have my freedom, as the Commission will terminate on that day.

301. Do you think that the Commission exists, in fact, to plant a building on a site which the preceding Commission settled, or is it bound during the five years which it exists to report upon any site which the higher powers may select?—Certainly, the Act of Parliament only refers to a particular site, and if this site is given up, the Commission goes with the site.

302. Then you consider that the present Commission ought to have no relation at all with any but the site originally pointed out, and that a new Commission should deal with Howard-street and its site?—I should think certainly not; if there is a provision in the Commission that requires them to report upon ways and means, and how the suitors are to be taxed to raise the money, that must go to the wall also. I cannot imagine that the Commission would ever like to be a party to taxing the suitors to build in Howard-street.

303. You consider then, altogether, that you are only a supplement to the Commission of which Sir John Coleridge and Sir George Lewis were members, and which I believe decided on the Carey-street site?—Yes; we are merely appended to this act for putting a building on that particular site. It is really the same question as the point as to *ultra vires*, I imagine, which the Chancellor of the Exchequer has put to me.

304. But

304. But speaking not in your character as secretary of the Commission, but as a gentleman who has bestowed great attention upon the matter, you are decidedly of opinion that Carey-street is in itself the better site?—It is the best site which is possible, and the other is a most inadmissible and surprising one, in my judgment—though it is true that I am getting old, and may have lost my power of judging; it is something like 30 years since I was first examined on this subject, and probably I am the only witness surviving, or at any rate there cannot be many.

305. At the same time, you qualify that answer, do you not, by the strong conviction that in order to make the Carey-street site perfectly satisfactory, it would be very desirable to buy additional land?—Certainly, and very profitable I am sure; I should be very glad, indeed, if the Government would build the courts in Carey-street, and would pass a compulsory Bill, to take the purchase of Bell-yard off their hands at the cost price, and give them a bit of land to widen Bell-yard too; I would be very pleased indeed to undertake it.

306. You have expressed a decided general preference for the Carey-street site, and a decided general disapprobation of the Howard-street site; but assuming that Parliament could and would buy indefinitely in Howard-street, but that it was limited to the ground it already possesses in Carey-street, would you still say that the Carey-street site was better than having the courts in Howard-street, with the chance of extension?—I should; because I should say that the Howard-street site would be a detriment to the law, even if you had it as a gift. I am now solely thinking of how the law work is to be carried on; and I say, as all the judges and everybody said in 1841 and 1842, that the chambers of counsel are a part of the manufactory, and that they must touch the courts, or else you are destroying the object of concentration.

307. Will you expand that a little, and tell us a little more of how the adoption of the Howard-street site would be a detriment to the law?—It is the same thing, if I may use an illustration, as if you had your kitchen a street or two away from your dining-room. The work done in the courts is all prepared in chambers, and is carried backwards and forwards in the same way as an article under process of manufacture, or a dinner just cooked, may be carried from one part of a house to another. It is all one work, from the beginning of a suit to the last order which gives a man his *quietus;* and all that goes on in chambers or in Court is a part of the general manipulation of the work tending to the final result.

308. Are you decidedly of opinion that the distance (which, measured by yards, is not great) is yet sufficient, when multiplied by the infinite number of cases and the quantity of business before the courts, to amount to a gigantic inconvenience?—Yes; Sir James Wigram thought, when the Lincoln's-inn-fields scheme was under consideration, that the distance to the other side of Lincoln's-inn-fields was too great from Lincoln's-inn to make it worth while to build there although the land was offered as a gift, and I think he was right.

309. Do you attach any importance to the difference of level between the two sites?—My impression is, that the levels of Carey-street are very advantageous, as Mr. Street has used them. I am now purely speaking of the convenience of the profession; and I think they will find it a convenience to have that rise to Carey-street, if the courts are ultimately put there.

Mr. *E. W. Field.* 5 July 1869.

310. Do you think that Mr. Street meets that difficulty by the ingenious proposal, in the book which was circulated a short time ago, of a double arcade, like the Rows at Chester, the one leading to a bridge, and the lower one leading to a tunnel?—I do not understand why his second plans have been prepared upon a basis wholly opposed to the very first resolution of the Commission. To my mind, it is naturally essential to the good arrangement of all courts that the courts shall be upstairs. I believe that the height of the Privy Council Chamber is the right place for a court.

311. Do you think that Mr. Street's proposal to extend Somerset House Terrace, so as to give the judges an entrance very nearly on a level, would be feasible or desirable?—I would not say a word about it being feasible. I think it would be desirable; but I do not think that it is very important. Every judge goes upstairs to his bedroom and to his drawing-room, and I do not see why he should object to go up one flight of stairs to his court once a day. One thing very much surprised me while the Commission was conducting its inquiries; I had fancied that everybody would have wanted the ground or first floor. To my great amazement, some of the most important officers wanted the second floor. I found that they came in in the morning and stopped all day, and went away at night, and they thought that they should be quieter there. But we found that some of those people who wished to go up those two pair of stairs had 2,000 people a day coming into their offices.

312. Are we to gather from that, that of the two questions of absolute site and internal arrangements, you think the absolute site is the most important one?—I think the building must touch the counsels' chambers, and that they are the first essence of it, and that it is very important indeed that it should touch them as much as possible. The solicitors' chambers on the map in the law quarter of the town are devoted mainly to the carrying on of court work. If I may put it as an illustration, I look upon all those strokes upon the plan as the roots, if one may say so, of the law maturing and conducting its sap. As one of the Commissioners truly said, "Take the courts and offices away to Howard-street, and you would tear the law up by the roots."

313. Therefore you think that the best site ought to be first selected, and then that the arrangements should be adapted to that site, rather than that the arrangements should be first prepared and then the sites adapted to the arrangements?—I think that the only place for which it is justifiable to tax the suitors is the one most convenient for them. Their convenience was certainly the dominant thought of Parliament in ordering the concentration, and appointing the Commission to secure such convenience.

314. And you think that convenience consists more in the site of the building itself than in the details of its internal arrangements?—I think that the site is all-essential, but that the details are very essential; I think that it would be very undesirable that the offices should be separated from the courts, as in Mr. Street's last arrange-

Mr. *E. W. Field.* 5 July 1869.

ment, and that it would be very much to be regretted if it were considered necessary to adopt that plan. I speak purely in the interest of the law.

315. Above all things you consider it necessary, do you not, for the due administration and future reform of the law, that the principal courts should be in one building?—I think so; but that is a matter for a statesman rather than for me.

316. That is the first and most essential provision of all, is it not?—I think so.

317. On that account, therefore, without going further, you think that the scheme which was agitated some years ago, and then was forgotten, and which has just been revived by the honourable Member for Whitehaven, would be very undesirable?—I think that, looking at the future of the law, and the improvement of the law, it is inadmissible; but if we are to go on as we are, with law and equity kept separate, I think it would not be at all a bad scheme, if they could contrive to get the offices of the judges a little nearer to their courts.

318. Do you think that the whole tendency of public and legal opinion is to bring law and equity nearer and nearer together?—I do. They are now really so far fused that the law requires an equity judge to decide a common law question if it comes before him, and it does not allow him, as he used to do, to send it away to a common law judge to dispose of, and *vice versâ*.

319. And you think, therefore, that making a little privileged enclosure of the equity courts would be directly antagonistic to that great improvement?—Certainly it would.

320. Therefore, on broader and deeper principles, independently of Howard-street or Carey-street, you think that the retention of the equity courts at Lincoln's-inn would be inadmissible?—Certainly; the common law judges have a good deal of equity before them, and they ought to refer some of the accounts to the equity judges' officials, who are constantly occupied upon such things, and they cannot do it now.

321. Do you think that that is the general opinion of both barristers and solicitors?—I would not say that at all; but it is the opinion of the Judicature Commission, and it is therefore the opinion of those to whom I look with great respect and reverence.

322. On the whole, may we infer that the scheme of keeping the Law Courts in Lincoln's-inn, is rather a scheme finding favour within Lincoln's-inn itself than generally?—I should think so; I have heard no solicitor say anything in its favour. It would be better than going to Howard-street, certainly.

323. For instance, can you say what is the opinion of any one Inn of Court—take Gray's-inn, for example?—I do not want to say anything disrespectful of Gray's-inn, but I do not care to ask what their opinion is. They have done; they are gone, as a law inn. The force of concentration has been too great for them. That change in 20 years is very curious; the mere change within 20 years which those red and blue spots on the plan show are all changes of a concentrative character, and show how all the profession is always trying to get itself more pushed up together. Everything we know has changed since the time of Mr. Gem, who was the first person who dealt with these matters in his pamphlet of 1840. The first proposal of all was, as to Lincoln's-inn-fields from Mr. Gem, who is now a gentleman of private fortune, and has long retired from practice. He is a man of very great ability, and I daresay he would tell you now, that Lincoln's-inn-fields is the best site; but as Gray's-inn died out, the only argument for Lincoln's-inn-fields seemed to me to die out too.

324. Was it proposed to construct the building inside Lincoln's-inn-fields?—Yes; on the upper part of the gardens.

325. Has not another consideration come in from the fact of Lincoln's-inn-fields being almost a public park of London, and its being therefore undesirable to block it up with building?—I and my partners are the owners of a large house there; our ancestors in title helped to buy the garden, and we should certainly feel that, as we bought it, we were entitled to sell it or give it away; but I gave evidence against the Lincoln's-inn-fields' proposal myself.

326. It is a lung of London, is it not?—Certainly, but it is a private freehold.

327. But it is an open space, and it helps to purify the air of London, does it not?—But then the public should buy it. However, I object to it entirely as the site for the courts, and I gave evidence against it.

328. Are we to gather from the evidence which you gave at the beginning of your examination, that the first move for buying extra land in connection with the Carey-street site proceeded from the Treasury of the day, and not from yourselves?—Certainly; the Treasury itself caused an Act to be passed to justify the application of any monies already voted to the purchase of any other land; if they could have bought by private contract the whole of that Bell-yard block, the Act of Parliament would have allowed them to buy all Bell-yard.

329. Whether the extension of the area be or be not extravagant and unnecessary, the opening of the floodgate rests with the Treasury of that day, and not with you?—I would wish to say that the Commission, in the discharge of its duty, recommended some very wise arrangements; I think it was a very wise arrangement which would have got rid of that angle at Lincoln's-inn (*pointing to the Map*).

330. But the body which was responsible for the first deviation from the *status in quo*, which was represented by the receipt which you gave, was the Treasury and not the Commission, was it not?—Instead of answering yes, I would say the body which is entitled to the credit of it, if you please, because I think that their views were quite correct.

331. Mr. *Goldney.*] Is it your view, in your professional capacity, that the first thing to be considered in this new building, is the convenience of the suitors?—If they are to pay for it, that is unquestionably my opinion.

332. Irrespectively of that, supposing that it was not to be paid for out of their pockets, but supposing that the Government was going to do it, would not the first thing to be considered in the construction of the Law Courts be the convenience of the suitors?—I should say that it would unquestionably be so.

333. Do you not think that that convenience is to be arrived at by placing the Law Courts in proximity to the solicitors' offices?—Yes, and only by so doing; looking, however, to proximity to counsels' chambers first.

334. Supposing that proximity to be attained, is it your view that the legal business of the country

country would be considerably facilitated?—Unquestionably.

335. And that suits, especially in the Courts of Equity, would be very much shortened?—I would not say that they would be very much shortened, but they would be shortened very much more than would be enough to pay for the extra taxation.

336. Is not the amount of money locked up in the equity courts said in round figures to amount to more than 60,000,000 *l.*?—There is that in the Accountant General's hands, and a vast deal more tied up by the court.

337. What amount do you suppose is in litigation?—I made a good many calculations at the request of the Commission of 1860, but I am sorry to say that they are very much out of my mind at present.

338. Have you any idea that if suits by the concentration of the courts were facilitated to the extent of a shortening of the time which they would otherwise have occupied, by 12 months, the interest of the money would more than pay all the expenses of the building?—I would say 12 days; I undertake to say, that if two or three days in each year can be struck off the length of Chancery suits by concentrating the courts, the extra taxation will be an admirable outlay, treating it as a discount to be paid by the suitors for earlier recipiency of their money. See my evidence before the 1860 Commission.

339. You give that as an approximation to the benefit which is likely to accrue to the public, from the concentration of the courts at a spot near where the legal officials have their offices?—Certainly.

340. Does it not often happen that the same person wants to attend the courts, and also the offices of the Court of Chancery, at the same time?—The head clerk, or the solicitor himself, who attends in the Court of Chancery at the hearing of the cause, ought to attend the registrar when he passes the order, and the chambers when it is acted on there.

341. From the fact of the offices being now separate, are not suits very frequently delayed?—They are delayed, no doubt, a good deal, and the work is not so well done if there is a dispersion of offices; you are obliged to send worse clerks to appointments, while the better clerks or the master himself would otherwise attend.

342. Was not the amount which the purchase of the site and the building were estimated to require considered in Committee previous to the Bill being passed, and was there not evidence given, previous to the passing of the Bill, as to the amount of 1,500,000 *l.*, which was inserted in the Bill?—I am not certain about that.

343. There must have been some evidence, must there not, by which that sum was arrived at?—I have no doubt that there was, but I have not it before me.

344. I think the attention of the Commission was drawn by the Treasury to the amount of money that they had to spend on the building; and in the architects' instructions you put in the amount to which the expenditure on the building was to be limited, did you not?—Yes; but we put it in rather as agents of the Treasury than as Commissioners.

345. But in those instructions to the architects did the Commission put in the actual amount?—The Commission and the Treasury together did so, because the Treasury approved the instructions.

346. That amount was 750,000 *l.*, was it not?—Yes.

347, Do you not think that the building could have been erected for that amount?—The Commission was of that opinion.

348. In the instructions given by the Commission to the architects, the amount of the expense was to be limited to that amount, was it not?—Yes; on the certificate that was given by the Commission several witnesses were examined, who led them to certify that they believed that the courts could be built for that amount.

349. In the Act of Parliament which was passed for the purpose of the acquisition of the site and the building of the courts, which were defined to be provided for, were the Superior Courts of Law and Equity, the Probate and Divorce Court, and the Court of Admiralty, with their offices, specified?—Yes.

350. Does the proposed new plan embrace the whole of those courts and offices which are contemplated by the Act of Parliament?—Yes.

351. And more?—I am not certain without having the plans before me; but I think there was a depository for wills in the basement.

352. There could be no necessity, could there, for having a depository for wills in the place where the courts were?—I never could see why it was wanted.

353. Was there any necessity for the Inclosure Commission being concentrated with the Courts?—I do not know that that was not desirable.

354. Have they any legal business?—They are not included, but my impression is that they ought to be included.

355. In making the arrangements for the courts and these suggested additions, I think the Commission appointed four or five sub-committees, did they not?—Yes, a considerable number.

356. There was one sub-committee of solicitors and counsel, was there not?—Yes; there was a works committee, and a legal arrangements committee, and a finance committee; and after working some little time, when the plans came to be made out, there was a requisitions committee appointed to examine all the offices. If I remember rightly, Sir William Erle, then Chief Justice Erle, was upon that committee, and it met for a great many days, sitting all day long. Many of the officers were brought up, and everybody wanted great lots of room and accommodation, and they had to be cross-examined as to the quantity that was requisite for each.

357. In the first instance, Mr. Abraham was appointed your architect, was he not?—Mr. Abraham, junior, was; but he died almost directly.

358. Was Mr. Waterhouse then apppointed?—Then Mr. Waterhouse was appointed.

359. And then Mr. Waterhouse requested to be allowed to retire, did he not, on account of his being excluded from the competition?—Yes, in a few days.

360. Was it then that you looked out for another architect who was not likely to compete, and did you then select Mr. Burnet?—Yes; I think that the first recommendation to me was from gentlemen well known, I believe, to the First Commissioner of Works, Bircham, Drake, and Company.

361. Have the Commission been quite satisfied with

Mr. *E. W. Field.* 5 July 1869.

with Mr. Burnet's attention and ability? — Entirely so; and he has been of the greatest possible value to me.

362. Mr. *Osborne Morgan.*] You were asked by the noble Lord as to the width and convenience of the streets leading to the Carey-street site from the north; would not a person coming to the Embankment site from the north have to traverse exactly the same streets as a person coming from the north to Carey-street?—I conceive so.

363. Then that inconvenience would apply to both sites, would it not?—I should think so.

364. And there would be the further inconvenience, as regards the Embankment site, of having to cross the Strand, would there not?—Yes.

365. Is not the portion of the Strand which is immediately opposite to the entrance to the Carey-street site very much wider than the part of the Strand which is immediately opposite to Norfolk-street?—Yes.

366. It is nearly double the width, is it not?—I believe it is.

367. Do you not think that the width of the Strand immediately opposite to the principal approach to the building would be a point of considerable importance?—There are two considerations: at my age, and going, as I do, much to the courts, I would much rather have a little place to run across than a long one.

368. But would there not be a number of vehicles constantly passing along?—No doubt; but perhaps there would be more chance of dodging them in a narrow street. It would be a very fatal objection, it seems to me, to have to make all the world of the law run across backwards and forwards that bit of street, all day long.

369. But the street is very narrow there, is it not?—If you have to cross a street through a lot of cabs, it is a question whether a wide or a narrow street is preferable. I am not at all sure that I should not prefer a narrow street, having regard to my own safety.

370. You have produced a map showing that all the largest part of the legal profession is at present located in the neighbourhood of the Carey-street site, and you have stated that you consider it to be of paramount importance that the courts should be situate in the immediate neighbourhood of the chambers and offices of counsel and solicitors; I should like you to give me your grounds for that opinion a little more in detail, and I will try to help you; I will take, first of all, the case of the chambers of counsel: why do you consider it of considerable advantage that those chambers should be in the immediate vicinity of the Law Courts?—Because a counsel ought to be in his chambers till the moment he is wanted in court, and he ought to have his books and his notes at that place, and he cannot have them so if the Howard-street site be adopted.

371. You are aware that junior counsel practice both in chambers and in court?—Certainly; it is a joint practice, it is not two practices, but it is two parts of the same process.

372. I presume that the libraries are in their chambers?—They are.

373. How many times do you suppose that a counsel in large practice has to pass backwards and forwards in the course of the day from court to chambers, when the courts are sitting?—I cannot tell, but a great many times, I should think.

374. Thirty or forty times?—I cannot tell; I daresay a leading junior counsel must be always running backwards and forwards if he is doing his work properly. In the old times I know we could get no chamber work done by junior counsel during the sittings at Westminster, and nobody thought of getting pleadings from a junior counsel in Lincoln's-inn when the Court of Chancery were sitting at Westminster, but the Chancery business is infinitely better done now.

375. Are not conferences constantly required in chambers while the courts are sitting?—Constantly.

376. As a matter of fact, do you not find that the chambers of equity counsel are situated in the immediate vicinity of the courts?—Certainly.

377. Do any counsel live in Lincoln's-inn-fields?—A few.

378. How many?—I do not know; but I should say that there are four or five near the corner next Lincoln's-inn.

379. But no counsel would think, would he, of living at a greater distance than that from the court?—No; and I think that none with any great amount of practice live as far from the courts as that.

380. Do any counsel live in Gray's-inn?—No counsel who practise in the courts live in Gray's-inn, to my knowledge, though a few conveyancing counsel practice there.

381. Then, as a matter of fact, the chambers of practising counsel are clustered in the immediate vicinity of the courts, are they not?—They are now.

382. Why is it desirable that a solicitor's office should be located near the courts?—Because then he can be in court in a moment. I was for 20 years of my life in Bedford-row, and when I removed to Lincoln's-inn-fields, I could not have imagined how much better we were able to do our business, although when we got to Lincoln's-inn-fields, we only saved a walk of seven or eight minutes.

383. Is it not the practice in large solicitors' offices to have the witnesses up to the offices before they go into court?—It is always the case in Common Law proceedings.

384. Do you not think, that looking to the convenience of the solicitors and of the witnesses, it is desirable that their places of business, namely, the solicitors' offices, should be as near as possible to the courts to which they have to go?—Certainly.

385. You are a solicitor in very large practice, I suppose in perhaps the largest practice in the profession?—Most certainly not; and my own experience, I should say, is almost entirely in equity.

386. May I ask you how long you have been in practice as a solicitor?—I was admitted in the year 1826.

387. Is it your practice, when you are distributing your causes among your clerks, to give one cause to a particular clerk?—Not entirely so. We give one cause to a head clerk, but he has help from other clerks under him to take the unimportant part of the work; and for taxation, there are, of course, other clerks.

388. Do you not, as a matter of fact, entrust a particular cause to a particular clerk?—That is very much the case.

389. Then in point of fact, from the time when a cause is started, so to speak, is it not chiefly conducted

conducted by the clerk and the junior counsel?—Very much so. Of course the clerk is constantly speaking to me or my partners about everything that is being done. He comes backwards and forwards to our offices all day through; and this should not be impeded.

390. Then that clerk would have to be constantly engaged, would he not, both in court and in the offices?—Yes, and with counsel.

391. Is it, therefore, in your opinion, important that the chambers of counsel and solicitors, and the courts and offices, should be in immediate contiguity?—I do not believe that the law work can be carried on with any decent amount of convenience or dispatch without it. I cannot use language strong enough to express my conviction that if the suitor is to be cared for that must be done. It is essential to any buildings for the purposes of law courts that you should remove the chambers of counsel to the courts, if you do not take the courts to the chambers.

392. As a matter of fact, have you not often heard the Vice-Chancellors complain of the absence of a clerk from the court at a time when a particular cause has been called on?—Certainly.

393. Is not the hearing of the causes very much delayed on that account?—I would not like to say so much as that. I would always put down the mischief of bad work as greater than the mischief of slow work.

394. Has not Vice-Chancellor Malins refused to hear any cause in the absence of the solicitor's clerk who attends to the cause?—I believe he has. But then little boys will be sent in last resort.

395. To what do you attribute the absence of the clerk in those cases?—To the dispersion of the offices and courts, even to the small extent to which the offices and Courts of Chancery are now dispersed.

396. He cannot be in two places at once, of course?—No; and the dispersion, though it looks small upon the map, is large enough to be a very great encumbrance and hindrance to the due transaction of business. The scheme of Mr. Street, approved by the Commissioners, would be a perfect change in that respect.

397. Then, do you believe that it would be possible for the legal profession to reside where they do now, and to do their work as well, or to do their work at all, if the courts were removed to the Embankment site?—I do not believe that it could be properly done; of course we did it when the courts were at Westminster, but we did it in a very bad and inefficient way.

398. As a matter of fact, does not a cause in equity take a very much shorter time to be heard and disposed of now than it did formerly?—It does; it is quite different now.

399. Do you attribute that at all to the fact of the courts being concentrated?—Very considerably. The four terms of the year were then very much wasted.

400. I think that until very recently, that is to say, that until within about 10 years, the Courts of Equity sat during the summer at Westminster, did they not?—I believe it was in 1848; I think that the memorial that was presented was drawn up by the present Lord Justice Selwyn, who was then at the junior bar; it was in Lord Cottenham's time.

401. Lord Cottenham was a judge who had a great idea of the dignity of his office, was he not?—He had; but he had a very great idea of having the Chancery work done as it ought to be. He stated that counsel chambers should be within reach of the call of the courts.

402. The courts were removed to Lincoln's-inn for the reason which you have stated, were they not?—Quite so, upon the memorial printed in the reports.

403. As regards the convenience of the public, as opposed to the convenience of the profession, do you in any way recognise that convenience of the public, as opposed to the convenience of the profession, as at all an element of consideration in the case?—I am unable to recognise what is meant by "the public" for this purpose; I have never seen them, and I have been at it since the year 1826.

404. Do you recollect the removal of the back bench in the present Lord Justices' Court?—Yes.

405. Do you know why that was removed?—I do not; I remember that when the hall formed one court for the Lord Chancellor, the recesses were found to be a very great nuisance in those days, because people would get in there, and the place could not be kept quiet; I remember very well that the stove in Vice-Chancellor Shadwell's Court had to be removed, because so many dirty fellows (now called the public) came in in the winter, and it was almost impossible in consequence to stop in that part of the court.

406. Mr. *Layard.*] Did I rightly understand you to state that if you bought the land round the present Carey-street site you could resell it at a profit?—I have not a doubt about it, and my principal reason would be that a number of acute Liverpool gentlemen found it worth while to buy those houses in Cook's-court to pull down and rebuild. They had made some very fine speculation of the same sort in Liverpool. If you could buy the Bell-yard houses without compulsory purchase, and pull them down, and rebuild them properly, I am quite sure that a very large profit could be made; and taking the cost of the present site as the clue to what would be the probable cost, and, in fact, taking the Government surveys of the Bell-yard property, I have not the slightest doubt that there is a very large profit, indeed, to be made.

407. Are you aware that there has been a good deal of speculation in land about the present Carey-street site?—I am not aware of anything of the kind, except as to Cook's-court; but that is a very large concern.

408. Are you aware that it has been stated by the Law Institution that the Government would lose 500,000 *l.*, or nearly that sum, on the resale of the Carey-street site?—I know that they stated some sum.

409. You say that Vice-Chancellor Malins now complains that the solicitors' clerks are not always in attendance?—No doubt that is so.

410. And yet the court in which Vice-Chancellor Malins now presides is in the very centre of Lincoln's-inn, is it not?—Yes.

411. Mr. *Mowbray.*] You do not think that it would be very convenient for an equity barrister to have to cross the Strand to go to Howard-street?—Certainly not; it would be too far off.

412. If the courts were built in Carey-street, would it not be equally inconvenient for barristers in the Temple to have to cross the Strand?—I think not, because the scheme was to give them a bridge on the level of the courts.

413. Has not that scheme of building a bridge been

Mr. *E. W. Field.*

5 July 1869.

been abandoned?—Not by Parliament yet, and Parliament empowered it. If the authorities of State say that it shall not be done, of course their wisdom will prevail. I am aware that it has been struck out in one plan; but if the crossing of the Strand on a level is an evil, it is a much lesser evil to make persons from the Temple cross it going to the north than to make persons from Lincoln's-inn and that district cross it in going to the south, because the latter class are in the proportion of seven or eight to one. There will be about 170 solicitors, besides their clerks, coming from the Temple northwards over the Strand; if you put the courts to the north of the Strand, and there will be about 1,100 solicitors, besides clerks, going from the north southwards, if you put the courts on the south side of the Strand.

414. Is that including all the barristers and solicitors and clerks?—Solicitors only; but there is also a much greater proportion of barristers to the north than to the south. It will be found from figures which I will prepare for the Committee, that the risk of life, if the courts are put to the south of the Strand, as compared with the risk of life if the courts are to the north of the Strand, will be in the proportion of something like seven or eight to one.

415. If you abandon the bridge which connects the Temple with the Carey-street site, there is a certain risk of life to everybody going from the Temple crossing the Strand, is there not?—There is the same risk in going from the north to the Howard-street site.

416. If Mr. Street's plan contemplating the tunnel and arcade were adopted, the objection on the ground of danger to life would be removed, would it not?—Mr. Street may contemplate it, and the metropolis may contemplate the railway, but I do not see that either the railway or the tunnel is proposed in anything that is before Parliament. The Railway Company have, I believe, no money and cannot borrow.

Friday, 9th July 1869.

MEMBERS PRESENT:

Mr. Bentinck.
Mr. Chancellor of the Exchequer.
Mr. William Cowper.
Viscount Enfield.
Mr. Goldney.
Mr. Gregory.
Earl Grosvenor.
Mr. Russell Gurney.
Mr. Beresford Hope.
Mr. Hunt.
Mr. Layard.
Lord John Manners.
Mr. Osborne Morgan.
Mr. Mowbray.
Lord Stanley.
Mr. Torrens.

THE RIGHT HONOURABLE LORD STANLEY IN THE CHAIR.

Mr. EDWIN WILKINS FIELD, recalled; and further Examined.

Mr. *E. W. Field.* 9 July 1869.

417. *Chairman.*] I BELIEVE you wish to add something to your evidence?—I was asked on the last occasion about the evidence on which the certificate was given; I have it here from the shorthand notes: and I was asked about the witnesses, and I was unable from memory to state their names positively. I find that they were Mr. Abraham, Mr. Waterhouse, Mr. Pennethorne, and Mr. Henry Hunt. Those were the four witnesses upon whose evidence the certificate was given by the Commission, in the first instance. That is the first document that I produce.

418. Are there any other Papers that you wish to put in?—There were some others that I was asked about. I find that I have many copies of the draft report, if it is wished that I should produce them for the purposes of the Committee; and I have brought with me 18 proofs as they then stood. I have not seen the Lord Chancellor, but I have seen Sir Roundell Palmer, and we cannot conceive any reason why it should not be used, if it is not published. The Committee will distinctly remember that this paper is not settled yet; and I omitted to state the other day what I ought to have stated, namely, that there were expressions in it about extra land being essential, which were objected to by many of the members of the Commission; and I received at the time a letter from Sir Roundell Palmer, which I have not been able to find, stating that he could not sign the report unless those expressions were modified. Subject to these observations, I believe that there is no reason whatever that I should not, if desired, place 18 copies in the hands of the Members of the Committee. I have written at the top that this proof was printed in June 1867, and is not complete. The Committee will be so good as to recollect that it brings down the history of the proceedings of the Commission only to that date.

419. Mr. *Russell Gurney.*] Is that signed?—No, because it was never completed; it contains a very fair summary of the general proceedings of the Commission, and probably will render it not necessary that I should give in the précis that the Chancellor of the Exchequer desired me to prepare of the general changes proposed in the original Parliamentary scheme by the Commission, upon the details of that scheme as they appeared in the map of Mr. Abraham and the plans laid before Parliament in 1867. The thing will be found very well stated there; but I have made, and can produce, if it is wished, a short statement, being in fact again an abridgment of the abridgment that their report contains of the way in which the Commission have dealt with, and what additions they have made to, the scheme that was laid before Parliament when the Act was being passed. The Committee will be good enough to remember, when looking at my abstract, that it is not a very reliable abstract; I am having it copied, and it shall be placed in the hands of the Committee clerk shortly.

420. *Mr. Chancellor of the Exchequer.*] You produce, as I understand you, a précis of the changes that have been made by the Commission since their first appointment?—Yes, it is an abstract of the statement contained in four or five pages of this draft report, and it shall be placed in the hands of the Committee. I beg the Committee to understand that it is not a very good abstract of what is very fairly stated here in the draft itself. Then I was asked about the cost of the Great Turnstile improvement and the changes there; I have brought Mr. Pownall's reports upon that subject, and the surveys that were made by him, if the Committee wish to see them.

421. Mr. *Layard.*] What is the amount?—There are three schemes; one 91,000 *l.*, another 100,000 *l.*, and the other 122,000 *l.*, after sale of the surplus land. That is made by Mr. Pownall by the direction of your office, or of the Treasury, with a view to the question whether the Commission should advise that the suitors should be at the expense of opening the Turnstile.

422. I understand you to say that the lowest estimate was about 90,000 *l.*?—£. 91,000 *l.*

423. Mr. *Osborne Morgan.*] Do you mean the Little Turnstile or the Great Turnstile?—Only the Great Turnstile.

424. Mr. *Layard.*] Was an estimate made for opening the other Turnstile?—It was never thought of by the Commission. I believe that those are all the things that I was desired to

Mr. *E. W. Field.*

9 July 1869.

state. I do not know whether I might be allowed to add something to my evidence.

425. Mr. *Goldney.*] What have you to add to what you stated on the last occasion?—I wish to state what my own experience has been as a professional man. I began and was for nearly six years in the Temple, serving my articles at King's Bench-walk, so that I know what the Temple wants are pretty well. I was then for quite 10 years practising in the City, and I know pretty well what the City wants are. I was then for 20 years in Bedford-row, and I know pretty well what are the conveniences and inconveniences of carrying on the legal profession in that part of the town; and now I have been for 10 or 11 years in Lincoln's-inn Fields. That was one of the things that I wished to say. Then I wish to make an additional statement as to what took place when the book of instructions was sent to the Treasury, that book of instructions being the real allowance by the Treasury, to the architects and to everybody, of the additional purchases. What I wanted to state was merely this: that when that book of instructions was sent to the Treasury for their approval, I myself wrote a formal Minute calling the attention of the authorities of the Treasury to the fact that they ought to satisfy themselves about the additional purchases that were being proposed before they gave their sanction to the instructions being issued to the architects.

426. Have you a copy of that Minute?—I have (*producing it*); it is on page 74 of the Commission Minutes: "Mr. Field thinks that the Treasury should satisfy itself that paragraphs 42 and 43, as to ventilation, paragraphs 13, 29, and 39, as to housekeepers' dwellings, and tunnel in Carey-street, and pink and other additional lands, take the right view. Strong remonstrances have been received against leaving the question of ventilation and heating to the architect. Mr. Denison, Q.C., says that Dr. Percy ought to be consulted. In other respects, Mr. Field thinks that the Treasury need not trouble itself with the examination of the draft." All the rest had been gone through, but those were very important, and those were matters which I thought, from what I knew had taken place before the Commission, the Treasury ought very carefully to attend to, before it issued the book of instructions.

427. *Chairman.*] Is there anything further, that you consider material, that you wish to add to your evidence?—I wish to add that in 1841 and 1842, when there was such an anxious inquiry among all the witnesses, of whom I was one, as to what would be the best site (there was no such thing then as the battle of the sites, and no bias at all in the matter), the first person who suggested the change from Lincoln's-inn Fields to Carey-street, was Mr. Commissioner Hill, the brother of Sir Rowland Hill, and his suggestion was felt to be so wise from its pointing at a place which touched the chambers of the law, both in the Temple and in Lincoln's-inn, that the original scheme was very soon abandoned. Sir Charles Barry, who had given evidence in favour of the Lincoln's-inn Fields site, himself stated that Carey-street was a much better site, and the whole thing was done in a most unbiassed manner amongst the lawyers of that day.

428. Then, I understand it was considered then that Carey-street was more convenient than Lincoln's-inn Fields; but the question of the Embankment could not arise?—The thing that was considered was what was the elemental condition of the site that would be best for the suitors, and they said, "It must be one, if possible, that touches both the Temple and Lincoln's Inn." The Rolls estate was talked of at that time as being nearer the City, and to some extent fulfilling the same conditions, but it was thought not nearly so good.

429. Mr. *Mowbray.*] As a matter of fact, there was no embankment site then in existence?—No; but the elements and conditions that ought to attach to the site were before all these great men, from Lord Cottenham downwards, who fixed on Carey-street as the most convenient for the objects they had in view. Then, further, when I answered my Lord Grosvenor's question (No. 224), "With regard to light and ventilation, do you not consider the Howard-street site infinitely preferable to the Carey-street site on those points?" I forgot to refer to one very important thing which occurs in the winter time, and that is the fog. The river fogs would be a great inconvenience to the Howard-street site.

430. Mr. *Chancellor of the Exchequer.*] There would be none in Carey-street?—Not so much as on the Thames.

431. Mr. *Layard.*] Is there any fog on the Thames?—Terribly bad; we can hardly see our way round the Temple. Everybody who goes through the fog knows that it gets worse when you go down into that part of the town. Then, in answer to Mr. Bentinck, when he was speaking of the present courts in Lincoln's Inn, I think I spoke a little too strongly about their convenience. It is very inconvenient that there should be courts without water-closets, and arrangements of that sort; and they have nothing of the kind there, and they certainly ought to be very much improved if they are to be ultimately adopted as the courts of justice for the country. Then, too, I do not think that my evidence sufficiently points out this: that with regard to the persons who come, as suitors or otherwise, to the courts, the comparatively few who do come only come once in a day, whereas the lawyers and their clerks are really running in and out of the courts all day like ants, and you must count them as very very many, when you are considering the question of access to one or the others. Then, further, I did not refer, in speaking of the interests of the suitors in the acceleration of justice, to any other element of consideration except the saving of money to them by the quickening of proceedings. I ought, undoubtedly, to have referred to the saving of the heartrending and misery, which after all is even more important to them than that which arises from the law's delay; and I ought to have stated that some years ago a medical man sent me a book containing a treatise on what was called "Chancery Cachexia," an account of people who sickened and perhaps died of Chancery suits; and it does seem to me that it is a matter of grave consideration, that the Committee, in settling the site, should do all they can, if it is only in the interest of the ease, and comfort, and happiness of men, to let the works of the courts of law be done as well and as quickly as possible. Then, again, I did not point out, as I think I should have done, an expression in the book of instructions to the architects, as to the not exceeding the amount of the money that was mentioned in the Act of Parliament. There was an expression

of

of a hope that it would not be much exceeded; but such an expression, as I think, was a tolerably good proof that there was an expectation on the part of those who were responsible for the issuing of those instructions, namely, the Commission and the Treasury, that it must and would be exceeded. Then there is another matter, really of some moment, in which the question of the convenience of legal business has a good deal altered its aspect since 1841 and 1842; and that is the numerous postal deliveries in the course of the middle of the day, and still more the immense flood of telegrams which come in to our offices through the whole of the day; they can only be received at our offices, and those offices ought to be very near the courts, as a very great number of them relate to court work. The very moment when the cause is going on in the court, there is a telegram from Liverpool, for instance, to direct its course.

Mr. *E. W. Field.*

9 July 1869.

432. Mr. *Layard.*] Could you not remedy the inconvenience by having a telegraph office in the building?—I should not like anybody else to have a chance of having my messages; I would rather have them delivered at my own office; they are too important to run risks about. Besides it is impossible for a man to know when he sends the telegram, unless he has got one from us in the morning, that the cause is on at the moment. We have a vast number of telegrams coming in and out in the course of the day. I have no doubt that in the Bedford-row district there are hundreds and hundreds per diem, judging from the number of agencies that I see located there.

Mr. William Burnet, called in; and Examined.

433. *Chairman.*] You are Architectural Clerk to the Commission, I understand?—Yes.

434. And have you served upon it from the beginning of the inquiry?—From nearly the beginning of the inquiry, from December 1865.

435. Mr. *Layard.*] May I ask you whether you are an architect by education and profession?—I am.

436. Have you ever been engaged in architectural construction of any kind?—Yes, all my life.

437. Were you employed to draw up the instructions to the competing architects?—Yes.

438. Have you been consulted by the Law Institution?—Yes.

439. Did you draw up the map for the Law Institution which was circulated amongst Members of Parliament and laid before this Committee?—I did.

440. You are responsible for it?—I am responsible for it.

441. Are you responsible for other statements which have been circulated by the Incorporated Law Society?—For nothing whatever beyond that map.

442. Here is a statement of the comparative cost of the Carey-street and Howard-street sites; were you consulted about that?—In nothing whatever about that.

443. Only in regard to the map to which I have referred?—Yes.

444. Are you aware that at a meeting of the Royal Commission, on the 4th of June last, Sir Roundell Palmer moved a resolution disapproving of the Howard-street site and approving of the Carey-street site, and that that resolution was founded upon the documents referred to in the following minutes:—"Inspected Mr. Street's block plans and report of May 1869; inspected map of Parliamentary Carey-street site and Howard-street site, circulated by the Incorporated Law Society (which is the map in question); inspected map prepared by the Architectural Clerk, showing how the scheme approved by this Commission might be reduced to the area of the Parliamentary Carey-street site; inspected tables of comparison prepared by the Architectural Clerk, between Mr. Street's Howard-street scheme, Mr. Street's Carey-street scheme, of May 1869, and Commissioners' scheme, as suggested to be reduced to Carey-street site"?—It was so.

445. Are you aware that Sir Roundell Palmer withdrew that resolution, and that those documents were referred to a sub-committee for examination?—Yes.

Mr. *W. Burnett.*

446. Are you aware that the sub-committee reported in these terms: "That the original map (1845), which is the map upon which that resolution of Sir Roundell Palmer was founded, did not, of course, represent the boundaries of the now purchased site in Carey-street or of the proposed site in Howard-street; and such sites appear to have been inaccurately delineated on the new or reproduced map; for instance, although everyone agrees, and it is so stated on the map itself, that the purchased site in Carey-street contains 7½ acres, the dimensions of the site, as delineated on the map when measured by the scale upon it, do not produce that result. That map, therefore, cannot be relied upon as an accurate representation of the shape and dimensions of the proposed site"?—Yes, I am aware of that.

447. Are you aware that Mr. Hunt moved that the words, "and not a copy as it purports to be," should be inserted instead of the word "reproduction"?—Yes.

448. Are you aware that Mr. Hunt further states, "Nor does it, as it appears to me, represent with proper accuracy by the black blocks upon it, the buildings used by the legal profession, as I have caused an investigation to be made by a competent person, and it has been ascertained that about one-fifth of the buildings thus indicated, are not so used. The map of the Incorporated Law Society is, therefore, in my opinion, neither a copy of the map of 1845, nor an accurate representation of the buildings now used by the legal profession"?—I am aware of that.

449. Are you aware that this map is stated to be copied from the plan, number 608, ordered by the House of Commons to be printed on the 1st of August 1845?—Yes.

450. Is it a copy or not?—It is not a copy in the strict sense of the word, certainly.

451. Then, why was it stated to be a copy?—It is an inaccurate expression.

452. You state on this map, that a space coloured yellow, contains six acres, is that so?—It does not contain six acres.

453. Do you still believe that a road 60 feet wide, might be carried from the Strand to Carey-street, without interfering with the acreage proposed

Mr. *W. Burnet.*

9 July 1869.

posed to be employed for the erection of the Law Courts?—Yes.

454. That is to say, that by carrying this road from the Strand to Carey-street, you would still leave six acres for building purposes?—Not six acres, but a sufficient space for building.

455. A direct road?—A straight road.

456. Such as is marked on this map?—Very nearly, there is a slight projection further westward in the building, but very slight.

457. Upon what grounds did you mark with a violet colour upon this map the site of Mr. Street's proposed erection on the Howard-street site?—It was merely done from reading the report of the speech made in the House of Commons; I am not sure whether by yourself or by the Chancellor of the Exchequer; I had no other information to guide me.

458. Did you consult Mr. Street when you marked upon this map his own plan of the Howard-street site?—No.

459. Why did you not consult Mr. Street?—It did not occur to me to be necessary for the purpose that this map was wanted for.

460. You are aware that this map was produced and used in the House of Commons by Sir Roundell Palmer as an authentic statement of the size and measurements of the respective sites?—Not of the size and measurements but of the general question of the respective sites.

461. Did you draw up that plan which is hung up on the wall?—Yes.

462. Can you state whether Carey-street and the addition to it, between it and Chancery-lane are equal in width the whole distance?—It is not the same width, it varies in several places.

463. Taking that part of Carey-street which abuts on Chancery-lane, is there not a considerable difference in the width of the street at that point?—The part at the Union Bank is rather wider than the general width of Carey-street at present, there are parts in Carey-street that are narrower than that part of Carey-street opposite the Union Bank.

464. But when Carey-street is widened as you have proposed, at that time would the whole width of the street be the same?—No.

465. That part before the Union Bank would be much narrower than Carey-street?—Yes.

466. You have, I believe, prepared for the Royal Commission a reduced plan for the Law Courts, to be placed upon the Parliamentary Carey-street site?—Yes.

467. Have you seen Mr. Street's report upon that plan?—Yes.

468. Are you aware of the criticisms that he makes upon it?—Yes.

469. Do you dispute the accuracy of those criticisms?—I think that that they are not quite accurate.

470. I believe that that is the plan that you have prepared (*handing a plan to the Witness*)?—That is one of the plans.

471. In this plan you make Bell-yard 30 feet wide at the narrowest part?—Yes.

472. It is not a fact that, at the point which is marked here, "Bar-robing Room," there is a projection which reduces the width to less than 30 feet. (*The Witness measured it*)?—I find that it measures quite 30 feet on this plan that I have got here, at this angle.

473. Are you aware that Mr. Hunt, in a report upon your plan, which report has been laid before Parliament, has stated, "Another alteration made in the plan of August 1845, before it was used in the lobby of the House of Commons, was that spaces, which in the original plan had been marked as shops, were included in the altered plan in the deep black blocks intended to indicate buildings used by the legal profession?—I find the careful map that I have made since, shows that a very few places used for other purposes have been coloured by mistake in that way.

474. I believe in your plan, you propose to do away with the bridges which were to connect Carey-street with the Temple and Lincoln's-inn?—Simply because I understand the Government decline to purchase any further land.

475. By your plan, I presume that the judges' access to the courts is to be in Carey-street?—It remains entirely the same as Mr. Street's; I meant no alteration in any arrangement of Mr. Street's.

476. Lord *John Manners.*] If Government declined to purchase any land for the purpose of throwing a bridge from the Carey-street site on to the Thames Embankment site, how would the lawyers and clients who live on the north of the Strand cross conveniently to the new Embankment site?—They would have to cross the Strand as everybody else would have to do.

477. Are you aware whether Mr. Street's plan contemplates throwing a bridge over the Strand from the Embankment site on to the other side?—Yes; I believe that Mr. Street proposes a bridge and a tunnel.

478. Could that be carried into effect without purchasing ground on the south side of the street for that purpose?—No; I should imagine not.

479. Mr. *William Cowper.*] You have just stated in reply to the First Commissioner of Works, that this plan, which was circulated by the Law Institution, is not accurate as to measurement; would you be good enough to explain to the Committee how it happened that you prepared a plan which you now admit is not precisely accurate?—If I may explain how I prepared the plan for the printer, that will explain it all. This (*pointing to it*) is a copy of the House of Commons map of 1845.

480. Published in 1845 as one of the Parliamentary papers?—Yes.

481. Will you state in what Report it was appended?—The Report from the Select Committee on the Courts of Law and Equity, on the 1st of August 1845. On that map you will observe on the present Parliamentary site for the Law Courts, Sir Charles Barry had delineated his proposals, and it was therefore impossible to show plainly, as was wished by the Law Society, what is shown in this new map, and I cut out the whole of this (*pointing to the plan*). It required to be done in very great haste; I believe I did it in less than an hour; I cut out the present site, and included the whole of this part (*pointing to the plan*).

482. Have you cut out all which Sir Charles Barry has coloured blue by his plan?—Yes.

483. Did that extend between Chancery-lane and Clement's Inn?—Yes.

484. Did it occupy the same as the present Carey-street?—Yes, up to Chancery-lane. I then pasted a piece of white paper on the back of it

it, and sketched in Bell-yard. I did not measure it at all; it was all done in *bona fides*.

485. Will you explain why that process of yours ended in its being a false measurement?—By sketching in inaccurately the space between Chancery-lane and Bell-yard. The only inaccuracy is on the east boundary, which is moved too far east.

486. *Mr. Chancellor of the Exchequer.*] How much too far?—Thirty-five feet, I think; but I may mention that on this very Parliamentary map of 1845 there is an inaccuracy of 30 feet in the width of the site from the north-east angle of Pickett-street to Carey-street, and there are several other inaccuracies in it.

487. Mr. *William Cowper.*] Why did you go through this process in such a hurry?—I was desired to produce the map as speedily as I could by the Law Institution.

488. If you had had more time, you would have taken the measurements more accurately, and been able to give a more accurate statement?—Yes, and we should have gone through the parts where there are black marks, and corrected them by the existing "Law List."

489. Did you understand that the purpose for which that map was to be used was to give a general notion of the two schemes without being considered as a precise and accurate exhibition of all the measurements?—Certainly.

490. Then, you were not told that the minute accuracy would be wanted for this purpose, which would be required in an official map that you prepared on your official responsibility?—Certainly not.

491. Is there any other inaccuracy besides that which proceeds from a wrong measurement of the distance between Bell-yard and Chancery lane?—There are a few inaccuracies in the black marks; but the great majority of them arise from the original map here; they are no longer used as legal offices, though they were in 1845.

492. On what data did you proceed to correct the black marks of 1845?—From memory more than anything else, and I only did it in one or two instances.

493. Did you inform those to whom you gave the map that it was one that could be entirely relied upon?—No, certainly not. I spoke of it as being inaccurate in the shape of the site. I do not refer to that inaccuracy at the east end, but I spoke of other inaccuracies.

494. Is this map (*pointing to another map*) a map in which you show how the site of Carey-street might be used with a reduced building?—Yes.

495. Will you explain how you got the reductions; whether they were made in the width of the quadrangles, or in the width of the buildings, taking now the dimensions from north to south?—From north to south, the dimensions of the buildings were reduced, the north range two feet; then there was an external corridor on the south side of that north range, six feet six wide, that is also struck out. The north inner street, or quadrangle of 50 feet wide, is left untouched. The central block, which I understand from Mr. Street to be 272 feet (it does not measure so on Mr. Street's block plans), I reduced to 265. The south street, which on Mr. Street's plan was 62 feet, is reduced to 50, on the ground that if 50 feet was sufficient on the north side for business purposes, it would be sufficient on the south side. Then the south range, which was 56 feet, I make 52 feet, the same as the north range.

496. Will you state what width you have left for Carey-street?—Fifty-five feet.

497. What width did Mr. Street's approved plan leave for Carey-street?—I understand 55 feet.

498. Do you think that 55 feet is a necessary width for Carey-street?—Well, Mr. Street himself proposes on the Howard-street site, to make the new Howard-street 50 feet wide, although it measures only 45 on the small block plan; I should imagine, therefore, that 50 feet for Carey-street would be sufficient.

499. Then, on the authority of Mr. Street in Howard-street, you would give 55 feet; will you state your own opinion as to the width that a street must necessarily be, when it is contiguous to a building of that character?—It ought to be so that the windows on the ground floor would receive the light at an angle of 45 degrees. Still we know that streets narrower than that are sufficiently wide; the width of the street called Exchange-buildings, behind the Royal-exchange, is only 47 feet.

500. Have you reason to believe that houses erected on the opposite side of Carey-street will be lofty?—I should imagine so, because property will become valuable there, and they will be certain to erect large buildings.

501. What is the width of the new enlargement of Carey-street on the east side?—Forty feet from railing to railing, including the area, it is 46 feet.

502. Do you think that that is a width sufficient both for traffic, and for light, and air?—Yes.

503. So that if we may judge by experience that that is sufficient, you might have brought your reduced plan of building much nearer to the north side of Carey-street than you have done?—Ten feet nearer.

504. If, therefore, it be thought that you have too much encroached upon the block of buildings in your reduced plan, you might add 10 feet, by taking the building further northward?—Yes.

505. Your inner quadrangles are 50 feet?—Yes.

506. Will you just state with regard to the west, what area you have left outside your building, between that and the other building?—Sixty feet.

507. And you think that it might be reduced if necessary?—Yes; I should imagine so.

508. You do not think that 60 feet is an essential width to have on the west of the building?—Not if one were cramped for space.

509. Have you in this reduced plan made any alteration in the height from the ground of the floors of the central-hall in the courts?—No alteration whatever; I did not propose to disturb anything that Mr. Street had done in that way.

510. Earl *Grosvenor.*] You have already stated that this plan which was distributed among Members of the House of Commons to influence the decision of the House, was inaccurate, and you state that it was inaccurate with regard to the Carey-street site. May I ask whether the Howard-street site, coloured lavender, is also inaccurate?—Yes, because it is inaccurate on the original map; the inaccuracy on the Carey-street site was my own fault; the inaccuracy on the Embankment site is not my own fault.

511. You

Mr. *W. Burnet.*

9 July 1869.

511. You stated that it was so coloured in consequence of the report of the speech of the First Commissioner of Works, or of the Chancellor of the Exchequer, as I understood you?—Yes.

512. Will you state what, in the report of those speeches, gave you that idea?—The statement, that it was a space of six acres, and that it was not to extend northwards beyond the south front of Howard-street, and on measuring it (I believe with Mr. Street, at all events he saw it afterwards), we found that six acres necessarily brought the line of the south front out to the very wall of the proposed underground railway, and that was the reason why I coloured it as you see it.

513. But you acknowledge now, that that is incorrect?—I have not measured it; I take it on Mr. Street's own statement

514. Will you explain to the Committee why you marked upon this map in front of this lavender site an open cutting; "railway station; open cutting"?—From the best information that we had; I found afterwards that it was inaccurate, and we struck it out, but not till it had been published.

515. Mr. Field stated yesterday in his evidence, with regard to the description of property round Carey-street, that the houses in Carey-street were of a very low description, and that it was obvious that they must be bought if the Law Courts were put on the Carey-street site; and he also stated that the land would be sold at a very advantageous rate; would not the same thing apply supposing the Law Courts were built upon the Howard-street site; do not you suppose that the land now in possession of the Government on the Carey-street site would also be sold advantageously?—I am not competent to express any valuable opinion on such a question as that. I could only give my own judgment upon it. It is not a question that I have had any experience in.

516. Mr. *Osborne Morgan.*] You stated that the descriptions of the sites upon your plan were inaccurate; will you be so good as to state in what respects they were inaccurate?—I have only had a very short time to look at Mr. Street's report on this matter; I only got it last night, and therefore I cannot go through the whole report. I will only notice the last paragraph: "In conclusion, I ought to explain to you how it is that statements such as those which I have made find no place in the report of the sub-committee presented to the Commissioners on the 10th of June." That refers to these tabular statements of the examination of the three schemes. Now, there was a statement prepared on the subject of light and air, on the subject of the surrounding streets, their widths, the slope of the streets, the kind of traffic that would probably be found there, and also as to the question of cost, and, I think, one or two other things, it was not prepared in time to be laid upon the table of the Commission at that meeting; but it was in the stationer's hands, and when it came in I saw Mr. Street with it, and we had a long and quite friendly discussion on the subject, and settled between ourselves what we should say upon it; and therefore I was a little surprised to find it stated here that I had altogether ignored all these subjects of light and air, when I had carefully considered them, and made a comparative statement between this latter reduced scheme and Mr. Street's two schemes.

517. You were asked about a map which was taken from the map of 1845, showing the position of the different professional offices and chambers in London at that time, you admitted that to be inaccurate?—Yes.

518. Have you had an opportunity of ascertaining, since the map was made, in what respect that map was inaccurate?—Principally in chambers in the Howard-street district, and in the Red Lion-square district, and several others have ceased to be used for that purpose.

519. Have you prepared a correct map showing the present position of things?—I am now preparing it.

520. Have you anything to show in an accurate map in what respect the position of the different professional offices is changed?—No; I had that at the last meeting, but I have not got it now; but the numbers were 99 new houses used for legal purposes, as against 74 or 73 which are now disused.

521. But taking the present position of the different professional offices and chambers, are they, as compared with those shown on the map of 1845, nearer to Carey-street or to Howard-street?—Unquestionably, nearer to Carey-street.

522. Then, so far, the inaccuracies on the map of 1845 are favourable rather to the Howard-street site if that is so?—Yes.

523. What was the position of those houses that were marked black upon the map of 1845, generally, and which are now not used as professional offices?—There were several in Red Lion-square, several in Howard-street, and that district, and several in Thavies-inn, and Barnard's-inn.

524. What was the locality of those chambers and offices which do not appear on the map of 1845, but are now used as such?—Principally in Chancery-lane and Carey-street, and that neighbourhood.

525. How about this reduced plan; you prepared it by the orders of the Commission?—No, not by the orders of the Commission, a mere suggestion which I offered to Mr. Field.

526. For what purpose was it intended; it was not intended to be a guide to Mr. Street, was it?—Not at all; it was a mere suggestion of mine to help in the work of the Commission.

527. Was it considered by you as the only mode by which a reduction could be carried out?—Certainly not.

528. Could you suggest any other mode by which a reduction could be carried out?—I did suggest another mode, and showed it to Mr. Street.

529. Was that by narrowing Carey-street?—No, that was the third mode; the second one was to avoid that irregular west end.

530. I understand that it was merely a suggestion of your own, and not intended to supersede the other?—Not in the slightest.

531. Mr. *Goldney.*] At the meeting of the Committee that has been referred to, all the members of the Commission, including Mr. Hunt, that were present agreed in one thing, that in the main that plan of yours was a reproduction of the map of 1845; I means as regards the resolution in No. 4, which was, "This map is in the main a reproduction of a map made by the late Sir Charles Barry"?—Yes.

532. They all agreed with that, with the exception that Mr. Hunt wanted to add the words "not a copy"?—Yes.

533. And the object of the plan was simply to show

show the position of the two sites generally?—Yes.

534. The actual measurement of that land showed a less quantity than 7½ acres in Carey-street?—I have not measured the whole.

535. With reference to this plan of yours as I understand it, it is merely to show that the original plan of Mr. Street can be placed on the site of Carey-street as already purchased?—Yes, that is all.

536. And you do not go minutely into the building?—It is merely a general suggestion.

537. It does not contemplate any of those bridges of communication across the Strand?—No.

538. Nor does Mr. Street's new plan as far as you know contemplate any communication across the Strand to Carey-street?—No.

539. Mr. *Chancellor of the Exchequer.*] What is the length of the eastern side of this yellow piece from Carey-street to the Strand?—I have not measured it.

540. Do you know what the length of the Howard-street site is from east to west?—I cannot remember.

541. Your plan is wrong to the amount of 40 feet there; you have given 40 feet too little?—At Essex-street? Yes, I think so; I did not know the length of the site then.

542. The length is about 800 feet?—Yes, about that, I should think.

543. Then, your plan was wrong by 40 feet multiplied by 800?—Not by 800, but by the depth of the site, whatever that may be.

544. You did not know what the depth of the site was?—No; therefore I wrote the words "six acres" on the plan.

545. Does it not come to this that your plan has given the yellow part about 21,000 feet too much, and Howard-street that much too little?—I never intended that it shouldbe so.

546. I do not say intended, but the practical effect is that, is it not?—The practical effect, no doubt, is that one is too large and the other too small.

547. *Chairman.*] If I understand you rightly, this plan of yours, when first drawn out, was not intended to be minutely accurate?—Not at all; it was a sketch plan.

548. To show how the various sites lay to one another?—Yes.

549. Mr. *Layard.*] When that map was submitted to the meeting of the Commission, and Sir Roundell Palmer moved his resolution, there was also a statement submitted by you, containing in three parallel columns, Mr. Street's Howard-street scheme of May 1869, for the Howard-street site, his reduced scheme for Carey-street site, and the scheme approved by the Commission, that is your scheme reduced to the Carey-street site?—Yes.

550. That statement was also referred to a sub-committee?—Yes.

551. Is it not the fact that that statement was found to be entirely inaccurate?—No, certainly not.

552. Did it not state, in the first column, that Mr. Street's Howard-street scheme covered 8 acres 1 rood 10 perches?—Yes.

553. Did not the sub-committee reduce those dimensions to 6 acres 3 roods 26 perches?—Yes; there is an explanation of that, namely, this: that on the south side of the new proposed building in Howard-street, there was an inclosure shown on Mr. Street's plans, coloured green, with roadways through it. I had no means of making my estimate except on these plans of Mr. Street's. I naturally concluded that this inclosure was to be inclosed and appropriated, not to buildings to be placed upon it, certainly, but for the site of the Law Courts; and I imagined, from all I knew of the views of the Metropolitan Board of Works, that something would have to be paid for it, and therefore I included it.

554. Was not Mr. Street in the office at the time when you drew up that statement?—Yes, I believe he was.

555. And why did you not consult him?—I do not know that I had any right to do so. I was instructed to prepare certain data for the Commission.

556. In this column you state that this was Mr. Street's Howard-street scheme. I wish to know why, before making that statement, you did not ask Mr. Street, who was in the same office with yourself, whether it was or was not his scheme?—The statements were prepared from the first, with the intention of their being submitted to Mr. Street.

557. Did you not state, as part of Mr. Street's Howard-street scheme, "Total area provided, 180,423 feet"?—Yes.

558. Was not that statement corrected by the Sub-committee, and made 285,000?—You will find that there is a foot-note referred to there under the head of "Office Accommodation." In the first column, opposite the words "Office Accommodation," is a reference to a foot-note, and that foot-note says, "Any floor space that might be provided for offices in the court block is omitted in these measurements." I should add that I saw Mr. Street with those papers in writing, and we went over them together, and corrected them by Mr. Street's enlarged plans, before the Committee saw them at all.

559. Why, before preparing that statement, did you not consult Mr. Street?—Because I was instructed to prepare the whole, and then submit it to Mr. Street, after it was prepared.

560. Mr. *Goldney.*] You were employed by the Commission, and not by Mr. Street?—Just so.

561. Mr. *W. Cowper.*] Are you able to state what were the courts and offices which were in the approved plan, and which you have omitted in the reduced plan?—It omits the Probate, Admiralty, Bankruptcy, Land Registry, Middlesex Registry, Offices for Royal Commissions, and Bar-rooms.

562. What I wanted to know was more detail; what were the number and the purposes of the rooms, as well as the courts that were omitted; have you a fuller list than is mentioned in this Parliamentary Paper?—No.

563. Mr. *Bentinck.*] Is there any court omitted?—Yes; the spare courts, Appeal courts, and Bankruptcy.

564. Then, are you able to tell us whether all these courts which are alluded to in this return are excluded both in your reduced plan and in Mr. Street's plan for the Howard-street site?—They are the same in both.

565. Mr. *Goldney.*] Has there not been some considerable difficulty of communication with Mr. Street since the contest has been going on?—I should not wish to say anything about that.

Mr. *W. Burnet.*

9 July 1869.

566. There has been no facility, has there?—No.

567. Mr. *Osborne Morgan.*] Have you written a letter to Mr. Street?—Yes; stating that I was preparing these tables of comparison.

568. Lord *John Manners.*] I think we understood you to say that you took as the basis of your plan for the Howard-street site, the statement supposed to have been made in the House of Commons by the Chancellor of the Exchequer, that no ground was to be purchased to the north of Howard-street?—Yes.

569. Mr. *W. Cowper.*] The ground plans of your reduced court do not tell us whether you have increased the number of storeys; but in the approved plan have you done so?—No; I have left the building precisely the same.

570. Mr. *Osborne Morgan.*] Will you read the letter which you wrote to Mr. Street?—"Dear Sir,—Sir Roundell Palmer has desired me to say that if you can make it convenient to attend the meeting of the Commission to-morrow it would be very desirable. I have, at Sir Roundell's request, prepared a number of calculations in reference to the several schemes for the new law courts, which, of course, are to be submitted to you for examination, and which it was at one time proposed you should have to-day, in anticipation of the meeting to-morrow; but they have involved more work than was supposed, and it will be impossible, I fear, to let you have them in time to check them before the meeting. You shall have them at the earliest possible moment."

571. Have you the answer?—There was no answer. I saw Mr. Street the next morning, and we had a talk about these tables, and that was the answer, I suppose.

572. Mr. *Russell Gurney.*] What did you mean by saying that there was no facility of communication with Mr. Street?—I would rather not have answered the question. Mr. Street's rooms are on one side of our Commission room, and ours on the other; and Mr. Street has kept his doors locked since he began to prepare the plans for the Howard-street scheme.

Mr. George Edmund Street, called in; and Examined.

Mr. *G. E. Street.*

573. Mr. *Chancellor of the Exchequer.*] You are the Architect for the New Law Courts?—Yes.

574. You have heard Mr. Burnet's evidence just now?—Yes.

575. Is there any observation which you wish to make upon it; it divides itself into two parts, first with reference to the plan circulated in the House of Commons, and next with reference to Mr. Burnet's plan which he prepared on the other side; will you have the kindness to say anything you wish to say on either point?—Well, I think that there is one observation that I may make. My reason for calling attention to the inaccuracy of that site as depicted upon the Law Society's plan, was that I saw the debate in the House of Commons, and I saw that Sir Roundell Palmer in his speech said that the ground admitted of a site of 6 acres with good roads east and west; that, as it was shown on those plans, there were direct roads running from north to south on each side of the 6 acres, and I felt that if that was not corrected and it was not shown how inaccurate the statement was, I should be asked in course of time to put on that piece of ground all that could fairly be put on 6 acres of good building land. I do not think that I have anything more to say on that point, for the accuracy of all my statements has been admitted.

576. Can you state the amount of error of the two sites?—It was stated in my report. The site on the north side of the street, the Carey-street site, as it is commonly termed, has been altered as Mr. Burnet told you by altering the eastern boundary from 40 to 45 feet at various points.

577. What would that give in acres?—Practically it makes a site of that shape, which it is possible to build on, from 4½ to 4¾ acres, instead of the 6 acres written on that plan.

578. With regard to Howard-street, what is the difference?—I have never measured the exact difference. There the error arose entirely from ignorance of what the land proposed was, and from the inaccuracy of the original map.

579. I am not speaking of any blame, but of the amount of error?—I cannot say exactly.

580. It was 40 feet by the depth of this plan (*pointing to the plan*)?—Yes; I do not know exactly what it was.

581. Something not very different from the error on the other side, I suppose?—Not so much.

582. You were instructed to prepare a plan by the Commission, I think?—The original plan.

583. What I may call the great plan?—Yes.

584. Will you tell us as much about that as you think that we ought to know, with a view to understanding the plans now in competition?—That great plan is shown on the map on the other side of the room by the outline marked blue; it contained exactly what was required by the Commission of the competing architects, and it provided for no distant approaches; it provided for sufficient open spaces in the way of inside streets and quadrangles for lighting the whole building, and for all necessary immediate access, and provided for widening Serle-street and Carey-street on the north, and Bell-yard on the east, and for making an opening from Bell-yard into Chancery-lane, and for making a new street between the building and Clement's Inn, most of which is shown by the yellow colour outside the blue line on that plan.

585. What amount of ground did that cover?—I really do not exactly remember the exact amount of acreage; there was 7¼ acres on the original site, and then the additional land, for which a Bill was prepared to go before Parliament, amounted to 3 or 4 acres more, but some of that was for re-sale.

586. Would it have covered the 7¼ acres?—Yes; that and the streets round it would have covered more.

587. What offices would it have contained?—All the courts and the offices naturally connected with the courts; the Appellate Court, offices for all the officers, such as the Registrars in Chancery, the Accountant General, a new department for the registrars connected with the Accountant General, the Vice-Chancellors' Chambers, the Taxing Masters' Offices, Record and Writ Office, and a vast collection of offices connected with the Probate

Probate Court; a space for the Bankruptcy Court and Bankruptcy Registrars and Common Law Masters, and the Queen's Remembrancer, and a number of smaller subordinate offices.

588. And what were the arrangements of the courts and offices on that plan?—The general scheme was keeping the courts and rooms, immediately connected with the courts in the central block, entirely separated by an internal street from the building which contained all the offices.

589. They formed a sort of circle round the courts, being separated by a street?—Yes; over which there were several bridges of communication.

590. What provision was there for light, and air, and quiet?—The provisions were very carefully considered altogether. On the north side there was a bridge communicating between Lincoln's Inn and the building, the height of which above the street would have prevented any very heavy traffic passing along Carey-street. Then on the eastern side Bell-yard was not proposed to be a through thoroughfare, it was stopped by steps at the north of the entrance, so that no carriages could have passed through. On the south side we had the Strand; on the western side we had a broad 60-feet road between Clement's Inn and the building, which would have been guarded by gates at each end, so that it would not have been a public thoroughfare. So that we secured practical quiet on three sides of the exterior of the building, and in the interior no traffic was to be allowed to pass through except to the courts themselves; and there was a good ordinary provision for light and air outside.

591. You had internal quadrangles for lighting purposes?—Yes; streets and quadrangles varying from 50 to 88 feet in width.

592. With regard to approaches, what approaches did you consider it necessary to recommend in the immediate neighbourhood?—I think, perhaps, it would be well that I should read a Report which I read to a sub-committee of the Courts of Justice Commission on July 2nd 1868. "For approaches and for improved lights on the east, west, and north sides of the site the whole of the lands coloured pink on the block plan will be required; and, in addition, the following acquisitions of land ought, in my opinion, to be secured: (1.) Sufficient land to allow of the continuation of the road on the western side of Lincoln's Inn Fields down to Gilbert-street, and thence by a line sloping in a south-east direction to the site of the new building, and so on to the Strand. I have marked the margin of this roadway on the block plan with a dark blue tint; most of this land is already marked green on the block plan." I may mention that all the land coloured green on that plan was land which all the competing architects agreed before the design was sent in would be necessary for the building.

593. That is to the north-west?—Yes.

594. Mr. *Beresford Hope.*] When did they so agree?—At a meeting held at the request of the Commission.

595. Mr. *W. Cowper.*] Did they consider it necessary, or did they desire it?—I believe it was impossible to say, because everybody's plan differed a little, but as far as they could say, talking in that way before their plans were sent in, they all agreed that it would be desirable to have all those green lands purchased; but the Commission, I think, thought that they must wait.

596. Mr. *Chancellor of the Exchequer.*] Will you proceed with your report?—"(2.) On the south side of Portugal-street, a small portion of land should be taken from King's College Hospital to improve the junction of Carey-street and Portugal-street. This will probably be the principal entrance to the building for the judges. (3.) The Cook's-court block, coloured green, is, I believe, to be purchased. When this is done, it would be well to take the opportunity to widen Serle-street." (Serle-street is shown in its present width there. It comes right up to the middle of the building, and I thought it desirable to widen it up to Lincoln's Inn Fields.) "(4.) The land, coloured green, forming the south side of New-square, ought, I think, to be obtained. It would be of the greatest importance to the building if no buildings intervened between it and New-square, and offices and chambers of the same extent might easily be erected on some of the land, coloured pink, between the southern end of Bell-yard and Chancery-lane." (That was land that had also been recommended for purchase.) "I consider the purchase of this land very important." Then the next recommendation (I pass over one, for a subway under Chancery-lane to the Rolls Estate, which was given up in a very early stage of the proceedings) is, "In the centre of the east front of the building, sufficient land ought to be acquired to allow of a large entrance court being formed where carriages and cabs could stand. This might have a gallery round three sides, communicating with the bar corridors, and by a bridge across Chancery-lane just to the north of Serjeant's Inn with the Rolls Estate, so as to allow of the extension of the buildings in this direction, if necessary, at any future time. The whole of the land required for this is outlined with dark blue on the block plan. In order to obtain the necessary approaches to the new Temple Bar bridge, it will be necessary to secure a portion only of the land, coloured green, between Thanet-place and Child's-place. My plan will make it necessary to place the bridge about 10 feet west of the present bar. This will leave the front of Child's bank undisturbed; and I have marked on the plan with blue, the land which ought to be bought in order to make an approach from Brick-court. This can be accomplished, I think, without interfering with Messrs. Child's premises." The Commission, I think, recommended a great portion of those purchases.

597. You reported all these to the Commission?—I think to a sub-committee, first of all, and then to the Commission. At page 248 of the Minutes, it appears that the secretary was ordered to write to the Treasury "a letter in the terms following," and among other things it is said, "The Commission have carefully re-considered the whole subject of additional purchases in conjunction with the architect, and with the light thrown upon it by his plans now made, and the Commission are satisfied, not only that none of the above-mentioned lands can be dispensed with, but that it is an object of great importance to add thereto the ground occupied by Hodgson's Auction Rooms, and the Albion Insurance Office, both in Chancery-lane, and a small portion of the area on the west side of the Law Fire Office adjoining Bell-yard. They are also of opinion, that it would be desirable to include in the compulsory powers Hallett's Tavern, and the land in the occupation of the London Joint Stock Bank, and of the Law Union Insurance Office, all of which are in

Mr. *G. E. Street.* 9 July 1869.

Mr. *G. E. Street.*

9 July 1869.

Chancery-lane," and they go on to say, "But in proposing to the Treasury that compulsory powers should be taken for the purchase of these last-mentioned lands (as an economical arrangement in view of the position of the three properties mentioned, and of the probability that they may be at some future time required, when their value will have been greatly augmented), the Commission do not anticipate any immediate necessity for removing the houses now existing thereon, which, until required for public purposes, may be held by the Government as landlords." It was with a view to have the command of that property towards Chancery-lane that they recommended that very large purchase there.

598. Mr. *Hunt.*] What is the date of that letter?—The 23rd of July 1868. I may say that the approach-road from the north has never been approved by the Commission; that is only my recommendation.

599. Mr. *Chancellor of the Exchequer.*] A road from where?—From Lincoln's Inn Fields to the building; both the taking off a corner of Portugal-street, and the making a wide street from Lincoln's Inn Fields to the building, were never approved of by the Commission.

600. Did they approve of all the rest substantially, or were there any other things that they disapproved of?—I think the Commission have approved of everything else.

601. That includes not only the approaches, but the purchases that you recommended?—Yes. I think that includes everything that I considered necessary in order to erect the building.

602. Can you tell me the quantity of land that this was?—I do not know exactly. I have never gone into the quantities of land.

603. Have you the means of telling us that afterwards?—Yes; the fact is, that I have never dealt with the quantities of land. It is easy to measure it; but then of course that new street would be a very large proportion of my recommendation, and it never passed beyond the stage of being a recommendation.

604. In the same way you have nothing to say about the price?—No.

605. Will you tell us why you recommended these purchases?—As I said in my report, they appeared to me to be indispensable for the proper working of the building. That western road from Lincoln's Inn Fields appears to me to be indispensable, because looking to the state of communication in London, from north to south, between Waterloo Bridge and Blackfriars Bridge, if in the course of any alterations it is possible to give another road, north and south, I conceive that it would be an enormous advantage to the metropolis to do so. I imagine that the Commission felt that it would be so great an advantage to the metropolis that they thought it could not be fairly charged to the building.

606. They did not doubt the wisdom of it, but thought it not their business?—I think so, but am not sure that they discussed it.

607. Have you anything further to say on this building?—There is one question of the estimate of land, which I may mention; I do not think that it has come before the Committee that Mr. Pownall's estimate in 1866 for additional land was 488,000 *l.*; but as you will see at page 77 of the Minutes, he foretold that if it was not purchased then, the price would be soon largely increased; and in 1868, when he made another, which amounted to 668,000 *l.*, the estimate for the original land had already been increased by 50,000 *l.*

608. I think that 668,000 *l.* did not include everything; not Cook's-court?—I think that it included the south side, but not the eastern side; not the widening of Serle-street.

609. Will you tell me whether it was on account of the large size of these buildings that you considered these purchases indispensable, or from the nature of the situation of the building, or from what cause?—From both of those causes. It appeared to me important that so large a public building should have, at least, good means of access to it on all sides, and good thoroughfares all round it, and really they were most amply provided for, if we take the whole surroundings on the map. On the western side, you see that we had recommended the purchase of the property south of the Law Institution, and there could be no doubt that if the Government became the landlords, the whole of that would be rebuilt in such a way as not to be offensive to the building. On the north side we proposed to take away all the low houses at the back of New-square; the Commission would not entertain my recommendation of opening the south side of New-square to the building; but they entertained the recommendation of taking away the low houses on the north of Carey-street.

610. Or did they entertain the recommendation of pulling down the south side of New-square?—No, the expense was too great; to the west of Serle-street, we had to deal with a company, mainly of Liverpool gentlemen, who had purchased a great number of the houses, and as far as I remember the agreement with them was that the Government was to obtain powers for the whole of that block of land between Portugal-street, Serle-street, and Carey-street, and to pay them per foot whatever it had cost the company.

611. The company was content to make no profit by it?—Yes; it was a very good bargain for the Government, I think, and I have no doubt for the company too, as they so readily agreed to it. Then on the north western side we proposed to take down all the low houses between the hospital and the building, which are of a very inferior character; and on the western side by a give-and-take arrangement, for which also there was some kind of agreement prepared, I believe, with Clement's Inn, we were to take Danes Inn; and Clement's Inn proposed to rebuild their own Inn on the opposite side of our western approach road. In that way almost the whole surroundings of the building would have been new, in one or two places done at the expense of the Government, but very largely at the expense of private individuals.

612. Will you tell us what sort of property it is that surrounds this Carey-street in general?—Between Chancery-lane and Fleet-street, below the Law Fire Insurance, the properties in Bell-yard are very small. Bell-yard is a narrow alley, and the houses there are small poor houses, not running back far generally, and of an extremely bad kind to have opposite to a public building; on the north side they are not so bad, though they are not quite the sort of building that you would like opposite a public building; but there is nothing very offensive about them.

613. They are lofty, are they not?—No, none of them, because the buildings at the back of the New-square buildings are two storeys in height only;

only; then the New-square buildings are a fair height, but nothing extraordinary; and on the north-west you come into the Clare Market district, which is one of the very worst districts in London, and that was one of my reasons for wishing a road made to cut it off.

614. And the south-west?—That is a fairly respectable district, till you get down to Wych-street and Holywell-street; there the houses are bad.

615. Now, will you have the kindness to describe what the Howard-street site is to the the Committee?—The Howard-street site, I think, is most clearly seen on that map. The line that I propose to take for the building on the Howard-street site is the south side of Howard-street.

616. How far south of the Strand is Howard-street?—220 feet is the present length of the upper part of Norfolk-street; and I proposed, in order to have a command of the levels of Howard-street, and in order to have good buildings on the opposite sides to the Courts of Justice, that the houses on the north side of Howard-street should be taken, and that that should be the line; that Government should take all across a line parallel with Howard-street, but going back a little to the north of it.

617. The depth of one house?—Yes.

618. That was your proposal?—That was my proposal, and to go as far on the east as the eastern side of Essex-street, that is really to the Temple.

619. That is, to take both sides of Essex-street?—To take both sides of Essex-street. Then I proposed that the houses should be taken from Howard-street up to the Strand, so that we might be able to continue the line of the new Essex-street in a straight line up to the Strand.

620. You do not mean the Howard-street that exists now?—No; the proposed continuation of it eastward of the existing street.

621. You propose to take both sides of Essex-street up to the Strand?—Yes, and to alter the line of Essex-street; it is in a very inconvenient direction, not square with the building.

622. Then, what else are we to purchase?—That is the whole, because on the south you have the Embankment.

623. There is the south of Howard-street?—The whole south of Howard-street between King's College on the one hand, and the Temple on the other.

624. Putting aside Essex-street for a moment, which is only an approach, what size will that give you to build upon?—It is 3 acres 3 roods 26 poles of land covered with houses, and 3 roods 33 poles of reclaimed land, making 4 acres 3 roods, very nearly 5 acres.

625. Lord *John Manners.*] For the purpose of building that is?—Yes.

626. Mr. *Beresford Hope.*] Is that including courtyards?—Yes, the land inclosed within that outline on the map.

627. Mr. *Layard.*] That part coloured violet on the map?—And the part marked white; there is a very large quadrangle included in this amount.

628. Mr. *Chancellor of the Exchequer.*] How would that site be bounded on the west?—By King's College.

629. On the east by the Temple?—Yes.

630. On the south by the Thames Embankment?—Yes.

631. On the north by the new street?—Yes, by the new street, of which Howard-street forms the basis.

632. What do you think of this site, of its merits and demerits as a site?—I think it is an extremely good site for building.

633. Will you state why you think so?—Because the light and air are extremely good, and the approaches seem to me to be good, and I think that the opportunity of architectural effect would also be good.

634. There are three heads there, first with regard to light and air, and quiet, why do you think that they would be good there?—Because on the south side you have an enormous opening, the whole width of the river. On the eastern side, to a considerable extent, you have the garden of the Temple. And on the western, though the opening is not so good, you look on to the back of King's College, which stands back some distance from the boundary of the street, and a good many of the buildings being low, the new Courts being about 90 or 100 feet from Somerset House, would have also the advantage of light and air from the river on the south side.

635. Are you of opinion that it would be lighter than the Carey-street site?—My opinion is that it certainly would be, as you have much less interruption by means of other buildings.

636. Now, as to the question of access, what access is there to it?—The access is singularly good to this site; in the first place there is the Thames Embankment.

637. What access is that?—The Thames Embankment gives you the great access on the south to the building.

638. It is a road 100 feet wide?—Yes, it is a road 100 feet wide; it is connected with the new road from the Mansion House, which is just a mile from the corner of the building on the Embankment, and it goes on to Westminster, which is just another mile, Then, of course, there is the railway on it, which, making the circuit of London, enables people, if they choose, to come by railway from all parts of London to the south side of the building. Then, there is the access by the river also, which is also important, I presume. There is easy access from the south side from Southwark, by Waterloo, or Blackfriars Bridge. Then the access from the north is the point on which, I think, most explanation is wanted. I noticed that Mr. Field, in answer to some question, observed that the access from the north to both sites is exactly the same. I do not think that is quite accurate, because if anybody arrived at the North Western Station, and asked a cabman to drive him to Norfolk-street, he would take him down Gower-street and Drury-lane, or down Tottenham Court-road and Endell-street, and so into the Strand, for you have certain roads which are quite passable there without taking people through the sharp little turns of Little Queen-street, Great Queen-street, and Portsmouth-street. Then, from the east and north-east you can hardly conceive anything much worse than the communications with Carey-street. Chancery-lane is only 20 feet at the narrow part, I think, and a great part of the traffic to the Carey-street site would come down that way. To the building here in Howard-street a certain portion of it would, no doubt, come down Fetter-lane as well as Chancery-lane.

Mr. *G. E. Street.* 9 July 1869.

lane. This is an almost equally bad street; but it is better to have two bad streets than one. Then there is a probability of people coming by the Embankment to Howard-street. I think that a cabman driving from the new Smithfield Market would save time if he were to go down under the Holborn Viaduct and along Farringdon-street until he got to the Embankment. The road from the City to the Embankment will be a road on which everybody may travel rapidly.

639. From its great width?—Yes; as there cannot be a great number of shops or warehouses on the road, there would not be the sort of traffic that there is along Fleet-street or the Strand.

640. Now, on the west?—On the west the traffic would come mainly along the Strand and the Embankment. From the whole south-west it would come by the Embankment, from Victoria-street and the other side of Westminster Bridge, and so forth; but from Piccadilly and that part everything would come into the Strand.

641. Do you contemplate any approach from Wellington-street?—From Wellington-street to the building I propose to avail myself of the terrace which exists in front of Somerset House, and which is already a carriage road with a foot-path on each side of it. It is a level of about three feet below Wellington-street, and by a slight alteration this could be made a carriage-way to the angle of the new building.

642. It is suggested that the railway being close to it would be a nuisance to the building; what do you say to that?—Undoubtedly it is a difficulty; I think that, with the assistance of Mr. Fowler, the engineer, I have made such an alteration as will prevent its being any great difficulty. That plan on the wall, I think, shows more clearly than any small plan what the old scheme of the railway was. There was a very large station in the middle of the Embankment, and a rising road on each side of it, which led round to the ends of Norfolk-street, Surrey-street, and Arundel-street. The rising road did not inclose an open cutting as the Law Society's plan says, but what Mr. Burnet, when he drew the large plan, very properly called a garden. I felt that if that railway station were to be built there it would be fatal not only to the building of such a large building as the Courts of Justice on the site, but to the building of anything really good there. I saw Mr. Fowler as soon as I was consulted on this site, and afterwards the chairman of the railway company, and Mr. Fowler, at my suggestion, proposed an altered scheme for the railway. What was originally proposed was an enormous opening of, I think, 15 feet by 150, which was placed in the very front of the intended line of the building. This is Mr. Fowler's Parliamentary plan (*producing it*), and he had stations and terraces all the way round; he has consented, instead of having that opening there, to have three openings (*pointing them out*), one here (*pointing to it*), and another which includes the station here at the south-east of the building, and another small opening here to ventilate the station and light it. The latter comes on the reclaimed land which is the property of the Middle Temple, and the Benchers of the Middle Temple have no objection to an opening of that kind on their ground. The evil is reduced so much that I do not now feel that it is a serious objection to the scheme.

643. How do you consider that those changes obviate the evil?—Because the opening is so small, and part of the opening is removed from our own land on to the land of the Temple; and, moreover, I have put it in front of a great opening which I have formed in my building towards the river. So that there are only two portions of the building which would be at all affected by it.

644. Then you are of opinion that the approaches are good upon the whole to Howard-street?—Extremely good.

645. There is the question about crossing the Strand for those who live north of the Strand; have you anything to say as to that?—I thought that it was extremely desirable to show that the admitted difficulty of crossing the Strand could be got over if the necessary powers were taken. The most convenient place for crossing the Strand to this building from the north, would undoubtedly be Essex-street, which would be just in a line with Serle-street; and therefore I have no doubt whatever that in laying out the land on the north side of the Strand, supposing that the Embankment site were adopted, a broad street would be carried from Carey-street down to the Strand.

646. Through the middle of the piece of land, now the property of the Government?—Yes, that would be the inevitable way of laying it out as a question of sale, and the width of the Strand would be so great there, that if everybody were to attempt to cross, it would be a great difficulty. It would be something like 175 feet there between the buildings on one side and the buildings on the other. The levels of the ground, as I have stated in my report to the First Commissioner, would allow of making a tunnel from Howard-street to the north side of the Strand, and then ascending to the Strand by stairs, so that by a tunnel you get over the necessity of crossing for people who choose to go on the level. Then, again, it would be very easy to contrive an arcade, which, starting from the north side of the Strand, at about 10 or 12 feet above the level of Carey-street, would take you across the Strand and bring you to the floor above the courts. That is to the level of one of the highest floors in the building in Howard-street (*describing it on the plan*).

647. Mr. *Layard.*] Do you think the most profitable way of laying out this ground would be to have a wide street in the centre; supposing it were possible for a company to buy this land, and lay it out for chambers, they would naturally, in order to use it to the best advantage, lay out streets?—Yes.

648. *Chairman.*] It would not follow that they would make it as wide a street as is proposed here, or in the same situation?—It would almost follow unless some one company wanted to put some one building on the whole site, for a railway station for instance.

649. Mr. *Layard.*] The Government in selling that land might make its own conditions?—Yes.

650. Lord *John Manners.*] Might not the conditions contemplated being imposed by the Government diminish the value of the land as a building speculation?—I do not think that it would diminish it the least in the world, except on the supposition that some railway companies who wanted to use the 7½ acres of land (as suggested by Mr. Beresford Hope) should be the purchasers of the land.

651. Might you not conceive other large speculations,

speculations, a market, a bazaar, or any other great building of that sort, which might be injuriously affected by a condition that would necessarily run this wide street down there?—No, I cannot think so, because the great difficulty of selling this land, if you provide no thoroughfare through it, would be that you would get no respectable people to live on it.

652. What thoroughfare would there be, unless much larger street alterations are made to the north of Carey-street, than would properly apply to the erection of law courts on either side of the two sites?—I assume, as a matter of course, that if Government made a broad street from the river up as far as Carey-street, and as a broad street exists for more than half the way already beyond, that it would be impossible to refuse the concession as a metropolitan improvement of widening Serle-street, and opening Great Turnstile at an expense of 120,000 *l.* or 130,000 *l.*, I suppose. This plan also shows the arrangement of the tunnels and the passages (*describing the plan*). Then, here on this level is an arcade, somewhat like the Rows in Chester (*describing it on the plan*). I have no doubt that that sort of condition would not really affect the value of this land for building, because people who would have the advantage of using it for chambers and so on, and would gladly build the necessary passages if Government made it a condition.

653. Mr. *Chancellor of the Exchequer.*] You said that you would take both sides of Essex-street; will you tell us why you think it necessary or advisable to do that?—Because it appears to me that to stop Essex-street at Howard-street would be exceedingly inconvenient. People would come from the Embankment up this fine new street, 60 feet wide, and when they got to the north-east corner of the building they would have to turn round and find their way up to the Strand by Arundel-street, Norfolk-street, or Surrey-street. It is true that they could do that, but it would not be a convenient thing to do, and I consider that, though the lengthening of New Essex-street up to the Strand would be, no doubt, an enormous metropolitan improvement, still it is also an improvement which would be necessary, if any public building is to be put on this site, to give an easy access to it.

654. Supposing that were not done, would these courts have bad access; they would still have three streets, Norfolk-street, Surrey-street, and Arundel-street?—Yes, four streets, including Milford-street, but two of them bad; Essex-street is rather narrow at the opening.

655. However, that improvement is what you recommend as an architect?—Yes.

656. Have you anything more to say on the subject of access?—I think I have said all on that.

657. Now we come to the next head of the matter, the architectural qualities of this site; what have you to say about that?—I have a very high opinion of the advantages which the site offers.

658. Will you state why?—Of course the main architectural effect of the exterior of the building will be from the south side, the Embankment. It is always an advantage to have the principal architectural effect in this country with a southern aspect; you never have too much light and shade here. The lie of the ground is very peculiar on the Embankment; the Embankment roadway, as you will see from these plans, is on a very considerable curve, and it is almost indispensably necessary in arranging the front of the building to suit that curve, that the front should be irregularly broken; in some degree, I think that it would be a very great advantage, and the more so as it follows after the unbroken façade of Somerset House. I can understand a popular objection being taken (as it has been taken I believe already) to putting any building in continuation of Somerset House which is not in a line with it; but if the Committee will look at that plan they will see immediately what the result of building in a line with Somerset House would be; that your building would run away from the river, from the Embankment, and it would be as unsightly to have a great public building taking an entirely different line from the curve of the Embankment as anything you could conceive.

659. It would be like a tangent drawn to a curve?—Yes. At the same time the Metropolitan Railway in front of Somerset House goes under the road which is 100 feet wide, and wherever the railway station is to be made, owing to the very slight dip below the ground of the Metropolitan Railway, it is impossible to get a passage for passengers over the trains, therefore they must pass outside. The consequence is, that I have had to move the railway up to that point which you see marked on the plans, and it defines exactly the extreme point southward to which the building can possibly come. At the south-east angle the angle of the building comes as near as it can to the railway, and that is 180 feet back from the front of the river. The south-east angle of Somerset House-terrace is 143 feet from the Embankment. I have taken the terrace line of Somerset House as the building line for the new courts; I did it not only because I wanted the width from Howard-street down to the southwards, but also because, as anybody will see who walks along the Embankment, if the building was set back behind the line of the terrace, nothing would be seen of it as you came from the west, it would be entirely concealed by the terrace. The terrace is about 35 feet above the Embankment, and so large a feature that it appears to me to be a natural line from which all building ought to proceed.

660. You think that it is bad abstractedly, without reference to convenience that it should be in a line with Somerset House?—Most fatal; then it was proposed by some people that there should be a continuation of the Somerset House-terrace in front of this building; that would involve enormous expense. Somerset House-terrace practically conceals the two lower storeys of Somerset House, and I could not afford to sacrifice that space; and then again the terrace decreases very much the apparent height of the building. I was obliged to make use of the whole height in order not to waste money in building up unnecessary foundations, and I proposed to regulate the height of my building by the height of Somerset House, making the height of my parapet the same as the height of the parapet of Somerset House. I feel that whatever I may say about Somerset House may be said by some people to be an opinion that ought to be taken *cum grano*; I confess that the river front of Somerset House does not appear to me the best part of it; I have always felt that the Strand front is the best of it, with the view

Mr. *G. E. Street.*
9 July 1869.

looking into the quadrangle. The river front seems to me to owe its importance very much to the beautiful colour of its stone and its great length; but I should like to read a very short extract from what Mr. Fergusson, who is generally accepted as an authority in these matters, said in his History of Modern Architecture some four or five years ago of Somerset House, speaking of the river front, "The river front, however, was Chambers's great opportunity, but it unfortunately shows how little he was equal to the task he had undertaken; to treat a southern façade, nearly 600 feet in extent, in the same manner as he had treated a northern one only 132 feet long, was about as great a blunder as an architect ever made; no wonder that it looks hardly as high, and is not more dignified, than a terrace of private houses in the Regent's Park or elsewhere: this is the more inexcusable, as he had 100 feet of elevation available from the water's edge, without adding one inch to the height of his buildings, which was more than sufficient for architectural effect, if he had knowledge to use it; even with the terrace as it is, if he had brought forward the wings" (I wish you particularly to notice this) "only to the edge of the terrace, and thrown his centre back 50 or 100 feet, he would have improved the court immensely, and given variety and height to the river front, and then either with a cupola or some higher feature in the centre, the worst defects of the building might have been avoided." Now, I have read that extract from what Mr. Fergusson says, because it has been objected that the angle of my building will project in advance of Somerset House 80 feet; I think I have seen Mr. Pownall states it in some report. He is a little inaccurate there; the difference is about 50 feet, exactly the width of the terrace at the point of junction; but if you look on this plan at the whole curve of the river, you will see that the curve is so favourable that anybody coming along here (*pointing to the plan*) on this eastern part of the Embankment, will never have any part of Somerset House concealed by a building projecting as much as that only. There is a space of 92 feet between the angle of Somerset House and my building, and this point projecting only 50 feet (*pointing to the plan*), the effect of this curve is that only about 40 or 50 feet of the building is obscured at the worst, and from this side (*pointing to the plan*) you see the whole of the building perfectly. This little projection will not appear to set the building back or throw it into the shade.

661. Mr. *Layard.*] May I ask you what is the projection of the west side of Wellington-street, which is marked pink on the map; it would be about the same as your building, would it not?—I am not aware; on the same point I should like to say, also, that is impossible to lay down iron rules as to whether buildings are or are not to project a little nearer the water's edge than other buildings near them. If you take some of the finest buildings in the world you find the rule set at naught. For instance, the ducal palace at Venice stands on one side of the piazza, and stands 50 feet further from the water than the library of St. Mark. Nobody ever felt that either building looked the worse; just in the same way, also, St. Mark's Church itself stands in advance of the palace. Then, again, the very effect of my design would be just that which Mr. Furgusson has pointed out, that dispensing with the terrace my building would look much loftier than Somerset House. I think the suggestion which he makes about an improved lantern or dome in the centre of Somerset House would cure that. But a small building by another that is loftier is not necessarily injured by the fact. We all know how well the Traveller's Club looks standing close by the Reform Club; it does not appear to me to be affected by the fact that the building by its side is loftier; and I might also give the example of the Bank of England and the Royal Exchange. Good architecture always asserts itself, and it does not signify to a building that another near it is loftier.

662. Mr. *Chancellor of the Exchequer.*] It is objected that this is down in a hole, what do you say to that?—"Down in hole" is a strong statement; seen from the south, of course it is up on the hill; seen from the north, the Strand, it has a certain disadvantage in having its front ground line 10 feet below the level of the Strand. On the other hand, we must remember that, as I suppose there is no prospect whatever of that ground ever being cleared from Howard-street up to the Strand for the purpose of forming a courtyard up to the building, because the site would be so enormously expensive (at the present moment I am told it would cost 1,000,000 *l.*), the only views of the building from the Strand would be views down a street, and, seen in that way, it matters very little whether you are looking down upon it or not. I could quote examples, if it were worth while, of buildings which you do look down to in that way, and where nobody feels that they are much the worse for it. I remember particularly the north transept to the cathedral at Toledo, which one looks down to, one of the most picturesque views possible; and, to give another instance of a different kind, I think that the view which Longleat presents, where one looks down to the house, is singularly beautiful, and not much affected by the fact that the spectator stands above the house. My opinion is, therefore, that as there is no apparent chance of there being a great open place in front of it, the descent is not a serious objection, though, on the whole, I would rather the ground were level.

663. Turning to the other side, what do you think of it as an object in London?—It would have a very important effect there if my scheme is carried out, because the views of that site, as the Committee may satisfy themselves if they go to look at it, are singularly good. Even from the hospital opposite to this room, or from the Surrey side of Westminster Bridge, you can see Somerset House, and you see the Temple Library. From this point the gap between these two boundaries of the site seems really to take in a third of London almost, it looks so much larger than it really is; and you would see this building rising with high towers, and high gables, well from here in spite of the bridges. From Waterloo Bridge it would be a singularly good view, for this reason: that Waterloo Bridge is 37 feet above the ground level of the Embankment, so that you get naturally what, when I made my competition design for this building, I was obliged to get artificially. In order to show the whole scheme, including the great central-hall rising above other buildings, I was obliged to take a bird's eye view, which is entirely an imaginary thing, but from Waterloo Bridge you do get, to a great extent, the effect of a bird's eye view. Rising behind

behind the lower buildings, at the front, you see the higher buildings at the back; and it is difficult to conceive a site where you will see the buildings better, both from the ground line and from a line above. The view in a distant view of London, would not be so good as of a building in a higher site, in my opinion; but still, if my plan is carried out, the buildings are so high that they will still be seen rising above the general block of houses (*describing it on the sketch*). Here is a similar sketch of my first approved plan, for building on the Carey-street site (*producing it*). There is a difference of 22 feet in the elevation above the Embankment on the two sites (*pointing to the plan*).

664. There is a difference of 22 feet between the level of the building on the Embankment site and the Carey-street site; that is to say, Howard-street would be 22 feet lower than Carey-street?—Yes.

665. Mr. *Beresford Hope.*] The southern line of each?—The real line from which all the buildings are taken; that is, practically, the floor of the central-hall.

666. Mr. *Chancellor of the Exchequer.*] It was said that the courts were to be on the ground floor, and that arrangement was found fault with; is that the case?—They are not to be on the ground floor in any of my plans; I quite agree with Mr. Field that the first floor is the proper place for the courts.

667. Mr. *Goldney.*] When your two designs were originated, there was only 22 feet difference from one given point to another given point?—Yes.

668. Mr. *Chancellor of the Exchequer.*] Have you any other point to mention upon the levels?—There is one point as to levels; the great slope of ground on the Embankment site and all the way down gives the advantage which that section, the drawing of the bridge and the houses in Essex-street, showed you; it gives the advantage of enabling people, with a very slight ascent on the north, to find themselves very high in the building in Howard-street, and also of being able to get entrances at several levels. There is a difference of 23 feet between the south side of the building on the Embankment and the north side in Howard-street; so that you might have some office entrances on the Embankment which would give you an entrance two floors below the level you can enter on at the north side; and in that large quadrangle shown on the other plan you can get other entrances, so that there are three different levels for accesses.

669. You propose some access from the Temple?—I have not proposed it, but it would be very easy to give a bridge across from Fountain-court, in the Temple, to Howard-steeet; and I may mention, what I have not mentioned before, that I should not propose to build up opposite Howard-street in front of Fountain-court, because few things would be more charming than looking into that court, with its old hall, which is exactly on a line with the north side of the building. It would be quite possible, if it were thought desirable, to carry a bridge across from the Temple into the building.

670. Have you anything more to say on the purely architectural question?—No, I do not think that I have.

671. Now on the question of the foundations. It is said that they will be very expensive; what do you say to that?—I have taken a good deal of pains to ascertain, as well as one can without boring, the nature of the foundations there. We have an unusually good opportunity of ascertaining that now, owing to the works in progress for the Embankment and for the railway; there have been borings taken all the way along the front of the Embankment for the purpose of building the Embankment wall. First, below the bed of the river, there is soft muddy sand, and then sharp gravelly sand, and then sharp gravelly sand and gravel or clean gravel. The works on the eastern division of the Embankment which I have carefully examined, convince me that if we decided that we should carry down foundations to a depth of 25 feet below the level of the roadway, we should secure perfectly good foundations. Of course, there is a little guess-work in it; but every one connected with the Embankment work says that 25 feet would be more than enough. The clerk of the works on the works told me that at 20 feet down you can get everything that you possibly want. I have assumed 25 feet; in short, that we should have to put along the whole front of the building towards the Embankment a bed of concrete 25 feet in depth, by 50 or 60 in width.

672. This site is inferior to Carey-street in point of foundation, I suppose?—I apprehend that you would have to make a greater amount of foundation there than in Carey-street.

673. Is there anything that counterbalances that?—Yes; there is the very great facility of building; you would be able to build on this Embankment site without any interference whatever with the traffic of London. That is one great advantage, of course. In addition to that, you would have a great economy in being able to land all materials from the barges, and run them in by steam power on to the site of the building without any use of carts or horses. As far as I can form an opinion, I should say that the advantage to the building of building on that site might be calculated as being five per cent. on the whole cost of it, or something of that kind. I think that that would be a very moderate computation of the advantage to a contractor.

674. Mr. *Mowbray.*] After deducting the increased cost of the foundation?—No; I have always, speaking roughly, been in the habit of considering that one might be set against the other; but now measuring the foundations accurately with the data that I have, it appears to me that the cost of foundations for that part might be 20,000 *l.*, and the advantage to the building 45,000 *l.*; but still, one would rather leave a very large margin for the cost of the foundation there, and that led me to mention the figure I did. I may mention that the rails of the Metropolitan Railway are 17 feet 6 inches below the line of the Embankment, and I propose that the foundation should be carried down 25 feet; of course, when we come to build or bore, and find out exactly the nature of the foundation, we might in some places have to go a little deeper; but I should be inclined to recommend that in no case should you go less than 25 feet, because I think that some such depth of foundation below the line of the rails would be if not necessary, at least very advantageous, for the purpose of preventing vibration in the building from the passing of trains.

675. Mr. *Chancellor of the Exchequer.*] Is there anything more on the structural question that you wish to say?—No, I think not.

Mr. *G. E. Street.* 9 July 1869.

676. Now we will pass on to this building as compared with the great building that you described to us before. What is omitted in this that was in the great building?—We have omitted three Courts of Justice, the Probate, and Admiralty Offices, the Land and Middlesex Registries, the Accountant General's Office, the large refreshment department, offices for Royal Commissions, and office for Bankruptcy Registrars.

677. What three courts of justice do you omit?—I can hardly tell you; there were some spare courts in the original scheme, one very large spare court, and two others, and those would I presume be the three courts; I may say about the reduction of the building that I have been obliged to act in the matter as if I knew exactly what would be required here; but as the reduction is accepted in the reduced plan of the Commission, I presume that I was not very far wrong in presuming that that was the sort of reduction that ought to be made.

678. Then as to the arrangements with reference to the shape of the site, do you alter the arrangements which you made of the offices about the courts, so as to make it like Saturn with his ring?—Yes; I was able to adopt that arrangement in the Carey-street site, for we had there a depth of 500 feet from north to south. When I had to deal with a site of a different shape, 280 feet from north to south only, I was obliged to make an entirely different arrangement, and the arrangement, I dare say, has been seen by all the members of the Committee, on these block plans. It consists of putting a central hall, with the courts around it, and the rooms beyond the courts on the western part of the site, providing the greater part of the office accommodation in a large eastern quadrangle, on the eastern side of the site, so that the bulk of the offices may be said to be together, being connected at one end with the courts, instead of surrounding the courts, as they did in the other case. One difference is, that I have a very large amount of office accommodation also in the central block. I thought that we might put the whole of the Vice-Chancellors' chambers there, probably, where they would be in immediate connection with the Judges' rooms below; and I provided by making large staircases for much better access to them, and other alterations of detail.

679. You consider that that is an improvement as to the Vice-Chancellors' chambers?—I think that the Judges will consider it an advantage; they will be in immediate connection.

680. Can you state anything that you lose by the Embankment site in the way of arrangement?—Yes. Supposing that there was sufficient space for light and air between the block of courts and rooms connected with them and the offices, I think that my old plan, the large plan, was better than this.

681. On the other hand, you gain in some things?—On the other hand, I gain very generally in some things. In all the offices I gain better light by putting them round one large quadrangle, than I had in the other site, where I had placed them round narrow streets.

682. Is it true that you have not a dark passage in the Howard-street building?—I believe that throughout the building everywhere I have provided for light directly from open areas; but, in planning this building, I have been able to give increased width in the central block. In the other, I had to squeeze everything from north to south; in this site I have not been so much pinched for space; the consequence is at Howard-street I have some 8 feet more in width than in the approved plan. The consequence will be seen at a glance; you will see that the open areas between the courts is 20 feet by 21 feet in this case; and in the other, 21 feet by 27 feet. Then I have also been able to get a much better arrangement of the jury rooms and staircases, and all the corridors round that part of the building (*pointing to the plan*) are far better lighted. It seems a small difference, this of 8 feet, but it just gives me the power of getting a lobby at the back of the court, which would be very convenient for the judge, and give much more light. I think that is the main difference of convenience. Then, I should say also, perhaps, that these plans contemplate, as the plans in the Carey-street site did, a very large number of consultation rooms for the use of solicitors and barristers; and, if you inquire, I believe you will find that at the present day there are no consultation rooms whatever in connection with the courts. Barristers who want to have consultations have to go to their chambers for them. At Westminster, I believe the man who keeps the robing-room lets them use a room, and people carry on consultations at very great disadvantage. In this building there will be a very large number of consultation rooms in the immediate neighbourhood of all the courts.

683. The courts are to be all on the same level, are they not?—There will be 18 courts on the same level. If it is considered desirable to add to those courts a Bankruptcy Court (for there is no provision for a Bankruptcy Court in that main block), it seems to me to be a court which might be treated distinctly; it always has been so; it was in the large plan. I do not know that it is important that it should be on the same level; but the rest of the courts are on the same level.

684. Every court forms a complete unit with the offices connected with it?—Yes, and they are precisely the same in arrangements, so that anyone who knew his way to the rooms in connection with one court would know his way to the rooms in connection with every other court throughout the building. That has been held to be very important by the Commission as looking to the possible fusion of law and equity, and having the same course of proceeding in all the courts.

685. Have you formed any sort of guess as to what this building would cost?—I have made a rough estimate, but it is only a rough estimate. It is calculated on the system of measuring the cubical contents of the building; and I have taken the same price per cubic foot which Mr. Gardiner took in estimating the design which I made in competition for Carey-street (he was employed by the Government to make estimates of them all), and, taking his price, the total cost of the building would be about 900,000 *l.*, including the foundations.

686. That has not yet been submitted to the officers of the Board of Works?—No.

687. That is your view of the expense, supposing you carry out the views that you have laid before us?—Yes.

688. Is there anything else to say on the Howard-street site?—It will be necessary, no doubt, in such a building to have facilities for cabs to stand in the immediate neighbourhood, setting down at different doors and turning back again.

again. That remark ought to have come under the head of access, perhaps. It will really be very well provided for; traffic would come down through so many streets along the Embankment to the building, and there is plenty of room all round it for very long cab-stands if they were wanted.

689. Now we will pass, if you please, to the scheme that you have prepared, at the direction of the Chief Commissioner of Works, for putting a smaller building on the Carey-street site; your direction, as I understand, was to put down a building with the same contents as that projected for the Howard-street site?—Yes; I ought to read perhaps the first paragraph in my report on that subject, which really states exactly what the condition was: "I proceed now to give a similar explanation of the plan which I have prepared to show how the already purchased land between Carey-street and the Strand may be used for the New Courts of Justice, without the purchase of any additional land whatever; in the instructions which I received from you to prepare this reduced sketch plan, you requested me to bear in mind that the ascent to the court level by staircases from the street must be of no greater height that would be the case on the Embankment site, and that the same facilities for carriage access, &c., must be provided on the one site as on the other. The plan I have prepared fulfils these conditions as far as possible, I believe, and may be considered under the same heads as that for the Embankment site." The consequence was that I had equally on this site as on the other, in order to obtain the same amount of light and to improve the lighting and arrangement of the central block of courts, the judges' rooms, and jury rooms, and witnesses' rooms, and all the rooms connected with them, to widen that block and so to give up the arrangement of a central block surrounded by streets with buildings on the other side of them.

690. And how have you done that?—Owing to the irregular configuration of the ground I was obliged to move this large block of buildings more to the north. You will see, by a glance at the plan, that it was impossible to put it anywhere else. The point where the land pinches is on the south-west, the boundary of Clement's-inn (*describing on the plan*).

691. I understand the shape of the land to be rather unfavourable for the purpose, taking the problem as it is given to you?—Extremely unfavourable, because of the extreme irregularity of the whole western outline. Then I arranged the offices, partly on a block of buildings occupying the north-western angle of the site, and partly round a large quadrangle on the south side.

692. The same offices as you would put in Howard-street?—The two buildings would hold just the same.

693. And you have made the best arrangement that you could?—I think that the rooms and courts in the great block of courts are better arranged than in the approved plan, and the offices I have arranged as well as I could.

694. You mean, when you say better arranged, that your experience has given you new ideas?—Yes. Since I drew that plan I have had six or eight months for thinking of very little else.

695. As regards light, air, and quiet, comparing the reduced plan for Carey-street with Howard-street, how do they stand?—In my opinion the light in Carey-street could not be as good as it would be on the other site; the building is much more hemmed in by other buildings than it would be in Howard-street.

696. What do you say of the ventilation?—The ventilation would not be as good either, because no doubt the current of air passes up and down the river, and if the river is pure facilitates natural ventilation immensely; and on the Clare-market side of Carey-street, as I mentioned, you have a neighbourhood which really, on sanitary grounds, one may say, for the sake of London itself, ought to be swept away; if you walk through it your nose tells you at once that you are in a bad neighbourhood. We should have to come upon that unless more land is purchased.

697. With reference to quiet, what do you say?—The greater part of the site would be noisy. The quadrangles themselves would be quiet enough, and the whole western side of the building would be quiet. Carey-street would be noisier that it would be on the arrangement we had for the great plan, because there is no bridge provided to Lincoln's-inn, and consequently nothing to prevent heavy railways waggons passing through it; and I think that it is absolutely necessary that Bell-yard should be made a thoroughfare throughout, partly because the rights of the owners of the property on the eastern side would make it impossible to stop up the road.

698. Then in light, air, and quiet, you hold it to be inferior to the other site?—Yes, very inferior to Howard-street.

699. Do you think that you would hear the noise of the Strand in Howard-street?—Nobody would be conscious of it.

700. Then we come to the surroundings, that is much the same as you told us before, as regards the great plan?—Yes, that would be much the same.

701. And the courts and alleys?—The courts and alleys are important, because I feel that if this building is put on this site, it would be impossible to go on without altering the access to it. Thus on the north side of the building, you must widen, I should say, Serle-street; but either Serle-street, or the west part of Carey-street and Portugal-street. As it is now you have nothing but narrow passages to pass through to get to the north side of the building. I have a note of the width of these streets, which lead to it. For instance, Little Queen-street is 27 feet 8 inches wide, Great Queen-street is 26 feet wide only, and you have to make two sharp turns there in coming from Holborn. Then, if you continue along that road, Portsmouth-street is 18 feet wide only, at the corner of Portugal-street, at the continuation of the western side of Lincoln's-Inn-Fields.

702. Do you mean under an archway?—No, that is another street; that is Duke-street; that is about 12 feet wide; then, if take the other mode of access, that is to say, if you give up Portsmouth-street, and Portugal-street, and Carey-street, you must improve Serle-street, because Serle-street is only 26 feet 10 inches wide, which is a very miserable street, to form one of the principal accesses to a great building of this kind. To the east, Chancery-lane, at the narrowest point (which, of course, is the test of the whole thing), that is, at the Holborn end, is only

Mr. *G. E. Street.*

9 July 1869.

only 20 feet in width; there is only room for one vehicle to pass at a time.

703. And it is a great thoroughfare already?—A very considerable thoroughfare.

704. You have stated what purchases you recommended as necessary for the larger plan; now are there any of those purchases which the reduced plan would render unnecessary, in your opinion; can you point out anything which would be saved in the way of purchases by the reduced plan?—I think there is very little that could be; I think that it would be still most important to make an opening from Bell-yard to Chancery-lane on the reduced plan, and that it would also be most important to purchase the property at the southern end of Bell-yard; I should assume that you would purchase the greater part of it for re-sale, sacrificing, no doubt, some of the frontage; that, I think, would be absolutely necessary; it is only a question of time; if you built there you would certainly have to rebuild on the other side afterwards.

705. Is there not a good deal of this property that could only be obtained by Government, and never by private purchase?—Yes, a great quantity.

706. Why is that?—The property is very much subdivided; you will see on that plan behind you that there is a small court east of Bell-yard, between Bell-yard and Chancery-lane, called Apollo-court, which is a court and passage leading all the way down to Fleet-street. Now, supposing you buy the buildings at the back of Apollo-court, you cannot stop till you come to Chancery-lane; you must purchase the whole there in order to be able to sell to any advantage. Then on the north side, New-square, you will find from the book deposited in connection with the applications for the purchases of that property, that each house belongs to some 13 or 14 different people; every floor almost is a freehold, and consequently the Inn never would be able to buy it, unless they came with compulsory powers. So also, in the case of Cook's-court, it would be very much to the advantage of everybody that the scheme relating to Cook's-court should be carried out, but it could only be carried out by compulsory powers, because some of the houses belong to lunatics and some to people who will not sell. On the western side, I believe, there is not the same difficulty.

707. Do I rightly gather, that the same reasons which induced you to recommend the purchases which you did recommend for the larger plan, apply to the smaller?—On the north and east certainly; on the west, I imagine one would have to modify one's recommendation.

708. Supposing the reduced building to be placed on the Carey-street site, can you tell me what distance it would stand from the houses that surround it; where would it be nearest to them?—In order to put as much upon the ground as I could, I have ventured very close indeed to some of them, because the ground is so irregular on the side of Yeates'-court; I have one projection here which is only 10 feet from the opposite houses; at the bottom of Bell-yard I have made it as little as 45 feet, but you will see that the line of houses east of Bell-yard is so irregular, that 45 feet, as the narrowest point, gives 65 feet somewhere else.

709. What would be the general run of it round?—I made Carey-street 55 feet, which is the greatest width, and it would be 10 feet at one point; I should say that the property between King's College and the north-east of this site; there are a public laundry and some small hucksters' shops which cannot be of very much value at present.

710. Supposing that we do build the reduced plan on the Carey-street site, what clear space round you would you be satisfied with, in order to give the building the requisite air, light, and ventilation?—I think that we ought not to have less than the Commission originally approved of, from 55 to 60 feet in the streets or courts all round.

711. Would you be content merely to buy up the 60 feet, and to leave this low kind of property on the other side fronting the Courts?—No, certainly not; indeed I doubt whether you could do it. You must buy the whole if you buy part.

712. How much should one buy?—As much as would enable you to sell the land again for rebuilding.

713. That would involve the further question, would it not, of the light for the property that you would build on that land?—Yes.

714. Therefore, there would require to be a very considerable ring of space round it?—Yes, on the south of the Law Fire Insurance Office. I imagine that you could not do anything with the property without buying the whole of it.

715. Where is that building?—Between Chancery-lane and Bell-yard. It would not follow that you would have to pull it all down and rebuild it; but you would have to deal with it, and therefore you must buy it all, I imagine.

716. Is there anything more that you have to observe on the reduced scheme?—There is nothing more, unless it is on the question of the cost.

717. With regard to the cost of the Howard-street plan and this plan, what would it be, putting aside these questions which we have been discussing, and taking the buildings themselves merely?—I imagine that the cost of the building itself, planned in the same way as this is, would be about the same on one side as the other.

718. Taking into consideration the question of foundations?—Taking into consideration the foundations, and the advantage to the Embankment site of being on the river.

719. To sum it up, as far as light, air, and quiet goes, you give the preference, as I understand, to Howard-street?—Yes.

720. As far as convenience of access goes, to which do you give the preference?—I should give the preference to Howard-street also; I do not know whether I have spoken about the access to Carey-street from the south.

721. I think not; what have you to say about that?—Certainly it would not be so good in the way of access if the Essex-street improvement is not carried out. Whatever carriage traffic comes from the east and west, direct to the Courts, if it is found (as I apprehend it is very likely to be) that a person taking a cab would get sooner to the Courts by the Embankment-road than by the Strand (*describing the route on the map*), would come up the rising road round the station, and then the traffic will have to come into the Strand at the west of the building at the narrowest part; it would get into the Strand at Norfolk-street, and then back to the building, which would be a disadvantage. I apprehend that it will be found when the Embankment-road is made,

made, that that will be really the quickest way of getting to the Courts in Carey-street by a cab both from the City and West End; of course, people who come by railway will walk up to the Courts.

722. Upon the whole, you give the preference, as far as access goes, decidedly to the Howard-street site, I understand?—I think that it would be decidedly best in that respect.

723. Taking in the question of surrounding and necessary purchases, how does the expense stand then?—I have asked Mr. Hunt for the estimate of the additional lands, but as you will call him, I apprehend, I will not go into those figures.

724. All the purchases that would be required for Carey-street would be just so much expense against it, would they not?—It would be all additional expense beyond what you have now; there is a large additional expense, which I am certain that no person in his senses could deny, must be incurred on the Carey-street site beyond the existing piece of ground; it may be made into a very good site with additional purchases, but without additional purchases it cannot; of course if you pitch upon the most thickly populated part of London, and have an unlimited command of money, you can carry it out well.

725. You can make as good a site as you please then?—Yes, you can make a very good site of it.

726. Have you anything to say about Mr. Burnett's plan for putting your improved plan on Carey-street; you consider that it very materially spoils the plan, do you not?—Yes, if my improved plan, which I have had copied on this tracing, had been really copied by Mr. Burnett, that is how it would have appeared (*describing it to the Committee*); if the rooms shown in the approved plan, and which are absolutely necessary for the accommodation of the judges and all the officers of the courts had been put, that could not have been done without coming down another 45 feet here, and 40 feet here (*pointing to the spots on the plan*), and destroying the proposed western access; it is impossible to apply my large plan to the site in that way; besides which, the streets become reduced to 42 feet 6 inches wide if you are to have the same accommodation in the building instead of 60 feet wide.

727. The effect of it would be, either that the courts would be a storey higher, or that the courts would be made much nearer to the opposite houses?—Either one or the other, but we have it in evidence that they would not be made a storey higher.

728. I have the opinion that the plan, therefore, of Mr. Burnet is an impracticable one?—Yes; a very undesirable one.

729. It is a great sacrifice of light and air?—Yes; and does not provide the required accommodation.

730. *Chairman.*] Looking at your plan for the Howard-street site, do I rightly understand you that you consider it necessary to widen Howard-street, and to lengthen Essex-street?—Yes.

731. Those are indispensable accompaniments of the plan?—In my opinion they are.

732. You would not be prepared to carry out that plan, as at present advised, on the condition of leaving Essex-street untouched, and the north side of Howard-street untouched?—The north side of Howard-street must be taken, in any case, to get width. As to Essex-street, I hold a strong opinion; but I differ in opinion from many other people, who think that it is not necessary to carry on Essex-street to the Strand. I think that it is; but that is for the convenience of the public, not for the erection of my building. I hold that the thing is so obvious that it must be done, and done at once, if the street is made at all.

733. Is your estimate of 900,000 *l.* for the building alone?—Yes.

734. Irrespective of the land?—Yes.

735. I suppose we must get the value of the land from other witnesses?—Yes; I have nothing to do with that.

736. You said that, with regard to Howard-street, it would be easier to build there than on the Carey-street site, because the materials would come by water or by the Embankment, and there would be no interruption to traffic?—They would all come by water.

737. But I presume you contemplate that in any case Carey-street would be filled up with some building?—Of course, but the difference would be that if you left so large a piece of land for building, so far as my experience goes, it would not be all built upon at once, but only by degrees.

738. The same amount of carting, therefore, would take place, but it would spread over a longer period of time, you think?—Yes, but if my plan is carried out you will have the advantage of a way by New Essex-street to the Embankment for your carts, whereas if you built on the north side of the Strand, without New Essex-street, all the carts will have to go along Fleet-street or the Strand.

739. With regard to the irregularity of the outline of the Carey-street site, would it be impossible to remedy it by drawing a give-and-take line?—I should think that was not impossible; it depends, of course, upon the willingness of the people to whom the land belongs on the other side.

740. Would it necessarily involve any serious loss if a certain amount of compulsory purchase were to take place beyond the present site, and afterwards a give-and-take line were drawn, and what was not wanted was resold?—My impression is that you would not lose by purchasing land round this building.

741. I suppose what you say as to the bad neighbourhood of the Carey-street site, to the north-west, will equally interfere with the selling or letting of that land for private purposes?—It must affect the value of that corner, as there is no thoroughfare which a decent person can use.

742. I think you said that on your reduced plan, part of the building was within 10 feet of other houses?—Yes.

743. But that is only the offices of the building as I understand the plan, and not the main building?—It would be a portion of the common law offices.

744. Mr. *Layard.*] You are aware that in the estimate made by Mr. Hunt for the First Commissioner, the north of Howard-street is included?—Yes, I understand that that is included; it is in the deposited plan, I think.

745. Can you tell the Committee what the present width of Norfolk-street is?—It is 48 feet wide.

746. Do you consider that a good average width

Mr. *G. E. Street.*

9 July 1869.

width for a street?—It is a very fair width; I should like more.

747. What is the width of Essex-street at its entrance into the Strand?—It seems to be 30 feet now.

748. Then, in fact, without increasing the width of Essex-street, you would have at this moment access to your courts on the Howard-street site by Norfolk-street which is 48 feet, and by Essex-street, which at its narrowest part is 30 feet wide?—Yes, and by Arundel-street which is 28 feet, and by Surrey-street which is 25.

749. Therefore the traffic in coming from the Strand to the Howard-street site, could be divided into four thoroughfares?—It could. I take it that some of it will go down Essex-street, and the rest down Norfolk-street and Surrey-street, but I imagine that Arundel-street will take very little.

750. Therefore, without widening Essex-street, you would have abundance of access to the Howard-street site?—As far as access to the building is concerned it would have plenty of access.

751. Are you aware that it was stated before the Committee on the Hungerford Bridge roadway, that it would be necessary, under any circumstances, as a metropolitan improvement, whether the Carey-street site be adopted, or the Howard-street site, to widen Essex-street?—No, I did not know that.

752. You stated that you contemplate widening Bell-yard, and making it a thoroughfare?—Yes.

753. On the reduced scheme do you propose to have a general thoroughfare, or to have gates?—I explained to the Chancellor of the Exchequer that I doubted whether we could close it by gate; I suppose they would have a right of way there.

754. Therefore this Bell-yard, if widened, would become a great thoroughfare from the north of London to the Embankment?—You must remember that it leads to nothing at the top.

755. It would lead to Carey-street?—By the time you have improved the access from Lincoln's-Inn-Fields to the building, I suppose any traffic would get round there, to some extent.

756. And supposing carts and railway traffic were coming from any of the great stations in the north of London to the Embankment, and supposing that Serle-street were enlarged according to your plan, would they not then take Bell-yard as the main thoroughfare between north and south?—It is very difficult to answer exactly what they will do; my impression is, that you might get traffic from the Midland and Great Northern stations there; I doubt about any other coming.

757. You stated that Chancery-lane is blocked up, and is very narrow at this opening; I presume a considerable part of the traffic that now takes Chancery-lane would take Bell-yard, if it were widened?—It might; it is almost impossible, however, to give an answer; it is a matter of conjecture.

758. Presuming that it did so, you would have then noisy thoroughfares on two sides of your building?—Yes; but my impression is that a carter would not trouble himself about turning out of Chancery-lane when once he had got through that narrow opening, but would go down to the bottom, and then into the Strand.

759. I mean, supposing he started from the west end of Holborn, and wanted to get to the Embankment?—From the western part of Holborn, I think he would be more likely to get into Drury-lane.

760. I understand you to say that under any circumstances you consider it necessary to open a thoroughfare between the Carey-street site and Chancery-lane?—Yes, I should make it for foot passengers. What was proposed in the great plan was, a considerable entrance for foot passengers, and a space where carriages could turn in and turn out, or stand (*describing it on the plan*).

761. Supposing that the Law Courts are not erected on the Embankment, have you ever considered what class of buildings are likely to be erected on that site?—No; I have never ventured to consider; I do not know in the least; I do not think that there is space for doing much there, unless a good deal is pulled down first of all, and of course it is very doubtful whether it is worth anybody's while to pull down houses, in order to build larger establishments. I think that to the north of the station that approach road incloses a sort of garden, and then in front of the present houses which fringe the Duke of Norfolk's property there is a narrow margin which he may build upon.

762. Do you think it likely that private residences would be built there?—I should not have thought it likely. I should have thought that, as that district is full of inns and boarding-houses, that is the sort of building that would take place, if anything.

763. Do you think it likely that it would remain in its present condition?—My private opinion is that it would, but my opinion is not worth anything on that point.

764. And, supposing it were to remain in its present condition, do you think that a creditable state for a leading thoroughfare of the metropolis?—It is most unsightly.

765. Are you aware that the North Western Railway Company are contemplating, in the event of our erecting the Law Courts on the Carey-street site, to obtain, if possible, the Howard-street site for the erection of a railway station?—I only know it by having seen some paragraph in the papers to that effect.

766. Supposing that they did acquire that site and erected a railway station, such as we have already seen erected on the banks of the Thames, would not that destroy the effect of your Law Courts, looking at it from the south?—Yes, if they erected a monstrosity, like the Charing Cross Railway Station, no doubt it would. I think that a station of that kind is destructive to anything within a mile of it as to its effect and proportion.

767. In preparing your plan for the Law Courts on the Embankment, have you interfered with the ornamental ground which was reserved under the Act of Parliament for the Embankment?—Yes, I have interfered with it; I have altered its position. The ornamental ground on the railway company's plan is the ground inclosed within a curve marked "garden." There is a large piece of garden to the east of the proposed railway station, and a small piece to the west; I have provided to the front of my building an equal amount of ornamental ground; that would have been all on a slope with the road rising round it, and a wall

and

and balustrade round it; but I have provided the same amount of garden in the front of my building on the level of the Embankment.

768. Have you not rather added to than diminished the extent of the ground?—It is a little in excess, I believe, but not much.

769. And as regards the ornamental part of the Embankment, as contemplated by the Act, you have not taken away from that?—The alteration would add enormously to it, I think. I do not know whether you know the character of the station proposed there; it would be very damaging, indeed, to the appearance of the Embankment, and also to the view of Somerset House immediately beyond it.

770. As regards the assertion that your building would impede the view of Somerset House, can you state to the Committee how far the western side of Wellington-street advances beyond the line of Somerset House?—It seems to me to advance in front of the new wing to Somerset House, but not in front of the main line of the building.

771. That is to say, it advances exactly the same as yours?—Exactly the same.

772. Does it practically impede the effect of the view of Somerset House?—I never discovered that it did; it does not seem to me to do so at all.

773. Are you aware that the Law Institution are adding a storey to their present building?—I believe they are; I am not quite certain about it.

774. Would it in any way interfere with the building that you contemplate erecting, supposing it were erected on Carey-street?—Well, it would make the light so much worse for any building on the opposite side.

775. Supposing that you had erected a building on the Carey-street site, would the Government have had a right to object to the addition of that storey?—I believe they would not have; but they could not have raised that storey before you had removed the old buildings in Bell-yard.

776. Mr. Burnett has stated that you closed your doors against him; is that a fact?—You ought to have a plan of my office; my office is on one side of the Commission room, and his on the other; we both have front doors, and he is perfectly welcome always to come to my front door; but in the other way he comes straight into my room, whilst I prefer that he should pass my clerk's office first.

777. Therefore, you never refused Mr. Burnett any information that he has required?—No; and since the time he mentioned he has been in to see me.

778. He never did consult you upon the plan and statement which he prepared for the Commission?—No.

779. And, in your opinion, ought he to have done so before making that statement?—I think so.

780. Mr. *Mowbray.*] You say that the width of the Strand at the church is 175 feet, do you not?—Not the present width of the Strand; but I should set back the building line on the north side of the Strand, and then have a pier to carry the centre of the structure.

781. That width is the space that you propose to fill up with a bridge and arcade?—Yes.

782. Do you know what would be the cost of the bridge and arcade connecting Carey-street?—As I said before, I doubt very much whether the condition of having passages through houses at the same level would diminish the value of the property for building.

Mr. *G. E. Street.*

9 July 1869.

783. Independently of the diminution of the value of the property, you know what the cost of the building would be?—I have not entered into it; judging from Mr. Gardiner's estimate for Temple Bar, you may say 10,000 *l.*; I apprehend that the passages in the building might be built by the people who built the chambers, under such conditions as Government might make.

784. And if the Carey-street site were adopted, it would still be necessary to have the accommodation for persons from the Temple to cross the street?—It was always held to be necessary, because there is the case of the gentleman, Mr. Field quoted last time, who was killed in crossing Chancery-lane; if he was killed in crossing Chancery-lane, it is still more likely that some one would be killed in crossing the Strand; but it always appeared to me rather a doubtful question whether the whole courts throughout should be raised as the Commission determined that they should be, in order that you might have a bridge across Carey-street, and a bridge across the Strand; it was going to a great expense, and involved the raising of the floor of the courts throughout.

785. Then a bridge over the Strand at Temple Bar, connecting the Temple with the Carey-street site, would probably involve a greater expense than the bridge that you contemplate?—Very much greater, because it would involve the raising of the courts; it would very largely increase the expense.

786. Assume the courts to be built in Carey-street, it would be necessary to have increased accommodation to connect them with the Embankment, would it not?—I think so; I think that the convenient access from the Embankment would always be where Essex-street is; it is opposite the steamboat pier, and I think that it would be really a necessary approach; it is so for London, rather than for the courts of law.

787. So that, in all probability, whether the Courts were erected in Carey-street or Howard-street, it would be equally necessary to improve and widen Essex-street?—Not equally necessary, but very desirable certainly.

788. Mr. *Cowper.*] When you sent in your competition drawing, was that the plan, according to that drawing, fitted to be placed upon the area which was then purchased?—No. The competing architects had such doubtful instructions given them as to the quantity of land on which they were to place their building that there were hardly any of them that took exactly the same area. We were never able to get from the Commission a definite statement, so many feet east and west, and so many north and south. We were informed that we might take 510 north to south; but as to the east and west we were informed that there was to be a give-and-take arrangement, which no two understood alike, I believe, and I and Mr. Dean took less than anyone else. I only, for my competition plan, took 685 feet from east to west, and 500 from north to south; but Messrs. Brandon, Burges, Lockwood, Waterhouse, and Abraham understood that they were at liberty to deal with 700 feet from east to west, and Mr. Barry 750 feet from east to west.

789. And the fact that you had taken less space than some others, induced me to ask whether your design would not have fitted on to

Mr. G. E. Street.

9 July 1869.

the site, as originally purchased, without the extension of it?—It could fit into a smaller piece of ground if you could rectify your western boundary, and give me a width of 500 feet from south to north, which you cannot get without purchasing the north side of Carey-street.

790. I suppose you mean to say that, looking to the north and south line, although you could have placed it on the site, yet the width of Carey-street would have been insufficient for the proper approach to the building?—Yes. I do not know quite the distance those houses are; there is a 25-feet span, I think, which ought to be thrown into the street.

791. But now that the plan has been made, with a reduced number of courts and offices, do you see any difficulty in placing that reduced building upon the Carey-street site, if you are free to adopt the disposition that you would prefer?—If I am free to adopt the disposition that I would prefer, it would be the one which you have in your hand; and, as I have shown there, I have accomplished putting it upon the site.

792. I understand you to say, that in preparing this plan for the reduced building on Carey-street, your discretion had been fettered by certain instructions which induced you to adopt on the Carey-street site certain particulars which were adopted on the Howard-street site; for instance, that you had instructions to place the courts and judges' rooms at a lower level than was intended by the Commission when they gave their instructions?—Yes.

793. Upon that, I would ask you, do you think that there was any advantage in departing from what the Commission had agreed to with so much deliberation, and with communication with all the judges, by placing the court level at no greater height than would have been the case on the Embankment site?—I do not think that that instruction fettered me at all, because as I said just now, I did not agree with the Commission in thinking that it was wise to raise the central-hall in the way that they proposed; I think that at almost the first meeting of the sub-committee this occurred: A sub-committee was appointed "to confer with Mr. Street, as to plans," and the Minute says, "Discussed the general outline of scheme at great length with Mr. Street. Resolved: That central-hall ought to be on the level of Carey-street; that the bridge proposed to be erected across Carey-street, ought to be provided." Well, I remember having made a calculation of what the cost of it would be, and expressing my opinion that it was not desirable; therefore I do not think that that condition hampered me at all.

794. Did it not cause you to make some changes in the plan?—Very slight changes that would show themselves on the ground plan; there would be differences in the sections.

795. Does that affect this passage (*pointing to the plan*), that is marked to the west of the building?—That is affected by another direction that there should be the same facility of access to the judges.

796. And if that instruction had not been given to you, you could have utilised this passage?—Yes.

797. In your approved plan, was the distance which the judges would have to rise the same as those persons had who went from Westminster Hall to the Lobby of the House of Commons?—In my plan, the height to the judges rooms from Carey-street was 26 feet, and from the southern quadrangle to the judges' rooms 38 feet, and the height from Westminster Hall to the floor of the House of Commons is 19 feet 6 inches, and from Westminster Hall to the committee-rooms, the level where we are sitting, 43 feet, so that it is five feet more than the height from the southern quadrangle to the judges' rooms.

798. Have you any reason to suppose that, what is done by the Members of the House of Commons and Lords, would be too much to require of the judges?—I never regarded that as an inconvenience. It occurred to me as a thing that they would have to do once in the day, once up and once down.

799. Will you state what is the width of the new Howard-street to the north of the Embankment site; what do you intend to be the width of Howard-street, according to your Embankment plan?—Sixty feet in part, and at the other end 50 feet, but that is below only; there is an arcade which would not run up the whole height.

800. Did I rightly understand you, that you had given 55 feet to Carey-street in the altered plan?—Yes.

801. I think you stated that the minor courts would become too narrow if they were reduced to 42 feet?—In my opinion they would be.

802. Are there not many similar courts which are of less dimension, such for instance as Pump Court in the Temple?—I have no doubt that there are. They are innumerable almost.

803. But do you think that more than 42 feet wide is necessary, and not only that, more than that might be desirable?—Well, in my opinion it is necessary; I lived and worked once in a street which I suppose is at least 50 feet wide, out of Russell-square, and I know that the difference of light and power of doing work in going from rooms of that kind into a square is something extraordinary, and the quality of light is entirely different.

804. Turning to this plan that we have before us, by which you have put the reduced accommodation on the Carey-street site, are we to understand that you consider that a satisfactory plan?—I think that that part of it which you have in your hand is perfectly satisfactory; Mr. Field tells you his opinion about it, but Mr. Field does not know the difference; I have not had an opportunity of explaining it to him; but if I had, I think he would agree that that part of it is an improvement in detail.

805. And I may understand, that if the reduction be adopted, a satisfactory building can be erected on the existing Carey-street site; I am speaking of building, without reference to the approaches?—And if you speak without reference to the outlook from the building, but only as to the building itself, I answer yes; there are so many acres of land.

806. If we speak of outlook, is there any advantage in clerks in offices having very interesting views of shipping in the river, or is it not desirable that they should have no temptation to look out of the windows?—That seems to me to be a question for the Committee to decide.

807. I observe from a printed pamphlet that I have in my hand, that in the month of February last, you expressed a very decided preference for the Carey-street site, upon several grounds; you stated, "It has appeared that the greatest convenience

venience of position is found in the Carey-street site," and then you said that, "but hitherto very little has been said as to the convenience of the levels, and yet here again the Carey-street site has very great advantages." Then you stated that the advantage of the level led to economy in construction, and then you said, "If you contrast this statement with what must happen on the Embankment site, you will see the very great disadvantage under which the latter lies on its western side, in a length of about 450 feet, the rise is 35 feet 6 inches, and the rise from north to south is nowhere less than 30 feet." Perhaps you would explain the grounds on which you have expressed a different view to day from what you did in February?—I was talking about two entirely different things; you are quoting what I said now in answer to a scheme of Sir Charles Trevelyan's, which I thought excessively extravagant; you will remember that his scheme was to build up to the level of the Strand, for roads, court-yards, and everything else, and as I pointed out here, that involved a substructure to the height of the terrace in front of Somerset House, which was not merely to cover the ground from Howard-street to the river, a comparatively short distance, but the whole distance from the Strand to the river. The two schemes submitted to me were so different, that I must say that the opinion which I gave about Sir Charles Trevelyan's scheme, does not seem to me the least contradictory of what I have said about my reduced scheme.

808. According to Sir Charles Trevelyan's scheme, there must have been a terrace like Somerset House-terrace, built in front of the proposed building?—To the height of 30 feet; that was the basement of the building.

809. Then you said, speaking of these buildings, "A vast number of rooms must be provided in basements, which would not only be very inconvenient as regards light, but equally as regards access." But I understand in the building which you propose, there will be no rooms that will be inconvenient for light and access, in the lower part of the building on the river side?—I think so, certainly. I propose no terrace in front of the building. I propose to take the natural level of the ground for the great quadrangle, and there is no part of the building obscured by any artifical erection of that kind. I daresay you will remember that Somerset House was quoted to us on that occasion, as an illustration of the enormous amount of accommodation that might be obtained in basements; and my objection was to providing a new public building with any such artificially lighted accommodation as that in Somerset House.

810. Will you say for what purpose the rooms are to serve on the river-side on the ground storey of the building?—I have not had time to arrange the whole in detail; but as regards the rooms on the Embankment side of the building, they would be about 20 feet below the floor of the central hall, and lighted as well as it is possible that rooms can be lighted; I cannot conceive that there would be the slightest difficulty in using them; your central hall is raised above the Embankment on this plan, and so you get the advantage of descending to certain offices and and rising to others; it is not all done by rising, which is an advantage and a convenience.

811. Speaking of the foundations that would be required, you spoke of the necessity of going down to the gravel; do you not think it necessary to go deeper down, to the solid clay?—I do not think so; if we find the same sort of gravel that they have found further out, it would be, in my judgment, quite useless to go through that, if the gravel is what I have been informed it is; I believe that the Embankment wall does not all go down to the clay.

812. Mr. Fowler stated to the Committee on the Hungerford-bridge that he thought that no public building could be safely built, unless the foundation were carried through the gravel to the clay; do you think that is unnecessary?—My strong impression is that it is unnecessary; with hard gravel underneath you, and a bed of concrete 20 or 25 feet thick resting upon it, I can conceive no better foundation; if the gravel were not hard it would be necessary to go through it; but from the information that I get on the Embankment works I find that they have carried down a great concrete wall, which forms the retaining wall on the northern side of the Embankment, which does not go down so deep as I propose to go.

813. In your estimate have you considered the necessity of making a coffer-dam to exclude the water of the river?—I do not think that it would be necessary.

814. Is it not the case that at the present moment at high tides the water comes through the reclaimed ground as far as Milford-lane, and fills the cellars occasionally?—I do not know; my impression is that we should require to do a certain amount of pumping to keep out the land water as much as the river water; there is no difficulty in putting the concrete in without a coffer-dam. The distance of the building varies from 160 to 140 feet from the Embankment wall.

815. What is the nearest point at which the railway, whenever it is made, will approach the new building?—The railway station is close to it here (*pointing to the map*). Then there is an open arcade here (*pointing to it*); but at this point they are as close as they can be built.

816. Do you anticipate vibration and inconvenience from the railway at that point where it approaches so closely?—I suppose that it would be here (*pointing to the map*) that the trains would be always stopped. Here (*pointing to it*) the railway goes away from the building.

817. At what distance would it be at the extreme west of the building; what is the furthest point from the railway?—I believe that it would be 55 feet from the retaining wall of the railway to the base of the building at the west.

818. Have you any information as to the probability of the time at which that railway may be made?—No, I know nothing about it. I was informed (but you must know more about it than I do) that they had obtained some Bill, by which they would get the money for it.

819. On the western side will you explain what is the communication from the Embankment roadway up to the north by the south-west corner of your building?—There would be a roadway between the building and the wall of King's College.

820. What would be the width of it?—The narrowest point of it I have made 25 feet. I have made it narrow because the buildings of King's College set back very considerably. There is at one place 48 and at another 80 feet between building and building. I may mention, in reference to the narrowness of that road which you ask me about, that supposing it were felt to be too

Mr. *G. E. Street.* — 9 July 1869.

too narrow, it could be easily increased without altering the scheme by a little reduction of this quadrangle (*pointing it out*). You could have 10 feet more of roadway there if it were necessary: but I do not think that it is.

821. Will you explain how the people who come by railway will reach the courts?—The opening to the railway station will be at the bottom of Essex-street, and from thence passengers will go into the great quadrangle, and then in by the eastern entrance to the central hall.

822. And what will be the entrance of those who come from the north?—Those who come from the north-east would probably come down Essex-street into the quadrangle by the same entrance; but they might also come by Norfolk-street, Surrey-street, or Arundel-street, to an entrance in the centre of the north front.

823. Supposing that the prolongation of New Essex-street to the Strand were not made, carriages would have to descend from the north by Arundel-street or Norfolk-street?—They can still descend by Essex-street, for it is wide enough for two vehicles to pass; they will descend by all those streets.

824. They are all rather of a steep gradient, are they not?—Norfolk-street is not steep, it is very moderate, and Essex-street is not steep; the other two streets are steep rather, but not impracticable.

825. Mr. *Osborne Morgan.*] In this report of yours, to which the Right Honourable Member has referred you, I see you say at the top of page 39, "I may also observe that the experience of any architect would enable him to say that it is always more costly to build on a steep incline than on a nearly level site, and that I believe the building on the Embankment, if it is to be really worthy its position, would cost more than one on the Carey-street site would:" that would apply, would it not, to the building as at present designed and proposed on the Embankment?—No, I do not think that it would; in that discussion, the scheme which I was criticising was Sir Charles Trevelyan's scheme, and that was in my mind. The truth is, when I had come to work this question out, I found that the preliminary objection which I had taken to Sir Charles Trevelyan's scheme, did not apply to the building, if it was built using the land with the greatest possible economy, as I have proposed.

826. Would not a building on the present plan be on an incline?—Yes; but we propose in order to alter the incline, to alter the level of roads as well.

827. But surely your statement would apply exactly, because it would be a building depending on a steep incline, and therefore more costly than one on a nearly level site?—I do not think that the other is nearly level.

828. "The building on the Embankment, if it is to be really worth its position, would cost more than one on the Carey-street site would;" does not that apply?—Well, I was thinking of Sir Charles Trevelyan's scheme of building up an artificial terrace, which is a very common way, and that would cost enormously more.

829. What is the incline on the Carey-street site?—It is a rise of 12 feet, supposing that you can lower Carey-street; it is 16 or 17 feet if you do not lower Carey-street.

830. That would be about one in 30?—Yes; the rise of Essex-street will be one in 29.

831. I am speaking of the actual incline of the Howard-street site from north to south; it would be much more than that?—No, I think not; from the Embankment up to Howard-street the rise would be about 21 feet.

832. Then would not the fact of that difference in level be greatly in favour of Carey-street, as far as cost is concerned?—I do not think that it would, if I proposed to utilise the whole of the ground, as I do.

833. Then you do not adhere to this statement in the 39th page of that pamphlet?—I do not mean to say that it is not the fact that there is a very steep incline; if you built upon it in the way that Sir Charles Trevelyan proposes, it would be enormously more expensive; that was what I was addressing myself to then.

834. As to the foundation, I do not think that you were concerned in the building of the Middle Temple Library?—No.

835. Do you know anything about the difficulty of laying the foundation there?—I asked the surveyor to the Middle Temple, and he gave me the impression that they put in very little foundation there; my impression is that it was infinitely less than I proposed. There are settlements in the building now, in consequence, probably.

836. But you do not know, as a matter of fact, what that is?—No; the fact is, that Mr. St. Aubyn, the surveyor of the Middle Temple, does not know; there seems to be no record.

837. You spoke of the comparative accessibility of the two sites; have you considered that question with special reference to the present site in which the legal profession are located?—No.

838. You know, of course, that they are, most of them, located to the north of the Carey-street site?—My general impression is that the whole of that district, mainly north but also east of Howard-street, is what anyone would call the legal quarter.

839. You spoke of the great inconvenience of the streets leading to the north of the Carey-street site; no doubt there is that; but would not those streets have to be traversed by a person coming to the Howard-street site as well?—No; because people have so very many more opportunities of getting to this site, it being so much further off from Carey-street.

840. How would a person who came from New-square or Lincoln's Inn-fields, for instance, go to the Howard-street site; he would come down Serle-street?—Yes, Serle-street or Chancery-lane. If the Embankment site is adapted, then I hold, as a matter of course, that you cannot sell land without roads through it, and you would have a good road opposite Serle-street.

841. But from New-square or Lincoln's Inn-fields you would have to come down Serle-street?—From New-square you would not come down Serle-street.

842. Unless you wanted to drive?—Yes.

843. Coming from Stone-buildings you would have to go down the narrow part of Chancery-lane?—You would go down Chancery-lane.

844. Speaking of an arcade across the Strand, would it present no obstruction to the traffic?—No, I think not; you would have one great pier, but that would be where there is an erection, already just to the east of St. Clement Danes Church.

845. That would be a repetition of the inconvenience of Temple Bar?—Not the least, because

cause my arches are 80 feet, and Temple Bar is about 20 feet.

846. I observe that just opposite to the southern entrance of the Carey-street site the Strand is very wide, whereas just opposite to Howard-street, to the northern site of the Embankment, it is very narrow, it is only two-thirds the width?—Yes.

847. Do not you think that it would be a disadvantage having so narrow a thoroughfare just opposite?—It seems to me a common disadvantage. If persons were going to Carey-street they would have to pass through it; if to Howard-street they would turn down as soon as they could.

848. A cab stand stands there at the north of St. Clement Danes?—The cab stand could not stand there after you have your building in Carey-street, because it will be a very important entrance to the building; that is to be the great way into the courts.

849. There would not be room for a cab stand, even round the church?—I do not think so.

850. Do not you think that the width of the street opposite the principal entrance would be a great advantage?—Yes.

851. You spoke of the comparative quietness of the different sites, would you be kind enough to tell me how many great communications there are from the Strand to the Embankment, say between Charing-cross and Blackfriars, are there any?—No, I do not think so; I think that if Essex-street were made it would be a great communication, but never to be compared to the thoroughfare of the Strand, because you must remember that on the Embankment you will have nothing to bring people except from the ends.

852. Would not that white space there (*pointing to the plan*), the quadrangle, be a great thoroughfare?—There is an arrangement of steps across it; there could be no passage of carriages there, they could only come and put their load down. But the noise of a thoroughfare depends on the width of it.

853. Essex-street would be a considerable thoroughfare, according to your plan?—Yes, but not a thoroughfare to be talked of in the same way as the Strand; I cannot imagine its being a line for omnibuses.

854. Even if widened?—No, it would be mainly for light traffic, I should think.

585. It would pass through the quadrangle; there would be greater foot traffic, I suppose?—Yes, and there would be no objection to that.

856. What is the fall from the junction of Howard-street and New Essex-street to the central entrance?—It is 6 feet in 130 feet, about 1 in 21.

857. From Surrey-street to the north-west angle of the new building there would be a steep fall?—Yes. That I regard as an advantage, because I do not want it to be a thoroughfare. You asked me from Surrey-street to the west of the building; Surrey-street would be a way of getting to the hall, but that is east of Surrey-street; you come down Surrey-street, and turn along Howard-street to the west of the building.

858. From the top of Surrey-street to the bottom would be a fall of 1 in 9 or 1 in 10, would it not?—It is steep; I do not know what it is quite, but it would necessarily remain as it is; we could not alter that. It is 7 feet in 100; it is 1 in 14 or 15.

859. That would be steeper than Holborn Hill, would it not?—I do not know what Holborn Hill is. It is a short street. There it is, and we are going to do nothing to it.

860. I thought you said that the three approaches would be Surrey-street, Norfolk-street, and Essex-street; that Arundel-street would not be one?—I say that the tendency of a cabman is to turn down the first convenient street, and, coming from the west, he would turn down Surrey-street or Norfolk-street, and, from the east, Essex-street, so that Arundel-street would not be much used.

861. What about Surrey-street? — Surrey-street is not sufficiently good to be one of the chief approaches, but it is one of the approaches.

862. From the north-west angle of the building to the west entrance there is a steep fall, is there not?—Yes; that is all steep; I have purposely not dealt with the levels there; I might have dealt with the levels there if I had chosen, but I prefer to keep that at the natural level of the ground, because it would prevent its being used as a carriage thoroughfare.

863. It would be dangerous?—From the Embankment up to the western entrance is level.

864. I mean from the north-west?—But I do not think anybody would ever go to that entrance from the north; they would always go to the central entrance. That western entrance would be useful for people coming from Westminster along the Embankment.

865. Where do you propose for persons coming along the terrace to enter?—I should be inclined to limit that access for all people having business in the courts, for attorneys and their clerks, and so on. The Judges would enter in the angle, and would rise about six feet to their rooms, and the solicitors, the barristers, and so forth, would descend about six or eight feet to the floor below. The terrace is just on a mid-level between two floors.

866. What is the width of Strand-lane?—It is 25 feet at the narrowest part.

867. The average width would be about the same as Bell-yard?—The present Bell-yard comes to much less than that. I think it would be better to take the width of Surrey-street. I think you will find that it is about the same as Surrey-street; Surrey-street is about 27 feet. This (*pointing to the plan*) is the narrowest part of Strand-lane.

868. As compared to Bell-yard, it looks in that map the same?—Bell-yard you may make any width you like, because the houses curve round Bell-yard in this upper part. Just below the Law Institution there is one part that used to be only 12 feet, and the part down near the Strand is 12 feet, most of it.

869. What did you say was the width of the new Howard-street you proposed?—Sixty feet at one end and 50 feet at the other; for purposes of light it is all 60 feet really, because that narrower part does not go up to the whole height of the building.

870. Howard-street, as regard the Embankment site, would be a street corresponding to Carey-street, as regards the Carey-street site?—I imagine that more people would come that way, because most of the lawyers would arrive that way; certainly all from Lincoln's Inn and that side.

871. Should you say that that would be a sufficient width for Carey-street, 55 feet?—Yes; that

Mr. *G. E. Street.*

9 July 1869.

that is what is proposed on the plan. I should like all those dimensions much larger for architectural effect.

872. In your original plan for the Carey-street site, and I suppose even in your reduced plan, to a certain extent you have the offices clustered round?—Not in the reduced plan.

873. To a certain extent?—No, not more in one than the other of the plans before you. There is a detached part in one block of the reduced plan.

874. In the Embankment plan the offices are quite detached except in the case of one of the Vice Chancellors?—And some of the judges' rooms.

875. With the exception of those, is it not so?—They would be clustered in a quadrangle, so that the effect would be that business transacted with a lawyer's clerk might be effected without interference with the courts.

876. You do not consider that in itself an advantage to have the offices separate, do you?—I think that that is a question which the lawyers must answer; it seems to me as far as I can gather from the answers to questions I ask, that solicitors who are not in an enormous way of business keep a clerk who does work both for equity offices and common law offices. To that man it would be an advantage to be able to get more easily from one to the other.

877. You took pains to communicate with the officers of the different courts in making your plan?—Yes.

878. Did they not report in favour of having offices in the immediate vicinity?—I do not know what they have reported; but the representatives of a good many of those offices were on the Commission, and they approved of my plan. I have never gone sufficiently far in detail with this plan to consult them as to whether the arrangements I was making were convenient for them or not, but of course I have had their convenience in my mind throughout.

879. It took you a very long time, did it not, to prepare these different arrangements on the original plan?—I have been now rather more than a year constantly at work, and three years more or less.

880. Would you not have to go through all that labour again if the other plan were adopted?—No, not all; I am sorry to say that whatever happens I shall have to go through a great deal of it again.

881. Would you have to begin *de novo* in dealing with the reduced Carey-street plan to the same extent?—Unless more land is bought to the north I must begin *de novo*. If more land is bought to the north I should not have to begin *de novo* in Carey-street as to a considerable part, not as far as the great block of courts; I consider that as settled in any plan, but the offices would require re-arrangement.

882. As to the level of the central hall that you propose, what is the level of it?—The level of it is 4 feet below the level of Howard-street, and 17 feet above the Embankment.

883. Do you not think that it will become a thoroughfare, that people would pass and re-pass through the central hall?—I do not think so; it depends very much upon whether New Essex-street is made. If it was decided that the northern entrance should be kept for people who had business there, I do not think it would be difficult to prevent that entrance being used by others.

884. But the Temple is used as a thoroughfare, although it has a porter?—That is a very different thing; you must admit everybody there whether on business or not; nobody is stopped.

885. Would you have any greater opportunity of excluding people from a court of justice?—I do not wish to do so, but I think people who want to go to the railway will go the nearest way, and will keep in the streets, and not go into the building unnecessarily.

886. From Norfolk-street and along this proposed new road, coming down close to St. Clement Danes, would not that be the nearest way?—No; they would have to go about 400 feet from the corner of Howard-street to the entrance, then into the hall, then 400 feet back to the railway station; nobody who came down New Essex-street would ever want to go into the building at all; they would not even go into the quadrangle. I have been particular to make the entrances and exits to that station on the eastern face.

887. You propose to put the courts on the first floor in the Carey-street site?—In both the sites.

888. Mr. *Layard.*] You have not prepared your working drawings for Carey-street, have you?—Yes, I have. I have got, I am afraid to say how many rolls of drawings, all prepared in pencil to a building scale for the approved plan.

889. Mr. *Mowbray.*] Do you know how deep the foundations for the hospital opposite go?—No, I do not know; I do not think they are an enormous depth; I think I heard the other day that the whole foundation cost 47,000 *l.*

Tuesday, 13*th July* 1869.

MEMBERS PRESENT:

Mr. Bentinck.	Mr. Beresford Hope.
The Chancellor of the Exchequer.	Mr. Hunt.
Mr. William Cowper.	Mr. Layard.
Viscount Enfield.	Lord John Manners.
Mr. Goldney.	Mr. Mowbray.
Mr. Gregory.	Lord Stanley.
Earl Grosvenor.	Sir William Tite.

THE RIGHT HON. LORD STANLEY IN THE CHAIR.

Mr. GEORGE EDMUND STREET, called in; and further Examined.

Mr. *G. E. Street.*

13 July 1869.

890. Lord *John Manners.*] WHAT is the area of the cleared ground of the Parliamentary site in Carey-street?—I believe it is to be 7½ acres.

891. And what is the amount of the proposed site on the Embankment?—You mean the ground on which we are going to build.

892. No; the whole site proposed to be taken?—I do not think that I can give it you; because it would include the roads all the way round. It appears by this statement of the Sub-Committee to be about 6½ acres; that is exclusive of the Embankment road, of course, but including Essex-street.

893. That leaves an acre of ground more on the Carey-street acquired site than on the proposed site in Howard-street?—Quite so.

894. I understood you to say that you regarded the building ground on the Carey-street site as equal to 4¾ acres?—Not the building ground, but the building ground shown on a particular map, the map published by the Law Society.

895. Then what do you assume to be the building ground of the Carey-street site?—I think that in order to use that irregular piece of ground in the most convenient way, to leave light and access, and so forth about it, the whole site is required, if you are to get the same accommodation as you get upon the six acres on the other site, because one site is a parallelogram and the other is extremely irregular in its contour.

896. That is to say, although there is an acre of ground more in Carey-street, you do not think that you could gain more ground on Carey-street for building purposes than you can in Howard-street?—Not as the site stands at present.

897. In order to enable you to make full use of the 7½ acres already acquired, will you tell the Committee what ground you think it absolutely necessary to add?—I must first of all ask whether your question is as regards the making of the site perfectly useable by making decent frontages on the other side of the surrounding streets.

898. It has nothing to do with the frontages on the other side of the street; but the statement is this, that whereas there are 7½ acres already acquired in Carey-street, and it is only proposed to acquire 6½ acres of ground on the Howard-street site, yet owing to the peculiar conformation of the ground on the Carey-street site, you cannot get more ground for building purposes on the Carey-street site than on the other; I ask how much more would have to be acquired in order to enable you to make full use of that 7½ acres?—The great difficulty in Carey-street is the excessively irregular shape of the western boundary. You want to square that.

899. And what amount of land would be required to accomplish that object?—I cannot state the precise amount necessary now, but it is exactly what was considered necessary by the Commission, one condition being that you should have a give and take arrangement with Clement's Inn.

900. It is chiefly that?—On that side.

901. It would be a give and take arrangement with Clement's Inn to make it available?—Available for my reduced plan, but not for the Commission's reduced plan.

902. I think that you were not able to tell us on the last day what the exact amount of the proposed additional ground was that the Commission recommended?—In the great scheme the total area of land which was to be dealt with in one way and another, in fact, the land which is coloured on that map in front of you, is about 13¼ acres. There was that amount of pulling down and rebuilding and forming streets which would have taken place if the building had been put upon that site.

903. But I am speaking now of the additional land?—I presume that you mean all this land (*pointing to the map*). This map shows practically the various properties that were to be dealt with. That pink site was 7½ acres. The area that would have been dealt with by the Government and private individuals would have been altogether 13¼ acres.

904. Including Cook's-court?—Including Cook's-court and everything that was to be taken down and re-constructed.

905. What was the additional amount recommended to be purchased by the Commission, exclusive of Cook's-court?—I have not measured it; I should think that three acres would be very likely about the amount.

906. Three acres and two roods?—I should think very likely.

907. Of that three acres and two roods, can you tell the Committee how much would really have been required for the plan as agreed upon by the Commission and yourself?—The whole of it.

Mr. *G. E. Street.*

13 July 1869.

908. And for the building?—For the building and for light and air on the opposite side of the streets in front of the building, which I take to go with the building. That 3¼ acres includes both sides of Bell-yard, for instance; it includes the north side of Carey-street, and the southern face of the Cook's-court block.

909. Take that part coloured green, between Chancery-lane and Bell-yard; is it your impression that that was proposed to be built upon or to be reserved as vacant ground?—It was proposed to be taken and re-let or re-sold, but it was all proposed to be taken.

910. Of the three acres and two roods which the Commission recommended to be purchased, how much would have been required for the purposes of the building, or for air and access to the building, and how much would be available to be resold?—I cannot tell you to a yard how much acreage, but on the plan I can tell you exactly. On this site we take up the whole of that yellow (*pointing to the plan*); then, in taking that, you cut into the backs of various premises, and in order to rebuild the front there you cut into the backs of these buildings (*pointing to the plan*), and I have no doubt that it would be found necessary to rebuild them up to Chancery-lane (*describing the plan*). On the north side we proposed to take the low buildings at the back of the houses on the south side of New-square, coloured yellow. The ground which we proposed to use on the eastern side of Bell-yard was rather more than half the whole area scheduled.

911. Then in continuation of Carey-street going west, what amount of ground coloured green would be available for re-sale out of the total amount proposed by the Commission to be acquired?—The whole of the land coloured green would be available for re-sale.

912. Sir *William Tite.*] That is on the west?—That is on the west.

913. Lord *John Manners.*] Can you tell the Committee how much then out of the three acres and two roods proposed to be purchased would be available for re-sale or letting?—I can only give you a guess. I have never had it measured; one can only give a guess by looking at its colouring here. I suppose that that (*pointing to the map*), might be an acre and a half, or something of that kind.

914. The total estimated cost, I believe, of the three acres and two roods was 668,000 *l.*?—Yes; but I cannot state exactly what was not included. I think any purchase in Thanet place was not included in that estimate.

915. The brown (*pointing to the map*) was not included?—No.

916. It comes to this, that out of the three acres and two roods which the Commission recommended to be purchased, about an acre would remain to be re-sold?—I have no doubt as much as that.

917. The total cost would be 668,000 *l.*; and from that would have to be taken the price of the acre (we will call it an acre) that remains over and above?—Quite so.

918. Now the depository of wills and the registry, and all the offices connected therewith, are not proposed to be included in the reduced plan on either site?—No.

919. They were all of them included, I think, in your accepted plan?—They were.

920. Can you tell the Committee at all what amount of ground at present is occupied by the Depository of Wills and the Registry, and the offices connected with them?—No, I cannot at all. I do not think that it would be important evidence either, because, as you know probably, there is a number of houses which have been joined together from time to time, and they cover an area which is not properly dealt with; really, the houses there are very low inferior property.

921. Whatever the property amounts to, of course it would be available for re-sale, in the event of the original plan being carried out?—Quite so.

922. Therefore, in the event of Parliament sanctioning the plan recommended by the Commission, there would be that acre coloured green to be re-sold, and all the land, whatever it is at present, that is occupied by the Depository of Wills, and the Registry, and the offices connected with them?—Yes.

923. I think you have already said that the Commission have not recommended that great street that we were talking about the other day, on the north-west of the Carey-street site?—They have not recommended that.

924. Can you tell us whether, in your opinion, it would be equally desirable to have that street made, whether the Law Courts were placed on the Carey-street site or on the Howard-street site?—I do not think that it would be equally necessary; it would be desirable in any case, as I said in my evidence before, to take the opportunity of getting a thoroughfare from south to north in that part of London; but if the building were put on the Howard-street site, then the street would come opposite Serle-street, and the natural line would be a continuation of Essex-street across to Serle-street, and so to Holborn; and you would not want that other north-western line of road, as I said in my evidence on Friday, if you had a street coming up there (*pointing to the plan*); it would be a natural way of laying out this ground, to have a street across here too (*pointing to the plan*).

925. Will you explain to the Committee why, in the event of the Serle-street improvement being made by the opening out of the Great Turnstile, in your opinion, a north-western approach would still be requisite for the Carey-street site, and not for the Howard-street site?—I did not say that. As far as the Courts of Justice are concerned, if Serle-street is improved, and there is an opening made opposite, that would be sufficient for the site of the building here (*pointing to the plan*).

926. As far as the Law Courts are concerned, we need not trouble our heads about that street, therefore?—If you take the widening of Serle-street, you need not.

927. Can you tell us what is the narrowest part of Serle-street?—26 ft. 10 in. between the houses.

928. Whereabouts is that?—It is below Portugal-street, in that part (*pointing to the map*).

929. Is not the narrowest part of Serle-street the part nearest to Carey-street?—Yes, it is.

930. Therefore, if the houses coloured yellow were purchased, Serle-street would be widened at its present narrowest part?—Yes, if the eastern side of the Cook's-court block is purchased, then the street might be widened in its worst part.

931. But even now it is 26 feet wide, is it not?—Twenty-six feet wide in the narrowest.

932. You

932. You mentioned, in your evidence, that if the Howard-street site were adopted, convenient accesses to the north would be found by Chancery-lane and Fetter-lane; I think you gave us the width of Chancery-lane, can you now give us the width of Fetter-lane?—I did not say that they would be convenient accesses; I said that they would be two bad accesses instead of one bad access; Fetter-lane is very narrow; it seems from the Ordnance map to be about 21 feet at the narrowest part that I can find.

933. Now, with respect to the bridges, I think you said that where you have proposed to put a bridge across the Strand it is 175 feet wide?—Yes.

934. And what is the width of the Strand where you would propose to place the bridge to the Carey-street site from the Temple?—The width I proposed to give on the approved plan was 55 feet; the actual width of the Strand at the narrowest place place is about 40 feet at present, but 55 feet was the width of the arch which I proposed on the approved plan.

935. In the one case you would have to build a bridge of 175 feet in length, and in the other of 55 feet?—Yes; it would have two arches, with a pier between them.

936. Have you any estimate of the respective cost of these structures; The one was a covered bridge and the other is an open bridge; I have not made an estimate; there is no doubt that the wider bridge would cost more, though it is not covered.

937. Then, as we understand it, the bridge is to be prolonged by an arcade down to Howard-street?—Yes, that is my proposition.

938. Have you estimated the cost of the arcade?—I said in my evidence on Friday, that it appeared to me that the advantage to the houses built there for use as chambers, law stationers' shops, and so forth, would be so great by having two traffic ways, that probably any persons who took the land for rebuilding would take it without any diminution of the rent which they would pay to Government on that consideration; it appears to me to add largely to the value of the land.

939. Do you assume they will pay for the cost of the arcade?—It is simply making so many piercings in the front walls of the houses; the additional expense of the building is nothing; it is the sacrifice of a certain amount of area on one floor; in the one case they would be offices very high above the ground, only reached from Essex-street; in the other, they would be offices reached by a level road very much frequented by lawyers and lawyers' clerks, and so forth, and therefore you would have the advantage of two ground floors really; my own impression is that it would increase the value of the property.

940. Then you are not prepared to tell the Committee what would be the extra cost of building a bridge at the wide part of the Strand over that of building a bridge at the narrower part?—I should think it would be a safe statement that if it cost 10,000 *l.* more, that would be the outside; I should say that it would not cost so much more by a good deal.

941. Have you estimated the cost of the Temple Bar bridge?—There was an estimate made, I think, at the time that I sent in my plans in competition, but I forget what it was now; I think some 6,000 *l.* or 8,000 *l.*, or something of that kind.

942. Now, with respect to the reduced plan on Carey-street, the point that you most complained of, I think, was the angle of your proposed building that would come close to Yeates's-court, is that so?—What I most complained of was the surroundings of the site; I said that in order to make the most of the land, I had brought my building within 10 feet of Yeates's-court, but I was satisfied that when it was done, Yeates's-court would be pulled down.

943. And Yeates's-court is included in that ground which the Commission recommended to be purchased?—Yes.

944. The part of your building which comes within 10 feet of Yeates's-court appears to be a sort of projection?—Having to deal with property so bad, I made what I thought an ingenious termination of my building, making windows in the towers which look down, not the 10 feet, but 100 feet, probably; I should have had no windows towards the court at the narrowest part.

945. I suppose that if the proximity to Yeates's-court was thought unadvisable you could easily re-arrange that portion of your scheme?—Yes, of course.

946. With respect to the bad air, and so forth, from Clare-market, will you explain to the Committee whether Clare-market abuts upon the Parliamentary site, or whether there is any property, and, if so, what property, interposed between Clare-market and the Parliamentary site?—I am not quite certain how far Clare-market extends. I see on the map there is a very short street, called Clare-market; but if you were to go there you would find that all the streets are of the same character. It begins at Clement's Inn-passage, south-east of Clare-market; that is as bad a passage as you can find anywhere; and the three streets at right angles to Clare-market, Houghton-street, Holly-street, and Clare-street, are streets of fair width, but full of hucksters' shops, and shops of that sort. Directly you pass the Clement's Inn boundary you may say that the bad property begins.

947. But, as a matter of fact, Clement's Inn is interposed, is it not?—Hardly; there is a space between Grange-court and Clement's Inn-passage, which would be open to it; and upon the great scheme we proposed to interpose a new Clement's Inn between the building and those back premises. I think that the open space, supposing you took down those houses, would be 100 feet; I mean the opening towards Clare-market.

948. I think you have already said that it is on the west side that, if the reduced scheme is to be applied to the Carey-street site, you would wish some additional purchases to be made?—The want of space from north to south pinches me more than anything. You might shorten the site from east to west, and make room for a reduced scheme, but if you are to carry out anything like the arrangement of the plan sanctioned by the Commission, you must also purchase property on the north side of Carey-street.

949. Do I rightly understand you to say, that if you purchased property on the north side of Carey-street, consisting of those low houses on to the south of Lincoln's Inn, you would then be able to part with a portion of the already acquired ground of the Carey-street site?—Yes; you would be obliged to buy some of Dane's Inn, and on the other hand to sell some of the other side. I think I answered the question to the

Mr. *G. E. Street.*

13 July 1860.

Chairman of this Committee on Friday, that a give-and-take arrangement might be made, if everybody were willing.

950. In your evidence the other day, with respect to the Howard-street site, you stated that the value of the property between Howard-street and the Strand was, in your opinion, enormous?—Yes, I should say enormous; I am told a million; but that is a very rough statement.

951. In the event of the Law Courts being placed on that site, I need hardly ask you whether the value of the property not purchased would be increased?—I have no doubt that it would be increased, but not in the same proportion as the property round the Carey-street site. The houses to the north of Howard-street are already respectable houses, and there would not be any reason for pulling them down because the Law Courts were built there. Whereas if you look all round the property on the Carey-street site, you will see that they are all bad houses; and the first thing that anybody would have to do would be to pull down all the houses and rebuild them, so that you would have houses rebuilt on a much larger and grander scale than would be done on the Howard-street site; you would have houses of the same character on the latter for some years to come.

952. We have it as your opinion, that the value of the property on the Howard-street site is enormous, and that it will be increased, though not largely, if the Law Courts are taken there?—No doubt it will be increased in value.

953. Whether, therefore, for practical purposes, or for giving a better view of any large building that might be placed there, we may assume that it would not be practicable for Government hereafter to purchase property in order to add to the site on the Embankment?—I cannot say about its being practicable for the Government to do it; it would be very costly, no doubt.

954. That is to say, that if at any future time it is thought advisable to bring either more courts or more offices into the concentration scheme, it would be extremely expensive to do so on the Embankment site?—There is no doubt it would.

955. Now with respect to the proposed building itself on the Embankment site, I see that since we met the last time a design has been placed before us. Looking at the design, are the Committee to understand that the top of the roof of the proposed building is higher than the roof of Somerset House or not?—Yes; the parapet is level with the parapet of Somerset House, so that in a very near view, when you are looking along the Embankment, the roof will be very much foreshortened; still, it would look somewhat above the roof of Somerset House. The line that I gave you was the line of the height of the top of the parapet, which is the same in both cases.

956. The eye, of course, would rest upon the roof?—Yes; in fact that drawing represents exactly the right proportion.

957. The roof is higher, and the building itself projects 50 feet in front?—Yes, 50 feet in front of Somerset House, to the line of the terrace.

958. What is the height of the building?—I think it is 75 or 80 feet, or something of that kind from the Embankment, I am not quite certain.

959. Can you tell the Committee how high your building would be with respect to the houses on the north side of Howard-street, next to the Strand; take Messrs. Smith's, for instance?—No, I have not measured Messrs. Smith's, that is very lofty indeed; but seen from Waterloo Bridge my building would entirely conceal Messrs. Smith's premises, because you see the roof of the central hall, for instance, is so high that it conceals the tower of St. Clement Danes; I did not measure Messrs. Smith's premises, but I took the exact level and height of the spire, and that is not visible above the roof.

960. That is from Waterloo Bridge?—Yes.

961. Take the Embankment?—From the Embankment there would be no chance of seeing anything of it; Waterloo Bridge is the place where you would see most.

962. With regard to looking down narrow streets at the building, I think you mentioned Longleat the other day?—Yes, I mentioned that as an example of looking down to a house; I said that I did not think that from the Strand, when you only see a narrow section of the building, it matters much whether you look up or down, though I would rather, on the whole, have it level, and I quoted Longleat as evidence of the fact that a very large building may look striking though you look down upon it.

963. But is there not a difference in looking down through trees and through houses?—It seems to me that looking down a narrow street is an extremely picturesque way of seeing a building.

964. Looking at the Ordnance map behind you, supposing that you were unfettered in your treatment of a great building to be placed on the line of the Embankment, starting from the south-west corner of Somerset House, is that the line that you would select?—I should bring it out a little more at the south-east angle of the new building; I would keep at the same distance from the Embankment wall as far as I could, and the more one could, by this arrangement of the plan, follow the line of the river, the better the scheme would be, I think; that has been my object in that plan, to do it as nearly as the railway would allow.

965. How near have you come to the railway?—It varies very much at different parts; the south-east end is the nearest. At the south-east there is a pavilion which comes within 10 feet of the railway, but the railway is parallel with the general line of the front of the building at a distance of 60 feet, which is just about the same distance as Westminster Abbey is from the Metropolitan Railway.

966. I think your attention was called the other day to evidence given before Lord Elcho's Committee, on the subject of vibration?—I was asked about it.

967. Have you paid any attention to that evidence since you were here?—I was not aware that the Report was out; but since then I have been looking at the Report, and my opinion is still that the suggestion of a very large bed of concrete under the building is the best suggestion that could be made, with the addition of one that was made by Mr. Bazalgette, I think, to interpose an area between the foundations and the railway so as to stop all vibration, leaving, practically, an area which would be formed on the one side by the side wall of the railway, and on the other by the foundations of the courts.

968. And is your proposed building in such a position with reference to the railway that Mr. Bazalgette's

Bazalgette's suggestion could be carried out?—It could be carried out perfectly easily. I think that the projecting parts of the building might be affected by the vibration; but when you consider that the general line of the building is as far from the railway as Westminster Abbey is from the Metropolitan Railway, when you consider that the foundations here are proposed to go very much below the bottom of the railway, whereas at Westminster Abbey they are above them, and that Mr. Fergusson and Mr. Scott, and other gentlemen, seem to have gone to the top of the clock tower at Westminster Abbey, and to have tried in vain to discover that there was the least vibration; I do not think that there would be any danger of the general line of the building being affected, although the south-east angle would be affected, I think, by the vibration.

969. Is there room at that angle to place the area which Mr. Bazalgette recommends?—You could make a space there between the railway and the building; the railway is so constructed that it does not exert any thrust on the side walls; there might be an area of five feet there, or something of that kind, which, if the wall is made sufficiently thick, would be quite sufficient; I doubt whether you would quite get rid of vibration in the south-east angle. I have made the projecting centre of the building rather larger than is desirable for architectural effect, perhaps, but I was not certain how it would work out; it comes on this plan within 20 feet from the railway.

970. Mr. *Layard.*] That is only a sketch (*pointing to the design*)?—Not only a sketch, but a sketch made between a Monday and a Saturday, and therefore it must be taken as merely a sketch.

971. Lord *John Manners.*] I understand that you would have to reconsider even the plan?—I should have to reconsider the detail of all the rooms; that projection is caused by having to provide a number of rooms for the Lord Chancellor and the Lords Justices beyond the number required for the other judges; but of course all these plans are block plans which show the general arrangement of the area, and I have not got very far in settling exactly how the rooms would be arranged.

972. Earl *Grosvenor.*] Is it not your opinion that this is one of the few available sites, and one of the finest sites in London, for a public building of great national importance?—I think it is a magnificent site for a public building; the Committee have only to go to these windows to see the effect from here; you will see that from the warehouses of the India Office on the right, looking to the other side of the bridge, almost the whole space would be filled up by this building.

973. Do you think that, considering the enormous extent of London, and the unhappily prevailing fog and smoke, distant views are worthy of consideration?—I think so; on some days we have not those fogs. It is not, however, of the same consequence for a building to be seen at a great distance. It requires some magnificent feature, like the dome of St. Paul's, of enormous bulk, to make its mark among other buildings, and a tower does not produce the same effect, as we know in the case of the Victoria Tower.

974. Supposing that the building were put on the Carey-street site, I suppose that the vibration would be as great or nearly from the Strand, as it would be on the Howard-street site from the railway?—The vibration from heavy waggons passing along the Strand is very great indeed; but I have already expressed my opinion in my report, that the annoyance from noise and so forth on the Carey street site would be greater than the annoyance on the Embankment site; this railway is the one annoyance on the latter site. I ought to supplement what I said just now, by saying that the courts of justice themselves will nowhere be nearer than 110 feet to the railway; that the rooms which come within 60 feet and less are most of them offices and judges' rooms, and so forth, none of them courts of justice; but the courts of justice at the nearest point are 110 feet off.

975. Mr. *Bentinck.*] Do I rightly understand from your evidence, that the two rival reduced plans stand upon the same area virtually?—The two plans in the report cover somewhere about the same; the one that you have before you has rather a larger area covered with building; it has rather a larger area, because I apprehend that we shall be obliged to confine ourselves there to four storeys high, whereas, on the Howard-street site, owing to the greater fall of the ground, we might have a fifth storey without inconvenience.

976. They have, to all intents and purposes, the same accommodation?—Yes.

977. The additional courts that you specified would have to be provided in both?—If you return back to the great plan, that would be so.

978. As to the question of access, in answer to Lord John Manners I understood you to say that the northern approaches, which you thought so desirable in the Carey-street site, would not be required in the Howard-street site?—Just so; I explained that on Friday.

979. You propose now, in the event of the adoption of the Howard-street site, that a broad street should run across the Carey-street site, and communicate with Serle-street?—Yes.

980. And that, you consider, would be sufficient for a north-western or northern approach?—In itself it would be a great advantage to the building; but I view that street as an enormous metropolitan improvement, not as a necessity for the courts of justice on the Howard-street site, because there are so many modes of access to the Howard-street site; people will come round the Embankment roadway from a great part of London; people will use Drury-lane and Endell-street, or Wellington-street from the north-west; and from the north-east they will use not only Chancery-lane but Fetter-lane, and, I have no doubt, to a considerable extent, Farringdon-street, because a cab from Smithfield could come quickly all the way to the Embankment through that street.

981. You create a northern artery by a new street joining Serle-street?—Yes, for the sake of London, rather than for the sake of the law courts.

982. As regards the eastern and southern approaches from the Embankment, you stated, on Friday, that it is a fact that the Strand requires great relief?—Yes.

983. Are you not aware that there are improvements going on in the City which will tend to that relief by the forming of a new street from the Mansion House down to the Embankment?—I doubt whether that will relieve the Strand very much. The effect one sees of the metro-

Mr. *G. E. Street.*

13 July 1869.

politan improvements, is that the old streets are still as much crowded as ever; and the reason that the Strand is so blocked with people is, that there is not any portion of the Strand which has not a shop or a place of business on it, which brings and creates traffic. The Embankment roadway will be a great through thoroughfare probably for people coming from one end of London to the other; it will not be crowded with people stopping at doors, because there will be no doors to stop at.

984. In your opinion the City improvements will not lighten the traffic in the Strand?—I doubt whether they would ever diminish it to an appreciable extent.

985. As regards the enormous crowds who are to arrive on the Embankment, and go to the Law Courts from the south and the east, how far would they have to go from the railway station and steamboat pier, and the Embankment generally, to the Carey-street site?—It would be about 950 feet from the railway station to the south front of the building.

986. There are already three streets between the Embankment and the Strand, namely, those three streets that you see on the plan?—None of them run down to the Embankment, they all combine in one at the bottom; the three streets all come down on to the Embankment at different levels, and a rising road coming round the railway station is proposed, which will intercept all those streets, so that all three form the same road at the bottom, and then wind round on to the Embankment.

987. Do none of those three streets come on to the Embankment?—No, they could not do so directly, because at the bottom of the street you would have a rise from the embankment up to the end of the street of one in ten, or something of that kind, which is an impossible gradient.

988. Is it not contemplated that those streets shall communicate with the Embankment?—Yes, but they communicate with a road which intercepts them all, and then winds down to the Embankment.

989. What you mean to say is, that those three streets would all fall into one street at the bottom?—Yes, an intercepting street.

990. Norfolk-street is a very wide street?—Not very wide; it is a good street; call it 50 feet. I believe it is 48 feet.

991. With regard to the omitted courts and offices which you referred to in your evidence the other day, they stood in the original plan, I think I understood you to say, upon an area of 284,000 superficial feet?—They stood upon a very large area. I forget the figures.

992. Are you acquainted with the courts at Lincoln's Inn?—Yes; I think that I know all the courts there.

993. And the offices which belong to those courts?—Yes; the various offices spread round.

994. You are also acquainted with the Rolls Estate, situate on the eastern side of Chancery-lane?—Yes.

995. Could not these omitted law courts and offices be accommodated upon those two sites, upon the Rolls Estate, and also upon the site of the Lincoln's Inn Courts?—The Lincoln's Inn Courts, you know, occupy a very little space indeed; you are aware that they are two courts formed out of a dining hall.

996. I include out of that the Vice Chancellors' Courts and the block of buildings which forms a sort of island in Old Square?—That is the old dining hall, is it not, cut into two courts.

997. The old dining hall and the rooms which are now used by the Lords Justices, and their offices, and the rooms behind the old hall used by the Lord Chancellor, and his offices; and, in short, the block of building which forms an island?—That is the piece that you refer to (*pointing to the plan*). You could not remove the chapel (*pointing to it*).

998. The whole of that part (*pointing to the plan*) is virtually occupied by Courts of Chancery or the offices of officers belonging to the Courts of Chancery?—I think that the three temporary courts here (*pointing to the plan*) are very objectionable; their area is very small.

999. On the upper part of Chancery-lane there are the offices which belong to the Registry, formerly occupied by the Six Clerks?—Yes, and the Accountant General; the Accountant General is not now proposed to be removed, you know.

1000. I wish to ask you whether you do not think these omitted courts and offices might be placed upon that area upon the Rolls estate?—I do not exactly know how much of the Rolls estate would be left, or how much is proposed to be occupied by the Record Office, but it was always looked forward to by the Commission that there should be the prospect of enlarging the building on the east side of Chancery-lane; but if you ask me about the other property, it seems to me that to arrange a little bit of the building here, and another here (*describing it*) would be no improvement upon the present state of things.

1001. But if the Rolls estate was adopted it would clearly be more convenient that the main building should be on the Carey-street site?—The Rolls building forms an admirable opportunity for enlargement, no doubt, because the land is Government property.

1002. As regards these towers that we see on that design, are they part of the plan?—Well, they look as if they were.

1003. I ask you that question because the other day Mr. Field told us that the towers were omitted altogether?—But I am not responsible for his description.

1004. Are they essential to the architectural effect, in your opinion, of the building?—I think they are an enormous gain to it; a building may be a good building without towers, of course, but two of those towers are intended for the purposes of ventilation; the other is a clock tower which I thought to be of great advantage to that part of London as well as to the building, and, up to a considerable height, it might be used. For instance, there was a stationer's department proposed by the Commission which might perfectly well be there. The writing clerks have nobody to see them, and the further they are removed from the general public the better, and they might perfectly well go up to a sixth floor if necessary, to do all the law stationers' work done in the building.

1005. I understand you that the clock tower would be utilized?—The lower part of it would, so that the expenditure upon it would not be entirely thrown away.

1006. It has not been proposed to omit the towers altogether?—No.

1007. Sir *William Tite.*] With reference to a question asked you by the noble Lord, as to the

the original and larger design, in that there was a very large tower?—Yes.

1008. And was that intended to receive the wills?—I think that you are under a little misapprehension as to that.

1009. It is shown on that drawing?—Yes, but that is not the design that has been approved; that is my competition design. In the original instructions to architects, the architects were told that the heads of the Probate department thought it would be a very good thing indeed, to put the wills either in a tower or towers. Upon that instruction I provided that tower; but when I came to discuss the question with the officers, they said that what they would prefer would be to have two towers; and so in this plan, which has been approved by the Commission, there were two towers inside the building inclosed by walls. They were frightened by the explosion in the Coldbath Fields, and they thought it important to have the depository for wills inclosed in the quadrangle.

1010. At all events, in that approved arrangement, you had a depository for wills?—Yes.

1011. Which demands enormous space?—Yes; 365,000 cubic feet they wanted.

1012. That of course is not essential to the practice of the courts, or necessary to it in any manner?—I should think not.

1013. A will is rarely referred to, and if wanted, a certified copy is often sufficient? Yes, one of these towers was for original wills, and the other for copies; of course the applications for very old wills are rare, so that Dr. Bayford, the head of that office, thought that the fact of the wills being stored a considerable height above the ground, in the case of old wills, would be no great inconvenience.

1014. But is it your opinion or not, that the original instructions which you embodied in your original design, and which you have attempted to modify and re-arrange on your larger plan, were exceedingly extravagant in their demands for space?—I should not like to say that they were exceedingly extravagant; I thought there were many respects in which they were extravagant, and as soon as I was appointed architect to the building, I suggested whether they could not be reduced, and a sub-committee was appointed, and we did very largely reduce the amount of accommodation.

1015. Then you consider that they were extravagant originally?—I consider that they were extravagant, but not extremely extravagant.

1016. Was there not in your original construction, and is there in your amended plan, a great arrangement of kitchens and eating-rooms?—In the large amended plan there was a dining-room, but it was provided in the basement.

1017. And necessarily a kitchen also?—Yes.

1018. Do you know the meaning of a "despatch kitchen"; have you heard that phrase?—Yes; I forget what it is now.

1019. Did you provide a "despatch kitchen" in the original design?—No; there was simply so much space given up for refreshment-rooms generally.

1020. Is that mentioned in the original instructions?—Yes; but there is no reference to a despatch kitchen.

1021. With regard to the accommodation for waiting-rooms, is it true that there were to be waiting-rooms for plaintiffs' witnesses and for defendants' witnesses; one for plaintiffs' male witnesses and one for defendants' male witnesses; one for plaintiffs' female witnesses and one for defendants' female witnesses?—Yes, all that was provided.

1022. Is that abandoned?—It is not altogether abandoned, but it is reduced considerably there, and I have reduced it again in the plan that I propose for the Embankment.

1023. All those things would rather suggest that there was a considerable amount of extravagance, although you objected to the word "excessive"?—Yes; I did not like to use the word "excessive," because, as far as I have been able to judge, I do not think that there was a very extravagant demand on the part of the heads of the departments, so much as in those rooms for which nobody was responsible; rooms for plaintiffs' witnesses and defendants' witnesses, and jury rooms, and so forth: I think that there was a great deal of extravagance in that block connected with the courts, a great many rooms that would be very seldom used indeed.

1024. In the plan for either the Carey-street site or the Embankment site, the extravagance of those demands is greatly diminished, I suppose?—I have reduced it very largely indeed.

1025. You have told us that the area is pretty much the same in the two cases, only that in one case you have put a fifth storey, which you cannot so well do in the other case, from the nature of the site?—Yes.

1026. Is it possible, do you think, still to diminish the Embankment site, if we chose; you have left out three courts completely, if I understand you rightly?—Yes.

1027. Is it open to us to leave out any of the accommodation in that site, still further to diminish it?—I very much doubt whether it is; I hold it to be of great importance to make all the rooms connected with the court the same throughout, so that anyone who knows the rooms in connection with one court, will know them in all; in connection with every court, I have placed a jury room and a witnesses' room; that is a convenient arrangement. None of the rooms are excessive in their size, and they are very much reduced from the original demand in the book of instructions to the architects; I do not think that you could reduce it more. As to the judges' accommodation, I am somewhat doubtful; I do not quite understand how much use is to be made of their rooms; but if we got all the judges and clerks on one floor behind the court, if that were possible, it would be an advantage, because we should have the whole use of the rooms underneath them, as well as over them, for offices.

1028. I understand that you have really studied the subject in all its details, and I want, not the opinion dictated to you by the Commission, but your opinion as the architect; can you reduce this enormous extent of six acres for the building without diminishing the real convenience of it to the public?—I have no doubt that there are small reductions still possible when we come to arrange the details of the plan. For instance, there are a great many retiring-rooms provided for officers, which men in my profession can carry on their profession without.

1029. Are the courts no bigger than they ought to be?—I do not think that they are.

1030. Is the central hall larger than it need be; I mean on your reduced plan?—I do not think so.

 1031. What

Mr. *G. E. Street.*

13 July 1869.

1031. What is the size of it now?—In the approved plan it was 55 feet by 322 feet; that is an area of 17,710 feet. The hall in this reduced plan is 50 feet by 280 feet; that is an area of 14,000 feet; so that I have reduced the hall for these reduced plans. I thought the hall was perhaps unnecessarily large in the other.

1032. Still that is very large?—It is a grand size.

1033. How big is Westminster Hall?—239 by 68; an area of 16,252 feet.

1034. I find, on looking at the instructions, that there was a very large space mentioned for libraries; what have you done for that?—It would remain for the Government to instruct me about that; at present the whole arrangement of the building is so very unsettled that I expect I shall have to have some instructions on questions of that kind from the Government, as to whether in either case they would build a library or not.

1035. But, in the one case or the other, you have a very large space for a library?—Not in the reduced plan; I assume that the library would be reduced and put over the Bar room, which is also reduced. I thought the accommodation originally given for the Bar rooms too large.

1036. What is the meaning of the term "Bar rooms"?—There was a large room for the Bar, and a refreshment-room for the Bar, and a large library for the use of the Bar and attorneys.

1037. I think that I gather this; that you could, by careful study, and with some authority to guide you, still diminish (may I say sensibly?) the space required on the Embankment site?—I do not think that I could; I have first of all succeeded in reducing the building for the Carey-street site from the large plan, and I have taken the liberty to assume that a great many reductions would be made, and those I have calculated upon; I do not think that you will be able to reduce the building any farther than I have already on this Howard-street site.

1038. Not the six acres?—It is not six acres for building.

1039. What is this end building on the plan (*pointing to it*)?—They are all offices.

1040. Mr. *Goldney.*] In the original instructions to the architects, was it not clearly defined and laid down that you were to confine yourselves to the yellow space laid down on the plan (*pointing to the plan*); I will refer you to page 93; you are directed there, in the first instance, to confine yourselves entirely to that; "Resolved, that, subject to the qualification in the paragraphs 10, 11, and 39 in the instructions to the architects as to Clement's Inn, the architects be instructed to confine their plans for the court building to the part coloured yellow on block plan of site"?—That plan (*pointing to it*) was subsequently modified.

1041. I ask you whether, in the first instance, it was not as I say?—I believe that, in the first instance, we were directed to confine ourselves to a particular width from south to north.

1042. In the first instance, the competing architects were directed to confine their building to the yellow space?—I do not think that was so; my impression is that it was not.

1043. The architects afterwards met together, and Mr. Scott wrote a letter on their behalf, saying that they should like to have a large space from north to south?—Yes.

1044. In that letter Mr. Scott said that it was possible to put the building on that other space, but that they would like to have more: on page 107 he says, that "though the whole scheme might possibly be carried out on the ground indicated by the yellow tint, it could not, in their opinion, be done without a sacrifice of convenience"; and then he asks for the additional land?—Yes; eleven of them met together and agreed to ask for 510 feet from north to south, and 700 feet from east to west.

1045. Then a qualified addition was made that you might bring the buildings to the border of Carey-street, but not go into Pickett-street?—That we were not to encroach on Pickett-street; that circle was to be left out of the building.

1046. Nor were you to encroach on Carey-street?—Yes, we were to deal with Carey-street by encroaching on it.

1047. On page 109 I find this resolution: "In preparing his design each architect may consider that any part of the lands coloured blue, which such design may require, will be purchased, and that liberty be given to the architects to vary the site of the actual building, as suggested in their letter, except that no part of Carey-street or Pickett-street is to be included in such site?"—Yes, but I think you will find somewhere else that that was the building line; beyond that was to be the area, and such projections in the way of staircases and so on, as we chose. There is a letter, rather late on, from Mr. Waterhouse, asking whether he was at liberty to make projections beyond that line to the front of the area.

1048. I will read Mr. Scott's letter on page 111, with the reply to say that they would not consent to go on either with Carey-street or Pickett-street: Mr. Scott says, "I think that there was no general feeling in favour of including any part of Pickett-street; but there was, I am bound to say, a very strong and very general feeling of the necessity of adding as much as possible to the depth of the site from south to north; and, as a means of effecting this, it was a general opinion that the open area for giving light to the basement might, with the greatest advantage to the arrangements, be made to occupy a part (say 15 feet) of the present roadway in Carey-street, the loss of width being more than made up by the addition to its north side of the space tinted red on the plan; so that, in effect, no part of the building itself would go beyond the present line of frontage in Carey-street. All we ask is, that we may not be compelled to set our building back from that line of frontage;" then you find on the following page that the words "Carey-street" were struck out, but that Pickett-street was wholly excluded?—We were not allowed to go into Pickett-street, but were allowed to do what Mr. Scott asked in Carey-street.

1049. "All we ask is that we may not be compelled to set our building back from that line of frontage"?—Yes; we were to build up to the edge of Carey-street, and take the area out of the then existing Carey-street.

1050. There was an application afterwards for some further alterations at a meeting of the 27th of June, at which the architects were not unanimous, I think; were you one of these that signed

signed that?—I was there; on what point do you mean they were not unanimous.

1051. Not unanimous in saying that any further land was necessary; you will find on page 140, that Mr. Scott stated in his letter "that the competing architects considered the obtaining of compulsory powers for the purchase" of land, and that they were not unanimous about it?—It was a meeting which was held about two months before the competition plans were sent in, and when every man's plan was so far advanced that it was impossible to alter it; I do not seem to have been present at the meeting; I suppose that I thought it unnecessary to go to a meeting about the site at that time of day, but if there was any apparent disagreement among them, I suppose it was because no one liked to show his hand to his neighbour.

1052. Could a building larger than this reduced plan have been placed on the Carey-street site, as purchased?—I do not think that it could with propriety in its present shape.

1053. I ask whether it could be; I do not say "with propriety"?—Yes; any amount of building can be put upon any site, if you do not care about air and light.

1054. I ask whether a building larger than the one now suggested could be placed on the Carey-street site?—Yes, if you are not particular about the air and light.

1055. With regard to this additional land, as to which some questions have been asked you, was the suggestion made by you in the first instance after your appointment in 1868?—Yes.

1056. The requirement emanated from you, and not from the Commission?—I forget exactly how I came to be asked to report, but I reported, and the Commission considered that most of these lands were indispensable.

1057. I ask whether it did not emanate from you?—I presume, as a matter of course, that it did.

1058. And not until the final appointment of yourself as architect in 1868?—Of course not; I had no instructions from the Commission until then.

1059. Have you ever heard any complaints from the residents of Clement's Inn and New Inn, with regard to the defective air from these places of which you have spoken?—No.

1060. Have the buildings existed as long as you remember?—Yes, and in the same state.

1061. Have you heard any complaint about King's College Hospital suffering from it?—No.

1062. I want to draw your attention to the comparative statements of Mr. Burnet and yourself with regard to the statement about the available space for offices; it is in the report of a sub-committee appointed by the Courts of Justice Commission; in the first statement, the "original statement," it is put that the original requirement for offices was (leaving out fractions) 256,000 feet. In "Mr. Street's Howard-street Scheme," the available space for offices is put down at 180,000 feet?—Yes.

1063. In the "reduced scheme for Carey-street site," it is put down at 278,000?—Yes.

1064. And at the bottom is a foot-note, foot-note B., "Any floor space that might be provided for offices in the court block is omitted in these measurements, because it may be added equally in each case": now I will refer you to the statement in Appendix A., which I presume was drawn up by Mr. Hunt?—No.

1665. By you?—No; the comparison headed "New Law Courts," that you have been reading from, is the comparison made by Mr. Burnet; the next one is Mr. Burnet's comparison corrected by the Committee.

1066. Of which Mr. Hunt was a member?—Mr. Hunt was a member, but he had no more to do with it than any other member of the Committee.

1067. In the Appendix A. there is a quantity of 96,000 feet added as "Total space provided in court block," which brings up the requirement to the original area, 285,000 feet?—Yes.

1068. And in the next column, giving your reduced plan for Carey-street, you say, opposite to "office accommodation," "practically the same as the Howard-street scheme"?—Yes.

1069. To make up the area of office accommodation you have abstracted 96,000 feet in the Howard-street plan from the court block?—It is provided in the court block.

1070. If that same quantity of space were abstracted from the court block in the Carey-street site, would it not give you the 278,000 feet plus the 96,000 feet?—No; the two schemes now are just the same; the 96,000 is provided in the court block in either case, and 190,000 in the rest of the building; these figures in the first sheet, this "original statement," are all wrong, and have been corrected by a sub-committee once.

1071. Look at the foot-note in E., please: "Any floor space that might be provided for offices in the court block is omitted in this measurement"?—Quite so; that is in what is called the reduced Carey-street scheme.

1072. To make the comparison equal, would not the 96,000 feet have to be added to that 278,000 feet?—No, because I have reported at length on that point, to show that it is not possible to get that space without making an entirely different plan. In order to get the power of using those rooms, I altered my scheme for the central block of courts and offices completely. The approved scheme had external staircases for the general public to get to the courts; but I have done away with those staircases because passages to them from the galleries, cut through the floor above the judges everywhere. There are no spaces provided for those staircases, and no provision for getting to them; and I do not see how, without the entire re-modelling of that plan in the way that I did re-model it for Howard-street, you could make use of that office accommodation there.

1073. You mean that in the Howard-street plan you could abstract the 96,000, and in the Carey-street plan you could not?—It is not abstracting; I add a storey there. I make a more economical use of the building.

1074. Then shall I take the answer in this way, that you add to the offices by a storey in Howard-street, which you think it would be impossible to do in Carey-street?—Impossible without an entire alteration of the plan, as shown in my reduced plan.

1075. Supposing that the Howard-street plan were carried out, how many steps would a person coming by the railway have to go up from the railway to the Strand; would it be 120 steps?—There would be 14 feet 6 in the first place from the platform of the railway station to the ground, I believe; then there would be an incline

Mr. *G. E. Street.*

13 July 1869.

incline in the quadrangle till you came to the entrance to the central hall, and the people coming from that side would have to rise 12 feet to the floor of the central hall (I do not know whether I have yet mentioned here that I have assumed that the Thames Embankment roadway was 14 feet above the Ordnance datum; it turns out that it is 16·50, so that all the dimensions here are shown on my block plans two feet worse than they ought to be). From the hall to the courts would be 15 feet 6; so that the height to be taken by steps from the platform of the railway station to the floor of the courts would be 42 feet.

1076. Assuming the steps to be six inches, that would make it 85 steps?—Yes.

1077. As regards the mode of access in Carey-street, have you ever compared them with those to the new Royal Academy?—You mean the streets that lead to it; no, I have not compared them with the Royal Academy.

1078. Which should you think that the largest number of people will be resorting to?—I should think, at any one time, to the Royal Academy, certainly.

1079. Do not you think that the approaches to the Royal Academy are narrower than those to the Carey-street site?—No, I should say not.

1080. I am not talking of the temporary entrance to the Academy, you will bear in mind?—But I am afraid that the temporary entrance shows you a state of affairs just as good as it will be when the court-yard is finished and opened; but it is very difficult to compare two things so dissimilar. Coming from the north, there are Sackville-street and Bond-street, both of which may bring a great number of people; you come down Sackville-street into Piccadilly, and so get to the Royal Academy, or down Bond-street and Dover-street, or Albemarle-street; from the south you have still better accesses; they all converge upon the south front.

1081. Is Piccadilly wider there than this part at St. Clement's Church?—No, not wider than it is at St. Clement Danes.

1082. That would be one entrance to the Royal Academy?—That is the only entrance.

1083. At that point the Strand will be wider?—At that point Piccadilly is not so wide as the Strand at St. Clement Danes.

1084. As to the foundations; have you seen the foundation that the gas company are obliged to take at Barking for their works?—No.

1085. Have you heard of it?—No.

1086. Would you be surprised if I said that it was 70 feet deep?—I do not know the nature of the site at all.

1087. It is by the river side with gravel similar to the gravel here, they say; have you considered it possible that it may be necessary to go right through that gravel?—Yes.

1088. What would be the depth of it?—It is about 35 feet below the Embankment roadway. At present there have been no borings made except on the front wall of the Embankment between Temple Pier and Waterloo Pier.

1089. Supposing that it were necessary to go through the whole of that gravel, would it materially increase the expense of the foundation?—Not very enormously. In the front of the building you might add for concrete about 6,000*l.* for every five feet in depth.

1090. Do you know the concrete that they are putting in at the new public offices?—I tried to learn yesterday, but I could not find Mr. Scott; but I know what has been done on the hospital opposite to us, and what has been done at the Middle Temple Library. In the case of St. Thomas's Hospital, I find that the main walls are carried down to the blue clay, which averages about 26 feet from the surface, and the walls rest on a bed of concrete at the average depth of 15 feet. The spaces between the main walls are only excavated to the gravel.

1091. What is the sub-soil of the Carey-street site?—I cannot tell you; there is gravel, no doubt, but they say there is sand as well. I think that when you get back from the line of the river, you may assume that the foundations would be the same in either case.

1092. You do not know when the railway will be finished?—No; but I believe that they are at work at this end of it.

1093. Would it be possible for the two works to go on together?—Yes, the railway is made independent of anything beyond it; it does not depend for support on anything at the back of the wall.

1094. Sir *William Tite.*] Do you know that from the parentalia, St. Paul's stands upon the gravel above the blue clay, except in one instance?—Yes.

1095. Mr. *Beresford Hope.*] I suppose that we may assume that the main reason for the proposed change of the building from Carey-street to Howard-street is of an artistic nature?—The main reason which operates with me, do you mean.

1096. With those gentlemen who wish to change the site from Carey-street to Howard-street?—I presume so; but I am hardly justified in answering for them.

1097. Generally, as a man interested in the question, that would be your inference?—Yes.

1098. The Chancellor of the Exchequer says that there may be economical reasons also?—Yes; they are economical reasons which are put to me by the Government.

1099. Do you think that this Committee may assume that a building generally sufficient for the purposes of law courts and their attendant offices might be placed upon either site, if we throw artistic considerations aside?—Upon the reduced scale it might, but I am no judge of whether the reduced building is sufficient for the purpose.

1100. But, assuming that it is?—Assuming that it is, I have shown by my Report that a building containing the same accommodation can be put on either site.

1101. Of course the question of preference between the two sites must depend a great deal upon the conformation of the ground in either case?—Yes.

1102. You have studied the Howard-street site?—Yes.

1103. And you are prepared to say that the conformation of the ground there is not unfavourable?—Yes.

1104. You do not think that the fact of the ground sloping down somewhat abruptly till it reaches a precipice at the end of the streets, and then resuming again on a dead flat upon the reclaimed ground is unfavourable?—In an artistic point of view certainly not, because that abrupt fall would disappear in the process of our works.

1105. Practically, is it unfavourable?—The only unfavourable point is the additional cost of foundations on the Embankment.

1106. And

1106. And the great labour that you must have in carting away a great deal of that rather irregularly formed soil, I suppose?—It so happens that a vast quantity of the soil that we take out of one place will go into another in the form of concrete; there is a vast quantity of valuable gravel all over that site, apparently.

1107. Is it not the case, that not only does the ground slope from north to south, but that there is a considerable inequality in Howard-street itself, which rises in the middle like a gable, and falls east and west?—Yes.

1108. Have you found any difficulty from that peculiarity?—No; it has led to a very convenient access to the central quadrangle; you descend from Essex-street and the highest part of Howard-street to the entrance to the block of offices; it is really a convenience as far as access to the building goes.

1109. Then you consider that in that point of view, the conformation of the ground, the Howard-street site has advantages over the Carey-street site?—I do not know that it has advantages; it is perfectly satisfactory. But the truth is, that if you deal with any site upon common sense principles it appears to me that there is very little difference between them; there is nothing inconvenient in the slope of the ground in Carey-street, and nothing inconvenient in the slope of the ground in Howard-street.

1110. I observe in your plans contained in this book that you propose to buy the church on the northern side of Howard-street?—I think it would be necessary, certainly.

1111. Supposing that the Chancellor of the Exchequer, from the economical reasons which he so properly called to your attention, should decline to do that, would your Howard-street plan be seriously damaged?—I think that you are suggesting something that is contrary to the fact; as I understand the Government have given notice for the purchase of those houses.

1112. On the whole of the north side?—Yes.

1113. Leaving the remaining houses between Howard-street and the Strand untouched?—Certainly; they are most of them very respectable London houses of their kind, you know.

1114. You look on the Essex-street improvement as an essential part of your plan?—Yes.

1115. Including the scheme of an upper row, like the rows at Chester, communicating by a bridge with the Strand, and a lower arcade communicating with it by a tunnel?—I think that it would be of very great advantage to the public, and to the lawyers in Lincoln's Inn-fields and Lincoln's Inn; I do not say that it is essential, but it would be a very great gain.

1116. Will you explain a little more fully how you propose to deal with that bridge. In the first place, it will be only a foot bridge?—Only a foot bridge.

1117. Do you propose having staircases to it on the north and the south of the Strand?—Not on the south; I should not see much use in that, though it might be contrived very easily; but on the north I propose it.

1118. You propose that bridge for the use of those coming from the north of the Strand?—And going to the building and back again.

1119. How would you propose to work the tunnel; have you a staircase descending into the tunnel on the north of the Strand?—Yes.

1120. Have you any means of getting into the tunnel on the south of the Strand?—It is a straight road through from Howard-street; it is on a level with the front of Howard-street. The scheme that I made was really with a view to the benefit of the Courts of Law, and not with a view to enable people to cross the Strand; but supposing that it were thought necessary to give the public walking along the Strand the power of crossing it by a tunnel or a bridge, it would be easy to add another staircase.

Mr. *G. E. Street.* 13 July 1869.

1121. Then your row and arcade would be intended for the use, not of the public, but of the lawyers?—I meant it for the lawyers just as I may mention that the Temple Bar bridge, proposed to be rebuilt by the Commission was to be exclusively for the use of barristers in the Temple, and not for the public at all.

1121.* This bridge of yours, in fact, is the correlative of the Temple Bar bridge, as proposed in the large Carey-street plan?—Yes, but with this difference, that in the case of the Temple Bar bridge the members of the Temple were expected to rise the whole height over the Strand to the Courts, and then descend a little again to get to their rooms; they had, in that plan, to take an enormous number of steps altogether; the advantage of this bridge is that anybody coming from the north would have to mount very little indeed from the north.

1122. And do you leave amply sufficient headway for the Strand, for all vehicles passing under?—Yes; there would be no great waste of labour in getting up to this level; if it were carried through to Carey-street you would only have to rise 12 feet in Carey-street, which is nothing.

1123. Would your bridge communicate with the proposed street across the Carey-street area?—Yes.

1124. A street across the Carey-street area and this bridge communication with the law courts by Essex-street, are, you consider, portions of the same improvement?—Yes; I think that it would get over the objection of those who live on the north side of the Strand; it was rather in their interest that I proposed it.

1125. You propose to make the ground line of your new courts, the ground line of Somerset House Terrace?—The base of Somerset House Terrace.

1126. Do you consider that Somerset House Terrace is viewed architecturally, a portion of the structure of Somerset House itself, or only a basement to it?—It is very hard indeed to Somerset House if it is not; that is all I can say; because when you walk along the Embankment, you will find that in the perspective the terrace cuts off, I think, the whole of the ground floor of Somerset House; so that really, walking along the Embankment, there is no question whatever that the terrace is the base line of the building.

1127. And you consider that, by so treating your building, you confer a benefit on Somerset House?—I do not say that I confer a benefit; but I consider that I do Somerset House no injury; if I set my building back to the line of Somerset House with no terrace in front of it, I consider that my building would most decidedly be very much affected, because I should have this erection 35 feet high, standing out 50 feet in front of my building, and preventing its being seen by persons coming from the west; and even looking from the road below Waterloo Bridge

Mr. *G. E. Street.*

13 July 1869.

you would only see the further end of the new building.

1128. Do you think that the difference of level in Somerset House proper, does you any injury?—No.

1129. You do not think that people, who will obstinately look at Somerset House as beginning with its basement and not with its terrace, will look on it raised upon a considerable elevation and look upon your building as in a hole?—I do not think so; I quoted on Friday what Mr. Fergusson said. I find that he has observed that the real height of Somerset House is very great, but that its apparent height has been immensely decreased by the erection in front of it: as to putting a building down in a hole because it is built on the natural level of such a road as the Embankment, it appears to me an absurd sort of statement.

1130. I said as compared with Somerset House?—I seldom see any advantage in an artificial ground line of that sort; in Somerset House the ground line is quite artificial.

1131. I gather that your objection to the Carey-street site, viewed artistically, is the irregularity of the outline to the west?—I have made no objection to the Carey-street site, artistically; the objection to the outline of the Carey-street site is a practical objection; it is inconvenient for building on.

1132. Are you prepared then to state that you see no artistic objection to the Carey-street site owing to the outline?—Yes, I think that the Carey-street site stands high, and there would be no difficulty in putting a fine building upon it.

1133. And considering the plasticity of Gothic architecture you do not think that that projection there to the north-west would be a detriment to the building that would be put there?—No, otherwise I should not have proposed it.

1134. You do not fear that the fact of having to put a building there, projecting angle-wise, would be a detriment to that work as an architectural work?—No; if you ask me which site affords the greatest opportunity for architectural display, I should say the Embankment site; but granted that you are going to make the land round my building decent, I have no objection to the Carey-street site.

1135. Your objection to Clare-market is, first, the inconvenience it will cause your clients, and, secondly, the obstruction it will be to your building?—One objects to such a neighbourhood as Clare-market anywhere; it is certainly an unpleasant neighbourhood.

1136. But do you think that you have less chance of that singularly unpleasant neighbourhood being wiped off the face of the earth from the fact of a fine large building being put near it?—If Government would purchase the land from the west side of Lincoln's Inn-fields down to the Strand, I think that would be the best thing that could happen; if we are to build to fit that site we could not provide the great thoroughfare necessary; I think that all one's experience of London goes to prove that unless you can provide good thoroughfares in which decent people will take up their residence, you cannot improve a district like that, and it was with that view that I proposed a large thoroughfare through the heart of the Clare-market district.

1137. I suppose you consider it extremely probable that even if the law courts were in Howard-street, buildings of the first class, and of a dignified character, would be put on the Carey-street area?—I should hope so; but I have no knowledge of any scheme for building there.

1138. From your general knowledge, what should you expect?—From my general knowledge, if you made a good thoroughfare through it you would sell it for building, I think.

1139. Do not you think that it is almost a matter of mathematical certainty that Clare Market would soon be effaced, if good buildings were put on that Carey-street site?—No; my impression is that the buildings will turn their back to Clare Market, and that unless you can devise some means of making a good thoroughfare through it, it will be maintained as it is now; it owes its existence very much to the fact that there is a gate there near Clement's Inn, which is shut at night; my impression is that unless the Government or the Metropolitan Board of Works were to make some great thoroughfare through Clare Market, anybody building would try to turn the back of his building to it.

1140. Supposing that they did not make a thoroughfare through Clare Market, but one very near it, would not the drift of public improvement almost necessitate a rebuilding of that quarter?—I should like to know what this other thoroughfare is, because you seem to have a scheme in your mind which nobody else has hit upon.

1141. The thoroughfare that you have talked of yourself at the continuation of Essex-street?—I do not think that that would affect the extreme western boundary; I do not think that unless you had a street branching out into Clare Market, and a distinct thoroughfare from them to some other good point, it would do you much good.

1142. You do not give much credence to the idea that that quarter of London will rebuild itself, so to speak, with the progress of these public improvements?—If my large plan approved by the Commission had been carried out, we should have dealt directly or indirectly with 13 acres of land there. I consider that that was a matter of enormous importance for London, it was so great an alteration of bad property in the heart of the City; but I confess that if you come to build a smaller building to conform to those boundaries, having to accept the thoroughfares that you find, without making arrangements with a view to others, you will still have Clare Market left as a closed quarter.

1143. Have you heard that there is any chance that a give and take arrangement would be likely to be carried out with Clement's Inn?—In the original scheme there was some such chance; there was a draft agreement prepared, I believe, between the Commission and the ancients of Clement's Inn for the purpose; that involved as a necessity the purchase of property in Dane's Inn, in order to compensate Clement's Inn.

1144. Could an arrangement in that spirit be carried out so as to get rid of the projecting north-west angle, and give you more elbow-room to the south-west?—I should think that you might rectify that line by means of an Act of Parliament; you would have probably to deal with Dane's Inn; but that is not a very important institution, I imagine.

1145. It would not be a difficult job?—No, I think not; I think that you will find in all my evidence that the western side is not the

side

side on which the difficulty presents itself; if you contract the site you may do it on this side without vast expense; I should think it is the northern and eastern sides on which you must incur the great expense.

1146. You expressed your strong doubts to Sir William Tite that you could diminish your building in Howard-street much more?—Below the point to which I have already diminished it, I doubt very much whether it could be done; two separate reductions have already been made, I doubt the possibility of making a third; I suggested in my report to the Government that some means should be taken for going through all the schedules; it would be unfair to leave it to me to arrange with the heads of departments what their accommodation should be.

1147. You mean the same answer to apply to your plan for the Carey-street site, I suppose?—Yes.

1148. May I ask what, looking at this question of reduction, are your reasons for constructing so very large a hall; do you know the dimensions of Guildhall?—No; but it is considerably larger than Guildhall; I have gone to a certain extent on the requirements made by the Commission; and the question of the central hall was discussed several times by a committee of the bar, and solicitors; a certain area was prescribed, but I have provided a smaller area than that; but you must remember that we have no experience of such a concentration of courts as is proposed now.

1149. You are prepared to believe that the Guildhall is from 150 to 170 feet long?—This is 100 feet longer.

1150. Considering your knowledge of the wants of courts of law, which you have gathered since you have been architect in this case, are you prepared to say that you could not group your courts round a hall of the size of Guildhall, without inconvenience?—You could not group this number of courts round it; and the nearer the hall could be to all the courts, I think, the better.

1151. And you hold it essential, do you, for the good administration of the law, that all your courts should, as in this plan, open into the central hall?—As nearly as possible; the nearer the better.

1152. That is the key to your scheme?—Yes; everybody gets through the hall to the witnesses' rooms, the jury rooms, and the courts.

1153. That is a reason for making your hall as long as it is; but could you make it narrower?—It is only 50 feet wide; it is not an extravagant width. It would be very narrow in proportion to its length if it were made narrower. It is very largely reduced from the hall which was sanctioned by the Commission.

1154. Do you consider St. Paul's an ornament to London?—Decidedly.

1155. And well placed?—Yes; admirably.

1156. In spite of Cook's warehouse to the south?—The dome of St. Paul's rises so high, that it will always assert itself, even over Manchester warehouses, I suppose.

1157. Do you suppose that it would be an improvement to London if you could put the Temple where St. Paul's is, and put St. Paul's where the Temple is?—No; I have a strong opinion of the advantage of raising a building.

1158. You consider that a building raised above the Thames to the height that St. Paul's is, stands at an advantage?—In all distant views, certainly. As I told the Committee, I think the last time that I was examined, the difference is 22 feet in the level between the two sites. It is an important difference in the distant view; but, on the other hand, I have to consider the whole case in all its bearings, and I am perfectly satisfied that London would be affected more beneficially in an architectural point of view by having a building on the Embankment, 22 feet lower than one in Carey-street, than by having it in Carey-street, though the Carey-street site would be very fine, on account of its altitude above the river.

1159. Would not the Palace of Westminster, in which we are now sitting, be better if it stood on a hill 22 feet above the river?—Yes; but the site in Howard-street does rise above the river, and here it is a dead flat.

1160. May not the difference between this site and that in Howard-street be stated as follows; that, in this case, on this spot we have the simple choice of a dead flat close to the river, or of a dead flat at a greater distance from the river; but in Howard-street we do see a hill rising behind us, which we might use if we liked?—I think that the difference between the two schemes, in that respect, is so little in the drawing, that it would be very little appreciated (*pointing to the design*).

1161. We shall see the Howard-street building very well from the windows of this building, from a large tract of London bordering on the Thames?—Yes, the whole length, and from opposite here.

1162. Would you not also see the Carey-street building, in its most picturesque aspect, from the windows of the Houses of Parliament and the Embankment?—I do not think that you would from here. You would see whatever towers, and so forth, were well raised.

1163. And you would not see the lower floors?—You would not see anything below the height of the high buildings gradually being built on the Strand. For instance, Mr. Smith's warehouse would come between you and the building, and so would the steeple of St. Clement's.

1164. Speaking generally, should you say, having created such a quay, in such a city, on such a river, as our Thames Embankment, that it would be better to put large buildings on that quay, so as to hide the contour of the town behind, or to use it as an open area, either dotted with stately buildings, or spreading into gardens with avenues, and so let in to view the heights of the city behind?—If you had an opportunity of laying out the whole part from the river up to Carey-street with terraces and gardens, no doubt it would be a very fine thing to do so.

1165. I believe it is pretty certain that something of that kind will be the case, at least in Essex-street, with the widening of Essex-street?—I do not know; I should have thought, judging by the whole tendency of the changes that I have had to make in my plans in the last few months, that it would have been absolutely certain that nobody would have given money to do it.

1166. You have read, I suppose, the first Report of Lord Elcho's Committee on the Hungerford Bridge?—I have read the evidence through, but not the Report.

1167. Have you heard that one of the recommendations of that Report, which was unanimously passed, was, that whether the law courts were placed in Carey-street or in Howard-street, equally should Essex-street be widened as a metropolitan improvement?—Yes; but I gather that

Mr. *G. E. Street.*

13 July 1869.

that it was Sir John Thwaites' evidence that the street should be made into a 60 feet street; that does not fulfil your idea.

1168. What is the width, in your plan of Essex-street?—Sixty feet; the same width as he proposes to make.

1169. Supposing that a large building, or a large mass of buildings and chambers of an architectural character, were placed on the Howard-street site, crowned with a distant view of your building, would you not think that a very ornamental view?—If you eliminate the railway station, to begin with.

1170. I said if you had buildings of an ornamental character on the site?—You cannot escape from this condition; one of the elements is, that you have already a plan, sanctioned by Parliament, for a large railway station rising above the Embankment, as to which it was resolved, at a meeting of the Society of Arts, "That, in the opinion of this Committee, the authorised position of the railway station on the Embankment, in front of Norfolk, Arundel, and Surrey streets would make the erection of a grand public building in this part of the Embankment very difficult, if not impossible." I think, if it is to remain in the form sanctioned by Parliament, it would make, not only the erection of any public building difficult, if not impossible, but the appearance of all private buildings bad.

1171-2. The railway station might be sightly or unsightly; but I apprehend that it would not be a very large building; it would be a low building, would it not?—It is to rise not very much above the grounds, but to be inclosed by balustrades, and to have rising galleries behind, and a terrace on the top of the station; altogether, I think you would agree with me that it would not be very sightly.

1173. Have you considered the chance of fogs on the river, and that a building on the river side might more often be darkened through fogs, than one in a higher site?—I have not myself lived on the river; the question is, whether you get better light in these rooms than you would in the Strand; I should have thought that you would get better light here.

1174. Then, on the whole, we gather that, though your preferences may for some reasons be in favour of the Embankment, you think that you could put a building that would be an honour and a decoration to London on either site?—Yes.

1175. Mr. *Hunt.*] With regard to the railway station, would the railway company be willing to make the architecture of their station harmonize with that of your building on the Embankment?—The understanding was that it should form a single basement, the basement of the station projecting beyond the basement of my building, and that it would necessarily be made to harmonize entirely with it.

1176. With reference to the approaches to the north; you contemplate a great arterial communication from Holborn to the Strand?—Yes.

1177. Supposing that a wide street was made to the Parliamentary site, do you contemplate that being extended northwards till it reached Holborn?—My opinion was, that if Parliament made the street as far as Serle-street, then the economy with which a continuation could be made up to Holborn, would force the Metropolitan Board of Works to do it before very long.

1178. You would anticipate a great amount of traffic from the north through that communication to the courts?—Yes, of light traffic, a considerable amount; not of heavy traffic, I should think, owing to the fall of the ground.

1179. Have you considered the inconvenience of having a great deal of traffic crossing the Strand at right angles?—It is an inconvenience that you must submit to if you wish to get good communications; the advantage would be greater in being able to get from north to south than the disadvantage of having the traffic in the Strand to a certain extent interrupted; you have that at Wellington-street to a certain extent now.

1180. Would it be possible to carry carriage traffic by a bridge over the Strand to the Courts of Justice?—It would be very difficult; because, if you rose above the Strand from the north, you would have such an enormous fall down to the Embankment; the fall from Essex-street to the Embankment would be one in 29; that is a fair usable street; but if you made it much steeper than that it would be unusable.

1181. You are acquainted with the approaches to the South Western Station from the level of the road?—Yes.

1182. That has a considerable slope?—Yes, that is an impracticable slope for a public road, I think.

1183. Do you think that it would be impracticable to make an incline serviceable for cab traffic over the Strand?—If the present slope of Essex-street is one in 29, you would have very nearly to double the pitch, to make it one in 14 or one in 15; I dare say that that rise to the South Western Railway Station may be something of that kind; but it is too much for any public road.

1184. There would be no heavy traffic to the Law Courts?—No.

1185. But cabs find their way to the South Western Station now by that incline?—Yes; but my experience is that the cab-horse is constantly inclined to jib on his way up.

1186. Unless that difficulty is overcome it would be a great evil having traffic like that in the Strand crossed by a stream from the north?—It would require a good deal of regulation by the police, just as you have at Wellington-street, and Blackfriars, and Fleet-street, and at the crossing of Oxford and Regent street.

1187. But at Wellington-street the Strand is not so wide, is it?—I should think it would not make matters worse having a wide street; it would rather facilitate the crossing, because you see that vehicles coming down the end of St. Clement's churchyard would to a certain extent fall into a line with those coming westward.

1188. If they were coming down New Essex-street they would cross the traffic going east and west?—Yes, they would cross it; but that cross line there does not show the position of New Essex-street. There is an inconvenience, but an inconvenience that you cannot help in a large city; I am afraid as to the possibility of getting over it, that would be very difficult. I think that it would be more practicable to take the traffic through under the Strand.

1189. Would it be possible?—It would be more possible if you had the land to deal with, and you might make the road up towards Carey-street.

1190. You would get the same rise if you did that?—No; because the ground does not slope so much. You might make the tunnel so low

low as to enable only light vehicles to pass through it.

1191. With reference to the central hall, do I rightly understand that the floor of the central hall would be on a level with the floor of the courts?—No.

1192. The witnesses' rooms would be on the same level?—The witnesses' rooms and the jury rooms would.

1193. And the courts would be a storey higher?—Yes.

1194. Would it be practicable to have galleries round the central hall to be used as libraries, without any sacrifice of architectural effect?—I have not thought of that; in my original plan I had galleries the thickness of the wall to make every possible communication for the Bar, but I should have thought that a gallery in the central hall would not be a good place for books, because of the dust.

1195. I am supposing that there was no communication for people from the central hall to those galleries; in that case, those galleries might be made available to barristers and others using the court, provided that the communication with the galleries went out of an appropriate room?—Yes; that was the arrangement in my plan to have barristers' corridors running all round, and bridges across.

1196. Supposing that that arrangement could be made, there would be a great saving of expense, would there not?—Yes; except that I did not suppose that we should make an enormous building anywhere for a library. In every case there must be some room for books in each court; I have provided a large number of consultation rooms, and it might be possible out of them, to get some space that might be given up for libraries.

1197. As I gather, the size of your hall has reference rather to the number of courts than to the wants of the persons who would use the hall?—I think that the two things go together; that in proportion as you increase the number of courts you must increase the area of the hall between the courts. It is a small area in proportion to the number of courts, compared with that which you have in the great country assize courts. The proportion here is so much smaller than it would be, if you took the proportion that you have at Manchester or Liverpool, or any of the country courts, that I do not think the hall will be found too large. And, again, for the working of so great a building, it would be very disastrous if, after you built it, you found that this hall through which everybody was to pass was too small; you must allow an ample space from that consideration.

1198. With regard to any future extension of the building, in the case of the Embankment site, where would you look for any extension?—It must be northwards, north of Howard-street, unless by the removal of King's College; that is the only possible arrangement, because a good deal of the land in front of the Temple is Crown land, and I suppose by Act of Parliament could not be built upon; and in the next place would be extremely undesirable for building upon, because it is a great lung for that part of London.

1199. You might get extension on the King's College side by taking that building?—Yes.

1200. Mr. *Layard.*] I think I understood you to say that, supposing the Law Courts be erected on the Howard-street site, practically a communication could be made to the Carey-street site without additional expense?—That is my opinion; that is to say, if you make it near Essex-street.

1201. I think that under an Act of Parliament the Metropolitan Board of Works are bound to make a street from the Embankment to the Strand?—Not to make a street from the Embankment to the Strand, I think, but to make a street which shall communicate with the base of those three streets, and therefore shall afford communication with the Strand.

1202. Therefore, supposing that the Government did not enlarge Essex-street, the Metropolitan Board of Works would probably do so?—I do not know enough about the Metropolitan Board of Works to answer the question. I see from Sir John Thwaites' evidence that he considers Essex-street a very desirable means of communication from the Embankment.

1203. Practically, supposing that the Howard-street site were used, a communication would be made between the Howard-street site and the north of London without any expense to Parliament?—That is my impression; the whole expense of making it would be very small, owing to the existing road on the east of Lincoln's Inn-fields, as I imagine.

1204. Do you not think that it would be a great convenience for persons having business in the Courts, and who had to wait, that there should be open spaces, like those in the Temple Gardens, for them to wait in?—No doubt it would be much pleasanter for witnesses who had to wait, that they should wait outside the building rather than inside, if on a fine day.

1205. Lord *John Manners.*] If the Government do not make this communication by bridge and arcade, from the north of the Strand to the Howard-street site, what accommodation will the lawyers, who live in Lincoln's Inn and Bedford Row, and all that district of London have to find their way to the New Law Courts?—They will cross the Strand at various points, and they would not be likely to cross the Strand at the widest point; they probably would come down Bell-yard and cross at Temple Bar, or keep along by Clement's Inn, and cross where the Strand becomes narrow west of St. Clement's Church. Most people have always crossed hitherto at one of those two places, so as to avoid a crossing 110 feet wide.

1206. Therefore the omission on the part of the Government of the bridge and the arcade which you propose, would put all the lawyers who live north of the Strand to the inconvenience of finding their way as best they may with their books and so on across the very crowded thoroughfare of the Strand?—Yes, they would have to do it unless a bridge were put across.

1207. Earl *Grosvenor.*] With regard to the questions which Mr. Beresford Hope asked you with reference to the building of St. Paul's, you are aware that it was part of Sir Christopher Wren's plan for St. Paul's that the whole of the land between St. Paul's and the river should be left open?—I have heard so.

1208. Do you think that any architect would build a very large building like St. Paul's near the Embankment, unless he was quite sure of plenty of room between the Embankment and that building?—No, I should not.

1209. Mr. *Bentinck.*] I may have misunderstood your answer just now; but my impression was that you said that those three streets did not

Mr. *G. E. Street.*

13 July 1869.

not come on to the Embankment?—They are intercepted by a cross road, a raised road into which they all come (*pointing it out*).

1210. Take a person driving from the roadway, and desiring to drive into the Strand, would he not be able to drive up, when the works were completed, any one of those three streets?—Yes.

1211. Therefore the great crowds of people that we are to have coming to attend these law courts, finding themselves on the Embankment would be able to pass up by three ways to the Carey-street site?—By three ways, and by steps to Essex-street.

1212. And one of those roads is 50 feet wide?—Yes; there is this also to be said, that those three roads open into the narrowest part of the Strand.

1213. This is the railway station, surrounded by a grass plot (*pointing it out*)?—Yes.

1214. A person travelling from the east or the west will drive to either extremity, and then turn either to the right or to the left, and if he desires to pass up to the Carey-street site, he will have three roads open to him?—Yes.

1215. Mr. *Mowbray.*] Is that Somerset House Terrace continued in front of King's College at present?—King's College inhabits a certain portion of what appears to be Somerset House; there is a terrace in front of part of King's College House, not of the whole.

1216. Then it would be necessary to continue that?—Yes.

1217. And to ornament King's College to make it harmonize?—The brick part of King's College sets back some little distance (*describing it*); this is the unsightly part (*pointing it out.*)

1218. You stated on the last meeting that the western side of Wellington-street, you thought, advanced beyond the line of Somerset House, about 45 feet; are you sure of that?—I measured it on the Ordnance map; it so appears on this Ordnance map.

1219. Assuming that it does project to any extent, do you know the length of frontage of those particular buildings towards the river?—Very small indeed, just the depth of one house.

1220. You could not argue, presuming that if it did project beyond Somerset House, it would not detract from Somerset House, as your long building would on the east?—I do not think that my building would detract from it; the view that you almost always get of Somerset House is from Waterloo Bridge, and this makes the projection beyond, not between you and the building.

Mr. Henry Arthur Hunt, called in; and Examined.

Mr. *H. A. Hunt.*

1221. *Mr. Chancellor of the Exchequer.*] What is your profession?—I am a surveyor.

1222. Have you had experience in the valuation of land and property?—I have.

1223. And in buildings?—And in buildings.

1224. You are, I believe, a member of the Commission appointed about the Law Courts?—Yes.

1225. Do you remember having an interview with Lord Palmerston and Mr. Gladstone on this subject?—Yes.

1226. When was that?—In 1861.

1227. What happened then?—It was a discussion with reference to the probable cost of the Carey-street site, and the probable cost of the building. I made a report upon that occasion, giving my opinion as to the cost of land and buildings at 1,500,000 *l.*

1228. That was in 1861?—And subsequently in 1864.

1229. Sir *William Tite.*] What did you do in 1864?—The same thing.

1230. *Mr. Chancellor of the Exchequer.*] Did you, as a Commissioner, approve of the proceedings of the Commission with regard to Carey-street, or what line did you take about it?—Well, I did not approve of the proceedings of the Commission at the onset. I thought that the appointment of an architectural clerk was unnecessary. I considered that the instructions to architects might have been prepared by members of the Commission, having before us at that time plans which had been carefully prepared by a gentleman of the name of Abraham, an architect of considerable experience, and upon whose estimate and plans the Commissioners, at their first meeting, signed a certificate; the Commission, however, thought otherwise; and, upon the resignation of Mr. Waterhouse, Mr. Burnet was appointed architectural clerk.

1231. Did you give any opinion to the Commission on the Carey-street site in 1865?—I gave evidence, at Mr. Gladstone's request, as to the probable cost of acquiring the land, 750,000 *l.* I was not asked my opinion as to the probable cost of the building, although I did tell Mr. Gladstone that if the site were big enough to carry a building properly, the building would cost 750,000 *l.*

1232. Did you make any objection or protest to the proceedings of the Commission with regard to this matter subsequently?—I only made a statement to the Commission with reference to the appointment of an architectural clerk.

1233. With reference to the Carey-street site, and the expenses that it would entail, I mean?—I do not know that I ever made any particular speech upon the matter, although I have from time to time said that the cost would largely be increased, and that it would be necessary to acquire a great deal of the surrounding property, particularly and especially in the neighbourhood of Clare-market, in order to ensure better ventilation, comfort, and convenience of suitors and others attending the Courts. I stated that to the Commission.

1234. That it would incur a larger expense than the mere lands on which the building was put?—Yes.

1235. Will you give us your opinion of the Carey-street site in your own way, and say what you have to tell us about it?—I think that if the Carey-street site is adopted for the Courts of Justice according to the plan which Mr. Street has prepared, and which is attached to his report of May 1869, the least amount of property that it will be necessary to acquire, in order to improve the approaches and so on around this site, is what is shown on the deposited plan of 1868, which I have had tinted red to correspond with the estimate which was made by Mr. Pownall in that year, and which was the foundation of the application to Parliament for the acquisition of these lands. Those properties are estimated by Mr. Pownall

Mr. H. A. Hunt. 13 July 1869.

Pownall at 668,000 *l.*; but that estimate included property on the south side of the Strand to enable a bridge to be thrown across from Thanet-place to the site, at an estimated cost of 60,000 *l.* In round numbers, without that, you may call it 600,000 *l.* A portion of that property, tinted red upon the plan before me, west of St. Clement's Church, is property intended to be acquired, partly to make an exchange with Clement's Inn, in order to make this ground rectangular, and partly to make it more convenient for building purposes; it was necessary to take Clement's Inn, and the object of taking this land is to have the power of exchanging lands with that body, and so making approaches to that side of the building; it was also intended that the Act of Parliament should comprise the whole of what is called the Cook's-court block, and that the Government or the Commissioners should pay for so much of it as was thrown into the street to widen the thoroughfare. Now, if the building should be erected upon this site, it seems to me necessary and desirable to take the whole of the property except that in Thanet-place; and moreover, I consider it necessary to acquire a good deal more of the surrounding property to the west, in the neighbourhood of Clare-market, which has always appeared to me to be a very objectionable neighbour for a building which is to be used for eight or nine months out of twelve by probably the largest number of persons assembled in one building that we know of, comprising, as it would, eighteen Courts and a great variety of public offices. I think that the greatest amount of fresh air and light should be afforded to such a building; and if the Government should do me the honour to consult me before they embark in the erection of the building, I should certainly recommend a considerable clearance of the surrounding property, in order that good ventilation may be given to the building; and that a plan should be made in the first instance suitable to the position, having regard to the ground which would be cleared in order to afford proper access and proper ventilation.

1236. Why do you omit Thanet-place from that estimate?—I omit Thanet-place from my estimate because if Mr. Street's last plan is carried out upon this site, it will not be necessary to make a bridge across from the Temple; at least, I suppose not, and I assume not; for this purpose, therefore, I leave it out of Mr. Pownall's estimate.

1237. Why would it not be necessary to have a bridge?—Well, I do not know whether it is necessary or not, but I do not think it is proposed at the present moment; if it is proposed to have a bridge, of course that 60,000 *l.* must be restored to Mr. Pownall's estimate.

1238. If there is no bridge, of course people would have to cross the Strand from the Temple?—Yes.

1239. This estimate of Mr. Pownall's was with reference to the larger plan of Mr. Street, was it not?—Yes.

1240. Now we have a smaller plan, will that enable us to reduce the quantity of land purchased?—I do not think it will.

1241. Why not?—Because I think that all the ventilation you can possibly get around this building is most desirable; for instance, Carey-street must be widened, and all the buildings in the block of buildings on the south side of New-square, Lincoln's Inn, must be removed; Bell-yard must be widened, and an opening must be made as proposed by Mr. Street in his original plan from Bell-yard into Chancery-lane, and in all probability (and very wisely too), the whole block between the Law Office and Fleet-street, should in my opinion be removed altogether, giving good access from Fleet-street to this great building, and an abundance of air from that particular point.

1242. All those things are included in Mr. Pownall's estimate?—Yes.

1243. Does Mr. Pownall's estimate include all the approaches that it is necessary to make?—No, Mr. Pownall does not include the widening of Serle-street, or the widening of Portsmouth-street and Portugal-street.

1244. That is to say, the access to Lincoln's-Inn-fields is not included?—No; he has not included that.

1245. Does it include any means of getting into Holborn?—No.

1246. You are left to Little Queen-street or Chancery-lane?—Chancery-lane on one side, and into Lincoln's-Inn-fields on both sides, by passing along Serle-street on one side, and out of Portsmouth-street on the other.

1247. And then into Holborn by Little Queen-street?—Yes.

1248. Does it include any opening to the west?—No.

1249. Does it include the part of Clare-market which you have mentioned?—No.

1250. Is there anything else that it does not include, that you think it necessary to include?—I think that at some not very distant date, the south side of New-square, Lincoln's Inn, ought to be removed.

1251. Why do you think so?—Because at present it is a great impediment to the ventilation of this building, and when removed it will throw New-square, Lincoln's Inn, open, and will afford a very considerable amount of ventilation; and I think, when the Committee visit the spot, and see these buildings, and consider what the effect would be, it is not improbable that they will consider that some day or other it will be necessary to pull them down.

1252. If we add to the land which Mr. Pownall estimated these things which you think are required, and will have ultimately to be obtained, can you put any estimate upon what they would amount to?—It is extremely difficult to say what is to be done with the neighbourhood of Clare Market; speaking, according to my judgment, of what ought to be done, I think that it would not be safe for the Government to calculate upon a less expenditure than a million of money.

1253. That is 400,000*l.* more than the land which Mr. Pownall estimated?—Yes.

1254. You consider Mr. Pownall's estimate to be a reasonably right one, as I understand you?—Mr. Pownall is a very careful, skilful man, and I adopt his figures.

1255. You have confidence in his competence to form an estimate?—Certainly.

1256. And I suppose that, as regards that million, the cheapest way really would be to make the purchase at once, would it not, or would it be wiser to let it stand over, and to do it by degrees?—It is much cheaper to do it at once.

1257. Because otherwise we raise the value as against ourselves?—Unquestionably.

1258. Is there anything else you can tell us about the Carey-street site or the building; have you

Mr. *H. A. Hunt.*

13 July 1869.

you formed an estimate of what the building would cost?—I assume that the building on the one site and on the other will be the same, about 800,000 *l.* There is, in point of fact, more building on the Carey-street site; that is to say, there is more area covered with buildings.

1259. In order to get the same amount of accommodation, you are obliged to build higher on the Carey-street site?—No, you are obliged to cover more area of ground.

1260. Sir *William Tite.*] Is this the great building, or the altered building, you are talking of?—The smaller building according to the altered plan; I am taking these comparative plans which are taken in Mr. Street's letter. The Carey-street buildings cover an area of 221,624 feet, and the buildings on the Embankment site 189,754 feet, so that there are 30,000 or 40,000 feet more area of building in one than in the other; but as I assume that the foundations of Carey-street may not require any extra expenditure, I set one against the other, and assume that the cost of the building on one site, and the cost of the building on the other, will be the same, 800,000 *l.*

1261. Have you been in the habit of making such estimates?—Yes, I have very frequently.

1262. And have you found that generally you can go pretty near the truth in your estimates?—Yes; they have turned out very near indeed in the buildings which I have had to do with for the Government in the last 14 years.

1263. Could you tell us how you made this estimate?—I could tell you, but I am afraid that it would give you no practical information.

1264. Have you anything else to tell us about Carey-street; what do you think about light and air, and ventilation there, for instance, supposing we do not buy these surrounding houses?—Then I think it will be very imperfect indeed, and even if you do, I am of opinion that it will not be so well ventilated, and that it will not be a building so well adapted for the business of the courts of justice, having regard to light, air, and so forth, as a building erected on the Thames Embankment.

1265. Not even if we spend the additional million that you speak of?—No, because you must necessarily have on the east side of Chancery-lane a quantity of very closely packed and lofty buildings, which impede the air; you have King's College Hospital, a very lofty building, close by the very corner of these intended courts of justice, and you have a very crowded district on the west.

1266. Sir *William Tite.*] Right away to Drury-lane?—Right away to Drury-lane.

1267. *Mr. Chancellor of the Exchequer.*] Then with regard to approaches, when you have done all these things, how will the Courts be then as regards accessibility?—The approaches from the north must be from the turnstile on the north-east corner, and from the opening to be made into Holborn on the north-west corner; the cost of making the opening on the north-east corner would be about 70,000 *l.*, and on the other it would be about 150,000 *l.*

1268. Do you allow for that in your 400,000 *l.*?—Yes, I think that may fairly be included.

1269. Both of them?—Yes.

1270. Sir *William Tite.*] Is it included?—Certainly, but that is approximate and wide; Chancery-lane being very narrow, it will be an inconvenient approach from Holborn; so also is Fetter-lane; the Strand and Fleet-street are crowded now, and will be crowded still more, should this building ever be erected on the Carey-street site.

1271. *Mr. Chancellor of the Exchequer.*] So that when all this money has been spent, what sort of approaches do you think you will have?—Imperfect.

1272. You would not consider them, even then, good approaches?—No, not good approaches.

1273. What would be the fault you would find with them mainly?—That they were narrow, inconvenient, and crowded.

1274. Then, on the southern side the Strand would be crowded?—Yes.

1275. On the east, Chancery-lane would be inconvenient?—Yes.

1276. There is none on the west?—There is none on the west, except taking the existing Carey-street, and carrying it by King's College Hospital into Lincoln's-inn Fields, if the Governors would allow that to be done.

1277. Do you calculate for that in the 600,000 *l.*?—No.

1278. Will you explain about that?—The 400,000 *l.* includes the widening of Carey-street and Serle-street, one being about 45,000 *l.*, and the other 50,000 *l.*; as I have already said, I can give estimates for that, but I am obliged to guess at the probable cost of acquiring property sufficient to afford good ventilation in the neighbourhood of Clare-market.

1279. As regards getting into Lincoln's-inn-fields, have you not estimated in your million for the widening of Portugal-street and Portsmouth-street?—Yes, I have.

1280. Upon the whole, the approaches would not be good?—No, I think not.

1281. And what would be the ventilation and light, after these purchases had been made?—They would be better of course, by reason of the clearance which I propose.

1282. But would still be imperfect?—Yes.

1283. Now we will turn, if you please, to Howard-street; with regard to the question which we have been speaking of as to the access to Howard-street, will you tell us your opinion on that?—The access to Howard-street would be partly by the Thames Embankment. I think the Thames Embankment roadway will be a very frequented communication; it practically commences at the Mansion House, by the new street, which is now being formed; it will cross Bridge-street, Blackfriars, and then down an inclined roadway 100 feet wide, until it reaches the east end of Temple Gardens; it then passes along to Westminster Bridge, on a dead level, and it seems to me to afford a very excellent communication between the heart of the City of London and the Houses of Parliament, and the south-west district of London. Moreover, by passing over the new bridge at Westminster, you will get upon a very fine embankment road on the south side of the river to the Vauxhall station, and from Westminster Bridge there will be also a communication on the north side of the river, from Millbank-street to Battersea Bridge. An Act of Parliament has been obtained for continuing the Embankment of the river from Chelsea Hospital to Battersea Bridge. Therefore, I think the Embankment roadways will form important communications for a very large amount of

of population, and that they will be much used by the public.

1284. What will the communication from the Embankment be to the courts?—The communication from the Embankment to the courts as proposed by Mr. Street would be by a road called New Essex-street; that is a continuation of Essex-street, and a widening of Essex-street into the Strand; there would also be a communication by an opening in his intended building for foot passengers to Howard-street, and from Howard-street through Norfolk-street, Surrey-street, Arundel-street, and Essex-street into the Strand.

1285. From the Strand to the building?—Yes, from the Strand to the building.

1286. Then there would also be the railway?—There will also be the Underground Railway, which will bring passengers from almost all parts of the metropolis, and there will also be the steamboats.

1287. Have you formed any opinion as to the railway, as to the injury or nuisance it may be to the courts?—I have not had much experience upon that subject myself, but from what I hear from engineers and other persons, no nuisance does arise from that; I hope that Mr. Fowler will be able to come, and give evidence before you with regard to that; he will tell you of two houses in Park-crescent, Regent's Park, where the railway passes under the kitchens of those houses, and they are occupied by persons of great respectability who pay high rents.

1288. The railway will not pass under any part of this building, will it?—No.

1289. It will pass in front of it, under the great roadway?—Yes.

1290. Where is the station to be?—The station will be arranged by Mr. Fowler, so as to make it suitable to Mr. Street's building, and, I think, that Mr. Street has seen Mr. Fowler upon the subject.

1291. Then there is also an access from Wellington-street, is there not?—Yes, an access from Wellington-street, on the terrace in front of Somerset House.

1292. What is your opinion in regard to those approaches, taking them altogether?—I think they will be very good approaches; from the Strand there will be four streets, the aggregate width of which is now 123 feet; I think that having four thoroughfares is better than having one, because the traffic could be regulated, and, as Mr. Street says, it will filter through them.

1293. Do you think that, upon the whole, they are superior to the approaches that would be obtained in Carey-street after we have invested this million that you speak of?—It seems to me so.

1294. Decidedly so?—Yes; decidedly so.

1295. With regard to the surroundings of the Howard-street site, what have you to say on that point?—As to the surroundings of the Howard-street site, on the east we have the Temple Gardens.

1296. Do you consider that a good neighbour?—I consider it a very good neighbour; especially as about two-and-a-half acres of reclaimed land will be thrown into their garden.

1297. Is that garden open to the public?—I do not know. On the north of the Howard-street site we have, of course, the buildings on the north side of Howard-street, the height of which will be regulated when we sell or let land which may not be required for making the roadway. The west surroundings are not so good; the high buildings of King's College and Somerset House beyond, but I attach a great deal of importance to the advantage of light and good ventilation to be obtained from the river. I think it is an enormous advantage to a public building of this sort. For instance, I think that these committee rooms are far more agreeable, healthy, and convenient for business than if they were in the neighbourhood of Clare Market. So I think the Courts of Justice would be better placed upon the Embankment site than on the Carey-street site.

Mr. *H. A. Hunt.*

13 July 1869.

1298. As to the piece of land between Howard-street and the Strand, what value do you put upon that?—One million.

1299. Then there is no great facility for increase of building, is there?—If you want to extend the building you must extend it towards the north; you cannot extend it unless you take King's College on the west, and the Temple Gardens on the east.

1300. Do you consider that a disadvantage?—No, I consider it an advantage.

1301. Why so?—Because it prevents that pressure upon the Government, which I know is very often made to increase the size of public buildings, and consequently to increase the cost. And if the buildings require to be enlarged, they can be enlarged to the north after they shall have been erected, and experience shall have dictated the necessity for increased accommodation.

1302. But that would be at an enormous expense?—Then it would.

1303. Therefore, practically, there is not any great inducement offered by the site to any increase, beyond the present plan?—No. If I could persuade the Government or the Committee that I am right as to the ultimate expenditure of a million of money to make the Carey-street site suitable for the building, which it is proposed to put upon it, I would sooner spend that million in clearing away all the buildings north of Howard-street, and in making a quadrangle in front of the New Courts of Justice as seen from the Strand, than spend the money in Carey-street.

1304. Something like the quadrangle in front of Charing Cross Railway Station, I suppose you mean?—Yes, only bigger; and a grand thing it would be.

1305. The building in Howard-street you estimate at the same price as the building in Carey-street, that is 800,000 *l.*?—Yes.

1306. Are you of opinion that the alteration of Essex-street is a necessity?—Well, I think it is.

1307. Why so?—Mr. Street desires to alter the gradients, and to make a public thoroughfare of it, and it must, sooner or later, be done; it might be called a public improvement, but I think that it is fairly and properly to be put down to the cost of the Embankment site.

1308. Is there not some inconvenience in creating a very large public thoroughfare that does not now exist, close to the Courts?—Not if you can separate the thoroughfare effectively from the Courts, so as to prevent any noise reaching them.

1309. Can you do that?—Of course there would be a great deal of traffic up Essex-street,

Mr *H. A. Hunt.*

13 July 1869.

and there will, to that extent, be noise on that side of the building from that street.

1310. And that traffic will not necessarily be the traffic of the Courts, but the traffic of persons going from the north to the Embankment?—No doubt.

1311. I do not now quite understand why you consider that a necessity?—There should be some public communication, I think, from the Embankment to the Strand at that point; I think it would be a great public convenience.

1312. Putting aside the question of the Law Courts altogether, you look upon it as a metropolitan improvement?—Yes, certainly.

1313. But would it not be better for the Law Courts if it could have been put a little further off, though I suppose it would have been impossible?—The further you can remove any roadway from the Courts the better.

1314. Supposing that the Courts are placed on the Howard-street site, what should we do with Carey-street; how should we lay it out, or what should we do with it?—Upon that I can only say that I have been in communication with a gentleman who represents, as he stated to me, some very responsible persons, who are willing to take that site and lay it out for building purposes, at an ultimate rent equivalent to 3½ per cent. upon 780,000 *l.*

1315. That is the money that it has cost?—Yes, I stated it in my Report to the First Commissioner of Works to be 3 per cent., because, though the ultimate rent will be equivalent to 3½ per cent., there must be a period of time when we shall not be able to get all the rent, and so, to make it perfectly within the mark, I put the 3 per cent., and it is only waiting the decision of the House with regard to the appropriation of that site for these gentlemen to put forward their prospectus, and they are very urgent to do so.

1316. How would they propose to lay out the Carey-street site, do you know?—They propose to lay it out by making a main thoroughfare from Essex-street across Carey-street, and to appropriate the land on either side of it for chambers.

1317. Making it a wide street?—Yes, a wide street, 60 feet wide.

1318. That they would do merely with the view of turning the property to the best account, I suppose?—Yes.

1319. Then, if I understand you rightly, the establishment of the Courts on the Howard-street site might lead as a consequence to the making of this large street through the Carey-street site?—It would absolutely do so.

1320. And I suppose it must lead, in no long time, to the continuance, by the Metropolitan Board of Works, of that street into Holborn?—Most probably.

1321. Which would satisfy a great metropolitan want?—No doubt.

1322. That then would be one collateral advantage of the Howard-street site?—No doubt.

1323. Is there anything else which you would like to tell us?—I may state as to the foundations of the Howard-street building, that I have assumed a platform of concrete 15 feet thick.

1324. Sir *William Tite.*] How broad?—All over the area, 5¾ acres, a solid platform 15 feet deep, and not being an engineer, I have taken the opinion of Mr Fowler and Mr. Bidder, who both concur with me in thinking that 15 feet will be ample for the purpose, and they are ready to come before you if you should desire it, to give evidence to that effect.

1325. *Mr. Chancellor of the Exchequer.*] Assuming that to be so, what would be the extra expense incurred thereby?—I put it at 50,000 *l.*

1326. Is there not to be something set against that in the way of greater facilty of transport of building materials?—Yes, I have not gone into that, but there is no doubt that it would be cheaper to build upon the Howard-street site than on the Carey-street site by reason of the facility which the water affords for bringing materials.

1327. Sir *William Tite.*] But you have set that enlarged area in Carey-street against that 50,000 *l.*?—Yes, but I have given no credit, so to speak, for the facilities of getting materials to one site over the other.

1328. *Mr. Chancellor of the Exchequer.*] Is there anything else which you have to state?—No, I think I can say that that is all.

1329. *Chairman.*] If I understand you rightly, that million of money which you spoke of as being necessary to give ventilation and proper approaches to the Carey-street site, would in fact be expended in improving the adjoining streets for the most part?—Yes.

1330. Do you not rather look upon that in the light of a metropolitan improvement, than as an accessory to the Courts of Justice?—No, I think that is entirely due to the Courts of Justice; I think that the block of buildings in Chancery-lane would not be pulled down if the Courts of Justice were not coming there, and I do not think that the buildings in Carey-street and Serle-street would be pulled down unless the Courts of Justice were coming there.

1331. But apart from any advantage to be derived by the Courts of Justice, or by those who frequent them, would there not be considerable advantage in that demolition and reconstruction to the neighbourhood in general?—Yes.

1332. Therefore, in point of fact, a large part of that million must be considered as being expended in the general improvement of London?—If your Lordship and the Committee think that it is to be considered in that way; but I think that it is consequent upon placing the Courts of Justice on that site. It was a great public improvement clearing the site of the wretched houses that stood there; the cost of it practically comes out of the Consolidated Fund.

1333. You have not at all considered the question whether the metropolitan authorities might be called upon to assist in works which would undoubtedly be a great metropolitan improvement?—From my experience of the Metropolitan Board of Works, they would be very chary indeed in undertaking any improvement out of the pockets of the ratepayers, if they can fall back upon the Consolidated Fund.

1334. With regard to the land that it is proposed to take on the Howard-street site; what is the character of the houses there south of Howard-street?—They are, for the most part, lodging-houses and private hotels; there are some manufactories; there is an engineer's; there are some large printing works, and a builder's yard, but, chiefly, the houses are occupied as private houses, and for the most part let out in lodgings.

1335. Are they good, substantial, respectable houses?—Fairly respectable houses.

1336. Therefore,

1336. Therefore, in taking that site, you are destroying a better class of property than exists round Carey-street?—Yes, that is so.

1337. Have you made any estimate of the value per foot or per square yard, of the land south of Howard-street, that it would be necessary to take?—It is somewhere about 110,000 *l.* an acre, in my estimate; my net estimate for the Howard-street site is 600,000 *l.*, and I think that that will be sufficient to purchase the property; Mr. Pownall has made an estimate, and his is not very far different from mine.

1338. Could you tell me what the cost per acre has been of the Carey-street ground actually cleared?—About the same.

1339. Mr. *Chancellor of the Exchequer.*] It was within your estimate in that very case, was it not?—Yes, within the estimate.

1340. Mr. *Layard.*] Have you seen a document called "An Estimate of the Comparative Cost of the Carey-street and Howard-street sites," circulated by the Incorporated Law Society, and distributed to Members of Parliament?—Yes.

1341. Will you state whether that is in any respect an accurate description of the comparative cost of the two sites?—No, it is not accurate.

1342. Will you state in what respects it is inaccurate?—As to the first column, with reference to Carey-street, I think there will be no surplus land; nothing to spare. On the other side, I think that the 250,000 *l.* for extra foundations must go out. Then comes "Loss on resale of Carey-street site," 200,000 *l.* If I am right with reference to the proposals that have been made, there will be no loss of that sort. Then comes "Loss of interest and rates on the Carey-street site till re-sale is effected." There is no doubt that there is something in that. The loss of interest upon the money until it is let is given for four years at 34,000 *l.* a year. I do not know whether it would be so long as that, but I think we shall not cavil at that. "Value of portion of Carey-street site required for new street from Embankment site northwards to Serle-street, 3,200 square yards, at cost price, 80,000 *l.*" That last item of 80,000 *l.* relates to the making of a street across the Carey-street site, which is altogether a different thing.

1343. Then I understand you to say that that document circulated by the Incorporated Law Society is altogether an inaccurate statement?—Yes.

1344. Have you seen another statement circulated by the Incorporated Law Society, which purports to be an estimate by Mr. Pownall "of the cost of the property required to be purchased for building the New Law Courts on the Thames Embankment (Howard-street site), and of the amount that could be obtained on a re-sale of the Carey-street site"?—I have seen it.

1345. Will you be good enough to inform the Committee whether that is accurate?—It is accurate as far as it goes, and I think I have explained that in my letter to you of the 18th of June. Mr. Pownall, in his estimate of 812,415 *l.*, has included the widening of Essex-street, which I have not. I have, in my letter to you, deducted 150,000 *l.* from that. His figures would then stand at 662,000 *l.*, as against my 600,000 *l.*, showing a difference of 10 per cent.

1346. Then that is not an accurate statement?—Well, you cannot very well call it an inaccurate statement, because Mr. Pownall included that which was shown upon Mr. Street's plan, and which I did not, because my estimate was made long before Mr. Street's plan was made. Therefore you cannot say that Mr. Pownall's estimate was inaccurate, although his instructions should have been more definite—how much for the land, and how much for the approaches. He, I suppose, was not so instructed, and he gave the whole figure.

1347. Therefore I understand you to say that, leaving out ground which there was no intention to purchase, Mr. Pownall's estimate and yours agree?—Yes, or practically agree.

1348. There is another document circulated by the Incorporated Law Society, called "Statement by the Council of the Incorporated Law Society with reference to the Thames Embankment Site." Have you seen that document?—Yes.

1349. In the first place it is stated there that the façade of the building that Mr. Street proposes to erect on the Thames Embankment projects 80 feet in front of Somerset House, is that the case?—I know nothing about that; Mr. Street must tell you as to that.

1350. It is stated here that the new building would, "to a large extent, absorb the open area which by the Thames Embankment Act 1862 (section 26) 'is for ever hereafter to be maintained for the use of the public as recreation or ornamental ground?'"—That is not so; but Mr. Street could explain that better than I can.

1351. Or do you agree with this statement, that "the Embankment site, owing to its peculiar nature, would require a large preliminary outlay on foundations"?—I do not.

1352. Do you agree with this further statement, "By limiting the building to the plan submitted to Parliament in 1865, and confining it to an area of six acres, as proposed for the Embankment site, it may be placed on the Carey-street site, with no material alteration of the plan decided on, and without buying a single yard of additional land for approaches or light and air, there would be a surplus of an acre and a half for these purposes"?—I do not concur with that.

1353. Have gentlemen of your profession often occasion to go to the Courts of Justice as witnesses, and otherwise?—Some members of my profession have; I do not go there very often myself.

1354. Which in your view would be the most convenient site for them, the Carey-street site or the Embankment site?—It would seem to me that the Embankment site would be the most convenient.

1355. Can you give the Committee any information as to the kind of building or buildings likely to be placed on the Embankment site, supposing it not to be utilised for the Courts of Law?—I have not considered that.

1356. Do you think that any great change would take place in its present features?—I think that the Duke of Norfolk would improve the character of his buildings so far as they abut on the Embankment.

1357. All the land does not belong to the Duke of Norfolk, I believe?—No.

1358. How far does the Duke of Norfolk's property extend?—I think it goes up as far as Milford-lane.

Mr. *H. A. Hunt.*

13 July 1869.

1359. Sir *William Tite.*] As to the ragged property about the end of Essex-street, which is so exceedingly unsightly at present, what would become of that?—All that is very wretched property.

1360. Do you think that it would cure itself very soon?—I think in all probability when the Embankment is completed it may improve itself to some extent.

1361. And pretty soon? — I daresay Mr. Gwynne will not turn out very soon if he can help it, unless we can turn him out by an Act of Parliament.

1362. Who is Mr. Gwynne?—An engineer.

1363. Is Essex-street on lease?—There are leases existing.

1364. Mr. *Mowbray.*] You say that you think the Carey-street site will probably yield, if resold, an ultimate rental equal to 3½ per cent. upon the capital?—That is the offer which I have received.

1365. How soon would that rental be likely to be realised?—In all probability I should recommend the Government to give them two years' peppercorn, and then a graduated rent extending over nine or ten years.

1366. So that at the end of three years, the Government would in all probability be receiving 3½ per cent. upon the capital expended?—Yes; if I could advise the Government to let the property to all these parties that would dispose of it quicker.

1367. Do you mean that if sold in lots it would produce a better return to the Government?—No; I think that it may be sold to enterprising persons who have a scheme of their own to carry out.

1368. Lord *John Manners.*] Can you give us any information as to the amount and the value of the ground now occupied by the Depository of Wills, the Registry of Wills, and so on?—I do not know it at all.

1369. With respect to the estimate for the purchase of the ground in Howard-street, you give that as 600,000 *l.* exclusive of Essex-street, is that so?—Exclusive of the upper end of Essex-street.

1370. But I understand you to say that you agree with Mr. Street, that in order to make an effective communication with the law courts there, it will be necessary to purchase the upper end of Essex-street?—Yes.

1371. What do you estimate that at?—£. 150,000.

1372. By purchasing the upper end of Essex-street, Mr. Street contemplates being able to throw a bridge over the Strand, and so to accommodate all the legal profession who will have to come from the north of the Strand?—Yes.

1373. Do you think that that is an accommodation which the legal gentlemen who live on the north of the Strand would have a fair right to expect?—It would be a great convenience to them no doubt.

1374. Would it not be a very great inconvenience to them unless they had an accommodation of that sort?—It would be an equally inconvenient thing for all persons coming from the Embankment to have to cross the Strand to get to Carey-street from the south. The inconvenience from the north to the lawyers would be considerable, and a bridge would be a great convenience to them. On the other hand, supposing the building is not to be erected on the Howard-street site, but on the Carey-street site, all persons coming by the Embankment, and up Essex-street, will have to cross the Strand unless they have a bridge.

1375. Those who wish to go to the law courts, you mean?—Yes.

1376. Have you paid any attention to the proportion of people that would be likely to frequent the Law Courts, coming from the north and from the south?—I do not know that there is any means of ascertaining that.

1377. Is it not assumed that the legal profession, and all those who belong to the legal profession, are those whose interests are primarily, though not exclusively, to be considered, when we discuss the question of the most convenient site of the Law Courts?—The most convenient site of the Law Courts should, I think, be considered, not only with regard to the lawyers but with regard to the public.

1378. What do you call the public?—Everybody; the public who are more or less interested in the lawsuits carried on in our courts of justice.

1379. The public interested are, first of all, the suitors?—Yes.

1380. And, secondly, the witnesses?—Yes.

1381. And, thirdly, the jurors?—Yes.

1382. And we will say, lastly, if you please, the legal profession?—Yes.

1383. Is it not a fact that, so far as the suitors and the witnesses are concerned, it is not at all infrequent that they have to go to the solicitors' chambers, and so on, before they go into the court?—I dare say they do, but I never have any legal business myself; I say that it would be an inconvenience to the barristers in Lincoln's Inn, unquestionably, to have to cross the Strand; but there are a great number of lawyers residing in the City, who would come from the City along the Embankment, and they would find it more convenient than coming to Carey-street down Fleet-street and the Strand.

1384. My question applied to those who live to the north of the Strand; now you and Mr. Street agreeing that the north end of Essex-street ought to be purchased in order to make an effective new courts of justice scheme on the Embankment site, the total value of the ground is raised from 600,000 *l.* to 750,000 *l.*?—Yes.

1385. May I ask if that estimate includes all the other expenses beyond the mere value of the land?—Well, I do not think it would include the conveyancing expenses on the part of the vendors.

1386. Can you tell the Committee what the actual cost of the Carey-street site would be?—The actual cost has been 765,440 *l.*

1387. That is the total cost of the land and houses?—Yes.

1388. But has not a further sum to a considerable amount been paid for contingent expenses?—Yes.

1389. Can you tell the Committee what that sum is?—No, I cannot tell what it is; it must depend first on who buys the property; secondly, who has the conveyancing business to do, and a variety of circumstances.

1390. But the Committee may understand that the 750,000 *l.* will have to be added to for contingent expenses, probably in the same way, and probably in the same proportion as the contingent expenses for the Carey-street site?—Yes.

1391. I wanted

1391. I wanted to see whether the 750,000 *l.* does really include all the necessary expenditure on the proposed new site, and you say it does not. Now with respect to the proposed additions to the Carey-street site, I think in this paper, No. 273, you refer to the fact that, in 1866, you did suggest to the Royal Commission, of which you were a member, that further grounds ought to be purchased for the purposes of further ventilation, access, and so forth?—Yes.

1392. Do you tell the Committee that the Commission agreed with your view in that respect?—I do not know whether they agreed with my view or not.

1393. So far as we all know they have not acted upon it, have they?—No.

1394. The commission was composed of gentlemen of eminence, I believe, in every branch of the legal profession?—Yes.

1395. They naturally, I assume, would look very carefully to what is necessary for their health and convenience?—Yes.

1396. And having spent some years now in deep consideration on this matter, they do not appear to have thought it necessary to enter into those further purchases which you to-day have told the Committee you thought essential?—They did not then think it expedient, at all events.

1397. And so far as we know, we may assume that to be their view now?—Yes.

1398. Among other suggestions to raise the total amount for the Carey-street site to a million, you have told us that it will be necessary to buy the south side of New-square, Lincoln's Inn?—I said it was probable that it would be called for. I did not include that in my million.

1399. On what ground does your opinion rest that it will be called for?—I think for improved ventilation.

1400. What is to be the width of Carey-street?—Sixty feet.

1401. And then comes this one block of houses, after Carey-street has been widened to 60 feet?—A low block of houses; they are included in Mr. Pownall's estimate.

1402. Then comes a single line of houses one house deep, between the widened Carey-street and of New-square, Lincoln's Inn?—Yes.

1403. Do you tell the Committee that that single line of houses interferes with the proper ventilation of this new building, if it is put on Carey-street?—That is my opinion.

1404. That being your opinion, may I ask what is the width of Howard-street to be?—Sixty feet.

1405. Just the same as Carey-street?—Yes.

1406. What blocks of buildings, after Howard-street has been widened, will intervene between the New Courts of Justice and the Strand?—There will be buildings of a limited height, no doubt.

1407. Are they a more limited height than Messrs. Smith's premises?—I am speaking of those immediately abutting upon the north side of Howard-street.

1408. But will there not be blocks of houses more than one house deep between the widened Howard-street and the Strand?—Yes.

1409. Will they not, according to your view, materially interfere with the proper circulation of air to the Law Courts?—They will be better away; I say that the south side of New-square, Lincoln's Inn, would probably be removed.

1410. On the same principle as you debit the purchase of the Carey-street site with the removal of the south side of New-square, must not the Howard-street site be debited with the removal of the houses that lie between it and the Strand?—But I have not debited the Carey-street site with that which you suppose.

1411. How do you obtain the 1,000,000 *l.*?—I said first of all that there is 600,000 *l.* of Mr. Pownall's; there is 150,000 *l.* for widening the north-west corner of Lincoln's Inn; there is 70,000 *l.* for widening the Turnstile; and there will be 100,000 *l.* for widening Serle-street and Portsmouth-street, and then there is Clare Market, of which I have made no estimate.

1412. The 70,000 *l.* for the Great Turnstile would apply of course equally to the Howard-street site?—No, I do not know that it would; I think that the smaller Turnstile would; but I am not quite certain that it would in the other case.

1413. Then these houses to the south of New Square, Lincoln's Inn, being not more objectionable, to say the least of it, than the houses to the north of the widened Howard-street, let us come on to the west; I think you say that on the west Clare Market is highly objectionable, and the whole of that district you would sweep away?—I would improve it.

1414. For purposes of ventilation, and so forth?—Yes.

1415. Now King's College Hospital for some years has been in existence?—Yes, it has.

1416. Are you aware whether any complaints are made of the badness of the air for the patients?—No, I am not.

1417. But King's College Hospital is nearer to Clare Market, is it not, and that bad district, than the proposed New Law Courts?—Yes.

1418. If, therefore, no inconvenience has been found to the patients in the King's College Hospital there, why should it be found to the lawyers and the public using the Courts?—I am only venturing to give you my opinion; I do not know the condition of the patients in King's College Hospital.

1419. With respect to the 3½ acres of ground that the Commission recommended to be added to the Carey-street site, when they contemplated a larger building, did you hear Mr. Street's evidence?—No, I did not; this is the only day that I have been here.

1420. I understand Mr. Street to say, that of those 3½ acres about one acre would be contemplated to be re-sold?—I think that I heard him say that to-day.

1421 Did you take that into calculation in giving your evidence as to the million which would have to be added for the purchase?—No, I do not think that any of that should be re-sold.

1422. There you differ from Mr. Street?—Certainly; I should not counsel the sale of a piece of that.

1423. But Mr. Street, who is responsible for the building, in your audience gave that evidence?—Yes, he did.

1424. Did you hear Mr. Street say, that if the minor plan is adopted a portion of the existing Carey-street on the west might well be given up, provided that the low buildings on the north of Carey-street were acquired?—Yes.

1425. Do

Mr. *H. A. Hunt.*

13 July 1869.

1425. Do you agree with him in that?—No.

1426. You think that Mr. Street, who is responsible for the building, has not given a satisfactory answer?—I am only giving my own opinion as to what I think should be done.

1427. I think you told us, that on the north of Howard-street the new buildings that might be erected after Howard-street had been widened would be of a regulated height?—Yes.

1428. Will you tell the Committee what buildings those are to which you refer?—This represents the ground proposed to be taken (*pointing to the plan*). These properties (*pointing them out*) will be appropriated, if the street is made, for building purposes.

1429. Will you show how far the 60-feet street will come? (*The Witness described it.*)

1430. How do you propose to put houses on that?—On this piece that we shall acquire.

1431. Seeing this plan, will you explain to the Committee how, if the north of Essex-street is not purchased, this building can be placed so as not to interfere with the line of the existing Essex-street?—Essex-street need not be altered, really, beyond this point (*pointing it out*); but Mr. Street's project is to improve the thoroughfare throughout.

1432. Seeing the line of the proposed new buildings, as shown on this plan, are you of opinion that it would be at all advisable to leave the north end of Essex-street as it exists at present?—No.

1433. Mr. *W. Cowper.*] Some doubt having been expressed as to whether this widening of the upper end of Essex-street should be charged to the expenses of the Howard-street site, I would ask you to tell me whether it would not be the case that if the Courts of Law are built upon Howard-street without any widening of the north side of Essex-street, the public will be greatly injured by the transaction, since they will be deprived of the use of Norfolk-street, which they would have if no Courts of Justice were built there at all?—I do not quite fully understand you.

1434. Supposing that the Courts of Law are not built in Howard-street, the persons who come by the railway will be landed at the bottom of Norfolk-street?—Yes.

1435. They will then have a wide street to proceed to the northward; but if the Courts of Justice should occupy the lower part of Norfolk-street, the public will be deprived of that opportunity of going to the north, will they not?—Yes.

1436. And they will also be deprived of the use of the other streets, Surrey-street and Arundel-street, because the building will occupy the southern sides of them?—Quite so.

1437. Therefore for the communication between the Embankment and the Strand, will not the building of the Courts of Law, without the widening of North Essex-street, be a great public inconvenience?—Certainly.

1438. Are we wrong then in supposing that if the act of those who build the Courts of Law upon Howard-street, deprives the public of an access which they would otherwise have that would be convenient, they are bound in all equity to bear the expense themselves of replacing the public in the convenient position which they would have been in, without the building of the Courts of Law?—Yes.

1439. The houses to the north of Howard-street are of a more expensive character, as I understand, than the houses to the south of Howard-street; have you been able to form any estimate of the difference in value, if it became necessary hereafter to purchase the houses between Howard-street and the Strand?—It depends upon how long it is before you require it, and so on. But no doubt if the courts are built south of Howard-street, the property north of it will very much increase in value; unquestionably, that will be the case.

1440. You have contemplated that there need be no increase of the buildings of the Courts of Justice; but supposing that hereafter there should be an increase, will it not be much more expensive to increase them north of Howard-street than it would be on the Carey-street site to increase them by buying all the property to the west in the direction of Clare Market?—It depends upon what happens in the meanwhile; I say that *primâ facie*, it would be cheaper to buy the property in the direction of Clare Market than to buy the property in Howard street.

1441. But do you contemplate that anybody would be able to purchase Clare-market and its neighbourhood and build upon it very valuable houses, without having compulsory powers in an Act of Parliament?—No, certainly not.

1442. Therefore there is no reasonable prospect that any change would occur to the west of Carey-street, that would render purchasing in that direction as dear as purchasing north of Howard-street?—No.

1443. Will you explain why you answered just now that the Law Institution was incorrect in laying down a proposition which, *primâ facie*, seemed a simple one; that proposition was, that if the new building in Carey-street was placed upon six acres out of the 7½ acres of which the site consists, that would remain 1½ acres of surplus land. I think I understood you to say that that was an incorrect statement?—I do not know that I said that it was incorrect, but I did not indorse it.

1444. The statement was that if the building was placed upon six acres of ground there would then be 1½ acres disposable, and that there would be no material interference with light, air, and approaches?—Yes.

1445. I did not precisely understand the answer that you made to that, but perhaps you would explain now, more fully than you did then, what is your view upon that subject?—My view, no doubt, was that I would not sell an acre and a half, or half an acre, or any other quantity of land, which might not be occupied by the building.

1446. That you do not consider it surplus land, in the sense of putting it up to sale?—No.

1447. But that you think it desirable to preserve it for the purposes of approaches or light and air?—Yes.

1448. Then, I think, there was another statement mentioned in a question to you, namely, as to whether the foundations of the Howard-street site would not involve large preliminary expenses for foundations; I understand you not to question that the expenses for the foundations would be far greater on the Howard-street than on the Carey-

Carey-street site?—I do not know what the soil of Carey-street is; I have assumed that the soil in the Howard-street site would require an artificial foundation, and I have taken that at 15 feet deep.

1449. Is it not a fact well known among engineers, who have any experience of the banks of the river, that all along that side of the river the foundations are much more uncertain and much more difficult to build upon than those upon higher ground?—Upon that subject I said I had taken the opinion of two of the best engineers in London, and therefore I will ask the Committee to take their evidence upon that.

1450. Then I will put it in this way: you said that you calculated upon a concrete foundation of 15 feet in depth for the Howard-street site?—Yes.

1451. Should you think it necessary to make any calculation of that sort for a concrete foundation of that kind on the other site, the Carey-street site?—No; I assume that the foundations for the Howard-street site are extra altogether; extra upon ordinary foundations.

1452. Mr. *Bentinck.*] Have you always been of opinion that the Carey-street site was not adapted for this purpose without extra approaches?—I think that I have, ever since I have been a Commissioner.

1453. You are aware that in 1861 a Select Committee sat upon the question of the site, of which my right honourable friend who has just examined you was the Chairman, and of which I myself was a humble member?—Yes.

1454. You were not yourself examined before that Committee?—I am very glad to hear it.

1455. But the Government, whose Bill it was, examined Mr. Abraham and other experienced witnesses upon this subject?—Yes.

1456. I do not find that that objection was taken at all then?—No.

1457. And, therefore, they differed from you in that opinion?—Perhaps they had never considered the question.

1458. I should like to call your attention only to one point that has caught my eye; will you read Question 111 in Mr. Abraham's evidence, and the answer to it?—"You leave Carey-street 10 feet wider than it is at the present moment?" the answer is, "If Carey-street is 60 feet wide it will be the width which the Crown surveyor, Mr. Pennythorne, and others, have thought sufficient for a public thoroughfare. *Q.* It will be 10 feet wider than the Strand at this moment?—*A.* The narrowest part is 40 feet, at Holywell-street; I do not think that Temple Bar is the narrowest part."

1459. Do you agree with the proposition which Mr. Pennythorne, the Crown surveyor, seems to maintain, that 60 feet width is sufficient for Carey-street?—Sixty feet is a very good width for an ordinary purpose.

1460. Not for that purpose?—For this purpose I say that it is a very good width, but I do say that in order to give additional ventilation, some day or other it will be thought expedient or desirable to pull down the south side of New-square, Lincoln's Inn; this is not the first time that I have suggested it; I have suggested it from time to time to members of the Commission, and I ask the Committee to judge for themselves, and look at it on the spot.

1461. Then I understand that if you had been examined before the Committee of 1861, instead of Mr. Abraham or the other witnesses who were brought forward by the then First Commissioner of Works, to substantiate the proposition that he was desirous to carry, you would have advised the Committee that it would have been impossible or inexpedient to erect the building on that site without large purchases of additional land?—I cannot say in 1869 what I might have said in 1861.

1462. But the circumstances of the case in no way differ?—But I have had four years to judge of this from being on the Commission.

1463. You think that the advice which they gave then was erroneous?—You must not ask me to say that.

1464. Did the Committee come to a decision to adopt this site in Carey-street distinctly upon the understanding that the ground then purchased was sufficient for all purposes?—Yes; I believe so.

1465. They were advised to come to that conclusion by the experienced witnesses produced by the Government?—Yes.

1466. If those witnesses advised the Government that that was the correct course, in your judgment the advice would be erroneous?—Perhaps according to their view at that time it may not have been erroneous. If I had been examined at that time, perhaps, it might not have occurred to my mind; all I can say is that in 1861 they gave an opinion from which I, in 1869, differ.

1467. Was it erroneous then?—It depends upon circumstances.

1468. At all events the recommendation which they then made was insufficient?—According to my judgment.

1469. Touching this question of the access, you have answered Lord John Manners, that although it would be convenient to barristers and others connected with law, that they should not have to cross the Strand, yet having to cross the Strand would be inconvenient to those from the Embankment or the south?—Yes.

1470. Have you at all considered the number of people likely to come that way?—No; nor should I be able.

1471. We have had it in evidence that the Court of Chancery and its offices occupy more than one-fourth of the building; you have attended, of course, the Court of Chancery, occasionally?—I have been a spectator, occasionally.

1472. You have never seen a great number of spectators there, have you?—No, but I have in the ordinary common law courts.

1473. The common law courts that will be taken to this Carey-street site, are those now held in Guildhall and Westminster?—Yes.

1474. Do you really think that if those courts are taken to this Carey-street site, there would then be immediately a crowd from the Embankment corresponding to the crowd at the Crystal Palace on the Forester's fête?—I have never seen a Nisi Prius Court at Guildhall or Westminster that was not completely crowded.

1475. Because those are very small courts; but you never saw a great procession of people going to the courts?—No, because you have not now 18 courts together.

Mr. *H. A. Hunt.*
13 July 1869.

1476. If you had the common law courts together, do you think that you would have such a crowd coming from the south as would endanger the lives of people crossing the Strand?—No.

1477. Mr. *Goldney.*] Do you think that the turning out of 4,000 people from a site already cleared, should be at all an element in the consideration of the Commmittee?—Not the least in the world.

1478. In your estimate, have you taken into consideration any claim for compensation that the people in the upper end of Norfolk-street, Surrey-street, and Essex-street, would be entitled to for having their access cut off?—On the contrary, I have suggested putting a clause into the Act of Parliament, that in estimating any damage which they suppose they may sustain, the increased advantages should be taken into consideration; I have contemplated that the claim would be made, but as I entertain a strong opinion that the property will be vastly increased by the proximity of the courts, I consider that there will be no compensation required.

1479. You have taken it into consideration but not into the estimate?—I say that there will be no compensation.

1480. Assuming Government to re-let this land, it is suggested that the Government might enter into a building arrangement; now, having reference to the loss that has been incurred by that same process in the City, do you still think that the Government could realize the 3¼ or 3½ per cent.?—I am speaking in the presence of persons who have expressed their willingness to give it; therefore I cannot have any doubt whatever as to the expectation of realizing it.

1481. In the event of Carey-street being widened in the way that you suppose, would it not attract a very large amount of heavy traffic?—It depends upon whether the opening is made into Holborn.

1482. Do you know that the qualified widening of Carey-street has already attracted a large amount of railway traffic?—Passing by the Union Bank? I do not know.

1483. Would you be surprised if you were told that the wagons with heavy railway goods passed that way now, and did not before?—No; I think that they will make their way into every good thoroughfare.

1484. If it were still further widened it would present a further attraction to them?—And increase, of course, the noise that would prevail.

1485. Would not that be detrimental?—I do not suppose that the noise of a street 60 feet wide would be more detrimental than the noise of a street 50 feet wide.

1486. Unless you brought more traffic?—I cannot discriminate between those two cases.

1487. You do not believe in seven spirits more wicked than the first coming there?—No; but the project is to keep Carey-street stopped from heavy traffic altogether.

1488. But that is not what you contemplate with these additional purchases?—No.

1489. Mr. *Beresford Hope.*] Do I rightly understand that you were always dissatisfied with the Carey-street area as a site for the Law Courts?—I cannot say that I was always dissatisfied, but I was always anxious to improve the surroundings; it was no part of the duty of the Commission to take into consideration any other site than that with which they had to deal; and I say rather than spend money in improving the Carey-street site, let us have the site on the Thames Embankment where we can get at a moderate expense better ventilation, and, at least, as good approaches as we have in the other; so that I have always felt that that great enlargement was necessary in Carey-street.

1490. Do you believe, looking at the character of the property round Carey-street, part of it being Lincoln's-inn, where there is comparatively little residential, but a large garden space, and part of it being Lincoln's Inn Fields, that the margin of squalid poverty about it will be such as to make the air unwholesome and unpalateable?—It seems to me so, walking round the locality.

1491. And you think, as a practical man, that it really will have this effect?—I do.

1492. It will have this effect upon the offices, I suppose; according to the plan, the Courts would lie inside, on the Carey-street site?—Yes; but the air would find its way into the Courts. There is a certain amount of vitiated air to be expelled, and a certain amount of fresh air to be brought in; and if the source from which you bring it is contaminated, evil effects will result.

1493. At present is there a considerable amount of disreputable property near Howard-street, by Milford-lane?—Yes, comparatively.

1493.* But part of that would be swept away by your scheme?—Yes.

1494. Then you consider that the area surrounding the Courts, if built in Howard-street, will be of that quality which will yield a superior ventilation?—Yes.

1495. Somerset House is on one side, and the river on the other?—And the Temple on the other.

1496. Do you consider the Carey-street area unfitted in its conformation to be a site for law courts, putting its surroundings out of the question?—I have only considered the relative position of one site over the other; I do not know whether Carey-street, or the City, or Westminster is the best place to put the Courts of Justice.

1497. But in itself, do you consider that by its shape and its size, it is well fitted to hold a large public building of that class?—Yes, no doubt, supposing that the public building is not too big for the street, and that there is plenty of space and air.

1498. And do you consider that Mr. Street's reduced building would be too big for the Carey-street area?—I have not had an opportunity of judging of Mr. Street's designs; I have not been asked to look at them except as one of the public, and secondly you cannot judge from a small sketch of that kind what the details of the building would be when they had been digested and drawn out to a larger scale; they will be well considered, no doubt.

1499. Mr. *Layard.*] Do you think that if Government upon the report of this Committee were to decide to change the sites, any great delay would take place in erecting the Law Courts on the Embankment site?—If you pass the Bill which

which is now before Parliament this Session, there would be no delay.

1500. And supposing that that Bill were not passed, what would the delay be?—The delay of a year to get another Bill passed next Session.

1501. You would give the notices in the usual manner?—In November.

1502. But supposing that the Bill should be passed this year, there would be no delay?—No, not in the execution of the works.

1503. In both cases the working drawings would have to be made, I understand, and the contracts taken?—Yes.

1504. You stated that the additional land which, in your opinion, would be required to make the Carey-street site available for the Law Courts would cost a million sterling?—Yes.

1505. That does not include the expenses of conveyance, and other legal expenses, on acquiring it?—No.

1506. Therefore, you would have to add to that million a further sum?—No doubt.

1507. Then, in your opinion, taking the cost of both sites, as far as you are able to judge, the Howard-street site would cost a million less than the Carey-street site?—That is according to my opinion, acting upon the best judgment that I can bring to bear upon the subject. As a public servant, and as a servant of the Government, that is my opinion.

1508. And that is the advice that you have given me, as First Commissioner, you being the responsible adviser of my Department?—Yes.

Mr. *H. A. Hunt.*

13 July 1869.

Friday, 16th July 1869.

MEMBERS PRESENT:

Mr. Bentinck.	Lord John Manners.
Mr. Chancellor of the Exchequer.	Mr. Mowbray.
Viscount Enfield.	Mr. Osborne Morgan.
Mr. Goldney.	Lord Stanley.
Earl Grosvenor.	Sir William Tite.
Mr. Layard.	Mr. Torrens.

THE RIGHT HON. LORD STANLEY, IN THE CHAIR.

Mr. JOHN FOWLER, called in; and Examined.

Mr. J. Fowler.

16 July 1869.

1509. *Chairman.*] I NEED hardly ask you whether you are the Engineer of the Metropolitan Underground Railway?—I am.

1510. You have consulted, I believe, with Mr. Street, the architect of the New Law Courts, and also with the Office of Works, upon the subject of your station by the Temple?—I have.

1511. And we understand that there is no objection on the part of the railway company to the removal of the station?—No. The result of our consideration of the question has been, that the Law Courts, as proposed, and the railway, with a slight modification, (to which we see no objection) may be made compatible with each other.

1512. And I believe that you found the authorities of the Temple also willing to give you all facilities?—Yes.

1513. Supposing that plan to be carried out, we understand that the station will be close to the entrance of the New Law Courts, if they are put upon the Embankment site?—Yes, at the end of a new street which would be continued to the Thames Embankment from the Strand, a continuation of Essex-street, in fact.

1514. I suppose that there is hardly any limit to the quantity of passenger traffic that your railway, when completed, would be able to carry in the day?—No, we have not yet nearly reached the limit on any part of the Metropolitan Railway.

1515. Then do you think that, with the facilities afforded by the railway, and also by the road running alongside, and the river, there would be a better access to that site than to any other that could be proposed?—I think it would be the most accessible site that could be found in London; it has three extremely good means of access, namely, the river, the new wide road, and the railway, constituting, for all practical purposes, accommodation without any limit; the very numerous trains which would run upon the railway is a peculiar and important element with such a combination of business as would be concentrated in the Law Courts.

1516. When your railway is complete, there would be access by it from the east as well as the west, a complete circle?—Yes, and with trains every two or three minutes in each direction.

1517. We have heard something of the difficulty of obtaining foundations for a building upon a great scale so near to the river; is there such a difficulty?—That is quite a misapprehension; there is no difficulty whatever. The foundation is extremely good upon the site of the proposed Law Courts. The investigations made for the purpose of the Thames Embankment show the nature of the foundation, viz., that at a moderate depth you reach the hard clay, but above the clay is a gravel, which is free from alluvium, and which would form a good foundation; but if the foundations were to be taken down to the clay they would be moderate in depth and inexpensive, by reason of the Thames Embankment forming a permanent coffer dam.

1518. With regard to the possible effect upon the buildings, or upon those who occupy them, of vibration, produced by the railroad, I believe that there is a good deal of experience now upon that subject, and that vibration is not found to be practically inconvenient?—In speaking of vibration, I always prefer to divide it into two parts; first of all, vibration with reference to structural damage, and secondly, vibration with reference to inconvenience. With reference to structural damage, we have no instance anywhere of the vibration of a railway causing structural damage, however near, or however fragile buildings may be. With regard to inconvenience, it is a question about which there may be differences of opinion, but perhaps the best instance for a guide in such matters, would be found in the case of the Metropolitan District Railway, which now runs within a few feet of Westminster Palace Hotel. In Westminster Palace Hotel a good many arbitrations are held. I believe that under no circumstances have persons sitting upon those arbitrations been conscious of the passing of the trains. That, I think, in itself, is a very significant fact. Again, immediately near the same point, is Westminster Hospital; there the railway passes within two or three feet of the open area, which is a few feet in width, separating the road from the hospital. Since the opening of

of the railway, we have never had the slightest complaint of any inconvenience in the hospital, nor have the people in the hospital been conscious I believe of the passing of the trains. I could give a great many other instances, but I think that the two I have named are the most to the purpose.

1519. Mr. *Layard.*] Can you state to the Committee to what depth the foundations of the railway are carried along the Thames Embankment?—The depth varies according to the level at which the clean gravel is found; but the railway is carried nearer to the river in all cases than the proposed Law Courts, and therefore the clay on which the gravel rests is deeper where the railway passes than it would be at the proposed Law Courts. The clay, I may say, for the information of the Committee, rises on the average at an inclination of 1 in 30 from the river, and consequently the foundations are less in depth and less expensive when a building is removed, as in the case of the Law Courts, at some distance from the river.

1520. Can you state the depth?—I could scarcely give the depth, it varies at every point.

1521. Can you give the average roughly?—I should think that about 15 feet below the bottom of the railway would represent the average.

1522. Then you think that if provision were made for foundations of concrete, to the depth of 25 feet for the proposed Law Courts on the Embankment site, it would be ample?—It is more than ample; I have seen what is proposed by Mr. Street, and also what is suggested by Mr. Hunt, and from my knowledge of the foundations, I am satisfied that the provision they have made will be found greater than is necessary in practice after Mr. Street has ascertained the depth of his foundations precisely.

1523. Do you know the distance of the House of Commons from the railway?—One hundred and fifty feet.

1524. That is from a point near the railway station?—It is the railway station itself.

1525. If the Law Courts were about 100 feet from the railway station, or the railway, would there be any sensible appreciation of the railway at that distance?—No; but you have a more analogous case in Westminster Abbey, which is about 70 feet from the railway, almost exactly the same distance as that proposed for the Law Courts.

1526. Will you state to the Committee what the obligation of your railway company is as regards access by Surrey-street, Norfolk-street, and Arundel-street to the Strand?—In the Act of Parliament a number of clauses were inserted by which the railway company were compelled to place their station opposite Norfolk-street, with side approaches from the Thames Embankment and from the railway station, so as to give ample access to the streets which lead up to the Strand. The consequence of the modification in the railway and station, which would be caused by the placing of the Law Courts on the Thames Embankment, would be that the access from the station would be up Essex-street, instead of by those three streets. I think that the alternative would be quite as convenient as the plan we are at present under obligation to carry out.

1527. Under the Act you are obliged to bring a street from the level of the Embankment to the level of these three streets?—Yes.

1528. But you are not bound to alter these streets?—No; but it involved a terrace by which the difference of level, between the railway station and those streets, was got over, so that the streets come up to the railway station at a level above the Enbankment, and from this terrace, access was made, partly by steps, and partly by inclines, to get down to the railway station, and the Embankment roadway.

Mr. *J. Fowler.* 16 July 1869.

1529. Could carriages enter those streets?—Yes; provision was made for carriages to enter there from the Embankment by a circuitous inclined plane.

1530. But you are not to alter the level of those streets; they remain as they are?—They remain as they are.

1531. At what time do you think that it would be desirable for the Government to come to some decision as regards the alteration of the position of your railway station?—Certainly in the present Session. The works of the railway could not be arranged that the question could remain open beyond the present Session. I mean this, that we must either proceed on the old plan or on the new. If we proceed on the old plan it will be inconsistent with placing the Law Courts as proposed. If we proceeded on the new plan, and the Law Courts were not placed there, the railway station would be all wrong; therefore it is almost a necessity that there should be a decision during the present Session.

1532. "All wrong" for what?—For the communications; there would be no means of access from the new station to the Strand, because it would be dependent on Essex-street being opened out; neither, I apprehend, could we obtain the consent of the Temple unless it were to be a part of the plan; nor could we be relieved from our obligations to the Duke of Norfolk to take the station from Norfolk-street excepting it were a part of the plan and consistent with the Law Courts.

1533. Then I understand you to say, that if the Government takes possession of the property belonging to the Duke of Norfolk, all the obligations which the company are under to the Duke would be transferred to the Government?—I apprehend that would follow.

1534. As regards the general convenience of the metropolis, and your railway in particular, do you consider that Essex-street is of more value than the other three streets?—We have looked at that question very carefully indeed, because it affects ourselves, and we believe that Essex-street would be at least as convenient as the existing arrangement at Norfolk-street.

1535. And supposing hereafter that Essex-street were continued by a street through the present Carey-street site, and thence to the north of London, Essex-street would then become a very material artery of communication between the north and south?—Most important.

1536. Mr. *Mowbray.*] How soon do you contemplate the railway being opened to the Essex-street station?—In about nine months.

1537. Lord *John Manners.*] What are the arrangements under the new scheme for carriage traffic to the railway station at the bottom of Essex-street?—Essex-street would itself be the carriage approach to the station, and would form a junction with the Thames Embankment roadway, the station buildings being immediately to the west of Essex-street, at the

Mr. *J. Fowler.*

16 July 1869.

point of its junction with the Thames Embankment.

1538. And can you tell us what would be the steepest incline?—No; but there would be very little incline.

1539. I was under the impression that Essex-street descended by a flight of steps to the Embankment, if so, how do you get over that steep incline?—I have never taken any section; but I find, from the present south end of the Embankment, there would be an inclination of one in 29 to Essex-street.

1540. Can you tell us how many steps there are at present from the end of Essex-street down to the level?—No, I cannot.

1541. Have you managed your incline satisfactorily with respect to the approach road to your station from Norfolk-street and the other streets leading to the Strand?—In the old plan? Yes.

1542. You think that old plan would have given convenient carriage communication from the Strand to the railway station?—The only objection to it was that it was circuitous, but not too steep.

1543. It was safe?—It was safe.

1544. If Parliament do not sanction in the present Session of Parliament placing the Law Courts on the Embankment, and the question is re-opened after you have made your stations and ventilating shafts on the present scheme, has your company come to any resolution as to who is to bear the expense of any future alteration that may ensue?—No, we have not; we have assumed that Government will decide one way or the other during the present Session.

1545. What if they do not decide?—Then we must encounter and consider a very difficult state of things.

1546. With respect to the foundations, are you able to tell us what depths the foundations of the Houses of Parliament have?—No; they would be much deeper, because they extend much further into the river.

1547. They would go, would they not, considerably below the foundation of your railway?—Certainly; but Westminster Abbey and the Westminster Hospital are much higher, that is to say, the foundations of the railway are deeper than the foundations of Westminster Abbey or the foundations of Westminster Hospital.

1548. Are you aware of the evidence given by Mr. Hawkshaw before Lord Elcho's Committee, as to the vibration felt at the Westminster Palace Hotel?—I think Mr. Hawkshaw said that when sleeping at the top of the hotel, he felt the vibration or heard the noise of the trains; of course that would be so if he said so; but with reference to the rooms which are usually occupied for arbitrations, I can say, speaking from my own experience, being frequently in those rooms, and from that of others, that it is perfectly impossible at any time to hear the trains or to be conscious of their passing.

1549. Therefore we may take it that your experience of a certain portion of the Westminster Palace Hotel enables you to tell the Committee that no vibration is perceptible in those rooms?—Yes.

1550. But Mr. Hawkshaw having stated in evidence before Lord Elcho's Committee, that he was conscious of vibration in certain parts of the Westminster Palace Hotel, you would say, would you not, that vibration certainly exists?—Yes.

1551. Earl *Grosvenor.*] Do you remember the distance of the Westminster Palace Hotel from the railway?—Eighteen feet and 13 feet are the distances of the points nearest to the Westminster Palace Hotel.

1552. Have you power to shift the station from Norfolk-street to the space between the Temple pier and the Temple library?—There is nothing in our Act of Parliament which would forbid our doing so; the Act of Parliament enables us to acquire all the property which would admit of our doing that.

Mr. Henry Ray Freshfeld, called in; and Examined.

Mr. *H. R. Freshfield.*

1553. *Chairman.*] You are a Solicitor to the Bank of England?—I am.

1554. And have a very considerable experience of your profession?—Yes, nearly 40 years.

1555. And probably you have a very extensive acquaintance among members of the legal profession of both branches?—Yes.

1556. I understand that you have formed an opinion, and are prepared to express it, as to the comparative advantages of the two sites now before the Committee?—It appears to me, and also to my partners, that the Embankment site is preferable to the Carey-street site, especially on the ground of its approaches. The Embankment site has the advantage of roadway, waterway and railway, both from the east and from the west, and on those grounds we think that it generally would be more convenient to the public and to the profession than the Carey-street site.

1557. You are speaking of the profession generally, and you have considered, I suppose, not only those who reside in or near the Temple, but those who reside further north?—Certainly.

1558. Mr. *Layard.*] I think either yourself, or a member of your firm, accompanied a deputation which waited upon the Chancellor of the Exchequer?—My nephew did.

1559. I think he stated to the Chancellor of the Exchequer that he was authorised to speak for many of the leading firms of the City?—For several of the leading firms of the City.

1560. And those firms have a very strong opinion that it would be for their convenience, and for the convenience of the profession and of the public, that the Law Courts should be on the Embankment site?—Yes; they were of opinion that the Embankment site is preferable; in fact, Carey-street is almost unapproachable from the extent of traffic in the Strand and other streets, whereas, with the aid of the new street, which extends from the Mansion House direct to the Embankment, the Law Courts would on the Embankment site be placed in the most convenient access for all those in the City who had business at the Courts. Hitherto, the City law cases, involving the attendance of a great number of witnesses and jurors, have been tried at Guildhall; they involve the attendance of a vast number of persons engaged in the commerce of London, to whom time is very valuable. We think that the Embankment site, by

by reason of its accessibility, offers greater advantages for these persons than the Carey-street site.

1561. I presume you would admit that for the occupants of Lincoln's Inn the Carey-street is preferable?—There is no doubt of that; but that is regarding the question from a selfish point of view; if we were to look at it only in our own interest, the City would be by far the most convenient for us; any alteration of the sittings of Guildhall must affect all those having business in the City.

1562. You presume that the sittings in Guildhall would be removed when the new courts were built?—Certainly.

1563. And suitors, witnesses, and jurors, and the public, from the City, would have easier access to the Embankment site than to the Carey-street site?—Yes.

1564. Do you speak with regard to the Common Law Courts alone, or with regard to the Equity Courts as well?—As regards the whole of the Courts; our view is that the Courts are to be concentrated.

1565. It has been stated to the Committee that the loss of two or three minutes to barristers who are required to be in attendance is so important a consideration to the public, that that ought to over-ride every other consideration in regard to the choice of the two sites; is it, in your opinion, so?—I should say not. We must lose a great many minutes in going to the Carey-street site. I put aside the question of the interests of individuals. I think Sir Roundell Palmer stated that the distance from his chambers in Lincoln's Inn to the Embankment site was five minutes; I do not consider that an unreasonable time for a great public advantage.

1566. Lord *John Manners.*] Can you tell us exactly how many firms you represented at the interview with the Chancellor of the Exchequer?—I think my nephew spoke for four or five of the leading firms of the City of London.

1567. Are you able to tell the Committee how many of the City solicitors have signed the petition to the House of Commons in favour of the Carey-street site?—No; I was myself invited to sign a petition circulated by the Incorporated Law Society, and I know when a petition comes from a body of that kind, supposed to represent the profession, we are too ready to put our names to it.

1568. Would you be surprised to know that 472 names were appended to that petition?—No, I should not.

1569. With respect to the convenience of solicitors residing to the north of the Strand, I understood you to say that their convenience will be consulted by placing the courts on the Thames Embankment site?—Of course the nearer the court is to the chambers of counsel and solicitors, the more convenient it is for them individually. I do not see at present the access to the Carey-street site.

1570. If there is no good access to Carey-street, from the north, what good access is there from the north to the Howard-street site?—There is no good roadway, at present.

1571. Will not, therefore, the balance of inconvenience, for those who reside on the north, be against the Howard-street site?—Certainly, those who reside to the north will have to go a little further; five minutes, at the outside.

1572. With respect to the state of the traffic at present, you say (no doubt most correctly) that the traffic from the City to the Strand is obstructed?—Yes.

Mr. *H. R. Freshfield.* 16 July 1869.

1573. But a great new street is now in progress of formation between the City and the Embankment?—Certainly.

1574. Is it not calculated that that will greatly relieve the existing traffic from the City to the Strand?—No, I think not; it is the heavy traffic that stops the way. To-day I came here from the City in a shorter time than I could get to Carey-street. I came across Southwark Bridge, and over Westminster Bridge.

1575. But the new street is not yet opened?—The new street from the Mansion House to Blackfriars is not yet opened.

1576. What I mean to call your attention to is the probable effect of that new street on the traffic from the City to the Strand after it has been opened?—I have seen the traffic of London increase so enormously within the last 25 years that I doubt its being much relieved. The fact is, that the heavy waggons, carts, &c. stop the way; and that must still go on. The traffic to and from the enormous warehouses in Cannon-street, Gresham-street, and that neighbourhood, I think, would continue to make Fleet-street an obstruction; the only chance would be a new street.

1577. Under the new Act of Parliament, are there not regulations imposed to regulate the traffic?—Yes, but practically it does not give us much relief; I feel it every day.

1578. Earl *Grosvenor.*] Mr. Field, in his evidence, stated that a great many suitors have died, in the course of years, from the inconvenience and delay in the dispatch of legal business; do you not consider that the health of the solicitors and the barristers might be not only not interfered with, but rather promoted, by five minutes' walk, supposing the site were in Howard-street?—I should be happy if my walk were not extended more than five minutes.

1579. Still that could not do them any harm?—Certainly not; I think it is unreasonable to object on such a ground.

1580. Mr. *Goldney.*] Can you say what proportion of the solicitors live north of the Strand to those living on the other side?—I think a third at least, perhaps more.

1581. But as compared with those living in the immediate vicinity of the Temple?—I cannot answer that question.

1582. Would you say six-sevenths?—I should say certainly not; I believe that the solicitors east of St. Paul's are about one-third of the whole number.

1583. Are there any agency offices east of St. Paul's?—Yes.

1584. How many?—I cannot mention; there are large ones.

1585. Are there three agency offices?—There must be a great many more; Messrs. Young & Maple's offices, for instance.

1586. Is Mr. Young adverse to the Carey-street site?—I should think strongly in favour of the Carey-street site. He is an active member of the Incorporated Law Society, and a member of the Commission by whom the Carey-street site was approved.

1587. Do you know any agency solicitors who are adverse to the Carey-street site?—No.

1588. Did your firm attach their signature to the Carey-street site petition?—No, not that I am aware of. When the agent of the Law Society brought it I declined to sign it; I stated that

Mr. *H. R. Freshfeld.*

16 July 1869.

that I considered the Embankment site the better.

1589. Are there many solicitors in the Temple acting as agency solicitors?—A great many.

1590. Do you know that those are favourable to the Carey-street site?—I do not know it.

1591. You have not heard the contrary?—No.

1592. What number do you think that that third that you spoke of as living in the City, amounts to?—Mr. Baxter has the numbers, but I think there are upwards of 1,000.

1593. Do you know how many out of that 1,000 signed in favour of Carey-street?—I do not know. I think that many are practically indifferent. Their object is to see some scheme carried out, and they are afraid of a new scheme, varying the site, causing delay.

1594. Those that are indifferent would not sign, would they?—I cannot say.

1595. Supposing that half that number have signed, would you think it an indication that the people east of St. Paul's were favourable to the Carey-street site?—I do not think the fact that they have signed a petition, based upon certain statements, without having before them the relative advantages of the two sites, proves much.

1596. Do you mean to say that solicitors are apt to sign without due care?—No; but that they signed a petition in favour of the concentration of the Law Courts; they thought that the Embankment site might postpone the carrying out of the work; and many were of opinion that the site having been purchased, it was dangerous to advocate a change of site.

1597. Then you think that this petition did indicate their views?—No, I do not think so.

1598. Why do you say that they thought that when they signed it?—I think you misunderstand me.

1599. I asked you first whether signing the petition indicated their views at all, and you said they signed it because they thought the Carey-street site having been purchased, it would delay the thing to have the Embankment site adopted?—I meant that they signed the petition generally, understanding that it was the scheme approved by the Incorporated Law Society, and knowing that the petition was put forward and promoted by them. The object was to provide new law courts, and they thought, perhaps, at the time that the petition would promote that object and end. I do not think that at the moment they had distinctly before them the comparative advantages of the Embankment and of the Carey-street sites. And I meant to add that, in communication with several members of the profession, they had given me as the reason of their support of the Carey-street site, that the ground having been bought and being ready for building, an alteration of site might endanger the concentration.

1600. Will you name any one who said that?—At the moment I cannot mention names.

1601. Then you know no one that signed the petition who said that?—I do not know who signed and who did not sign.

1602. Have they regarded the Law Institution as representing their feeling?—I think they have.

1603. And what were the views of the Law Institution?—The Law Institution are strongly in favour of the Carey-street site.

1604. In the question of the choice of a site, which do you think is most important, as regards the concentration of the courts, to consider the access to the public or the access to the profession?—I think that both the profession and the public should be considered.

1605, I did not ask you that; I asked you which you thought ought to be considered first?—I have difficulty in saying that the profession should be considered first.

1606. Do you think that the profession and their clerks would go more times as a rule in a cause than the public. Supposing a man were interested in a cause, there would not be the actual necessity for his going to the court that there would be for his professional man going?—The "public" involves the attendance of jurors and witnesses.

1607. Let us take the case, in the first place, of the man who has a cause; his professional man is bound to be there?—Certainly, he ought to be there.

1608. And bound to be there before, to know when it is coming on?—Yes, or his clerk.

1609. The client does not go till he is sent for?—No.

1610. Then the solicitor and his clerk would be there oftener than the client?—Yes, there are also the jurors and witnesses.

1611. How often does a juror attend as a rule?—It is impossible to say. I have known one man summoned five times in the course of a week.

1612. How often do the Courts sit at Guildhall?—After every Term.

1613. And how many Courts are there sitting at the same time?—Six or more.

1614. But as regards the Chancery business, everyone goes to Lincoln's Inn; that does not migrate at all?—No.

1615. Were you in practice when it did migrate to Westminster?—Yes.

1616. Did you find any inconvenience in that?—Yes.

1617. You find the convenience in regard to the Chancery Courts, in their being concentrated?—Yes.

1618. And being concentrated in a spot near where the counsel are?—Yes.

1619. Would it be at all beneficial to the City solicitors if those courts were moved to Guildhall occasionally?—Of course it would save them the trouble of going to Lincoln's Inn.

1620. Which would be the most convenient thing, to have the courts and counsel together, or to have the courts occasionally at Guildhall?—I apprehend that the courts and counsel should be in proximity.

1621. Live there, do you mean?—Have their chambers near the courts.

1622. You think that supposing that the courts were removed to the Embankment site, the counsel would all go there?—Yes, I think so; I think it would lead to buildings being put up on the Carey-street site.

1623. You are quite impressed with the necessity of having the counsel and courts in close proximity?—Certainly, it is very convenient.

1624. Not only that, but you think it must happen?—Yes.

1625. If the Carey-street site is abandoned and the Embankment site adopted, the counsel would migrate

migrate to the Embankment?—The Temple is convenient for the Embankment site. As regards Lincoln's Inn, if the courts are on the Embankment, I think new buildings will arise on the site already cleared.

1626. In the Temple there are no Chancery barristers?—I do not know of any.

1627. As regards the Chancery barristers, they would naturally migrate if the Embankment site were adopted?—Yes.

1628. Mr. *Torrens.*] I understood you to say that you thought that the Embankment site would be more convenient to you as practising the profession in the City, because you would have an access by a broad thoroughfare from the City along the Embankment?—Yes, I should; by road, water, and rail.

1629. That is a great line of traffic now subsisting, and the other one which can be called great in point of convenience, by St. Paul's, and down Ludgate-hill, and by the Strand, you think so blocked as to be very inconvenient?—Yes.

1630. I presume you are aware that there is another great line now in formation north of St. Paul's?—Yes.

1631. And that line, I believe, is nearly in a straight line, as straight as streets usually can be made, from the north angle of St. Paul's Churchyard to close upon Lincoln's Inn Fields, at the Great Turnstile?—Yes.

1632. You are aware, I presume, that the viaduct over Holborn Valley is nearly completed?—Yes.

1633. What difference would it make, in point of convenience, if you had to attend either a consultation or a court for hearing, whether you should come by that great northern way, or by the southern way, which would be called the Embankment route?—One's object must be to go the quickest way.

1634. That is not my question; as far as I am aware the distance would be about equal, and a transverse line from the Turnstile to the river would cut the two great lines of thoroughfare equi-distant from St. Paul's?—I cannot say.

1635. What difference would it make to you professionally if you took the great northern way by the Turnstile, or the great southern way by the Embankment to the corner of the site?—I think 10 minutes to a quarter of an hour; taking the Royal Exchange as a starting point.

1636. My question refers simply to the distance of St. Paul's from each of the two sites?—I walk now in preference to riding, the stoppages are so great.

1637. Supposing a line be drawn from Great Turnstile to the river, would it not leave both sites to the west?—I think it would leave it to the east.

1638. I should have said Little Turnstile; I mean the Turnstile at the eastern corner of Lincoln's Inn Fields?—That would take you in a straight line by the side of Lincoln's Inn Gardens, down to the garden, through Serle-street, and would bring you to the western part of the Carey-street site.

1639. Chancery-lane comes into Fleet-street opposite the gate of the Temple. Then you pass through Temple Bar and come to Essex-street, and the new site on the Embankment will be to the west of Essex-street?—I suppose it would.

Mr. *H. R. Freshfeld.*

16 July 1869.

1640. Then accordingly if you take the line of Chancery-lane, or a parallel line which is a very few yards more to the west from Little Turnstile through Lincoln's Inn Fields down to the river, that would leave both sites to the west?—I apprehend that a straight line from the Turnstile referred to in the question, would run into the Carey-street site.

1641. But I want to bring you to this point; the distance from St. Paul's to Little Turnstile, and the distance from St. Paul's to the end of Essex-street, we will say are about the same?—I should have said that the distance to the Turnstile was considerably longer. I am only speaking of my own recollection. If I wanted to go from the corner of St. Paul's to the Embankment site I should get there in a very few minutes.

1642. And how many minutes would it take you the other way?—The other way it would take me a long time, because I should have the block of the street.

1643. What do you mean by a long time?—It is almost impossible to say, but I go to and fro to Lincoln's Inn almost daily. I can walk there quicker than I can ride, generally; I think it takes me on an average, from the Bank to Lincoln's Inn, about 20 minutes.

1644. Walking?—Yes, walking or riding. If the streets are clear then we save five minutes or so.

1645. Does it take you 20 minutes to go from St. Paul's to Lincoln's Inn?—Certainly not; I should say it would take me a quarter of an hour walking.

1646. And how long would it take you from St. Paul's to the Embankment site?—I think that it would not take me above 10 minutes.

1647. Do you anticipate that a great thoroughfare would be made from St. Paul's, or up from the Bank; are you calculating upon the facility of a great thoroughfare from St. Paul's?—From the Bank, from the corner of the Mansion House.

1648. Then the facility you think you would have would be from St. Paul's, and you think that it would make a difference of five minutes?—No, the facility would be by the formation of the new street from the Mansion House to the Embankment at Blackfriars, and by the Embankment to the site.

1649. Then all comparisons about St. Paul's are out of the question; you would not go by St. Paul's?—No, certainly not to the Embankment site. One of the great features, in point of the City convenience, is the new street which is making from the Mansion House to the Embankment at Blackfriars.

1650. Will you make no account of the great street making the other way?—I think it is too far north.

1651. Mr. *Layard.*] I presume that that petition was signed by the City solicitors upon certain representations of the Incorporated Law Society?—It was sent round by the Incorporated Law Society, and the petition came from them; and I have no doubt that, the solicitors feeling that it came from a body that assumed to represent the profession, it would be very generally signed.

1652. But

Mr. *H. R. Freshfeld.*

16 July 1869.

1652. But was not a circular sent round by the Law Institution, containing various statements as to the two sites, to all the solicitors in the kingdom?—Yes, and representations were made by the Incorporated Law Society, with which I was unable to concur.

1653. Are you aware that it has been stated to this Committee that those representations are entirely incorrect?—No, I was not aware of it; but it occurred to me that they had gone further than they should have done.

Mr. Robert Dudley Baxter, called in; and Examined.

Mr. *R. D. Baxter.*

1654. *Chairman.*] You are, we understand, a member of the firm of Baxter, Rose & Norton, of 6, Victoria-street, Westminster?—Yes.

1655. And you have interested yourself a good deal in this question of site?—I have, of late; but for a long time we all, at Westminster, maintained silence; we really had no information, and did not know what to think about the two sites.

1656. We understand that you have now formed a decided opinion on the subject?—I think there can be no question that, for Westminster, the convenience of the Embankment site will be very much greater than that of the Carey-street site; also that, as Mr. Freshfield has said, for the other district, the City, it will be very much more convenient. Then there is a third district on the map before your Lordship, that on the southern side of the Strand, which is coloured in pink; I think that for that site also it would be very much more convenient to have the Embankment site. Then, on the other hand, there are only two districts, Nos. 4 and 5, that to the north of Lincoln's Inn, and that which I will call the Oxford-street and Regent-street district, which will, no doubt, find the Carey-street site more convenient. But I have taken the trouble to go through the Law List, and to have not only the solicitors counted in each of those districts, but the barristers counted in each of those districts, and the account stands thus: that taking the first three districts, the City, the Temples, and Westminster, as the division for which the Embankment site is most convenient, the number of barristers in that is 1,177, and of solicitors 1,718. On the other site, taking the division for which the Carey-street site is most convenient, namely, Lincoln's Inn and the Oxford-street and Regent-street district, the number of barristers is 895 and solicitors 1,442; so that there is actually, in my belief, a majority to whom the Embankment site is most convenient of 282 barristers and 276 solicitors. (*The Witness handed in the Statement*, vide *Appendix*).

1657. Mr. *Layard.*] In this comparison you have not, I observe, taken any account of the solicitors on the south side of the Thames?—Those are only the north of the Thames; but there are not a very large number to the south.

1658. But I presume that those to the south of the Thames would also find the Embankment the most convenient?—Yes. I find that the total number of solicitors in London, as near as I can obtain the number, is about 3,500. I have accounted, in the figures that I have given, for 3,160; so that that leaves a very small proportion for the rest of London.

1659. May I ask you why you put the solicitors in the Regent-street district as probably in favour of the Carey-street site?—Because I think that they would get, probably, down Long Acre, and the Oxford-street solicitors would come in from the north.

1660. But supposing that a road were made from Charing Cross to the Embankment, do you not think that then the solicitors would come that way from Regent-street?—No doubt, it would be the shortest, in point of time, for them to come through Charing Cross, then to the Embankment road, and so to the Embankment site.

1661. Are you aware that the Metropolitan Board of Works contemplate making an access from Charing Cross to the Embankment?—I know that an access was intended; I heard it was to be there, but I have no certain information on that.

1662. Therefore, some of these solicitors and barristers that you have put down here as being favourable to the Carey-street site may possibly be favourable to the other?—Yes.

1663. Is yours an agency house?—No.

1664. Are you Parliamentary agents?—Yes.

1665. Have you much to do with the Common Law Courts?—We have a great deal to do with the Common Law Courts.

1666. As regards the convenience of suitors, witnesses, and jurors, and the public in general, which of the two sites, in your opinion, would be the most convenient?—No question the Embankment site. The Common Law Courts are some of them at Westminster, close by the river, and close by us, and the remainder of them are at Guildhall in the City, in that very large district there; and if the Carey-street site is adopted, we and the City will lose immensely in convenience, in time, in expense, and in everything else, by having to go through crowded thoroughfares to Carey-street.

1667. I understand you to say that, from the result of your inquiries, taking barristers and solicitors alone, without including the public, in your opinion the majority would be in favour of the Embankment site?—Precisely so. May I also mention that the inconvenience to those solicitors and barristers, who live in the Lincoln's-Inn district to the north of the Strand, appears to me to be very much smaller, if the Embankment site is adopted, than the inconvenience to us on the south of going to Carey-street. For this reason, that Mr. Street, in his plan and statement, contemplates that it is perfectly possible to make both a tunnel and a bridge from the northern side of the Strand to the southern side, by which barristers and solicitors, and every one, will come very conveniently to the Embankment site; but it will not be possible to make similar approaches from the southern to the northern side of the Strand, if the Carey-street site is adopted. Then there is another point: the Westminster lawyers are a fixed body, because they are there for local reasons, clustering round Parliament. The City solicitors are a fixed body, because they are there for local reasons, obliging them to live close round the banks and the great houses of business. But the lawyers that live to the north in the Lincoln's-Inn district are not a fixed body,

body, but merely, if I may express it so, hangers-on of the Court; and the consequence is that if you adopt the Embankment site, they will creep downwards, and not stay where they are. It seems to me much more sensible to fix the really good site for the public (and also, I may say, for the majority of the profession), and let them come down to it, than to bring the site to those who are mere temporary lodgers there.

1668. I think that when a deputation waited upon the Chancellor of the Exchequer, the head of your firm, Mr. Baxter, a gentleman of very great experience, was a member of it?—Yes, he was; he would have been here, but he has been called into Wales.

1669. He is in favour of the Embankment site?—Yes.

1670. Mr. *Mowbray.*] Your comparisons are based upon the existing state of things?—They are.

1671. But do you think it probable that if the courts were erected on Howard-street, Norfolk-street, Surrey-street, and Arundel-street, would become full of solicitors' offices?—I think that the district close to the Strand on both sides would become much fuller of solicitors' offices than it is at present, and that the convenience of the profession would in a very short time be overwhelmingly in favour of the Embankment site.

1672. Is there any reason why the equity barristers should be concentrated in Lincoln's Inn, rather than in the Temple?—At present there is.

1673. But if the courts were removed southwards, a barrister now practising in Lincoln's Inn, might move his chambers to the Temple?—Yes. At present I believe the two divisions of barristers are very curiously marked, the Common Law barristers being to the south of the Strand, so as to get to Westminster easily, and the equity barristers and conveyancers being to the north of the Strand.

1674. Do you think that a large proportion of the solicitors in Bedford-row, and other localities north of Holborn, would be induced to move to Carey-street, or other streets near the Embankment, if the Howard-street site were adopted?—If buildings for their accommodation were erected there, as I understand from Mr. Hunt's report is already in contemplation.

1675. You think it possible that that site would operate by those buildings to induce them to settle there?—I think so; and it would be a paying speculation.

1676. Lord *John Manners.*] You have told us that you take the solicitors who live in the three districts, the City, the Temple, and Westminster, as being in favour of the Embankment site?—I say that it is more convenient to them; I do not know how far, at present, they appreciate that convenience.

1677. We can test that perhaps by some figures; can you tell us how many solicitors do live in the City district?—Yes, 1,270 nearly (these numbers are approximate, but as nearly accurate as can be).

1678. In the comparison which you have given in to the Committee, you take those 1,270 as being ranked on the side of the Embankment site?—As their convenience being on the side of the Embankment site.

1679. You place them on the side of the Embankment site?—I do.

1680. Can you tell us, out of those 1,270, how many have expressed an opinion in favour of the Embankment site?—No, I have not the number; but I can give a very good reason why more have not done so. In the first place, because there has been no canvass for the Embankment as there has been for the other site. In the second place, because the Law Institution, with its overwhelming influence, has taken up the cause on the other side; and, in the third place, because solicitors are so much overwhelmed with business, as the French say, so *très affairés*, that they do not think for themselves on the subject, but follow the lead of some one else, and that some one else is, in ordinary matters, the Law Institution.

1681. We know that, so far as your information goes, the solicitors in the City district have not pronounced themselves to any appreciable extent in favour of the Embankment site?—That may be so, I daresay.

1682. Can you tell how many of the City solicitors have expressed themselves in favour of the Carey-street site?—No, I cannot; but still numbers of signatures were obtained to that petition by representations which were not, as I understand, altogether accurate.

1683. You have told us that probably a great number of the City solicitors who have signed the petition in favour of the Carey-street site, have done so owing to the overwhelming influence of the Incorporated Law Society?—That is so, I believe.

1684. Will you tell me how it is that the Incorporated Law Society has acquired this preponderating influence over the profession?—Because they are the organised head of the profession.

1685. And, probably, they would not be the organised head of the profession if they did not fairly represent the profession?—On ordinary subjects, certainly, they fairly represent the profession; but on this subject, if I may speak without disrespect to them, I think that they are warped by their own private and peculiar interests. The Law Society committee is composed of gentlemen of great reputation, but belonging to the elder portion of the profession. They naturally cling to their own locality, and to their old associations, and therefore go for the Lincoln's-inn site.

1686. Then, of the 1,270 who live in the City, you cannot give us any reliable information as to the number who are in favour of the Embankment site?—No, I cannot.

1687. With respect to the south of the Thames, you have said, in general terms, that comparatively few solicitors are to be found in the south?—I believe so; they are very scattered.

1688. Can you tell me how many there are?—I should think not more than 200 or 250; but that is a mere guess, because I did not think of looking for the numbers accurately.

1689. With respect to the London solicitors who represent country firms, can you give us any statistics to show how they are divided in districts?—No doubt the great majority of agency houses are in the Lincoln's-inn district.

1690. And they, you have told us, are in favour of the Carey-street site?—Certainly.

1691. That is to say, the great body of the country business represented by London firms is in favour of the Carey-street site?—That is so at present, because those country firms happen to be represented by gentlemen to whom the

Mr. *R. D. Baxter.*

15 July 1869.

Carey-street site is an advantage. That may not be the case a few years hence.

1692. But at present that is so?—At present it is so.

1693. With respect to the crowded thoroughfares to Carey-street, I think you said that if Carey-street is adopted as the site, all the professional gentlemen who live in the Westminster district will have to make their way through crowded thoroughfares to Carey-street?—Yes.

1694. How would they go to Carey-street from, take your own place of business?—I should go up the Strand.

1695. When the railway is opened along the Embankment, if you were in a hurry, would you go along the Strand or by the railway?—There would be inconveniences in going by the railway in that case, because you would be turned out at the station with, perhaps, not a cab at hand, and would have to get across the very crowded thoroughfare of the Strand, and no doubt the most convenient way in such a case would be to charter a cab at one's own door, and go through the Strand straight to the Carey-street site.

1696. Take the new carriage communication that, we have heard from a previous witness, there will be along the Embankment, and across the Strand to Carey-street, would you think that a less convenient access to Carey-street than going up the Strand?—You would get into the Strand in a very crowded part; it would come to much the same thing; the crowded part of the Strand is when you get near Carey-street.

1697. Is there not at times considerable inconvenience felt now opposite to Messrs. Drummond's bank?—No doubt.

1698. Do you not look to the proposed Embankment carriage-way as a great means of access from your part of Westminster and the City to the Strand?—No doubt it will be; just like the railway.

1699. With respect to the inconvenience of all professional gentlemen who live to the north of the Strand, if the Howard-street site is adopted, you tell the Committee that you think that would be very much mitigated, if not altogether removed, by Mr. Street's plan of a tunnel and a bridge across the Strand?—Yes.

1700. Supposing that the Government do not agree to purchase the northern end of Essex-street, how can that bridge or tunnel be made?—That is a question that I have not gone into. I have taken that upon Mr. Street's affirmation.

1701. But, on the assumption that neither the tunnel nor the bridge will be made, what, then, would be your opinion of the position of the great mass of professional gentlemen who live to the north of the Strand, if the Howard-street site were adopted?—Then the inconvenience to them of coming across the crowded thoroughfare of the Strand to the south would not be so great as the inconvenience to the Westminster and City solicitors, and the solicitors on the south of the Strand, in the Temple district, of going to the north.

1702. Will you explain how that is?—Because they have merely to go out of their own offices and find their way out of Lincoln's Inn across the road, a short distance. We, on the other hand, at Westminster, would have to take cabs, and to thread our way through the crowded thoroughfare; and the City people would have to do the same; to take cabs, and to thread their way through crowded thoroughfares; whereas that would be entirely obviated if we could get down either by cab, or by the road to the new Embankment site, or by railway.

1703. What would be the inconvenience of gentlemen residing in the Temple having to cross by a bridge at the narrow part of the Strand to Carey-street, compared with the inconvenience of gentlemen living in Bedford-row or Lincoln's Inn having to cross by Mr. Street's bridge across the Strand?—They would be pretty nearly balanced, one against the other, I will allow.

1704. And if no bridge were erected in either case, which set of professional gentlemen would have to undergo greater inconvenience; those who live north of the Strand having to cross the wide part of the Strand, or those who live in the Temple having to cross the narrow part of the Strand?—I think very much the same.

1705. In answer to a question from Mr. Mowbray, I think you said that the professional gentlemen who now live in Lincoln's Inn, if the Howard-street site were adopted, would come down and live in the Temple?—No; but they would gravitate towards the Temple. I think my phrase was, that they would creep towards the south.

1706. I understand you to say that there was no reason why the equity barrister should not leave Lincoln's Inn and live in the Temple?—I do not think that there would be room for them all in the Temple.

1707. That is the point that I want to come to; can the Temple accommodate the equity barristers who now live in Lincoln's Inn, and the common law barristers who now live in the Temple, as well?—I recollect now the phrase that your Lordship refers to; my meaning was, that whereas, at present, so many common law barristers live in the Temple, then there would be no reason for that distinction, but that the equity barristers might, in their migration southward some of them, settle in the Temple, and some of them on one side.

1708. Earl *Grosvenor.*] Supposing that the Carey-street site was available for building purposes, they would come down and fill up that space and live on the Carey-street site, you think?—I think they would.

1709. Mr. *Goldney.*] Do you agree with the view that the people who carry on the business of the courts, that is, solicitors and barristers, are more to be considered in this case than the general public?—Not entirely.

1710. Do you think that they are to be considered first, or that the general public are to be considered first?—The general public should be considered first.

1711. Then the question of the convenience of barristers and solicitors is only an ingredient, not the main element, in the question?—I think that my calculation shows that it will be for the convenience of the majority of the barristers and solicitors also to adopt the Embankment site.

1712. But the general public are the first to be considered, you think?—Yes.

1713. Have you made any calculations as regards the general public?—No; but I take it on the broad ground that you have in the Embankment site a site surrounded by four roads. First of all you have the Strand, which is common to the two

two sites, and next you have three roads; you have the road, the railway, and the river. If I may so phrase it, they are the three R's of the legal site question. Those three roads are totally wanting to the other site. When you come to the Carey-street site, you have simply that one bad road which is common to it and to the other site, and then at the back of it you have a perfect block. There can be no question in point of convenience to the public between the two things. In the one case it would be like setting down a station a mile or two off the London and North Western Railway, instead of on the railway itself.

1714. As regards the public, you said that they had great advantages in the courts being held at Westminster and Guildhall; do you think that is an advantage for the public to have any concentration of the courts?—I doubt it, as regards Westminster and Guildhall; because I find the City solicitors to whom I talk, remonstrate very strongly against taking City men away from Guildhall to Westminster; but as regards the rest of the public, I agree with you that the concentration would be an advantage to them.

1715. In speaking of the public at Westminster and Guildhall, you take the solicitors as the public, and think that they would be disadvantaged by the concentration?—I think that by the concentration the City public and the City solicitors would be put under a disadvantage by the trials being removed from Guildhall, but that is an exception to the general rule.

1716. But your view is that either site will be a disadvantage to the public living in the City and to the public living in Westminster?—The Embankment site would be a very small disadvantage to the public living in Westminster, because the access to it is very easy, and if you are to withdraw the trials from Guildhall, you ought, in justice to the City, to that very large, wealthy, and business-occupied mass of people in the City, to put them at the place which they can approach with the greatest celerity.

1717. Either site would be a disadvantage to the City and Westminster, but Carey-street would be a very great disadvantage?—To the City and to Westminster it would be a qualified to have the courts moved to the Embankment site.

1718. You say that the portion of solicitors in Lincoln's Inn would naturally creep on to the courts if they were placed on the Embankment site?—Yes.

1719. How was it that they did not do so when the equity courts were held at Westminster?—No doubt there has been a migration to the courts at Westminster.

1720. How can you explain their having removed the equity courts from Westminster, on the ground that it was more convenient to the solicitors of Lincoln's Inn that they should not be held at Westminster?—No doubt it would be an advantage to the equity courts to be concentrated at some point, whether at Lincoln's Inn or the Embankment.

1721. How was it that the solicitors in Lincoln's Inn brought the courts back to them from Westminster?—I am not aware of the circumstances of that case.

1722. Are you old enough to remember when the equity courts were held during term time at Westminster?—I was not resident in London then.

1723. You know that that was so, as a fact?—Yes.

1724. And you know the fact, that they are now held at Lincoln's Inn?—Yes.

1725. How do you make that coincide with your view that the solicitors would creep after the courts?—I have not taken it on that instance. There were local reasons at that time why they did not creep on to the courts; because Westminster was a very long way from Lincoln's Inn; but when you have a removal a very short distance, and a great deal of vacant ground available for building, which may be made into offices, I think it is almost certain that the vacant ground will be occupied by new offices, and that the solicitors will move themselves down by natural gravitation.

1726. Wholly irrespective of the facts as regards Westminster?—I think that the facts are not parallel.

1727. You say that you have made calculations as to the solicitors whom the Embankment site would suit best; have you heard the views of those 1,718?—I have talked to a great many solicitors.

1728. And have they adopted your views?—Yes.

1729. How long have you begun to think for the solicitors?—I do not think that the question was brought before me till a month ago.

1730. Up to that time they thought for themselves, perhaps?—I think that in our part we were in happy ignorance of everything that was going on.

1731. But nearly 2,000 solicitors have signed a petition in favour of the Carey-street site?—Not London solicitors, I think.

1732. How many City solicitors have signed out of those 1,100?—I have not the figures.

1733. Shall we say 500?—I will take it from you if it is so.

1734. And then we may take 635 the other side of Wellington-street in addition?—Yes.

1735. It would make together upwards of 1,200; do not you think that they will exercise their own professional opinion?— No; I agree with Mr. Freshfield that they signed from very diverse motives; first, because the Law Institution asked them, and secondly, because they thought that they had better get something somewhere.

1736. Are you a member of the Law Institution yourself?—No, I am not, but other members of my firm are.

1737. Do you know that there are a great many City solicitors, leading men, who are on the Council?—I dare say, but I have not examined it to ascertain that.

1738. Take Mr. Lawrence as a leading bankruptcy solicitor, he is on the Council?—Yes.

1739. Take Messrs. Young & Maples, that is a large City firm; they have both signed?—Yes.

1740. Do not the Law Society publish a report every year?—Not being a member, I have not received it.

1741. Whom do you represent beyond the four solicitors who attended the Chancellor of the Exchequer?—I am speaking now for myself and my own firm, and those gentlemen to whom I have talked.

1742. There has been no public meeting adopting your view of the solicitors that you know of, has there?—No public meeting beyond the deputation.

Mr. *R. D. Baxter.*

16 July 1869.

1743. Whom do you represent beyond the four solicitors that waited upon the Chancellor of the Exchequer?—There were a very large number of solicitors that waited upon him.

1744. What do you mean by a large number?—There were 20 or 30 gentlemen present; there may have been firms represented there containing 120 or 130 solicitors.

1745. There are large firms which both carry on Parliamentary business at Westminster, and carry on the general business of law in other parts of the town?—Yes.

1746. And they have offices in both places?—Yes.

1747. Do you know what the views of those people are?—Well, I talked to one gentleman (a gentleman of very great influence) who has an office of that kind, yesterday, and he said that he had signed the petition that was sent by the Law Society, but that he really did not care anything about it.

1748. But your view is, as I took it before, that the convenience of the professional men is not to be the ruling question in the choice of the site, but the convenience of the public?—The public first, and the interest of the profession afterwards.

1749. You do not think that interest of the public is merged in the professional men being in the vicinity of the Court; I am putting it as a question of access at the present moment; do you think that the advantage to the public is to have a free, easy access to the Court, or that the advantage to the public is that the solicitors who transacts the business should be residing in the immediate vicinity of the Courts?—I think that it is of the first importance that the public should have the most undoubted facility of access; and it is also of importance, but of minor importance, that the profession should have the greatest facility of access; but my opinion is that, as regards the Embankment site, the advantages of both are concurrent.

1750. What are your grounds for making it of second importance that the professional men should have facility of access; is it because they carry on the business of the public?—Yes.

1751. Is the public business carried on more by professional men, or more by people who attend as jurymen and witnesses?—It is carried on by both.

1752. You say, as I understand you, that you think the access of the general public is first to be considered?—Yes.

1753. Is the advantage of the public greater or less by the very access of non-professional men, or of professional men?—I do not think that you can take it in that way; I think they are both concurrent advantages. May I also state, that I think that one position of the Law Society, of which a great deal has been made, presents an erroneous impression. They put the question as regards solicitors thus: "There are rather more than 10,000 solicitors; of these nearly 6,000 have either their own offices or those of their town agents in this legal district; and of this number the offices of more than 5,000 are on the north side of the Strand"; leading to the impression that 5,000 solicitors are to be considered as on the north side of the Strand, and that therefore there is a very enormous preponderance of convenience there. But they forget that those 5,000 solicitors are represented by only 1,234 gentlemen actually residing there, and that the balance of the 5,000, say 3,800, are not London solicitors, or people having a great deal of business in London, but only people who have a small fraction of their business in London. I have myself practised for seven or eight years in a large firm in the country, and therefore I know what the country requirements are, and I know that the portion of business that we sent up to our London agent was but a very small proportion indeed of our business, and the business which would have gone to the Courts if we had been living in London. You can only count five country solicitors, say, as equivalent to one London solicitor in point of convenience, as regards the convenience of these Courts; and therefore I say that that is a misleading numerical calculation.

1754. Have you any notion what the proportion of the causes being tried at one time are sent from London or from the country generally?—No, I have not those statistics; they can be obtained; but the county courts have taken off a great deal of business that used to come to London, and therefore the agency business is not now of that importance to the profession that it used to be; I should say, not now of half the importance to the profession that it was 20 years ago.

1755. Would you say that one-third of the causes tried are country cases?—I have no figures on that point; I will take it, if you say so; I have no means of knowing that, as I have not gone into the figures.

1756. I thought you put it that five solicitors in the country would only represent one in London?—No; that a solicitor living in London would have more to do with the Courts in London than five solicitors living in the country.

1757. How do you arrive at that if you do not know the relative number of causes tried?—I only take it on my own experience, from living in the country and in London.

1758. The relative proportion, if it can be got at, would test it?—Yes, I believe it would.

1759. Mr. *Torrens.*] Putting aside various classes of the profession, whose convenience it is desirable to meet, who constitute chiefly the public that are interested in having access to the Courts?—There are a very large number of business men who are very much engaged, and they have to attend as jurymen and as witnesses, and, therefore, it is of very great importance to them to be able to go quickly to one place and get back quickly.

1760. By "the public" you mean, in fact, the jurymen and the witnesses?—The jurymen and the witnesses.

1761. I presume that the jurymen and the witnesses may be taken as coming indiscriminately from all quarters, and not preferentially from any one or two?—Yes, from all quarters of London, but, naturally, more come from those parts of London which are the most engaged in business, and therefore the most involved in litigation, necessarily.

1762. By that you mean to indicate what district; the City?—The City and the whole of the mercantile part of London; the south of London, as well, would come in on that ground.

1763. Did I understand you correctly as intimating that the course of business had led a portion of the profession to migrate generally towards Westminster?—I think that a nucleus has grown up round Westminster which is larger now than it was several years ago.

1764. What

1764. What class of the profession chiefly have their offices in Westminster?—Those engaged in railways and Parliamentary work, and to a limited extent in common law.

1765. Are there any of the great equity houses in Westminster?—No.

1766. Nor of the general common-law houses, I suppose?—Not what you call general common-law houses, but houses that have a great deal of common-law business. For instance, my own house has a great deal of common-law business; but if we were put under the disadvantage of the Carey-street site, we, no doubt, should lose part of that business, because we could not attend to it; the same staff that now attends to it would not be able to attend to it then.

1767. Do you think that the sitting of the common-law courts in Westminster Hall tends to bring common-law solicitors to Westminster?—I think that it has some tendency in that way.

1768. And yet what proportion of the common-law profession do you think reside at Westminster?—There is not a large number; but you must remember that the common-law business is only a small portion of the business of a solicitor. His locality is determined by the great mass of his business, which may be conveyancing or commercial matters; and he will not migrate simply because a little part of it may be more conveniently transacted at Westminster.

1769. Then I understand you to say that the sitting of the Courts at Westminster has not brought any great proportion of the common-law practitioners there?—No; but I may give an illustration in point, and that is, that the great firms in the City that have to do with Parliamentary business, have opened offices at Westminster within the last few years, and no doubt they use those offices for their common-law business when it is at Westminster.

1770. On the other hand, you are aware, though it is not within your own personal experience, that the tendency has been to drive the Equity Courts to the business dwellings of the equity practitioners?—Yes.

1771. As distinguished from mere proceedings at common law and equity, take a different class of solicitors, the large houses that have a great conveyancing business; where are they chiefly located?—I think that they live a great deal in Lincoln's Inn, because they are near the barristers there.

Mr. *R. D. Baxter.*

16 July 1869.

1772. What proportion of that class do you think live out of Lincoln's Inn?—I have no data for that, it is so difficult to say when a man is a conveyancing solicitor and when he is not. You can tell it in the case of the barristers, because it is put down in the red book, but it is not in the case of solicitors.

1773. It is within your knowledge that it is of immense advantage to have the two branches of the conveyancing profession contiguous, that is to say, that the equity draughtsman finds it convenient to be near the person who gives him business as a solicitor, and *vice versâ*?—Yes.

1774. I presume it is also within your cognisance that for the purposes of conveyancing and drafting of all kinds, and everything connected with titles, it is often a great advantage, if not always so, to be near the offices of the Courts for references of all kinds?—Yes.

1775. Therefore, for general purposes of concentration, it would be essential that the Courts and their offices should be not only contiguous, but, as far as possible, identified in site?—No doubt the nearer they are the better.

1776. And both should be identified with the business dwellings of the profession of all kinds?—Yes. But, perhaps, I may now show you the Law Society's plan, which is not altogether accurate in point of measurement; but I have had the barristers' dwellings coloured separately. The barristers are shown by those parts in green, and the solicitors are shown in dark building. Those are not entirely solicitors, but they are in the main solicitors. The barristers here, to the north of the Strand, are smaller in mass than those to the south of the Strand. The numbers are 1,100 to the south of the Strand, and only 800 in this block (*pointing to it*), so that the general convenience of the barristers is very strongly in favour of the Embankment site.

1777. Lord *John Manners.*] Are there no barristers in Gray's Inn?—Yes, that (*pointing to the plan*) should have been coloured; but I think it was mentioned that they are migrating down here (*pointing to the plan*). They are principally solicitors up there.

Mr. Henry Trelawny Boodle, called in; and Examined.

1778. *Chairman.*] I think you act as Solicitor and agent for Lord Westminster?—I do.

Mr. *H. T. Boodle.*

1779. Where is your place of business?—It is No. 53, Davies-street, Berkeley-square; the Oxford-street end of Davies-street.

1780. Then we may take you as a representative, as far as your profession is concerned, of that part which locates itself at the West End?—I have not communicated on this subject with any solicitors in that neighbourhood, so I am not in a condition to speak for them.

1781. We understand that you have formed an opinion as to the best site for these Law Courts?—I have.

1782. Will you kindly state what it is?—I am certainly in favour of the Thames Embankment rather than the Carey-street site, because I think that generally for the public, and for judges and jurors, it would be much more convenient. As to the convenience of the legal profession, I will speak presently. And also I take a great interest in the improvement of London, and I think that architecturally that would be the better site, though it would be presumptuous in me, perhaps, to express any opinion upon that point. But I think that for light and air it would be very much better for the Law Courts to be on the Embankment site; and certainly for the general public, and judges, jurors, and witnesses.

1783. You are rather looking at it probably in the point of view of those who come from Westminster?—Yes. I also think that as regards the profession, the subject may be divided in this way. The barristers connected with the Chancery Courts are naturally located in Lincoln's Inn and that district, and those connected with the common law courts are located in the Temple. I have not gone into the figures of their numbers,

Mr. *H. T. Boodle.*
16 July 1869.

but I should think that they are pretty equally divided. So far as the barristers are concerned, I should think that their numbers would be equally divided. No doubt, for the common law barristers it would be more convenieut to have the Embankment site, and for the Chancery barristers it would be more convenient to have the Carey-street site, because those sites are near their respective chambers. There are also other barristers called chamber counsel, who are not connected with the courts, and have nothing to do with the courts. In Lincoln's Inn these attend to conveyancing business, and in the Temple they are pleaders. They do not go into court at all, and so we may put them aside, I think, as not necessarily inconvenienced or convenienced either way. I think that, as far as the barristers are concerned, one site would be practically as convenient as the other, because the common law barristers are pretty well equal in number, I should think, to the Chancery barristers. Then, regarding the solicitors, I have not gone into the statistics as to the number of solicitors in London, but Mr. Baxter has already stated that he has gone into the number, and he finds that, excluding those who live in the Lincoln's Inn district (which, I take it, includes all Lincoln's Inn, Lincoln's Inn-fields, and Bedford-row, and the rest of the district called the legal district, as defined by the Council of the Incorporated Law Society), and for whom Carey-street would be the most convenient; the others are a majority to the extent of 300 or 400, I think, in his opinion. I was not aware that the solicitors in the City and the West End and Westminster, were so numerous, but I have no doubt that he is accurate, because he says that he has carefully studied the Law List on the subject.

1784. Upon that subject you have no knowledge of your own?—I have no knowledge of my own as to the numbers.

1785. Mr. *Layard.*] I understand that when the Incorporated Law Society sent round a circular calling upon the profession to oppose the Embankment scheme, you entered a protest against that circular?—The council, through the president, wrote me a letter, of which I have a copy here, a lithograph letter, which is signed by Mr. Bolton, the then president of the society. He says at the end, "I beg to suggest to you, as one who takes an interest in this matter, that you should at once communicate with all those Members of the House of Commons with whom you have personal influence, urging them to support Sir Roundell Palmer in his opposition to the Bill." I rather objected to that letter, and it assumed that the members of the society to whom it was sent took interest in the matter, notwithstanding which the council had gone to the extent of attending as a deputation to the Government, and presenting a memorial without having called a meeting to get authority from the members to do anything of the kind. I thought it a wrong course for them to have pursued. Therefore I wrote this reply on 25th May: "New Law Courts. Dear sir,—I have, within the last two or three days, received your circular letter, dated the 12th May, suggesting to me to 'communicate with all those Members of the House of Commons with whom I have personal influence, urging them to support Sir Roundell Palmer in his opposition to the Bill,' introduced by the First Commissioner of Works for a change of site from Carey-street to the Thames Embankment. I regret that I must decline to accede to your request, as my views do not coincide with those of the council of the Incorporated Law Society as to the site. I take this opportunity (as a member of the society) of mentioning that it appears to me that, in a question of national importance, such as this, the council of the society would have done well to have called a general meeting of members to discuss the subject before they took the active steps which they have taken to show their preference on behalf of the society, for the Carey-street site: long ago, the council attended as a deputation upon the Government, and presented a memorial against the Embankment site, without any consultation with the members generally, and the only communication which they make with the members is the issue of the circular which I have just received from you, and which assumes that the members to whom it is addressed take their opinions from the council. By the course which they have adopted, the council render it necessary for members of the society who differ from them to take independent action in opposition to the action of the council." The secretary of the society acknowledged the receipt of my letter.

1786. Lord *John Manners.*] How long, may I ask, have you been a member of the Law Society?—I think I was admitted a member of the Law Society a year or two after I became a solicitor. I was admitted a solicitor in 1856. I have been nearly 13 years a solicitor.

1787. In that letter you complain that the Law Society took that course of action without calling their members together to deliberate upon it?—Yes, just so. I thought that the council were elected for general purposes, but that when a question of national importance arose, they ought not to have taken action without specially consulting their constituents.

1788. Is there an annual meeting of the society?—Yes, it happens to-day.

1789. Have you ever attended one?—Yes.

1790. Did you attend the last one?—No, I think not.

1791. Or the one before it?—I forget.

1792. Are you aware that at the annual meeting this question of the site has been formally discussed?—I never heard of it being discussed; not the Embankment site.

1793. Did you read the report of last year?—I may have read it cursorily.

1794. Are you aware that in that report there is a distinct reference to the revival of the scheme for the Law Courts?—I was not aware of it then.

1795. At any of the meetings that you attended did you ever hear a dissentient voice to placing the courts on the Carey-street site?—I do not think that the subject has been discussed at any meeting I have been present at.

1796. Were you present at a special general meeting of the society in last February?—I think not.

1797. Then you are not able to tell the Committee what occurred at the special general meeting on the subject of the site of the Law Courts?—I am not. My office is a considerable distance from the Law Institution, and I do not always attend. The meeting in February was not convened as to the Law Courts, neither has there been any meeting called on that subject, I believe.

1798. Mr.

1798. Mr. *Goldney.*] Have you any practice in courts at all?—I have. I have nearly always something going on, both in the courts of common law and in the Court of Chancery.

1799. How many clerks of yours attend those courts daily?—My clerks do not attend daily. I have one clerk who has something to do pretty nearly every day, either in the courts or offices of common law or in those of Chancery; also several clerks engaged in conveyancing business.

1800. And that is the extent of your business in court?—Yes, I have not very much court business.

1801. But you know that there are some offices which keep a great number of clerks, who attend to these matters?—Yes.

1802. Do you know any office that keeps 40 clerks, who attend entirely to common law and Chancery work?—I do not know of any, but I dare say there are agency houses that keep that number.

1803. You say that the matter that influences your opinion is the facility of access for jurymen and witnesses?—I do not put it quite in that light. I say that, independently of architectural advantages, and light and air, the Embankment site would be the most convenient for the general public, and for judges, jurors, and witnesses; and that, so far as the barristers are concerned, I think the convenience of access is about equally divided between the two sites. I may be wrong in saying that the common-law barristers are equal to the Chancery barristers in number; but assuming that to be so, I think that the convenience of site for the bar is equally divided. Then, as regards the other professional men, I think that Mr. Baxter's statement is probably correct.

1804. Do you think that the public or the profession, taking the public as contradistinguished from the profession, are to be considered first on the question of the site?—I do not agree with Mr. Baxter, that the public (laymen, not lawyers) ought to be considered first, before the profession; but I do not think that the interests even of the profession ought to be so far considered as to over-ride any very great advantages to the public, if, by a little sacrifice on the part of the profession, the public interest could be better consulted.

1805. What part of the public is it that you are interested about, or that ought to be considered on the question of site?—Certainly the judges ought to be considered, and the jurymen and witnesses; and I think that in a country like this it is very important that the public should have free access to the courts, and not be excluded by an inconvenient approach, or otherwise.

1806. Do not you think that the interests of the profession ought to be considered, as representing the public?—I think the interests of the profession ought to be considered certainly, but not so far as to shut out the interests of the public.

1807. Is it not the interest of the public to have their business transacted near where their professional advisers live?—To a certain extent it is.

1808. Is it not the interest of the public and not the professional men themselves?—I think that the professional charges would be the same.

1809. What is your view then of the object of the concentration of the courts?—I think that it would be a very great advantage to concentrate the courts; because it is very inconvenient for a man for common-law business to have to go to one place, and for Chancery business to another place at a distance.

1810. Do you think that it is the convenience or the inconvenience of the professional man that has necessitated the concentration of the courts?—Yes, I think so.

1811. Solely?—Perhaps not solely; there have been Acts of Parliament passed with a view to amalgamating law and equity, and there is a great tendency to that in our jurisprudence.

1812. Did it ever enter into your head that it was the facility of business that was the object?—No doubt that was a primary object.

1813. And accelerating the decision of causes?—No doubt.

1814. And would that be the effect of the courts being concentrated?—I do not think that that would necessarily be the effect, under our present system, so much as might be expected, because the same sets of counsel and managing clerks who attend to a common-law case do not generally attend to a Chancery case.

1815. But have you not ever considered that a barrister would be able to carry on his business with much greater facility if the courts were near his chambers instead of one court being at Westminster and the other at Lincoln's Inn?—So far as the court he attends is concerned, it would be so, no doubt.

1816. He does not see his clients when he is at Westminster?—No, not generally.

1817. And if he is an equity barrister he does not withdraw his attendance when sitting in court; he has to do it at chambers?—Yes.

1818. Have you ever read any evidence as regards the object of these courts being concentrated?—I think I have read of it partly in the Report of the Jurisprudence Commission, and I have seen public discussions on the subject.

1819. But you do not now think that the convenience of professional men has brought about that?—I think that the primary object of the concentration of the courts has been the convenience of the profession, and the facility of business.

1820. So far as regards the convenience of the offices, do you know how many offices there are attached to the courts?—The answer to this depends upon what you mean by offices.

1821. I mean in the proposed concentration of the courts, the offices are to be attached to the courts; do you know that there are 50 offices connected with the courts?—I did not know that there were 50.

1822. Forty, say; do you know that?—It would require considerable time to calculate the number.

1823. Whatever number of offices there are there are no jurymen or witnesses to go there?—Not to the offices.

1824. The clerks or solicitors go there?—Yes.

1825. Is it a convenience to the public that those offices should be near the solicitor's professional residences?—Yes.

1826. It saves a great quantity of time?—Yes.

1827. And the time saved to the solicitor the client gets the advantage of?—I am not certain of that; I do not know that the professional charges would be altered.

1828. Is it only as a question of professional charges that you put the advantage to the client;

Mr. *H. T. Boodle.*

16 July 1869.

is it not a question of delay also?—I do not know that there is any complaint of the delay of business now; there used to be.

1829. Is it not the object of the client to get the ultimate decree in the suit as soon as possible?—No doubt.

1830. Has he any interest in the meantime?—No; but I think that the delay in court business is caused, if there be a delay, by there not being perhaps a sufficient number of judges to take the cases, and not by the distances of the solicitor's offices from the courts.

1831. Have you ever been at the Examiner's offices in Chancery?—I have.

1832. It is necessary that counsel, on each side, or that solicitors, on each side, should attend?—Yes.

1833. Have you ever known appointments there postponed because the solicitor, or the counsel, were engaged in court?—No doubt that sometimes happens.

1834. Have you ever known, on account of that, causes to be thrown over the vacation?—No, but I could easily imagine that it might be so.

1835. Have you any idea of what the money in litigation is, taking the Court of Chancery alone?—No.

1836. Would it amount to 400,000,000 *l.*?—I really cannot say.

1837. Would that be beyond your idea?—I cannot form any opinion on that point.

1838. Do you think this, that the facility of Chancery causes being determined a month earlier, would amount as a question of interest to an appreciable sum?—No doubt it is a very great object to get causes through as quickly as possible.

1839. Do not you think that the concentration of the offices, with the courts, would tend to that?—Yes; I think that the more they are concentrated the better business would be got through.

1840. Would it be of any benefit to concentrate them near where the professional men reside?—It would be a benefit no doubt. It would facilitate my own business if the courts and offices were just outside my office.

1841. And if it would facilitate your business to have the courts just outside your office, it would facilitate the business of the men in Lincoln's Inn to have the courts just outside their offices?—No doubt.

1842. Is there any other mass of solicitors whose business would be facilitated so much as those who live in the neighbourhood of Lincoln's Inn?—There is no one area of London, of the same size, where so many lawyers are congregated as in Lincoln's Inn, Lincoln's Inn-fields, and Bedford-row.

1843. You say that the charges would be the same, but do you not think that the benefit is not to the solicitors, but to the public whom they represent?—The benefit of concentration would be to the solicitors and to the public also.

1844. Therefore if the courts and offices are brought near them, the public get the benefit?—If you could bring the courts and offices so absolutely near to where all the solicitors are congregated as that they can go in at any moment to transact their business, of course it would make a considerable difference to the public in the transaction of business.

1845. It might get the causes terminated quicker?—No doubt.

1846. And that is the advantage that the public seek?—To get their causes expeditiously settled.

1847. There is no end that a client has, except the ultimate result when he is to get his money?—That is so.

1848. In your business is money often paid into court which you often want to get out?—I have chiefly guardianship suits, and suits relating to management of property, and so on.

1849. Where you want to get money out?—No, very seldom; there are cases of that kind.

1850. Then your business is more of an amicable business?—My business is such court business as arises out of conveyancing chiefly; conveyancing being the chief part of our business.

1851. Do not you ever pay money into court?—Yes, sometimes.

1852. And apply to get it out afterwards?—Yes.

1853. Would not the fact of having the courts concentrated accelerate that?—Yes.

Mr. Henry Warwick Cole, Q.C., called in; and Examined.

Mr. *H. W. Cole*, Q.C.

1854. *Chairman.*] You are a Queen's Counsel and a Chancery Barrister?—Yes.

1855. And your offices are in the Temple?—I am a Bencher of the Inner Temple, but my chambers are in Lincoln's Inn.

1856. Have you formed an opinion upon the question of the best site for the New Courts?—Yes, I have considered the question, as I think most gentlemen of the legal profession have.

1857. And you have come to a decided opinion upon it?—I have come to the opinion that, upon the whole, I prefer the Embankment site; though I should be perfectly satisfied with the Serle-street site, provided that the country is willing to go to the expenditure necessary for the construction of proper approaches.

1858. But assuming that the question is not between the enlarged Carey-street site, but between the more limited plan which we understand to be at present before us and the Embankment site, you think that the Embankment site is preferable?—In my opinion the Embankment site is preferable to the public; but it would be inconvenient, in some respects, to a portion of the legal profession.

1859. I suppose that portion is those living north of the Strand, and especially about Lincoln's Inn?—Yes, I would divide the legal profession, in relation to this topic, into the solicitors practising in the courts and the bar. I will take first the case of the solicitors. A very great outcry, if I may use so strong an expression, has been made as to the injury that would result to the solicitors if the courts of equity and the courts of common law, instead of being brought under one roof on the Serle-street site, should be brought under one roof on the Embankment site; and it said, with great truth, that a very large proportion of the solicitors who practice in the courts of law and equity live in offices immediately adjacent to Lincoln's Inn. They live in Lincoln's Inn-fields, in Bedford-row, in John-street,

Mr. *H. W. Cole*, Q.C.

16 July 1869.

street, Bedford-row, and other places; and it is said that it would be a great injury to them if the Embankment site were selected. Well, I have considered that subject, and I think that the representation so made is very much exaggerated, and if the Committee wish it, I will explain why. In the first place I believe that the Embankment site would be a preferable site to all solicitors who live in the City of London, and very large and important firms of solicitors live in the City of London; and although the City of London is at a considerable distance from the courts of equity in Lincoln's Inn, we find that when their business is on there they attend with as much regularity as the solicitors who have offices in Lincoln's Inn-fields, or within the limits of Lincoln's Inn itself. The City solicitors would have easy access by steamboats, by the Metropolitan Railway, and by the Embankment road, which will go from the Mansion House, as I understand, to the Embankment site. They would thus have superior facilities in attending court, if the courts were on the Embankment site, than they would have if the courts were put on the Serle-street site, because, practically, their only mode of arriving at the courts on the Serle-street site would be along Fleet-street and through the Strand. There is another mode by which they might go, which is along Holborn, which would bring them to the north; but then, as the Committee are quite aware, there is no good communication at present from Holborn into Lincoln's Inn-fields. Even then it would be a round-about way to go by Holborn, and it would be necessary to incur expense in opening a communication into Lincoln's Inn-fields, which would be attended afterwards with this great disadvantage, that ultimately all the traffic going to the courts, and coming from them, would have to pass through Serle-street, which is a very narrow street; it would become like a narrow neck to a large bottle. Then I say that the West-end solicitors again would have very superior facilities in attending the courts if the courts were placed on the Embankment. A great many solicitors reside in Westminster, immediately in connection with the Houses of Parliament, that neighbourhood being convenient for them, in order to attend Committees of both Houses of Parliament, and to attend to Parliamentary business. Then, with respect to the great mass, and I should say perhaps two-thirds of the solicitors in London, it might and would, I think, be more convenient to them to have the New Courts on the Serle-street site, provided that they have no power to shift their quarters. But the solicitors have a power of shifting their quarters which the Bar does not possess. The barristers, principally and almost exclusively, have their chambers within the precints of an Inn of Court. Some of them have chambers in Chancery-lane; but it is not considered "the thing" to have chambers in Chancery-lane, or to have chambers out of one of the Inns of Court; and therefore, practically, there is an obstacle to the Bar shifting their quarters from one place that is not convenient to another that is. But with solicitors it is not so. I should say that out of 50 solicitors, perhaps there are not 10 on the average who are the owners of the houses which they inhabit for offices. They are yearly tenants for the most part, and congregate in the neighbourhood of Lincoln's Inn-fields, Bedford-row, John-street, and elsewhere, in that immediate district, because it is convenient to them to congregate there; but if the Law Courts were brought upon the Thames Embankment, they would shift their quarters. The Committee will take notice of the fact (which may be seen on the plan), that there are four streets at least which lead from the Strand down to the proposed Embankment site, Surrey-street, Arundel-street, Norfolk-street, and Essex-street, and in the first three of those streets at present very few solicitors have their offices. If the Committee were to refer to the "Court Guide," which gives an account of who it is that lives in every house in every one of those streets, they would be astonished to find how very few solicitors have their offices there at all The houses in those streets are very much occupied, I observe, by what are called small private hotels. People from the country who do not want to spend much money, are accustomed to go to one of the small hotels in those streets. But if it be of real importance to the solicitors in London that they should be in proximity to the courts, they, instead of hiring offices as they do now in Lincoln's Inn, Bedford-row, and that neighbourhood, will shift their quarters, and hire offices in some one of the four streets that I have mentioned. Therefore I consider that, in point of fact, the proposed Embankment site is not one that would inflict injury upon the solicitors as a body of practitioners. It would, however, do so upon some of the solicitors who have purchased the premises in which they conduct their business, for they would find those premises less valuable. But, I believe that, even in their case, with the exception of a few great agency offices, the importance of living in close proximity to the Courts of Justice, that is to say, of being within two or three minutes' walk, is not a matter of paramount moment; that the greater part of them could, without inconvenience at all, remain where they are, but that some of the great agency offices would find it advantageous to shift their quarters to Norfolk-street, and I believe that they would do so. But with respect to the Bar it is different. I have explained to the Committee that the Bar cannot shift their quarters in the same way. They must have their chambers either in the Temple, or Lincoln's Inn, or Gray's Inn. I am not aware, however, that any practising barrister at all has chambers in Gray's Inn, because Holborn intervenes, and this makes Gray's Inn inconvenient for the transaction of court business; but barristers who practice in court have their chambers principally in Lincoln's Inn or in the Temple.

1860. Mr. *Layard.*] From what I understand you to have said, in your opinion, if chambers for solicitors were built upon the Carey-street site which has been cleared, those chambers would be speedily occupied by the profession?—If they were not too dear.

1861. Mr. *Mowbray.*] Do you think that the Carey-street, site would be equally convenient, if accesses were made to it?—I think that the Carey-street site would be convenient in point of situation, supposing proper approaches were made; unquestionably it would be more convenient to gentlemen who have chambers in Lincoln's Inn than if the courts were put on the Thames Embankment.

1862. But you think that it would be necessary in addition to the ground already taken, to make accesses from the Strand on the west, and Bell-yard on the east?—That is the result of my experience: I have for 30 years been accustomed

Mr. *H. W. Cole*, Q.C.

16 July 1869.

to go every day, except when the courts were not sitting, from my house in Chester-square to Lincoln's Inn; I have met continually with very great difficulty in going to and fro, on account of the very bad access there is to Lincoln's Inn and the neighbourhood of Lincoln's Inn at the present time from the west. If a person resides north of Oxford-street, he is not subjected to that inconvenience; but if he resides in the south of London, or in the south-west of London, in point of fact, in any point to the west that is south of Oxford-street, then he is exposed to very great difficulty indeed in going to Lincoln's Inn, and would be exposed to great difficulty in going to the courts on the Serle-street site, unless he should take the one only convenient course open to him, which would be the Strand; but this would throw all the traffic into the Strand. I have experienced very great obstacles in my progress to and from Lincoln's Inn (my chambers are in Stone Buildings), by reason of the existence of Covent Garden Market. Covent Garden Market in my recollection, I am speaking of 30 years ago, was not formerly as great a nuisance as it is now. London, since the introduction of railways, has grown very much in population; and the quantity of vegetables brought to Covent Garden Market has very much increased. Formerly, I could pretty well be sure of being able to get through in a cab to Lincoln's Inn, and the cabmen always desire, if they can, to take you by the shortest way, which is through Covent Garden Market; but of late the increase of waggons and carts has been very great, indeed I may say enormous, and they now, on market days, overflow beyond the limits of Covent Garden Market into all the adjacent streets; and I have often been obstructed very much even in Long Acre, where these great waggons are obliged to stand. I consider that that is an increasing evil; and when I remember how it has increased during the last 15 years, and that the rate of increase is still going on, I cannot help thinking that in another 15 years from this time, something must be done with respect to Covent Garden Market, if the Law Courts are to be on the Carey-street site.

1863. If you come from the north it will be necessary to widen Serle-street?—If you came from the north it would be necessary to get convenient access to Serle-street; but how, by the existing narrow lanes, you are to get to Serle-street, without great inconvenience, I do not understand.

1864. You have heard that it is in contemplation to open the Turnstile?—That would do for persons who come by Holborn, but would not be of the slightest advantage to persons coming from the south, or the west, or the south-west.

1865. And if the Carey-street site were adapted you think that it would be necessary to incur the additional expense of making approaches from the west, from the east, and from the north?—Unless the public will be content to have no practicable mode of getting to the new buildings, except by the Strand. I think that all the other modes of access are inconvenient. The streets are narrow, filthy, and disagreeable in every respect; and it would be necessary to incur the expense of making a convenient access to Lincoln's Inn Fields, not only from Great Turnstile, but in some way towards the west and the north-west of Lincoln's Inn Fields.

1866. Do you ever cross Clare Market in your way to your chambers?—I have often crossed Clare Market, and I think that the existence of Clare Market is an additional evil; it is filthy and disagreeable. I consider that Covent Garden Market and Clare Market are two decided objections to the Serle-street site.

1867. You think that it would be necessary to clear Clare Market also?—I do not know that it would be necessary, for we lawyers are capable of great endurance; but I think that it would be highly desirable.

1868. Mr. *Bentinck.*] Are you a bencher of Lincoln's Inn?—No, I am a bencher of the Inner Temple. And perhaps, with reference to that, you will allow me to say that the benchers of the Temple have not, in my judgment, any pecuniary interest in having the Embankment site selected. I made inquiry of our sub-treasurer, who assured me that we had not a single set of chambers in the Inner Temple unlet, and that we have between fifty and a hundred names down as applicants for chambers. Consequently, as we do not wish to raise our rents upon our own members, and we let to no other persons, our income would not be increased by the superior advantages given to the Temple if the Embankment site should be selected.

1869. Mr. *Goldney.*] You say that your belief is, that the City solicitors would be benefited by coming to the Embankment site?—I think so, and I have been told so by some of the leading gentlemen who are members of firms carrying on business in the City.

1870. Have you been told so by any other members than Messrs. Freshfield?—I have been told so by one of the Messrs. Freshfield, and I think by other City solicitors.

1871. What do you think of the Moorgate-street solicitors; supposing that it were at Carey-street, how would they travel?—I suppose that they would endeavour to avoid, if possible, Fleet-street, and that they would take the Holborn route.

1872. Is there any spot in the City where more solicitors are congregated together than Moorgate-street, that you know of?—I am not prepared to say.

1873. You think that, as regards Howard-street, people come to the small hotels there who do not want to spend much money?—I suppose they do not wish to spend much money. I should imagine that those hotels, though I have never staid in them, are not so expensive as the Westminster Palace Hotel, and the Charing Cross Hotel.

1874. Do you think that you would remedy that if you brought the lawyers there?—I think that lawyers would pay a greater rent.

1875. And compel the people who did not want to pay more money to go somewhere else?—It would leave them to go where they liked.

1876. You say that, as regards the people in large practice, they want to be near the courts; but for solicitors who have not much practice, you do not think that it is essential?—Not of much importance. Whether a solicitor has to walk 10 minutes further or not makes in general but little difference.

1877. Supposing that these courts were placed on the Carey-street site, and you were coming from Chester-square, how should you go there?—Along the Strand as I do now; I go now always along the Strand, and drive up Chancery-lane.

1878. But you would not want to drive up Chancery-lane

Chancery-lane if the courts were in Carey-street?—No.

1879. Supposing that the courts were put upon the Embankment site, how would you go from Chester-square then?—I think that I should very likely go along the Embankment road. I should go along the Mall, and along the Embankment road.

1880. Drive?—Drive or ride.

1881. Where is the Embankment road?—As I understand, there would be a road 100 feet wide along the Embankment.

1882. It is not there now?—No, nor are the courts.

1883. Supposing that the Embankment road was not there, you would still go the Strand way?—Yes.

1884. Is your objection to the Carey-street site based upon the disadvantage of the approaches?—I think that that is the principal objection. But there are other reasons; the putting a large and important building in a place where it cannot be seen is also an objection.

1885. Why cannot barristers live in Chancery-lane?—It is not considered the thing. Some very highly respectable gentlemen do live there, as they cannot get chambers in Lincoln's Inn.

1886. When the courts were built, do you not think that it would alter that sort of conventional feeling?—I do not think so.

1887. Then, wherever the courts are, you think that the barristers must remain where they are?—I think that if a gentleman takes chambers out of one of the Inns of Court, he puts himself, by his voluntary act, into a secondary rank.

1888. Is it your opinion that the chambers must still remain in Lincoln's Inn if the courts are built on the Embankment site?—I think so.

1889. And that it is only a certain number of solicitors who could migrate there?—I do not say that. I think those who could not, would be the exception. Those who would not, are the owners of the property where they conduct their business.

1890. Why should you say that Gray's Inn has no practising barristers, on account of Holborn intervening?—I recollect in my experience that the Court of Review used to sit in Gray's Inn. I have had to go, in my wig and gown, across Holborn, and struggle through the omnibuses and cabs, to arrive at Gray's Inn; and I found it so inconvenient that I am sure no one would voluntarily incur such a journey.

1891. The barristers living north of the Strand would find it inconvenient to have to cross to the Embankment site?—I think that a great inconvenience would be felt by barristers in Lincoln's Inn, if they were left to struggle to find their way across the Strand.

1892. Then, as regards the convenience of the barristers in Lincoln's Inn, your opinion is in favour of the Carey-street site?—Just so; and I think that the opinion of the Bar, particularly considering that they cannot shift their quarters, should be regarded by the Committee. When Parliament gave its consent to the courts being built on the Serle-street site, I took some interest in the subway and bridge that were proposed, which would have enabled gentlemen to go from the Temple in their wigs and gowns without inconvenience; and I think that something of that kind should be done for the convenience of the Bar on the north of the Strand.

1893. Did you take any interest in the matter when the Lincoln's-inn Fields site was proposed?—No.

Mr. *H. W. Cole*, Q.C.

16 July 1869.

1894. But you know that the Carey-street site was a compromise with those who lived in the Temple, for the Lincoln's Inn site?—No, I do not know that. I know that when the Carey-street site was settled on, the mode of getting there became a subject of considerable anxiety to persons connected with the Temple, and although I never myself had chambers in the Temple, yet being a Bencher of the Inner Temple, I thought it my duty to endeavour to see that whatever convenience was possible should be afforded to the Temple by the new scheme, and Parliament seem to have given their sanction to that principle.

1895. Leaving the courts for a moment, what do you say with regard to the offices attached to the courts; how far would the Carey-street site be beneficial to the solicitors living there?—I think that it is of great convenience to the solicitors that the offices and the courts should be brought into close proximity one with another, and that the doing so would be necessarily a great saving of time to them. I think it would be a great boon to the profession, whether the new Law Courts are put on the Serle-street site or on the Embankment site, that the Law Courts with the offices should be brought together, and that the waste of time, which now takes place from their being in different places, should continue no longer.

1896. When you say "A boon to the profession" you mean a boon to the public, I suppose?—I think that by its being a boon to the profession it would be a boon to the public also.

1897. How would it be a boon to the profession as contra-distinguished from the public?—Take the case of a professional man, he has to go himself or send his clerk to several offices and courts. If they are all together he can do it in less time than if they are scattered over several parts of London.

1898. It would materially facilitate the termination of suits, you think?—I do not think that it would make much difference in that respect.

1899. Not if a counsel could be called out of court suddenly to attend before a judge at chambers when his cause was not actually on in court?—There would be some additional convenience in that, but I do not think that it would have much practical effect.

1900. Supposing your chambers to continue in Stone Buildings and the courts to be in the Temple, and that you have a cause in the paper, would not that necessitate your remaining in the court?—Yes; I know the inconvenience of it; I have lost many a valuable hour of my time when our courts of equity sat at Westminster, by remaining at Westminster when I could have been more usefully employed in chambers.

1901. If you had been more usefully employed you would have been able to facilitate business which you could not, as it was, attend to?—Yes.

1902. As regards Stone Buildings, would not the distance be almost equally convenient if the courts were at Westminster, as compared with the Embankment site?—No; in the first place the distance is far less, There are gentlemen who practice in the Rolls Court (at the lower end of Chancery-lane), and some of the gentlemen who have the largest practice in that court have their

Mr. *H. W. Cole*, Q.C. 16 July 1869.

chambers in Stone Buildings; one in particular, Mr. Jessel, has his chambers there, and he has to walk in his wig and gown from Stone Buildings to the Rolls Court, and has to cross Chancery-lane among the cabs and omnibuses. The inconvenience of that is very great; and I recollect that when I practised in the Rolls Court I, on one occasion, on a wet day, slipped and fell amongst the omnibuses and cabs in full bar costume, and I have never forgotten the magnanimity of the omnibus driver, who, having a lawyer at such great disadvantage, pulled up his horses instead of passing over him.

1903. Would not the distance to the Embankment site be double that from Stone Buildings to the Rolls Court?—Not double, but greater; and if I might say so, I disapprove of one part of Mr. Street's plan that I have seen. It seems to me that there is one blot which is sure to be seen in it, and it is this: I think that every inch of the site that is in close proximity to the Temple and Lincoln's Inn is, for the purposes of the courts, of far greater value than those portions of the site which are more distant, whereas for offices it is unimportant whether they are near to the Inns of Court or distant, so long as they are on the site at all. It seems to me, therefore, that having regard to the convenience of business, the offices should have been put to the west, and the courts brought as far as possible to the east, because at the east they would be closer to the Temple and closer to Lincoln's Inn.

1904. It must be considerably more than double the distance to the Embankment site that it is to the Rolls Court from Stone Buildings?—If you brought the Law Courts as near as possible to the Inns of Court, and put the Law Offices as near as possible to Somerset House, you would greatly remedy that inconvenience; and then, if acting on the principle which I think received the sanction of the Legislature on a former occasion, you conducted a covered arcade of glass and iron, which might be made at a small expense, from Lincoln's Inn to the corner of Essex-street or to the corner of the Law Courts, the practical inconvenience would be very much alleviated.

1905. But as the plans are now drawn, would not the distance, having to cross the Strand, be considerably greater from your chambers than it is now to the Rolls Court?—It would be greater; but I am not able to estimate it with exactness.

1906. Would a gentleman living there then be able practically to be longer at his chambers than if the Court were at Westminster?—I think so; I do not think that it would take him more than a ten minutes' walk from Stone Buildings to the courts on the Embankment site.

1907. How long would it take a clerk from the court to go to you in Stone Buildings and fetch you, and then for you to come from Stone Buildings, and to cross the Strand to the court?—It would depend upon the route that we should have to take; if a convenient covered way of the kind that I have mentioned were conducted across the Serle-street site to Lincoln's Inn, that would lessen the time required.

1908. I leave out the imaginary covered way, and take the existing state of things, supposing that the courts were built upon the Embankment site as contemplated, how long would it take, if a cause were suddenly called on in which you were engaged, for the clerk to go to you from the court to Stone Buildings and fetch you, and then for you to come back from Stone Buildings and to cross the Strand?—I should say about a quarter of an hour.

1909. And would the Court wait for you a quarter of an hour?—No, nor five minutes.

1910. Then, would it not be practically necessary for you to attend at the court, in the same way as at Westminster?—No; but I think that I should have to go down earlier, and sometimes run a little more risk.

1911. Still, then, you would have to run a risk?—Yes.

1912. Would that risk be obviated if the courts were on the Carey-street site?—I think that for the practitioners in Lincoln's Inn it would be lessened.

Mr. Samuel Boxill Robertson, called in; and Examined.

Mr. *S. B. Robertson.*

1913. *Chairman.*] You are a Solicitor?—Yes.

1914. You have prepared, I think, an analysis of the official "Law List?"—I have.

1915. Explaining in what districts barristers and solicitors have their chambers?—Yes.

1916. Will you put it in?—Yes (*handing it in,* vide *Appendix*).

1917. Mr. *Layard.*] According to this list, to the north of Holborn, there are residing 76 barristers having chambers and 990 solicitors, which would make a total of 1,066 professional men?—Yes, including the outlying districts. The numbers are 599 actually north of Holborn, and 467 in outlying districts.

1918. Between Holborn and the Strand, there are 834 barristers and 520 solicitors, making a total of 1,354?—Yes.

1919. To the south of the Strand, south-west of the Strand, and south-east of the Strand, and in the City, there are altogether 1,135 barristers and 1,939 solicitors, giving a total of 3,074?—Yes.

1920. What, then, is the majority of the solicitors living to the south, south-west, and south-east of the Strand, and in the City?—In the north of Holborn, and between Holborn and the Strand, there are 1,084 solicitors, as against 1,939 south of the Strand, in Westminster, and in the heart of the City. The majority of solicitors topographically favourable to the Embankment is 855.

1921. Then, in your opinion, there are more barristers and solicitors whose convenience would be consulted by the Embankment site, than there are barristers and solicitors whose convenience would be consulted by the Carey-street site?—Very many more.

1922. And these tables that you have drawn up tend to prove that?—Yes.

1923. Have you had any opportunity of communicating with any solicitors in Lincoln's Inn and Raymond Buildings?—I have.

1924. Do you find that any solicitors in Lincoln's Inn and Raymond Buildings are in favour of the Thames Embankment site?—Yes.

1925. Can you mention any of them?—There is Mr. Du Cane in Gray's Inn.

1926. Mr. *Bentinck.*] I understood you to say just now, that there are more barristers living to the

the south of the Strand than to the north of the Strand, and that their convenience would be consulted by this arrangement?—Yes.

1927. Are you not aware that comparatively few of these barristers who live in the Temple have any London practice?—No, I am not aware of that.

1928. Are you not aware that the number of common law barristers who have London practice is very limited; do you not know that the greater number of common law barristers practise as common law barristers in the country, on circuit?—They have to go on circuit sometimes.

1929. And that a very small proportion of the common law barristers in London have London practice?—I am not aware of that.

1930. But are you not aware that the number of common law barristers who are in extensive practice in London, is comparatively very small?—I cannot say.

1931. But you know that the business of all Chancery barristers is in London?—Quite so.

1932. And the vast proportion of the Chancery barristers live to the north of the Strand?—Quite so.

1933. And consequently, the majority of barristers who practise in London, live to the north of the Strand?—I cannot say.

1934. As a solicitor, I ask you whether it is not your opinion that the greater number of barristers, taking the two bars together, who have practice in London live to the north of the Strand; I ask you as a solicitor practising in London, and not looking to your table?—I would rather refer you to the table.

1935. As a solicitor practising in London, you cannot answer me that question?—I have no knowledge of that without referring to the table.

1936. Mr. *Goldney.*] How did you get this information in the table?—By taking the "Law List" to pieces, and picking the names out.

1937. You have no other information excepting the "Law List"?—No; none.

1938. You know nothing of the people entered there, whether they are practising or not?—No. But I have assumed that all those who have addresses in the legal districts are practising, and I have only counted such.

1939. You know nothing of them except that they are put down as barristers or solicitors?—No; I have followed the official list.

1940. Did you see any of those people while you were about it?—No.

1941. How many men on the Northern Circuit are practising in London, do you suppose?—I have no idea.

1942. Do you think that a third are?—I cannot say.

1943. Do you suppose that a fourth part are?—I should think so.

1944. Why do you think so?—That is simply my opinion.

1945. You have no knowledge at all of what number of barristers are merely interested in this question as barristers, and who are practising?—No, except so far as their addresses in the "Law List" guide me.

1946. Do you know how the "Law List" is made up?—No; I know nothing of that.

1947. You have merely taken this book as a piece of information, and mechanically taken out the names?—Yes.

1948. Do you know of solicitors stated here, how many are agency solicitors, and how many are not?—I am taking that out now; it is not finished yet.

1949. Are you a member of the Law Institution?—Yes.

1950. Are you going to attend the meeting there to-day?—I shall not be able.

1951. Did you know that there was a meeting to-day on this question?—I knew there was a meeting, not on this question, but the annual general meeting.

1952. Did you know that they were unanimous in favour of the Carey-street site?—No.

1953. What part do you reside in?—In the Temple.

1954. Has your business always been in the Temple?—Not always; I was once in Bedford-row.

1955. The First Commissioner asked you what solicitor you knew in Raymond Buildings favourable to this site; is there any other person in Gray's Inn who has given his confidence to you?—No.

1956. Then you have no other person in Gray's Inn or Raymond Buildings, but Mr. Du Cane that you can mention?—Mr. Du Cane did not give me his confidence; it was in casual conversation.

1957. Have you had any conversation with anyone who authorised you to come here, but Mr. Du Cane?—No, certainly not; I am not authorised by anyone.

1958. Then, Mr. Du Cane has not authorised you to say that he prefers the Embankment site?—I am not authorised to say that for anybody.

1959. Not even for him?—No, certainly not.

1960. Did you sign any petition at all?—Yes.

1961. Which one?—In favour of the Embankment site.

1962. Did you attend on a deputation before the Chancellor of the Exchequer?—I did.

1963. It would be of greater convenience to you in the Temple to have the building on the Embankment site, I suppose?—Certainly.

1964. Is your business principally common law or Chancery?—It is chiefly conveyancing with common law and equity, arising out of conveyancing.

1965. Have you many clerks attending at the offices?—No.

1966. Have you two or three attending daily?—No.

1967. Have you one attending daily?—Yes.

1968. Attending daily at the offices or at the offices and the courts?—At the offices, and the courts, too.

1969. Is it inconvenient to you or to him the offices being separated as they are now?—Certainly.

1970. Supposing that they were concentrated, would your clerk be able to attend every other day, and would he be more at chambers?—I should think it possible; at any rate it would be a great convenience.

1971. How much inconvenience do you think it would be to you in the Temple, if the offices were concentrated in Carey-street?—It would not be so convenient on the whole; but I do not know that it would make much difference to me.

1972. This paper that you think of completing differs very much from Mr. Baxter's, I think?—No; I think it is very similar to his.

1973. Did Mr. Baxter take his from this?—I was not aware that Mr. Baxter was making an

Mr. *S. B. Robertson.*

16 July 1869.

analysis of the "Law List"; my analysis is divided into three parts; north of Holborn; between Holborn and the Strand; and south of the Strand.

1974. Then, practically they are both taken from the "Law List"?—Mine is.

1975. Sir *William Tite.*] Your statements that you put in are derived from the "Law List"?—Yes; from the official "Law List."

1976. And you know, in point of fact, that they are correct, being derived from those data?—Yes.

1977. And, except incidentally, you do not know the individual opinion of the solicitors?—No.

1978. Mr. *Layard.*] I presume that your table has been made upon the same data as the Law Institution Map?—I do not know how they have formed their map, but I have taken the "Law List," and checked it by comparison with the "London Directory," and I believe it to be correct.

Mr. Charles Shapland Whitmore, Q.C., called in; and Examined.

Mr. *C. S. Whitmore,* Q.C.

1979. *Chairman.*] You are a Queen's Counsel, I think?—I am.

1980. And a County Court Judge?—I am one of the Metropolitan County Court Judges.

1981. Are you the Treasurer of the Inner Temple?—I am also Treasurer of the Inner Temple for this year.

1982. We understand that you have formed an opinion upon the question of the site for the Law Courts?—I have formed a very strong individual opinion; but perhaps it would be better that I should state to the Committee that I represent here the Inner Temple; and, that I should inform them how it was that we petitioned Parliament in favour of the Embankment site. At the beginning of this year, when that question came to be agitated, it was thought right by the Treasurers of both Societies that their Benchers should have an opportunity of considering it; it was brought forward at the Middle Temple and at our Temple; a special meeting was appointed for the consideration of the subject, and due notice given of that meeting, informing every Bencher of the subject to be then considered; there was a large meeting of Benchers; the subject underwent a very long consideration and discussion, and there were but three who were in favour of the Carey-street site. And, inasmuch as it is sometimes thought that this is a question between the Templars and Lincoln's Inn, I may inform the Committee that the majority were composed, not merely of Templars, but of some members of the Chancery Bar, having chambers in Lincoln's Inn, and practising in Chancery, of whom Mr. Cole, who has been examined, was one. There was another gentleman also, having chambers in Lincoln's Inn, and practising in Chancery, who was rather a notable instance of conversion, for he stated to us that he had been originally in favour of the Carey-street site, but that he was convinced of his error, and was glad of an opportunity of recanting, which he did. I may also state that the three gentlemen who were somewhat against the Embankment site, advanced as their arguments the apparent expense of the undertaking, and the probability of delay, but at that time the present Government proposal was not before the world. That which was before the world, was the somewhat magnificent scheme of Sir Charles Trevelyan, and many were rather startled by that magnificence, and thought that if it were entertained it might, in fact, put an end to all concentration of the Law Courts. Those considerations of expense and probable delay were stated by the three opponents of the Embankment site as the reasons for their own decision. Two of those gentlemen were Parliamentary Counsel, and the third has retired from the profession. I heard some statement just now which looked as if it went to show that we were inferior in numbers to Lincoln's Inn; I do not for certain know how it is, but I can hardly think that such is the case, for I happen to have with me some returns which I had made out (not for this purpose, for I have not been able to prepare myself for this subject at all, but for another purpose) which show the comparison between the numbers called to the bar for seven years at Lincoln's Inn, at the Middle Temple, and at the Inner Temple, and the number called to the Bar for the last seven years at the two Temples is more than double the number called at Lincoln's Inn.

1983. Mr. *Layard.*] Will you mention the numbers?—The total for the Inner Temple was 502, Middle Temple 383, and Lincoln's Inn 408, so that the two Temples together amount to 885, as against 408 of Lincoln's Inn.

1984. Mr. *Goldney.*] Is that the average on the total of the seven years?—The total of the seven years.

1985. Mr. *Layard.*] I think that yourself and a deputation from the Benchers of both Temples called upon me and informed me that you were willing to meet the wishes of the Government as regards the removal of the railway station to the corner of Essex-street?—I was not one of that deputation; when it was made known to me that the removal was in contemplation I brought it before our Bench; our architect was instructed to report to us upon the subject, and upon his report we came to the conclusion that we were not damnified at all, and we were very willing to assent to the proposed alteration.

1986. As regards the convenience of the Temple, what do you think of the Carey-street site without the bridge, which it was first proposed to erect over Fleet-street and the Strand in order to connect the Law Courts with the Temple?—It is unnatural altogether to the Templars to go to the north; our gravitation is southward and westward, and I do not think that we should be easily persuaded to go to the north anyhow.

1987. You think that the inconvenience of crossing the Strand without a bridge would be very great for the Templars?—Very great.

1988. With reference to the amount of business of those who have chambers in the Temple and in Lincoln's Inn, can you give us any comparative statement?—I was astonished at the suggestion which was just now made, that the greater number of the common law barristers living in the Temple do not practise in the London courts; almost all the common law barristers practise *quodam modo* in London; no doubt with reference to the amount of money that is in dispute the Chancery practitioners greatly overweigh the common law practitioners

practitioners, but the number of common law barristers must be greatly in excess of the number of Chancery barristers; whenever the sittings at Nisi Prius are going on, and that occurs for four weeks after every Term, there are no less than six courts sitting to try jury causes; there is, in each of those courts, a list of causes for the day; and the number of counsel engaged in them (they are not the same counsel) I should think would be quadruple or quintuple the number of those engaged in the Chancery Courts; I speak without book, but I cannot imagine any comparison in point of numbers between those practising in common law and those practising in equity.

1989. I believe that the common law courts considerably exceed in number the equity courts?—I do not know that they exceed them in numbers. I do not think that they do; but the number of persons resorting to them is infinitely greater than the number of persons resorting to the equity courts; and that is one reason, in my opinion, why a selection should be made for the law courts of such a site as is eminently accessible, because the accessibility is a point to be considered for a very large number of persons. I do not understand any very great distinction between the profession and the public. By the public I understand in this matter all those who may have occasion to resort to our courts in any capacity, whether as judges or jurors, or counsel, or attorneys, or witnesses or parties. The number of those resorting to the common law courts is infinitely greater than the number of those resorting to the equity courts; and when one comes to think of the nature of the accessibility and the advantages of the accessibilty, one is struck at once by this, it is not merely greater facility and comfort of walking that is in question, but it is greater punctuality, a greater accuracy in point of time, and above all, to my mind, the greater cheapness. No one who is not accustomed to it, or who does not know something about it, can well estimate how large the sums are that are spent in the litigation of the common law courts as allowance to witnesses, for travelling and conduct money. It is of very great importance, to my mind, that that expense should be lessened as much as possible; and here we shall have (and we are not talking of to-day, but of some years hence) facilities of conveyance so great and so numerous, that the cheapness of conveyance will be greatly reduced.

1990. That is to say, supposing that the courts are placed on the Embankment site?—Yes; even now I can come from the Temple to Westminster by a boat for a penny, and I do it repeatedly; we should have our witnesses every five minutes, coming to and fro, and able to be at the very spot where they ought to be, for a very small sum, and we should have them coming there from all parts of the world, because, though the girdle round London is not quite complete, very few links are wanting, and those links will be supplied long before the new building is completed; and then from every part of England and from every part of the metropolis every man having to resort to the courts will be able to come by railway or by river, and in either case with certainty as to the time of his arrival, and with great convenience, in all respects; my court is in Southwark, and I have no railway to assist me, and I am constantly thrown out from want of punctuality; owing to the deficient means of conveyance, I am made half-an-hour late sometimes, and the witnesses are, too.

1991. Sir *William Tite.*] You spoke of a meeting that was specially summoned at the Inner Temple, and you stated, did you not, that there were three gentlemen who came over to your views on that occasion?—I will not say that they have come over, but I say that their arguments were addressed to a state of things which does not now exist.

1992. How many were present on that occasion?—Twenty, or thereabouts.

1993. Is that the number of an ordinary meeting?—Rather more.

1994. Was the matter fairly discussed?—Quite so; it occupied at least four hours; the meeting was specially called out of the usual course, in order that we might be occupied with this question exclusively.

1995. Had you any other business before the meeting?—We had no other question whatever before us.

1996. Were you in the chair?—I was in the chair. I took no part in the discussion, but simply listened to it.

1997. Was the resolution carried unanimously?—With those three exceptions which I have named.

1998. Mr. *Bentinck.*] You say that you were astonished just now at the suggestion which I made with regard to the majority of barristers living in the Temple not having court practice in London. A vast majority, I believe, if not all of the barristers who go circuit have chambers to the south of the Strand?—Yes.

1999. What proportion of those barristers do you suppose have any court business in London?—It is extremely difficult to say that; I do not know what proportion. They all hope for business, and they all may go to court.

2000. I have always understood that court practice in London was the thing which the common law barristers desired to have?—Yes.

2001. Do you think that the majority of those barristers who go circuit, have London court business?—It is a very small proportion, I am sorry to say, of the bar that have any business at all. We have 1,600 barristers on our books, and you may infer from that how very small the proportion must be who actually get business.

2002. Do you think that a good many barristers who go circuit, have court business in London?—Those who go circuit, have a fair chance of court business in London.

2003. Have the majority of them court business in London?—I think that all those who have good business on circuit at Nisi Prius, in all probability have court practice in London. They are reasonable expectants of court business in London, because all Nisi Prius business in the country has a chance of coming to London for after consideration. They probably prepare pleadings, and advise upon evidence in all the country causes, and if there is a point reserved for consideration in a London court, they have a chance of attending before the court in London.

2004. You speak of them as reasonable expectants, but reasonable expectation is not profession?—I have no statistics to guide me, but certainly a large proportion.

2005. A large proportion of the barristers who go circuit, have court business in London you think?—Yes.

2006. But not the majority?—No.

Mr. C. S. Whitmore Q.C.

16 July 1869.

2007. You would say that the vast majority of the barristers who practice in London have their chambers north of the Strand?—No.

2008. Mr. *Osborne Morgan.*] There is this difference, is there not, between common law and equity barristers, that an equity barrister combines a much larger amount of chamber work with his court practice than a common law barrister does?—I should think so, but you are a better judge of that than myself; but there is a great deal of chamber work for a barrister practising in the common law courts; he has to advise on evidence, and to settle pleadings.

2009. He will be a special pleader, will he not?—Not exclusively.

2010. Of course the common law pleadings are a mere nothing compared to equity pleadings?—I should say so.

2011. An equity lawyer constantly combines the two things at the same moment, does he not?—You are better able to say that than myself; I believe it is so, to some extent.

2012. Whereas a common lawyer's business is generally confined to court work; the greater proportion of it is court work?—I should not say that.

2013. Take a junior in large practice; I suppose his court practice would be ten to one to his chamber practice?—It depends upon the nature of his court practice; if you take such a man as Mr. Mellish, his chamber practice is enormous.

2014. Mr. Mellish a Queen's Counsel; I am speaking of a junior who has to draw pleadings?—A very large class of barristers have a large chamber practice, and are constantly in chambers.

2015. When you were speaking just now of the comparative numbers of barristers belonging to the three inns, did you mean that to convey any idea of the number of working men belonging to the three inns occupied in my actual practice?—I wished to convey nothing beyond what I stated.

2016. Surely the number of men at the Temple who do not intend to follow the law as a profession, is much greater than it is at Lincoln's Inn?—I cannot answer that question.

2017. Mr. *Goldney.*] A large number of your Benchers are either on the Bench or not practising at all, or in the House. Take men like Mr. Cardwell and Mr. Hardy, for instance?—They took no part in this discussion.

2018. Did the judges who are Benchers take part in it?—Certainly not.

2019. Both Temples, I suppose, had a Parliament about it?—Yes.

2020. Do you remember when the equity side of the Exchequer Court existed?—I do.

2021. Do you know that it was virtually given up on account of the inconvenience to the solicitors?—I have not the least idea that that was the cause of it; I believe that it was a very imperfect system.

2022. What number of offices that did exist in the Temple have now been removed to north of the Strand?—You must ask some one else.

2023. You, as treasurer, would know that?—No, it is quite foreign to me.

2024. You know that there are a great number of offices which used to be attached to the Temple that have been removed north of the Strand; the Master's office, for instance?—That is now in the Temple.

2025. And the Exchequer?—The only removal that I know of was the Master's office from a lower point to a higher point in the Temple.

2026. Do you remember the equity side of the Exchequer Court?—It existed since I was called to the bar. I remember that one of the Barons of the Exchequer sat in equity, and he sat in a side room at the Court of Exchequer, and it was a very imperfect system.

2027. Where is your county court that you preside in?—It is near Horsemonger-lane Gaol.

2028. How do the witnesses get there?—It depends from what point they come. If they come from London Bridge they get to it by railway; at London Bridge there are converging lines.

2029. They would not be affected in any possible way about these courts?—Not my witnesses.

2030. Do you find much inconvenience to the witnesses going to your court, from their not having water carriage?—Great inconvenience from want of punctuality, and frequent complaints at times, because the streets have been blocked up.

2031. But they have never raised it, that view, that it was because they were not on the Thames?—Well, I should raise that view for them. It is not exceedingly likely that people a mile and a half inland would suggest the river.

2032. Have they ever thought that it would be better for them to be on the Thames in that respect?—I am unable to say what they have thought.

2033. What do you think yourself on that point?—I think that undoubtedly it would be to their advantage.

2034. That it would be an advantage to the county court to be removed near the Temple?—It would then be in a situation where they would have greater facility of access.

2035. Is it your view that, instead of having the district court near the Horsemonger-lane Gaol, where you say it is now, it would be of greater advantage to have it on the Temple?—If it were equally central. There are many considerations to be taken into account. One consideration is accommodation of witnesses. There are other considerations which may be stronger the other way.

2036. We will take that particular court and district; would it be for the convenience of the suitors in that court that they should come to a spot on the Temple, or that they should have the court with all the disadvantages of access where it is now situated?—It entirely depends upon the outline of the district.

2037. I am speaking of your particular district?—In my particular district I should think that it would be just as well to be at the Temple in all respects barring this, that the Temple is not within the district of the Southwark County Court.

2038. I ask you, looking at those disadvantages which you speak of in getting there, and looking at the circuit, whether it would be most advantageous to the suitors to have the courts on the banks of the Thames, near the Temple, with the facilities which water carriage would give them, or to have it where it is, in the midst of themselves?—It is very difficult to say. They have some advantages, from its present central situation,

Mr. *C. S. Whitmore*, Q.C.

16 July 1869.

tion, which they would lose if it were removed here to the extreme circumference of the circle.

2039. Have you read the reports of the Judicature Commission, on the subject of bringing the courts to the people, rather than the people to the courts?—No, I have not seen that.

2040. Would the same thing apply to Lincoln's Inn and Carey-street?—Yes.

2041. That is to say, that the question of the convenience of the locality might be set against that of access?—Certainly; you have your pros and cons in all questions.

2042. But as regards the offices principally, the public have very little to do with the offices of the courts?—That is in the hands of the profession.

2043. As regards the access to the general public, it would not give the general public any benefit?—They would have no occasion to resort to the offices.

2044. What number of professional people do you think are occupied in the offices, every day, as compared with those in the courts?—That I have no idea of.

2045. Do you think that there are more in the offices?—I really do not know.

2046. You would not be surprised if it were stated to you that there are more?—I should not be surprised. It is done, I believe, by attorney's clerks, and those clerks are benefited more by having a little further to go.

2047. For their health you mean?—Yes.

2048. Do not you think that it would hinder business?—No, not appreciably.

2049. Do you not know that a large number of counsel are engaged in the offices?—I feel the force of their objection in Lincoln's Inn.

2050. In the common law, though there are not a great number there, are some engaged in Judges' Chambers?—Not a great many.

2051. But there are in the Chancery Courts?—Yes; the practitioners in the Judges' Chambers are chiefly, I believe, pleaders.

2052. As regards the members of the Temple who came to that meeting of 20 that you spoke of, I assume that they were mostly practising barristers?—Yes, or who had been so.

2053. I want you to draw a distinction between those who were, or those who had been?—I think that they were chiefly practising barristers. Perhaps, I may add one thing. I have always myself thought that it is for the benefit of the legal profession, including the solicitors, that the clearing of the site of Carey-street should have taken place, so as to enable them to resort there for future practice; and I cannot but believe that in the course of the few years that will intervene between the present time and the time when the courts are built, that will become the legal *quartier*; and I see no reason why the counsel from Lincoln's Inn themselves should not have that space annexed as a sort of extra square to Lincoln's Inn, and so bring them in all but contiguity with the new courts, in very close proximity, if not absolute contiguity; and whether the barristers of Lincoln's Inn do adopt that course or not, certainly the solicitors may, and those who are far off may most naturally migrate there, and find it to their advantage; and I am assured by many solicitors whom I come in contact with, that the want of proper accommodation for solicitors' offices is much felt by them now, especially offices on the modern plan, with all the rooms on one floor, and offices occupying a larger space than they now do. No one who has not gone into them can form any idea of the miserable places in which some of the leading practitioners are now condemned to carry on their practice, from want of the possibility of doing anything more. I know several of them myself. I have been brought into contact with them as a trustee, and otherwise, and I happen to know something myself of solicitors to the north who have a preference for this site; but they say, "We cannot well go against our brethren."

2054. Mr. *Layard.*] You think that the clearance of Carey-street would prove to have been a public advantage if it were left to be used for chambers?—I am quite certain of it. We are to consider the state of things eight or ten years hence; and I feel perfectly certain that if the Courts of Law were on the Embankment those courts would be fringed in no time with a legal population; they would come round them, just as the stockbrokers get round the Royal Exchange, or as the Parliamentary agents are here in the neighbourhood of these Committee-rooms.

2055. Mr. *Goldney.*] Do you think that, as a question not of public necessity, it would be a right thing to turn out people compulsorily for the advantage of making better chambers?—There would be few who would be turned out compulsorily, I apprehend.

2056. But do you know how many people were turned out in Carey-street?—That is done and past.

2057. Mr. *Osborne Morgan.*] You have been speaking of the disadvantage that the Temple men would labour under if they had to cross the crowded thoroughfare of the Strand to get to the Carey-street site. Would not a person having chambers above Carey-street be under exactly the same disadvantage in coming to the Embankment site?—Yes, in that respect it is tit for tat.

Mr. HENRY VALLANCE, called in; and Examined.

Mr. *H. Vallance.*

2058. *Chairman.*] YOU are, I think, a Solicitor?—I am.

2059. And where is your place of business?—In Essex-street.

2060. I believe that you have taken a good deal of interest in this question?—I have.

2061. What is the conclusion to which you have come upon it?—The conclusion that I have arrived at is, that the balance of convenience with regard to the public and the profession generally between the Carey-street site and the Embankment site is considerably in favour of the Embankment site.

2062. Could you state briefly your reasons for that conclusion?—My reasons generally are these: I can quite conceive that the barristers who reside in Lincoln's Inn and Lincoln's Inn-fields may find it more convenient to have the Courts of Chancery, in which they principally practise, close at hand, and ready of access; but with regard to the solicitors (except the solicitors living in Lincoln's Inn, and I except them with the barristers), taking the general body of solicitors in the metropolis, and especially as regards the suitors in the majority of the courts, the convenience would be considerably in their favour

Mr. *H. Vallance.*

16 July 1869.

in having the Embankment site. It would offer a greater convenience of access, and greater facility of getting there and returning from the courts, and a more agreeable character in the places where they would have to wait; and all that is generally in their favour as against the Carey-street site. I may mention that I think that the attendance upon the courts is frequently a question of minutes, and that, especially in the common law courts; and I think the persons attending are about double the number of those attending the Courts of Chancery. There are special jurymen, and common jurymen, and witnesses, and they comprise generally the public who attend in those courts, against the barristers and the solicitors, and some few of the parties interested in the Court of Chancery. I do not know what the estimated number of the courts is, but I think that, in round figures, it may be taken that there are about double the number of common law courts (including amongst them the Courts of Bankruptcy, Probate, and Divorce,) than there are of the Chancery Courts; and the general public attend the former to a much greater degree than the latter.

2063. Mr. *Layard.*] I think you stated, in an interview you had with the Chancellor of the Exchequer, that you thought one very great advantage in favour of the Embankment site was, that a large number of persons who have to wait in the courts of law before their business is called on, could then have means of recreation or of passing their time agreeably, whereas, if the courts were on the Carey-street site, such persons would be confined within a crowded and unwholesome neighbourhood, that they would be in if the courts were built on the Carey-street site?—I think so. That is a most essential argument in favour of the Embankment site. We all know that it repeatedly happens that there is a long list of causes down for hearing, and that parties have to wait sometimes two or three days. In the Courts of Chancery, exceptional causes sometimes occupy three, four, or five days in hearing; but in the case of the common law courts they repeatedly occupy a long time, and the jurors and witnesses must be in attendance, whether the cause comes on or not. I apprehend, from my own personal experience, that clients and witnesses would remain with much greater contentment if they had a view of gardens and the river, and anything agreeable, than they would on the Carey-street site, where there would be nothing of an attractive character to occupy their time and attention.

2064. You stated that your offices are in Essex-street. Do you suffer very much from fog in Essex-street?—I have been in the same offices for upwards of 30 years, and do not experience the least inconvenience from that cause.

2065. You do not agree with Mr. Field, that the courts there would generally be enveloped by a fog?—Physically not; professionally, perhaps, we may not be so clear of fog in our district. But between the two sites there is not the east ground for any such a pprehension.

2066. And from your experience of the law, do you think that in the event of the Law Courts being placed on the Embankment site, the solicitors would do, as Mr. Whitmore has just stated to the Committee, aggregate as it were round the Law Courts, and that they would occupy chambers which might be built upon the present Carey-street site and other parts of that neighbourhood?—Yes; I venture to think that the first proposal of the Carey-street site had in it a most inherent defect. If the courts be concentrated, I think it most desirable to have facilities for solicitors and barristers living in the neighbourhood of the courts, and I therefore look forward to the suggestion made for putting the courts on the Embankment as most desirable, as affording the barristers and solicitors the opportunity of having chambers on the Carey-street site; so long as the different courts held in London are spread over it as they are, of course the barristers and solicitors practising in those various courts will suffer great inconvenience. But when these courts are concentrated, I think it follows that there must be some accommodation for barristers and solicitors to live in the neighbourhood.

2067. You think that the very fact of the Carey-street site having been cleared is in that view an advantage?—Yes; and I cannot conceive any more advantageous use to which that site can be turned. I am speaking personally, because my firm will be turned out of Essex-street, to our great inconvenience, and we do not know where to go. I think that the construction of offices on that site will be a main element of the advantages in the Embankment site.

2068. Sir *William Tite.*] Where are your chambers in Essex-street?—No. 20, about midway on the west side.

2069. And they are convenient, I suppose?—I have two houses there, which are almost entirely devoted to our business.

2070. And they would be destroyed by these improvements?—I am sorry to say they would.

2071. You think that it would be a reasonable thing to provide accommodation for you and other solicitors who would occupy chambers on a site like that of Carey-street?—I cannot conceive a more profitable application of that land than to apply it to building offices for solicitors and barristers.

2072. Mr. *Mowbray.*] You have heard of the proposal to make an arcade on the west side of Essex-street?—I have.

2073. Do you think that it would be an advantage to have chambers in that arcade?—I think it is always an advantage, if the courts be there; I think that the barristers will feel that especially.

2074. You think, in fact, that the arcade would be such a convenience that chambers would command a higher rent in the arcade?—I have not the slightest doubt whatever about it; any sum, almost, in that neighbourhood.

2075. Earl *Grosvenor.*] Is the gradient very steep in Essex-street as far as the lower end?—I should calculate it is about three feet fall from the Strand to the lower part of Essex-street. Then there are steps which lead down to the Thames afterwards.

2076. Sir *William Tite.*] You never felt the gradient a very important matter?—Not the least.

2077. Mr. *Mowbray.*] The question of gradient is a future one?—So I understood.

2078. At present there is a very slight gradient, and several steps below?—I do not think that the question of a few steps is of any consequence either one way or the other.

2079. Mr. *Osborne Morgan.*] Are your offices your own?—We hold them under a lease for about 30 years. No compensation that can be given to us under any ordinary rule would compensate

us for having to look after offices pending the construction of the courts and chambers.

2080. With regard to the accessibility of these courts to the general public, do you not think that the disadvantage of bringing a number of curious and idle people to the courts, by making them accessible, would be a set-off against the advantage of making them accessible to witnesses and jurors?—I confess that I do not.

2081. Have you never found your way into court blocked up by a number of loungers?—No; some causes of interest arise in the London courts the same as on the country assizes, but when the courts sit continously, that could only be an exceptional thing.

2082. On cold days in winter have you not found people coming to the courts, not because they have any business there, but to get themselves warm?—I have never found any inconvenience myself from that.

2083. You never found the approaches to the courts blocked up?—Not any more than I should have found it in other public buildings; churches, picture galleries, or buildings of that kind.

2084. Have you noticed people who have no business in the courts hanging about them?—Yes; I think the general public take an interest in the common-law courts.

2085. I mean people who come from mere curiosity?—I think that there is a great mass of the general public who come from mere curiosity, but I never experienced any inconvenience from their presence.

2086. Of course the more accessible you made the Courts of Justice, the more likely you would be to attract them?—I think that would follow.

2087. Have you ever estimated the proportion which persons belonging to both parts of the profession attending the courts bear to the general public?—No, I have not; I was going to venture to suggest to the Committee that they might ask for a return of the causes heard in the common law courts, and those heard in the Courts of Chancery. Perhaps one of the associates could give the return for the common law courts, and one of the registrars in the Court of Chancery could give a return of the causes in Chancery. An estimate might then be made of the number of the public who attend those causes. I think it will be found that the attendance of the public in a large proportion, is in favour of the common law courts over the Chancery Courts.

2088. In the case of witnesses, is it not the practice before the witnesses go to court, to bring them to the solicitor's office to collect them there?—No, we do not do that; we see them always prior to the cause coming on, but then we order them to meet at a particular place at the courts.

2089. But I suppose that you would never think of allowing one of your witnesses to go into court without having him at your office previously, and examining him as to what he is going to say?—Or at his own residence.

2090. It would be more convenient for you to have him at your office?—Yes, as far as my convenience goes; but we do not always find that practicable.

2091. Mr. *Goldney.*] You think that the Carey-street site would be a great inconvenience to people in the Temple crossing the Strand, without any bridge?—I think it would.

2092. And if the offices were built there, and the courts were on the Embankment, the same inconvenience would arise?—To the solicitors who resided on the north side, clearly.

2093. You have said that the Carey-street site would be a convenience to barristers; do not you think that a convenience to barristers means, practically, an advantage to suitors?—Well, it does to a certain degree, not to the absorption of the whole of the advantages.

2094. What do the persons who are witnesses and jurors in attendance at the courts in Westminster do in their spare time now?—They walk up and down Westminster Hall.

2095. Do they come out in the gardens that are put outside in the space there?—I was not aware of any gardens.

2096. I mean the gardens near Old Palace-yard?—I think not.

2097. Do not you think that the greater part of them remain in court, when once they have been brought there, and see what is going on?—Not the greater part; many do, no doubt.

2098. You said that you did not consider the steps of any importance; have you looked at the plans on the Embankment site; do you know what number of steps it would be from the court to the gardens?—No. I have seen the plan; but when persons are going for recreation I do not think that a question of 10 or 20 steps is any consideration.

2099. But when it comes to 120 steps, if the cause were coming on suddenly, it would be a matter of time as well as of convenience?—Clearly; but the advantage gained by giving accessibility to an agreeable promenade for witnesses is a great thing.

2100. Supposing that the witnesses were required to wait, you say that it would be an advantage to have the courts there in order that they might have recreation and pleasure while waiting; but the question is, whether if there were 120 steps for some one to go down to call, and then for them to get up to the courts, that would not be an inconvenience?—But probably you are aware that the moment a cause is called on the witnesses are immediately ordered to be in attendance at the court, and there would be time, therefore, to get them there.

2101. Your advantage would be merely for causes before they were called on?—In anticipation of causes being called on.

2102. You think that those witnesses would prefer waiting out of court to waiting in court?—I am sure the great majority would.

2103. You think that the proximity of the business chambers to the courts is of great importance?—I think that it is very important to the principal firms in London.

Tuesday, 20th July 1869.

MEMBERS PRESENT:

Mr. Bentinck.	Mr. Hunt.
Mr. Chancellor of the Exchequer.	Mr. Layard.
Mr. W. Cowper.	Lord John Manners.
Viscount Enfield.	Mr. Mowbray.
Mr. Goldney.	Mr. Osborne Morgan.
Earl Grosvenor.	Lord Stanley.
Mr. Beresford Hope.	Sir William Tite.

THE RIGHT HON. LORD STANLEY, IN THE CHAIR.

Mr. PHILIP CHARLES HARDWICK, called in; and Examined.

Mr. *P. C. Hardwick.*

20 July 1869.

2104. *Chairman.*] WE understand that you are the Architect of the Law Institution; is that so?—I am.

2105. And I suppose that you have been in communication with the members of that body on the subject of the best site for the Law Courts?—I have.

2106. Their buildings, as I understand, immediately adjoin the proposed site in Carey-street?—Their building is on the opposite side of Bell-yard.

2107. Your attention has therefore necessarily been a good deal called to this question?—It has.

2108. And we understand that you have formed a decided opinion upon it?—I have.

2109. Will you state generally what that opinion is, and what are the reasons that have led you to it?—I think that it would be convenient if I were to divide the whole question into four parts; that is what occurred to me as being the clearest way of approaching the subject; and I would suggest that those four heads should be, first of all, the approaches; secondly, the question which site would give the greatest amount of light, quiet, and air; thirdly, the cost; and fourthly, what would be the architectural effect of the building, not only as far as the building itself is concerned, but also as far as its effect as a decoration of London goes. With regard to the approaches, it will be very much better, I think, to separate that question into two parts, and to consider first, what would be necessary to improve the more distant access to the building; and secondly, what would be necessary immediately surrounding the building. Now it appears to me that whether the Courts of Justice are placed upon the Embankment site or upon the Carey-street site, it will be absolutely necessary for the convenience of the public, that the Strand should be widened to the west, and that there should also be an improved access from the north from Lincoln's Inn-fields; and certainly if the Carey-street site is selected, it will be very desirable to have a street somewhere about the present Essex-street; but those approaches appear to me to be common to both sites, and the selection of either one or the other does not really affect them. I do not think that a large building of this sort could be properly got at unless there are at least two improvements, that is, the block of buildings between Holywell-street and the Strand removed, and also a proper thoroughfare made up to Holborn through Lincoln's Inn-fields, either at the north-western or the north-eastern angle. That I take it would be agreed to on all hands. I do not think, therefore, that that affects really the question of these two sites. Then, with reference to the approaches themselves immediately around the building, I really see very little difference between the two sites. Mr. Street proposes to widen Howard-street for the Embankment site, and to make a new Essex-street. Those will make two very good streets, and I believe quite sufficient for all purposes. On the Carey-street site there is the Strand on one side, which is wide at that point; Mr. Street proposes to widen Bell-yard; and there is Carey-street on the north; and I believe myself that those three streets would provide perfectly sufficient access for carriages to go to the Courts of Justice. And I am inclined to think, from what I have read, and from what I have heard, that many persons are apt to exaggerate the number of vehicles going to the Courts of Justice. Any person who has been compelled to go there, as I have, as a witness from time to time, whether at Westminster or Lincoln's Inn, must have noticed that there are very few carriages going to the courts of law, and that the great majority of the professional public who frequent them go on foot; and, therefore, I do not think it so very important that very large spaces should be provided round the building for the purpose of accommodating carriages.

2110. Sir *William Tite.*] That applies to either site?—That applies to either site; both plans seem to me to provide sufficient accommodation for the carriage traffic to the Courts of Justice.

2111. *Chairman.*] You contend, in fact, that a very large amount of carriage traffic is not to expected?—It is not to be expected. I think that there will be a still less carriage traffic if the courts were all condensed on the north side of the Strand, because there is a plan which I have seen, showing the residences or offices of most of the

Mr. *P. C. Hardwick.*

20 July 1869.

the solicitors; and they, in a great majority, are to the north of the Carey-street site, and therefore those who now have to go to Westminster in carriages would then go on foot. Whilst on the subject of approaches, I think I ought to say that it occurs to me that placing such a great thoroughfare as the Strand must always remain between the large body of gentlemen living about Lincoln's Inn, and to the north, and east, and north-west, and the Courts of Justice, must entail upon them very considerable inconvenience. I notice that Mr. Street, in his report, foresees that inconvenience, and that he endeavours to get over it by proposing an underground passage and a bridge across the Strand. However skilfully he may treat either of those means, I cannot but think that they would be attended with very considerable inconvenience. It is a very common practice now in railways to have tunnels underneath, to go from one side of the station to the other, or to have bridges, and everybody who travels much by railway would know the great inconvenience of adopting either expedient; I mean, of course, in comparison with the power of walking straight along a street up to the building to which you are going.

2112. But that applies equally to both sites, does it not. If the courts are to be south of the Strand, those who live near Lincoln's Inn will have to cross the Strand to attend them; and if on the other hand they are on the Carey-street site, all those resident in the Temple will have to cross to that site?—I think that there is this difference: first, I apprehend that there would be far fewer persons coming from the south of the Strand to Carey-street than from the north of the Strand to the Embankment site; and further, inasmuch as the Temple is at a much lower level than Carey-street, it would be obviously easier to go through a tunnel under the Strand, and rise to Carey-street; you must rise, anyhow, from the Temple or the Thames Embankment up to Carey-street, and, therefore, you would not require to go up to go down again; whereas if you come from Carey-street down to the lower level of the Howard-street site, you must either go down to go up, or go up to go down. I should apprehend, too, that there would be some little objection to the position of the railway station. I do not quite see how it is contemplated to prevent persons passing through, at any rate, part of the building; I mean that if the ordinary public coming along the Strand want to go down to the railway station, I see no means of preventing them from going through the building appropriated to the Courts of Justice, and so crowding it, although they have no business whatever there.

2113. That would be only foot traffic?—Only foot traffic.

2114. Do you conceive that that would create any considerable noise and disturbance?—Not noise and disturbance; but I think that it is undesirable to load even the great hall or the courts with persons who really have no occupation there; that is all that has occurred to me about the approaches. The next point that I considered was the light, and air, and quiet.

2115. And in that respect do you consider that the Carey-street site has the superiority?—No; I think that in that respect both sites are excellent; the space is so large that I cannot conceive that there would be any difficulty in obtaining an abundance of light to every room in a building constructed upon either site.

2116. Then you do not consider that the neighbourhood of the Embankment, and the access to the river, gives any superiority to that site in point of light?—Not in point of light.

2117. In point of ventilation?—I do not think that the difficulties of ventilating a large building, would be at all diminished by placing it on the Embankment.

2118. Then, as I understand you, you contend only that in that respect the two sites are upon an equality?—I think so.

2119. And there is no superiority?—I do not think so; stress has been laid upon the reflected light from the river. Now, I think myself, that as a rule, light reflected from a surface below the eye, is an extremely uncomfortable one. The most agreeable mode of lighting a room, is from the top, not from the bottom; but that reflected light would only be obtained by the windows placed as these are (*pointing to the plan*) immediately opposite the River; it could not affect any of the rooms within the centre of the building.

3120. Have you considered at all the question of the neighbourhood of Carey-street, the quantity of buildings of a very low and poor character, immediately adjoining the building, as affecting the ventilation and the purity of the air?—With regard to the purity of the air, of course it is very difficult to pass an opinion about that, unless it were tested, but I should doubt very much whether any difference would be found in that respect in the two sites. Supposing that one building were taken on one site, and one building on the other, I am inclined to think from what I know of that subject generally in London, that you would find the purity of the air very much the same in the two cases, and I would make the same remark with regard to noise. It appears to me that the building on the Carey-street site would be so far removed from the Strand, that with the exception of the buildings immediately abutting upon the Strand, the noise would not be at all inconvenient.

2121. You think that from the extent of the building, there would be no inconvenience suffered from that respect?—I think that from the distance the great body of the building is from the Strand, the noise of the traffic in the Strand would not be a disturbance.

2122. That it is large enough, in point of fact, to protect itself from any disturbance outside?—Yes. Then I would say one word about cost. I have made no estimate at all of the value of this property, but as I was asked to direct my attention to it, I have done so as best I could; and I would merely remark that, with regard to cost, it would appear from the figures which I have seen that the purchase of the Embankment site must involve a considerable loss to the country.

2123. Do you mean the re-sale of the Carey-street site?—Including the sum which would be obtained for that, according to Mr. Pownall's valuation, which I must say I think a very fair one; that has cost about 800,000*l.*, and deducting the sum at which Mr. Pownall estimates its value, what Government would recover for it would leave a loss of 436,000*l.* I do not see myself how that loss can be met in any way.

2124. You are aware that it has been stated that that land on the Carey-street site, if retained in the hands of the State can be let at the rate to bring three per cent. upon the capital?

Mr. *P. C. Hardwick.*

20 July 1869.

capital?—That is contained in Mr. Hunt's letter, I think. If it were so it would be quite contrary to the experience that I have had with regard to property in London, because when you purchase property of any large extent and remove the buildings upon it, I do not know of any case where it can be resold except at a considerable sacrifice. If it is a small property abutting upon a great thoroughfare, where very often the land is of such great value that it answers your purpose to pull down the house and relet the land at a very considerable increase even upon the rack rent of the house which formerly stood there, that is another matter; but that only applies to great thoroughfares, and certainly, I think, never can be taken to apply to anything like the area cleared on Carey-street.

2125. You would assume, as a matter of course, irrespective of any peculiarities of this site, that when land is purchased compulsorily, and the buildings upon it pulled down, and other buildings put in their place, there must be a loss upon that transaction?—I think so, in every part of London. The 3 per cent. that Mr. Hunt talks of, would be about 24,000*l.* a year, and that would make 3,200*l.* per annum per acre. It seems to me a very large return indeed to anticipate. Of course I do not go into the question of the loss of the time that it would take to produce that; that is hardly worth considering. But a large portion of this land, if it is to be covered with houses containing chambers, must be given up to streets, and that is all included in this return; therefore the actual return from the land on which the houses would be built of course would require to be much more than 3,200*l.* per annum per acre. And further, I doubt myself, from what little experience I have had in this neighbourhood, whether there is that large demand for chambers. I know that occasionally I have been consulted with reference to chambers even in Lincoln's Inn Fields, and there has been a great difficulty in letting them. That is not my business, but still I have been occasionally asked what I should recommend persons to do with their property, and I know that there has been great difficulty in obtaining tenants; and I did not hear that the solicitors and barristers living in Carey-street, who were turned out of their chambers, had any great difficulty in getting accommodation elsewhere. Of course I know that there is a great pressure within the precincts of Lincoln's Inn and the Temple, but that obviously is from other reasons; I am speaking generally of the neighbourhood of Carey-street.

2126. Do you consider that, apart from any loss that might be involved in the re-sale or disposal of the Carey-street site, the site proposed upon the Embankment is an expensive one?—Does your Lordship speak of the construction of the building or of the clearing of the site.

2127. I mean the site?—I should think that the cost of clearing the Howard-street site would be, acre per acre, much about the same thing as that of clearing the Carey-street site. The property has much about the same character. I do not suppose that there would be any greater difficulties, or that it would involve any greater expense, acre per acre, in the one case than in the other.

2128. In the event of any extension being required beyond the limits of the site at present proposed, I presume that that land would be very costly?—I should think not at all, more than what has been already paid for the Carey-street site. It seems to me that in that respect the two sites are very much upon an equality. If the Embankment site is found too small, property to the north must be purchased.

2129. That is the property to which I refer; is it not considerably more valuable than that which surrounds Carey-street?—I should think that it was of the two. I apprehend that the Clement's Inn district would be cheaper than the houses between Howard-street and the Strand; but I take it that, assuming that Mr. Pownall is correct, the Carey-street site (looking at it in the broadest possible way) has cost nearly 800,000*l.*, and that the Howard-street site would cost about the same sum; and therefore, supposing that the Embankment site were taken, the loss really is, in round numbers, the difference between what has been paid for the Carey-street site and what would be returned to the country; and that, I take it, would be somewhere between 400,000*l.* and 500,000*l.*

2130. Is there anything more that it occurs to you to say as to the question of cost?—Nothing.

2131. Will you proceed to your next point?—My only remaining point is the architectural effect of the building. There is no question that the Howard-street site is a magnificent position for any public building; Somerset House shows one that; and it is always an advantage to have the base of a building seen; and I do not think that any architect would take the slightest objection, looking at his work as a work of art, to the Embankment site; and there is no doubt that the building would be better seen there by persons going along the River and going along the Embankment, considering it as a means of decorating the Metropolis. But then, on the other hand (I am now putting convenience altogether out of the question, and looking at the thing merely as a work of art), I do not think that it can be disputed that the Carey-street site would have these two great advantages: first, it is situated on the north side of one of our greatest thoroughfares, which must always remain the greatest thoroughfare; and I suppose that the number of persons either in carriages or on foot, passing along the Embankment will be infinitely less than of those passing along the Strand.

2132. Do you think that that would be so, including those travelling by railway and using stations close to the Embankment?—I should think so. I see that Mr. Street, in his report, does not contemplate that the Embankment will be very much used for carriages; whereas the Strand, I presume, always must remain the great thoroughfare of London. Therefore it is obvious that far more persons would see the building in its entirety if it were placed on the Strand than would see it if it were placed on the Embankment.

2133. Do you include in that comparison the number of persons who go up and down the river in steamboats?—I think that that is very small, except just in the summer months; and I am inclined to think that it will be smaller when the railway is made. There is a loss of time in going by boat, as I myself know, from the City to Westminster. Then again there is another point in favour of the Carey-street site, in regard to its position for the building, and that is that it is at a great elevation; I think some 23 feet, Mr. Street gives it, if I recollect rightly, above the other

other. Whatever it is, it is of course, all in favour of the building being better seen from a distance; therefore, considered as an ornament to London, to form one of the great groups of large public buildings, such as St. Paul's and the Houses of Parliament, and so on, which are seen from a distance, certainly it is advisable, as I think, looking at it merely as a work of art, that it should be placed upon the highest possible elevation. And further, I think another thing ought not to be lost sight of. I have spoken about the advantage of seeing the base line of the building on the Embankment site; but I walked the other day on purpose to look at this very point along the Embankment, and I noticed that the bridges would prevent your seeing the base line of that building until you came close to it; so that that advantage of seeing the base line is one which is more apparent than real, in fact (I am speaking now principally of those persons who come from the west), and really the best possible place for seeing that building would be from the river, and there I fear it will be seen, as I have said just now, by a very few persons indeed; whereas if it were north of the Strand, hundreds of thousands would see it every day from the Strand.

2134. I presume that there would be a partial view of the building if constructed upon the Embankment site, from the Strand down the streets leading to it?—You would then be so close to the houses in the Strand that they would effectually cut off from view the perspective of the building until you saw it through one of those narrow streets, which would give you only a fragment of the elevation.

2135. But comparing the two sites in that respect, would not three fronts out of four of the Carey-street site be almost invisible?—No, they would not be at all invisible; they would not be seen all at once from Lincoln's Inn, but they would be seen by persons walking along Serle-street, just as the building on the other site would be seen from Howard-street and Essex-street. There are two ways of looking at a building; one is as it is seen from a distance, to catch the grouping of the sky-line, and the other is to see it in sharp perspective; and most architects will tell you that they generally design their buildings to be seen from both points of view; that is to say, they make a broken sky-line, and they make also an effective picturesque building to be seen from a narrow street.

2136. Then do I rightly understand you to put it, that as regards their being seen, the two sites would be nearly on an equality?—Very nearly; I think it should be fairly stated that there is little to choose between them. I honestly confess that the more effective of the two, I think, perhaps might be the Carey-street site; the building there would be seen by more persons, and so on.

2137. Mr. *Layard.*] In speaking of the Carey-street site, is it with reference to Mr. Street's plan that you speak, or with reference to any other plan that you may yourself have devised?—I have devised none.

2138. Then you are merely now speaking of the Carey-street site as proposed to be used by Mr. Street in his plan for the Law Courts?—The only plans which I have seen are those attached to Mr. Street's report, with the exception of that general plan to which I have alluded, about the residences of the solicitors, which I saw the other day for the first time. I have seen no other plan for the building but those attached to Mr. Street's report.

2139. Then you think that the Law Courts, as designed by Mr. Street could be placed upon the Carey-street site without clearing away any of the surrounding buildings?—That is a question that I cannot answer, because I have not gone into the details of his plan at all. It would be impossible for me to say whether his buildings, or what he has to provide in that building can be placed on one site better than on another without going into the details, which I have had no opportunity of doing.

2140. What you mean is, that a building, without reference to the accommodation that it would afford, could be placed on the Carey-street site without clearing away the surrounding buildings?—The areas of the two sites are very nearly the same without clearing away additional buildings.

2141. I want to know whether you have studied the question with reference to the accommodation required for the new Law Courts?—No; I have had no opportunity of doing so.

2142. All that you mean is that a building, without reference to accommodation, could possibly be placed on the Carey-street site without requiring any clearing away of the surrounding buildings?—Mr. Street shows us that; he has done it by his plan.

2143. But Mr. Street states that he cannot put his building there without clearing away the surrounding buildings; do you agree or differ with him in that?—I have had no opportunity of agreeing or differing.

2144. You do not know the requirements of the building which is to be placed there?—No; I never even read the instructions to the architects.

2145. You say that as regards approaches to the two sites they would be practically the same; and you take Carey-street as the northern approach to the Carey-street site and the Strand as the southern; may I ask you how you would get to Carey-street?—I think I mentioned that it would be necessary to improve the thoroughfare from Carey-street, northwards.

2146. How would you improve that thoroughfare?—That I should improve by widening Serle-street.

2147. That brings you into Lincoln's Inn-fields?—Yes.

2148. How would you get into Lincoln's Inn-fields?—I should carry a line of street in the direction of Serle-street, and project it into Holborn.

2149. If the Law Courts are upon the Carey-street site, that access will be necessary?—Yes.

2150. And would actually depend upon the fact of the Law Courts being on the Carey-street site?—Yes.

2151. But supposing the Law Courts to be upon the Howard-street site, would not that access be a metropolitan improvement, and not depend upon the Law Courts?—No; I think that would be equally necessary, whether the courts of justice were placed on one site or the other. In one sense it would be more necessary if they were placed on the Embankment site, because I apprehend that more persons would use carriages to go there (I am speaking of the professional public) than if the building were placed upon the Carey-street site.

2152. I thought you stated to the Committee that carriages were very seldom used at all by

Mr. *P. C. Hardwick.*

20 July 1869.

persons going to the courts of law?—That is to say, only a certain number would be used; but more would be used to go to the Embankment site than to the Carey-street site, because I think that many men, rather than run the gauntlet of the Strand, with a quantity of papers, and so on, coming from their offices round Lincoln's Inn and to the north of Lincoln's Inn, would take a cab; and it would make a great difference to them having to cross the Strand.

2153. Do you think that anyone would take a cab from Lincoln's Inn to Howard-street?—I think that anyone that had a large quantity of papers would.

2154. It depends upon his papers, then, and not upon the distance?—I do not think that the mere distance would make much difference if there were no obstruction.

2155. You have assumed that a larger number of people would come to the Law Courts from the north than from the south; upon what ground do you assume that?—I assume that because there are very few offices indeed between the Strand and the River in comparison to the number between the Strand and the district of Russell-square up to the Gray's Inn-road. There are a very large number of persons living there who would have to make use of the courts of justice, a far larger number than those living to the south of the Strand.

2156. Are you aware that tables have been submitted to this Committee which show that there is a very large majority of solicitors and barristers living to the south of the Strand, and to east and west of the Howard-street site, as compared with those living north?—No, I was not aware of that.

2157. You have never gone into this question?—No.

2158. As regards suitors, witnesses, jurors, and the public; which would be most convenient; access by road, river, and rail, such as there would be on the Embankment, or by the Strand?—The access by the Strand, I think, would be most convenient for the large majority of persons who would go to the Courts of Justice. I must say that I do not think you would find persons who would take the trouble to go to a railway station except persons coming from a great distance.

2159. But suppose that the railway station, as proposed by Mr. Street, were on the site itself?—I am speaking of the railway station at the other end.

2160. For instance, taking persons from the City; jurors, witnesses, and the legal profession; would it not be more convenient to them to take such a broad street as would run from the Mansion House to the Howard-street site, or the railway, than to come by Fleet-street and the Strand—I think that it would depend upon where their offices were placed; if they were close to the railway station, they would make use of the railway, or if they were on the banks of the river they would come by the Embankment.

2161. I suppose that you know, for instance, the house of Messrs. Freshfield, in the City?—Yes.

2162. Which would be the most convenient access to the courts for them?—They would come by the new street probably, as very convenient to them.

2163. Are not the larger number of professional men in the City, grouped round the Exchange and the Bank of England?—Yes; but I should think that City solicitors live very much to the north of the Bank of England, and east of it.

2164. Then they would have the Moorgate-street Station?—Yes, they would have the Moorgate-street Station.

2165. But as regards jurors and witnesses, and people having business in the courts, surely it would be a less expensive and a more convenient way for them to come by rail than by a cab through the crowded streets?—Yes, no question. A juror coming up the river from a distance, say Gravesend, would probably come by a steamboat, make his way to Essex-street, and pass up Essex-street, and there he would be at the courts; but he might also go up Essex-street to Carey-street perfectly well.

2166. You have stated that you believe that the Strand will always remain the great thoroughfore of London; upon what grounds do you form that opinion?—I think you will find generally, that a large street in any town in which good shops are, placed on each side, especially if it leads directly from one extreme point of the town to the other, becomes a great thoroughfare.

2167. But with regard to people having business and requiring to save time, surely they would prefer coming by a long open street, rather than through narrow crowded streets?—To go from one extreme point to the other, no doubt they would.

2168. And you assume too that that block of buildings between Holywell-street and the Strand must be cleared away?—It ought to be cleared away.

2169. You have assumed that Mr. Pownall's estimate for the Howard-street site is correct, and upon that assumption you have taken the cost of the two sites as equal. May I ask whether you are aware that Mr. Pownall has admitted that his estimate was founded on incorrect data?—No.

2170. Are you aware that Mr. Hunt has shown that Mr. Pownall has assumed that he wishes to take possession of land, which he did not contemplate taking?—No.

2171. You have merely taken the Law Institution's statement of Mr. Pownall's estimate?—I have merely taken the paper addressed to the President of the Incorporated Law Society.

2172. You have assumed that Mr. Pownall is correct in stating that Government could only re-sell the Carey-street site for 364,000 *l.*?—Yes, I have assumed that to be correct.

2173. Are you aware that Mr. Hunt has stated to the Committee that offers upon a much larger basis have actually been made to the Government?—He hints at that in his report, but he does not give anything definite, he merely says that he has had an offer from some unnamed persons, amounting to three per cent. upon the outlay.

2174. Have you been in the habit of having business relations with Mr. Hunt?—Yes.

2175. Have you found him generally accurate in his estimates?—Very accurate.

2176. You have stated that in no case as far as you are aware, could ground such as the Carey-street site, if purchased, be resold except at a very great loss?—Not a large area of ground, I am not speaking of small plots of ground near great thoroughfares.

2177. Are

2177. Are you acquainted with a company called the Cooks'-court company?—No.

2178. You are not aware that they propose to purchase a considerable plot of ground from the Government at the price which the Government might pay for it?—I am not aware of that.

2179. You have stated as one cause of great loss in the re-sale, that there will be the necessity of making a street through the Carey-street site?—Supposing the ground were built upon you mean. That is not exactly what I said; what I said was, that supposing that ordinary dwelling-houses were to be built upon that seven acres, a certain amount of the land must be devoted for streets.

2180. But I presume that streets existed upon that site when it was purchased?—Principally narrow courts.

2181. But a good many?—A good many.

2182. Are you aware that, according to the plan of Mr. Street, and, indeed, of Mr. Hunt, it is proposed to carry only one wide street through the Carey-street site, uniting Essex-street with Serle-street?—I am not speaking of any street which may be necessary to connect one great thoroughfare with the other, but I am speaking of treating the land for building purposes, and I say that you must have streets for frontages.

2183. But in dealing with that land, supposing chambers to be erected on it, you would have a most convenient opportunity for making such a street?—Certainly.

2184. You have stated to the Committee that you think it necessary that Essex-street should be widened whichever site is adopted?—I think it most desirable under any circumstances.

2185. You stated that one of the objections, in your opinion, to the Howard-street site would be, that persons on foot going to the railway station would make use of the great Central Hall as a thoroughfare?—I think it very likely that they would cut across through the building, unless means were taken to prevent them.

2186. Then you are not aware that Mr. Street stated to the Committee that he had taken means that would make it extremely difficult for persons to do that?—No, I have not been present during his examination.

2187. Have you examined Mr. Street's plans thoroughly?—Not the details of them.

2188. What you have stated is merely conjecture?—Merely what I think might happen to any building set in that position.

2189. You have stated that the ground line of the building on the Howard-street site would not be seen from any distance?—I said that the bridges would prevent you from seeing the base of the building until you came close this side of Waterloo Bridge.

2190. You would see it from the bridges; Waterloo Bridge, for instance?—Certainly.

2191. You stated also that Somerset House is one of the greatest ornaments of the Metropolis?—Yes.

2192. But does not the same remark apply to Somerset House as would apply to any other building in a line with Somerset House?—Certainly.

2193. Therefore that is not an objection to Somerset House?—It is only so far an objection that it would be very much better if one could see the base of Somerset House; but Somerset House was specially designed to terminate at the level of Waterloo Bridge. I am speaking of the level in point of height.

2194. You stated that as far as a distant view is concerned, the Carey-street site would have a very great advantage?—I did not say very great; I said that it would have the advantage of being placed on a higher elevation.

2195. Supposing that such a railway station were placed on the Howard-street site, as we see at Charing Cross and Cannon-street what would then be the distant view of Carey-street?—Still at a distance it would be seen.

2196. Behind such a building as we have at Charing Cross?—At a distance; it is a mere question of position.

2197. Have you taken into consideration the great convenience of the River as a means of transporting building materials for erecting an edifice upon the Howard-street site?—No, I have not.

2198. Perhaps you are not aware that Mr. Street has stated that that would make a very considerable per-centage of reduction in the expense?—In saving the carting from the River up to Carey-street?

2199. That you might bring materials at a much cheaper rate to the Embankment?—It is a mere question of cartage, I apprehend, from the River up to Carey-street.

2200. You are not prepared to give an opinion upon that?—Not at all.

2201. You speak of Bell-yard as a thoroughfare; supposing the Law Courts were placed on the Carey-street site, are you aware what the width at Bell-yard would be according to Mr. Street's plan, or according to Mr. Burnet's plan?—Mr. Burnet's plan I do not know; Mr. Street's plan I have here (*the Witness measured it on the plan*). The smallest distance from building to building is about 45 feet.

2202. Are you aware that Mr. Street has stated that it would be absolutely necessary to open a communication between Bell-yard and Chancery-lane, to the south of the Law Institution?—No, I am not aware of that.

2203. Do you think that it would be necessary?—It would be desirable.

2204. And then of course that must be added to the cost of the Carey-street site?—Certainly.

2205. I think you said that you did not consider Clare Market, and the low squalid houses in the neighbourhood, as any objection to the Carey-street site?—I, myself, think that Clare Market is too far off to affect the building.

2206. Is it your opinion, as an architect, that, in regard to approaches, light, and ventilation, the two sites are equal?—I really think so.

2207. Supposing that you had, as an architect, the choice of the two sites to erect a building on which your reputation should depend, which site would you have chosen?—I should feel great difficulty in saying which I should prefer for a building, looking at it as a work of art.

2208. Sir *William Tite.*] You gave an opinion as to relative advantages in respect of air, and so on, of the two sites; do you, or do you not think that having Somerset House on the one side of the Thames Embankment site, and the Temple Gardens on the other would be better for ventilation than the crowded and miserable population which surround the Carey-street site in all directions?—I think that the only real advantage in regard to air would be the fact of the current of air along the river.

Mr. *P. C. Hardwick.*

20 July 1869.

2209. You are probably aware that in the present state of our chemical knowledge we know nothing at all about it; and that at the time of the cholera raging in London, the chemists could not detect, by their analysis, the worst possible situations from the very best?—I am aware of that.

2210. And therefore we do not know much about that subject though we have learnt to detect fever raging in one place and not in another?—They can detect solid matter without difficulty.

2211. They cannot detect the causes of disease?—That is another thing.

2212. You have said that you abide by Mr. Pownall's estimate, though you know that Mr. Hunt is a man in the same position, and that his estimate is as likely to be correct as Mr. Pownall's; do you know with regard to investments in large buildings (not little matters), that the former Excise Office was entirely destroyed to the very foundations, that it was sold by auction, and that it has been rebuilt at a very great cost, so as to be almost an ornamental building, and has paid from 10 to 12 per cent. to those who did that?—I have heard so.

2213. Again, do you know that the East India House, when abandoned by the Government, was bought by tender from the present Council of India at a very large price, that it was equally destroyed (only the materials being of the least value, and then of very little value) to the very foundations, a large quantity of concrete placed in, and the whole building rebuilt handsomely, and that that pays 10 per cent.?—I have only heard so.

2214. What is the difference between those cases and the case we are now speaking of?—The great difference, I think, is in the positions of the three sites. The two buildings that you have alluded to, as every one knows, are in the heart of the City, and in that part of the City where land and buildings are very nearly of the very highest value. I doubt very much whether there would be anything like the same demand for chambers in buildings on the Carey-street site as there was in the case of those two buildings.

2215. But then that must affect very largely the original purchase, because those who sold those two sites must have been undoubtedly aware of those facts as well as you, and the price paid would be in proportion?—I have always heard that the two sites were purchased at a small cost; that is to say, that the value of the land was small. That may or may not be the case; still, there is no question that there was an immense presure at that time for offices in the City of London, and fortunately for the persons who invested their money in those two buildings, they were able to fill them immediately with tenants, I have heard, and they have never been empty since; I doubt very much, with deference to you, whether there would be the same demand for even a building of the same size, or two buildings of the size that you spoke of; whereas, here we have got a site very much larger, I apprehend, in area, than those two buildings put together.

2216. I suppose you know that the sum paid was something under 200,000*l.* in those two cases?—I do not recollect the figures, but certainly the two sites together are nothing like seven acres in extent.

2217. Were they not about that in extent?—Still I think that the relative position of the buildings in London makes an immense difference. I have had one or two cases of property in the City of London pass through my own hands, where it has fetched an enormous sum; but then that, as I said just now, was owing to its peculiar position; and to that peculiar position I think the great success of those two buildings which you have alluded to is due.

2218. Do you think that that remark applies to the Strand; do not you rather think that the value of everything in the Strand has increased enormously?—The value of the frontage of the Carey-street site towards the Strand will be very great indeed; but that forms a very small proportion indeed of the length of the frontage that would be produced by laying the whole site out for building.

2219. But compared with the two sites that we have been speaking of in the City, the frontage of the Carey-street site to the Strand would be double in extent, would it not?—I should think so.

2220. Mr. *Mowbray.*] You appear to consider that the traffic along the Embankment will always be inconsiderable?—"Inconsiderable" is too strong a word; I do not think that I made use of that word; but in comparison to the traffic along the Strand I think that it will always be very small.

2221. Do you think that you can appreciate in the present position of the Embankment, it being now only a foot way, what the traffic will be when the whole line is completed of the road from the Mansion House, and the Embankment from Blackfriars Bridge to Westminster Bridge?—I suppose there is no question that there will be a great traffic along the Embankment; but still I do not think that it will approach to the traffic along the Strand.

2222. You think that when the Embankment is completed from Westminster Bridge to Blackfriars Bridge it will not become a main artery for traffic from west to east?—I think not; I think that I quoted Mr. Street's words in which he made some allusion to the fact that the Embankment will not be such a very great thoroughfare for carriages.

2223. Have you considered that the effect which the stations of the Metropolitan Railway will have in bringing traffic along the Embankment?—There is no doubt that it will all tend to increase traffic, and as traffic increases year by year, still larger and larger traffic will be carried by its means.

2224. At any rate the embankment will be a wide and open space, available to bring suitors and the public, and professional persons to the courts if they are placed on the Embankment site?—Yes.

2225. You think that the traffic along the River in steamers is likely to diminish rather than to increase?—I should think so; I speak from my own use of the steamboat; I have had to come from the City to Westminster, and I do not find that it saves me time.

2226. Does not that depend upon whether you take an express boat or a stopping boat?—Yes.

2227. And upon the state of the tide?—To some extent upon the state of the tide; but I do not see them very much used except in the summer.

2228. Lord *John Manners.*] You have been asked

asked a question as to the character of the buildings in the neighbourhood of the Carey-street site, more especially with reference to Clare-market and the surrounding streets; they have been called low buildings; can you tell us whether they are low in height as well as quality, compared with the height of a great building placed on the Carey-street site, such as the Law Courts will be?—They are all very low as far as mere height goes.

2229. Perhaps in your opinion from their lowness in point of height they would not interfere with the ventilation or light of the proposed New Law Courts?—I do not think that they would form any obstruction whatever to either the light or the ventilation of the building.

2230. You have confirmed Mr. Pownall's estimate of the probable loss if the Carey-street site is resold, that is put I think at 436,000*l.*?—Yes.

2231. And you have given your reasons for agreeing with Mr. Pownall in that respect; are you aware that before Lord Elcho's Committee, Sir John Thwaites stated that the Metropolitan Board had found in their transactions that a similar loss was incurred?—I have always understood that you must always calculate upon a very large loss in re-letting these great areas when they are once cleared.

2232. But with respect to the East India House and the Excise Office, on which some questions have been put to you, those, I apprehend, belonged to, and were sold by departments of the Government?—The East India House was sold by the Council, and the Excise by the Government.

2233. In either of those cases would compensations to tenants, the purchase of goodwill, and so on, have to be included?—I had nothing to do myself personally with the sale or purchase of either of those buildings, but I believe that there were no interests whatever to be bought up; the buildings were sold *en bloc*, ground, bricks, and mortar and all; there were no tenants whatever.

2234. But in cases such as the purchase of the Carey-street site, and, indeed, all other large purchases of ordinary property in London, is not a very considerable item of the expenditure in the purchase derived from the necessity of giving considerable compensation to persons in business whom you drive out of their houses?—No question of it.

2235. Therefore we will go back, if you please, and will take your and Mr. Pownall's estimate, as probably a correct one, that there would be a probable loss of 436,000*l.* accruing on the resale of the Carey-street site; that sum, therefore, would be regarded probably as being in hand on a comparison of the cost of the two sites?—Certainly.

2236. Are you acquainted with the estimated cost of the additional 3½ acres which the Royal Commission recommended to be purchased for the purpose of improving the accesses to the Carey-street site?—No, I am not.

2237. We have it before us that the estimate is about 600,000*l.*; assuming that 600,000*l.* which has been estimated as the total value of the 3½ acres that the Royal Commission recommended to be purchased, that would give a little less than 200,000*l.* an acre?—Yes.

2238. Mr. Street has told us that of those 3½ acres he should estimate about one acre as being available for resale; what, therefore, may we assume as the total cost of the 3½ acres after the one acre has been resold?—It would be rather more than 400,000*l.*

2239. Therefore the loss on the Carey-street site would actually exceed the net cost of the purchase of the 3½ additional acres recommended by the Royal Commission for the original larger scheme of the Commission?—So it would appear, if those figures are correct.

2240. Are you aware that the larger scheme of the Royal Commission contemplated the concentration of all the probate registry offices on the Carey-street site?—Yes, I have heard that.

2241. And perhaps you are also aware that the reduced scheme of the Government proposes to exclude the Probate Registry offices?—Yes, I am aware of that.

2242. If the larger scheme therefore were carried out, there would be the whole of the land, the Government property in Great Knightrider-street, available for resale?—Yes.

2243. Therefore there would be the value of the property in Great Knightrider-street to be added to the saving in keeping the Carey-street site for the purposes of the Law Courts?—Clearly that would be an asset.

2244. With respect to the Strand, can you tell us on which side of the Strand, in front of the Carey-street site, the great stream of traffic, whether in carriages or on foot, at present goes; does it go on the north side of the Strand or on the south side?—Of the passenger traffic, I should think a very much larger proportion will go on the south, than will go on the north side.

2245. Therefore, for the purpose of viewing a great building, placed on the Carey-street site, the actual stream of traffic on the south side of the Strand would afford great facilities?—Yes.

2246. Then, with respect to the view of the north side, you have been asked if there would be any good view of the New Law Courts from Carey-street; according to the plans before this Committee, can you tell us whether the New Carey-street would be as wide as the New Howard-street on the north side of the building, if it is placed on the Embankment site (*the Witness measured it on the plan*)?—The scale here is very imperfect, but here is a slight advantage of a few feet in favour of Howard-street if this plan is correctly drawn; Carey-street, I see, is proposed to be 55 feet wide.

2247. Therefore, speaking roughly with respect to a view of the building from the northern approach, whether the building is placed on the Howard-street site or the Carey-street site, people from the north would have the same facilities for viewing it?—Very much the same.

2248. You have been asked some questions as to the possibility of placing the same building on the Carey-street site, as can be placed on the Embankment site; can you tell us how many acres there are on the present cleared Carey-street site?—No, I have not gone into that.

2249. We have it that it is 7½ acres on the Carey-street site, and that it is proposed to have 6½ acres on the Howard-street site; do you imagine, as an architect, that there would be any difficulty in placing any building with the same accommodation on the 7½ acres, that you can put on the 6½ acres?—I cannot conceive that there can be any difficulty at all in doing so; the sites are nearly the same, because the Howard-street site is not quite so deep, from north to south,

Mr. *P. C. Hardwick.*

20 July 1869.

south, as the Carey-street site, but it appears to me to be a little longer; there do not appear to me to be any special advantages in either site over the other, for the arrangement of the details of the building.

2250. If New Essex-street is made through the Carey-street site, and the New Law Courts are placed on the Embankment, to what would this New Essex-street lead, unless Serle-street is widened, and the Great Turnstile is opened?—If the Law Courts were built upon the Embankment, Essex-street would be very incomplete, unless it were carried right through to Holborn.

2251. Therefore, if the Law Courts are placed on the Embankment site and New Essex-street is made across the Carey-street site, in your opinion, it would be necessary to complete that street by opening the Great Turnstile and widening Serle-street, at any rate, at the bottom?—Certainly on whichever site the building is placed that improvement, which has been talked of as long as I can recollect, must be made.

2252. Now with respect to the estimate of the Howard-street side, at the commencement of your evidence you told us, I think, that as to the approaches to either site you put them on an equality; did you, in making that statement, assume that Essex-street would be widened throughout as an approach to the Thames Embankment site?—I take these plans of Mr. Street's for granted; that is, Howard-street widened as far as the three blocks of buildings go, indicated by those dotted lines on the north, and Essex-street widened on the east.

2253. And taking Mr. Street's plans you assume also that Mr. Pownall, in his estimate of 800,000*l.*, would not be far wrong?—No, it appears to me to be a very fair estimate.

2254. But from a question which has been put by the First Commissioner of Works, it would appear that the Government do not contemplate purchasing the whole and widening the whole of Essex-street; and by omitting that improvement the estimate might be brought down to something like 600,000*l.*?—Yes.

2255. Would you wish to qualify your statement as to the equality of the approaches to the two sites if Essex-street is not to be widened, according to Mr. Street's plan and Mr. Pownall's estimate?—If I am right in supposing that the great majority of persons will come from the north to the Courts of Justice, unless Essex-street is widened, the approaches to the Howard-street site are altogether inadequate, because there would be only Arundel-street and Norfolk-street left; Milford-street and Essex-street in its present position would be almost useless.

2256. You have been asked, if the New Law Courts were placed on the Carey-street site, and a great railway station were placed on the Embankment site, what would be the effect on the New Law Courts; but have you any reason to suppose that a great railway station is likely to be placed on the Howard-street site?—I have never heard it suggested.

2257. From your experience in these matters, does it occur to you as probable that a great railway station is likely to be placed on that site?—Very unlikely, after what we know of the history of railways in the last 10 years.

2258. Mr. *W. Cowper.*] In regard to the cases in the City, in which very large prices have been given for cleared land, was there not much greater competition for that cleared land than could be expected for the Carey-street site, if it were now to be sold?—The cases that I mention as having passed through my own hands were in very great thoroughfares, within a few hundred yards of the Bank of England, where the property a few years ago was at a perfectly fabulous price.

2259. And excluding from our consideration the frontage of the Strand, I would ask you, should you anticipate any very great competition for the remainder of the Carey-street site if it were now to be sold; would it be used, I mean, for many other purposes besides the one suggested, of dwellings for legal gentlemen?—I should doubt whether there would be any demand for shops, or whether there would be any demand for any trade purpose. Factories, I presume, would be out of the question, and as far as I know there is no demand for warehouses in that part of the town; therefore it must end in there being dwelling-houses, used, probably, almost exclusively as chambers.

2260. And then considering the large area that would be devoted to that purpose, do you think that there is a probability of such competition for chambers as would run up the price of that land to any artificial or special extent?—I think so much the contrary, that there would be great difficulty in getting rid of it.

2261. And I think that you founded that opinion partly upon the experience that you have had, that the legal gentlemen who were removed out of Carey-street had not any very great difficulty in finding other offices?—Those of whom I have any personal knowledge had no difficulty certainly.

2262. Was there a considerable amount paid for the good will of the shops in the Strand that were paid for the Carey-street site?—I had nothing to do with any of the shops in the Strand. A few cases were left to me as umpire for some of the houses in the other streets, but I had nothing to do with anything in the Strand.

2263. But should you say, from your knowledge of the property, that there must have been a considerable amount paid for goodwill for shops in the Strand which could not be recovered by a sale of the land?—Certainly, that all disappears; there is nothing to represent it when you only have the ground left you.

2264. Then too, if a street 60 feet wide is made across the Carey-street site, to unite Serle-street with the Strand, must not a loss of space accrue from that wide thoroughfare?—I think that that wide thoroughfare would be essential to the success of a building scheme on the Carey-street site, a large quantity of the land must be given up to streets, to produce the frontages and to make the houses take, that is to say, to make them answer their purpose a large area must be given up for public thoroughfares; we all know that a blind alley is a very great disadvantage to property.

2265. In comparing then the present value of the site with its value at the time it was purchased, have you not to consider that a great deal of space must now be devoted to streets, which was not so employed at the time when it was purchased, because the courts and alleys were peculiarly narrow?—They were peculiarly narrow, and I should think that a larger space must be given up for thoroughfares now than was the case before.

2266. Then are we to understand that from your general knowledge of the sale and purchase of

of land, you think it very unlikely that any company would actually be brought into living existence, who would be able to give three per cent. upon the cost of the ground, whatever may be the ideas at present put forward?—I should doubt whether any company could be found who would give a substantial guarantee that they would give a ground rent equal to three per cent. upon the 800,000*l.* A company might be formed, but whether it would be a substantial one is another matter.

2267. I think you stated that looking at the buildings architecturally, the near views of the building on either of the sites might be pretty equal, and that the difference to be considered with reference to the architectural character of the two sites must depend mainly upon the distant views. Which of the two distant views should you, on the whole, prefer; assuming that the building on the Carey-street site would reach in its highest point the top of the pinnacle of St. Paul's, and consequently would be seen in every part of London where the pinnacles of St. Paul's can be seen, should you think that a better site for distant views than a building so much lower as one on the Embankment site, which would only be seen advantageously in distant views from the south?—There would be just the difference of the difference of elevation; elevation is a very important ingredient in the effect of any great building from a distance; and by just so much as Carey-street is higher than the Embankment, by that much it would have the advantage.

2268. Would not the difference of elevation prevent the building on the Embankment from being seen from the north of London?—It would be seen from its being such a very lofty building, but not of course from so many points, or to so great an advantage as the building on the higher site.

2269. In considering ventilation, do you attach much importance to the height of the stratum of air that is breathed?—The higher you go, as a rule, the purer the air, unless there is some accidental circumstance to affect it, such as a chimney, or something of that sort.

2270. You have got to consider among the advantages of a building on the higher site, the superior purity of air that would reach it at that height?—I do not think that really you could say one would be purer than the other; they are so close together, and there is so little difference in the height, that I doubt very much whether any difference whatever would be found.

2271. Have you any experience of the character of the foreshore of the river to enable you to form an opinion as to the extent of expense that must be incurred in making the foundations of the Embankment site?—I have never built close to the Thames near the Strand. The only experience on the subject that I have had is in constructing the foundations for the City Gas Works, which are the other side of the Temple. I have had a good deal to do for them; they occupy about the same relative position to the river as the Embankment site; the lower part of the Embankment site, that is to say, not the upper.

2272. Therefore, probably, that would be a good guide as to the character of the soil near the actual foreshore of the Embankment site?—I should be prepared to find the two very much the same.

2273. And would you state what was the result of your experience in regard to the foundations of the City Gas Works?—I had to remove the whole of the soil to a depth of from 20 to 30 feet to form the foundations for those buildings. They require to be perfectly steady, because the least movement in the foundation would lead to very disastrous results. Therefore, I took a good deal of pains with their foundations from time to time; but there really is no difficulty about forming a foundation even in such a very unfavourable soil, full of water as it is, and consisting entirely of silt, because all you have to do is to put a sufficient quantity of concrete; it is a mere question of cost.

2274. And should you consider that it would be necessary to have concrete to the depth of 20 or 30 feet in that place?—I should think most probably.

2275. Earl *Grosvenor.*] With regard to the depreciation of the property on the Carey-street site, I think you stated that you actually think that the property on that site will be depreciated even when the Law Courts are built?—I think so.

2276. You say that the properties in the City which have been referred to the Excise Office, and the India House were sold for an enormous sum owing to their position; but do not you think that the case is almost parallel here, and that when the Law Courts are built, the surrounding property will be so much improved, and that there will be so much demand for law accommodation that the Carey-street site will fetch a very large sum?—The reason why I gave that answer just now was this; I think that it is known to everybody that the trade of London has enormously increased during the last 20 or 30 years, and that it has increased to a very much greater extent than the legal profession: now, unless the legal profession is to increase very much in number, and the legal business of the country to increase very rapidly, I do not think that it would be fair to take the increase of the trade of the City of London as a criterion at all of the extra demand that will arise during the next 20 years for chambers near the Law Courts.

2277. Do not you think that the legal gentlemen will be likely to concentrate themselves on this site when the Law Courts are concentrated there?—No doubt by degrees they would get as near as they could to the building where they were to pass the greater part of their life, but that would only be a gradual thing.

2278. Are you aware that the chambers in Lincoln's Inn are generally in a bad state?—I am not aware of it.

2279. Or those in the Temple?—I know nothing about the Temple.

2280. Are you aware that there is at present a considerable demand for chambers in Lincoln's Inn which cannot be met?—I am aware of it.

2281. One question with reference to the view. You stated that the view of the building to be erected in Carey-street will be seen in its entirety from the Strand. Now do you know what is the space from the Carey-street building to the south side of the Strand?—The front of the building according to Mr. Street's plan occupies, I think, very much the same position as the old line of buildings, except that the more lofty parts of his structure are placed at a distance from the Strand.

Mr. *P. C. Hardwick.*

20 July 1869.

2282. But still the Strand is very narrow along that frontage of the new building?—It is not narrow for the Strand; it is rather wider, I think, than in other parts; it is rather a little wider a little to the east of St. Clement Danes' Church.

2283. But do you think that from any point you will be able to get a good view of that façade?—I think that the moment you came along the Strand, when you got at all clear of the Holywell-street houses, you would see the new building very well.

2284. But coming from the east, you would get a very indifferent view of it?—Temple Bar cuts it off very much from the east.

2285. But from the crowded state of the Strand, both in the street part and on the foot pavement, do you think that it is possible that any one can stand and look at this building for one minute; is it not a matter of physical impossibility?—I should doubt that; persons do not stop to sketch buildings in the middle of the day in a crowded thoroughfare, but they might look at it very well from there.

2286. Do you think, as an architect, that the view from the Strand can compare for one moment with the view which would be obtained from the Embankment, from the bridges, Blackfriars and Waterloo, and from the boats, which carry thousands of people, and who would be able, having leisure, and sitting perfectly still on the steamboats, to look at the building carefully?—The Embankment site, when you come nearly opposite to it in steamboats, or seen from the bridges, is one of the finest in the world, no doubt.

2287. And when the building was erected on the Embankment site, do not you think the stonework of the elevation would be much better preserved on that site, owing to the abundance of light and air, than on the Carey-street site, owing to the smoke?—I have no reason to think that.

2288. Mr. *Goldney.*] If the building was erected in Carey-street you would get as good a sight of it as of St Paul's from a near point?—Yes, about the same thing. The Strand is about as wide as Ludgate-hill at that point, I should think.

2289. It is rather wider at St. Clement Danes' Church, is it not?—I was not aware of that.

2290. Sir William Tite has put a question to you with reference to the Excise Office and India House; do you know what has taken place with reference to the purchase by the railway companies of the St. Thomas's Hospital land: you know that they did purchase a large portion, if not the whole of it?—Yes; I was consulted with reference to part of that not long ago. A triangular part was purchased by a company; and a gentleman who had subscribed some shares consulted me what he should do. They found it almost impossible to re-let it, and they were prepared to suffer some 60,000*l.* or 70,000*l.* loss, I believe.

2291. At all events there will be a considerable loss in the re-sale?—Yes.

2292. There was a much greater demand for offices in the City, three or four years ago, than there is now?—Very much.

2293. Have you heard of a company, the City Offices Company, that are experiencing loss from that fact?—Yes.

2294. Their business was to purchase up land and re-let it for the purposes of building?—Yes; but they made very large offers, judging from one transaction that I had for a gentleman whom I am generally engaged for; they made an offer in that case of nearly twice the amount that anyone else did. They have erected on that land, which I have now referred to, a very large building, which I believe has been a complete failure, as far as any money return goes.

2295. With reference to the Strand being retained as the general road for traffic, is it not the fact that the greater portion of the traffic still goes by Cheapside, notwithstanding the wider space of Cannon-street?—Yes.

2296. Omnibuses and the general public still go that way, even when they want to go round by London Bridge?—I believe experience goes to this, that it is very difficult to divert a great current of public traffic.

2297. And from your general experience and knowledge you would think that the Strand would always remain a great thoroughfare?—I believe so.

2298. You have said, with reference to the number of solicitors living to the north of the Strand, that you have had some experience upon professional matters in seeing solicitors in large practice?—Yes.

2299. As regards those solicitors in large practice whom you have generally seen, do not they generally (apart from figures) live in that district?—I should say from my own experience, having to go a great deal to solicitors' offices, that they do live, a large proportion of them, in Lincoln's Inn and the north.

2300. In a question of this sort, you would take not the number of solicitors but the amount of business that they carry on as the important consideration?—As far as my own business with them has been concerned it has been chiefly with gentlemen to the north of the Strand.

2301. With regard to those in Carey-street and Lincoln's Inn-fields, did you ever hear of their health suffering from occupying offices in that locality?—No.

2302. You never heard them complain of the great nuisances surrounding them?—No.

2303. And you do not think that people in the courts would be worse off than people who lived in the offices all day?—No. A friend of mine lived in an office at the corner of Carey-street, in Bell-yard, and I have never heard of his complaining. He was extremely sorry when he was turned out compulsorily for this scheme.

2304. And as a rule, have they continued in the same offices for nearly the whole of your expreience?—Yes, I believe, for generations.

2305. You have no fear at all about the health of people being affected if the building were put on Carey-street?—I should have none.

2306. As a matter of common sense, do not you think that these Law Courts can be erected on seven acres and a half?—It is impossible for me to say. I declined to compete; and I did not therefore read the instructions to the architects.

2307. Still there are no difficulties that present themselves to you, as regards the erection of the building, that did not exist in 1865?—No, none whatever; the site is the same.

2308. If the site was considered proper in 1865, nothing has arisen detrimental to Carey-street since, that you know of?—Nothing that I know of, certainly.

2309. Mr. *Beresford Hope.*] I think you said, that on the whole, you think the architectural advantages of the Carey-street site and the Howard-

Howard-street site are pretty equal?—I should have great difficulty in saying which I thought the best.

2310. You think that it is a disadvantage to the Howard-street site that the bridges would intercept the view of the building?—To those only who were walking along the Embankment. The one great advantage, I think, artistically of the Embankment site is, that when you are opposite the building you see it from its base, and you see a very noble base, which is the river; but that advantage is diminished, to my mind, by the fact of the base being cut off by the bridges until you come nearly opposite the building.

2311. The First Commissioner asked you whether a similar disadvantage did not attend Somerset House. But do you consider that the view of Somerset House is the mere view of Somerset House, or of Somerset House and of the terrace upon which it is raised?—You must consider the terrace as an integral part of the elevation; it is so in my mind, always.

2312. And therefore you consider that if any large building were to be placed on the ground that Mr. Street proposes for the Law Courts, the eye would not be shocked by that building and Somerset House standing on different levels?—I think that there will be no difficulty in treating the building perfectly well upon the Embankment site.

2313. Have you considered whether the difference of about 22 feet, which would raise the Carey-street building to about the same level as St. Paul's, would be an advantage to the general aspect of the metropolis?—It is always an advantage for a building to be raised when you are to see it in such a great metropolis as this.

2314. On the whole, how would you strike the balance of advantages between the elevated position which you obtain in Carey-street and the full view which you have of the whole façade of the building if it is on the Embankment?—I acknowledge that I should have very great difficulty in saying which, as an artist, I should prefer.

2315. In short, you think that they are both very great advantages?—They are both magnificent sites, artistically.

2316. You do not join, then, in the cry which has been raised in favour of the Embankment site from purely æsthetic considerations?—I think that the advantage of the Embankment site has been exaggerated on artistic considerations, if I may judge from what I have read and heard.

2317. It is your opinion that the Holywell-street block must go?—Yes.

2318. That it must go, as a metropolitan improvement, for the same reason that Middle-row, Holborn, went?—Yes.

2319. Independently of the question whether the Law Courts are or are not to be in Carey-street?—It does not matter to my mind, as far as that matter goes, whether the Law Courts are on the Carey-street site or the Embankment. If the building is anywhere in that neighbourhood, Holywell-street ought certainly to be removed.

2320. Assuming that Holywell-street goes, do you or do you not think that you would have a series of very beautiful picturesque views of a stately building in Carey-street as you advanced from the west, along the south side of the Strand, views which would give you the southern and the western façades of the great building in Carey-street at different angles?—I can only repeat what I said at first, that I think that that site for a building is a very fine one, and that it is impossible to find any position in a street better than that would be, supposing that that block of buildings were removed; and the views coming along from the church would be superb if the front were properly treated.

2321. You do not give in to the notion that you must see buildings up straight avenues and full faced?—On the contrary, I should think that any one who has been accustomed to draw buildings much would agree that the angle view is the one you should adopt. From a great distance I think a direct view of a building immediately in front of you, if it is symmetrical, like St. Paul's, is a very fine thing.

2322. But assuming that public opinion has ruled that the Law Courts are to be in Gothic, and not in Italian or Grecian, you think that the angle view is likely to be a picturesque one?—Yes.

2323. And do you think that the trend of the Strand, which is slightly curved, something like the High-street, Oxford, combined with the Carey-street building standing just above it, on a slightly rising site, would lead to peculiarly picturesque angle views?—I think so.

2324. That being so, do you think that the accident that would compel Mr. Street to make a broken line of building to the west, following the red outline on the plan there, might be an advantage rather than a disadvantage to the building?—With Gothic architecture one rejoices in those accidents that one can get a broken outline on some part of your ground.

2325. Then as an architect with great experience in Gothic architecture, you do not look on that broken line to the west as a misfortune?—If I were to design it I should be very glad of that. One does not like to force the picturesque, but to take advantage of any element which will make your building more picturesque naturally.

2326. Then assuming that there is acreage enough there to hold the courts and offices practically wanted to be put there, do you consider that Carey-street site a lucky one for an architect of ability to deal with?—A very fortunate one.

2327. I think that you are the architect of the additions to the Law Society's buildings in Bell-yard?—Yes.

2328. We have heard it objected to the Carey-street site, that your building comes so very near the building that it will be a detriment to it; can you give the Committee any explanation of that?—I have never heard it suggested. Our building has been erected, and I am only adding to it. I am not responsible for the building as it stands.

2329. It has been urged, more than once, that the proximity of so large a building as the Law Society's building, so near the courts, will produce a considerable inconvenience; you do not think so?—I cannot imagine that any one would suppose that; it is rather further back than the rest of the Bell-yard buildings. Bell-yard is at present wider there than it is elsewhere.

2330. What is the actual distance between the Law Courts and your building?—At my building the narrowest width is 55 feet; that is the nearest point that the two buildings would approach each other.

2331. There would be room then to make a good

Mr. *P. C. Hardwick.*

20 July 1869.

good thoroughfare between the new building and your building without having to pull down anything?—Plenty of space, as far as my building is concerned.

2332. Does your building advance nearer to the Law Courts than the original building that you have added it on to?—The original building is really a little nearer. I am going to set my new building a few inches back.

2333. The detriment, then, if there be any, is not increased by your addition?—No, certainly not.

2334. You consider, then, that, keeping your building, it would be perfectly competent to run up a thoroughfare by widening Essex-street, and then making a carriage street of Bell-yard with a minimum width of 55 feet?—I see no difficulty in that.

2335. That being the case, then, would you get into Carey-street and Serle-street?—Yes.

2336. And then, by opening the Turnstile to the north you would open out the Carey-street building to all the north of London?—Yes.

2337. To come back again to the question of architectural effect, the principal façade of the Howard-street building would be upon the Embankment?—Yes.

2338. And of the other building, the Carey-street building, upon the Strand?—Yes.

2339. There would be no architectural facade to the north of the Howard-street building?—I presume that it would be an architectural façade, but it would not be very well seen.

2340. Do you think that the façade of the Carey-street building would be better seen from Lincoln's-inn Gardens and Lincoln's-inn Fields, down Serle-street, than the Howard-street site from the Strand?—If Serle-street is widened there would be a better view of the Carey-street site, from Lincoln's-inn Fields, than there would be of the Howard-street building from any one of those narrow streets, because the only street that it is proposed to widen I understand is Essex-street at the extreme end of the building.

2341. But from the steps of the hall at Lincoln's Inn you would have a good view of the northern *façade*?—You would see only a part of it. New Square would prevent you from seeing all.

2342. You would see the sky-line?—You would see the sky-line.

2343. *Mr. Chancellor of the Exchequer.*] You speak of the necessity of doing away with Holywell-street, what purchase would that require?—I do not know in the least, I have made no calculation of that.

2344. I want to know exactly what you spoke of with reference to that plan behind you, how far it would go?—I said that it was desirable now and would be necessary, supposing the Courts of Justice were brought to either of the two sites in question, that the block of buildings between what is called Holywell-street and the Strand, should be taken away.

2345. Do you know what length of frontage to the Strand that has? (*the Witness measured it*) —Very nearly 500 feet along the Strand.

2346. Do you know the depth at all; it is narrow near the church and widens out; will you give us an approximation on a rough guess? —Sixty feet is the average width.

2347. How many acres would that be?—Less than an acre.

2348. There would be 500 feet frontage to the Strand, you say?—Yes.

2349. And the character of the property is low in Holywell-street, I suppose?—Yes, small shops.

2350. Have you any idea of what the value of that block of buildings, houses, and land, would be?—Not the least.

2351. It would be something very large, I suppose?—I have no notion.

2352. But it ought to be taken away to do justice to the site?—For either site for the increased traffic, certainly.

2353. With regard to the building on the Carey-street site, you think that it would have a good architectural effect; may I ask, what land you assume you have got for that effect; is it the land coloured red on that plan behind you?—Yes, the land coloured red.

2354. Not the yellow?—No.

2355. Have you seen Mr. Street's plan for covering that land?—The only plans that I have seen are those attached to his report.

2356. You are aware that in one place the building would approach within 10 feet of the surrounding houses, I suppose?—It actually touches in Pickett-street, I see, where there is some building that he calls offices.

2357. But you do not contemplate, I presume, leaving the thing in that state for the Courts to touch the buildings opposite; that would not be architectural effect?—I think that there would be no harm in leaving the offices touching the houses in Pickett-street.

2358. Are you aware what is intended to be left between it and the low houses round?—It is very irregular.

2359. The greatest width would be 55 feet?—No; more than that.

2360. But I understand you to be content with that surrounding for architectural and other purposes?—Yes.

2361. You do not think it necessary to purchase more?—Not for architectural effect.

2362. Or for air, or ventilation, or quiet?—It does not affect the question of quiet.

2363. Not if you have half a dozen Irishmen fighting within 10 feet of the building?—I do not think that the fact of the buildings to the west being close to the courts of itself would affect the question of quiet.

2364. Is it not very low property?—The property that is nearest is Clement's Inn.

2365. Besides that is there not very low property?—King's College Hospital comes very close; the very low property is some distance beyond, at a place called Clare-market.

2366. You think that that is not near enough to affect the question of quiet?—I think not near enough.

2367. With reference to the approach from Howard-street to the Strand, why are you of opinion that it is desirable to widen Essex-street? —I think that the other streets are so very narrow.

2368. Is Norfolk-street a narrow street?—Norfolk-street is a much narrower street than would be desirable.

2369. Do you know the width of Norfolk-street?—About 45 feet from house to house.

2370. Nearly as wide as in Carey-street?—Yes.

2371. Then there are four accesses to the Strand,

Strand, the three others being Surrey-street, Arundel-street, and Essex-street?—Yes.

2372. You think that Essex-street should be widened in any case?—I think that it would be desirable to widen Essex-street.

2373. Do you see any necessity, taking Mr. Street's plan for the Carey-street site, for spending any money on approaches?—No greater necessity than I think would be involved by removing Holywell-street and widening Serle-street, and making the approach to Holborn, which I think is a necessity common to both sites.

2374. I am speaking now of Carey-street; that would be a necessity, would it, for Carey-street?—I do not think that there is any necessity to widen Carey-street for the Carey-street site.

2375. Do you know what the estimate is of widening the Turnstile?—No, I do not know the estimates that have been made of it.

2376. Do you think that anything else would be necessary, any approach from the east?—None, but what I have already alluded to. I think I said, in the beginning of my evidence, that certain improvements ought to be made in the more distant approaches, whichever site were adopted, and I thought that those were common to both sites. And with regard to the nearer approaches, that is to say, the streets immediately surrounding the sites, it would be very desirable to widen Essex-street, as Mr. Street proposes, and to widen Howard-street; or if the other site were taken, to widen Bell-yard.

2377. And you think that that would be unnecessary for the purposes of the Howard-street site?—It would not be necessary to widen Bell-yard.

2378. That would be necessary for the Carey-street site?—Yes.

2379. Is there anything more required for Carey-street that would not be required for Howard-street?—I do not think that there is anything.

2380. You do not think that the fact of the approach by the river and the Embankment exonerates Howard-street any more than Carey-street from building any other approaches?—I do not think that it would dispense with Mr. Street's proposal, widening the three end blocks in Howard-street, and also widening Essex-street.

2381. Mr. *Layard.*] Will you state what the width of Carey-street would be if you did not buy the opposite property?—I ought to say that I am taking these dimensions from the roughest plans and very imperfect scales. It would be 52 feet, about.

2382. Without being widened?—Yes, because these plans show the low buildings at the back of the houses, and I am giving you the dimension between the outermost line of the building which would represent, I suppose, the pavement and the front of those law buildings. Carey-street could easily be widened by the removal of those low buildings at the back of the houses in New-square, but I am giving you now the dimension, without widening; but it is unsatisfactory to give you dimensions from such imperfect plans.

2383. I understood you to say that the façade of a building on the Carey-street site could not be seen from any one point until after you have got through Temple Bar on the east, and round St. Clement Danes' Church on the west, unless Holywell-street were removed?—If you advanced up the Strand, and took the south side of the Strand, you would see it directly the eye got the line free of the south-eastern angle of that block of buildings to which I have been alluding as what ought to be removed.

2384. Would not St. Clement Danes' Church be in your way there?—The St. Clement Danes' Church, I think you would find, would abstract only so much of the building as is immediately behind it, but the courts would extend east and west of it, and would be such a lofty building that the St. Clement Danes' Church would only obstruct them partially.

2385. Coming from the east, you would not see anything till you had passed Temple Bar?—If Temple Bar is allowed to remain, you would only see a fragment till you passed Temple Bar.

2386. Mr. *Chancellor of the Exchequer.*] I believe that the Carey-street site has cost 750,000 *l.* including the expenses of the commission?—Yes.

2387. Do I rightly understand you to be of opinion that 440,000 *l.* would be lost on the resale of that?—I think so.

2388. Then do you think that it was purchased at a very extravagant rate?—Not at all. It is the natural consequence of removing buildings where you purchase a large estate like that, six or seven acres, compulsorily. You have to buy the land, you have to purchase that of the owner of the land. You buy the leaseholds, you give trade compensation, and the only thing left you is the land, after you have removed the whole of those buildings. All that is so much property destroyed, actually destroyed.

2389. In this case it was a very low class of property, was it not?—Well, it was a very valuable property, so far as this, that it was densely inhabited.

2390. You are aware, perhaps, that Mr. Hunt estimated what it would cost to purchase it?—Yes.

2391. And that his estimate turned out substantially correct?—Yes.

2392. If then he estimates that nothing will be lost on the land, should you be disposed to take his estimate?—The basis that he takes for that opinion, is one that I doubt very much, the offer of a nameless company to give three per cent.

2393. That rests upon his word?—Hardly, as I think; it rests upon the word of the company.

2394. You do not doubt the offer being made?—I do not doubt anything that Mr. Hunt says.

2395. You think, in ignorance of who made it, that it is not a valid offer?—I should be sorry to advise any friend of mine to act upon such a vague offer.

2396. Is it not an indication of the value of such thing, that such an offer should be made?—It depends upon who makes it.

2397. What do ground rents sell for in London, how many years' purchase?—Twenty-two up to 28 years' purchase, according to circumstances.

2398. Not more than "28"?—In rare cases 30 years, but then those are ground rents which are already secured, as it is called, that is to say they are ground rents with buildings on which you come for the ground rent previous to the rack rent.

2399. Mr. *Osborne Morgan.*] Would you advise any company for which you were acting as

Mr. *P. C. Hardwick.*

20 July 1869.

architectural adviser to give 750,000 *l.* for that ground?—Certainly not.

2400. Lord *John Manners.*] Looking at Mr. Street's plan of the Carey-street site, you have been asked a question by the Chancellor of the Exchequer as to the proximity of a certain portion of that plan to Yeates-court; will you look on that plan and tell us whether that part of the building which is in close proximity to Yeates-court is what Scotch architects call a roundlet, a round projection?—Yes.

2401. Would you agree with Mr. Street saying that, if the proximity of that roundlet to Yeates-court was thought unadvisable, he could easily re-arrange that portion of his plan?—I should think so, if he wants it for convenience. It is a very small area. How far it affects his elevation I cannot say.

2402. With respect to the removal of the Holywell-street houses, am I right in saying that your position is that whether the Law Courts are placed on the Carey-street site or on the Howard-street site, it would be advantageous that that block of houses should be removed for the convenience of the traffic going, in the one case, to the south of the Law Courts, and in the other, going to the north?—Yes, certainly.

2403. But supposing that they are removed, would the buildings, if placed on the Embankment site, be better seen after removal of the Holywell-street block?—It would not affect the appearance of the buildings on the Howard-street site, which you could only see then when you came directly opposite the end of one of those streets leading down to the building.

2404. But supposing that the Law Courts are placed on the Carey-street site, and the Holywell block of buildings are removed, then I apprehend that you would gain greatly in the view of the building by the removal of Holywell-street?—Very greatly; a magnificent view of that building it would be.

2405. Therefore in your opinion, while the removal of the block of houses in Holywell-street would be advantageous and convenient for either site, it would be doubly advantageous if the Law Courts were placed on the Carey-street site?—Certainly it would give you a noble view of that building.

2406. Mr. *Beresford Hope.*] What is the character of the houses in Holywell-street; are they good respectable houses, or not?—I never went into one of them, but, judging from what one sees in passing, I should say that they are of the very lowest possible character. Holywell-street is one of the oldest parts of London, judging from the gable end and the timber construction of the buildings.

2407. And it is not reputed to be respectable in the character of the trade carried on there?—I think the police reports have shown us that.

2408. Mr. *Osborne Morgan.*] Is it partly untenanted?—There was a scheme for placing an hotel there, but the company is practically bankrupt, I believe.

2409. Earl *Grosvenor.*] Considering the approaches which the railway, the Embankment, and the river will give to the Embankment site, would you not consider that the removal of Holywell-street is not so essential by any means to it as to the Carey-street site?—I think it would be essential in either case, because my theory is that the Embankment road will not be so much used as is apprehended, and that such a large quantity of traffic will come along the Strand that even if the building is placed on the Embankment you will have to remove Holywell-street, which ought to be removed even now, I think, for the sake of the ordinary traffic which now runs along the Strand.

2410. Mr. *W. Cowper.*] May I ask whether, supposing you remove the block of the Holywell-street buildings without touching the churches, you actually gain much in the width of the street. The distance between the churches is not very much less than that between Holywell-street and the south side of the Strand?—I trust that the removal of Holywell-street would point out the necessity of removing the churchyards; that is, the enclosed spaces. I do not go into the question of the churches themselves. The remains in those inclosures ought to be removed elsewhere, as they have been in the city of London, and the whole of that space thrown into the carriage traffic.

2411. Lord *John Manners.*] Architecturally, if the church is allowed to remain, it will act as what you call a scale to the larger building, would it not?—I should not now build a church in the position of St. Clement Danes, but I think that it would not be any great detriment to me if I were an architect designing a building on the Carey-street site.

Sir Roundell Palmer, Q.C., a Member of the House, Examined.

Sir *R. Palmer,* Q.C., M.P.

2412. *Chairman.*] We are aware that you have taken a great interest in this question of the site for the New Law Courts, and perhaps I need hardly ask you whether you have formed a decided opinion upon it?—Yes; the Committee know that I have done that.

2413. And probably you have had many opportunities of communicating with other members of the legal profession, and you are aware to some extent what their feeling is?—Yes, to a very considerable extent, I think.

2414. Are you prepared to state from your own knowledge what is the feeling as regards one of these sites as against the other?—I should say that there is a very great preponderance of feeling both in London and in the country, and taking them as a whole in all branches of the profession, in favour of the Carey-street site. I may mention to the Committee what perhaps they already know, that among the petitions which I have recently presented, there was one signed by solicitors in London, of which, including persons and firms, the number of signatures is 1,281, and if you reckon the individual members of the firms, that would represent 1,661 individuals, and I believe that a similar petition is still being signed. I have got a division of those signatures made out in this way. From the western district, that is west of Wellington-street, Strand, on both sides of the river, for Carey-street 174, and only 61 refusals to sign from that district. From the central district 635 signatures, and 82 refusals to sign, the central district being the one which lies between western and the eastern districts; and from the eastern district, which is on both sides of the river east of Farringdon-street,

street, 472 signatures, and only 135 refusals to sign. But when I speak of refusals to sign it may be right to mention that in some cases, as the Committee might suppose, the members of one firm are not all of the same opinion. For instance, we had the signature of a firm who went to my Right Honourable friend the Chancellor of the Exchequer as representing the Howard-street interest, and upon my pointing out the inconsistency of that signature being upon the petition, it was removed, no doubt on the ground of want of unanimity in the firm; and among those who refused there may be many similar cases. The total result is that that petition contains, as I have said, 1,281 signatures, and it is still in progress, and of all asked to sign only 278 have declined to do so. There is a great preponderance from all the districts, western, eastern, and central, and there is no part of the Metropolis in which the preponderance of the opinion of the profession, is not, as far as my information goes, very greatly that way. Then I may mention that I presented a petition signed, not by individuals, but by officers of the body on behalf of the Provincial Law Association; and the representation made by them is of very great unaminity throughout the country in accordance with the prevailing view of the profession in London, and that, both because the offices of the majority of agents are in what we call the legal district, and because, independent of that altogether, the general sense of convenience is the same throughout the profession. Then I may mention that, besides minor petitions, including some from country towns and other places, which I will not trouble the Committee by speaking of, I presented recently a petition from members of the bar containing 393 signatures, of which 74 were from the Temple, and the rest from other Inns of Court. No doubt the Committee very well know that considerable efforts have been made to persuade those who live in the Temple that it would be for the benefit of their societies that the building should be on that side of the Strand. But I think that, with the exception of those influenced by that opinion, the opinion of the barristers is quite as preponderating as that of the solicitors, in favour of the Carey-street site. That is what I believe, and I have no doubt that the more it is inquired into the more it will appear to be the case.

2415. Have you any means of comparing the total number of those who have given an opinion one way or the other with the total number of the profession practising in London?—With regard to the solicitors, I can give the Committee that information; I do not think that I have the figures as to the barristers. I find a total number of 3,153 solicitors appearing in the Law List; and therefore the Committee will see that the number who have actually signed the London solicitors' petition, which I presented, make more than an absolute majority of the whole number of solicitors in London, and that those who have declined to sign are a very trifling minority.

2416. In those petitions do they confine themselves to a statement of their opinions, or do they give their opinions also?—I think that, for the most part, they give their reasons. I hold in my hand a copy of the petition, with the signatures, of the London solicitors. In that petition they mention the convenience of the situation: "That the Carey-street site is in the centre of the district in which the whole of the bar and the great bulk of your petitioners are settled; it has Lincoln's Inn on one side of it." And then it describes the Carey-street site. Then they say, "That your petitioners view with consternation the proposal of Her Majesty's Government to abandon the site in favour of one smaller in size, less suitable in shape, and at an inconvenient distance from the legal district." Then they say that they anticipate delay from the adoption of the Embankment site. Then comes this passage in their petition: "That the first consideration in the erection of the new Courts ought to be the proper and convenient administration of justice. It was never intended to build new Law Courts and offices for the decoration of the River Embankment. A grand and majestic building may nevertheless be raised on the higher level of the Carey-street site, and be a greater ornament to the metropolis than if placed on the Embankment site." The Bar petition, of which I hold the signatures in my hand, also gives reasons. They say that they "Take a deep interest in the concentration of the superior courts for the administration of justice in the metropolis, and consider it to be of paramount importance that the concentration should be effected in the centre of the great legal district, and as near as possible to the several Inns of Court, where, and around which, the chambers of the barristers, and of a very large proportion of the solicitors, are congregated. The advantages to be derived from judicious concentration must be incalculably great in expediting the business of the suitors by economising the time, and diminishing the labour of their representatives, the practititioners, in the several courts;" and then they say, for reasons similar to those in the solicitors' petition, but stated at greater length, that they greatly prefer the Carey-street site.

2417. Do I rightly understand that a considerable number of barristers residing in the Temple have signed one of these petitions?—Seventy-four have signed the petition that I mentioned. I do not know how many may have signed any other petition.

2418. Have you reason to suppose that any considerable number of those signatures were influenced by the opinion that if the Carey-street site were adhered to the building would be completed at a much earlier period, whereas by changing the site an indefinite amount of delay would be produced?—The apprehension of delay is undoubtedly mentioned among the reasons given in the petition; it is impossible for me to say how much that consideration may have operated; as far as I can say, I should think that it is not the leading consideration with those who signed the petition

2419. You think that, apart from delay, there is a deliberate conviction in the majority of the profession that the original Carey-street site is more convenient for their purposes?—I have not the slightest doubt of that. Perhaps the Committee will permit me to refer them, because I do not think that anything can better state my own individual opinion and the grounds of it, to some passages in the evidence given before the Law Courts Commission of 1859. If the Committee will take a note of the answers given by Mr. Lake to Questions 246 to 250, inclusive, and to Question 257, I think they will find that the opinion then entertained when no such controversy existed

Sir *R. Palmer*, Q.C., M.P.

20 July 1869.

existed as at present, was exactly the same as that now entertained. If I might be permitted to do so, I will read the questions and answers, which are not very long. Mr. Young, who was a member of the Commission, asked Mr. Lake this question: "Is there not to common law barristers an enormous loss of time from being at Westminster separated from their chambers, and all that business which they transact at chambers"? He answered, "Certainly, I speak from my own observation and their information too." Sir George Lewis asked, "Does not that inconvenience arise, not from the dispersion of the courts, but from the distance of the court from their chambers"? And he answers, "Yes, to a certain extent." Then the next question is, "Supposing, for example, that the courts were concentrated in one spot, and that that spot was at a distance from their chambers, would not the inconvenience be just as great in that case as it is now"? And he answers, "Yes." Then he is asked, "Then, in fact, your plan involves two conditions; one is, that the courts should be concentrated; and the other is, that they should be concentrated near the chambers of the barristers and attorneys?" The answer is, "Certainly." Then this question is put, "Unless it fulfilled both those conditions, the plan would not, in your opinion, be satisfactory?" And the answer is, "No, I think not; of course it would be something to get the concentration, even if the situation were not quite so good; but the plan would not be perfect without both." And then to Question 257, by Mr. Young, with reference to what is now called the Carey-street site, he is asked, "Is that the site which you consider best adapted to combine the various advantages spoken of; that is to say, concentration of all the courts and offices, and concentration in the neighbourhood of those places in which the barristers and solicitors mainly reside?" and he answers, "It appears to me so; it appears to me to be the best site which you can get." Perhaps I may be permitted to add the answer given by Sir Richard Bethell, then Attorney General, to Question 700. He was asked, "Have you turned your attention to the question of where the best place would be for the concentration to be carried out?" and his answer is, "I have for the last four or five years been extremely desirous of having the courts concentrated in a spot which, if I may use the expression, appears to have been created, and left as it were, on purpose for this great improvement, namely—" and then he describes the Carey-street site, precisely within its present limits. He says, "The great benefits which would result to the public and the profession from that particular locality cannot be over-estimated." Without adopting the peculiarity of the language in which that last answer was expressed, about its being created on purpose, I deliberately avow my opinion to be, and always to have been in substance, exactly that which is expressed in the answers to those questions; and I think that there would be a great loss of a very material part of the advantages intended from concentration, if the site were to be removed so far as to Howard-street.

2420. At the time when those answers were given, I apprehend that the Embankment was not in contemplation?—The Thames Embankment was not then in contemplation; the Act for it was passed in 1862; but it is quite manifest that a site in that part which, putting aside the ground reclaimed from the river, would now be in the Howard-street site or thereabouts, was quite as possible then as now, if it had been in itself a desirable site; I mean desirable for purposes of utility, putting aside the embellishment of the metropolis.

2421. Do you not, then, consider that the creation of the Embankment, with the road and the railway upon it, has very materially altered the conditions of the problem to be solved?—With a view to utility, in my opinion, not in the slightest degree whatever. I look upon that as mere error, a mere fallacy. I do not think that the road and the Embankment will be in any appreciable degree conducive to the convenience of those who have business to do in the courts.

2422. Will you explain that opinion a little more fully?—By far the greater part of the legal profession in London, and those who represent by far the greater part of the country attorneys, reside in what we call the legal district, which is principally to the north of the Strand. Those persons will never use the Embankment road or the railway. But it is not only those who reside there who will not use it; other attorneys or solicitors having business to do, unless they reside near some station of the Metropolitan Railway, will not use that railway for the purpose of approach; and they cannot always afford to wait till a convenient opportunity occurs, even if they are near a station; they will go the shortest and quickest way to the business that they have to dispatch. The consequence is, that even those who happened to be near the Metropolitan Railway Stations would not always find it convenient to use that mode of access, and those not near them would, as a matter of course, not use it. And with regard to the main road along the Embankment, those who happen to come from the other side of the river, or who live upon the river side, may perhaps use it, but those who live at a distance would never do so. It seems to me to be altogether a delusion to imagine that for those who do the business of the profession those modes of access would be to any great extent available or convenient.

2423. Assuming the Carey-street site to be adopted, do you think that the majority of those constantly employed in the courts would not come to them by way of the Strand?—I think not; I think that the majority would come from the north; of course a considerable number would come by Fleet-street and the Strand. If you take the eastern part you may divide the City into those who would come by the Holborn line and those who would come by the Fleet-street line; and those who came by the Fleet-street line would come by the Strand, but those who came from the north would not. The preponderance of business lies to the north, though I do not undervalue the importance of other portions.

2424. In your view the circumstance of the Strand being over-crowded by traffic is by no means material?—By no means material to the Carey-street site, but infinitely material to the Howard-street site, and an objection of the greatest magnitude to it, because the whole northern traffic is then sent across the Strand.

2425. Are you aware that it is proposed to meet the difficulty by a bridge or tunnel, or both, across the Strand?—I saw in Mr Street's report that such a thing had been suggested by him; I did not understand that it was any part of the Government plan. Of course that would so far

meet

meet that objection, that it would afford a mode of access not interfering with the Strand.

2426. Taking that large body of legal gentlemen whose offices are in the Temple, would it not be an inconvenience to them to have to cross the Strand to go over to Carey-street?—I will not deny that it would be in some degree an inconvenience to them, and it was one which even at the time that the Act of Parliament was passed it was in contemplation to relieve them from, and if they are likely to have less accommodation now than before, I can only say that it is their own fault for throwing their influence into the rival scheme. But if we had the building on the Carey-street site, and it were found material to give them that access, the present or some other Government would certainly give it them. It is a question of comparison; I think that it would be a very proper thing to do, and I should wish to see it done. But you can cross the street as I have done very often, even in wig and gown, under circumstances of necessity, though I cannot call it a convenient crossing. Of course it would be infinitely worse for those who came from the greater distance, Lincoln's Inn; they would not only have to walk across, but must walk all the way from Lincoln's Inn to the Strand, and again from the Strand to the courts. We should have to go a length which I have no hesitation in saying would be prohibitory to doing business at the same time in court and in chambers.

2427. If you put the building upon Carey-street it will become, sooner or later, a necessity to have a bridge or a means of access from the Temple; if the other site is chosen it will become a matter of necessity, or at least of convenience, to have a bridge over, or tunnel under, the Strand?—I would rather use the word "convenience" than "necessity." I mean that we should do without it if it were not given; but it is to be observed that a bridge over the Strand would be bridging over a very small part of our difficulty from Lincoln's Inn, though it would be bridging over the whole from the Temple. Perhaps I may be permitted to tell the Committee what I found upon making an experiment last Saturday to see the time occupied. I should mention that I practised for some time, in fact till I became a law officer of the Crown, I usually practised after I was Queen's counsel in the Rolls Court, and therefore I know that the distance even of the Rolls Court from chambers in Lincoln's Inn, which would slightly exceed that of the courts if placed in Carey-street, is just as much as can conveniently be reconciled with spending the spare time in chambers and having a clerk watching. The Rolls Court was quite as far as it was possible to go to without inconvenience. To go to the Rolls Court from the south-west angle of the exterior wall of New-square, Lincoln's Inn, abutting upon Carey-street as I measured, would take you about two minutes; and to go from the same point down Howard-street and back again by the nearest present mode of access, took me, walking fast, in fine weather, without any incumbrance, in the shape of book or bag or gown, exactly 10 minutes; I do not mean running, but walking as fast as one comfortably could without running. I suppose that if you gave a road across the Carey-street site you might possibly save, say two minutes. I do not think that you would save two minutes going there and back, but we may take it to be two minutes. Then you would have eight minutes in addition to what would be lost by going to the courts if placed on the Carey-street site; because in each case I started from a point in front of the new courts in Carey-street and stopped at a corresponding point in Norfolk-street, down which I came from the Strand, at its junction with Howard-street. It would make a difference of eight minutes going backwards and forwards in addition to the time now necessarily lost in being fetched to any of the existing courts, which is not at all a point to be overlooked. I have no hesitation in saying, as I have said already, that it would be prohibitory.

Sir *R. Palmer*, Q.C., M.P. 20 July 1869.

2428. Do you consider it a matter of importance that in any building which is now put up provision should be made for the possibility of future extension?—Well, I think that it would be a wise thing certainly, but I cannot say that I think it is an absolutely necessary thing, because I hope that the building, as it would be made, would contain all those courts and all those offices for which it is proposed to make provision, and they appear to me to include all which are indispensable, and to leave some room to spare which is desirable; and though I should think it desirable to have the means anywhere of extension, yet I do not look upon that as so narrow an allowance of room as to make it impossible to get on with that allowance even if you have not the means of extension. I think that it would be better to have them, but I do not attribute first-rate importance myself to that consideration.

2429. Are you at present contemplating the reduced original Carey-street site, or the larger scheme?—I am entirely contemplating the reduced or original site.

2430. You think that even that would give all the room that would be required?—It would give decidedly more than the other, and I have no hesitation in saying that I think it would give all which is really necessary. It would give a good deal more room than you get in the other, as far as superficial space goes.

2431. Mr. *Chancellor of the Exchequer.*] Do you contemplate any purchase to supplement that site, or would you take it as it stands?—I mean taking it strictly as it stands. Of course the Committee will not suppose that, if I were Chancellor of the Exchequer I should want to stint the public in the one site or the other; I should think that whichever site was taken it should be done reasonably, and with a view to the public convenience; but I will assume that no more can be taken, and what I say is upon that assumption.

2432. The assumption that nothing more is bought than the land as it stands?—Nothing more.

2433. Your opinion is that it would be sufficient for practical purposes?—I have no doubt of it.

2434. I understand you to view this as a barristers' and solicitors' question?—I cannot separate the public interest from that of the lawyers in this matter. In the administration of the law we are their servants; the people are interested in it.

2435. It is a public question, but the interest of the public is identical with the interest of the profession, so that practically we may take the interest of the profession to be that of the public, you think?—The convenience of the profession for the administration of legal business seems to me, in this matter, to be the public interest.

Sir *R. Palmer*, Q.C., M.P.

20 July 1869.

2436. Therefore, what the majority of the legal profession in London think ought to be done in that matter it is for the interest of the public to do?—It is not only the legal profession in London, but in the country also.

2437. Supposing that the majority in the country preferred one thing and the majority in London the other, what is to decide?—If it were so, speaking, of course, of those country practitioners who have business to do in London, it would be some evidence that the opinion which I have been expressing was not that of the profession at large; but I believe it to be otherwise.

2438. But it is the opinion of the profession that you would be guided by?—Not merely their opinion, it is my own opinion too. The facts upon which the convenience of the profession depends seem to me to be what we ought to be guided by.

2439. Do you regard the legal profession as an irremovable body which must by some innate necessity remain in the place in which they live now?—I think that, as a matter of fact, they will remain there for such a length of time that you would inflict a great injury on the public if you were to remove the courts of law to any inconvenient distance from them.

2440. Have you not proved yourself that it is convenient to live near the courts?—Yes.

2441. And do not you think that wherever the courts are put, the legal profession will follow them?—Most certainly not, and experience has proved the contrary, I think. The courts met at Westminster for a long time, and the legal profession did not go there.

2442. You think that they would remain where they are, wherever you put the courts?—Most assuredly they would, so far as the Temple and Lincoln's Inn are concerned. I do not think that any more chimerical idea could be entertained than that they would change their quarters.

2443. Do you apply that equally to barristers and solicitors?—I do not think that it would apply in an equal degree to the two. It would apply more to barristers, although I think it is also true that wherever barristers are congregated, from the convenience to many of the leading solicitors of their having their chambers in the same place, it would apply to them also.

2444. The barristers are immovable in your view, and the solicitors circulate round the barristers, so that practically the whole profession is immovable?—You know that practically there are two great colleges in the Temple and one in Lincoln's Inn, and the convenience of being near them for purposes of business, has brought into them many solicitors. The solicitors, do not, strictly speaking, belong to the societies which form those aggregates, but convenience has brought them there.

2445. A great part of the buildings in Lincoln's Inn are in a poor state, are they not?—They are old; I do not know whether they are dilapidated.

2446. They will require to be rebuilt before long, will they not?—The word "require" I cannot speak to, but I should think that at some time or other it is possible that they will be rebuilt. I have not heard of any proposal on the subject.

2447. You think that when that day arrives, supposing that the courts were altered, they would still be rebuilt on the same spot?—Yes.

2448. Do I rightly understand you to contemplate any money being spent for approaches on this Carey-street site?—I think that the Government ought to spend money for that purpose for either site.

2449. For the Carey-street site, ought they?—I do not think it indispensably necessary that a shilling should be spent on anything beyond what would be obtained in laying out the site itself.

2450. What would be obtained in laying out the site itself?—You would get space for a street on the Bell Yard side, and space for a street also on the other side, the west, if it were desirable to have both. Then you would get a certain width on the south side of Carey-street to widen Carey-street, and possibly also the Strand too.

2451. You do not contemplate the necessity of expending money on that?—Not as a necessity; but I should be very much misunderstood if it were thought that I should not consider a Government which, supposing either site to be adopted, did not make the proper approaches, a very shabby Government. I think that the approaches wanted from the north would be the same, whichever site you took, except that in one respect more would be necessary for Howard-street, because you would want then a large street through Carey-street, in addition to everything else. It may be a correct view that that would fall in so easily with the plans for building on that site, that it would be a consideration of no pecuiary importance. But putting that aside, in order to give the lawyers to the north proper facility of access to the Howard-street site, you would want to enlarge Serle-street, and make an opening to Holborn, quite as much as if the building were on the Carey-street site. I should like to add to that answer something founded upon experience. We have got now all the courts of equity, and since 1849 we have had them always, sitting and doing all their business in Lincoln's Inn. We have also got there the Accountant General's Offices and various offices, and some of the common law offices. We have the Record and Writ Clerks Offices there, and the Public Records at the Rolls Court; and we have been going on with the approaches as they are, and have been doing the business all these years. What we have been doing we could do even if no improved approaches were made there; but you would want an approach from the North, if the new courts were built upon that Embankment site at least as much as if they were built by Carey-street.

2452. Mr. *Layard.*] I presume that it may be assumed that the Carey-street site would be most convenient for the Chancery bar?—With the exception, which I do not at all undervalue, that the Templars would have to cross Fleet-street or the Strand, it would be exactly the same to both; the plan being of course to put the common law courts upon the south side and the equity courts upon the north side; it would be equally distant, and quite as convenient, as has been distinctly proved, in point of distance, to the Temple as to Lincoln's Inn, and in that respect at least as convenient to the Temple as the other proposed site; the difference, to the disadvantage of Lincoln's Inn, of going to the Howard-street site is no doubt infinitely greater; but as far as distance goes, the distance of the Howard-street site would be just as far to the Templars as that of this Carey-street site.

2453. But supposing that we had only to deal with the common law bar, and that the plan of some

some of the Lincoln's Inn benchers to have separate courts of equity were carried out, you would not have these objections that you now entertain to the Howard-street site?—Then you open a new set of objections. I cannot conceive a course more utterly contrary to all sound principle than to endeavour to keep apart for architectural fancy, or whatever else I am at liberty to call it, the courts of law and equity, and perpetuate the objections so long felt to the present separation between them.

2454. But supposing that the convenience of the common law bar were alone concerned, the objection to the Howard-street site would not remain?—If there were no bar in existence but those who live in the Temple, of course the objection founded upon the existence of other people in Lincoln's Inn and elsewhere would not arise.

2455. Do you believe that the recommendations of the Judicature Commission are likely to be carried out?—To a great extent they will, no doubt. Some may be adopted, and some may not, just as in the case of the recommendations of any other Commission.

2456. Supposing that those recommendations were not carried out, would not that modify your opinions as regards the Howard-street site?—Not the least in the world. The recommendations of the Judicature Commission proposed to break down all artificial barriers, but not to do away with the natural divisions of business.

2457. You are aware that one of their recommendations is that the Home Circuit should be brought to London?—Yes, I am perfectly aware of that.

2458. Supposing that recommendation to be carried out, would not the Thames Embankment site be an enormous advantage to those who live in the counties included in the Home Circuit?—I do not think it an advantage that would be worth taking into account, in comparison with other things, bearing in mind that people who landed on Essex-street could go up to the new courts.

2459. The great mass of jurors and the public in general would find it an advantage, would they not?—The great mass of jurors would not come from there; they would find their way from all directions. What is said about the public in general in this question seems to me misleading. The courts ought to be open to everybody who will come unto them; but it is no part of the duty of those who provide courts of justice to attract crowds of spectators for the sake of attracting them.

2460. The Courts of Chancery do not, as I understand, as a general rule, require the attendance of jurors and witnesses, but the common-law courts do?—That is so.

2461. If the Home Circuit were brought to London, the jurors, and witnesses, and suitors interested in law cases would have to come to London?—They will not all come from the south; the plan for the jury list is a comprehensive plan, and the jurors would live in different parts of the metropolis, and the surrounding district, probably as many to the north as to the south. Nothing can be more mistaken than to suppose that they would all come by that route, or even to attempt to define the proportion that would come by it.

2462. When the circular railway is finished round London, then access by rail could be had from all parts of England and all parts of London to the courts, if they were on the Embankment?—In my opinion, it would be a more easy access from the greater part of the railways to Carey-street, because the great stations are in the north, the Great Northern and the London and North Western, for instance. I do not know about the Great Western; it may communicate with the Metropolitan; but that seems to me the old mistake of supposing that every one lives near a metropolitan railway station, and will get into a train. In 99 cases out of 100 they will not.

2463. Might they not, if they had the opportunity?—I do not believe that the business world will go by that route.

2464. You spoke of the petitions presented by solicitors in London and the country; were not those petitions drawn up on representations made by the Incorporated Law Society?—The Incorporated Law Society took a great interest in obtaining the petitions; but my opinion is, that the solicitors judge for themselves in these matters, and do not take their opinions from the Incorporated Law Society.

2465. But has there not been a great influence brought to bear by the Incorporated Law Society on the legal profession?—None, except in the public interest.

2466. Are you aware that the statements circulated by the Incorporated Law Society have been proved to be very inaccurate?—I know that there has been a map of theirs, and great criticism upon that map, which to me appears very idle and irrelevant. It is true that that map is, in some of its outlines, and perhaps in the intensity of some of its black marks, inaccurate; but it was intended for the exhibition of actual facts in a general form, and it would not convey to any one who did not measure it like a surveyor anything that was substantially false.

2467. Putting aside the map, have not the statements as regards the form, and as regards the position of the building, and the relative cost of the two sites, been found to be inaccurate?—Whatever was stated was stated from information which was believed to be correct at the time, and the inaccuracies, which have been pointed out, appear to me to be entirely beside the purpose.

2468. Lord *John Manners.*] You have been good enough to give the Committee your idea as to the proportion of the solicitors who wish the Law Courts to be erected on the Carey-street site, contrasted with those who wish them to be erected on the Howard-street site. Will you have the kindness to look at that paper (*handing it to Sir Roundell Palmer*) which was put in to the Committee the other day by a witness, and answer one or two questions on it. I think in that paper the legal profession is divided into five districts?—Yes.

2469. The first is the City, in which it is assumed that 1,270 solicitors live, and that from the fact of their living, or having offices in the City, they would find their convenience in having Law Courts erected on the Embankment site: are you able to tell us from the document to which you have referred, practically, how many of the City solicitors are in favour of the Carey-street site?—The first question is, how they mean to define the "City." If I may be permitted to make the first observation, that occurs to me on this paper, one does not know whether it means the City, within the walls or liberties, if not, what ex-

Sir *R. Palmer*, Q.C., M.P.

20 July 1869.

actly it does mean. Then you have got the "Temple," and then you have got "Westminster;" does that mean the metropolitan borough of Westminster? Then you have Oxford-street and Regent-street. I do not know what Oxford-street and Regent-street mean here, or how the divisions were made; but if I am to suppose that they coincide with the paper which I have had, the Committee will see that whereas it is here represented that the Embankment site is most convenient for 1,270 solicitors in the City, I find that in the eastern quarter, which I suppose would be the City, 472 signed for the Carey-street site, and 135 only have refused to sign for it; and with regard to Westminster, 200 are said to be those whose convenience will be consulted by having the building on the Embankment site; but in the western district I have 174 for Carey-street, and only 61 refusals to sign. And I would observe that nothing in the world can be more fallacious than the suggestion, that because a man lives in the west, or because he lives in the east, therefore the Embankment site will be the most convenient to him. It may possibly be so to the gentlemen whose offices are close to a station on the Metropolitan Railway, or who live on the river side, but not at all to the others; and supposing even that a gentleman were so situated that he could conveniently go to the courts in that way, yet the separation of the courts from Lincoln's Inn, where he might have business, or from the offices, would be an inconvenience to him; and if you put the courts in a place where he would be brought as nearly as possible into the focus of his business, and be able to communicate with those with whom he had to communicate, it would be of much more importance to him than merely facility of going by railway from his own residence to the courts.

2470. We may take it that of the 1,270 solicitors stated in that paper to live in the City, you are able to say that 470 have already signed in favour of the Carey-street site?—That again involves a definition. I told you what my eastern district was; it is the district east of Farringdon-street, on both sides of the Thames. My central district is the district west of Farringdon-street and east of Wellington-street; and my western district is the district west of that: but as the total number of solicitors seems to agree in this paper of mine, I suppose that in some way or other these denominations are intended to cover the same extent of ground.

2471. And in the western district 174 have already signed the petition in favour of Carey-street, I understand you?—Yes; since this paper has been put in I may be permitted, perhaps, to tell the Committee that the firm whose name had been attached to the petition, but was removed upon my calling their attention to the fact that they had been at a certain deputation, were Messrs. Baxter, Rose, & Norton.

2472. The paper put into your hand ends with a statement that a majority of 276 will therefore find their convenience in the Embankment site. From the figures that you have submitted to the Committee I need hardly ask whether you agree in that?—No, on the contrary, it seems to me to be of a piece with a great deal more that one has heard.

2473. You have, I think, stated that if the convenience of the profession, who reside to the north of the Strand, is any way to be consulted, it would be absolutely necessary to provide the accommodation which Mr. Street suggests, by means of a bridge or tunnel from the north of the Strand to the Howard-street site?—I did not use the words "absolutely necessary"; I do not think that I should call that sort of accommodation absolutely necessary in any case; because if the world were obliged to do without it they would do as well as they could without it; the law business would not be stopped because people had to go under very great difficulties across the Strand; but I think that it would be in all reason a convenience that should be afforded to them; after all it would go a very little way, because it would not destroy the distance.

2474. There was some answer that you gave in which the word "prohibitory" found a place; will you explain that?—Prohibitory, I mean, to the great convenience, a convenience which is attended with very important consequences to the public, of barristers being enabled, without neglecting the business in their chambers, to be ready to attend to their business in the courts; and upon that subject I think it may be not unadvisable for me to remind the Committee what has actually happened, and which will partly explain why those who live in Lincoln's Inn are more keen upon this matter than those who live in the Temple. Ever since the year 1849 those who practise in the courts of equity have had the advantage of being able to reconcile their chamber business with their court business in the greatest possible degree; that is to say, the courts have been close to them, and those who have not been so fully occupied in court as to be obliged by the business going on always to be there, have been able to be in their chambers ready to attend to the business in court, with a clerk or boy to call them when the proper time came; and so they come backwards and forwards and economise the whole of their time, and the solicitors and the public get the benefit of their attention to papers, advising on cases, preparing pleadings, and things of that sort, during all the intervals of time that they are not actually required to be speaking in court and attending to the business of the court. That was not always so, because in former times the Court of Chancery sat at Westminster, and until 1848 it was in the habit of sitting at Westminster during term time in the four terms; and I hold in my hand a copy printed in the second volume of Mr. Purton Cooper's Reports of a memorial presented to Lord Cottenham by 254 equity barristers, with all the signatures, including those of the present Lord Cairns, Lord Justice Giffard, Lord Justice Selwyn, Vice-Chancellor Malins, Vice-Chancellor James, and all other equity barristers in anything like practice at that time. The representation is this: "That very great inconvenience and loss of time are occasioned to your Memorialists by the sittings of the Court of Chancery being held, during term, at a place distant from the Masters' offices, and the places of business of all the barristers, and nearly all the solicitors practising in the court." We may exclude the Masters' offices, for what corresponds with those would go with the courts now, but the places of business of all the barristers and a great proportion of the solicitors most conversant with legal business would still remain excluded It was suggested that they should come to Lincoln's Inn, and in 1849 they did so, and ever since that arrangement, the value of their time has been

been realised to the full by that branch of the profession. But to this day the common lawyers who live in the Temple know nothing about that; they have never enjoyed that advantage till this day; to this day they go to Westminster for the business of the courts, or to Guildhall, and therefore they are utterly ignorant of what it is to have the benefit of this kind of concentration. No doubt, to them, to be brought to Howard-street, even if it were more distant than it is, would be simply gain as far as it went; I do not mean to deny that the distance of the Howard-street site would be much the same to them as to us would be that of the Carey-street site; but to us the Howard-street site would be taking away that immense advantage, an advantage not to us as barristers merely, but all who employ us, and all whose business depends upon our employment, which for the last 20 years we have known. When I said "prohibitory," I meant that it would be prohibitory to a great extent of that convenience; because if a quarter of an hour is to be lost between the time that the boy leaves the court to fetch his master and his master's arrival there, the cause may have come on, or, possibly, may have gone off, before he can be there, and he will lose his brief and his reputation. He cannot afford to run that risk: he will be obliged to kick his heels, to use a common expression, till the business comes on, in the court and out of chambers, as we were obliged to do at Westminster. I know how that is as a pecuniary matter; all the time that I was a junior, I was labouring under that inconvenience; and I think it probable that the juniors who stand relatively in the same position in Chancery as I did then, make twice as much in the year as I did. Then the business could not be done; and you are going, if you make this change, really to counteract the progress of reform in these things. That is the root of my opposition to this scheme. I do not mean to say that I may not think that architecturally the site of Carey-street is a good site, but it is this practical view which is at the bottom of my opposition.

2475. It is not only that the change of the site from Carey-street to the Embankment will counteract the progress of reform now taking place, but it will absolutely deprive that large class of practitioners, to whom you have referred, of the advantages which they have enjoyed since 1849?—To a very great extent it will do so.

2476. Do you make that statement even if the bridge and the tunnel are made?—Certainly; the bridge and the tunnel will merely save the additional delays which would arise from the obstructed state of the Strand and the discomfort and the inconvenience of having to make your way through such traffic, a traffic, it is to be observed, which would be much increased.

2477. But, assuming that the bridge and the tunnel are not made, what, then, will be the position of this large and important class of professional men?—Of course, still worse; let me for a moment ask the Committee to recollect that those who speak of a bridge and a tunnel do not mean a bridge and a tunnel all the way from Lincoln's Inn to Howard-street, and, therefore, the most that we should have would only be a deliverance from omnibuses and cabs; but only imagine these men having to go backwards and forwards in their wigs and gowns on snowy days, and rainy days, and on all days; I know very well what it was to go to the Rolls under those circumstances; it was a thing which you could just do and only just do; the courts in Carey-street will be a little nearer than the Rolls, and the others will be practically half the distance to Westminster; I say practically, because we should get into a cab to go to Westminster, and we should not get into a cab ordinarily to go down to the Embankment; I am not sure that it would be an exaggeration to say that the courts at Westminster would be practically as near as the courts which are being proposed on the Howard-street site, because you always went to Westminster in a cab.

2478. To finish this branch of the inquiry, I will ask you if it would be necessary to purchase ground up to the south of the Strand in order to enable the Government to give this limited accommodation by means of a bridge and tunnel?—I suppose so; I have not gone into that part of the subject.

2479. With respect to the opposite inconvenience that might be felt by those who live in the Temple, you, of course, are aware that by the plan sanctioned by the Royal Commission and accepted provisionally by the late Government, a bridge was provided from the Temple across Fleet-street to join the Carey-street site?—Yes, and perhaps I may be permitted to say that that ought not to be reckoned in the same category with those larger extensions of the Royal Commission which have been so much criticised; that was a thing distinctly mentioned in Parliament and contemplated when the Bill passed, and the Temple supported the scheme, in a great measure relying upon the access so to be given; and, therefore, it seems to me that it is a thing which Parliament and this Committee ought to regard as quite separate from the very large extensions about which different opinions may be entertained, and which have been proposed for reasons of an entirely different kind.

2480. Can you give us any idea what further delay would be incurred if the bar had to robe in the new building on the Howard-street site?—I think that would make very little difference; the great probability is, that those who intended to go backwards and forwards, which I believe would be nearly impossible upon the Howard-street site, would do it in their wigs and gowns; and whether they had occasion to go to the court in the first instance, and robe in the robing-room there, or whether they robed in their own chambers, would make little difference, I think.

2481. You have been asked several questions by the Chancellor of the Exchequer as to the possible separation of the interest of the profession from the interest of the public, and I understood you to say that you found a difficulty in making that distinction, and that the interest of the profession in all its branches was in reality the interest of the public, *quâ* the erection of the New Law Courts?—I should say so, certainly; and perhaps I may be permitted to add this, I do not wish to suggest any pecuniary motives on the part of the Templars, but there is this little fact which may be mentioned, that in Lincoln's Inn we have no possible pecuniary interest in the value of the property there; no bencher or member of Lincoln's Inn gets, directly or indirectly, a shilling of profit from the chambers or the value of the land; but in the Temple I rather think that there is some little profit of that kind, that the benchers, in rotation, get chambers which they

Sir *R. Palmer*, Q.C., M.P.

20 July 1869.

they may let out at a profit rent, but we in Lincoln's Inn have nothing at at all to look to but the facility of the transaction of our business, which is the business of the public.

2482. Do you see any analogy between the erection of the Law Courts, on the site most convenient to the profession, and the erection of public offices, erected for the public service of the State, in the immediate neighbourhood of the Houses of Parliament?—I think that the same motives would operate in this case in at least as great a degree; I should almost think, when you look at the constant necessity that the same persons have, particularly solicitors, to be going round from one office to another many times in the course of the day, the reasons would considerably preponderate in the case of the legal business.

2483. Then, if the Commission, for instance, which has sat for the last two years on the concentration of public offices, reported that it would be for the public convenience that all the public offices should be concentrated in the immediate vicinity of Whitehall, do you imagine that it could be possible to set up a distinct and hostile interest between those who carry on the business for the public in these public offices and the general public?—I should not have thought, *à priori*, that it was possible for anyone to think of such a thing.

2484. You have been asked whether if the Home Circuit is brought up to London, it would not be very convenient for all who would be concerned in the Home Circuit to have the Law Courts placed on the Embankment site; but may I ask you with regard to persons coming from Kent and Surrey, for instance, where would they be landed, coming by railway; would they be landed to the south of Howard-street or not?—Well, I really do not know; I think it would depend very much on their convenience, and other motives which I cannot estimate.

2485. If they came by railway to the Charing Cross station, they would be landed in the Strand?—Yes.

2486. If they come to the Ludgate Hill station of the London, Chatham, and Dover Company, they would be landed equally to the north of the Embankment site?—Yes; but the real truth is that it is a great mistake to suppose that everybody would go straight to the courts; they will go to their own business, their solicitors, their friends, or their families; they will not all come from one side of London or from the other.

2487. Mr. *W. Cowper.*] You have stated the advantages which you consider that the Carey-street site has over the Howard-street site, as regards barristers and solicitors; would you state your opinion as regards the other persons who have to go to the courts, such as the clients and witnesses, and jurors?—I have just said that I think no human being can tell where they will come from; and I see no reason whatever to suppose that they would find it more convenient to come by the Embankment road, than from the north or east or west. One thing I see, which will follow inevitably from adopting the Howard-street site, namely, that you would bring across the Strand the transit of all the northern business, which would create a great obstruction to the proper traffic of the Strand; but beyond that, I do not see what data one has to go on to determine how people would come. I am quite sure that the northern persons would not go by the Embankment road, and it would be of no use to them, and that is the great mass of the professional persons, and their papers, and everything dependent on them, that will have to come to the courts.

2488. As to the business of those persons, is it usual for them to go to solicitors' offices previous to going into court?—A great many of them do; but a solicitor could tell you better than I can how far that is general.

2489. Mr. *Bentinck.*] You are a bencher of Lincoln's Inn?—Yes.

2490. You are acquainted with the proposal of Lincoln's Inn, contained in the petition referred to this Committee, with reference to the building of the courts?—Yes.

2491. Do you concur with the benchers, that the equity courts should be retained in Lincoln's Inn?—No, I am not of that opinion.

2492. Are you aware whether by the reduced rival plans certain courts of justice and other offices are omitted?—Well, hardly any court of justice, I think; if you look at the plans you will see that there are two spare courts; that there are three courts for each of the common law courts, and two spare courts, beside the Court of Admiralty, and Court of Probate and Divorce, and a court for each of the Chancery Courts. It seems to me that there is plenty of room there for a Bankruptcy Court, if you want to have one; and, if necessary, you might have a Privy Council Chamber in one of those spare courts.

2493. Mr. Burnet and Mr. Street have been examined before this Committee, and at Question 676 Mr. Street, in answer to the Chancellor of the Exchequer, says, "We have omitted three Courts of Justice, the Probate and Admiralty Offices, the Land and Middlesex Registries, the Accountant General's Office, the large refreshment department, offices for Royal Commissions, and office for Bankruptcy Registrars"?—I really do not know what Mr. Street means by three courts of justice; I can follow him as to two; he means that they have not made a provision expressly for the Bankruptcy Court, and not made a provision expressly for a Privy Council Chamber; but against that I put the two spare courts, which it seems to me would be available for those purposes; what the third is that he means, I really do not understand; with regard to the offices, what you have read is quite right.

2494. However that may be, by accepting the proposition of Lincoln's Inn generally, could these offices be accommodated in Lincoln's Inn, with advantage to public convenience and to economy?—I do not know at present whether Lincoln's Inn would propose to give the same facilities for any other purpose which it offered for the purpose of the courts of equity as distinct from other courts; but supposing that Lincoln's Inn would, then I think that there would be great advantage; and the question suggests to me, what perhaps I may be permitted to say of my own accord, that amongst other reasons of convenience in favour of the Carey-street site, but which I have not yet mentioned, is this. Now that it is not proposed to concentrate all the offices, taking the fact that you have got the Record Office at the Rolls, and the premises now occupied by the Judges' Chambers in Chancery-lane, in close proximity to the Carey-street site, and some parts of Lincoln's Inn, now occupied by the Accountant General's Office, all of which lie much more conveniently to the Carey-street site than

than to the other, those are reasons in favour of adhering to the site where you would get the nearest approach to concentration, even with respect to those offices which you do not bring into the building.

2495. Then you think that if Lincoln's Inn were pleased to extend their proposition in the manner I have mentioned, it would be an advantage to the public to accept it?—Yes, certainly; I think it would be so as to any offices which you want to provide for, and which you cannot provide for on the same site with the new courts.

2496. And I also understand you to say that a portion of the Rolls estate might be applied to the location of these new offices?—That part which is now occupied by the Judges' chambers might certainly, I should think, because the Judges' chambers will be in the building. With regard to the rest it is not a thing to be overlooked that the proximity of the Record building (which will remain as it is) to the new courts will be a matter of great convenience. Records are not unfrequently wanted to be taken from it, and the Master of the Rolls is the keeper of the records; and I remember very well that before the Commission of 1859, he gave evidence against moving his own court at all on account of the very great convenience of being able constantly to communicate with the record officers under him; that he would certainly do with much more facility from the Carey-street than from the Howard-street site.

2497. The old building of Lincoln's Inn to which the Chancellor of the Exchequer has referred, would according to the plan of the new courts of Lincoln's Inn, if that plan were carried into effect, be pulled down?—I suppose some part of them would, but I do not know whether that has been worked out in detail.

2498. Mr. *W. Cowper.*] This Committee have been advised that we may expect that the Carey-street site, if sold again, would be greatly in demand for the chambers of members of the legal profession; have you any reason to suppose that there would be such a competition for the land for that purpose as would lead us to expect that it might be well sold?—I think that it would be a very uncertain speculation indeed. It is to be remembered that the numbers of the legal profession are pretty well fixed by other causes, and would not be liable to increase at all on account of any place that you may put the courts in; and therefore it would be a question of drawing outlying members of the legal profession down there. I do not believe that those who are furnished with good chambers already which have got a goodwill attached to them, and to which their clients are accustomed, would be likely to take new chambers merely to be nearer the courts.

2499. You do not think that so large a speculation of this nature would afford to us any guarantee of such a demand?—I should be exceedingly unwilling to take shares in it.

2500. Mr. *Osborn Morgan.*] The number of solicitors in London you stated at 3,153, but I suppose a great many of those gentlemen who seldom practice in court?—No doubt, because those are all the names in the Law List.

2501. I presume that those not practising in court would be persons to whom the site of the law courts would be comparatively a matter of indifference?—I should think so.

2502. Then I may take it that the number of individuals that you have given, namely, 1,661, represents not merely a bare majority, but a considerable majority of the persons interested in this question?—I should certainly think so.

2503. You spoke of the inconvenience which you yourself experienced as a Queen's Counsel in going from your chambers, which were in New Square, I think, to the Rolls Court?—Yes.

2504. Would not that inconvenience be felt much more by the junior members of the profession?—Yes, to myself personally, or to any one in my present position, the question is of much less practical importance; I have no hesitation in saying that I am almost as much distracted now, having to go to the House of Lords and the Privy Council, as I used to be in former days; but I have now no chamber business, so to say.

2505. The reason why it is so much more important to juniors is, that they combine chamber work with court work?—Yes, and I may add it is of the greatest importance to beginners. When a man is making his way, to be absent either from his chambers when he ought to be there, or from court when he ought to be there, might be fatal to him.

2506. And, as a matter of fact, are not conferences and consultations constantly held by junior counsel during the time when the courts are sitting?—Yes.

2507. Could that take place if the courts were further removed?—No, I think it could not; and by way of illustrating that, I would mention that nothing is more rare now than to go for consultation from Lincoln's Inn to the Temple while the courts are sitting; the risk of going that distance for consultation is almost incompatible with due attention to court business.

2508. Do you consider that, to a common law man, it is such a great desideratum as it is to a Chancery barrister to be close to the courts?—It is not; because the Temple barristers have never had the advantage of it; it probably might in time become so if they had; they would soon find the advantage if they had the opportunity, because I observe that Baron Bramwell, in the evidence which he gave in 1841, I think, spoke of the immense loss of time; Westminster Hall was the idlest place in the world, he said; and other common lawyers stated that they could have found the means of using their time to their own benefit, and to that of their clients, if they had been able to be in their chambers.

2509. Surely the chamber work which a common law barrister engaged in court does, is much less than that of a Chancery barrister?—It is much less, as a fact, though it might be more if he could more conveniently combine the two things.

2510. As regards drawing pleadings, a Chancery barrister is more engaged than a common law barrister in that work?—Yes; but I suppose that that circumstance which I have mentioned may be a frequent cause of the practice of having pleaders under the bar in common law, because it was impossible almost to unite the two at the same time.

2511. As a matter of fact, when the court sat at Westminster, did the lawyers' offices or the barristers' chambers congregate round them to any extent?—No; Lincoln's Inn is much older than Queen Elizabeth; it is as old as Fortescue; and it is absurd to suppose that those colleges (which I hope to see made into a university) would be removed.

2512. You were asked by the Chancellor of the

Sir *R. Palmer*, Q.C., M.P.

20 July 1869.

Exchequer about the dilapidated state of the chambers in Lincoln's Inn; that would only apply to Old Buildings?—It would.

2513. Stone Buildings are quite modern, are they not?—Yes.

2514. And New Square?—New Square was built after the fire of London; some parts of it have been rebuilt more recently; but not all.

2515. Mr. *Goldney.*] We have had a distinction endeavoured to be drawn before the Committee between the public and professional men; but the economy of time to professional men is economy of time and money to the public, is it not?—Yes; it appears to me that that part of the public which is interested in the administration of the law has an interest inseparable from that of professional men.

2516. With reference to City and Westminster solicitors, in the event of the courts being placed on the Carey-street site, they would be able to have consultations with counsel or solicitors living in Lincoln's Inn, which they would not at the Howard-street site?—Yes; I should imagine that the more you collect into one focus all the engagements which they have, the more convenient it would be to them, and much more important than the relation of their own individual place of business to any one other place which they might have occasion to go to.

2517. And the facilities of being able to see solicitors or counsel in all the courts would be much greater if the Carey-street site were adopted than in the other case?—Yes.

2518. Mr. *Beresford Hope.*] I understand you to say that, supposing the courts were to be built on the river, the solicitors might change their chambers and gravitate down there, but that you thought the barristers would not be likely to do so?—I did not say that I thought the solicitors would, but merely that the solicitors were, so to say, more accidental residents in Lincoln's Inn and the Temple, whereas the barristers were the ordinary members of those societies. The societies of Lincoln's Inn and the Temple are formed of barristers, and are really colleges of barristers, but within the buildings there live many solicitors to whom it is a great convenience to be so near the barristers whom they constantly employ in business. I do not believe that that inducement would be a bit less powerful if you removed the courts. The convenience of being in what will always be the principal focus of business must be the same to the solicitors, and to the same proportion of solicitors, as at present.

2519. In the present day the collegiate feeling is so far broken into that there are many Templars who have their chambers in Lincoln's Inn, or *vice versâ*; do you not think it possible that that feeling might be still more broken into from motives of local convenience?—I think it would be difficult to say how that would operate. It is quite true, as you say, that a common lawyer, even if belonging to Lincoln's Inn, might find it convenient to have his chambers in the Temple, and an equity lawyer, even though belonging to the Temple, might find it convenient to have his chambers in Lincoln's Inn. I should imagine that where you have an aggregate of practitioners in one line there it would remain.

2520. The advocates for the Howard-street site contemplated the building of large masses of chambers that would be altogether, perhaps, something like a new inn of court in Carey-street; you do not think it likely that the solicitors and barristers would gravitate down to those masses of new buildings as they now do to the Inns of Court?—No, I do not; supposing that you could build all these streets just round the New Courts, there might be more chance of such an experiment answering; but when the difference was only moving a certain number of feet further, still being on the north side of the Strand, I do not think that there would be any chance of old associations being broken up to attain such an object.

2521. With a bridge and a tunnel, involving steps to go up and steps to go down, do you think that that experiment would answer?—No; I think that is a purely chimerical idea, and the proof is that all the former circumstances that I have mentioned never did produce a sensible influence upon the position of the chambers; the courts, in fact, have come to the chambers, but the chambers have not gone to the courts.

2522. Looking forward to the future fusion of common law and equity, do you consider that it would be a positive advantage to have the courts at a point about equi-distant between the Great Common Law College and the Great Equity College, so as to bring the two branches of the law face to face?—Yes, that has been the great object in the whole plan of concentration; and there is no doubt that any mode of carrying that plan into effect which makes it very much more convenient to one portion than to another portion of the profession, is partial, and may operate to diminish the tendency to fusion.

2523. You consider that that concentration which merely involves putting all the courts under one roof, and does not include placing them centrally in regard to the different offices and chambers, is a limited view by concentration?—Yes, and for that reason I alluded to the evidence given in 1859.

2524. We assume that that is your argument *in limine* against the river site, and in favour of the Carey-street site?—Yes; I have no hesitation in saying that I think that this Carey-street site is abstractedly the best site, and that no considerations of architecture, or even of economy within limits, would appear to me capable of counterbalancing that consideration.

2525. And if you heard that competent authorities said that you could construct an equally good building architecturally on the Carey-street site, that would confirm you in your opinion?—Yes.

The Honourable GEORGE DENMAN, Q.C., a Member of the House; Examined.

The Hon. *G. Denman*, Q.C., M.P.

2526. *Chairman.*] WE understand that you have formed a decided opinion upon this question of the New Law Courts?—Yes, but upon only one branch of it, that is to say, the greatly superior convenience to the profession, and through the profession to the public, of the Carey-street site.

2527. Will you then kindly give your reasons for your opinion?—My main reasons have been clearly stated in far better language than I can state them myself just now by Sir Roundell Palmer. The short view that I take of the matter, is this, that the great object of removing the courts from Westminster to some other site, being

being that they may be placed in a central and convenient spot for the accommodation of lawyers, and through them for the saving of the pockets of the suitors, the Carey-street site is a well chosen site for that end, and that the Thames Embankment site is nothing like so convenient. Perhaps I might state that there is one point in which I do not quite go along with Sir Roundell Palmer. He seemed to me rather to admit that though the Carey-street site would be very superior for the equity barrister, it would not be so superior to the common law barrister, because the common law barrister resides in the Temple. Now, that must be taken with a considerable qualification; I am a common law barrister myself, though a member of Lincoln's Inn, and as a common law barrister, I am obliged to have my chambers in the Temple; those chambers are in Tanfield-court. Many other barristers reside in King's Bench Walk, which is farther from the now proposed site on the Thames Embankment than Tanfield-court is. If I understand the plans, the courts are proposed to be placed on the west end of the Thames Embankment site. Now, if they were placed at that point they would be nearly, I think, double the distance from my chambers of the distance from the Carey-street site; I may be wrong in the measurement, but I believe it is about that.

2528. Mr. *Hunt.*] Are you taking the centre of each site?—No; I take the centre of the Carey-street site, which I suppose is about the place where some of the courts would be. Or I would suppose that the common law courts would be so placed as to accommodate the common law bar in the Temple, and the equity courts so as to accommodate the equity lawyers in Lincoln's Inn; taking that to be so, I understand that, as a fact, it is proposed that the courts on the Embankment site are to be at the Somerset House end of the new building. That would leave my chambers double the distance from the courts that they would be from the Carey-street site. Being a common law barrister, and having to attend many towns on the circuit, I have taken the pains to look at the distances of my own lodgings from the courts in various towns, and to see what effect that has had upon my own practice and conduct. We have seven towns on the Home Circuit, at every one of those but one, my lodgings are within 250 yards of the court. Of course we get as near as we can to the court. I find that at the most distant of those lodgings that I have just referred to, viz., those under 250 yards, I am to a certain extent inconvenienced. I have to spend more of my time than is convenient to me and to my general clients in the court; because if I am not in court there is a risk of my case being called on, and then being struck out, and my client in that case being mulcted in heavy costs, and very great loss occurring to him; and therefore, even at a distance of 250 yards, I begin to find that I cannot spend my time in lodgings, reading other briefs, and preparing myself for other business, as I can when I am nearer, as I am in every other case but one. In the seventh case my lodgings are 400 yards from the court, and I find that, to adopt Sir Roundell Palmer's expression, it is almost entirely prohibitory of attending to my business in lodgings; I am obliged, for fear of accident, to be constantly in the court from morning to night, with slight exceptions, rather than undertake the risk to myself and my clients of being absent for a sufficient time to go to and from my lodgings; which would be a sufficient time to also probably cause the judge to refuse to wait any longer, if my case should be called on. That applies, I believe, throughout; and I believe that the 200 or 300 yards to and fro, which have been treated sometimes so lightly in the House of Commons and in other places, are a very serious matter to be taken into consideration; in fact, that they are almost the whole question. There is one more observation that I should make, apropos of something I heard to-day; the question whether the alteration of the Home Circuit, to which I belong, and the bringing its business to London, would cause any difference in regard to the considerations affecting this question: it ought to be known that two-thirds of the business of the Home Circuit (I am speaking well within the mark) is purely London business, or business which comes from every part of the country; it is not business arising from the five home counties; so that if those causes were tried in London instead of on the Home Circuit, exactly the same arguments and reasonings would apply, with regard to the convenience of jurymen, witnesses, and others, as would apply to the pure London causes. I can only state that I have a very strong conviction that the courts being placed in Carey-street would be very satisfactory and very convenient to the profession, and would save a great deal of money to suitors; and that the removal of them to the Embankment near Somerset House, would, I will not say leave things so bad as they are at present for the common law bar, but instead of making a very important alteration, would leave things to a very considerable extent as bad as they are.

2529. Lord *John Manners.*] With reference to your statement that you, residing in the Temple, would find it more inconvenient to go to the west end of the proposed Howard-street building than to the centre of the Carey-street site, are you able to say whether that would apply to those Templars who live in Hare-court?—I should think, but I have not measured it, that it would be considerably further from Hare-court to the proposed site of the new courts, than it would be from Hare-court to the south-east end of the Carey-street site; I have not measured it, but I should think so; that plan which I see there leaves out all to the east of the Temple Church, a considerable part of the Temple.

2530. The north end of Kings' Bench Walk appears to be thickly studded?—That I should think would be much further from the proposed site of the courts, as I understand it to be placed at the west end of the Thames Embankment site, than it would be from any place in which the courts could be expected to be placed on the Carey-street site; at least 100 yards or two I should say; that would be enough to make a serious difference.

2531. The same observation would apply to a great extent to those who may reside in Serjeants' Inn?—Serjeants' Inn, Southampton Buildings, Chancery-lane, and Lincoln's Inn, would be altogether cut out by placing the courts on the Thames Embankment.

2532. Therefore it is not correct to say generally that the Thames Embankment site, as proposed to be laid out by Mr. Street, would be more convenient to the whole of those who reside in the Temple, than the Carey-street site?— I should think that it would not be so convenient to a great many of the residents in the Temple; I cannot

The Hon. *G. Denman*, Q.C., M.P.

20 July 1869.

I cannot state the proportions, but I think fully one-half.

2533. You have no doubt that with respect to those who live in Lincoln's Inn, the removal from Lincoln's Inn to the Embankment site would be most inconvenient?—Yes, most serious.

2534. Mr. *Osborn Morgan.*] Even taking the part of the Temple which is nearest to the Howard-street site, would not that be nearer to the centre of the Carey-street building than it would be to the part of the Howard-street site where it is proposed to erect the courts?—That is a matter of measurement; but if it be so, I think that every 100 yards additional is a very serious consideration.

2535. Mr. *Goldney.*] It was stated by one of the witnesses on Friday, that one of the advantages in the Embankment site was that jurymen and witnesses would be able to run down the steps into the Temple Gardens and amuse themselves before their cause was called on; do you think that that has anything to do with the question?—I cannot think that the disporting themselves by the jury and the witnesses is an important element in the case; witnesses come for the particular cause in which they are engaged, and have done with it. It is otherwise with professional men.

2536. And, as a rule, they are more or less interested in what is going on in court, are they not?—Sometimes they are, and sometimes they are not.

2537. At all events, the garden question is not an element that you would consider?—I think not.

2538. Mr. *Beresford Hope.*] It was a part of the original scheme, I believe, that there should be a bridge replacing Temple Bar from the Temple to the Carey-street site; on the other hand, it seems admitted on all sides, that Essex-street must be widened wherever the Law Courts are to be placed; is it not a fact, then, that if Essex-street were widened, the courts on the Embankment would be more inconvenient to those professional men in Carey-street, unless a bridge were provided to enable them to cross the Strand, than the other plan would have been to those in the Temple?—To Lincoln's Inn, most certainly it would.

2539. It must be remembered that by that scheme Essex-street, instead of being a bye-lane, as now, would be a main thoroughfare of London?—Yes; but I should then contemplate that a bridge might be made over Essex-street as well as Temple Bar; something of the kind would have to be done. I have always assumed, and I think anybody would assume, that when once these courts are removed close to the legal residences and the chambers of the barristers, we shall have greater facilities than exist at present to make them accessible in all weathers. I should even contemplate covered ways all through the courts of the Temple and Lincoln's Inn, leading to bridges over the Strand and Carey-street, and I have no doubt that that would come in time.

2540. Do you agree in Sir Roundell Palmer's opinion, that the idea of the Carey-street site being covered with a large mass of buildings, which might be used for solicitors and barristers, is chimerical?—I entirely agree with another view which he expressed, which is that solicitors once settled in old chambers, which they and their predecessors have dwelt in for centuries, would be very hard to move. But supposing that they were compelled, by such an alteration as is contemplated, to move on to an entirely new site, they would, if they paid anything worth the Government's receiving, have to pay enormously for their new chambers; and the public would have, in one way or another, to suffer for everything in the way of expense that they had to incur. I do not think that it would be good for the public that the solicitors should build enormously expensive buildings on that other site.

2541. You think that the clients would pay for it?—Yes, eventually they would, no doubt.

2542. Mr. *Hunt.*] I see that there is a petition from the benchers of the Inner Temple, signed by the treasurer on their behalf, in favour of the Howard-street site?—Yes.

2543. Are you aware whether the benchers represent the barristers who live in the Inner Temple?—I know that in one instance a bencher of that Inn, if he is to be considered a party to that petition, does not represent even his own opinion, for he is a Member of this House, and he told me that he was entirely in favour of the Carey-street site, as far as the convenience of the profession went; and he thought that it really was the right site, but because a petition had been sent in by his bench he felt bound to vote for the Embankment site.

2544. He was not present at the meeting, perhaps, when the petition was decided upon?—I cannot tell you; I have not looked at the petition. I should add, that I may be mistaken in what I have said just now; it was a bencher of the Temple; I am not quite sure whether it was the Inner or the Middle Temple.

2545. But the Middle Temple would certainly be more likely to be inclined towards the Howard-street site than the Inner Temple?—They are nearer to it.

2546. Has the crossing of the Strand anything to do with the opinions of the Temple with regard to whether the courts of justice should be on the one site or the other?—Not as far as I can tell. Living in the Temple, and talking to the members of the Temple on this subject, the feeling of the benchers of the Temple is, I believe, mainly actuated by a sense of duty, a feeling that it is their duty to increase the value of the property of their Inn as much as they can; I have heard that avowed.

2547. How would their own property increase in value by the adoption of the Howard-street site?—Because Lincoln's Inn would be cut out, and chambers in the Temple would be increased in value.

2548. There would be a greater run upon the Temple chambers, in fact?—There would be a greater run upon the Temple chambers; that view I have heard expressed by members of the two benches of the Temple, without the least hesitation; I am a bencher of Lincoln's Inn myself, but I have never taken any part whatever in the discussion of this subject in the Inn; I have never attended a bench on the subject; I disapproved of the view that Lincoln's Inn originally took, which was one analogous to that which the Temple is now taking, and which induced them to desire to keep the whole thing in Lincoln's Inn, and not to have a concentration of courts at all, because the equity business was transacted near Lincoln's Inn, and it was supposed to be good for the Inn to keep things as they were; I always stood aloof from Lord Justice Selwyn's view in that respect, and never took any part in it;

it; my interest is rather that of a common law barrister. I am obliged to have my chambers in the Temple.

2549. Have you seen some statistics laid before the Committee with regard to the number of barristers and solicitors who would be accommodated by the Courts of Justice being on the Carey-street site or on the Howard-street site?—No (*the paper containing the statistics was handed to Mr. Denman*). This paper I think must be a very loose statement indeed, because it assumes that the Embankment site would be the most convenient for 1,107 barristers residing in the Temple, and it does not assume that it would be less convenient for any single barrister residing in the Temple. Now, I am a barrister residing in the Temple, and I do not hesitate to say that to me the Carey-street site will be more convenient, and I believe that it will be so to at least all in the Temple east of the Temple Church.

2550. You cannot take the Temple barristers and solicitors in a lump, and assign them all to the Howard-street site?—No.

2551. And could you do it with the City solicitors?—I should have thought not; many of the City solicitors would be just as well pleased, I should think, to approach the Carey-street site along Holborn and by a wide opening from Holborn to the Carey-street site, as they would be to go along the Thames Embankment.

2552. And you think that those statistics to which I have called your attention, without being further analysed, would be very deceptive?—I think so.

2553. Mr. *Layard.*] On the other hand there may be solicitors in Gray's Inn and other places to the north of Holborn who may be in favour of the Embankment site?—People may be in favour of anything on æsthetic or other considerations, but as far as local convenience is concerned I cannot conceive a solicitor in Gray's Inn thinking the Embankment site more convenient than the Carey-street site. He may prefer it on other grounds than those of convenience.

2554. Therefore that analysis, to which you have just been referring, is merely the opinion of the person who drew it up of what he presumed to be the views of the persons inhabiting certain parts of London?—I should gather it to be nothing more.

2555. As a matter of fact both the Temples have petitioned in favour of the Embankment site, have they not?—The benchers have done so I understand.

2556. And the benchers of Lincoln's Inn have not petitioned in favour of the Carey-street site, have they?—I am not aware whether they have or not.

2557. They have petitioned not in favour of the Carey-street site, but of Lord Justice Selwyn's scheme?—I know nothing of it; I have always stood aloof, as being a common law barrister, from that discussion.

2558. Mr. *Hunt.*] Do you know whether the meetings of the benchers of the different Inns were summoned specially, *ad hoc*?—I do not know; I may have received a special summons for the purpose, but I did not take any notice of it, nor do I remember it.

2559. Mr. *Osborn Morgan.*] Would not the effect of placing the courts of justice on the Howard-street site, be to give the common law barristers residing in the Temple, a great advantage over those residing in Lincoln's Inn in the event of any fusion of the courts?—I think that it would give them an unfair advantage.

Friday, 23rd July 1869.

MEMBERS PRESENT:

Mr. Bentinck.	Mr. Hunt.
Mr. Chancellor of the Exchequer.	Mr. Layard.
Mr. William Cowper.	Lord John Manners
Viscount Enfield.	Mr. Mowbray.
Mr. Goldney.	Lord Stanley.
Earl Grosvenor.	Sir William Tite.
Mr. Beresford Hope.	Mr. Watkin William.

THE RIGHT HONOURABLE LORD STANLEY, IN THE CHAIR.

Mr. JOHN YOUNG, called in; and Examined.

Mr. *J. Young.* 23 July 1869.

2560. *Chairman.*] YOU are a member of the legal profession?—I am. I have been, I am sorry to say, more than 40 years in practice; during 36 of which I practised exclusively in the City.

2561. Are you connected with the Incorporated Law Society?—I have been a member of the Council for 21 years.

2562. Where are your offices situated?—The firm of which I am the head still carry on a large business in the very heart of the City, but I act as the solicitor for the Great Western Railway Company, and as their business occupies my entire attention, I am obliged to leave my City and general business to my partners. I carry on the Great Western business partly at Eastbourne-terrace, Paddington, near the station, and partly in Abingdon-street, for the purposes of their Parliamentary business; so that I may be considered both as a City lawyer and as a West-end lawyer.

2563. Then in the event of the Law Courts being removed to either of the two sites now under consideration, you would probably in attending them come from the West-end?—Yes.

2564. You have looked at the question mainly, I suppose, in that point of view?—Yes; but I have looked at it from both points of view, as being very familiar with both.

2565. Will you tell us which of the two sites you prefer?—I think that, looking at the question as one of convenience, there can scarcely be a comparison between the two. The Carey-street site, beyond all question, is the one I prefer.

2566. Taking it as a question of convenience for those who come from the West-end, do you think that the access to Carey-street is as good an access as that to the Embankment site?—I do think so; there are some solicitors of great eminence practising at the West-end of the town, at a certain part of the West-end, to whom I think the Embankment would be the more convenient site of the two. For instance, it would be so to all those who practice in Victoria-street, Victoria Chambers, and Westminster Chambers. To myself in Abingdon-street, if I had to go to the courts from Abingdon-street, the Embankment site would be shorter and more convenient than the Strand. If you take the solicitors practising immediately round Charing Cross, assuming as I do, that there will be a good opening from Charing Cross on to the Embankment, to those solicitors (who are very few in number, so that you may almost count them on your fingers), the Embankment would be more convenient, but to those who live at a wider distance, I do not see any advantage whatever in the Embankment site.

2567. Do you not apprehend any delay from over-crowding in the Strand?—No, I do not at all. I have had occasion to look a great deal into this question for many years past. I was a member of the Royal Commission, known as Sir George Lewis's Commission (but which I think might be more properly called Sir John Coleridge's Commission, for he was the Chairman of it). At the time that Commission was appointed I was the president for the year of the Incorporated Law Society; I entered into correspondence with the noble Lord the Member for North Leicestershire, who was the Chief Commissioner at that time, and it became my duty, as the exponent of the views of the Society, to lay before his Lordship the grounds upon which they thought that the time had come when all the courts and all the offices should be concentrated on the Carey-street site. Lord John Manners promised to bring the question under the consideration of the Cabinet; it was brought before them, and this ultimately led to the appointment of that Commission of which I was a member. The whole question was most thoroughly examined by that Commission. I should state that the subject had been under the consideration of Parliament on two or three previous occasions; I think I may say that it was by the instrumentality of the Incorporated Law Society, who have taken the deepest interest in the question from the very beginning, that Sir Thomas Wilde first of all brought it forward in Parliament, and procured the appointment of a Select Committee in the year 1842. There was another Committee in the year 1845; and both of those Committees took a great deal of evidence. The most eminent Judges of that day, the leading and most distinguished members, both of the equity and of the common law bar, and a great number of the leading solicitors of that day, were examined before both those Committees, and that evidence and the Reports of the Committees were laid before the Commission of 1859–60, of which I was a member. We also took a great deal of evidence ourselves; the leading members of the profession were examined as witnesses before us, and I think I may say that there never was a subject more thoroughly canvassed and examined than that was. We had before us then what I may call four distinct schemes. One was to keep the courts at West-

minster

minster; but it was very soon found that, practically, that was an impossibility. There was a great desire in many quarters, having regard to the traditional veneration, legal and historical, for Westminster Hall, to keep the courts there. There would also have been some convenience in that plan to the Parliamentary Bar, and to those members of the Bar who were in the habit of attending the meetings of the Judicial Committee; to them no doubt it would have been a convenience to have the courts at Westminster; but there was no possible spot where the courts and offices could have been concentrated, even if that had been a convenient site, which it was not; and that scheme was, therefore, very soon abandoned. The second scheme was that known as the Lincoln's Inn scheme, which has been mentioned here several times, and which was very shortly this. The Society of Lincoln's Inn offered to give the ground, and at their own cost to erect buildings thereon for the accommodation of the Courts of Equity. There are at present very convenient courts for the Lord Chancellor, the Lords Justices, and the Master of the Rolls, and for one of the Vice-Chancellors. But there are two most inconvenient courts, little better in fact than hovels, in which the other two Vice-Chancellors sit, and these are separated from their own chambers, and from the offices. The Society of Lincoln's Inn offered to build two commodious courts for the two Vice-Chancellors, with suitable chambers in connection with them, at their own cost, which they estimated at 100,000 *l.*, but they annexed this as a condition, that they should receive 4,000 *l.* a-year, being interest at the rate of 4 per cent. out of a particular fund, known as the Suitors' Fund, of which the Committee have heard a great deal. That was the second scheme. It was very carefully examined, and much evidence was taken upon it, including that of the Master of the Rolls, Lord Romilly, Mr. Koe, the then treasurer of Lincoln's Inn, and some of the leading equity counsel. But the Commission thought that it would be fatal to the wider scheme of concentrating all the courts of law and equity, and all the offices, in one central situation. That, therefore, was not adopted. The third was a scheme for building courts and offices in Lincoln's Inn-fields; it was brought under the notice of the Commission by a very intelligent gentleman, Mr. Harvey Gem, but, for many reasons, it did commend itself to us. And there was finally the Carey-street site, substantially the site now before the Committee under that name; and that was, I may say, promoted mainly by the Incorporated Law Society. A very large amount of evidence was taken in reference to the convenience and capabilities of that site, and, I may say that, as regards the evidence taken before the Commission, it was all one way; all the witnesses of all departments of the profession, judges, barristers, solicitors, all agreed that it was pre-eminently the most convenient site that could be adopted. I am bound, however, to add, and it is, indeed, apparent, that at that time the Embankment site did not exist, and, therefore, it was not at all before us, and was not considered by us.

2568. Therefore, we can only take that expression of opinion to which you refer as indicating that the Carey-street site was then considered eligible, but the comparison now instituted did not arise?—It did not. Then, one very important part of the subject matter of reference to us, and which was specifically stated in the Commission, was the existence of funds by means of which these courts could be erected without making any appeal to the public; that is to say, to the taxpayer. I had given considerable attention to that subject, and I was requested by my brother Commissioners to prepare that part of our Report which dealt with the question of funds, which I accordingly did. I should state that there were very grave objections entertained at that time to the application of any part of the Suitors' Fund, which consisted of a sum of stock of nearly 1,291,000 *l.*, to any scheme excepting for the purposes of the suitors in the Court of Chancery. It was thought that the suitors in the courts of common law had no right to share in the benefit of that fund. That opinion was entertained by the present Lord Chancellor, who, as Vice-Chancellor, was a member of the Commission, and he dissented from that part of the Report, and stated his views in a paper of great ability, which is annexed to the Report. The same objection was shared by the late Lord Justice Turner and the present Master of the Rolls, as well as Lord St. Leonards and others, who thought that the fund was impressed with a trust in favour of suitors in equity, and that no part of it ought to be appropriated to the courts of law. The other members of the Commission did not share that view. They thought that, while it would be a gross misapplication of the money to apply it to any purposes whatever excepting those connected with the administration of justice, there was no sound distinction between the courts of law and the courts of equity, but that they were all parts of one great scheme for administering justice. The result has been that, by the Act of 1865 (there were two Acts of the same year, one for the purchase of the Carey-street site, and the other for raising funds to pay for the purchase and to build the courts), the sum of 1,000,000 *l.*, part of the 1,291,000 *l.*, was appropriated for the purchase of the site and the erections of the buildings. This was to be considered as the contribution of the equity suitors towards the entire expense; and I think it is provided in the Act that they should not, under any circumstances, be called upon to contribute anything more in any way or shape, either in the shape of capital money or of fees. That was provided by the Act of Parliament. The suitors of the Court of Chancery contributed a million in stock for the express purpose, as stated in the Act, of building courts upon the Carey-street site, and no where else; and I venture to submit to the Committee that it would be a very gross breach of Parliamentary faith to divert those funds, or the produce of those funds, to any other purpose than that to which they were specifically appropriated by the Act of Parliament. It appears by a Parliamentary Paper which I have here that up to this time, in round figures, 885,000 *l.* has been expended in the purchase of the site, in clearing it, in paying all the expenses of the Commission of every sort and kind, and in paying 11,000 *l.* to the competing architects who sent in plans for the new buildings. To that 885,000 *l.* the public, the taxpayers, have not contributed one solitary sixpence. The whole of that large sum has come from the suitors in equity; and it is now proposed, as I understand, to hand over the land which has been purchased by their money to the Demon of Dilettanteism.

2569. As I understand you, the objection

Mr. *J. Young.*

23 July 1869.

Mr. *J. Young.*

23 July 1869.

which you take is this, that, the power having been granted by Parliament to apply this Suitors' Fund to the purchase of a site in Carey-street, it is not open to Parliament to divert it to the purchase of a site elsewhere?—It would be, I think, a gross abuse (if I may venture to say so in reference to the proceedings of so august a body as Parliament) of the power of Parliament,—a power which nobody can contest for one moment, least of all in these days,—to apply that fund, or the land purchased with that fund, to any other purpose, as for instance (to refer to what has been proposed before this Committee) to a grand building speculation for building offices and chambers, and so on.

2570. As I understand the matter, the fund was diverted from its original purpose, when it was applied to the building of the Courts of Justice at all?—I think not. That matter was most carefully and elaborately gone into by the Commissioners, and I do not think that Vice Chancellor Wood, or any of those who thought with him, objected to the application of the fund to purely Chancery purposes, because portions of it had been, in fact, already used for the purpose of building many of the existing Chancery Courts and offices. What they said was this: "You may very properly apply that fund" (which, it should be observed, does not belong to any suitors in particular, but is a sort of bankers' profit made by the employment of their general surplus balances) "to purposes in which the suitors of the Court of Chancery are interested, but you must not use it for any other purposes." The guardians of that fund have consented to one million of the stock being used for the purpose of building courts of equity on the Carey-street site. It is now proposed to let out the site acquired with their money for building chambers and offices, which I think would be an abuse. In the same way, another part of the fund to be contributed towards the building of the concentrated courts and offices was the fees paid by the suitors at common law, which yield a considerable surplus. Those fees were, by Act of Parliament, under the exclusive control of the judges, who had power to raise or to lower them, as they might think expedient. The fees produced a considerable yearly surplus, and the accumulations of that surplus at the time we made our report, amounted, I think, to 85,000 *l.* or 86,000 *l.* We thought, and reported, that that particular sum was properly applicable for the purpose of building courts for the accommodation of suitors at common law. The Treasury of that day thought otherwise, and wished to have the right of control in these fees transferred to the Treasury, and brought in a Bill for that purpose. They withdrew that Bill partly in consequence of the opposition that the Incorporated Law Society, as representing the suitors, made to it. But, after the existing Commission was formed, negotiations took place, which were conducted by Mr. Childers, representing the Treasury, on the one hand, and the Commission on the other; and the Right Honourable gentleman the Member for North Northamptonshire will recollect what passed on that subject. A compromise was ultimately arrived at, by which the control of the fees, for the future, was transferred to the Treasury, but one moiety thereof was to be treated as a fund, upon the strength of which capital was to be advanced by the State to complete the building of the concentrated courts and offices. This fund was described in the Act as the Annuity or Redemption Fund, and it was to be applied in repaying the advances made by the State, with interest, in a given number of years. That arrangement, again, had reference exclusively to the Carey-street site. The Act of Parliament which permitted the appropriation was for the purpose of erecting courts in Carey-street. Again, I think that it would be a breach of Parliamentary faith if funds, which were allowed to be applied towards building courts specifically at Carey-street, are to be diverted to some other purpose.

2571. I do not quite understand on what ground you think it is legitimate to apply these funds to build Courts of Justice in Carey-street, but not legitimate to apply these funds to build Courts of Justice in Howard-street?—Because those who, on that occasion and in that matter, were considered to represent the suitors, I mean the Incorporated Law Society (for the suitors, as a body, have no other mouthpiece), considered that it would be on the whole for the interest of the suitors at common law, that courts and offices should be erected on the Carey-street site; that it would be more to their advantage, than merely reducing the fees which the judges had power to do by law; that it would be more for their advantage to continue to exact the fees from them, and to apply one moiety of those fees towards building courts and offices on the Carey-street site. Having arrived at the conclusion that the Carey-street site, and no other, was the proper site for the courts and offices, they, as far as they could be considered as representing the suitors, and as competent to give any consent, did consent to an application of those funds on that particular site.

2572. It is admitted that the money came from the suitors originally?—Yes.

2573. In what sense does the Incorporated Law Society represent the suitors?—Certainly they cannot be said to do so in any strict sense, but they represent them, simply because they are the persons who pay these fees for the suitors who are their clients; they transact the business of those clients, and it is their desire to see the burdens lightened to their clients, as much as possible, by a reduction of unnecessary fees. It is only in that general sense that they could be considered to represent the suitors, and not in any strict sense.

2574. Mr. *Layard.*] Are you at present a member of the Incorporated Law Society?—Yes, I am.

2575. Are you a member of the Council?—Yes.

2576. And also a member of the Royal Commission?—Yes.

2577. I understood you to say, that the Incorporated Law Society had identified itself with the Carey-street site?—Yes, most undoubtedly.

2578. I believe that the Incorporated Law Society have added to their building considerably?—Yes.

2579. And they have widened the street rather to the north of it?—Yes.

2580. These alterations have been made with a view of having the courts on the Carey-street site?—Not at all.

2581. But you would not have made them if the courts were not going to be put there?—Yes, most certainly they would.

2582. Would they have widened the street opposite

opposite the Union Bank, but for that?—Yes, I think they would; at all events, they would have laid out the 20,000 *l.*, which they are now laying out wholly independently of the Law Courts. I should wish to explain to the Committee that to the Incorporated Law Society, as a Society, it is a matter of consummate indifference where the courts are placed, whether at the Embankment site, or at the Carey-street site, or at Westminster, or in the City of London. To the individual members of the Society in the interest of their clients, and for the convenient transaction of the business of those clients, it makes all the difference in the world; but to the Society itself it is a matter of the most consummate indifference.

2583. Have you been consulted with regard to the circulars that have been sent out by the Incorporated Law Society on the subject of the site of the New Law Courts?—I cannot say that I have been consulted; I am aware that they were sent out.

2584. May I ask you whether, in your opinion, it is within the province of the Incorporated Law Society to send circulars, not only to all the solicitors practising in England, but also to those in Ireland, calling upon them to use all the personal influence which they may have with Members of Parliament, to induce them to oppose the Government Bill?—I think so.

2585. You think that consistent with their duty?—Yes; I do most undoubtedly.

2586. Do you, as a Member of the Council of the Incorporated Law Society, and as a member of the Commission, adhere to the statements put forward in those circulars?—I do, unhesitatingly.

2587. You still adhere to the statement that the Law Courts on the Embankment site would advance 80 feet beyond Somerset House?—Whether the precise distance is 75 or 80 feet, I am not prepared to say, but as to the statement that there would be a considerable projection, and, as we think, an undesirable one, undoubtedly I stand by that.

2588. I understand you to say that you still adhere to all the statements made in the circular, with regard to the expense of foundation, the expense of land, and the comparative cost of the two sites?—Will you have the kindness to tell me in detail what statements you refer to?

2589. Do you adhere to this statement: "To obtain this extra space in advance of the line of Somerset House, it is necessary to encroach upon, and to a large extent absorb, the open area which, by the 'Thames Embankment Act, 1862,' (sect. 26), is 'for ever hereafter to be maintained for the use of the public as recreation or ornamental ground'"?—Yes; I ought to state that, personally, I was not privy to the preparation of that statement; but I unhesitatingly accept the responsibility of it as a member of the Council.

2590. And you adhere to the statement with regard to the foundations, that the foundations on the Embankment site will cost an enormous sum—I believe they will, and I believe so on the strength of Mr. Street's own statements.

2591. And do you adhere to the printed statement circulated by the Council of the Law Society, which gives an "estimate of the comparative cost"?—Yes, as an estimate intended to show that the Carey-street site and building will cost 1,770,000 *l.*, and the Howard-street site and building will cost 2,266,000 *l.*; substantially, I adhere to that; it is a matter of estimate and conjecture, of course, to a certain extent.

2592. Upon the faith of these statements, I understand that a large number of solicitors, both in London and the country, have been induced to sign petitions to Parliament?—I do not think so; I do not believe that the astute and hard-headed men who signed the London petition, troubled their heads about those statements, or that those statements were sent to them.

2593. Were they not sent to the solicitors in the country?—I believe not.

2594. Were not lithographed letters, with blanks left for signatures and address, embodying to a great extent these statements, sent to the solicitors in England and Ireland, with a request that they should be filled up and sent to Members of Parliament?—I did not know that any were sent to solicitors in Ireland, but if they were, I think it was very properly done; and had I been there, I should have joined with my professional brethren in what they did.

2595. You mean to say you think it right that lithographed letters so printed as to seem to be autographs in running hand should be sent to gentlemen to be signed by those gentlemen, as if they were written upon personal knowledge, containing statements not known by them to be accurate, calling upon Members of Parliament to oppose the Government scheme?—You are assuming as facts what I do not understand to be so. I certainly approve of sending letters to the Societies of solicitors in England and Ireland.

2596. Here is a lithographed letter beginning "Dear Mr. Trevelyan," which was sent to a Member of Parliament (*handing the letter to the Witness*), and signed "Croft Deverill;" is that a right proceeding?—I see no impropriety in that, any more than it is improper for the Government whips to send round to Members of Parliament to whip them up to vote. In principle, the two things appear to me to be the same.

2597. You said that the Carey-street site and the money which, according to you, belongs to the suitors, are now proposed to be sacrificed to the Demon of Dilletanteism?—Yes.

2598. May I ask what you mean by that?—I mean that this is done purely on æsthetic considerations, simply to have a fine building on the Embankment.

2599. Are you acquainted with the firm of Freshfield & Company?—Yes, intimately.

2600. And Messrs. Vallance & Company?—I know who they are.

2601. I presume that those firms are firms of considerable eminence?—Messrs. Freshfield stand at the very head of the profession.

2602. And do you think that they would recommend the Government to adopt the Howard-street site out of æsthetic considerations?—I think there are some members of the firm of Freshfield who would be moved by æsthetic considerations: but no doubt on this, as on most other questions, there is some difference of opinion. There are some eminent members of our profession who do not take the same view as I do, Mr. Henry Freshfield is one. He thinks that the Embankment site is the more convenient, and I differ from him.

2603. It is not merely on the ground of dilletanteism that he thinks so?—No.

2604. And the house of Baxter, Rose, & Norton are in favour of the Embankment site?—Yes; but it must not be forgotten that the house of Baxter, Rose, & Norton are the solicitors of the Metropolitan Railway Company.

2605. Messrs. Bircham, Dalrymple, & Drake also?—Gentlemen of the very highest influence.

Mr. *J. Young.*

23 July 1869.

I am quite aware that they take a different view from myself; theirs is one of the firms to whom the Embankment site would be the more convenient site of the two, because their offices being in Parliament-street they would get down on to the Embankment by a two or three minutes' walk.

2606. Then, you will qualify your statement that the opposition to the Carey-street site is on æsthetic grounds?—No; I mean to say that those who promote the other scheme do it on æsthetic grounds, I mean the Government. I believe that it is brought forward mainly on æsthetic grounds, in order to put a fine building on the Embankment, and that the views of the Government have no reference to the convenience of the profession.

2607. I should like to know the distinction you draw between the suitors and the public; is there any particular distinction so that they are characterised by dress or appearance?—No; but there is just the distinction between persons who go to law, and persons who do not go to law.

2608. Are you aware that I am at the present moment a suitor myself?—Then, I believe that if you are, your business will be more conveniently transacted on the Carey-street site than on the Embankment site.

2609. Are not most men, in the course of their lives, suitors in Chancery or otherwise?—No; I should say that, happily, suitors are a minority, and will continue to be so. I think that the question of the situation of the courts, and the arrangement of the courts and offices, is in the main a question for the suitors. If by reason of the dispersion of the courts and offices it takes two days to do that which, if they are concentrated in a convenient site, can be done in one day, I should be glad to know who pays for the one day lost? not the outside public, but the suitor.

2610. But supposing the public to be in favour of the Embankment site, does not that make some difference?—I must venture to ask in return, whom do you mean by the public; those who are not suitors?

2611. I mean those most interested in the business transacted, suitors, witnesses, and jurors.—No doubt besides the actual suitors there is a class of persons, such as jurors and witnesses, so far interested in the courts that they have to attend them; and my belief is that, looking at the question as a whole, both jurors and witnesses would be better accommodated on the Carey-street site than on the Embankment site. I believe that the Carey-street site would be found to be the more convenient site for all parties, whether judges, barristers, solicitors, jurymen, witnesses, or even that portion of the outside public who attend the proceedings in the courts out of curiosity.

2612. Do you not think, that in a very few years the communications between the different parts of London will be entirely changed by the railway system now being carried out?—No.

2613. You do not think that the circular railways, and the railways contemplated across the metropolis, will change the mode of communication?—No, and I can speak from a great deal of personal experience on that subject. My Great Western offices are at Paddington, in close proximity to the Underground Railway. During the Parliamentary Session, I have to come down constantly from Paddington to Abingdon-street. That portion of the Metropolitan Railway which would take me there is by far the most agreeable portion of the whole line, being mostly in open cuttings; but if I want to save time I get into a cab and drive down, for I have to stop no fewer than eight times between Paddington and Westminster Bridge.

2614. The time may come when that will be changed, and you may be able to go more expeditiously?—I do not know how that is possible.

2615. I believe that many years ago a large number of people went on travelling by stage-coach, and believed that railways would not answer?—It would not become me, as a railway official, to depreciate the value of railways. My view as to the relative convenience of the two sites for all the purposes of business is founded mainly on this. Suppose you draw a line from Charing Cross on the west to the Royal Exchange on the east, following the line of the Strand, Fleet-street, Ludgate-hill, and Cheapside, it will be seen that the great bulk of the population lies to the north of that line, not to the south of it, and they would not cross those different streets for the purpose of getting to the Embankment-road. Those who happen to carry on their business very near the Embankment, no doubt, will use it; but not those who live at a distance. I heard Mr. Street, I think, say that when the circular railway is complete, persons coming from the north by the great lines of railway would, beyond all question, make use of that circular railway to get down to the Embankment if the courts were there. The idea is absurd if it is looked at. The three great lines of railway in the north are, the North Western, the Midland, and the Great Northern. Now, the Midland and the Great Northern are close to the King's Cross Station of the Metropolitan Railway. In order to get by that railway to the Embankment, persons would have to stop 16 times in their passage from King's Cross to the courts. To suppose that men of business will be such simpletons as to do that, is an absurdity.

2616. Lord *John Manners.*] We have heard something about a plan that had been prepared, showing the distribution of the legal population of London; are you able to submit that plan to the Committee?—Yes. This (*handing in a small plan*) gives the effect of the larger plan on a very small scale; and this (*producing it*) is the larger plan.

2617. Is the plan entirely complete now of the whole metropolis?—Quite.

2618. And that plan is based upon the actual situation of the residences of the profession in the whole of the metropolis?—Yes.

2619. Will you have the kindness to give to the Committee the general result of that?—The plan follows the division of the Ordnance Survey, and the whole metropolis is divided into districts, and as to each of those districts there is shown in different colours the number of members of the legal profession residing and carrying on business in it. You will see some figures in black, and some in green; these black figures, for instance (*pointing to them*) mean that in that district there are 48 solicitors residing or carrying on business, and these green figures mean that they represent 108 country firms.

2620. Mr. *Layard.*] Who prepared this map?—It was prepared by order of the Commission.

2621. By Mr. Burnet?—By Mr. Burnet; and all the numbers have been supplied from the Law List, the official record, checked by the Street Directory, with the greatest possible care, and I think I can pledge myself that it is as accurate

accurate as it is possible to make a plan. There is a slight difference between the aggregate numbers appearing in the Law List, and the number shown on this plan, and that arises in this way, that the Law List embraces all those within 10 miles of London, whereas this plan does not go quite so far as that; but those residing at that distance are very few.

2622. Lord *John Manners.*] This plan appears to go as far as "Bricklayers' Arms," and Kennington, on the south?—Yes.

2623. And on the west nearly as far as the South Kensington Museum?—Yes.

2624. Taking the five divisions of this plan, are you able to give to the Committee the result as to the probable convenience of the two sites for the majority of barristers and solicitors, as shown in this plan?—Yes, for the purpose of comparison, I think the south side of the river may be altogether excluded. The whole number of members of the legal profession on the south side is only 52, that is to say, 42 practising barristers and solicitors, and 10 country agencies, making 52 in the whole. The whole number being 11,434, that small number of those on the south side of the river may, for all practical purposes, be taken out of the comparison. The yellow district is what may be called the west-end district. In that district there are altogether 696 barristers and solicitors. The red district may be called the central district; it comprises Lincoln's Inn, Lincoln's Inn-fields, Bedford Row, and is the great hive of the legal profession. It contains 2,026 practising barristers and solicitors, representing 4,447 country solicitors, making a total of 6,473. The little patch of blue close to the river represents the Temple. That contains 1,248 barristers and solicitors, and they represent 643 country solicitors.

2625. Mr. *Beresford Hope.*] How do you draw the distinction between a practising solicitor and a country agent?—The country solicitor transacts the general business of his client, purchases of land, sales of land, conveyances, mortgages, marriage settlements, and so on, without the intervention of any London agent at all; but whenever he has an action-at-law, or a suit in Chancery, he is compelled to employ a London agent.

2626. But what I mean is, that the same figure does not appear twice in the two columns by the side of your little map?—No, they are quite distinct. The second column is headed "Number of country solicitors' agencies." That means solicitors in the country represented by the London solicitors, given in the adjoining column. There are 1,248 practising barristers and solicitors in the blue district, that is the Temple. The solicitors represent 643 country houses. The green represents the City and east end. The purple represents the southern part, which is so small as to be quite insignificant

2627. Lord *John Manners.*] Having divided the legal population into these five districts, can you tell us what proportion, in your opinion, would be most benefited by having the New Law Courts on the Carey-street site, and what proportion would be most benefited by having the New Law Courts on the Embankment site?—It is difficult to give an exact answer to that question; but I have prepared, or have had prepared, this little map to explain the matter in reference to the very question that your Lordship is putting. Looking at the totals at the bottom of this little map, your Lordship will see the figure 4,944 as the number of barristers and solicitors in all the coloured districts; that is the total of the first column. Of those, there are barristers in or near Lincoln's Inn, 818; barristers in or near the Temple, 1,044; making a total of 1,862. Solicitors in all the districts, 3,082; total of barristers and solicitors, 4,944. That statement shows how many of the barristers are in the Temple and how many are in Lincoln's Inn. Of the 3,082 solicitors, the petition in favour of Carey-street was signed by 174 solicitors west of Wellington-street, 635 in the central district (that is the district including Lincoln's Inn, and so on), and 472 east of Farringdon-street (that is City solicitors), making a total of 1,281. These 1,281 signatures represent, in fact, 1,661 individuals out of the whole 3,082, because many sign in the name of the firm. The refusals to sign amounted altogether to 278, of whom 61 were west end solicitors, 82 central solicitors, and 135 City solicitors. Then, of the 6,490 country solicitors who are represented by their London agents, the London representatives of above 5,000 have already signed the Carey-street petition. There were 393 signatures to the barristers' petition in favour of the Carey-street site, of which 74 were from the Temple. Then we had the quantity of business on a given day taken, not a favourable day for our view of the case, because it so happened that on that particular day by the arrangements of business, there were an enormous number of summonses before the Master of the Rolls in winding-up cases which come principally from the City, and, therefore, that particular day was not a favourable one for our view of the case. But still the results are given in this paper showing the quantity of business transacted on a given day in the Chancery offices, and in the equity courts, from the western district, the central district, the Temple, and the eastern district. If the Committee will allow me, I will hand in that paper, (*the same was handed in, vide* Appendix). Assuming that the country solicitors are represented by their London agents, and that the London agents speak the voice of the country solicitors, your Lordship will see that the result is that a very large majority of the whole profession are in favour of the Carey-street site.

2628. With respect to the 7½ acres of cleared ground on the Carey-street site, will you tell the Committee what is your view as to the possibility of erecting on those 7½ acres of ground, as commodious and convenient buildings for the purposes of the Law Courts, as could be erected on the 6½ acres of the Embankment site?—I do not think that there could be a shadow of doubt about it. I think it is repugnant to common sense to suppose that if you can erect a given building on 6½ acres, you cannot erect a similar building on 7½ acres, the level being, it is admitted, very much better in the case of the Carey-street site. That is a question on which I should express any opinion of my own with diffidence; but I am supported in my view by Mr. Street. It may be in the recollection of the Chancellor of the Exchequer, and the First Commissioner, that at a recent meeting of the Commission I put these questions to Mr. Street. "You propose to put a certain building to accommodate a given number of courts and offices on the 6 acres proposed to be acquired in Howard-street," and the answer was, "Yes, I do." Then the question was, "Can you put a similar building to accommodate the same

Mr. *J. Young.*

23 July 1869.

same identical courts and offices on the 7½ acres in Carey-street," and the answer was "Certainly I can." Then I asked him, "You estimate that the cost of the building in Howard-street will be a certain sum; can you erect a similar building to accommodate the same identical courts and offices for the same sum on the Carey-street site?" "Yes," he said, "I can." Mr. Street stated that before the Commission, in answer to questions put by myself, and the questions and answers were taken down in shorthand and are now on the minutes of the Commission. Mr. Street added that there would be an increased expense on the Howard-street site by reason of the foundations, but that there would be an increased expense on the Carey-street site from the cartage of materials; but that, setting the one against the other, the cost on the two sites would be substantially the same. After hearing that from Mr. Street's lips, I can have no doubt in saying that all the courts that Mr. Street proposes to accommodate in Howard-street can be accommodated on the Carey-street site.

2629. With respect to light and air, will you give the Committee your opinion as to the advantages or disadvantages of the two sites in those two respects?—There can be no doubt, first of all, that as regards both light and air, the river frontage is a great advantage as regards so much of the building as fronts the river, but that is only one out of four sides; and even that advantage is not without a drawback, as anyone who, like myself, has to pass a good deal of his time in a building situated like this near the river, must know. As the poet says, you are "blinded with excess of light" in these rooms having a frontage to the river, owing to the reflected light from the river; still I do not for a moment attempt to say that the river-side frontage is not a desirable one as regards light and ventilation, but, as I have said, it is only one side out of four. Now taking the Howard-street site, I think the other three sides bad, and execrably bad, as regards light and ventilation. First of all, the western side of it would be close to King's College and Somerset House, and, as far as I understand, it will be dominated by those buildings. I do not see therefore any light or air that can be obtained on that side. Now take the north or Strand side; the Strand side will front on Howard-street, with rising ground, rising up to the Strand, covered with houses; I do not see what benefit of light and air the site is to get under those circumstances on the north side. On the east side there is Essex-street. Now it was distinctly stated by Mr. Hunt before the Commission, either at the same meeting to which I have referred already, or at a subsequent meeting, that we had no right to assume that anything more will be done in Essex-street than to purchase and remove the houses on the west side of Essex-street from the river up to the line of Howard-street; that that was all he had estimated for, and all that we had a right to assume or to discuss in dealing with the question of comparative cost. If for other reasons, either of access of light, or of general improvement, Essex-street were widened the whole way up, that was a distinct matter, he said, which he had not taken into account, and which we had no right to take into account. I have a right to assume, therefore, that the proposed buildings would be put down on the site thus limited by Mr. Hunt, by simply removing the houses on the west side of Essex-street, leaving the houses on the east side untouched. If that were so, I cannot conceive anything less advantageous in point of light or air than that would be. Now I am tolerably familiar with four great buildings, all built on the river side, all fronting to the river. I will take first this very building in which we are now assembled, the river front of which I conceive is as fine as could be desired, subject to the difficulty of light which I have mentioned; but nobody can doubt that the other parts of the building are, perhaps, as defective in point of ventilation and light as can be well conceived. Those who have had to suffer, hour after hour, in the galleries outside, in the offices surrounding the room in which the noble Lord the Chairman of Committees sits, and the offices on the other side, where the clerks of the House sit, know what it is. Can anything be worse in point of light and air? It is not enough, therefore, merely to have a river frontage, in order to have ample ventilation and light for a building, there must be more than that. Take another building, Somerset House, with a magnificent frontage to the river, and everything to be desired in point of ventilation and light, as far as the river frontage is concerned; but I have had often to transact business in the Inland Revenue Department, which looks into the quadrangle, and I cannot say that the light or ventilation is good there. Take a third building, the Custom House; in my early days I was often sent down there to register, or to search the registry of, transfers and mortgages of ships. I know that is called the Long Room, which fronts the river, and has capital light and air, but I doubt whether anything can be conceived worse than the three other sides fronting Billingsgate, Thames-street, and Custom House Stairs. Take another building (perhaps the most remarkable case of the whole), with which I am very familiar, Greenwich Hospital; probably the most magnificent river-side building in the world, with everything in its surroundings that you could desire; Greenwich Park on one side, the river on the other, and large open spaces at each end. There are four inner quadrangles there, and more cheerless, comfortless, places I can hardly conceive; one of them so bad in point of air and light, that a great hospital for which I am professionally concerned, the Seamen's Hospital, declined to accept rooms there, for this among other reasons, that the light and air were so bad. I do not think, therefore, that having a frontage to the river side is the only thing needed.

2630. You have given the Committee your view as to the nature and proper destination of the fund out of which it was proposed to erect the New Law Courts; whether that view be right, or wrong, I apprehend that it is the view, which up to this moment has been taken by the two Royal Commissions, and by each successive Government (subject to the modification which you have mentioned as being the result of a communication between the Royal Commission and the Treasury), and that it is the view which, hitherto, has been incorporated in the Acts of Parliament relating to this subject?—That is so.

2631. If, therefore, another view is now set up, it will be in antagonism to that view which has been persistently taken all through these proceedings?—That is so. The Act of Parliament,

ment, under which the Royal Commission was appointed, provided that they should act in concurrence with the Treasury. Not one single step has been taken, excepting with the concurrence of the Treasury for the time being, until the present time. The Act of Parliament of 1865 provided, not only for the concentration of the superior courts of law and equity, and the offices connected therewith, including the Courts of Probate, Divorce, and Admiralty (and it was to those alone that the Report of the Commission of 1860 referred), but it provided, that to these there might be added courts and offices as the Commission might think expedient. They thought it expedient to bring in the Depository of Wills, the Middlesex Registry, the Land Transfer, and others; and they even went so far as to recommend bringing the Court of Appeal, the Privy Council, and the Court of Bankruptcy up there. They might have been right or wrong, but that was their view, and the Treasury of the day concurred in that view; and therefore, up to the present time the Commission, in pursuance of its legal power, has acted strictly in concurrence with the Treasury for the time being. I should mention one very important question, that of access, which very materially affects, of course, the eligibility of the site. To those who would use the Embankment there can be no doubt that the access by the Embankment would be an exceedingly convenient one; but I believe that the number of persons using it really would be very small. We have heard a good deal about road, river, and rail; now, as to the river and the steamboats, I can speak from personal experience, as having been for many years a City lawyer. If I wanted to get to Westminster I often used the steamboat in fine weather, because I could go by the express boat, which landed me at Westminster Bridge; but if I wanted to go to an intermediate place, the last thing that I should think of using would be a steamer which stops at several places, having moreover the tide against you now and then. Again, those only would use the steamer whose offices happened to lie contiguous to the steamboat wharf. Then, as to the rail, for the same reason those who happen to be near a station would make use of the Underground Railway; those at any distance from it would not dream of doing so; they would lose, in getting there, and in the stoppages at intermediate stations, more time than they would save by rapid locomotion on the railway. Then, as to the Embankment-road, no doubt when the new street is made from the Mansion-House to the Embankment, it will be very convenient for a great many persons, and the Embankment may be a great relief to the traffic of Fleet-street and the Strand; but I do not think that, as regards the lawyers, it will make, to the great bulk of them, any perceptible difference; though to some it may. Of course, every man would like to have a railway brought to his own door. You cannot do that, but you must consider how you can accommodate the largest number of persons, and I am persuaded that the number of persons accommodated by the Embankment would be very small indeed as compared with those to whom it would be of no use whatever.

2632. Mr. *W. Cowper.*] You stated, just now, that Mr. Hunt, in his estimate of the cost of the Embankment site, had not taken into his calculation the widening and making use of Essex-street; do you consider that it would be an essential part of the plan, in putting the courts of justice on the Howard-street site, that the whole of Essex-street, from north to south, should be made suitable for traffic?—Nobody who knows what Essex-street is, who has ever been in it, or who would take the trouble to look down it from the Strand, would doubt for a moment that it must all come down.

2633. Whereas, if the courts were placed on the Carey-street site, would it then be necessary for their purposes that any alteration should be made in the streets coming from the Embankment to the Strand, because Norfolk-street, Arundel-street, and Surrey-street, would then be available, as they now are?—No alteration whatever would be necessary; and it is a curious fact that, if the courts are not placed on the Howard-street site, there will be at least four modes of getting from the Embankment to the Strand, or from the Strand to the Embankment, Essex-street, Norfolk-street, Arundel-street, and Surrey-street (I put Milford-lane out of the question, as being tortuous and of no use, and I put Strand-lane out of the question); but if the courts are placed on the Howard-street site, then, in three out of those four streets, there would be a *cul-de-sac*, because the traffic along them to the Embankment would be entirely stopped by the building. The result would be that, between the Charing Cross station or Villiers-street, which adjoins, it on the west, and Bridge-street, Blackfriars, on the east, there would be no mode whatever of getting to or from the Embankment, excepting by Essex-street. Now, if there are to be, as we are told there will be, hundreds of persons coming from the south, and east, and west, using the Embankment, how are they to get out? They must either go all the way to Westminster, or they must throng up Essex-street. All the carriages and cabs, all the railway vans, carts, and waggons, must come up Essex-street. It would be the only mode of access to or from the Embankment between Villiers-street on the west, and Blackfriars on the east. One of the great desiderata in choosing a site for buildings to be occupied for these purposes is quiet. The frontage of all the offices is to be in Essex-street; that is part of Mr. Street's plan. You would have the whole of the noisy traffic, therefore, coming up Essex-street right under the windows of these offices, and no other mode of getting in or out. Then, again, with regard to the foot traffic, can anybody seriously suppose that the foot passengers coming from the west along the Strand, and wishing to get down to the Embankment, would walk quietly along the Strand and down Essex-street? No; in order to cut off the angle, they would make a short cut through the courts and offices, which would thus become the great thoroughfare for foot passengers between the Strand and the Embankment. When the present Commission were framing their instructions to the competing architects, one of the points most insisted on was this, "You must so arrange the courts and offices as that while you give every possible facility of ingress, egress, and inter-communication to those who have business there, you shall put every possible difficulty in the way of those who have no business to transact in them, and above all prevent these courts from being made a thoroughfare." This object would, therefore, be entirely frustrated by the proposed scheme.

2634. Do you consider that the arcade proposed

Mr. *J. Yeung.* 23 July 1869.

posed by Mr. Street, for enabling legal persons to come from Lincoln's Inn-fields to the courts in Essex-street, is an advantageous arrangement?—No. First of all, it is very expensive; and next, the substantial difficulty still remains. The objection made to the Carey-street site is, that the access to it from the north is exceedingly defective. Granted; but supposing that the courts are put on the Howard-street site, that access will remain with all its defects, and the great tide of persons coming down from the north, the solicitors and their clerks, and the public generally, will all have to come down through those streets, and the difficulties will therefore be just the same, plus crossing the Strand. And there is another thing, that is, the access to be got to the main entrance to the courts from the north, the Howard-street entrance; that is to say, down three streets, Surrey-street, Norfolk-street, and Arundel-street. Norfolk-street is an excellent street, wide, and not on an inconvenient level. Arundel-street and Surrey-street are exceedingly small, and miserable streets; two carriages can barely go abreast; and, moreover, there is one grave objection common to all three: viz., that all three of them open into the narrowest part of the Strand, the neck of the bottle. It is assumed that there will be a great coach traffic to the courts. Now, either this will be so, or it will not. If it will, how is that great traffic to get down to Howard-street? It must go down these streets, and turn round at right angles, and come back again the same way, just into and out of the part of the Strand where at present the transit is the most difficult. If it will not be so, then what becomes of all the objections to the Carey-street site on the score of access?

2635. Do you contemplate the opening of the Turnstile and the widening of Serle-street, as equally necessary to either of the plans?—Yes, I do; or rather as desirable, not necessary. It is very desirable, and what I think ought to be done in either case.

2636. Have you any other remark to make upon that part of the question?—I think that on the whole, though I am not insensible to the advantages of the river front, the superior elevation of the Carey-street site will make it much better, both in point of ventilation and in point of light, than the Howard-street site. The Howard-street site is down in a hole. If the scheme were to be carried into effect according to Sir Charles Trevelyan's magnificent plan, by raising the whole building to the level of Somerset House, it would be a different matter; but now it will be in a hole. I think, therefore, that Carey-street, as regards ventilation and light, would be much superior to Howard-street; I think that as regards quiet, it will also be superior to Howard-street, for the reasons that I have mentioned. I think that as regards access it is on the whole better, because all persons going from the north to Howard-street will have to conquer the existing difficulties of the Carey-street site, plus the Strand difficulty.

2637. Though at the present moment it seems determined not to have a larger building than the one proposed, yet if hereafter some new circumstances should arise to render it desirable to enlarge the building, which of the two sites would afford the greatest facilities for such enlargement?—Beyond question, the Carey-street site. Of course the Howard-street site might be enlarged by taking down all the buildings up to the Strand; but I have heard the Chancellor of the Exchequer say that he never would permit that, the cost of it would be so great; whereas the Carey-street site might be extended westward without any great expense or difficulty.

2638. The property in Yeates's-court, and to the west of it, is property which would not fetch a large price in the market?—No.

2639–40. And could you enlarge the Carey-street site to the west, without necessarily interfering with King's College Hospital?—Yes. This might be effected by means of two blocks of buildings, one called Cook's Court, and the other Clement's Inn. It should be stated, with regard to Cook's-court, that is a block consisting of 56 houses, and having a frontage to Carey-street, and a frontage to Serle-street, and I think it would be very desirable, though not necessary, that a portion of Cook's-court should be purchased and thrown into the street; it would improve the access, and get rid of some objections. With the permission of the Committee I should wish to offer some further explanations as to this Cook's Court block in reference to some exceedingly unjustifiable observations that have been made with regard to the Incorporated Law Society, particularly at a recent meeting, when a deputation waited on two Right Honourable Members of this Committee. A statement was then put forth which had not a shadow of foundation. There is only one word in the English language which will properly describe it, but my respect for this Committee prevents me from using it. It was broadly stated at that meeting that there was a clique of persons who had pecuniary interests to serve in promoting this Carey-street measure. This statement is utterly without a shade of foundation; no living soul connected with the Incorporated Law Society has any interest, direct or indirect, in connection with this site; I can only conjecture that somebody or other may have got hold of a mare's nest about this Cook's-court block, and it is for that reason that I am desirous of being allowed to state the facts, which I have taken some pains to ascertain, and for which I can vouch. Some four or five years ago, since the passing of the Act of 1865, and no doubt assuming that the Courts would be built on the Carey-street site, some individuals formed a company, called the Cook's-court Company, to purchase Cook's-court, to pull down the existing houses, and build chambers and offices there. Whether that was a wise scheme or not, is immaterial; its promoters are principally, I find, gentlemen in Liverpool and Manchester, and there is an eminent London banker who takes a considerable interest in it. They have subscribed their money, and out of the 56 houses, they have bought 41; but the remaining 15 they cannot get, owing to difficulties of title, the refusal of owners to sell, and so on, and they made this proposal to the Royal Commission: "If the Government will obtain compulsory power to purchase these 15 houses, we, the Cook's-court Company, will take them off your hands at their actual cost to the Government, cost of every kind, Parliamentary expenses, vendors' charges, law charges, everything; and then we will sell to you just so much as you want for the purpose of improving Carey-street and Serle-street at the average price of the whole 56 houses to us. If, for instance, the whole site shall have cost us 150,000*l.*, and you want a fifteenth of it, we will sell it you for a fifteenth part of the 150,000*l.*?" That proposal was submitted by the

the Commission to Her Majesty's Treasury in the time of the late Government, and they expressed their approval of it; but nothing has been done to carry it into effect. In that scheme, whether it was wise or unwise, good or bad, of course the Incorporated Law Society, as a Corporation, could have no share; but, in addition to that, not any living soul connected with the Society, so far as I am able to ascertain, has the smallest interest in it; and, therefore, the allegation is without any foundation. A deputation, as I have said, lately waited upon the Chancellor of the Exchequer and the Chief Commissioners, and, by a curious coincidence, it so happened that there was a reporter of the "Times" present. Who brought him there, or how he happened to find his way there at that particular time, it is not for me to say; but the next day there appeared in the columns of the "Times" a long report of the proceedings of this meeting. I must not call it a debate, because the speaking was all on one side, but there was a most fierce onslaught on the Incorporated Law Society, charging them that this scheme was got up by persons having a pecuniary interest, and that that was the real secret of it. First of all, my Lord Bury began, and he said this: "He was led to believe that the council of the Law Institution did not by any means represent the general opinion of the legal profession, though they did represent certain parties who had a strong personal interest in upholding the Carey-street site." Then, a gentleman named Robertson, says this: "The Carey-street site was advocated in the interest of a clique, who were privately and personally interested in the question, but the public interests were entirely ignored;" and then the Chancellor of the Exchequer says, "The public cause was seldom so well advocated as that of persons who had private interests to consult, and who would move heaven and earth to save themselves from inconvenience." It is stated in distinct terms that the real secret of this fight for the Carey-street site was the personal and pecuniary interest of certain persons, obviously meaning the council of, or individuals, connected with the Incorparated Law Society. Of course I am not responsible for what the reporter of the "Times" says, but there it was, in the "Times" of Monday, the 21st of June.

2641. Can you state that the persons who have taken a leading part in this question, and who belong to the Law Institution, have no pecuniary interest in the matter beyond what may arise from the propinquity of the courts of justice to their chambers?—That is all; and that interest is not as members of the Law Society, but as individual practising solicitors. As members of the Law Society they have no interest whatever in it. I will assume that the effect of building the courts upon the Carey-street site will be to double the value of the Law Society's property (not that I believe so, but I will assume it), it would not make any difference to any living soul past, present, or future. It may be, and probably is, supposed by some persons that the Law Society are a joint stock company, but this is not so; the society was originally formed on that principle, and received a Charter from the Crown as a joint stock association, but finding this to be inconsistent with their public objects they surrendered their charter, the members relinquishing their shares; and they obtained a new charter incorporating them, for exclusively public and professional purposes. Any improvement in the value of their property by the selection of the Carey-street site would have just the same effect upon their interests that the improvement of the Crown lands in Downing-street, by the removal of the slums round Charles-street and King-street, would have upon the personal interests of the members of the existing Government, or any other Government; or just as if the tide of fashion were to set from Mayfair and Belgravia in the direction of Gower-street, the consequent rise of value of property in that neighbourhood would affect the members of University College.

2642. With reference to Cook's-court; do you mean to inform the Committee that the purchase received the sanction of the Treasury?—I do not think that it received it in any formal shape, but the minutes of the Commission record what passed on the subject. The Commission communicated to the Treasury, as was their duty, the proposals made to them, and the Treasury intimated that they thought the proposal a very fair and reasonable one, and but for what has since happened, I think that proposal would have been carried into effect.

2643. Was that the period when Mr. Childers was a member of the Commission?—Yes, it was.

2644. And he was not at that time in office?—He was not. Then as to Clement's Inn, the Society of Clement's Inn possessed property immediately adjoining the west end of the Carey-street site, and they made a similar offer. Their position is a very peculiar one. If they chose, I believe they might do what the owners of another Inn of Court, called Lyon's Inn, did. They were reduced to only two, and sold the property, and pocketed the proceeds; and I believe that the existing members of Clement's Inn might, if they liked, sell the property upon the best terms, and pocket the money. But they have said, "If we can give you any assistance in widening the approaches, and so on, we will most readily do so. We will take down some of the old houses and rebuild them, and let you have such land as you want at almost any price you like.

2645. They have a much larger space at present not covered with buildings?—Yes, gardens and squares.

2646. And what is the character still more to the west of Clement's Inn?—Very indifferent indeed; it is property which it would not cost much to acquire; but although I think that the acquisition of some of the property to which I have referred would be desirable, I by no means think it essential.

2647. Are you of opinion that if the reduction which is now proposed is carried out, that can be done at present on the Carey-street site without the necessity of making any further purchase?—Yes, I am.

2648. Mr. *Goldney.*] You have offices at the present time, I think, at Paddington, at Westminster, and in the City?—Yes.

2649. And the larger proportion of the business of your firm, that is to say, the business that is not special, is carried on in the City?—Yes, the general business is carried on in the City.

2650. Having offices, therefore, at those three points, you are able to judge better than most persons, what would be the best site for the Courts?—Yes, I think I have had peculiar opportunities for forming a judgment on such a question.

2651. Assuming this map which you have

Mr. *J. Young.*

23 July 1869.

shown us to be correct, the facility of communicating with the larger number of solicitors in the red block, to those having to do with the Courts, is another advantage in the Carey-street site?—Yes.

2652. That is to say, that a person having to attend the court will be able to transact other legal business with people in the same area?—Yes.

2653. That applies almost exclusively to the Carey-street site?—Yes.

2654. That is to say, supposing that the courts were on the Howard-street site, the facilities of entering into business relations with that large number of solicitors north of the Strand, would be materially diminished?—Yes.

2655. You have a very extensive library at the Law Institution, have you not?—Yes.

2656. And that library is open to the solicitors?—Yes, and to their clerks and students.

2657. And it is constantly used in that way, is it not?—Yes.

2658. Are you of opinion that if the courts were in Carey-street, that library would be constantly used as a library of reference for people practising there?—Yes, I think it would.

2659. Both for barristers and solicitors?—If we choose to extend the privilege to the bar, then they can make use of it also.

2660. But at the present moment the solicitors have no right to go to the barristers' library in court?—No.

2661. And if they want books they have to carry them with them?—Yes; but it was proposed, as part of the scheme for the courts, to have law libraries both for the bar, and for solicitors.

2662. As it stands at present, this library of the Law Institution would be open to all parties, whether from London or from the country?—All members of the society can attend themselves, and can give authority for their clerks to attend, and they do make very great use of it.

2663. You have lived in different districts, I think, during the course of your long professional career?—For thirty years I occupied the same offices in a street which has now disappeared; it will form part of the new street from the Mansion House to the Embankment; then I went from there to Frederick-place, where my firm now carry on their business.

2664. And you have a large practice in common law as well as in chancery?—Very large.

2665. I understand you to say that the authorities of Clement's Inn and New Inn are in accord with the plan for the Carey-street site?—Yes.

2666. And that they would render every facility for carrying out that plan?—Yes, and there have been communications from them laid before the Commission from time to time upon the subject.

2667. And the authorities of Lincoln's Inn are also in accord with that plan?—Yes. The authorities of Lincoln's Inn were always desirous, if they could, of carrying into effect the Lincoln's Inn scheme, that is, having the Courts of Equity only within the circuit of their own domain; but if that is not to be, they are generally in favour of the Carey-street scheme.

2668. With regard to the question of witnesses, I think before witnesses go to the court it is a general rule for them to go to the solicitor's office?—Yes, the witnesses come to the solicitor's office, and accompany the solicitor or his clerk to the court.

2669. Instead of going direct from the railway, as a rule, they would go from the railway to the solicitor's office in the first instance, and be taken by him or by his clerk to the court?—Yes, that is the common course of business.

2670. So that, both as regards professional men and as regards witnesses, the proximity of the solicitors' offices to the courts would be an advantage?—Yes.

2671. And you think that that advantage would be materially impeded by having to cross the Strand?—Yes; I think that whatever is convenient to the solicitors, I do not mean what is personally convenient, but whatever facilitates the transaction of their business, would apply to witnesses also, whose convenience must always be in accordance with that of the solicitors. I should remark, in regard to the City, that the Committee are no doubt aware of the very admirable line of communication which in two or three months will be open from the City by the viaduct. Newgate-street, which was very narrow, is now made a very wide and excellent street; and then there will be one of the finest streets in London, as regards dimensions, over the viaduct and along Holborn, and that would be one excellent access to the Carey-street site.

2672. And your opinion is that the majority of business people would come to the courts by road and not by rail?—Yes. I am quite sure that if I were now what I was till I went to Paddington, namely, a City solicitor, and wanted to get to the courts, I should not go by the Embankment; I should walk, or get into a cab, and go either by Holborn or by Fleet-street.

2673. Mr. *Beresford Hope.*] I think we may gather from your evidence that the Embankment site never came before your first Commission?—No, the Embankment did not exist then; but it did come before the Houses of Parliament when the Act of 1865 was applied for, and there was a considerable fight in both Houses in favour of the site on the Embankment, and the Bill was referred to Select Committees, and the Embankment site was then presented to those Select Committees.

2674. The Embankment, in some shape or other, has been a theory for a great many years; but it had not shaped itself so as to have come before your first Commission, even hypothetically?—Not in 1859-60.

2675. Speaking in your personal character as a gentleman very conversant with this question, do you believe that supposing the Embankment site had come before your Commission, you would still have adhered to the Carey-street site?—I cannot presume to speak for others, but, speaking for myself, I do not hesitate to say that if the question were now *res integra*, and I was a member of a Commission to choose between the Carey-street and the Embankment site, the same reasons which led me to consider the Carey-street site preferable then would bring me to the same conclusion now.

2676. I believe that the object that you and the other gentlemen who promoted the whole movement some 10 years ago had was the concentration of justice?—Yes.

2677. Do you consider that the concentration of justice merely implies bringing the courts and offices, as far as possible, under one roof, or that it implies bringing them, as far as possible, under one roof, and then placing that roof in as central a position as you can find?—The two are included certainly; the great object is to bring them altogether into juxtaposition, courts with

courts

courts, and offices with offices; but then the place in which that is to be done is a very material element of the question as affecting the object which you want to accomplish.

2678. And you consider that that object is better carried out by the higher site in Carey-street than by the lower one in Howard-street?—Yes, I do, certainly; and the main reason is this, that the Carey-street site is near to the great hive of legal business; the vast proportion of the business transacted in the courts and offices comes from places in immediate juxtaposition with the Carey-street site and not from places to which the Howard-street site would be readily or conveniently accessible.

2679. Do you consider that the difficulties which have been raised by the present Government as to the expense of purchasing in the neighbourhood of the Carey-street site would be an objection, or would you adhere to the Carey-street site, even if you thought it highly probable that land would be bought for a future enlargement of Howard-street?—I think that, even looking to the question of cost alone, the Carey-street site is better. I am assuming now that the reduced buildings are to be erected, that the original scheme of the Commission is cut down, certain offices lopped off, and the reduced scale of building adopted; and I consider, as a question of cost, the Carey-street site the better of the two.

2680. Would you be prepared to say that you would prefer the Carey-street site, with very little chance of enlargement hereafter, to the Howard-street site, with a considerable chance of enlargement hereafter?—I think that on all grounds, and in all respects, the Carey-street site is the preferable site; and the Carey-street site, already purchased, paid for, and cleared, is amply sufficient to accommodate all the courts and offices which it is necessary to concentrate. I think it would be desirable to bring the Depository of Wills, and the offices for the Grant of Probates and Administrations, into the building, if possible; and considering that, if that were done, not one farthing of the expense would be provided by the tax-payer, but all by means of additional fees, to be levied from the suitors, I do not think that the question of expense ought to weigh.

2681. I suppose you are well acquainted with the Temple and all its courts?—Yes.

2682. A witness has stated before us, that supposing, according to Mr. Street's plan, the courts are put in the western portion of the Howard-street site, they would really be more distant from many parts of the Temple than the courts in Carey-street; do you, or do you not, agree with that statement?—I quite agree with that, and I believe that a gentleman, a solicitor of great eminence in the Temple, is in attendance now, and will be examined here, who has a large business of his own, and represents upwards of 100 country offices; and he is here to say, that in his judgment, speaking as a solicitor in the Temple, the Carey-street site is the better site of the two.

2683. You are not of opinion then, that the Templars, as a whole, have thrown in their lot with the Howard-street site?—Not as a whole. Many of the Templars, and the Benchers, think that it will improve the value of the property belonging to the Inn, and they think it their duty to look after that; I think that has been admitted.

2684. Has it been admitted that it will improve the value of Lincoln's Inn to put the courts on the Carey-street site?—No; on the contrary, I think I heard Sir Roundell Palmer state that it would not. I am ready to admit that a large number of barristers in the Temple prefer the Howard-street site to the Carey-street site, but I believe that three-fourths of the whole profession are in favour of the Carey-street site.

2685. I suppose that the mass of solicitors who live in Gray's Inn are in favour of the Carey-street site?—Yes.

2686. Has the Bench of Gray's Inn at all indicated a preference?—I do not think it has.

2687. I suppose that the Bench of Gray's Inn has very little to do with the building there?—The Bar have left Gray's Inn.

2688. And the Benchers of Gray's Inn have their chambers in the Temple or Lincoln's Inn, have they not?—Yes. I should ask permission to put in, as bearing upon this question of the opinion of the profession, a copy, signed by the late President of the Incorporated Law Society, of a resolution passed at their annual meeting, held a few days ago, "That this meeting hereby expresses its entire and cordial approval of the steps which have been taken by the Council in opposition to the removal (as threatened by the Bill lately brought into Parliament), for the site of the new Law Courts and offices, from Carey-street to the Thames Embankment, or elsewhere, and this meeting earnestly deprecates such removal as injurious to the interests equally of the suitors, the public, and the members of the legal profession." This was moved by a gentleman of the name of Burgoyne, a very eminent solicitor in Oxford-street, at the corner of Stratford-place. It was seconded by Mr. Milne, who is here now, and carries on his business in the Temple, representing upwards of 100 solicitors.

2689. Mr. *Chancellor of the Exchequer.*] What Report do you think that this Committee ought to make, supposing that we follow your evidence. In the first place we should, of course, report in favour of the Carey-street site?—Yes.

2690. And what more should we report; that we ought to take the site as it is, or that we ought to purchase some further land?—If you ask my individual opinion, I think it would be a wise economy to purchase additional land, to bring in some of those courts and offices which are now to be excluded, and to improve the accesses. I think it would be a wise economy to do so, but that is merely my individual opinion.

2691. But your opinion is that we can do without it?—Yes, certainly.

2692. I understand distinctly that you agree with Mr. Hardwicke in saying that there is no real practical objection to building the courts on the site, as it is at present, without any further land?—No difficulty whatever.

2693. You have been so kind as to say that the Government was actuated in this matter by a spirit of dilettanteism; will you be kind enough to give me the grounds of that statement with regard to myself, and tell me why I am actuated by dilettanteism?—That is a delicate task, which I should rather shrink from.

2694. But you did not shrink from saying it?—I undoubtedly alluded a little more particularly to another Right Honourable gentleman.

2695. I am asking with reference to myself, who really had quite as much to do in the matter as my Right Honourable friend; perhaps you will reconsider that statement?—As regards the Chancellor of the Exchequer, I may; but I am

confirmed

Mr. *J. Young.*

23 July 1869.

confirmed in the opinion I have expressed by a statement made by Mr. Street, who says distinctly that the object of choosing the Embankment site is merely to improve the architecture of the metropolis. There was a committee appointed some little time ago of the Society of Arts to consider and discuss this subject; there was a three or four days' debate, and the proceedings were taken down in short-hand, and Mr. Street corrected the proofs of that part of the report which purported to give what he said himself, and upon that particular point I find that Mr. Street says: "The object of putting the building on the Embankment, being chiefly an architectural one, it is clearly absurd to think of building on so economical a system as to ignore architectural effect." That is Mr. Street's testimony, he being in close communication with the Chief Commissioner, and being in fact now the servant of the Chief Commissioner.

2696. What is the date of that which you have just read?—March 1869.

2697. Mr. *Layard.*] When you say that Mr. Street is the servant of the Chief Commissioner, what do you mean; he is not under my orders, is he?—We found to our surprise some little time ago, that by order of the Chief Commissioner, Mr. Street had stopped his work (indeed Mr. Street so stated to the Commission), and therefore I presume that he is the servant of the Chief Commissioner.

2698. When did Mr. Street state that?—About the month of January or February, I should say.

2699. Are you aware that the country solicitors have often several addresses, some of them no less than 11, and that each of these appears as a separate solicitor in that list which you have made out?—No, I am not aware of it, nor do I believe it.

2700. Take Mr. Stephenson, who has got residences at Chatham, Brompton, New Brompton, Frindsbury, Gillingham, Rainham, Rochester, Sittingbourne, Strood, Sheerness, Shoeburyness, and Southend?—He would appear as one.

2701. You state that?—Yes; most undoubtedly.

2702. Lord *John Manners.*] With regard to the question which has been put to you as to Mr. Street being under the direction of the First Commissioner of Works, will you have the goodness to read to the Committee what is on the outside of that document (*handing a document to the Witness*)?—"Block Plans prepared by George Edmund Street, Architect for the New Courts, by direction of the Right Honourable the First Commissioner of Works;" and he says in the body of the report, "I proceed now to give a similar explanation of the plan which I have prepared, to show how the already purchased land between Carey-street and the Strand may be used for the New Courts of Justice without the purchase of any additional land whatever. In the instructions which I received from you to prepare this reduced sketch plan, you requested me to bear in mind" so-and-so. It is on those data that I have assumed that Mr. Street is acting under the directions of the Chief Commissioner. I should wish to say one word about a certain plan of the Incorporated Law Society, to which a great many allusions have been made, and about which a great many hard words have been used, the little plan with black marks on it. I should state that the object of this plan (*producing it*) was to show, not the building capabilities of the two sites nor their exact shape and dimensions, but their position relatively to each other and to the great haunts of legal business; that, and that alone, was its object.

2703. *Chairman.*] I take it that you put it in this way: that though the plan was not strictly accurate, it was accurate enough for the purpose for which it was intended, and that, in the minute criticism that has been made upon it, it has been assumed to be intended for a purpose for which it was not intended?—Yes, certainly, that is my meaning. I may add this remark, that the preparation of the large new plan, and this very minute reduction of it, has shown this: that we very much understated the facts, and that the preponderance of buildings occupied for purposes of the law on the north side of the Strand, and in proximity to the Carey-street site, is much greater in fact than is shown by this plan.

2704. Mr. *Chancellor of the Exchequer.*] If you look at that plan you will see "six acres," in large letters, on the yellow block of land in Carey-street, it being in reality about four and a half; how do you account for that?—Supposing it to be incorrect, it is wholly immaterial in my view.

2705. Why was it put there?—If there is an inaccuracy there, it only resembles the case of a witness who has told all the substantial facts of a case with perfect accuracy, but has blundered about the colour of the gloves which some person wore, whether they were blue or green.

2706. Mr. *Layard.*] Why is it called a "copy"?—In literal strictness it could not be a copy, because at the time the original was made there was no such state of things as that plan shows, but in the substantial parts, and in reference to all those matters for which it was used, and which it professed to explain, it is a copy.

2707. Lord *John Manners.*] Whatever inaccuracies may be detected in the black-coloured blocks on the original smaller plan, those have turned out to be against your view of the case, and not in favour of it, as I understand you?—Certainly, that is so. I wish to be allowed to add one word upon the question of expense. In the estimate of the comparative cost of two sites one consideration has been entirely left out of the question, as far as I can understand; I have never heard it alluded to. Supposing the Howard-street site to be adopted, and then the Carey-street site already purchased to be sold or leased for building purposes, I heard Mr. Hunt say the other day that in about 10 years he had no doubt there would be an income accruing from ground-rents which would give 3½ per cent. upon the cost. Now, this has been entirely left out of sight, that there is 885,000 *l.* which has been expended and is producing no interest.

2708. Mr. *Chancellor of the Exchequer.*] Not expended on the site?—£. 750,000 or 760,000 *l.* on the site, and the difference is in costs of various kinds.

2709. That is the actual cost, not the cost of the site?—The whole cost up to the present time, the purchase of the site, the expenses of the Commission, the payments to the competing architects, and so forth. Now, spreading that over the whole 10 years, he says that for a year or two years you must grant leases at peppercorn rents, and then at rents gradually increasing, so that at the end of 10 years you would have an income producing 3½ per

3½ per cent. The fair way, as it seems to me, is this: to assume that for five years there will be nothing, and for five years 3½ per cent. Now, the interest alone on 885,000 *l.* is, at 3½ per cent., 30,000 *l.* a year, and the taxes requiring to be paid amount to 5,000 *l.* a year; that makes 35,000 *l.* a year for five years.

2710. Did not Mr. Hunt speak of 780,000 *l.*?—Then, if so, that only affects the difference between that and the other amount.

Mr. *J. Young.*

23 July 1869.

Mr. Nathaniel Charles Milne, called in, and Examined.

2711. Mr. *Goldney.*] You are residing in the Temple?—Yes; I am a Member of the Society of the Inner Temple.

2712. How long have your firm carried on business there?—I have practised there for 40 years.

2713. And you have a large agency business besides you own proper business?—We take out 110 certificates; a great many of them are for young men.

2714. Have you considered the question of the two sites?—Only lately. The new building will not be put up in my time, and therefore, personally, it is a matter of indifference to me.

2715. What part of the Temple are your chambers in?—Harcourt-buildings.

2716. Is your opinion favourable to the concentration of the courts taking place on the Carey-street site?—Certainly, and it has always been so since the question has been mooted.

2717. Since the question of the Howard-street site has been mooted against it?—Yes.

2718. And do you agree that the larger amount of business, irrespective of your own, lies in that district which has been spoken of as the legal hive on the north of the Strand?—Entirely. To illustrate that, I may mention that there is only one firm in the Temple who come in contact with us at all; almost all of them are north of Fleet-street, in Lincoln's-inn Fields, and Bedford-row, and Chancery-lane.

2719. As regards the offices, they are almost exclusively resorted to by the profession; the general public have little to do in the offices?—That is so.

2720. They never go near them?—No, except when receiving the money in the Accountant General's office, and in the Court of Chancery.

2721. Practically, the law offices are used by the profession only?—Yes.

2722. As regards the use of the courts by solicitors and their clerks, the solicitors and their clerks form by far the most preponderating number using the courts, do they not?—Yes, particularly so as regards the equity courts.

2723. And as regards the common law courts, the witnesses would take the line of the offices, would they not?—Yes; my invariable practice is to desire the witnesses to come to my office, then I take them up to the court, and I know where they are.

2724. In going from the office to the court, what would be a facility to the attorney and his clerk would also be a facility to the witnesses?—Certainly; I do not look at solicitors and attorneys particularly, because they are paid for their work, and must go where they are bid.

2725. Still if they go to a spot near their own offices they save time?—No doubt.

2726. And that saving of time is a saving of expense to the client?—Yes.

2727. The client's object is the ultimate result of the suit?—No doubt.

2728. Although a number of solicitors may be shown to be living right and left of the Lincoln's Inn district, the amount of business that the solicitors in that district transact is very much larger than that transacted in any other district?—Very much more.

Mr. *N. C. Milne.*

2729. Some offices there have 30 or 40 clerks?—Yes.

2730. The actual number of solicitors therefore would not give the amount of business, practically, that is transacted in that district, although a great number of them live there?—They must represent the business.

2731. I mean that one firm living in the Lincoln's Inn district might probably be carrying on as much business in the courts as 20 firms in the City?—Not so much as that; but a much larger proportion of the business that brings solicitors to court than many firms in the City.

2732. Would the difficulties of getting from the Temple to Carey-street be obviated by an underground passage somewhere near Child's-place?—I think so, very much; there must be either a bridge or some other communication for crossing Fleet-street.

2733. Have you heard that Mr. Ayrton made a suggestion with regard to Child's-place?—I have heard that somebody made a suggestion that there might be an underground passage made there.

2734. Supposing Child's-place was bought, that little block removed, and the house at the end of Brick-court, which blocks up the way there, there would be ample room for carriages to pass?—Yes, if you made the opening larger.

2735. And supposing that they started on the level from Brick-court, it would take them under the Strand almost on the level the whole way?—From Fleet-street to the Temple is down hill.

2736. Supposing you take a level line from Brick-court, it would carry you sufficiently low to carry you under Fleet-street?—Perhaps it might, but that would be more a question for a surveyor.

2737. But looking at that plan, the exit from Child's-place would be directly at the end of the Carey-street site?—One end of it.

2738. Supposing it to be done, barristers would then be able to walk robed from the Temple to Carey street?—Yes; some do so now.

2739. Do you think that that would meet any difficulties that now exist with regard to residence in the Temple?—I think it would, so far as the Bar is concerned.

2740. As regards solicitors, all those living to the east of your building would be practically nearer the Carey-street site than the other site?—Yes, I think so.

2741. You say, speaking generally, that the Carey-street site, to parties in your profession, would be much the most convenient?—I think it would; so far as I am personally concerned, it would. My business lies with men entirely north of Fleet-street, with one exception in the Temple.

Mr. Richard Kinder, called in; and Examined.

Mr. *R. Kinder.*

23 July 1869.

2742. Mr. *Goldney.*] You are a member of the firm of Woodfall & Kinder?—Yes.

2743. What are you?—Printers.

2744. Where are your business premises?—At the bottom of Milford-lane, on the Embankment.

2745. How long have you lived there?—Five years.

2746. Do you find any inconvenience from the water, since the Embankment has been finished, in spring tides?—At almost every spring tide the water comes into our foundations.

2747. And the cellars?—The basement.

2748. Notwithstanding the Embankment being completed?—Notwithstanding the assurance of the officers of the Metropolitan Board of Works that it should be kept out.

2749. When was the last time that the water came in?—About a month or six weeks ago.

2750. And do you think that that exists with other houses as well as yours?—I do not know at all.

2751. Mr. *Layard.*] Is yours a modern house, or an ancient one?—Partly very old and partly new.

2752. Are the foundations new?—The water comes in to both parts, the old part and the new.

2753. What depth are the foundations?—I cannot tell you. It comes into the basement of the old houses and into the pits made for machinery of the new parts.

2754. Lord *John Manners.*] Who built those new premises for you?—Dove, of Islington.

2755. Sir *William Tite.*] And can you state the name of the architect?—Mr. Field.

The Right Hon. Lord Romilly, (attending by permission of the House of Lords), Examined.

Right Hon. *Lord Romilly.*

2756. *Chairman.*] We presume that your attention has, for a considerable time past, been called to this question of the best site for the New Law Courts?—Yes.

2757. And you have probably formed a decided opinion upon it?—Yes.

2758. Before asking you to give your reasons, will you kindly inform us which, in your judgment, of the two sites, which are now, practically, alone before the Committee, the Carey-street site, or that upon the Embankment, seems to you the most convenient?—That which seems to me the most convenient is the Carey-street site; but perhaps the Committee will allow me to say a few words in the first place, on the question whether you want any site at all.

2759. Certainly that is a material point of the inquiry; will you state your views on that?—In my opinion it is a completely unnecessary and wasteful expenditure of money to build any courts at all; in the first place, I do not think that new courts are wanted; in the next place, you do not know what courts will be required. At this moment you have got a report from the Judicature Commission in which they propose complete alteration in the system of judicature and appeal, and it will be a singular inconvenience if, after you have built all your courts, you find that you have got some courts which are not wanted, and others which are not suited for the purpose required. Any change of court for me would be a very considerable inconvenience; I am however bound to say that, in this particular case, I do not think that I personally am much interested, because I think it very certain that I shall cease to be Master of the Rolls before any new courts are built anywhere; but I want to explain how far it would be an inconvenience to me; as Master of the Rolls I have a great deal to do with the records, the business of which has increased of late years, partly from what I have done myself, and from various other causes; and the result is, that there are continually little directions to be given. My court is at present in the Rolls House, the consequence of which is, that by coming down in the morning a quarter of an hour before the court sits, and going out for luncheon for a quarter of an hour at half-past one, or somewhere about that time, and staying half an hour after the court is up, I am able to dispose of a large amount of business, from having all the officers of the establishment just round me; they are sitting upstairs, all in the same building, and they come to me, if required, in a moment. If there is a letter to be settled, or to be written, I can do it with the greatest possible facility. I do not say that the amount of business is very considerable; but if I had to go to the Rolls House to do it, and thus add the journey to the work to be done, it would add much to my labour.

2760. Will you explain what kind of business this is; do you mean applications to you in connection with the records?—They are applications of this description: for instance, the records of a character that lie within my jurisdiction at some place distant from London may be in great confusion; persons write to me to complain that they cannot find the records that they require; then I have to send down Sir Thomas Hardy, who is the Deputy Keeper, to inspect them; he comes back and makes a report to me; I thereupon apply to the Home Office, and say that I propose to exercise the functions which I possess, under the Statute, of removing all those records to London (I am now merely following one particular case in order to explain it), and ask that they will allow me money for that purpose, and I act accordingly. All the little stages of that proceeding, from time to time require letters to be written, matters to be approved of, and things to be done, which, though they do not take a great deal of time, yet take each of them by itself a little time. Then application from persons relating to certain documents under my control, I am in constant communication with the deputy keeper on these subjects. The number of cases that I could state is innumerable. They are very small, but they all require attention, and they all must be done by the Master of the Rolls; and it is a great convenience to be able to have the thing done in your own house.

2761. Your objection, as I understand it, to being

being separated from the place where the records are kept arises out of that double duty imposed upon you, the judicial duty and the custody of these documents?—Solely. I do not think that it would apply to any Vice Chancellor; it applies solely to me, that I have a double function to perform, and it would be a great inconvenience to me to be removed; but I think that the Committee ought a little to consider this in choosing a site, that it ought to be in accordance with the wishes of the judicial part of the legal profession. For myself, I do not at present know any power you would have, or any power that Parliament could really exercise, of compelling the equity judges, for instance, to leave their present courts. I have often thought how it could be done by Act of Parliament. Supposing an Act of Parliament said, "The Master of the Rolls shall not make any order except in the Rolls House, or except in such a place"; that would paralyse the functions of the court. I make orders everywhere. Persons come to me at my own private residence. I make orders in the country; in fact, when I am performing judicial functions as a judge in Chancery, the Court of Chancery is for that particular purpose where I am; and it has happened to me when I have been sitting in the Judicial Committee of the Privy Council on a very pressing matter, where an injunction was wanted to prevent the destruction of property at the instant, to go into a room adjoining the Council Chamber, hear an application, and grant an injunction. Therefore it would be impossible to say that the judges should all perform all their duties at one place; and if you did not do it, it would be very difficult, I think, to enforce their attendance at any particular place. My own firm conviction is, that no new courts at all are wanted; that you ought to wait until you have ascertained what changes in the judicature are required before you have any courts at all built. I confess that my great regret was, that having a large fund by which you might have prevented what I think the worst of all taxes, namely, a tax upon law proceedings, (and which during a great number of years you had diminished, to a great extent,) you have been obliged to give up that system, and have been obliged now to increase the tax upon law proceedings, and increase the fees for the purpose of enabling courts to be built, injuring suitors, I believe, to a considerable extent, instead of doing them any good whatever. Of course I am not going into that question. Your Lordship, and probably every member of the Committee, is familiar with a little tract by Mr. Jeremy Bentham, probably one of the ablest things he ever wrote, called "A Protest against Law Taxes," in which he points out their evil very strikingly, and in a very few pages. During the time that the compensations have been falling in, since the great change in the Court of Chancery in 1850, I think, the Chancellors have been gradually reducing the fees in every respect, as the Suitors' Fund allowed it, and have reduced the fees to less than one-half. Now all that is stopped. Had it not been for this fancy for new courts when all the compensations had fallen in, the court fees would have disappeared in the Court of Chancery, and suitors would only have had to pay their solicitors for their regular business. That is why it is that I have looked with a great deal of regret at the application of any money at all to new law courts, and which, I believe, when you have built them, you will find has been thrown away. But, if you are to do it, my own opinion is, that the Carey-street site is by far the best for the purpose of the convenience of the profession. For the suitors it is a matter of perfect indifference; they come up to London, or they are residing in London, and whether they go to one place or to another is a matter of trifling importance to them. But, for their own convenience, as regards judges, barristers, and solicitors, I am quite sure that, in respect to the facilities of access so far as relates to the Chancery proceedings, of which I know most, the Carey-street site is by far the most convenient and the best.

2762. With regard to your observation, that it is not necessary that new courts should be built at all, has it not been a matter of complaint among judges for many years past, that the courts were very crowded and very inconvenient?—Yes, that is undoubtedly so, and will be so when these courts are built; and you will never get rid of that evil with the very best courts. It is incidental to persons who sit in courts of justice, and to the public. Upon various occasions they are very crowded, and I do not mean to say that you might not make more convenient courts than those at present subsisting, but I believe that you would make them at a greater sacrifice than is required.

2763. As a matter of fact, probably it is within your knowledge that many of the large provincial towns have thought it necessary within the last few years, in consequence of the increase of business, to erect law courts often at great expense?—Yes, I have known that done and with great advantage, and undoubtedly at assizes you require larger and more convenient courts than the greater part of the business in London requires; wherever you have juries and a great access of persons, you require more room and more facilities for hearing than you do in ordinary cases in Banco, and very much more than you do in cases in Chancery.

2764. I gather that you do not attach much importance to what many people regard as important, namely, the concentration of the courts in one place?—No; my belief is that the persons who would be benefited by that would be solicitors, and that nobody else would be benefited by it; jurors would not, and I do not think that judges would be benefited by it at all, but I have no doubt that to solicitors in large business it would save the expense of a clerk or two annually, and be of considerable benefit to many of them.

2765. You spoke of the Report of the Judicature Commission, and of the contemplated alterations of legal business, but are not those alterations likely to be in the direction of concentrating more business in London than the reverse?—I think they are, but I think also in the direction of diminishing the number of courts that you will require.

2766. Then, as I understand it, briefly, your opinion is this: you would rather leave matters as they are, but if the country or Parliament have decided on building, you would rather build in Carey-street than on the Embankment?—Yes, that is exactly my opinion; and I think that we are too hasty about it, that we had better wait and see what we shall require; and that the law is in a state of transition at this moment, and that a great alteration will be made in the law, which

Right Hon. *Lord Romilly.*

23 July 1869.

will require a corresponding alteration in the courts.

2767. Mr. *Layard.*] I think I understood you to say that the Carey-street site would be the most convenient to the Chancery bar?—Yes.

2768. Would you express so strong an opinion with regard to the Common Law bar?—I am not so good a judge as to them, but I should have thought that it would have been as convenient to the Common Law bar if (as I understood was intended to be done) you gave them access to it by going over Fleet-street instead of crossing it. No doubt it would be a very serious inconvenience to have to cross Fleet-street or the Strand; but if there were a means of access over the Strand, which I thought some of the plans proposed, I should have thought there would not have been a difference of many yards from the Temples between the two sites to the Common Law bar.

2769. You are aware that the Chief Baron, and some of the Common Law judges, have expressed a strong opinion in favour of the Embankment site?—No, I was not; but of course I should defer to their opinion as knowing more about it than I do.

2770. With regard to the large mass of persons, jurors, witnesses, and suitors, who take an interest in cases generally tried in the common law courts, do you not think that the Embankment, with access by rail and river as well as by road, would be much more convenient to them?—I should have thought that the access would not have been more convenient, or so convenient, as the other. The access from the north, where the greater number of solicitors of all sorts I believe dwell, would have been, I should have thought, easier to Carey-street; and if there is to be a passage over Fleet-street or the Strand, persons could come that way from the Thames Embankment Railway.

2771. I am not speaking of solicitors, but of the public?—Speaking of the public generally, much more of the public would come from the north of London, I take it, than from the east or west; or at least if they did not come from the north, they would not come from the south-east or the south-west.

2772. But supposing the recommendation of the Judicature Commission, that the Home Circuit, should be brought to London, were carried out, then surely a large number of persons would be brought from the surrounding counties?—Undoubtedly they would; but I think the access to Carey-street would be more convenient even then. It is manifest that it would be so from Middlesex. I think that it would from Herts and from Essex; they would all come from the northern part. From the south, from Surrey and Kent, they would have to come over the bridges, and the difference on either side of the bridges would be very slight indeed. No doubt if there were a bridge just opposite, it might be some convenience to them to come to the Embankment site.

2773. May I ask when you go to your court, how you generally go; is it by the Strand?—No, never; I live in Hyde Park-terrace, and I walk to my court every morning down Oxford-street, through Lincoln's Inn-fields to Lincoln's Inn, and into the Rolls-yard.

2774. Supposing that you come by carriage, how do you come?—Exactly the same way.

2775. But there would be this difficulty in reaching Carey-street, that you would have to pass through a good many small inconvenient streets?—No, I do not think you would. If you came from my district you would go down Oxford-street, and Little Queen-street, into Lincoln's Inn-fields, and then you are at Carey-street. If you came from the north, from Russell-square, for instance, you would come down King-street and Little Queen-street into Lincoln's Inn-fields, in the same way.

2776. Are not those streets small inconvenient thoroughfares?— They are, but they are very short; Little Queen-street is very short, and all the streets above it, to the north of the square, are of a very convenient size.

3777. Sir *William Tite.*] Your Lordship has been good enough to express an opinion that the concentration of the courts would be convenient to solicitors, what is your Lordship's opinion with regard to suitors, and the general public?—I do not think it would be any advantage to them at all.

2778. In what way would it be convenient to solicitors?—They have business in a great number of courts at the same time on the same day, and consequently if they are obliged to attend to all these matters, they must have a clerk here, and a clerk there, and a clerk at another place, whereas one clerk might do the whole, if the courts were concentrated; supposing a solicitor has a trial going on at Westminster, a trial at Guildhall, and a trial at Chancery, he must have three clerks attending at those three places. It is true that a Chancery clerk does not usually attend to common law business, but still, with every allowance for that you would find that a smaller number of clerks would then be able to deal with the business, or else I should have thought that so far as the public are concerned, the separation of the courts is more convenient to the persons not acquainted with it, the bustle attending the accumulation of the courts is a great evil, and a person coming from the country is completely puzzled and does not know what to do or where to go to, and you ought to have persons to direct such people. At Westminster Hall, on the other hand, a person knows where the Queen's Bench is, and the Common Pleas, and the Exchequer; their names are put up and they go into them at once.

2779. Does your Lordship think that the bar would be benefited by the courts being concentrated in this way?—Not a bit.

2780. Would not a man, on the contrary, undertake more business than he could manage perhaps from that fact?—I do not know; certainly it would be no advantage to him.

2781. And the fact that they were all united would be no advantage to me, or to anyone else?—No. There was a species of advantage which we used to enjoy a great number of years ago when I was first called to the bar; but it is an advantage which suitors derive no benefit from, or if they do derive any, it is in the most indirect manner. I allude to the union of barristers of the different courts meeting together at a coffee house. Such a meeting of barristers in different branches of the law had a great tendency to improve the profession, I think, to elevate the standard and character of the profession; and they got assistance from one another in improving the different parts of the profession; but that is purely a social benefit.

2782. Your Lordship said that the courts were complained of very much now, and that if they were

were rebuilt, they would be equally complained of; does that arise from the crowds at one time and the want of a crowd at another?—Yes. And when persons complain of the ventilation, they never seem to me to understand the difficulty of ventilating a place which is to hold 600 people at one time, and 60 in the course of half-an-hour.

2783. And your Lordship thinks that we should not be exempt from that difficulty, if we took the pains of building the New Courts?—No, you might diminish it a little, but practically you would not remedy it.

2784. Your own court is convenient, I believe?—Yes, I rarely have a crowd there; and it is about double the height of the other courts, and the air is usually freer and fresher.

2785. You spoke of the increase of fees also, as against the public; you are quite aware that one of the means which is suggested to pay for these new buildings is an additional duty on probates of one per cent.; do you think that undesirable?—I do not think that very undesirable, because, in fact, the tax upon the probate nobody ever feels; it is perfectly unjustifiable in principle, because it is a tax upon capital, but it is a tax which nobody ever feels; in fact, it is like the legacy duty in that respect, though upon principle it is wholly undefensible. When I say that it is a tax upon capital, it is never saved. If a stranger leaves you 1,000 *l.*, you pay 100 *l.* on that, and you treat that as a legacy of 900 *l.*; but if you are taxed 100 *l.* a year upon your income, it diminishes your expenditure to that extent.

2786. However, your Lordship thinks that that is a less objectionable way than increasing or continuing generally the fees paid to the ordinary courts of equity?—Yes.

2787. Lord *John Manners.*] If the additional expense is to be met by an additional tax upon probates, would it be your Lordship's opinion that the probate department should be properly accommodated in the new building?—Yes.

2788. With respect to your own court, in the event of its being decided to place your court in the new block of buildings, would you tell us which would be the most convenient site for you to go to from your offices in the Rolls Court to the New Court?—Unquestionably, the Carey-street site would be the most convenient. The other would be singularly inconvenient to me. In the first place, I should have to cross the Strand, which would be singularly inconvenient. It is at any time a great nuisance crossing these crowded thoroughfares, and then I should have to do it regularly, whereas I have not now to do it at all.

2789. Mr. *Watkin Williams.*] I think I am right in saying that the Rolls Court is confessedly one of the best courts in the kingdom?—Well, Sir William Tite is a much better judge of that than myself.

2790. There is not any likelihood of improving the Rolls Court by the change?—No.

2791. Mr. *Bentinck.*] Is it intended that the Rolls Court should be pulled down as the new building advances?—I believe that ultimately it will be pulled down. At present the Government have acted very liberally towards me at the Rolls, for they have given me ample space for keeping a great number of documents which will last for many years after I am gone. The Rolls House used to be inhabited by the Master of the Rolls. There is a private chapel belonging to it which I am in the habit of attending. It would be a great inconvenience to me if they pulled down the Rolls House and the Rolls Chapel, and took away all those recollections; it would be painful to me, but I do not think that there is any chance of its being done at present.

2792. You recollect the Committee of 1861, when you were examined, I believe?—I think I was.

2793. Upon the question between the site in Carey-street and the site on the centre of Lincoln's Inn-fields?—I do not remember my evidence.

2794. On that occasion you gave evidence to the effect that it was highly undesirable that any one who held the office of keeper of the records that the court should be removed?—Yes; I thought it better that it should be within the precincts of the Rolls Estate.

2795. You adhere to that opinion now?—Yes.

2796. As that building advances, is it contemplated to occupy the whole of the site of the Rolls Estate by the Record buildings?—No; but a certain part of the Rolls Estate now is occupied by common law offices; almost all is occupied by common law offices; and some houses in which I have put some documents relating to the Record Department.

2797. Then in that case a part of this Rolls Estate would be available for the general purposes of the law courts?—No, I think not, from being on the other side of Chancery-lane. The Rolls Estate lies almost entirely to the east of Chancery-lane, and you do not propose, as I understand, to take the interval between Chancery-lane and Carey-street, where the Incorporated Law Society's building now stands, and the houses which run down to Fleet-street. The Rolls Estate lies on the east of that.

2798. Perhaps it may not be within your knowledge that evidence has been given here to the effect that in the reduced plans a certain number of courts and offices have been left out that were included in the original plan, and therefore these offices would have to be located somewhere. The object of my question was simply this, to ask you whether, in the event of its being necessary to find a site for these extra courts it would not be possible that they might be erected upon the Rolls Estate?—No; I do not think they could. In the first place, the records increase very rapidly, and then it is very desirable that they should be very carefully preserved. I do not believe that such a collection of records exists in the world as exists in this country, and they will be constantly increasing; in the course of years I have no doubt you will require some considerable additions.

2799. Then you think, that, in principle, the whole of the Rolls Estate ought to be dedicated ultimately to the reception of the records?—Yes, all that remains of it, all that is not already taken up by Judges' Chambers; it runs down to Serjeants' Inn, and Serjeants' Inn has taken up a good deal of it in that way.

2800. But as to that part in which the Judges' Chambers are now situated, would it not be available for any general purpose?—You must have those offices somewhere. I do not know what they do in the Judges' Chambers, but I know that they require an ample space, and that they have a large building, which I believe stands principally on the garden of the Rolls. The Committee are probably aware that the back of the

Right Hon. *Lord Romilly.*

23 July 1869.

Rolls House, till within the last 30 years, there was about an acre and a quarter of garden ground in the middle of London which belonged to the Master of the Rolls.

2801. Then you do not contemplate that the site now occupied by the Judges' Chambers would ever be required by the Record Office?—I do not say that. I think the Record Office will require more room, but whether they are to turn out the Judges' Chambers, or not, I do not pretend to express an opinion.

2802. Mr. *Osborne Morgan.*] Does it not sometimes happen that a judge, in the course of hearing a case, requires to see the original document, and has to send for it?—Yes.

2803. Looking to that circumstance, would it not be desirable that the courts should be within a reasonable distance of the Record Office?—Yes, but I do not think that that happens very often; it has happened to me very frequently, but I am not sure, to tell the truth, that I do not a little encourage it, from the facility of obtaining the document, but still, occasionally, it is desirable.

2804. Mr. *Goldney.*] You have spoken of the great advantage of having offices near the courts, so that the judge should communicate with his officials without loss of time?—I referred then to the Master of the Rolls.

2805. Do you not think that in the case of the Vice Chancellors, it would be an advantage?—I suppose that if the New Courts were erected, they would have their offices close to them; it is of great importance that they should have their chief clerks near them.

2806. The chief clerks now are at a considerable distance from the three Vice Chancellors?—Yes.

2807. They must suffer practical inconvenience from the want of concentration of offices and courts?—Yes; if I want anything of those officers, they are in houses on the other side of the yard, and I send across, and get it in an instant.

2808. But your offices, although near your court, are very bad offices, are they not?—I do not know them well, but I think that they are not very bad; I believe they are better than the Vice Chancellors'.

2809. You spoke with reference to the saving the time of clerks and solicitors that would be effected by the adoption of the Carey-street site, but that practically results in a benefit to the clients, does it not?—I suppose it does, but I should think that the saving to them would be very small; I will answer for it that the solicitors will do the business just as well if the plan is not carried out. It will cost them less to carry on their business when these things are done, but their business would be done just as well without them. I do not think that to the suitors it would make a difference of a penny per cent.

2810. Take it in this way, supposing that in the Examiner's Office, for instance, it was necessary for a counsel to attend, and, supposing that that counsel was engaged in court, the separation of the court from the Examiner's Office frequently causes material delay, does it not?—I daresay it does; but you cannot prevent that, even if you have the courts close to each other; a person cannot be in two places at once; and the serious inconvenience usually arises from the fact of his being actually wanted at the same moment in two different places. I think Mr. Osborne Morgan will admit that we occasionally wait till a gentleman can come from another court and postpone his case a little; but it is an inconvenience which results from his being actually engaged elsewhere.

2811. When the Chancery Court was sitting at Westminster, it was then a great inconvenience in the way of chamber practice, was it not?—Very great.

2812. And that inconvenience would, to a certain extent, operate now, if the courts were placed on the Embankment site?—Yes; but I may observe that it was a great advantage to young men. Many a draft have I had to draw by reason of a counsel being detained at Westminster, and the defendant being under process of attachment; I am talking now of recollections of a great many years ago.

Mr. Charles Hall, called in; and Examined.

Mr. *C. Hall.*

2813. *Chairman.* You are a Chancery Barrister?—Yes.

2814. May I ask where your chambers are situated?—My chambers are in Stone Buildings, Lincoln's Inn.

2815. I suppose that you have had a good many opportunities of ascertaining the feeling of your profession, on the subject of the best site for these new courts?—Yes, I have; but I cannot say that I take any very warm interest in the question one way or the other; I rather came to give evidence as to what my own personal experience was with regard to the convenience of the one site or the other.

2816. Then I will put it to you in this way; looking at your own business only, which site would be the most convenient to you?—I should say undoubtedly Carey-street; and I should say that certainly in common with gentlemen who are in the same branch as myself—I am behind the bar, and have practised behind the bar for a great number of years: I am principally an equity draftsman and my business consists in drawing pleadings in Chancery—we are often under very great pressure in drawing those pleadings, and it is a great convenience to be very near the court, because I am enabled by that means, and so are many gentlemen in the same situation, to spend a great deal of time in chambers. We have a clerk in court who is always there watching to see how the cases are going on, and we are summoned in just as we are wanted. That enables us to be drawing pleadings up to the very last moment, and, as your Lordship is aware, in injunction cases it is of the greatest importance to the public that there should be no time lost; half an hour may make all the difference in the case of the pulling down of a house, and the sailing of a ship, or the drowning of a mine, or any similar thing. We draw Bills for injunctions in that way, and I have drawn many scores I may say in that way, and an absence of half an hour would have made all the difference. I practised for a long time while the courts were at Westminster, before Lord Cranworth ultimately made the change; first of all it was begun by Lord Cottenham, and it was ultimately completed by Lord Cranworth,

Mr. *C. Hall.*

23 July 1869.

Cranworth. At that time it was the very greatest inconvenience to us when we were summoned down there; counsel in considerable practice did the best they could; they got down by cab or otherwise, but occasionally they were too late, do what they would; and their cases were over before they got down. Now although there are generally two counsel in a case, and the leader may conduct the case, yet as the junior has been concerned from beginning to end with the pleadings, and knows the evidence from beginning to end, it is of the greatest importance to the suitor, that he should be there; and I am quite satisfied that unless the junior counsel is at hand, very often suitors are very much wronged by it; and that would happen if you do not have the chambers substantially close to the court; I may mention that there is another, to my mind, great advantage in having the Courts close to the chambers of junior counsel in particular. The bar of this country, and particularly the Equity bar, are educated to a very great extent in chambers; that is the course of their education, and the very best education that they could have, in my judgment, and, I believe, in that of most persons of experience. They go to chambers, and they have papers put into their hands, and the counsel instructing them is enabled to go through those papers with them; if the counsel is not at hand, this consequence follows: the papers are pressed for, the papers are taken home by the counsel in his bag at night; they are done at night or early in the morning, and that communication between the pupil and the preceptor does not take place which takes place in other cases; and I say that it is to my mind not only a great advantage to the bar in point of education, but indirectly necessarily also to the public, because you have the bar properly and thoroughly educated in that way; and I am satisfied that there is no other way of educating men, except taking them into chambers and letting them see actual practice; that does not apply to the common law bar so much, because it is a different style of business; but it is particularly the case with reference to the Equity bar.

2817. Mr. *Layard.*] I understand you to speak only as a Chancery barrister, not with regard to the common law bar?—I do not speak with regard to the common law bar.

2818. I can understand that an hour's difference would be a matter of great importance; but would it be so if the distance after all only involved a matter of five minutes?—Well, if we were within five minutes of the chambers, I would not say that that would be so; but as I apprehend the proposed distance of the Embankment site, I think that a very large proportion of the chambers of Lincoln's Inn would be much further off than that.

2819. I think Sir Roundell Palmer stated that even in the present crowded state of the thoroughfares, he was only six minutes in going down to the site; you would not consider five or six minutes a very great disadvantage?—No, I should not. But unless you are almost on the spot, you are always under a state of apprehension; you must go to the court, and you do not know whether you dare go away or not, and you cannot work there; that has been tried down at Westminster; we used to do a very limited amount of work there in the Library sometimes, but we were always in a state of apprehension; we could not do it. Now a very large proportion of the chambers in Lincoln's Inn are within, I should say, two minutes of the court, and you are called in directly you are wanted.

2820. Are there any practising Chancery barristers residing in the Temple?—I do not know of any who belong, properly speaking, to the Chancery bar, any Equity draftsman in the Temple; I should say not.

2821. Lord *John Manners.*] The time that you would be absent from your chambers would be six minutes each way?—Of course it would be six minutes each way; and if you went down to see how things were going on that would be a serious interruption; we do that now; we go into the court and just see how things are going on, and we satisfy ourselves that we are safe for such a time; if it is a quarter of an hour we may go away and leave the clerk to watch; if we cannot be sure of that we stop, but if it is six minutes each way of course that would alter matters considerably.

2822. Mr. *Osborne Morgan.*] Can you give me any idea how often you go backwards and forwards from your chambers to your court in a day on the average?—I should say myself, taking one day with another, that I go backwards and forwards to court five or six times.

2823. Is it not a fact that the proportion of chamber work done by a common lawyer in large practice (I am speaking of a man behind the bar) is very small as compared with that done by the Chancery barrister?—There is no comparison at all between the two; the labour of the Equity draftsman in his chamber work is ten times as much as a common lawyer's.

2824. As compared with his court work the proportion occupied in chamber work is, at least, half of his time?—Certainly; I should say, that although I have a great deal of court business as well as chamber business, I get, at least, half a day in chambers, taking it all round.

2825. That would apply still more strongly, could it not, in the case of gentlemen who combine conveyancing with the work of Equity draftsmen?—Yes.

2826. A great many do so?—Yes; I am one of the conveyancing counsel to the court myself, and therefore I do combine conveyancing with the business of an Equity draftsman; but, I speak more particularly of my Equity business, which is my principal business; it is probably more inconvenient to the conveyancer not to be near the court; and as most conveyancers do now generally combine the two branches, it is even more important to the conveyancers to be close at hand than to others.

2827. You spoke of your experience in the courts of Westminster; are you in the habit of practising at the Rolls Court?—Yes, I practise there.

2828. Do you not find even that distance inconvenient?—I think it very inconvenient indeed, and I think the court highly objectionable on that account; the Master of the Rolls is a very pleasant judge to practise before, but I, in commmon with many others, go there as little as I can.

2829. Would not that inconvenience be multiplied considerably if the courts were removed to a still greater distance?—I should say so, certainly.

2830. Mr. *Goldney.*] When you spoke of the personal gain and comfort to yourself, it would also be a very great gain to the suitor in respect of

Mr. *C. Hall.*

23 July 1869.

of the facilities for communication if the court were placed near the counsel and the solicitors?—Yes, certainly; of course the immediate gain is that of the solicitor being in immediate communication with the counsel, but whatever benefits the solicitor in that way must benefit the suitor.

2831. And the facility of the business would result to his benefit by the acceleration of the ultimate result of the cause?—No doubt.

2832. The general public are affected very little with the Equity courts; I mean that you have very few juries?—Very few juries.

2833. And very few witnesses?—Very few witnesses, and comparatively, I suppose, fewer of the public attend the courts; they are not so interesting, generally speaking, as the common law courts, and, therefore, the general public do not attend them so much.

2834. If the courts were placed on the Howard-street site, do you agree with what Sir Roundell Palmer said, that it would amount almost to a prohibition of the advantages which you have now?—I quite agree with that; I think it would be so, certainly. Speaking for myself, individually, I do not think that it would be at all possible to continue the business that I carry on at present, or anything like half of it.

2835. Instead of being benefited by the concentration of the Courts, you would be detrimented?—Certainly.

2836. Earl *Grosvenor.*] Has it ever occurred to you whether a system of telegraphs might be established between the Law Courts and any of the Inns of Court, Lincoln's Inn, say?—No; I have not considered that question.

2837. Do you think it possible that some such system might be established with advantage?—I really have no sufficient knowlege upon that to render my answer to the question worth anything.

2838. Mr. *Beresford Hope.*] Do not you think that any system of telegrams would be liable to great confusion, there would be so many lawyers telegraphed for simultaneously that probably the message would take much longer to reach the lawyer than a swift clerk on foot?—I think that is not at all an unlikely consequence; but I must again say that I have not considered that subject; I do not know whether I might be allowed to make one observation which has occurred to myself. I dare say very probably it may have been mentioned by other witnesses, and it is not a subject which I have any particular knowledge upon, but I think that I may be allowed to mention it perhaps. It occurs to me that if you change the site of course the consequence must be, that you must acquire a considerable quantity of private property for the new site that you propose to take. Therefore you must, to a certain extent, draw away actually from existing property the present tenantry. Now it has occurred to me, in my experience, to see very many cases of hardship flowing from that, particularly where you take house property. You take house property which is very often the subject of family provision by settlement and by will, and when that property is so taken, the consequence is this, the owners of that property have to search for other investments for their money; a good deal of it goes into the Court of Chancery, because they cannot make the title without going into the Court of Chancery. You must re-invest it; the only thing that you can re-invest it in at once is the Three per Cents.; the consequence is, that there is a lamentable diminution of income in many cases to the persons who were in possession of those incomes before. The owners of the property the tenants of which are drawn always, also suffer by reduction of their rental. I have seen very many cases of hardship in my own professional experience flowing from these changes of property, and it has occurred to me with reference thereto, that although it may be that the one site is so much better than the other, that the private right ought to yield to the public advantage; yet it must be a very paramount, and a very great advantage, which would warrant an interference with private property in a way which would lead to great hardship in the manner that I have mentioned. I do not know whether I have travelled out of my way in mentioning it, but I thought that I ought to mention it as it presented itself to my mind.

MR. JOHN OAKLEY, called in; and Examined.

Mr. *J. Oakley.*

2839. *Chairman.*] YOU have had large experience, I think, as a surveyor and valuer?—Yes.

2840. You have been engaged in that business for a good many years?—Yes; more than 25 years in this House.

2841. And I believe that you have had opportunities of making yourself acquainted with the value of the land in the two localities which we are considering?—I have.

2842. Have you specially examined what is called the Howard-street site?—I have.

2843. And are you prepared to give the Committee any evidence as to the value of that site?—Yes; I believe that the property which is named in this schedule which I hold in my hand, which was the schedule sent to me by Mr. Pownall, may be acquired for 637,494 *l.*

2844. You have examined the property house by house?—Yes.

2845. And that sum includes compensation for all interests that would be affected?—Yes.

2846. Lord *John Manners.*] Have you examined also the plan of the Carey-street site?—I have.

2847. And will you give the Committee the results of your examination of the Carey-street site?—I have examined the Carey-street site with Mr. Pownall's valuation in my hand, Mr. Pownall's valuation being this, that the ultimate ground rent which the Carey-street site would produce according to his plan would be 18,216 *l.* per annum, which he has calculated at 20 years' purchase, making the value of the fee at this moment 364,320 *l.*

2848. Have you compared that with the estimate which Mr. Hunt has given of the same property?—In my opinion this ground-rent named by Mr. Pownall is as much as the property will ever produce, therefore, in giving that opinion, of course I give an opinion that the rent that Mr. Hunt named is more than it will produce.

2849. You are of opinion that no company or persons will probably be found to give more than 364,000 *l.*?—Well, if a company, or any body of persons

persons are ready to give security at once for any rental which may be named, and that rental to commence at once, of course that is an unanswerable proposition.

2850. Sir *William Tite.*] You spoke of 20 years' purchase on these rents as the amount that they would realise; do you, or do you not, know that those ground-rents in Victoria-street, which are not very favourite rents in the public appreciation, under similar circumstances precisely, have sold for 25¼ years, and some even up to 30 years?—Yes; but the highest case I know of ground rents selling was Cannon-street, by Hoggart & Norton, which realised 27 years' purchase on the average, and these ground rents bear a larger proportion to the rack rents than any street I know of.

2859. Taking Victoria-street, which is not a very favourite street, at 25¼ years, which that commission has realised, and Cannon-street at 27 years, why do you put this at 20 years?—Because that is the price for immediate money; I take it that before this 18,216 *l.* can be secured 14 years will pass away; it will take 14 years to cover it; the mean of that is seven; I therefore deduct seven years from the 27 years which the rents would be worth when they are realised, and put them at 20 now.

2852. How long did it take to cover Cannon-street?—A very short period after it started; but I have taken that 14 years from my own experience; this is a large quantity of land, and a large quantity of capital will be required to cover it, and it will take a long time.

2853. But if Mr. Hunt has the offer of a certain amount which would represent a ground rent in that sense, what is to hinder your realising that at once, and putting it up to auction?—Because you have no security for the rent; if you sell it on a personal security, no one will buy it to give a good price for it; but if you sell it after the houses are upon it, and when it is secured, it will fetch 27 years' purchase.

2854. But what is to hinder the land being covered within a year from this time; how long did the Excise Office, for instance, take before it was covered?—The Excise Office I do not think is an analogous case to this.

2855. Take Cannon-street, then?—Cannon-street is not analogous to this, because it was a much more valuable site, and more capital was brought to bear on it than could be here in my judgment. The new frontages will, no doubt, go first, but it will be many years before the entire is covered; and this 18,216 *l.*, I take as the immediate rent to start now, and the capitalisation of it should be upon the principle which I have put forward, even if I have not done it rightly. I took Mr. Hunt to say that it would be two years at a peppercorn rent, and nine years at a graduated rent; that is 11 against my 14.

2856. However, if you could get the frontages taken as they were in Cannon-street, is Cannon-street so much better than the Strand, that the cases would not be analogous?—It is better than the whole of this site. As soon as you cover any one site with a building and secure the rent, you may sell that ground rent and get 27 years' purchase for it when it is covered and secured; but it will be a long time before 5¼ acres will be covered; the time occupied, even if the capital is ready, will be considerable.

2857. Why should it be; they can build as well on one place as another?—We have not had many sites of this size to deal with; I have one in my eye of four acres which it has taken a long time to cover.

2858. Is that near London?—St. Thomas's Hospital.

2859. But in that case the railway station was exactly at that time removed into the heart of the City?—No doubt the value of St. Thomas's Hospital was diminished by taking the station away; but it will be a long time before that is covered even now.

2860. Mr. *Goldney.*] Your opinion as a practical man is, that no person or company would give the 364,000 *l.* down now for that site?—No; I do not think that you would find any one to go into so large a transaction as to pay the cash for it; the only way to develop the value of a large site like this, is to take it bit by bit; if you want to sell the whole at once, you must take a less price.

2861. The only mode of obtaining the 364,000 *l.* you think would be by letting it out in lots?—Yes.

2862. So that the public or some one must be out of the money for some time?—Yes.

2863. As regards the Howard-street site, do you think that the Howard-street site could be acquired in a year?—I think that that is much more likely to arise than that the Carey-street site will be covered in the time named.

2864. In the ordinary way, would it take a whole year to acquire all the interests on the Howard-street site?—I should think that a year is a short time, but it is quite possible to do it in a year.

2865. Your estimate of the cost of the Howard-street site is wholly irrespective of any expense necessary to widen the approaches there?—Yes; I have got that separately.

2866. Will you tell us what your estimate of the cost of widening approaches there is?—£. 162,000.

2867. Will you state what that includes?—It includes the east side of Essex-street, four shops in the Strand, and four blocks of buildings in Devereux-court.

2868. And that you think would be necessary if any large building like the Law Courts were to be placed on the Howard-street site?—It would be necessary before Essex-street could be widened. I have only dealt with it as these properties have been put before me. I am not an architect so as to speak as to whether it is a proper situation or so forth.

2869. You are merely valuing them as to what the cost would be if the necessity arose of taking those buildings down?—Yes.

2870. Earl *Grosvenor.*] Your estimate of the Carey-street site is put upon the ground of the value of the site as it is, I suppose, independently of the law courts being put upon the Howard-street site?—I take it that the clearing of the Howard-street site would induce to the more quickly covering the Carey-street site; but I think, with all, that it would take 14 years to cover it.

2871. Mr. *Layard.*] Have you had any experience in the purchase and resale of property in London?—Yes, certainly.

2872. What do you consider, on the average, the loss upon the resale of property purchased?—I did not apprehend your previous question properly. I meant that I have estimated a great many sites, and I have tested that estimate by buying

Mr. *J. Oakley.*

23 July 1869.

buying the property; and generally in that way we find that the property costs almost always rather more than we put it at; but, on the other hand, the surplus land generally sells for more than the estimate.

2873. Are you aware of the cost of the Carey-street site, I mean that part which has been already purchased?—Only from seeing the figures published.

2874. You are aware that it is about 800,000 *l.*?—Yes.

2875. Do you think that the property purchased at above 800,000 *l.*, including expenses incurred in purchasing it, has been providently purchased, when it will only fetch, according to your estimate, 364,000 *l.*?—I do not think that sites cleared, where there have been large businesses carried on, would ever sell for the same money after they were cleared as they were purchased for.

2876. What experience have you had of the re-sale of such a site as this?—None; there was no trade in the case of St. Thomas's Hospital site; there was only the cost of turning out a large hospital; no doubt they had 50,000 *l.* or 60,000 *l.*; but I have had no experience in having to sell a large site after it has been cleared. I should say that there is no doubt that, if you buy up sites with bad properties on them and with no trades, in many cases you can sell them again at a profit; but in the case of the Carey-street site you could not do it on the best terms.

2877. Taking the property between the Strand and Carey-street, but not taking the Strand frontage, can you say what the nature of that property was?—I never examined that site; I had many compensations on it.

2878. Was it not of a mean character?—A great deal of it was.

2879. Do you think that the Government ought to incur a loss on the resale of that property of nearly, 500,000 *l.*?—No, I do not think that they ought to sell it; I do not think that that is the way to realise it in the best form; I think that they ought to realise it by degrees; I think that they ought to lay out roads, and when they have fixed those main arteries, then let it bit by bit, and when the ground rent is secured by the property placed on it, sell it.

2880. A great deal, therefore, in your opinion would depend on the way in which the property was laid out?—Yes.

2881. And what would your advice be as to that?—I am not an architect, but I think that if Essex-street is widened there should be a wide street made up into Carey-street, and I think that Bell-yard should be widened; I may say that when I let land on agreement for a lease with arterial roads set out, it is seldom that the arterial roads in the agreement turn out to be the arterial roads in the lease.

2882. But the arterial roads add to the value of the property, do they not?—Yes, no doubt.

2883. Do you agree with Mr. Hunt, that if you carried the main road through the Carey-street site, opposite the end of Essex-street, you would have to incur no loss in the value of the land?—No; I cannot follow Mr. Hunt's figures, which I took to be this, from reading his evidence in the shorthand writer's report; that he knew parties who were ready to begin by paying 3 per cent. upon the cost of that site, and that it would be, after 11 years, 3½ per cent.

2884. That is not my question; my question was, supposing that that site were utilised for building purposes, you could carry a street through it without any loss upon the value of the land?—I do not think you could realise the land without putting the street.

2885. You, of course, have a good deal of business with Mr. Hunt?—I have.

2886. Have you found him generally accurate in his estimates?—Yes.

2887. Lord *John Manners.*] What I understand you to say is this: that, if the Government become building speculators, you think they can get rid of the cleared ground in Carey-street with a less loss than there would be by proceeding on any other plan?—Yes; I do not think that you would find any one to buy the Carey-street site, for cash, at the price that the Government ought to part with it for.

2888. The Government ought to be the building speculator itself?—You would get more capital, and at the same time incur less loss upon the Carey-street site, by selling it to individuals, than to one gentleman who should find the whole capital.

2889. Sir *William Tite.*] Supposing that it were not a gentleman, but a company, as described by Mr. Hunt?—I think, whether it is a company or a single individual, either the body or the one man would know that there are so few customers for such a property that they would not give 364,000 *l.* for it, although I believe that it is very probable that, in the course of years, perhaps less than 14, 18,000 *l.*, ground-rent would be produced from it.

Tuesday, 27th July 1869.

MEMBERS PRESENT:

Mr. Chancellor of the Exchequer.
Mr. W. Cowper.
Viscount Enfield.
Mr. Goldney.
Earl Grosvenor.
Mr. Russell Gurney.
Mr. Beresford Hope.
Mr. Hunt.
Mr. Layard.
Lord John Manners.
Mr. Mowbray.
Mr. Osborne Morgan.
Lord Stanley.
Sir William Tite.
Mr. Watkin Williams.

The RIGHT HONOURABLE LORD STANLEY, IN THE CHAIR.

Dr. AUGUSTUS FREDERICK BAYFORD, called in; and Examined.

Dr. *A. F. Bayford.*

27 July 1869.

2890. *Chairman.*] YOU are the Senior Registrar of the Court of Probate, are you not?—I am.

2891. Are you in charge of the records and other documents which belong to the Court?—Partly, with the other registrars.

2892. Where are those records at present deposited?—The greater number of them are deposited at Doctors Commons. Some are at St. Paul's; and others in the district registries all throughout the country.

2893. Is it considered an object that they should be brought together?—Undoubtedly so; and as a great national object, the thing which I had always before my mind as worthy of aiming at was this: that you should have a depository of all wills and of all testamentary information in the Principal Registry of the Court of Probate; so that anybody might then obtain every existing information in reference to any grant of probate or letters of administration that ever had been made, of which there was the slightest record in this kingdom. In order to do that, it would be necessary for all the papers to be in one place, and for one set of persons to have charge of them; otherwise it would be impossible to carry out any plan of that sort.

2894. I presume that it belongs to the very nature of the business of your court that it must extend in amount?—Certainly; as the population increases, and as the resources of the country increase, so of course our business increases.

2895. It would follow therefore, would it not, that wherever your offices are, they ought to be in such a position as to be capable of extension?—Quite so.

2896. Have you formed an opinion as to what would be the most desirable position for them?—The most desirable position that has ever come before me was the original one which was proposed in the Carey-street plan, as it is called. Our position there was on the west side of the building, and the effect of that was that, though we could not in the building itself, perhaps, have made any extensions, supposing that it had been necessary to extend the offices, which it would not have been for many years, at any rate, there would have been in the locality just opposite to us, the means of purchasing places in which we could have put certain of our departments, as we do now, and re-arranged the rest, and thereby have greatly extended the premises.

2897. Then, if I understand you aright, you would prefer the Carey-street site, because there is a greater facility for buying up adjoining land, which land would be required for the purposes of your future extension?—That is one reason; but there is another, which however was embraced in the other larger plan, which seems now to be rather abandoned; namely, that the original Carey-street plan enabled us to be close to the court. It is of very great importance to us; indeed, it is of such great importance that if you had asked me ten years ago whether we could have gone on as long as we have gone on without daily and constant communication with the judge, I should have said that it was impossible, and that the court could not have gone on, and that the registry could not have gone on. Still, we have done it for ten years, and, therefore, I cannot say that it is an impossibility; but we feel it throughout all our business.

2898. Mr. *Layard.*] Supposing that you could obtain the same accommodation on the Howard-street or Thames Embankment site, then you would have no preference for the Carey-street site?—Quite so.

2899. Would you prefer the Thames Embankment site?—No, I should not; I should have no choice at all.

2900. Then supposing the same accommodation to be found for you in the vicinity of the courts, would I understand you to say that you have no preference for either of the two sites?—Not the least in the world.

2901. I presume that your offices are chiefly the resort of the public who require to see wills, and obtain information regarding wills?—There are a great number of solicitors and a great number of their clerks daily, and the rest of those who visit are composed of the public generally.

2902. Does that public bear a large proportion to

Dr. *A. F. Bayford.*

27 July 1869.

to the solicitors and their clerks?—I can hardly tell you. Giving a guess, I should say that probably it was divided between the two; but I cannot give anything like an accurate statement on that head. The thing differs very much in this way: on all days we are visited by the solicitors and their clerks in pretty good numbers, but on some days we scarcely see one of the public; but then the public on other occasions come and overflow us, so that it is very difficult to say how that may be.

2903. As regards the access to the two sites, have you taken that question into your consideration?—Yes. I do not see, as far as we are concerned, that it would make any difference; indeed I should say of the two, as far as I understand the plans, that there the Carey-street site had the advantage, because we should come into a street which would be almost entirely occupied by our buildings, and consequently the public would go into and out of a street which was not occupied by the rest of the building.

2904. My question had reference to access from different parts of the metropolis and from different parts of the kingdom. As you are aware, the building on the Thames Embankment would be accessible by the circular railway, by the Embankment road, and by the river?—Yes, and so would the other; it is merely a question of walking across the Strand.

2905. It would be more than that, would it not; it would be going up one of those streets, such as Essex-street?—Just so.

2906. Sir *William Tite.*] You have spoken of the judge; what judge do you mean?—Lord Penzance.

2907. I suppose you have understood that that arrangement of that court has been already abandoned and given up altogether, and put elsewhere?—I do not quite understand that.

2908. However, you want to be in connection with the Court of Probate, do you not?—Yes.

2909. Is that the court where the divorce cases, and so on, are tried?—It is a court in connection with it; the same judge presides over both.

2910. Will you explain what is meant by the Court of Probate?—The Court of Probate is the court in which wills which are disputed are tried. Supposing that a will is disputed, the case is heard in the Court of Probate; on the other hand, supposing that there is no will, but a case of administration, and the question is who is to administer, that case is also decided in the Court of Probate. In the Court of Divorce, which is presided over by the same judge, and the registry of which is in connection with the registry of the Court of Probate, the registrar of the Court of Probate superintending both registries, the matrimonial cases are tried.

2911. I suppose, then, that the two courts have no natural connection, except that they happen to have the same judge?—They always, up to this time, have been connected, and so one can hardly say that.

2912. Where does the judge sit now?—At Westminster Hall.

2913. Does he sit at all in the neighbourhood of your offices?—No.

2914. Are you aware that the general impression is, that that court is to be given up as one of the great associated courts of law?—No, I never heard that idea before.

2915. If that was so, I suppose all that you would want would be that there should be some central place where all your documents would be together. How are they kept now?—They are gathering together as fast as we can get room to take them, and clerks to take charge of them. That is the state of things.

2916. What space have you where you are?—I can hardly say. We have two large buildings entirely devoted to papers. Perhaps that is the easiest way to explain it. Mr. Pennithorne probably knows the dimensions, but I can hardly state them.

2917. When you speak of the west side of the Carey-street building, do you imagine that the space which you were to have there was to be equal to take all the wills in England?—Quite so.

2918. Have you any idea of what that space was?—I think that I can answer that question in this way, showing what was allotted to that purpose; I have the instructions to the architects in the first instance.

2919. Did you suggest that the documents should be in a tower?—I did not; I adopted that. It was the suggestion of one of the architects to me, whether that would not be as good a form of keeping our papers as any other, and he thought it would have a very good architectural effect; to which I said immediately, "There is no reason why it should not be in a tower, and, if it adds to the beauty of the building, so much the better."

2220. Do you consider the mounting of steps for 20 or 30 feet, any objection?—But we had the tower arranged so that off every floor you should enter it; so that the documents which would be used on one level would be in the tower on the same level at which they were wanted.

2921. Still you would have the steps to ascend, would you not?—To get up to our rooms, but not into the tower.

2922. What is the extent of the documents for the present century, for I presume that the present century would cover all that is likely to be wanted in any judicial proceeding?—No, I do not think that you could fix any time; I have in vain attempted to do so; it must always be remembered that the large bulk of the testamentary records extends only down to the year 1800; if you take those away the remainder is comparatively small; and when you go back to 1700, it is afterwards only a question of a room or two; they are but few throughout the kingdom; consequently, unless you stop after 1800, or 1825, or something of that kind, you really make no very material difference in the room which you want to provide.

2923. Then from 1700 to 1800, I suppose there is an enormous mass of documents?—It is not anything like those since 1800; perhaps it is about half. I do not think that you could stop before 1700, because we are constantly wanting those wills to use for grants, in respect of pedigrees and things of that kind, and administrations, and so on.

2924. Then do you think, on the whole, that they ought to be altogether, wherever they are?—It seems to me so.

2925. And as long as they are where the judge is, you do not care where they are?—No, I think that would be so.

2926. Lord *John Manners.*] Were the plans which were agreed upon Mr. Street's accepted plans, satisfactory to you, and to the other officials of

of your Department?—Perfectly so; we had every single department before us, and the clerks who were to be engaged were themselves consulted as to the convenience of the arrangement, and we all came to the conclusion that there would be sufficient and ample accommodation for us.

2927. By that plan, would the whole of the business which is now transacted in Great Knightrider-street be transferred to the Carey-street block of buildings?—Quite so.

2928. So that if that plan had been carried out the Government would have had the whole of that property available for sale, would they not?—Quite so.

2929. You stated in answer to a question, that the course of your business often leads to disputed wills being brought before the Court of Probate; is it necessary then that the disputed wills should be brought into the court?—Always.

2930. Therefore, in these which you tell us are frequent cases, must not inconvenience and delay arise if the wills are separated from the Court of Probate?—Quite so.

2931. Can you tell us whether there is any idea of the Court of Probate not being placed with the other judicial courts in the revised scheme?—I never heard of it until this morning; I did not know that that was so.

2932. As you understand the revised and reduced scheme, the Probate Court is to be in the courts of justice building, but the Probate Registry is still to be retained in Great Knightrider-street; is that your understanding?—That is what I understand is the general idea.

2933. And that in your opinion would be an extremely inconvenient arrangement, would it not, for the reasons which you have given?—As I stated, it is not an impracticable arrangement, but it would be continuing the inconvenience from which we are suffering at this moment; at the same time it is right to state that, of course, everything which decreases the distance between the registry and the court is so much to our advantage, and we should only have half the distance to traverse that we have at the present moment. Therefore looking at it in that way it is so far to our advantage.

2934. Will you tell the Committee what generally is the nature and extent of the present accommodation for your department in Great Knightrider-street?—We have some new rooms which have been built and which are I believe given to us to-day, and those rooms will be an exceedingly valuable acquisition to us, because they will be rooms fitter for our business and light and airy and so forth, and no doubt that will be a very great addition to our comfort. Besides that we have some houses which are so rickety and ready to fall down that the clerks are afraid to occupy the upper parts of them; those houses have been pulled about by the exercising of the fire engines and so on; the firemen have scaled the buildings and pulled down a stack of chimneys, and so on, and we consider ourselves in some danger in using the buildings at all; those we are to give up as soon as we enter the others. Then we have three or four other old houses which have been pulled to pieces, and doorways made through them and so forth, and of those one or two rooms are pretty fair, the others being very bad; the accommodation is I should say dreadful, in fact it is a reflection upon a country such as this that so large a business should be conducted in such mean and wretched rooms as many of those are; then besides this we have a very large house opposite, and in that we have three departments of the registry; then we have in St. Paul's the trophy room filled with a great quantity of our papers.

2935. Then, in the event of your department being retained in its present site, are you of opinion that very considerable additions will have to be made to the existing buildings?—I have no doubt of that. What would be necessary really to place us in a position, so that we might have that accommodation which fairly, as a Government office, we might look to have, would be this: to take the new part which is built, make that a wing, build a centre, make another wing, and occupy all the rest of the ground which is now vacant there, pulling down the whole of the rooms which we now occupy, and building up proper ones in their stead. That is really what would afford such accommodation as there is in every other Government office. We have not really a decent place in many respects; though the new part will be very nice.

2936. The Metropolitan Board of Works, I believe, are making a new street, as it were, in front of your buildings, are they not?—They are.

2937. Are you able to tell the Committee at what depth below your buildings the new street will run?—I think it is upwards of 20 feet below our old buildings.

2938. Are you under any apprehension of the result of the formation of this new street at the depth which you have described on those rickety old buildings?—I understand that the Metropolitan Board of Works are pledged to keep up those buildings, and I presume, therefore, that there is sufficient engineering knowledge in the country to do it; but, looking at it simply with one's eye, I should say that it was an impossibility; but, of course, I cannot put my opinion forward upon that point.

2939. Is there anything going below the new street?—There is a railway.

2940. Will that go to a still greater depth than the new street below your buildings?—Certainly.

2941. Can you tell the Committee how many feet below the foundations of your rickety old buildings that new railway will go?—I can hardly tell how many feet.

2942. Has your attention been at all called to the effect of underground railways being placed under public buildings?—I cannot say any more than one generally hears; that it is unsafe.

2943. Are you at present in any part of those ricketty old buildings subject to inconvenience from vibration or noise?—No, there is nothing doing behind us there; it is perfectly quiet at present.

2944. Mr. *Goldney.*] I do not understand what advantage the judge can have from old wills in probate disputes?—The old wills are produced on trials.

2945. I am speaking of the Probate Court?—I think there is a little misapprehension there as to what I have said. I do not mean that the old wills themselves are the principal things which make it necessary for us to be near the judge, but the attendance of the clerks who keep the papers which belong to the court is necessary, and they are in the registry.

Dr. *A. F. Bayford.*

27 July 1869.

2946. If the registry could he in the care of others, how many Registrars are necessary to attend upon the Probate Court?—One at present.

2947. Are there any instances in which you have had any of those wills, of 100 years back, before the Probate Court?—Numbers of instances.

2948. Have you had any before 1800?—Yes.

2949. On what occasion?—When there are applications for administration, raising a question of pedigree; a question as to who is to have the administration arises; and you go back and trace the families, and trace the interest; we have it constantly.

2950. How many times in a year?—I should say there was never a week passed without looking up wills before the year 1800.

2951. But how many times a year are they wanted to be produced in court?—I do not know that they are produced in court; they are produced in other courts, at assizes and so on.

2952. But are there not more old wills carried to the assizes than are carried to the Probate Court?—There are more wills used in the Probate Court in the registry, but not in the court itself.

2953. Are there more wills used in the assize courts than in the Probate Court itself?—Certainly, of the older ones.

2954. Then why do you say that it is an advantage or a necessity, that the old wills should be deposited near the court?—They must be in the registry, and the necessity is that the registry should be near the court.

2955. How does that operate with regard to the assize courts?—There are messengers sent down to attend with those old wills.

2956. And you say that this occurs more frequently in the Probate Court?—Certainly, so far as that goes; but the Registrars are the Registrars of the Probate Court, and the officers are the officers of the Probate Court; and consequently the necessity of our being near arises from the offices of the judge being in the registry and not close to his court; that is the main difficulty.

2957. What I want you to show is the greater necessity of the wills being near to the Probate Court than near to the assize courts?—There would be an attendance with them just the same.

2958. Then if that is the case, there does not exist any necessity, does there, for the wills being deposited in the same building as that in which the court is held?—They never have been, and never would be. The building in which the wills are, is a detached building by itself, and it has always been so.

2959. But is it material whether that is a quarter of a mile or 10 yards from the court?—Not in itself, but in reference to the officers who are obliged to be close to those wills, it makes a very material difference.

2960. But you say that only one registrar attends the court?—One registrar attends the court. There is also the clerk of the papers who has all the court papers in his custody; he is in the registry, and the judge cannot see any one of those documents without sending from Westminster to us to get them.

2961. But does he practically want any more than the more modern papers?—Occasionally it is so.

2962. But it is very seldom, is it not?—I should think that it was very seldom.

2963. Do you see any practical difficulty, supposing that the Probate Court is brought into connection with the other courts in the place for depositing the wills being also there; what is the great practical advantage, independently of the registrars being near the judge?—The way in which the business is done is, that the registrars preside over the common form business; the ordinary business of granting probates and letters of administration. For that purpose, they need all the clerks of the office around them, and the registrars need access to all the wills also. Several of these clerks have to do with court business, and therefore want access to the judge. In regard to the ordinary business also, in every case upon which we need advice and instruction, we have to go to the judge to get it.

2964. But not during the sitting of the court so much?—We cannot do it now; we are obliged to do without it.

2965. I am now talking of this large mass of wills before 1800; there can be no use in their being close to the court, can there?—It would be exactly the same as it is now. If they were wanted, they would have to be looked up and attended with, as they are now attended with.

2966. But would they want to be nearer the court than the papers in the Record Office, for instance?—I cannot say; I do not know the nature of the business there sufficiently.

2967. Mr. *Beresford Hope.*] I understand you to say that wills would be useful for all the courts as well as for the Probate Court?—Certainly.

2968. Then do you consider that there would be any advantage in having the wills not only accessible to the Probate Court, but accessible also to the other courts of Law and Equity?—I do not think that there would be, and the reason of that is this: that when they are attended with in the other courts, they are only attended with in order to supply evidence. They are looked up and those are attended with exactly in the same way as they are attended with at our court, and therefore it is only a question of the distance of carrying them, and I do not see that that would make any difference; but in regard to the common form business, they are looked up in a different manner. The common grants of probate and administration are without the intervention of the court itself, done in the office by the registrars.

2969. Then it is your opinion that it is desirable that the depository of wills should be near the Probate Court; but that it is not so essential that it should be near the other courts?—Quite so.

2970. What do you think of the proposal of the Government, to have the Court of Probate either in Carey-street or in Howard-street, and to leave the wills where they are, in Doctors' Commons?—I see no objection to that; we are doing that at present, and we can carry on the business perfectly well.

2971. But you just told me that it would be desirable to have the wills near the court; how do you reconcile those two answers?—It would be much more desirable, in order that our business should work perfectly, to be close to the court, but at the same time, we have carried it on for ten years in the best manner we could, and we are ready to continue to do so.

2972. You

Dr. *A. F. Bayford.*

27 July 1869.

2972. You put it in this way: you have scraped on for ten years, but you could do it better if the depository for wills were near to the court?—Quite so.

2973. Do you consider the character of the older buildings at Doctors' Commons to be satisfactory?—Not at all.

2974. Neither in appearance nor in repair?—To the appearance I am really quite indifferent; I have never thought of that.

2975. Have you considered the danger of fire there?—It is very great no doubt.

2976. I suppose that there are actually no precautions against fire at all in the present buildings?—We have water laid on, and pipes, and buckets, and engines, and all things of that sort, and persons instructed to use them; but what might happen if there was a fire I cannot say.

2977. One spark might set it all in a blaze, might it not?—To be sure.

2978. And would not the loss of documents be irreparable?—Perfectly so.

2979. Both to private interests and for national objects?—Quite so.

2980. Then would you consider that it would be of extreme importance that somewhere or other a fire-proof repository should be built for the wills?—Certainly; I should consider it most desirable.

2981. *Mr. Chancellor of the Exchequer.*] Have you ever considered the capacity of the Victoria Tower as a place for keeping wills?—No; I do not know as to that.

2982. Mr. *Layard.*] Have you any objection to a tower as a place in which to keep wills?—Not the slightest.

2983. Do you think that if a tower could be erected on the Embankment site, that would answer the purpose?—Perhaps I may say this, if I may be permitted to state my own idea: supposing that a conclusion were come to that it were desirable to adhere to the Carey-street site for the Courts, it does not at all follow but that a very splendid building might still be erected on the other site. I will take the architect who has succeeded so well, Mr. Street, and if that site were put in Mr. Street's hands to make a registry for us, so as to correspond well with Somerset House, and to place us on such a height of the Embankment as might suit properly, if he threw up a tower or anything else, so as to make a beautiful building there, we are in a situation perfectly able to pay for it. All that is wanted is for about 40 years an extra fee of 1 *s.* on every 100 *l.*, releasing from that liability all estates which are sworn under 100 *l.* Take 2 *s.*, for example, out of the estates which are sworn under 200 *l.*, and 3 *s.* out of those which are sworn under 300 *l.*, and so on. By that means you would get an income of 45,000 *l.* a year. Now 45,000 *l.* a year would be quite sufficient to raise a sum equal to anything which could possibly be wanted by the Court of Probate. It is very simple, and it would be a proper application of the money, and it would be felt very little. An estate sworn under 1,000,000 *l.* would only have to pay an extra 500 *l.* Now 500 *l.*, in addito the 14,000 *l.* which is now paid as probate duty, would really not be felt. Whether it was 14,500 *l.* or 14,000 *l.*, it would make so trifling an addition that even in the very largest estate it would amount to little, and in the smallest estate you would not be able to appreciate it at all.

2984. Mr. *Goldney.*] Have you ever considered whether such a cost as that would not be greater than the value of the wills before 1800, supposing that all the wills before 1800 were destroyed, do you not think that individuals would gain by that?—I am afraid that, if I were to say so, I should be called a Vandal, or something of that sort.

2985. *Mr. Chancellor of the Exchequer.*] You say, "We are in a condition to pay for it;" who are "We"?—I mean the Court of Probate, if the Government were to sanction such a fee being imposed.

2986. The tax on probate is at present carried to the account of the public revenue, is it not?—Just so.

2987. If you added a little more to it, whose property would that be, do you think?—Certainly that of the public; but I mean that it would not interfere with any other public money. It would be a charge which would cease of itself when it had done its work.

2988. Mr. *Beresford Hope.*] Do I rightly gather that you think that if the courts were in Carey-street, and the depository of wills were in Howard-street, they would be near enough to each other?—Quite so; and that would be the very best arrangement next to putting us all together, because it would be so very near that I do not think it would very materially impede our business.

2989. Sir *William Tite.*] You have very naturally suggested that Mr. Street, with his talent, could at once put a building on the Thames Embankment to accommodate your court, and all your records, which might be a credit to your site, and not be inconsistent with Somerset House; *mutatis mutandis,* is there any reason why the court should not be on that site, and your less important building upon the Carey-street site?—Not the least in the world.

2990. That has been suggested a good many months ago, has it not?—Yes.

2991. Did you ever object to it?—Not in the slightest.

Mr. James Pennethorne, called in; and Examined.

Mr. *J. Pennethorne.*

2992. *Chairman.*] You are acquainted with the land possessed by the Government in Great Knight Ryder-street, are you not?—I am.

2993. Have you had to deal with it professionally, and have you put up buildings there?—Yes.

2994. Am I right in thinking that there are some new buildings there lately completed by you?—Yes.

2995. What is the extent of the land in the possession of the Crown on that site?—The land which the Crown at present possesses is all covered with buildings. There are 8,105 superficial feet covered with very old buildings, so old that they will scarcely stand. There are 5,045 feet of new building erected entirely within the last eight or nine years, and there are 1,690 feet covered by two very old houses which are held on quarterly tenancies from the Metropolitan Board of Works.

2996. I need hardly ask you whether that site is very valuable from its position?—It is, of course,

Mr. J. Pennethorne. 27 July 1869.

course, a very valuable site (*the Witness produced a plan and described it*). The ground that is covered with old buildings is on this plan marked by a brown line; the ground which is covered with new buildings is coloured red; and the two old houses which are occupied on a quarterly tenancy are coloured blue.

2997. Has any land been recently purchased there on behalf of the Government?—Part of the red land has been purchased.

2998. Mr. *Hunt.*] What is the land bounded by the green line?—That is vacant land belonging to the Metropolitan Board, formerly the greater portion of the College of Advocates.

2999. Lord *John Manners.*] Will you tell the Committee what is the extent of the ground marked green?—The extent of the ground marked green is about 27,500 feet.

3000. You have stated that about 8,100 feet of ground is occupied by very old buildings; will you have the goodness to tell the Committee what is the actual condition of those buildings, as near as may be, in which we understand the business connected with the Registry is now carried on?—Every one of those buildings except, perhaps, the search-room, which is not quite so bad, is in such a state that we could scarcely expect to keep them together or uphold them when the alterations were made; they are in such a state that they ought to be pulled down when the present occupation ends.

3001. Will you explain to the Committee the position of the new street with the railway underneath it *quà* those buildings?—The new street, as shown by that plan, passes south of the buildings, directly in front of the search-room.

3002. Will you inform the Committee at what altitude it passes with respect to the search-room?—So far as I can ascertain, the level of the foot pavement of the new street will be three or four feet below the bottom of the foundations of the present building.

3003. And below the level of the new street is there to be a railway?—Yes, and the probability is that the bottom of the railway will be from 25 to 30 feet below the present foundations of the search-room.

3004. The present foundations of those ricketty old buildings?—Yes.

3005. Can you tell the Committee at what distance from the foundations, the foundation of the railway will be?—At the west end of the search-room the street almost touches them, and at the east end, I think, they are about five or six feet distant; and the railway will probably be under the centre of the street.

3006. You are conversant with those buildings, and probably with the nature of the business transacted in them; in your opinion is it requisite for the due transaction of the business which is carried on there, that there should be an ordinary amount of quiet and absence of vibration in the building?—The search-room is the building which is nearest to the street, and I think it is a matter of consequence that it should be free from noise and vibration. (*The Witness produced to the Committee a section of the front wall of the building, with section of the railway, and described the same.*)

3007. Are you conversant with the nature of the professional evidence which has been given before Lord Elcho's Committee, upon the subject of vibration arising from railways?—No; I did not hear it.

3008. Would you yourself be of opinion, that in order to check vibration from a railway it would be desirable that the foundation of a building in immediate proximity to the railway should lie below the foundations of the railway?—It would be a great advantage that it should be so.

3009. In this case, we understand from you that precisely the opposite result would ensue?—Yes.

3010. Here the foundation of the railway would be greatly below the foundation of the old buildings, would it not?—It would be greatly below the foundations of the old buildings, and it would be also below the foundations of the new buildings.

3011. Therefore, in either case, if the view taken by eminent engineers is correct, that it is necessary, in order to prevent vibration, to have the foundation of the building greatly below the foundation of the railway, we may assume that in this case that there will be very considerable vibration?—Yes.

3012. You have told us the extent of that ground; are you able to give us an approximate estimate of its value for sale?—Of course it is difficult at the present moment to value such a property. All the part occupied as old buildings I could only value as ground at the end of the present occupation; but taking that view of it, and supposing it now to be put into the market, I think that the entire property would sell for probably 55,000 *l.*

3013. Do you mean the property already in the possession of the Government?—The property already in the possession of the Government, both old and new together.

3014. You have spoken of the houses, I think, which are at present the property of the Metropolitan Board, but which are leased for a short time to the Government?—Yes; they are not held upon lease but they were let a few years ago to the Board of Works for the Probate Court upon a quarterly holding.

3015. In the event, therefore, of the Probate Registry Office being retained upon that site, at the end of a year or two the Government will have no property in possession for the future increment of this department, will they, unless they purchase fresh ground?—Not unless they purchase, of course.

3016. They will be deprived of those two houses which they now enjoy, will they not?—They may be deprived of them.

3017. You now have had considerable experience of the wants of this department; are you of opinion that, looking forward to the future, if the department is retained on this site, it will be necessary to make fresh purchases and to erect fresh buildings?—Yes; when the question of the Law Courts first came forward upon the Carey-street site, it was necessary that I should consider the extent of ground required for the Probate Court; and, upon the plans which were then made by me for an independent building for the Probate Court, 40,000 superficial feet of ground were found to be required for the courts and registries for the depositories, and for the entire department.

3018. Supposing that it is decided to place the Court of Probate, with the Judges' Chambers, on either the Carey-street site or the Howard-street site, and to retain the Registry and the Wills on the Great Knight Ryder-street site, what additional ground, in your opinion, would have to be acquired

acquired in the course of a few years for the due discharge of the duties of the Registry on the present site?—On the present site, taking 40,000 superficial feet as the quantity necessary, you will find that the ground inclosed within Addle-hill and Great Knight Ryder-street and Bennett's-hill and the new street, contains 40,000 feet; and, therefore, it would be necessary to take the whole of that square if the court were to be established there.

3019. Supposing that the court is not there, and that the Registry and offices are still retained there, what additional ground would have to be acquired?—I have not made any calculation of that, but it is possible that the area required would be reduced from one-fourth to one-sixth.

3020. But, whether the court is retained there or not, are you of opinion, from your knowledge of this department, that a very considerable proportion of the present vacant ground marked green would be required for the purposes of the registry?—Yes.

3021. Have you estimated roughly the value of the vacant ground coloured green?—The vacant ground coloured green is a considerable portion of the College of Advocates Estate, which was purchased by the Metropolitan Board of Works for the new street; and for the entire of which they gave 85,000 *l.*: and probably for this portion coloured green, 85,000 *l.* would be asked.

3022. Mr. *Layard.*] What was the area of that property?—The total area, as purchased for 85,000 *l.* was 35,500 feet; that is very nearly an acre; it is more than three-quarters of an acre.

3023. Lord *John Manners.*] You have told us generally the condition of the existing houses; are you able to tell the Committee at all what is their actual age?—I believe that they were all built directly after the fire of London.

3024. Can you tell the Committee the state of the accommodation afforded to this important department in those old houses?—The accommodation in the old houses is extremely bad; I do not know any office in London in which it is so bad; the accommodation in the new building is good.

3025. The new building, as I understand it, ranges with the new building of the Bible Society, which is a handsome new large structure?—Yes, it was finished about 12 months ago.

3026. If, therefore, it is necessary to increase the property of the Government on that site you would look to extending it on the east and not on the west, would you not?—You would be compelled to extend it eastward.

3027. Then, may we take it from your evidence, that if the Probate Registry is retained on the present site, all the old buildings will have to be pulled down and rebuilt, for the reasons which you have assigned; and that, in addition to that, the future requirements of the department will necessitate a considerable purchase of land, and the erection of new buildings upon that purchased land?—Yes.

3028. Sir *William Tite.*] I suppose that in any event those old buildings must be rebuilt?—They must be rebuilt.

3029. And if they are rebuilt you can put the foundation in, consistently with the altered state of things, can you not?—Of course.

3030. With regard to vibration, if the search-room is inconveniently placed there, I suppose that with so large an area as 8,105 feet, you could so arrange it as to put it out of the way of the vibration?—Yes. All the new buildings could be carried down to the requisite depth; but those new buildings which have been built could only be so carried down by under-pinning.

3031. They must be under-pinned; there is no difficulty in that, is there?—There is only this practical difficulty, the Metropolitan Board of Works are bound by their agreement to make good all damage, and the wall of the present search-room is so old that in attempting to under-pin it may fall.

3032. But you say that that is all a ruin; why should they not all be rebuilt at the same time?—That would depend entirely upon whether they remained there; and upon the convenience of the office.

3033. Mr. *Layard.*] When the Metropolitan Board and the railway company obtained their powers from Parliament, were any conditions made as regards the existing building of the Probate Court?—No; but afterwards when we had to negotiate with the Metropolitan Board of Works, they took from us a strong room, and we took from them land in exchange; and in that exchange a condition was inserted, that they should make good all damage of every sort or kind done to the old buildings.

3034. But when a Bill is going through Parliament for the making of a new street or railway, and that new street or railway injures a public building, is it not the custom to appear before a Committee, and to give evidence in opposition to the Bill?—I do not recollect that it was opposed in any way; the property was not within the line of deviation, and there was no *locus standi.*

3035. Lord *John Manners.*] You have told us that it would be possible to place the foundations of the new building on a site below the foundations of the railway; but I think you added that that would be expensive?—Of course it would add to the expense, considerably.

3036. Can you tell the Committee how deep it would be necessary to put the foundations of the new buildings, in order to prevent vibration?—I should say, probably, 15 feet below what we otherwise should do.

3037. Mr. *Beresford Hope.*] Is the property on which those dilapidated buildings now stand valuable property?—Yes, very valuable as building ground.

3038. Supposing that it were to be decided to place the depository of wills elsewhere, do you think that you could sell that ground for a considerable sum?—The entire property could probably be sold for 55,000 *l.*

3039. Which of course would stand to the good as regards the larger buildings in Carey-street or Howard-street?—Yes.

3040. As an architect, I suppose, you consider the present buildings dilapidated and dangerous?—Very much so.

3041. Do you consider the risk of fire considerable in them?—In all the old buildings there is a very great risk of fire; there is not that risk in the new building, and especially so in the new strong rooms which have been built fire-proof.

3042. May I ask how far does the new building serve its purpose; what per-centage of the

Mr. *J. Pennethorne.*

27 July 1869.

wills of the country are put in the new building? —That I cannot tell; all I know is that they occupy about 50,000 cubic feet of space.

3043. Does the 55,000 *l.* cover the sale only of the old buildings or of the old buildings and of the new ones?—The entire property old and new.

3044. *Mr. Chancellor of the Exchequer.*] Are you acquainted with the interior of the Victoria Tower?—I have never been up it.

The Right Hon. GEORGE WARD HUNT, a Member of the Committee; Examined.

Right Hon. *G. W. Hunt,* M.P.

3045. *Chairman.*] WE understand that there is a statement which you are anxious to make to the Committee; will you proceed to make that statement?—It is only with reference to the financial scheme which appears in the proceedings of the Courts of Justice Commission. There was a meeting on the 23rd of July of last year, at which I was present, and a sub-committee made a report, in which they presented a financial scheme which appears on our papers. The report of the sub-committee was received, and the statement was directed to be sent to the Treasury. The question arose at the Treasury, whether by having been present at the meeting, I had endorsed that financial scheme. I stated that I did not consider myself answerable for it in any way, and that though I was present at the meeting at which the report had been received, I had had no opportunity of sifting it; and I stated that I wished it to be examined departmentally. That was accordingly done. Mr. Forster, the principal officer of the finance division of the Treasury, was instructed accordingly to examine the financial scheme, and I hold in my hand a memorandum which he prepared, relating to that scheme. The present Chancellor of the Exchequer has allowed me to obtain access to this memorandum, and I should request that it might be placed in the Appendix. The memorandum is dated the 23rd of October 1868 (*the same was delivered in,* vide *Appendix*). My impression is, that I gave verbal directions that it should be incorporated in a Treasury Minute, and that it should be forwarded to the Courts of Justice Commission as the commentary of the Treasury upon the financial scheme: but I cannot find that there is any note or memorandum made of that direction. At all events, my intention was that that should take place. If the Committee will observe the date, the 23rd of October, they will see that it was very near the time of the elections. Shortly after having had this paper put into my hands, and examining it and approving of it, I went away for my election, and after the election, as the Committee are well aware, a change of Government took place. The consequence was, that nothing formal took place upon the matter, and of course the present Government, wishing to make an entire change with regard to the scheme, did not take the matter up. But I merely wish it to be put upon record that the late Government and the late Board of Treasury, and myself in particular, did not consider themselves responsible for the financial scheme which was sent from the Courts of Justice Commission to the Treasury, and that but for the change of Government, their objections to it would have been put upon record in the usual official manner.

3046. You had not, as I understand, an opportunity of formally expressing the objections which you entertained to the adoption of this scheme?—No. After the letter came from the Commission to the Treasury, a Treasury letter, signed by Mr. Sclater-Booth, was sent to the Commission, and that letter, which dealt with some other parts of the communication, stated that the financial part of the matter would be dealt with hereafter; it was never dealt with thereafter, by reason of the change of Government, but that paper was the preparation made for so dealing with it.

3047. Mr. *Chancellor of the Exchequer.*] That paper virtually repudiates the idea of there being any special fund applicable to this purpose, does it not, and treats the whole question of funds as a matter of the general revenue of the whole country?—I believe so. I have not refreshed my memory with the paper now, but I was satisfied with the views put forth in that paper at that time, and I was prepared to endorse them.

Mr. GEORGE POWNALL, called in; and Examined.

Mr. *G. Pownall.*

3048. *Chairman.*] I NEED hardly ask you, whether you are a surveyor?—I am an Architect and Surveyor.

3049. You have been employed, I think, by the Incorporated Law Society in connection with the question of the site of the new Courts of Justice, have you not?—I had to advise them what would be the cost of acquiring a site necessary to carry out Mr. Street's design for the Embankment site; those were my instructions.

3050. And you have made an estimate accordingly, have you not?—I have rendered that in a report to the Incorporated Law Society.

3051. Have you that report with you?—I have the draft of the report here, but I think it is in print.

3052. Can you state what are the general conclusions arrived at in that report?—I can. I have, of course, taken Mr. Street's report, and his plan, as representing what he considers would be necessary to be acquired for the site for his courts; and I estimate the cost of acquiring all interest upon that plan at 812,415 *l.*; that is inclusive of the purchase of the whole of the property on the east side of Essex-street to the Strand, as far as Twining's Bank, which I observe Mr. Street in his report states to be absolutely necessary.

3053. You have also surveyed the Carey-street site, have you not?—I have.

3054. Have you formed any estimate of what would be obtained for it in the event of its being determined to sell it again?—Yes; I consider that after providing for all the expenses of negotiating and letting that land, and getting the ground

ground rents clear, the value of the land is 364,320 *l.*

3055. The land having been bought for a sum of about how much?—£. 760,000 and a little more.

3056. Then, in round numbers, you would calculate upon a loss of 400,000 *l.* by re-sale?—About that; I assume that it would be let in the ordinary way for shops and offices, and so forth.

3057. Have you heard it stated that various offers have been made for this land?—Yes; I was requested to read Mr. Hunt's evidence, and I have had an opportunity of speaking to him upon the subject, and I understand that he has an offer of 3 per cent. upon the cost. I have no answer to make to that. There may be persons found who can give that rent, but I should not like to undertake to get it. That is all that I can say, but he may be right.

3058. You do not doubt the fact of such an offer having been made?—I cannot.

3059. You do not like to say that such an investment would not be lucrative?—I should not like to say that; a great railway company, for instance, desiring to come to that particular spot, may be willing to pay the price which they would have had to pay if they had bought it under an Act of Parliament; but if it is to be let in the ordinary way, laying it out as streets for shops and offices, and reverting also to the fact that the ground rents of the property, even as I have put them, are very high in proportion to the rack rents, and that, therefore, they would produce a lesser number of years' purchase in the market than ground rents usually do. I think it is a very high rent, though I cannot say that it could not be obtained.

3060. I think you have also expressed an objection to the plan by which it is proposed to throw out the buildings in advance of the line of Somerset House to a distance of 50 or 60 feet?—I have; I think it would be very objectionable. I was consulted by Mr. Cowper, the First Commissioner of Works, at the time that this great work was in Parliament, and I remember very well that great pains were taken, not only in the interest of the Duke of Norfolk, who met us most fairly, but in the interest of the public, to get a uniform line of building from the south-east corner of Somerset House to the south-west corner of the new library. It was thought that that was a building line which would harmonise very well with the general line of the Embankment wall, and, in fact, at present, without that part of the Embankment Act being repealed, no building could be erected beyond that line. There is a special clause in that Act prohibiting the erection of any building before the particular line which was laid down on a plan signed by Mr. Cowper, I think, as First Commissioner of Works.

3061. As a matter of fact, I believe it is not proposed to build upon any part whatever of the land reclaimed by the Embankment, with the exception of this one plan?—No; of course I cannot tell what was passing in the minds of the Committee in 1862; but I think that there was a general feeling and impression that this land should be laid out as recreation land for the mass of people who occupy the houses between the Strand and Holborn.

3062. Mr. *Layard.*] Are you aware whether the proposed building, according to Mr. Street's plans, would take away from the ornamental and open ground?—I have only the very small plan which is attached to his report, and my impression is that it would. It is quite true that a portion of that land was to be appropriated to roads of approach to the Duke of Norfolk's estate, but a portion also was to be used as a garden.

3063. Then you are not aware that in a statement made by the sub-committee of the Royal Commission, it is stated that Mr. Street's building, instead of taking away from the ornamental ground, would add to it?—I am not.

3064. Are you an architect?—Yes.

3065. You have had, I presume, a good deal to do with Mr. Hunt in matters of business?—Yes.

3066. Have you always found him accurate in his statements?—Yes, most accurate; I may state at once that if I found myself differing very materially from Mr. Hunt in an estimate I should desire to revise my own estimate before committing myself or anybody else; in fact, if you look at our estimates you will not find any very material difference; I find that I have included three or four houses in the accesses which he did not, and my estimate for the value is 812,000 *l.* If you deduct about 20,000 *l.* from that, you have his estimate of 750,000 *l.* for the whole, as against something under 800,000 *l.*

3067. That is the opening of Essex-street?—Just so.

3068. Therefore you agree?—There is no material difference; there is 5 per cent.; and honourable Members of the Committee must know perfectly well that in estimating for these public works beyond the value of the property, there is only one safe way of protecting your employer, and that is to put on a considerable sum, so as to meet the claims which are made by skilled counsel and skilled witnesses.

3069. Your calculation as to the Carey-street site, given to-day, is, of course, taken upon the supposition that that site is not to be improved by the removal of its surroundings?—Clearly; I have put such a value upon it as I think I could obtain if the Government were to put the property into my hands to deal with at once.

3070. But supposing a great public building, such as the Law Courts, were erected on the Howard-street site, would not that have the effect of increasing the value of that land?—There can be no doubt about that.

3071. Mr. *Mowbray.*] Then that increased value could not be realised until the courts were erected, could it?—Certainly not.

3072. There would consequently be a loss of interest, would there not?—There is always a great deal of money in this country in the hands of speculators, and I cannot tell when they would begin.

3073. Lord *John Manners.*] Has your attention been directed to the incline of Essex-street?—Yes.

3074. Can you tell the Committee the steepness of that incline?—I think the Committee could probably get that more accurately from the architectural clerk to the Commission, but I know both the gradients are very bad. Of course if the Committee, adopting the Embankment site, should think it right to put the building back to the building lines settled in 1862, then there would be a great increase in the estimate; again, if the Committee thought that the street to the west of the courts, which I think is only about 22 or 24 feet wide, was of insufficient width, so that the

Mr. G. Pownall.

27 July 1869.

the courts had to be pushed more to the east as well as to the north, then again there would be a considerable increase in the cost.

3075. Will you have the goodness to give the Committee your opinion as to the advisableness of having on the west a street of the width which you have described?—I do not believe that it would ever be executed.

3076. Are you of opinion that if the building is placed upon the Howard-street site it would be certainly expedient, if not necessary, to have a street of greater width than 22 feet?—I think it would be absolutely necessary. I have a plan here which is quite at the service of the Committee if the Chairman thinks right, showing the plan of the courts on the Embankment site as prepared by Mr. Street (*producing a plan and describing the same*); it represents exactly the plan as adopted by Mr. Street. The brown colour on this plan represents the site shown in Mr. Street's plan and report; the red shows the plan which I venture to submit to the Committee as the proper one, if they adopt the Embankment site; that would leave a street about 50 feet wide at the west end, but it would, of course, throw the building to a corresponding extent more to the east, and so compel taking of a part of the Temple Gardens, and diminish the surplus land, which forms an element, of course, in my estimate.

3077. Mr. *Layard.*] Would not that be more expensive?—Certainly.

3078. Mr. *Beresford Hope.*] That would also involve taking more land at the north, would it not?—Obviously.

3079. Mr. *Goldney.*] What do you estimate would be the value of that land to the north, which would be necessary?—I should say that, supposing it is not moved to the north, and that this street is made from the Strand right down to the Embankment corresponding to Essex-street, there would then be an addition of 40,000 *l.*; and if the building was moved north, then the additional estimate would be 120,000 *l.*

3080. Is that in addition to the 40,000 *l.*?—Yes.

3081. And in addition to the further sum you gave for purchase?—In addition to the sum I gave; I should say, moreover, that I do not know what the views of the Metropolitan Board are; I cannot speak with any confidence on the subject; but I do not suppose that they will give up an acre and a-quarter of land without being paid for it.

3082. That land, which is at present on the Embankment, is vested in them under the Act, is it not?—I think it is, in the First Commissioner of Works.

3083. Mr. *Layard.*] But why do you consider it necessary to have a wide street on the west side?—Mr. Street, himself, makes one of the important openings from his grand hall into such a street; and if you look at the map of London, you will find that the great mass of people, jurymen, counsel, and witnesses, would come from the north-west of London. If there was a tolerably good street, they would surely come down this street into the hall; I do not mean to say that they would have any very great distance to go if it was not made.

3084. Do you know what is the width of Bell-yard?—I have spent so much of my life in it, that I know it well; I do not think it would be more than 12 feet.

3085. Are you aware of the width of the street which it is proposed to make on the east side of the Carey-street site, supposing the Law Courts to be erected there?—No, I am not. I find in Mr. Street's plan, that he does, out of the land already acquired, improve those streets, without any further purchase, though to what extent I do not at this moment recollect. They are none of them handsome streets, but they are sufficient.

3086. Lord *John Manners.*] You have given 812,000 *l.* as your estimate for the purchase of all interests on the Howard-street site, inclusive of Essex-street; does that include or exclude the vendor's costs and preliminary expenses?—No; that is simply the cost of acquiring the property; I should have to add something, I expect, to that amount for that purpose.

3087. From your experience, could you give the Committee any hint as to how much it would be wise to add to that 812,000 *l.* for the other necessary incidental expenses?—My opinion would not be worth a farthing on that point.

3088. Mr. *Cowper.*] How much of the reclaimed land does Mr. Street's plan take for building purposes?—I think it is over an acre, but my impression is that it is under or about an acre and a-quarter.

3089. Do you think that there will exist in the public mind a good deal of objection against taking land which was intended for recreation ground by the present Statute, and employing it for building purposes?—I think so; and, independently of that, as an architect, and taking some interest in such matters, and having travelled a good deal, I think that the objection, apart from that, is very strong to placing this building as Mr. Street proposes. I think there would be a great objection in the public mind to the land which was intended as recreation ground for the public being appropriated to building purposes; but I think that, apart from that, it would be extremely objectionable in an æsthetical point of view (to use that term) to project this building before the line of Somerset House.

3090. And you think that the building itself would suffer more by being placed at a lower level, as it would be on the reclaimed ground, than it would if it were built upon the existing site?—That depends very much upon the manner in which it is treated; it is quite clear that, treated as Somerset House has been treated by Sir William Chambers, we have scarcely any more effective or finer building; he has taken advantage of the difference in level to make that noble terrace; Mr. Street is a man of great talent, and I dare say would so deal with his design as to produce a very satisfactory building.

3091. But I understand you to mean that he would be able to produce a building that would interfere less with Somerset House if it were put farther back?—Certainly.

3092. When you calculated the produce of the re-sale of the Carey-street site, did you allow for a very great competition being created by that sale on the part of persons who would wish to provide chambers for persons of the legal profession?—I scarcely understand the honourable Member's question; but I should suppose that if the Courts came here the Government would want to get rid of the land, and they would put it into some man's hands and say, "Lay it out, let it, and sell it"; and I suppose the

the sum I have mentioned would be produced; no doubt if it was kept, and the Courts were built on the Embankment site, probably a greater price would be obtained.

3093. From your experience of the amount of houses which are available for legal chambers, are you of opinion that this site would become valuable independently of all other purposes for the sole purpose of providing chambers in which solicitors and barristers might live, assuming the Courts to be placed on the Embankment site?—I think the land would be extremely valuable for the purpose, and it would be sought for for that purpose.

3094. Do you think it probable that those already provided with chambers in other parts of the town would be likely to leave them to come and occupy new chambers on the Carey-street site?—That would very much depend upon their practice in the courts; of course, a great many of the largest solicitors in London have very little to do with the courts, and they would not remove, whereas others, who had a great deal to do in the courts, would in all probability avail themselves of the opportunity of removing.

3095. In the course of your purchase of the Carey-street site, you had, I suppose, to dispossess some solicitors who occupied chambers in Carey-street; have you an idea that they had any difficulty in finding other places to occupy?—I have not pursued that inquiry at all; I think one firm, Messrs. Burnett & Newman, had very great difficulty; they were solicitors of very high reputation and position; and I think their being turned out was a great trouble to them, and they had some difficulty in finding a house suitable to their purposes; in fact, they built one in Howard-street, which, if these courts come to Howard-street, will be taken down, and they will be turned out again.

3096. But I understand you to say that you do not anticipate the sale of that Carey-street site, if it no longer be used for the courts of justice, will occasion a large expenditure to be made upon that site for the purpose of legal chambers?—I think it will depend entirely upon the fact of the courts being placed on the Embankment site; if the courts are placed there, I think it will be used exclusively for chambers; if not, then I think it will not.

3097. Earl *Grosvenor.*] I suppose you attribute this loss of 400,000 *l.* on the sale of the Carey-street site partly to the very bad existing surroundings, that is to say, to the low character of the surrounding houses, and the absolute want of approaches to that site?—It partly arises, no doubt, from that fact; if the approaches were improved the value of the land would be improved also; but in point of fact, the rental, as well as the capitalised value of the land, is very much diminished, from the fact, that so much of that which is purchased from the Government has to be abandoned for streets; it was a district unlike anything I have ever seen in London, there being 7½ acres of houses without a single street; in laying out that land for offices, or any purpose, you would have to sacrifice a considerable space for streets, and there would be a great loss in consequence; but no doubt the low character of the surrounding houses would affect it very much.

3098. And I suppose that that evil in the end would affect a large public building, if built upon the Carey-street site, to a certain extent, would it not?—People are obliged to go and attend to their business wherever it may happen to be; it would not be so agreeable to those who had to go to the Carey-street site to go through Clare Market, and that wretched district, as through a fine street.

3099. I suppose, in your opinion, those low houses immediately round Carey-street site would have to be purchased in the event of the buildings being put there?—It would lead, no doubt, to a considerable improvement in the neighbourhood.

3100. Mr. *Watkin Williams.*] Supposing that we determined to build the Courts of Justice on the Thames Embankment site, would not that have an immediate effect upon the deserted site?—Yes; I apprehend that this great offer which has been made to Mr. Hunt is made upon speculation.

3101. You would not have to wait for the erection of the Courts of Justice upon the new site to add to the value of the deserted site?—I think, in one way or the other, those who are going to take this land would require time. They would not get their return until the Courts of Justice were built, and therefore they would expect Mr. Hunt, instead of charging them 3 per cent. at once upon the purchase-money to make it a growing rent, the extent of that growrent being dependent upon the time at which they might fairly expect the Courts to be built.

3102. Do you know whether or not in the Temple there is a very great want of accommodation for chambers and offices?—I have heard that both in the Temple and Lincoln's Inn there is a very great want.

3103. So that if the Courts were built upon the Thames Embankment there would be an immediate demand for a fresh site for the erection of chambers and offices?—I have already stated that that, I apprehend, would be the way in which that land would be appropriated.

3104. Mr. *Goldney.*] I take it that you have given your view upon your general experience, without reference to any special questions?—Quite so.

3105. And I understand that, from your general experience, you are of opinion, taking all the circumstances into consideration, that 364,000 *l.* is the utmost that the Government could expect, adopting the best and most advantageous mode they could?—That is my impression.

3106. How long did it take you to obtain the Carey-street site by purchase?—I began the purchases in November 1865, and the bulk of the purchases were completed by the end of 1867 and the beginning of 1868; but there were remnants. Of course the solicitors were, as they always are, necessarily, behind the surveyors. It takes them much longer to investigate the title of a house than it takes me to purchase it, and they cannot begin until I have done.

3107. Until you have completed your arrangements, either by an agreement or before a jury, or by a reference, the solicitor's work, as regards the title, does not commence, does it?—No.

3108. Then it really has occupied something over three years to acquire the possession of the Carey-street site, has it not?—Yes; possession was taken of the last property, I think, about three or four months ago.

3109. You began, I think, in November 1865?—We began in November 1865.

3110. Looking at the question of the Howard

Mr. *G. Pownall.*

27 July 1869.

street site in the same way, and assuming that it is necessary to take this larger portion at the north, how long a time do you think it would be before that site could be cleared?—The time would be considerably less, because, as I understand, there is only one freeholder, whereas on the Carey-street site we had, though I forget the exact number, I should think 150 freeholders. That necessarily took more time not only in treating with the different surveyors who represented the owners of the houses, but it took a great deal more time in investigating the title.

3111. And difficulties arise as to leasehold interests as well as to freehold interests, do they not?—Yes, great difficulties.

3112. Do you think it possible looking to legal questions as well as to surveying questions that the Howard-street site, if the Committee reported in favour of it, could be obtained under a period of two years from the time of the Act being passed?—I think not clear and ready for the purpose.

3113. The surveyors of course would not commence to treat until there was authority giving compulsory power?—Certainly not; I do not mean to say that it is impossible to clear it in a shorter time. I understand that Mr. Hunt has expressed an opinion that it could be done, and he has a great staff, and probably works more quickly than I could do.

3114. You are speaking from general experience as much as from the special experience of Carey-street, are you not?—Yes; it would be impossible to carry out a great work of that sort without a great deal of patience and consideration to people who have to make claims.

3115. Supposing that you hurried them very much, would not the result be that you would have to pay considerably more in coming to an agreement?—No doubt.

3116. That is to say, unless you took the ordinary time of negotiating and offering arbitration, or eventually going to a jury and dealing at the end before the jury actually went into the box, if you adopted a figure, you had to pay considerably more, would you not?—I think so.

3117. And your estimate is based upon proceeding in the ordinary way, as you have done in other cases?—Quite so.

3118. In reference to those buildings being projected beyond Somerset House, have you consulted any architect of experience about it?—Yes, Mr. Shaw was associated with me. In fact, he was one of the judges of design, and I had an opportunity of speaking to him upon the subject and showing him Mr. Street's plan. He was one of the judges who recommended that Mr. Street should be employed, and he, like myself, has a very high opinion of Mr. Street's genius and talent; but Mr. Shaw objects most decidedly to that.

3119. Does he take quite so strong an objection as you do to the projection of new buildings beyond the line of Somerset House?—Quite so.

3120. With reference to this question of realising the Carey-street site, if it was let out on ground-rents at 3 per cent., what saleable value would you place upon those ground-rents before any building was erected?—I do not think that if the Government were advised properly, as I dare say they would be, they would attempt a forced sale if they were going to let it, and could find persons to take it for building purposes; they would reserve the sale until the ground-rents were secured, and then sell them.

3121. What period of time do you think that it would take to cover an area of that kind?—That is extremely speculative; I cannot tell; four or five years, perhaps; it would depend very much upon circumstances; if this great speculator who proposes to take the land found that the courts were going on rapidly, he would then, as a matter of course, get on with his buildings.

3122. But apart from this great speculator, it would move in the ordinary way, would it not?—I should think so.

3123. Mr. *Russell Gurney.*] It is the invariable practice to wait until the building is raised and the ground-rents secured before you sell it, is it not?—Yes.

3124. What number of years' purchase would you reckon upon a well-secured ground-rent in that position when it was secured?—Those ground-rents, either the rents which I have put, or the still higher rents which those gentlemen must have put who are speculating, cannot be considered well-secured ground-rents.

3125. What do you consider a well-secured ground-rent?—A rent which is secured with a property of four or five times its value.

3126. Supposing that it is secured at four times its value, what number of years' purchase would you reckon?—25 or 26 years.

3127. Has it not gone generally up as high as 28 years?—I have known certain instances of ground-rents, when a man is buying the fee of his own house, going up as high as 33 years, and I believe that the Royal Commissioners are obtaining those prices for the houses in Prince Albert's-road; but then the rack-rents of those houses are some of them 10 times the ground-rent.

3128. But taking the City ground-rents, and the improvements carried on by the Corporation, have they not averaged considerably more than 25 years' purchase?—I cannot say what the average has been; all I can say is, that for a charity in Hertfordshire, upon the sale of a large estate they had in Kent, I have bought a considerable number of their best ground-rents for 25, 26, and 26½ years' purchase, and even higher. Those were in Cannon-street. Mr. Norton, who had the sale of the property, offered me another ground-rent for the same charity where the rack-rent was about three times as much; first he asked me 25 years', and then 22 years' purchase, but I did not think it safe.

3129. When was that?—I think it was upon the last sale of their ground rents.

3130. They did vary for a very considerable time, from 28 to 31 years' purchase, did they not?—They did, and I can quite understand now that a banker owning a great bank in the City, and having a reasonable ground rent, would choose to purchase it if he could at the price which you have named.

3131. Mr. *Beresford Hope.*] Looking at the matter as an architect, do you consider that the vicinity of so very squalid a quarter of London as Clare Market would be a detriment to the Law Courts, supposing they were to be in Carey-street?—If you put it to me, as an architect, I say again that it would be very objectionable; but the courts being placed there, parties must go to them; and I quite agree with you, that I should think they would carefully avoid

avoid Clare Market, and would go a great way round to get into the courts by a better road.

3132. Do you think that the proximity of those buildings would affect the wholesomeness and ventilation and general pleasantness of the courts?—I really cannot answer that question very decidedly; it would of course be a great improvement to get rid of it.

3133. Do you consider that that is the positive objection to the courts being placed in Carey-street?—I do not.

3134. As an architect, do you consider that the broken line to the west of the site is a detriment to the building, or could Mr. Street, using the resources of Gothic architecture, turn it to advantage?—I think that he is so great a master of Gothic architecture, that he would conquer any difficulty, always excepting the projection before Somerset House.

3135. You think that is the one unforgiveable sin?—Somerset House is one of the few buildings which we can show with satisfaction to foreigners, and with its terrace it is a very grand thing. I should be very sorry to see it interfered with; but independently of that, I object to the projection on the ground of its interference with the building line, which was really very carefully considered at the time when the Act of 1862 was in Parliament.

3136. Did it ever strike you that there would be another incongruity, inasmuch as Somerset House is a building on a basement, or architectural terrace, which is not a part of Somerset House itself, whereas the Howard-street Law Courts would be a building which went down to the lowest level of the ground?—I rather hope that Mr. Street will be able to show that a terrace will be so ornamental and useful that he will induce the Commissioners to place one there.

3137. Have you not observed that on that drawing he has placed no terrace at all, and that in the book circulated to the Members of the Committee he has given reasons against his Law Courts being on a terrace?—Upon that point Mr. Street has considered the question very carefully, I have no doubt, with relation to the accommodation and arrangements, whereas I have not done so, and therefore I should not presume to offer any opinion upon the subject.

3138. Do you consider that it would be either very difficult or very expensive to regulate the western line of the Carey-street building by some give and take arrangement with Danes' Inn, or otherwise?—I made a second estimate of acquiring Danes' Inn, with a view of making a give and take arrangement between Clement's Inn and the Commissioners.

3139. Do you think that the two sums would pair each other off, and that there would really be no great addition of expense to the country?—I am not prepared to answer that question. I have here all the details of my valuation of the additional land which was spoken of as to which the estimate was made in 1868. I have in the plan here subdivided, the cost of acquiring that land in the neighbourhood of Clare Market, and I shall be glad to put that in for the Committee to see. They will then be able to see how far all, or any portion of that land is necessary (*producing a plan*). This is the deposited plan for the land which you are now considering, and those different sums (*pointing to the plan*) are indicated by colours on the plan annexed. The honourable Member was just now speaking of a give and take line. It was proposed to buy the green part, which represents Danes' Inn with a view of making a give and take line here (*pointing to the plan*). But as I have taken the liberty of criticising Mr. Street's design, I must say that I think the design which he has made for putting the courts here is remarkably clever.

3140. Do you think that it would have a good architectural effect?—Indeed I do.

3141. Has it occurred to you, looking at effects, that the building on the Carey-street site would have a noble effect from the south of the Strand, standing, as it does, upon higher ground?—It would. I think that St. Paul's would be an equally fine building on the Thames Embankment; but it has a much finer effect on the plateau on the top of the hill, and this would have the same advantage.

3142. And especially, I suppose, if the Holywell-street block were removed?—No doubt.

3143. I suppose you would consider that the removal of the Holywell-street block would be a thing desirable in itself, like the removal of Middle-row, Holborn, quite independently of where the Law Courts may go?—Quite so.

3144. In point of fact, you recommend that as almost essential in a sanitary point of view?—I should like a street from north to south, through Lincoln's Inn; those would be metropolitan improvements, independently of the courts altogether.

3145. And you say the same of Essex-street now, I suppose?—Mr. Street, with perfect frankness, admits that it is essential.

3146. Are you aware that Lord Elcho's Committee on the Hungerford Bridge and the Thames Embankment has reported in favour of the widening of Essex-street, whichever site is adopted?—I have heard that.

3147. Do you consider that, according to Mr. Street's plan, Bell-yard might be widened, so as to be a sufficient artery?—Mr. Street, as I said before, has made his arrangements there very cleverly; but I think it would be absolutely necessary to take down the houses, not up to Chancery-lane, but between Fleet-street and the Law Fire Office, and to make a street there, in fact, 50 feet wide. That would cost 50,000 *l.*

3148. Are you aware that Mr. Hardwick stated in evidence here, the other day, that there would be a breadth of 55 feet between the Law Society's buildings and Mr. Street's Law Courts?—I have no doubt that that is so.

3149. Do you think that keeping that breadth then would be sufficient for a street?—Yes, it would be sufficient, although I do not think that it would be a very handsome street.

3150. Supposing that a street were to be made, and the Turnstile to be opened, there would be a fair amount of communication with Carey-street from the north, would there not?—I think so; but I think that, independently of whether those Law Courts are at Carey-street or on the Thames Embankment, some communication from north to south, that is to say, between Holborn and the Strand, is a crying necessity as a metropolitan improvement.

3151. Therefore you put aside the question of the improvement of that part of the metropolis as an element in the comparison between the two sites?—Clearly so.

3152. I suppose that you have studied the conformation of the ground between Howard-

Mr. *G. Pennell.*

27 July 1869.

street and the Strand?—I am intimately acquainted with it, although I cannot say that I have taken any levels, but I have again and again looked at it.

3153. I suppose that you have observed that it is broken in every direction; that it slopes at the Strand and that it rises into a sort of hill or gable-shaped line in the middle of Howard-street?—It is difficult land to deal with, but I do not myself think that there would be any difficulty which Mr. Street could not get over provided that the question of expense was not considered of primary importance.

3154. Do you think that it would be expensive land to put a public building upon from its conformation?—I have scarcely considered that question, I have considered rather the cost of acquiring the site than the cost of executing the building.

3155. But you are decidedly, however, of opinion, are you not, that the difference of level is an architectural argument in favour of the Carey-street site rather than the Embankment site?—I think that Mr. Street would design and execute a fine building on either site in spite of all difficulties.

3156. But you have just told us that St. Paul's would not have looked so well if it had been by the side of the river?—That is another question altogether; I hold to that view, and I say that that building would be a finer object on the top of the plateau than it would be on the foundation.

3157. Would the palace of Westminster which we are in now have been a finer building on a plateau?—Certainly so.

3158. Then I suppose that in laying out a large city you conceive that the best course would be not to build all the large buildings on the low ground, but rather to keep them at the higher elevations?—I think so.

3159. Not to discount your Embankment?—I think not.

3160. *Mr. Chancellor of the Exchequer.*] Had you anything to do with considering the quantity of land which was to be bought round the present Carey-street site?—No; I simply acted upon my instructions to estimate the cost of acquiring certain land.

3161. But not as to the necessity or propriety of purchasing?—Not as to the expediency.

3162. Have you formed any opinion as to the amount of land that would be required for building there?—The design is different now from what it was.

3163. Take the first, the large design, what was your opinion with regard to price then?—If the great design had been executed, the whole of the property mentioned in that valuation of 600,000 *l.* would have been required beyond all question.

3164. Taking the small design, such as Mr. Street has suggested, have you formed any opinion as to what property would be required, or whether any would be required?—I have already said that in Bell-yard I think it would be absolutely required to buy the property, not up to Chancery-lane, but in fact, between the Law Fire Office and Fleet-street.

3165. Would you recommend the Government, supposing you were acting as their adviser, to place a building on the Carey-street site without buying land at all around it?—No; I should advise them to buy as much as Parliament would give them money to buy, and get the streets as wide as possible.

3166. Mr. *Layard.*] Were not a good many houses on the Carey-street site without any title at all?—After some of the purchases had been settled as freehold property, an old lease was discovered of the time of Elizabeth, and that lease had only 18 years unexpired. Of course, the persons who had fancied that their property was freehold, at once found that they were mere leaseholders, and that led to a great deal of delay, and to a great deal of expense, and I do not know now what has become of that question.

3167. What is your objection to the projection of the proposed Law Courts on the Howard-street site beyond Somerset House?—I think it would be very unsightly.

3168. Why?—It is a matter of taste. I can give no reason for it, except that it appears to me that it would be as unsightly (apart from the interference with the public way) as it would be to project the Reform Club 50 feet before the Travellers' Club.

3169. Are you aware that Mr. Street is of a different opinion?—Yes.

3170. You stated, did you not, that supposing Mr. Street's plan were carried out, the land which the Act of Parliament intended should be reserved for ornamental ground, would be occupied by the building?—I said that a portion would be occupied by roads for communication between the Duke of Norfolk's estate and the low level of the Embankment road, and a portion would be the land which I understood was intended to be used as ornamental land.

3171. In the Report of the Committee appointed by the Courts of Justice Commission which has been laid before Parliament it is stated in a note marked A., that "This is the part coloured green on Mr. Street's plan, in front of his building next to the Embankment, and is not less than the area provided by the Embankment Act of 1862, to be left for the ornamental grounds;" are you aware of that?—I do not understand how that can be. The building line settled by the Act of 1862 is shown upon a plan which I have now before me, and which is, I suppose, amongst the archives of the First Commissioner's office. Mr. Street's building undoubtedly projects considerably before that line.

3172. However, as a fact, that is the report of the sub-committee, is it not?—The thing speaks for itself. The Committee can easily obtain the original plan. I believe this to be a correct copy of it (*producing a plan*).

3173. Mr. *Goldney.*] Is this a copy of the plan which is in the First Commissioner's office?—I believe so; I looked up this paper when I was first consulted upon the matter, and I find here a memorandum to that effect. Mr. Hope Scott interposed on the part of the Duke of Norfolk, and had a great many conferences with Mr. Cowper, who was then First Commissioner, and that was the line then agreed upon.

3174. Mr. *Layard.*] But supposing that the Government purchased that site, of course they would purchase with it the rights of the Duke of Norfolk?—No doubt; but the Duke of Norfolk has no right to build upon it.

5175. That is to say, that it was reserved for his advantage?—Partly for his advantage and partly for the advantage of the public. I dare say that Mr. Cowper will recollect that the

Societies

Societies of the Temple, who upon the whole used us more fairly than anybody else, except the Duke of Norfolk, would have been glad, no doubt, upon the reclaimed land to have had the power of building chambers and offices; but they were prohibited from doing it.

3176. But if Mr. Street's plan does reserve an amount of open space such as is required by the Act, then the public interest would be cared for, would it not?—It would as far as regards the public interest, but my objection remains the same, with the greatest respect for Mr. Street, that it appears to me to be most unsightly to project this building before Somerset House, but that is a matter of taste.

3177. Mr. *Russell Gurney.*] Where is the District Railway?—It is not shown on this plan.

3178. Have they power to build upon this Embankment?—I believe they have that power.

3179. Lord *John Manners.*] You have stated, have you not, that if the larger plan was adopted, you would recommend the whole of the land, valued at 600,000 *l.*, to be purchased for that building?—If the original design, which I had to investigate as one of the judges of design is to be carried out, I say yes.

3180. Are you able to inform the Committee whether, in your opinion, the whole of that 3½ acres would be required for the purposes of the building, or whether a certain portion of it would be available for re-sale?—I think it would not be necessary to purchase it upon the smaller plan which Mr. Street now presents to the Commission; I think it would be desirable to purchase some portions, but certainly not to purchase the whole.

3181. But with respect to that larger plan, would the whole of this 3½ acres be necessary for the purposes of the building?—Certainly not for the present building.

3182. But I am speaking of the larger building?—It was intended, as I have before stated, that part of the purchase was to get an exchange, a give and take line with Clement's Inn; but I have not studied the subject sufficiently to be able to give any opinion.

3183. A question has been put to you with reference to the probable improvement in the value of land in Carey-street if the Law Courts are placed upon the Howard-street site. Looking at the Somerset House building, which extends from the river to the Strand, and directing your attention to the nature of the property on the other side of the Strand facing Somerset House, are you of opinion that the existence of Somerset House, with all the great public business which is transacted there, has had any effect in improving the value of the property on the other side of the Strand?—I cannot say that; but I think the circumstances here are different. You are making a special building for a special purpose, where barristers and solicitors would congregate, and if you offered them convenient offices as close to the courts as the property you speak of in the Strand is close to Somerset House, I think they would take advantage of it. I should say, if you will permit me, in reference to the estimate of 668,000 *l.*, that 60,000 *l.* of that was for the purchase of property in the Temple to make a bridge. I do not suppose that the Committee would think a bridge necessary, and, therefore, that might be very well struck out.

3184. *Mr. Chancellor of the Exchequer.*] Did you never hear of anybody going to live near the Inland Revenue Office for the pleasure of paying his taxes more quickly?—No.

3185. Mr. *Cowper.*] In the report of the committee of the Law Institution, a distinction is drawn between land which is inclosed for ornamental ground and that which is let for roads; do you conceive that the general object that Parliament had in keeping an open ground and open spaces near the river applied so much to that which was devoted to roads as to that which was devoted to grass?—I think so; I think the convenience of the public was consulted both in regard to the land which was intended as roads and also in regard to the land which was intended to be converted into gardens.

3186. When you mentioned just now that if the reduced plan of Mr. Street were adopted for the Carey-street site it would be necessary to purchase some houses between Bell-yard and Chancery-lane, did you contemplate that such portion of that purchase as would not be used for a site would be re-sold to advantage?—That I have considered; there would be very little surplus, because the houses are so shallow in Bell-yard, but I have put down something for it; it would leave a net outlay, I think, of 50,000 *l.*

PAPERS handed in by Mr. *John Young*, 23 July 1869.

LAW MAP OF LONDON.

EXPLANATION.

IN DISTRICT COLOURED	Number of Practising Barristers and Solicitors.	Number of Country Solicitors' Agencies.	TOTAL.
YELLOW	475	221	696
RED	2,026	4,447	6,473
BLUE	1,248	643	1,891
GREEN	1,153	1,169	2,322
PURPLE	42	10	52
TOTALS	4,944	6,490	11,434

LAW COURTS.

APPENDIX TO LAW MAP.

OF the 4,944 Barristers and Solicitors in the coloured districts, there are,—

Barristers in or near Lincoln's Inn	818	
Ditto - ditto Temple	1,044	
Total of Barristers		1,862
Solicitors in all the districts		3,082
TOTAL of Barristers and Solicitors		4,944

Of the 3,082 Solicitors, the Carey-street petition was signed by—

174 west of Wellington-street,	while 61	refused to sign.
635 in the Central District	82	„ „
472 east of Farringdon-street	135	„ „
TOTALS - 1,281 signatures		278 refusals to sign.

The 1,281 signatures represented 1,661 individuals out of the 3,082. The petition is still in course of signature.

Of the 6,490 country solicitors' agencies, the London representatives of over 5,000 have already signed the Carey-street petition.

There were 393 signatures to the barristers' petition in favour of Carey-street, of which 74 were from the Temple.

App. No. 3.

Appendix, No. 4.

PAPERS put in by Mr. *Pownall*, 27 July 1869. App. No. 4.

Mr. *Pownall* to Mr. *Alfred Austin.*

5, Westminster Chambers, Victoria Street,
Sir, 22 January 1866.

I HAVE, in conformity with your instructions, surveyed the property coloured pink on the accompanying plan, and I estimate the cost of acquiring all the interests in it at the sum of Four Hundred and Eighty-eight Thousand Six Hundred and Twenty Pounds (488,620 *l.*), which amount is exclusive of solicitors' and surveyors' costs connected with the purchase of the property.

I am, &c.
(signed) *Geo. Pownall.*

Alfred Austin, Esq.
Secretary of Her Majesty's Commissioners
of Works, &c.

Mr. *Pownall* to Mr. *E. W. Field.*

Great Turnstile Improvement.

5, Westminster Chambers, Victoria-street, Westminster,
Sir, 12 February 1867.

I HAVE surveyed the property, at Great Turnstile, which will be required for this improvement. My valuation, in each case, is the net cost after allowing for the surplus land which is marked red on the Plans, and will be for sale by the Commissioners, but it does not include the cost of making the road and footpaths.

Plan, No. 1, contemplates the removal of both sides of Great Turnstile, and a wedge-shape strip of land off Lincoln's Inn Garden, the net cost will be - - - - - - - - - - - - - - £. 91,000

Plan, No. 2, contemplates the removal of the west side of Great Turnstile and Newman's-row, but Lincoln's Inn Garden and the east side of Great Turnstile will not be touched, the net cost will be - - £. 100,000

Plan, No. 3, the removal of Newman's-row, and both sides of Great Turnstile, but Lincoln's Inn Garden will not be touched, the net cost will be - - - - - - - - - - - - - - £. 122,000

I also enclose a Plan showing the proposed new street in the rear of Holborn; you will observe that most of the houses in Holborn run as far back as Lincoln's Inn Garden, the owners and Lessees will therefore have the power to compel the Commissioners to purchase the whole of their properties; my estimate after allowing for the sale of the surplus amounts to - - - - - - - - - £. 36,000

I hand you a Plan of the property, as it exists at the present time, and the four other Plans before referred to, and remain,

Yours, &c.
E. W. Field, Esq. (signed) *Geo. Pownall.*

App. No. 4.

Mr. *Pownall* to Mr. *Alfred Austin.*

5, Westminster Chambers, Victoria Street, Westminster,
18 July 1868.

Sir,

I beg to acknowledge the receipt of your communication of the 16th instant, and two plans which accompanied it, which I herewith return.

In conformity with your instructions, I have surveyed the properties in Chancery-lane, edged with blue (except the Law Fire Office), and the premises in the Strand and the Temple, coloured green, and I beg to report to you as follows :—

	£.
My estimate, made on the 22nd January 1866, amounted to - - -	488,620
Deducting the value of property between Holywell-street and the Strand, facing St. Clement Danes Church - - - - - - - - -	39,500
Leaves a Balance of - - - £.	449,120
I think it right to draw your attention to the fact, that since I made this estimate many costly and expensive trades have been created on the land coloured red, and some of the claimants who were removed from the site now purchased have taken leases, and spent very large sums of money in fitting up new premises to which they have removed, and which it is now proposed to purchase; such, for instance, as Mr. George Attenborough, at the corner of Chancery-lane; Mr. Tuxford, No. 265, Strand; Mr. Dobree, No. 264, Strand; the Midland Railway Company, No. 262, Strand, and a considerable number of law stationers, and others, in Carey-street. To meet these newly created interests, I consider that a sum of 50,000*l.* should be added to my Estimate - - - - - - - - -	50,000
Increasing this Estimate to - - - £.	499,120
I am of opinion that it will cost, to purchase all interests in the five properties in Chancery-lane (edged with blue on plan), marked A, the sum of - -	108,000
And that to purchase the property, coloured green on the plan, signed by Mr. G. E. Street, will cost a further sum of - - - - - - - -	60,000
Making a Total of - - - £.	667,120

I have to add, that I should be very happy, for the private information of the First Commissioner of Her Majesty's Works, &c., to furnish the details of my valuation of each of the properties in Chancery-lane; but there would be very serious objection to making this information generally known, as it would very much embarrass the promoters if the purchase should hereafter have to be made.

The area in the rear of the Law Fire Office belongs to that company, and would of course be included if this property is purchased.

I am, &c.
(signed) *Geo. Pownall.*

Alfred Austin, Esq.,
Secretary to Her Majesty's Office of Works, &c.

Appendix, No. 5.

PAPER put in by the Right Honourable *G. Ward Hunt*, a Member of the Committee. App. No. 5.

MEMORANDUM by Mr. *Foster*, 23 October 1868.

BUILDINGS.

COURTS OF JUSTICE BALANCE SHEET, page 250.

Chancery Contribution of £. 1,000,000. Stock will produce - - £. 900,000.
Government Grant, fixed at - - - - - - - - £. 200,000.

FURTHER FUNDS.

By Chancery:

Fund to provide for officers of the Court of Chancery, 201,028 *l.* stock.

The interest of this stock at present is carried to the Suitors' Fee Fund Account, the ordinary receipts of which did not, in the year ending 25th November 1867, meet the charges by 35,000 *l.*

By Chancery:

Part of the cash balance of the Suitors' Fee Fund Account of 162,944 *l.*, viz., 100,000 *l.*

As stated above, the ordinary receipts of this fund do not meet the charges by 35,000 *l.* It cannot, therefore, out of its own means, spare 100,000 *l.* out of its cash balance.

This fund is, however, supplemented by transfers from other funds, viz.: interest Six Clerks Office Fund, 67 *l.*; interest from Suitors' Fund, 103,512 *l.*; interest, from Officers, Court of Chancery Fund, 8,895 *l.*

The first of these is insignificant; the last is the interest of 201,028 *l.* stock referred to in the first item which it is proposed to apply to the building account, and on which no further interest would be available for the Suitors' Fee Fund.

The only remaining source of additional receipt is therefore the Suitors' Fund.

On this fund the receipts in the year ending 1st October 1867, consisted of the dividends due upon the stock standing at the credit of the fund, dividends amounted to 117,841 *l.*, and of 550 *l.* for rents received. The charges on the fund were 51,493 *l.*, the balance of receipts over payments being 67,000 *l.*

It is proposed, however, as shown above, to sell 1,000,000 *l.* of the Suitors' Fund stock, which will reduce the interest receivable by 30,000 *l.* The surplus, which now is 67,000 *l.*, will then be only 37,000 *l.*, to meet a deficiency of 35,000 *l.* (as shown above) on the Suitors' Fee Fund Account, leaving a margin of only 2,000 *l.* for eventualities.

Should this very small surplus be turned into a deficiency, it would rest with Parliament to make it good out of the general revenue of the country.

By Bankruptcy:

£. 271,012. stock on Chief Registrar's Account, estimated to produce 256,000 *l.*

It had been agreed, and had received the sanction of the House of Commons, that this sum should be paid to Exchequer. *See* Draft Bankruptcy Bill, as amended on Report No. 75, ordered to be printed 24th April 1868, clause 464.

The Exchequer is just now not in a position to give up its claim to this amount.

App. No. 5.

Unclaimed Dividend:

Account 177,756 *l.* stock, estimated to produce 168,000 *l.*

This fund is liable to claims made within a certain period, and, if surrendered, the Exchequer will have to make good any claims which may be substantiated.

By Common Law:

Surplus fees, 1866–67 -	-	£. 26,600
„ 1867–68 -	-	16,250
		£. 42,850

It is scarcely safe to surrender these surplus fees, seeing that the surplus fell 10,000 *l.* last year, and may soon be turned into a deficiency; and from this statement the salaries of the judges, amounting to 105,000 *l.* per annum, are omitted, so that in reality the fees by no means meet the cost of the courts.

In addition to this, the cost in excess of fees of the Probate Court, the Admiralty Court, and the Land Registry Court, amounts to about 82,000 *l.* independently of judges' salaries.

The Exchequer therefore has a strong claim to these surplus fees improperly so called.

ANNUAL ACCOUNT.

Creditor side:

Surplus Common Law Fees, 16,000 *l.*

The note to this item admits a doubt as to the continuous average of this surplus, but suggests that it would be maintained if certain charges now falling upon the fund were provided for by votes.

It is clear that if Parliament votes the charges, the Exchequer is entitled to the fees which formerly met the charges.

Fee of 1 *s.* per 100 *l.* on probates and administrations.

This seems to be trenching on Imperial duties which are already imposed on these documents.

Debtor:

Redemption Annuity at 4 per cent. for a term not to exceed 50 years, to repay advance from Government of 1,395,150 *l.*, viz., 55,806 *l.*

An annuity of 4 per cent. to repay capital in 50 years is thus composed, viz.:—

Interest, about - -	$3\frac{1}{6}$ per cent.
Sinking Fund - -	$\frac{5}{6}$ „
TOTAL - -	4 „

It is clear that $3\frac{1}{6}$ per cent. per annum is an inadequate rate of interest. For small terminable loans Government itself has occasionally to pay 4 per cent. (*see* Exchequer Bonds, series M.), and Government should not, except under very exceptional circumstances, lend at a lower rate.

Taking interest at 4 per cent., it would require, to repay the above capital in 50 years, an annuity of 64,945 *l.*; and the payment of such an annuity would convert the apparent surplus on the account of over 6,000 *l.* into a deficiency of nearly 3,000 *l.*

It thus appears that by the application of the several funds to the Courts of Justice buildings, the Exchequer would suffer certainly to a considerable extent, and possibly to a much larger extent.

That the mode of raising the revenue to meet the annual charges trenches upon sources of Imperial revenue, and, as regards surplus fees, may not be realised.

That the redemption annuity must either be at a very inadequate rate of interest, or must be increased to an amount which, instead of leaving a margin of revenue, would raise the charges to an amount which would not be met by the receipts as set forth in the account.

The above statement is, further, dependent upon the accuracy of the estimate of expenditure; should this be exceeded (an event of not very uncommon occurrence), further funds would have to be raised, for the charges of which there would be, under the present scheme, no available receipts.

23 October 1868. *M. H. F.*

I N D E X.

N.B.—In this Index the *Figures* following the Names of the Witnesses refer to the Questions in the Evidence; those following *App.* to the Pages in the Appendix; and the Numerals following *Rep.* to the Pages in the Report.

A.

ACCESS (APPROACHES):

1. *Carey-street Site.*
2. *Howard-street Site.*
3. *Suggested Communication between Holborn and the Strand, common to either Site.*
4. *Conclusions of the Committee.*

1. *Carey-street Site:*

Conclusion as to the sufficiency of the present approaches to the Carey-street site, and as to the better facilities of access than to the Howard-street site, *Field* 119 *et seq.*——Advantage of increased facilities of access to Lincoln's Inn Fields, this, however, being a matter for which the suitors should not pay, *ib.* 217–219. 280–292.

Outline of the provision made by witness's original plan on the subject of streets and approaches, the site near Carey-street comprising an area of more than seven-and-a-half acres, *Street* 582–586——Beport by witness to a Sub-committee of the Royal Commission in July 1868, setting forth the property desirable to be purchased for the purpose of approaches to the Carey-street site, *ib.* 592. 596, 597——Concurrence of the competing architects as to the necessity of purchasing certain lands on the western side of Lincoln's Inn Fields, marked green on the block plan, *ib.* 592–595.

Information relative to the facilities of access and approach contemplated on each side of the site, by the purchase and removal of houses, *Street* 609–611——Particulars relative to the improved approaches necessary if the reduced plan be adopted; considerable difficulties on this score, *ib.* 700–707——Advantage of the wide entrance from the Strand to the Carey-street site, *ib.* 846–850——Several modes of access from the Embankment, near Howard-street, to the Strand, and to Carey-street, *ib.* 985–990. 1209–1214——Relative facilities of access to a building on the Carey-street site, and to the Royal Academy, *ib.* 1077–1083.

Grounds for concluding that the approaches to the Carey-street site, notwithstanding the several improvements contemplated by witness, will be inferior to the approaches to the Howard-street site, *Hunt* 1267–1280. 1283–1286. 1293, 1294. 1353, 1354. 1372–1383. 1469–1476——Approval of the Carey-street site, provided certain new and improved approaches are made; great difficulty of access otherwise, *Cole* 1857. 1861–1867.

Question whether as regards facilities of access the Howard-street site is superior to the Carey-street site; advantage in the latter case of the approach by the Strand, *Hardwick* 2131–2133. 2158–2168. 2220–2227——Belief as to the much larger number of persons going along the Strand, than along the Embankment or the river, *ib.* 2131–2133. 2136. 2220–2227. 2244, 2245. 2295–2297.

Belief that the majority of those using the Courts would come from the north; great obstacle through these having to cross the Strand if the Embankment site be adopted, Sir *R. Palmer* 2423–2427. 2487——Several means of access from the Embankment to Carey-street; interference with these if the Courts be erected in Howard-street, *Young* 2633——Advantages of the access from the north to Carey-street as compared with Howard-street, *ib.* 2634–2636——On the whole the access would be better to the Carey-street site, *ib.* 2636.

Report, 1869—*continued.*

ACCESS (APPROACHES)—continued.

1. *Carey-street Site*—continued.

Grounds for the conclusion that, as regards the Common Law Bar, and as regards the legal profession and the public generally, the facilities of access would be much better in the case of Carey-street site than of the Embankment site, Lord *Romilly* 2768-2776——Satisfactory improvement contempleted by Mr. Street's plan as regards the streets on the east side of the Carey-street site, *Pownall* 3084, 3085.

2. *Howard-street Site:*

Inconvenience of the approach along the Strand to the Howard-street site if many went there, *Field* 153-155——Increased difficulty of access from the north to the cabs rd-street site as compared with the Carey-street site; necessity of crossing the How[a] in the former case, *ib.* 195-197. 293. 362-369——Exceptions taken to the view that the facilities of access to the Howard-street site by the Embankment and railway offer peculiar advantages to suitors and to the profession, *ib.* 220-223.

Excellent facilities of access to the Howard-street site as compared with the means of access to the Carey-street site; details in support of this conclusion, *Street* 636-656. 700. 720-722. 744-760——Excellent access by means of the Thames Embankment, *ib.* 636-638——Contemplated approach from Wellington-street by means of the terrace in front of Somerset House, *ib.* 641——Access by way of Norfolk-street, Arundel-street, and Surrey-street, irrespectively of the widening of Essex-street, *ib.* 653, 654. 745-750. 822-824.

Better access from the north and east to the Howard-street site than to the Carey-street site, *Street* 656-659. 837-843——Facilities for entering the building at different levels, on account of the great slope of ground on the Embankment site, *ib.* 668——Necessity of widening Howard-street as well as of lengthening Essex-street, if the Embankment site be adopted, *ib.* 730-732——Good means of access from the north, irrespectively of Essex-street, *ib.* 822-824——Statement of the incline from Surrey-street and other points to different parts of the building, *ib.* 856-864——Suggestion that the access along the terrace from Somerset House be limited to persons having business in the Courts, *ib.* 865.

Excellent facilities of access to a building on the Howard-street site, *Hunt* 1283-1286. 1291-1294——Inconvenience through the want of better access to witness's court near Horsemonger-lane gaol; question hereon whether it would not be more convenient to the suitors if the Courts were near the Temple, *Whitmore* 1990. 2027-2038——Peculiar facilities of access by way of the river, the Embankment, and the railway, to the Law Courts, if erected on the Howard-street site, *Fowler* 1514-1516. 1526-1530——Explanation relative to the means of access from the railway to the Strand by Norfolk-street, Surrey-street, and Arundel-street; advantage on the other hand of widening and extending Essex-street as affording an improved access, *ib.* 1526-1530. 1534-1543.

Excellent facilities to the general public by means of the road, the railway, and the river, *Baxter* 1713——Grounds for the conclusion that the balance of convenience with regard to the public and the profession is in favour of the Embankment site, *Vallance* 2060 *et seq.*

Fallacy of the assumption that professional men would largely use the underground railways in order to reach the Courts quickly, *Young* 2613-2615. 2631——Grounds for dissenting from the opinion that on account of the river and the railway the Embankment site possesses peculiar advantage in the way of access, *ib.* 2631——Conclusion as to the necessity of a street much wider than twenty-two feet on the west of the Howard-street site, *Pownall* 3074-3076.

3. *Suggested Communication between Holborn and the Strand, common to either Site:*

Importance attached to a road on the western side of Lincoln's Inn Fields communicating with the new Courts and with the Strand, *Street* 605, 606——Wide street contemplated from the river up to Carey-street, involving the widening of Serle-street and the opening of Great Turnstile, *ib.* 647-652——Absence of necessity for a wide street on the west of the Carey-street site, communicating with the Strand, if the Serle-street improvement be made, and Great Turnstile be opened out, *ib.* 923-931——Important metropolitan improvement by having a broad street through the Carey-street site, joining Serle-street, *ib.* 978-981.

Conclusion as to the necessity of certain improved and general approaches, whichever site be adopted, *Hardwick* 2109. 2373-2380——Importance in either case of widening Essex-street, and of making an improved approach *viâ* Serle-street to Holborn, *ib.* 2109. 2145-2151. 2184. 2250-2255. 2334-2336. 2367-2380——Sufficiency of the improved approaches contemplated by Mr. Street in immediate connection with either site, *ib.* 2109.

Want of a new approach from the north quite as much if the Courts are built in Howard-street as in Carey-street, *Sir R. Palmer* 2451——Importance of a good street from Holborn to the Strand irrespectively of the new Courts, *Pownall* 3144. 3147-3151.

4. *Conclusions*

Report, 1869—*continued.*

Access (*Approaches*)—continued.

4. *Conclusions of the Committee:*

Area available for improved approaches in connection with the Carey-street site, *Rep.* iv—— Conclusion that as regards facility of access no great additional expenditure need be incurred should the Carey-street site be adopted, *ib.*——Necessity for improved approaches in connection with the Howard-street site as well as the Carey-street site, *ib.*

See also *Bell-yard. Carey-street. Carey-street Site. Carriage Traffic. City Solicitors. Cost. Covent Garden. Essex-street. Home Circuit. Howard-street Site. Legal Profession. Public, The. Railway. Strand. Suitors. Temple.*

Agency Solicitors (*Country Firms*). Doubt as to the number of agency solicitors favourable to the Embankment site, *Freshfield* 1583–1591——Admission as to the great majority of agency houses being in favour of the Carey-street site, *Baxter* 1689–1692——Exceptions taken to a certain calculation by the Law Society as to the importance of the Carey-street site with reference to country business, *ib.* 1753–1758.

Large number of country solicitors represented by London firms; considerable majority favourable through their agents to the Carey-street site, *Young* 2624–2627. 2699–2701.

Air and Ventilation. See *Light, Air, &c.*

Approaches. See *Access.*

Architectural Clerk (*Royal Commission*). Explanation relative to the appointment and qualifications of Mr. Burnet, as architectural clerk, *Field* 48–50. 357–361——Objection made by witness, as one of the Commission, to the appointment of an architectural clerk, *Hunt* 1231, 1232.

Architectural Effect. Evidence in strong approval of the Howard-street site as regards architectural effect, *Street* 657–663——Singularly good views obtainable of a public building on the Howard-street site, *ib.* 663——Sufficient height of the building to prevent the houses to the north being seen from Waterloo-bridge, *ib.* 959–961——Statement that the appearance of the building from the Strand would not be objectionable, *ib.* 962, 963——Advantage of the building following the line of the river as far as possible, *ib.* 964, 965.

Opinion that the Howard-street site is, in fact, a magnificent one for a public building, *Street* 972, 973——Impression as to the reasons for a change to the Howard-street site being both of an artistic and an economical character, *ib.* 1095–1098——Explanation that witness has no objection, artistically, to the Cary-street site, but considers that the Embankment site affords the greatest opportunity for architectural display, *ib.* 1131–1134. 1158. 1174.

Advantage of the Embankment site as regards architectural effect, *Boodle* 1782. 1803——Objection to the Carey-street site on artistic grounds, *Cole* 1884.

Evidence in detail in support of the conclusion that each site has about equal advantages on the score of architectural effect; denial that the Embankment site possesses on the whole any superiority in this respect, witness believing rather that the Carey-street site would be the more effective of the two, *Hardwick* 2131–2136. 2189–2196. 2207. 2244–2247. 2256, 2257. 2267, 2268. 2281–2289. 2295–2297. 2309–2313. 2320–2326. 2337–2342. 2383–2385.

Conclusion that no considerations of architecture or of economy, within limits, appear capable of counterbalancing the advantages of the Carey-street site, *Sir R. Palmer* 2524, 2525.

Comment upon the proposal to divert the suitors' money, and to abandon the Carey-street site, through a spirit of dilettanteism, *Young* 2586——Examination as to witness's grounds for the statement that Government, or certain members of it, have been actuated by a spirit of dilettanteism, and by æsthetic considerations in their preference for the Embankment site, *ib.* 2597–2606. 2693–2698. 2702.

Very fine architectural effect of Mr. Street's building on the Carey-street site, especially if the Holywell-street block be removed, *Pownall* 3140–3144.

Conflict of opinion in the Committee as to the comparative advantage of the two sites in point of architectural effect, *Rep.* v.

See also *Elevation. Somerset House.*

Arundel Street. See *Access* (*Approaches*), 2.

B.

Bankruptcy Court. Room for a Bankruptcy Court under the Carey-street scheme, *Sir R. Palmer* 2492, 2493.

Barristers. See *Legal Profession.*

Report, 1869—*continued.*

Barry, Sir Charles. Opinion of the late Sir Charles Barry, that the Carey-street site was better than the Lincoln's-Inn Fields site, *Field* 427.

axter, Robert Dudley. (Analysis of his Evidence).—Represents the firm of Baxter, Rose & Norton, of Victoria-street, Westminster; has studied the question of the site of the New Law Courts, 1654, 1655——Conclusion that for professional men in Westminster, in the Temple, and in the City, the Embankment site is much the more convenient, 1656. 1676——Greater convenience of the Carey-street site for Lincoln's Inn and for the Oxford-street and Regent-street district; exceptions to this rule, 1656. 1659–1662——Considerable majority of solicitors and barristers in those districts to which the Embankment site is more convenient, 1656. 1667——Few solicitors to the south of the Thames; convenience of the Embankment site in the case of these, 1657, 1658. 1687, 1688.

Conclusion as to the Embankment site being far more convenient for suitors and witnesses and for the public generally, 1666——Very little inconvenience to solicitors and barristers in Lincoln's Inn if the Embankment site be adopted, and if the Strand be bridged, 1667. 1699–1704——Expectation that barristers and solicitors in the Lincoln's Inn district will largely migrate, and will follow the Courts if placed on the Embankment site; grounds for this conclusion, 1667. 1670–1675. 1705–1708. 1718–1726. 1763–1769.

Examination upon the assumption that the City solicitors should be in favour of the Embankment site, as being more ready of access; explanation hereon as to many of them having signed a petition circulated by the Law Society in favour of the Carey-street site, 1676–1686. 1732–1740——Admission as to the great majority of agency houses being in favour of the Carey-street site, 1689–1692——Statement relative to the access from Westminster to Carey-street by way of the Embankment, and across the Strand by means of a bridge, if erected, 1693–1704.

Opinion that the public, or rather the suitors, jurymen, and witnesses should first be considered, and that it would be greatly to the convenience of the majority of these that the Courts be placed on the Howard-street site, 1709–1717. 1748–1753. 1759–1762——Inconvenience of concentration to the City public and solicitors, as involving the removal of trials from Guildhall, 1714–1717——Further consideration of the grounds for witness's statement that the majority of solicitors generally would best be suited by the Howard-street site, 1727–1747.

Exception taken to a certain calculation by the Law Society, as to the importance of the Carey-street site with reference to country business, 1753–1758——Advantage of a concentration of the Courts in proximity to the offices of the equity practitioners, and of conveyancers, 1770–1776——Calculation that the Embankment site would be to the convenience of a considerable majority of the barristers, 1776, 1777.

Bayford, Dr. Augustus Frederick. (Analysis of his Evidence).—Is senior Registrar of the Court of Probate, 2890, 2891——Deposit in different places, of the records and documents belonging to the Court, it being of great importance that they should be concentrated in one building, 2892, 2893——Constant increase in the business of the Court, 2894——Excellent facilities presented by the Carey-street site, and by the original plan of the New Law Courts, for the accommodation of all the wills in England; advantage of the opportunities for extending the accommodation when required, 2895–2897. 2917–2928.

Advantage of the depository of wills being in close proximity to the Court of Probate; approval of the one being on the Embankment site, and the other on the Carey-street site, though it would be better still if they were more close together, 2897–2933. 2944–2991——Statement to the effect that as regards a depository for wills, witness equally approves of either site, 2898-2900. 2988–2991——Sufficiency of the facilities of access to each site, as regards the inspection of wills, 2901–2905.

Particulars relative to the present buildings in Great Knight Ryder-street and Doctors' Commons; respects in which neither efficient nor safe, 2915, 2916. 2934–2943. 2973–2980——Convenience as regards the attendance of registrars and other officers in having the depository for wills close to the Court of Probate; less necessity for the wills being kept in proximity to the other Courts, 2944–2972.

Suggestion that if the Courts are on the Carey-street site, a tower might be erected on the Embankment site in which to keep wills, and that the expense might easily be met by an extra probate fee, 2982–2988——Approval of the Embankment site for the Courts, and of the Carey-street site for a will depository, 2989-2991.

Bell-yard. Evidence in favour of the purchase of the Bell-yard block, though not absolutely required for the New Courts, if erected on the Carey-street site, *Field* 266–279. 305. 406–408——Small and poor character of the houses in Bell-yard, *Street* 612, 613——Much greater width of Strand-lane than of Bell-yard, *ib.* 866–868——Advantage of a communication from Bell-yard to Chancery-lane to the south of the Law Institution, *Hardwick* 2201–2204——Necessity of purchasing some houses between Bell-yard and Chancery-lane, in connection with the Carey-street site; estimate of 50,000 *l.* as the cost of the improvement at this point, *Pownall* 3147-3149. 3164. 3186.

Report, 1869—*continued.*

Boodle, Henry Trelawny. (Analysis of his Evidence.)—Is solicitor for Lord Westminster, having offices in Davies-street, Berkeley-sqnare, 1778–1780——Considers that for the general public, and for judges, jurors, and witnesses, the Embankment site is preferable to the Carey-street site, 1781, 1782. 1803——Opinion in favour of the Embankment site on the score of light and air, 1782. 1803——Advantage of this site as regards architectural effect, *ib.*——Convenience of the Carey-street site to the Chancery barristers and of the Embankment site to the Common Law barristers, the numbers being about equal, 1783. 1803——Majority of solicitors to whom the Embankment site would, according to Mr. Baxter, be more convenient, 1783, 1784. 1803.

Circular letter received by witness from the Incorporated Law Society, requesting him to support the movement in favour of the Carey-street site, 1805——Reply by witness to the foregoing, objecting to the course pursued in the matter by the society, *ib.*——Statement as to witness not having been present at any meetings of the society when the site of the Courts was discussed, 1786–1797.

Limited practice of witness in the Courts, 1798–1802——Expediency of considering the convenience of the general public as well as of the profession, 1804–1806——Examination as to the advantage to suitors by concentrating the courts and offices near the chambers of the solicitors and barristers; saving thereby of delay and expense, 1807–1853.

Burnet, William. (Analysis of his Evidence.)—Has acted as architectural clerk to the Royal Commission since December 1845; is an architect by profession, 433–437——Preparation by witness for the Law Institution of a certain map of the Carey-street site and Howard-street site; explanation relative to its inaccuracy in several respects, 438–452. 457–460. 479–493. 517–524. 531–548——Inaccuracy of the foregoing map, as regards the localities of the offices of the legal profession; correct map being prepared by witness, showing this information, 448–473. 517–524——Belief that a road sixty feet wide may be carried from the Strand to Carey-street, leaving a sufficient space for the New Courts; six acres would not be left, as stated in witness's map, 452–456.

Examination relative to witness's map, as purporting to show the extent of the Howard-street site, and the mode proposed by Mr. Street for applying his scheme to such site; inaccuracies therein adverted to and explained, 457–460. 510–514. 568——Varying width of Carey-street, even when widened as proposed, 461–465——Statement as to the reduced plan prepared by witness, showing how Mr. Street's building might be placed upon the Carey-street site, 466–472. 494–509. 525–530. 535–538. 561–564. 569.

Question considered as to the construction of a bridge over the Strand, in connection with the New Courts, 474–478——Explanation relative to the width proposed for Carey-street, according to witness's reduced plan, 495–508——Discussion between witness and Mr. Street on the subject of certain tables and calculations prepared by witness relative to the several schemes; inaccuracies in these calculations adverted to, 516. 549–558. 570, 571——Circumstance of witness not having consulted Mr. Street before preparing the tabular statement about his scheme; difficulty in the way of communication with Mr. Street, 554–560. 565–567. 570–572.

C.

Cabstands. Facilities for cabstands in the immediate neighbourhood of the proposed building on the Howard-street site, *Street* 688.

Carey-street. Varying width of Carey-street, even when widened as proposed, *Burnet* 461–465——Explanation relative to the width proposed for Carey-street, according to witness's reduced plan, *ib.* 495–508——Relative width proposed for Howard-street and for Carey-street, *Street* 799, 800. 869–871——Necessity of widening Carey-street, *Hunt* 1241——Doubt as to the widening to Carey-street to sixty feet being objectionable, as attracting more traffic of a noisy character, *ib.* 1481–1488——Opinion that it would not be necessary to widen Carey-street, *Hardwick* 2374. 2381, 2382.

See also *Access* (*Approaches*), 1. 3.

CAREY-STREET SITE:

1. *Question as to the Sufficiency of the Area already acquired.*
2. *As to the Purchase of additional Land.*
3. *As to a Clearance of the Site, and the erection of Chambers and Offices.*
4. *Conclusions of the Committee.*

1. *Question as to the Sufficiency of the Area already already acquired:*

Conclusion arrived at by the Royal Commission as to the insufficiency of the original site of seven and-a-half acres in the event of an Appellate Court and other buildings not at first contemplated being erected, *Field* 16–22——Inconvenient shape of the Carey-street site, *ib.* 20. 22, 23——Opinion that all the courts and offices contemplated in the

CAREY-STREET SITE—continued.

1. *Question as to the Sufficiency of the Area already acquired*—continued.

original plan can be erected on the site, *Field* 205. 207–225. 266–273.——Decided superiority of the Carey-street site, *ib.* 304——Impartial and valuable authorities in 1841 and 1842, in favour of the Carey-street site, *ib.* 427–429.

Difficulty in applying the reduced plan, owing to the unfavourable shape of the present Carey-street site; means of remedying this, *Street* 690, 691. 739–741——Different understanding of the competing architects as to the actual area available at Carey-street, *ib.* 788——Means of erecting a satisfactory building on witness's plan upon the site, as at present acquired, *ib.* 789–791. 804–806——Larger area required on the Carey-street site than on the Howard-street site, on account of the irregular shape of the former, *ib.* 890–896.

Power of selling the land that would have been required for the depository of wills, and the registry, if the original plan had been carried out, *Street* 918–922——Somewhat larger area required for the reduced plan on the Carey-street site than on the Embankment site, *ib.* 975–977——Facility of placing a larger building than the reduced plan on the present Carey-street site, but only by sacrifice of air and light, *ib.* 1052–1054.

Opinion that there will be no surplus land for sale out of the seven and-a-half acres acquired in Carey-street, *Hunt* 1342. 1443–1447——Dissent from Mr. Street's view that certain land might be re-sold if the reduced plan is adopted on this site, *ib.* 1419–1426——Question as to the period for which witness has been of opinion that the present site was not sufficient for the Law Courts, *ib.* 1452–1468. 1489——Probable sufficiency of the site for the mere accommodation of the proposed Courts and offices, *ib.* 1496–1498.

Opinion as to the sufficiency of the site of seven and-a-half acres for the erection of the required building, *Hardwick* 2248, 2249. 2306–2308——Conclusion that by adopting the reduced or original Carey-street site but little regard need be had to the question of further extensions, *Sir R. Palmer* 2428–2430——Sufficiency of the land already acquired for all practical purposes, though further outlay for improved approaches is expedient, *Sir R. Palmer* 2431–2433. 2448–2451; *Young* 2646, 2647. 2679, 2680. 2689–2692——Authority of Mr. Street cited as showing that a similar building can be erected on the seven-and-a-half acres of the Carey-street site as on the six-and-a-half acres of the Embankment site, and at the same cost, *Young* 2628——Increased site necessary at Carey-street if the larger plan had been adopted, *Pownall* 3160–3163. 3179–3182.

2. *As to the Purchase of additional Land:*

Examination as to the part taken respectively by the Commission, the Treasury, and the Office of Works, on the subject of the purchase of additional land; prominent action of Mr. Childers in the matter on the part of the Treasury, *Field* 62–71. 79 *et seq.* 187–194. 328–330.——Statement to the effect that though more land need not be purchased in order to place the courts on the Carey-street site, such purchase is extremely desirable and would be a profitable investment, *ib.* 266–279. 305. 406–408.

Several purchases necessary in order to clear a sufficient space round the building on the reduced site, *Street* 708–715. 742, 743—Necessity in any case of large additional purchases, if the Court be placed on the Carey-street site, *ib.* 723–725——Further statement as to the necessity of acquiring additional ground, in order to render the site properly available for the new Law Courts; reference more especially to the excessively irregular shape of the western boundary, *ib.* 890–910.

Total of three acres and two rods recommended by the Royal Commission to be purchased, exclusive of Cook's-court; proportion thereof available for re-sale if witness's reduced plan be adopted, *Street* 905–917——Want of an extension of the site chiefly on the north of Carey-street; opportunity in such case of parting with portion of the ground already acquired, *ib* 948, 949——Origination with witness of the suggestion for additional land after his appointment as architect in 1868, *ib.* 1055–1058.

Conclusion as to the necessity of large additional purchases, at a cost of a million sterling, *Hunt* 1235–1257. 1267–1282. 1504–1508——Circumstance of the Royal Commission not having concurred with witness as to the nesessity of additional purchases for the Carey-street site, *ib.* 1391–1397.

Evidence to the effect that although sufficient land has already been acquired for the the completion of the reduced plan, it would be wise at once to purchase some additional ground, *Sir R. Palmer* 2431–2433. 2448–2451; *Young* 2646, 2647. 2679, 2680. 2689–2692.

3. *As to a Clearance of the Site, and the erection of Chambers and Offices:*

Advantage of the clearing of the Carey-street site, with reference to the provision of improved chambers for professional men, *Whitmore* 2053–2056——Desirable facilities offered by the clearance of the Carey-street site, for solicitors and barristers to have chambers there, if the Courts are placed on the Howard-street site, *Vallance* 2066–2071.

Very uncertain speculation if the Carey-street site were brought for the erection of chambers for the legal profession, *Sir R. Palmer* 2498, 2499.

4. *Conclusions*

Report, 1869—*continued.*

Carey-street Site—continued.

4. *Conclusions of the Committee.*

Period of nearly four years occupied in the acquisition of the Carey-street site and its clearance, the cost of the purchase and clearance having exceeded 800,000 *l.*, *Rep.* iii——Contemplated sale of portion of the ground already acquired as a means of purchasing other ground, *ib.* iv.——Views of the Committee as to the means of improving the shape of the Carey-street site, *ib.*

Sufficiency of the area already acquired for the erection of buildings on the reduced scale contemplated in the plan prepared for the Howard-street site, *Rep.* iv, v——Opinion that the Carey-street site, upon the whole, affords the best opportunity of concentration of the courts and offices, *ib.* iv——Several advantages of the Carey-street site as compared with the Howard-street site, the Committee recommending that the former be retained, *ib.* v.

See also *Access* (*Approaches*). *Agency Solicitors. Architectural Effect. Bell-yard. Carey-street. Clare Market. Clement's Inn. Cost. Delay. Elevation. Equity Courts. Essex-street. Extension of Site and Buildings. Holywell-street. Home Circuit. Howard-street Site. Incorporated Law Society. Law Institution. Legal Profession. Light, Air, and Ventilation. Lincoln's Inn. New Square. Plans and Maps. Probate Court. Public, The. Rolls Estate. Royal Commissions. Sale of Carey-street Site. Strand. Suitors. Temple. Treasury, The. Wills.*

Carriage Traffic. Conclusion as to the adequacy of the present approaches to the Carey-street site, very little carriage access being required by the legal profession using the Courts, *Field* 121–152. 197. 295–297——Very little carriage traffic to be provided for, especially if the Carey-street site be adopted, *Hardwick* 2102–2111. 2152–2154.

Central Hall. Improbability of the central hall on the Howard-street site becoming a public thoroughfare, *Street* 882–886——Opinion that the central hall in the reduced plan is none too large, *ib.* 1030–1033. 1148–1153. 1197.

Chancery Courts. See *Equity Courts.*

Chancery Lane. See *Access* (*Approaches*), 1. *Bell-yard.*

Churchyards (*Strand*). Expediency of removing the churchyards of the churches in the Strand in addition to the removal of Holywell-street, *Hardwick* 2410.

City Solicitors. Witness submits that for City solicitors the Embankment site is far more easy of access than the Carey-street site, *Freshfield* 1556–1565. 1572–1577. 1628–1650——Several leading firms in the City favourable to the Embankment site, *ib.* 1558–1561. 1566——Facility of access from the City to the Embankment site by the new street from the Mansion House to Blackfriars, *ib.* 1560. 1647–1649.

Consideration of the circumstances of a large number of City solicitors having signed a petition promoted by the Incorporated Law Society in favour of the Carey-street site; belief that in so signing they had not before them the relative merits of the two sites, *Freshfield* 1566–1568. 1588–1603. 1651–1653——Less facility of access from the City to the Carey-street site by way of the Holborn Viaduct than to the Embankment site by way of Mansion House street, *ib.* 1630–1650.

Examination upon the assumption that the City solicitors should be in favour of the Embankment site as being more ready of access; explanation hereon as to many of them having signed a petition circulated by the Law Society in favour of the Carey-street site, *Baxter* 1676–1686. 1732–1740.

Exceptions taken to certain calculations by Mr. Baxter purporting to show that the Embankment site would be more convenient to the great majority of solicitors in the City, *Sir R. Palmer* 2468–2472——Belief that many of the City solicitors would find the Carey-street site as convenient as the other, *Hon. G. Denman* 2551——Very good access for City solicitors to Carey-street when Newgate-street is widened, *Young* 2671, 2672.

Clare Market. Advantage of a road cutting off the Clare Market district from the new Courts, *Street* 613——Dissent from the view that the Clare Market district would soon be rebuilt and improved if the Courts be placed on the Carey-street site, *ib.* 1135–1142——Advantage of removing Clare Market, if the Carey-street site be adopted, *Cole* 1866, 1867——Opinion that Clare Market is too far off to affect the building, *Hardwick* 2205. 2365, 2366——Improvement if the Clare Market district could be purchased with a view to improved buildings and approaches if the Courts be placed on the Carey-street site, *Pownall* 3098, 3099. 3131–3133.

Report, 1869—*continued.*

Clement's Inn. Limited extent to which Clement's Inn is interposed between the law property about Clare Market and the Carey-street site, *Street* 946, 947——Prospect of a give-and-take arrangement being entered into with Clement's Inn, involving the purchase of Danes' Inn, *ib.* 1143-1145 —— Readiness of the authorities of Clement's Inn to facilitate the Carey-street scheme, *Young* 2644, 2645. 2665, 2666.

Cole, Henry Warwick, Q.C. (Analysis of his Evidence.)—Is a Chancery barrister, having chambers in Lincoln's Inn, 1854, 1855—— Preference on the whole for the Embankment site; more especially unless proper approaches are made to the Carey-street site, 1856–1867. 1884——Approval of the Carey-street site, provided certain new and improved approaches are made; great difficulty of access otherwise, 1857. 1861-1867——Grounds for the conclusion that the Embankment site would not entail any great inconvenience to solicitors in the Lincoln's Inn district; these could readily shift their chambers to the proximity of the Courts, 1859, 1860. 1873–1876. 1889.

Conclusion as to the Embankment site being the more convenient to the City and West End solicitors, 1859. 1869–1872. 1877–1883——Obstacle to barristers shifting their chambers and following the Courts; convenience on this score of the Carey-street site to barristers in Lincoln's Inn, &c., 1859. 1885-1892——Explanation that the benchers of the Inner Temple have no pecuniary interest in the adoption of the Embankment site, 1868 —— Objection to the Carey-street site on artistic grounds, 1884——Importance of a bridge or subway across the Strand, whichever site be selected, 1891, 1892.

Great saving of time to the profession, and advantage to suitors, by concentrating the offices and Courts on the same site, 1895–1901——Greater convenience to barristers in Stone-buildings by having the Courts on the Embankment site than at Westminster, 1902–1912——Defect of Mr. Street's plan in not providing for the offices on the west, and for the Courts as far as possible on the east, and closer to the Temple and to Lincoln's Inn, 1903.

Common Law Barristers. Doubt whether the Common Law barristers in the Temple have but little London practice as compared with the Chancery barristers north of the Strand, *Robertson* 1926–1935——Exceptions taken to the statement that the majority of the Common Law barristers in the Temple do not practice in the London Courts; examination on this question, *Whitmore* 1988. 1998–2016——Much larger attendance of suitors and of the public in the Common Law Courts than in the Chancery Courts, the Embankment site being preferable for these, *Whitmore* 1988, 1989; *Vallance* 2062. 2087——Unfair advantage to Common Law barristers in the Temple over those in Lincoln's Inn if the Courts be concentrated on the Embankment site, *Hon. G. Denman* 2559.

Compensation. Explanation as to witness having purposely excluded claims for compensation from his estimate of the cost of the Howard-street site, *Hunt* 1478, 1479.

Concentration of Courts. Great saving of time to the profession, and advantage to suitors, by concentrating the offices and Courts on the same site, *Cole* 1895–1901——Importance attached by the legal profession to a concentration of the Courts in the great legal district; concurrence of witness in this view, *Sir R. Palmer* 2416. 2419 *et seq.*—— Strong condemnation of any continued separation of the Courts of Law and Equity, *ib.* 2453, 2454——Equal demand for a concentration of the Law Courts on the site most convenient to the profession, as for the concentration of public offices in Whitehall, *ib.* 2482, 2483.

Importance of the concentration of Courts and offices being on a site as close as possible to the great hive of legal business, *Young* 2676–2678——Way in which a concentration of the Courts would be beneficial to solicitors; absence of benefit to the bar or to the general public, *Lord Romilly* 2764. 2778–2781.

Public advantage by placing the new Courts in immediate proximity to the chambers of the practising barristers and solicitors, *Rep.* iv.

See also *Cost,* 5. *Equity Courts.* *Legal Profession.* *Suitors.*

Consultation Rooms. Convenience of the provision of consultation rooms under witness's plans, that is, for the use of solicitors and barristers, *Street* 682.

Conveyancers. Still greater importance to conveyancers than to equity draughtsmen to be close to the Courts, *Hall* 2825, 2826.

Cook's-court. Want of compulsory powers in order to deal with the houses in Cook's-court, *Street* 706.

Cook's-court Company. Unfounded character of some statements as to the Incorporated Law Society being interested in the Cook's-court Company; progress made by the Company adverted to hereon, *Young* 2639–2644.

Report, 1869—*continued.*

Cost:

1. *Carey-street Site.*
2. *Estimated Return from Sale of Carey-street Site.*
3. *Howard-street Site.*
4. *Cost of Buildings.*
5. *Exception taken by Lord Romilly to the proposed Expenditure.*
6. *Conclusion of the Committee favourable to the Carey-street Site on the score of Cost.*

1. *Carey-street Site:*

Examination of four or five witnesses by the Royal Commission of 1865 before giving a certificate that the site would cost 750,000 *l.*, and the buildings 750,000 *l.*, *Field* 6. 24–38. 51–53——Statement that the certificate given by the Commission did not include any expenditure or estimate for accesses or approaches, *ib.* 25. 35. 53–59——Further reference to the witnesses upon whose evidence the certificate was given by the Commission, *ib.* 417.

Estimate of 488,000 *l.* by Mr. Pownall in 1866 for additional land at the Carey-street site; largely increased estimate in 1868, *Street* 607, 608——Estimate by witness in 1861, and again in 1864, that the probable cost of the Carey-street site would be 750,000 *l.*, and the probable cost of buildings 750,000 *l.*, *Hunt* 1225–1229——Statement by witness to the Commission that it would be necessary, for the sake of ventilation and approaches, to acquire much more land than was represented by the estimate of 750,000 *l.*, *ib.* 1233, 1234——Necessity, if the Carey-street site be adopted, of acquiring at least the additional lands shown on the deposited plan of 1868, and estimated by Mr. Pownall to cost 608,000 *l.*; concurrence in this estimate, *ib.* 1235–1241.

Belief that not only the property represented by the estimate of 608,000 *l.*, but other property, which witness estimates at 400,000 *l.*, must be acquired for purposes of ventilation, approaches, &c.; a further expenditure of at least a million sterling is in fact necessary in order to make the Carey-street site properly available for the New Law Courts, *Hunt* 1241–1257. 1267–1282. 1411. 1504–1508——Accuracy generally of witness's estimates for Government, *ib.* 1261–1263. 1339——Improbability of the Metropolitan Board of Works bearing any portion of the outlay of one million required for the improved approaches in connection with the Carey-street site, *ib.* 1329–1333.

Opinion that on the score of cost the Carey-street site is the best, *Young* 2679, 2680——Means of defraying the cost by fees, without expense to the public, *ib.* 2680.

Estimate of 488,620 *l.* by Mr. Pownall in January 1866, as the cost of acquiring certain property near Carey-street, *App*, 179——Items comprising Mr. Pownall's estimate of 667,120 *l.*, made in July 1868, *ib.* 180.

Memorandum by Mr. Foster, dated 23rd October 1868, relative to the cost of the New Law Courts, the means proposed for defraying the same, and the effect as regards the Exchequer, *App.* 181, 182.

2. *Estimated Return from Sale of Carey-street Site:*

Statement that certain persons are prepared to buy the Carey-street site at an ultimate rent equivalent to 3½ per cent. upon 780,000 *l.*, *Hunt* 1314, 1315. 1364–1367. 1480.

Concurrence in Mr. Pownall's estimate of a loss of 436,000 *l.* on the sale of the Carey-street site; limited faith placed in an offer by some company to pay a rental equal to three per cent. on the cost, *Hardwick* 2123–2125. 2172–2183. 2212–2219. 2230–2239. 2258–2266. 2275–2280. 2290–2294. 2380–2400.

Concurrence in Mr. Pownall's estimate of 18,216 *l.* as the ground rent which the Carey-street site would realise, *Oakley* 2847, 2848——Grounds for the conclusion that the value of the fee of the Carey-street site cannot be taken at more than 364,000 *l.*, or twenty years' purchase of the ground rents; dissent from Mr. Hunt's estimates on the subject, *ib.* 2847–2864. 2870–2889——Opinion that it would take fourteen years to cover the whole of the Carey-street ground with houses, or a mean of seven years, *ib.* 2851–2859. 2870.

Calculation that the Carey-street site, which has cost about 760,000 *l.*, would realise only 364,320 *l.*, *Pownall* 3054–3056. 3092–3097——Opinion as to a return of three per cent. upon the cost of the Carey-street site being a high rent, *ib.* 3057–3059——Increased amount to be realised by the Carey-street site if the Law Courts were erected on the Howard-street side; further question hereon as to its saleable value, if let out at ground rents at three per cent., 3069–3072. 3092–3096. 3100–3105. 3120–3130. 3183, 3184.

3. *Howard-street Site:*

Opinion that an extra million would be better spent in buying the property north of Howard-street than on the Carey-street site, *Hunt* 1303, 1304——Estimate of 600,000 *l.* as the net cost of the property required on the Howard-street site; this is somewhat less

Report, 1869—*continued.*

Cost—continued.

3. *Howard-street Site*—continued.

than Mr. Pownall's estimate, *Hunt* 1334–1339. 1344–1347——Omission from witness's estimate of the cost of widening Essex-street (150,000 *l.*), *ib.* 1345. 1369–1371——Omission of contingent expenses from witness's estimate of the cost of the Howard-street site, *ib.* 1384–1391.

Opinion that the purchase of the Embankment site and the re-sale of the Carey-street site must involve a considerable loss to the country; details in support of this conclusion, *Hardwick* 2122–2130. 2169–2183. 2212–2219. 2230–2243. 2258–2266. 2386–2400——Large addition to be made to the cost of transfer of site by reason of the loss of interest for several years on the purchase-money of the Carey-street site, *Young* 2707–2710.

Estimate of 637,494 *l.* as the purchase-money required for the Howard-street site, including all claims for compensation, *Oakley* 2841–2845.

Estimate of 812,415 *l.* as the cost of the required site, inclusive of the property on the east side of Essex-street to the Strand, *Pownall* 3052——Explanation that there is no material difference between the estimate of Mr. Hunt and of witness, *ib.* 3064–3068——Addition to be made for contingent expenses to witness's estimate of 812,000 *l.*, *ib.* 3086, 3087.

4. *Cost of Buildings:*

Estimate of 900,000 *l.* as the cost of the building on the Howard-street site, including the foundations, *Street* 685–687. 733–735——About equal cost of the Carey-street reduced plan, and of the Howard-street plan, *ib.* 716–718——Question considered whether the cost of building on the Howard-street site would not be much enhanced by the incline, *ib.* 825–833—— Estimate of 800,000 *l.* as the cost of the building on either site, *Hunt* 1258–1260.

5. *Exception taken by Lord Romilly to the proposed Expenditure:*

Witness is strongly of opinion that no new courts are wanted at all, and that a wasteful expenditure will be incurred if extensive courts are erected before it is known whether they will all be required, *Lord Romily* 2759–2766——Inexpediency of the proposed tax upon law proceedings as a means of defraying the cost of courts which may not be required, *ib.* 2761.

6. *Conclusion of the Committee favourable to the Carey-street Site on the score of Cost;*

Equal expense of acquiring the Howard-street site, and widening Essex-street, as that already laid out on the Carey-street site, *Rep.* v——Very heavy loss if the Carey-street site be abandoned, *ib.*

See also *Carey-street Site. Compensation. Essex-street. Extension of Site and Building. Foundations. Materials for Buildings. Probate Duty. Suitors. Treasurer, The.*

Country Solicitors. See *Agency Solicitors.*

Courts and Judges' Rooms. Approval of the proposal for placing the courts and the judges' rooms upstairs, *Field* 171. 173. 310, 311——Advantage of placing the courts on the first floor instead of the ground floor, *Street* 666. 887——Total of eighteen courts to be built on the same level, the rooms in connection with each court being all arranged alike, *ib.* 683, 684——Explanation relative to the level adopted in witness's plan for the courts and judges' rooms on the Carey-street site, *ib.* 792–798.

Covent Garden. Want of facilities as regards the traffic through Covent Garden to a building on the Carey-street site, *Cole* 1862. 1866.

D.

Danes' Inn. Reference to a proposal for the purchase of Danes' Inn, with a view to making a give-and-take arrangement with Clement's Inn, *Street* 1143–1145; *Pownall* 3138, 3139. 3182.

Delay. Delay in the erection of the courts if the Bill now before Parliament be not passed in the present Session, *Hunt* 1499–1503——Importance attached by the legal profession to the avoidance of delay in the erection of the new courts, *Sir R. Palmer* 2416. 2418——Question as to the time required to clear the Howard-street site, about three years having been occupied in acquiring possession of the Carey-street site, *Pownall* 3106–3117.

Conclusion of the Committee that no further delay should be incurred, and that the courts and offices be erected on the Carey-street site, *Rep.* v.

Report, 1869—*continued.*

Denman, The Hon. George, Q.C. (Analysis of his Evidence.)—Opinion as to the Carey-street site being much more convenient than the Embankment site to the legal profession, and through the profession to the public, 2526–2528——Statement showing that to witness and other common law barristers having chambers in certain parts of the Temple the Carey-street site is the more convenient, 2527–2532. 2534. 2549, 2550——Great importance of the courts being in close proximity to the chambers of counsel, 2528. 2534——Equal advantage of the Carey-street site if the business of the Home Circuit be transacted in the new courts, 2528.

Very serious inconvenience to the profession in Lincoln's Inn if the Embankment site be adopted, 2533——Opinion that the proximity of gardens and of the river to the Embankment site is not an important element in the case, 2535–2537——Facilities contemplated as regards the construction of a bridge across the Strand, the widening of Essex-street, &c., 2538, 2539——Doubt as to the Carey-street site being largely used as offices for the profession if the other site be adopted; nor would it be to the advantage of suitors that expensive offices should be built on such site, 2540, 2541.

Explanation on the subject of petitions from the Inner and Middle Temple in favour of the Embankment site; increased value of chambers in the Temple if such site be adopted, 2542–2548. 2555–2558——Deceptive character of certain statistics purporting to show that the Embankment site is more convenient for the profession in the Temple, in the City, &c., 2549–2554——Unfair advantage to common law barristers in the Temple over those in Lincoln's Inn if the courts be concentrated on the Embankment site, 2559.

Draft Reports. Draft Report proposed by the Chancellor of the Exchequer, *Rep.* viii–xi——Draft Report proposed by Mr. Goldney, *ib.* xi–xiv——Adoption of the latter, subject to some amendments, *ib.* xiv, xv.

Du Cane, Mr. Mention of Mr. Du Cane, of Gray's Inn, as being favourable to the Embankment site, *Robertson* 1923–1925. 1955–1959.

E.

Elevation (*Level of Sites*). Exception taken to the objection that the Howard-street site is "down in a hole"; the descent from the Strand is not in fact a serious objection, *Street* 662——Difference of twenty-two feet between the level of the two sites, *ib.* 663–665. 667——Opinion that notwithstanding the greater altitude of the Carey-street site it is not so desirable as the Embankment site; importance of the altitude of the site of St. Paul's adverted to hereon, *ib.* 1154–1163. 1207, 1208.

Importance of the much higher elevation of a building on the Carey-street site, *Hardwick* 2133. 2267, 2268——Better elevation of the Carey-street site, the ventilation and light being consequently better, *Young* 2636——Objection to the Howard-street site as being down in a hole, *ib.*——Advantage of the courts being on a plateau or an elevation instead of on low ground by the river side, *Pownall* 3141. 3156–3159.

See also *Architectural Effect.*

Embankment Site. See *Howard-street Site.*

Equity Courts. Objections to the proposition for keeping the equity courts in Lincoln's Inn Fields, it being very important that the courts of law and equity should be embraced in the same building, *Field* 225–236. 315–327——Obstacles to the erection of the courts inside Lincoln's-Inn Fields, *ib.* 323–327.

Advantage of a concentration of the courts in proximity to the offices of the equity practitioners and conveyancers, *Baxter* 1770–1776——Immense advantage of the equity courts being close to the chambers of the equity barristers in Lincoln's Inn, &c., the common law barristers in the Temple not being in a position to realise the benefit of concentration, *Sir R. Palmer* 2474–2480. 2503–2510. 2522–2525.

Dissent from the proposal of the benchers of Lincoln's Inn for retaining the equity courts in Lincoln's Inn, unless certain facilities can be obtained for securing the great object of concentration generally, *Sir R. Palmer* 2489–2497——Reference to the scheme of the Society of Lincoln's Inn for the erection of equity courts; its non-adoption by the Royal Commission of 1859–60, *Young* 2567.

As regards Chancery proceedings, the Carey-street site offers far better facilities than the Embankment site to the judges, barristers, and solicitors, *Lord Romilly* 2756–2758. 2761. 2766, 2767——Witness, who is engaged chiefly as an equity draftsman, shows that it is a matter of primary importance that his offices and the court should be in proximity, *Hall* 2815–2824——Submits that as regards equity draftsmen generally, the Carey-street site is far more convenient than the Howard-street site; witness in fact, would be greatly injured by the erection of the courts on the latter site, *ib.* 2816–2824.

Report, 1869—*continued.*

Equity Courts—continued.

2834, 2835——Serious inconvenience to witness if the Roll's Court were removed further from his offices, *Hall* 2827–2829.

Serious detriment to the public and to the legal profession, by placing the Equity Courts on the Embankment site, *Rep.* iv.

See also *Concentration of Courts.* *Cost*, 5.

Essex-street. Expediency of taking both sides of Essex-street, *Street* 653–655. 730–732. 744–751——Importance of improving Essex-street, even if the courts be erected on the Carey-street site, *ib.* 786, 787——Dissent from the view that the traffic along Essex-street would interfere with the quiet of the Howard-street site, *ib.* 851–855——Probability of the widening of Essex-street, and of other river-side improvements, even though the courts be placed on the Carey-street site, *ib.* 1164–1168——Prospect in any case of the widening of Essex-street, without any expense to Parliament, *ib.* 1200–1203.

Importance attached to the widening of Essex-street, this improvemeet being one which should fairly be charged against the Howard-street site, if adopted, *Hunt* 1306–1313. 1369–1374. 1431–1438——Circumstance of witness having omitted the widening of Essex-street (estimated at 150,000 *l.*) from his estimate of the cost of the Howard-street site, *ib*, 1345. 1369–1371——Objectionable character of the river-side buildings near the end of Essex-street, *ib.* 1359–1363.

Facility as regards chambers, by having an arcade on the west side of Essex-street *Vallance* 2072–2074——Absence of inconvenience in respect of the gradient of Essex-street, *ib.* 2075–2078——Inadequacy of the approaches to the Howard-street site, unless the cost of widening Essex-street be incurred, *Hardwick* 2252–2255. 2367–2372. 2380——Necessity of widening Essex-street if the Embankment site be adopted, *Young* 2632.

Estimate of 162,000 *l.* as the cost of widening Essex-street, and of the other approaches required if the courts be placed on the Howard-street site, *Oakley* 2865–2869——Very bad gradient of Essex-street, *Pownall* 3073, 3074——Expediency of the widening of Essex-street, whichever site be adopted, *ib.* 3145, 3146.

See also *Access* (*Approaches*) 2.

Extension of Site and Building. Enormous outlay required if it were necessary at any future time to purchase the property between Howard-street and the Strand, supposing the law courts to be placed on the Embankment site, *Street* 950–954——Necessity of any future extension on the Howard-street site involving the removal of King's College, or of the houses north of Howard-street, *ib.* 1198, 1199.

Estimate of one million as the value of the land between Howard-street and the Strand; advantage of this high value in so far as it may tend to prevent pressure upon Government for an extension of the courts, *Hunt* 1298–1303. 1439——Greater outlay in purchasing for extensions north of Howard-street than in the Clare Market district, *ib.* 1439–1442.

Greater expense of future extension on the Howard-street site than on the Carey-street site, *Hardwick* 2128——Facilities for extension of the Carey-street site, as compared with the cost of extension at Howard-street, *Young* 2637–2640. 2644–2646.

Less cost in providing additional accommodation in the neighbourhood of the Carey-street site than of Howard-street, *Rep* v.

See also *Access* (*Approaches.*) *Carey-street Site*, 1. 2.

F.

Fetter-lane. Inconvenience of the accesses by way of Fetter-lane and Chancery-lane to the Carey-street site, *Street* 932.

Field, Edwin Wilkins. (Analysis of his Evidence)—Is secretary to the Royal Commission of 1865 upon the New Law Courts, the Commission being still sitting, 1–3——Preparation by the Commission of a draft report in 1867; reasons for its not having been presented, 4, 5. 107, 108——Examination of four or five witnesses by the Commission before giving a certificate that the site would cost 750,000 *l.* and the buildings 750,000 *l.*, 6. 24–38. 51–53——Several matters upon which the Commission were instructed to report; the Carey-street site had been already decided upon, and the Commission were to consider how the buildings should best be arranged upon it, 7–22. 24.

Conclusion arrived at by the Commission as to the insufficiency of the original site of 7½ acres in the event of an appellate court and other buildings not at first contemplated being erected, 16–22——Inconvenient shape of the Carey-street site, 20. 22, 23——Statement that the certificate given by uhe Commission did not include any expenditure or estimate for accesses or approaches, 25. 35. 53–59.

Explanation

Report, 1869—*continued.*

Field, Edwin Wilkins. (Analysis of his Evidence)—*continued.*

Explanation relative to some plans prepared by Mr. Abraham and Mr. Pennethorne and produced before the Commission; payment made for these by the Treasury, 29. 34, 35. 39-45——Resignation of Mr. Waterhouse, as architectural clerk to the Commission, inasmuch as the office debarred him from competing, 46, 47——Qualifications of Mr. Burnet as architectural clerk, 48-50.

Examination as to the part taken respectively by the Commission, the Treasury, and the Office of Works on the subject of the purchase of additional land; prominent action of Mr. Childers in the matter on the part of the Treasury, 62-71. 79 *et seq.* 187-194——Information relative to the preparation of the instructions for the architects who were to compete for plans and elevations, 72-78——Large increase of accommodation contemplated by the Commission beyond the original scheme of the Government, and in excess of the expenditure first estimated for the site and buildings, 79-85. 187-190——Question considered as to its having been upon the advice of the Commission that the Treasury were induced to apply to Parliament for sanction of an increased purchase of land, 86-112.

Doubt as to the necessity of clearing away numerous houses around the Carey-street site for the purposes of light, air, and approaches, 113-118——Belief that the want of easy access to the courts by the public in general is altogether a delusion, 119, 120. 155, 156. 185. 197. 223. 292——Conclusion as to the adequacy of the present approaches to the Carey-street site, very little carriage access being required by the legal profession using the courts, 121-152. 197, 295-297——Inconvenience of the approach along the Strand to the Howard-street site if many cabs went there, 153-155.

Consideration of the modifications made in Mr. Street's plan by Mr. Burnet, several courts having been abandoned and other alterations made in order to apply the quadrilateral arrangements of Mr. Street to the Carey-street site, 157-174——Approval of the proposal for placing the courts and the judges' rooms upstairs, 171. 173.

Map in course of preparation by Mr. Burnet showing where all the legal profession in London is located; importance of this map with reference to the question of access to the Law Courts, 172. 174-176. 185, 186——Explanation on the subject of the inaccuracy of a former map prepared by Mr. Burnet, and circulated by the Law Institution, professing to show where the legal profession were located, 172. 177-186.——Increased difficulty of access from the north to the Howard-street site as compared with the Carey-street site; necessity of crossing the Strand in the former case, 195-197, 293. 362-369.

Explanation of the present views of the Royal Commission as to the omission of certain courts and the reduction of the original plan; the Commission have not decided to omit any courts, and advocate the erection of all the courts and offices contemplated by the Act of 1845; 198-204——Majority of nine to three at a recent meeting of the Commission against a substitution of the Howard-street site for the Carey-street site, 200-203——Opinion that all the courts and offices contemplated in the original plan can be erected on the Carey-street site, 205. 247-255. 266-273.

Careful consideration on the part of Mr. Abraham in preparing the plan submitted to the Commission; deficiency of the plan in some respects, 206, 207——Great care and long time devoted by the Commissson to the question of the buildings and their arrangement; composition of the sub-committees on the subject, 208-211. 355. 356——Due consideration given by the Commission to the mode of taxing the suitors for the concentration of the courts, 212-216——Conclusion of the Commissioners that the suitors would be great gainers in a pecuniary sense, inasmuch as the work would be more expeditiously and better done, 214, 215.

Advantage of increased facilities of access to Lincoln's-Inn Fields, this however being a matter for which the suitors should not pay, 217-219. 280-292——Exceptions taken to the view that the facilities of access to the Howard-street site by the Embankment and railway offer peculiar advantage to suitors and to the profession, 220-223——Advantage of the Howard-street site on the score of light and air, 224.

Evidence in support of the conclusion that it is most essential that the chambers of counsel and solicitors should be as near as possible to the courts; great advantage thereby to suitors, 224. 306-314. 331-342. 370-402. 409, 410——Objections to the proposition for keeping the Equity Courts in Lincolns-Inn Fields, it being very important that the courts of law and equity should be embraced in the same building, 225-236 315-327

Advantage of power to utilise the Rolls estate in connection with courts on the Carey-street site, 237-241——Abandonment of towers for the reception of wills, as proposed by the original plan, 242-246——Question considered as to the authority by which the Commission took upon themselves to condemn the Howard-street site; opinion that this was *ultra vires* on their part, 256-265, 291-303——Statement to the effect that more land need not be purchased in order to place the courts on the Carey-street site, but that such purchase is extreemly desirable and would be a profitable investment, 266-279. 305. 406-408.

Report, 1869—*continued.*

Field, Edwin Wilkins. (Analysis of his Evidence)—*continued.*

Appointment of the Commission adverted to as having had reference to the Carey-street site exclusively, 298–303——Decided superiority of the Carey-street site, 304——Detriment to the law by the adoption of the Howard-street site, and by placing the courts away from the chambers of the solicitors and counsel, 306–314——Approval of the courts being upstairs, 310, 311——Obstacles to the erection of the courts inside Lincoln's-Inn Fields, 323–327.

Further statement as to the Treasury having taken the initiative in the matter of the acquisition of additional land, 328–330—— Expediency of the convenience of the suitors being the first consideration, 331–333——Opinion that a receptacle for wills is not required near the courts, 352——Approval of the Inclosure Commission being accommodated near the courts, 353, 354——Appointment of Mr. Burnet further adverted to; his efficiency, 357–361.

Inexpediency of recognising the convenience of the public as distinct from that of the suitors, the latter alone requiring to be considered, 403–405——Respects in which access across the Strand would be more inconvenient as regards the Howard-street site than the Carey-street site; much larger risk in the former case, 411–416.

[Second Examination.] Further reference to the witnesses upon whose evidence the certificate was given by the Commission, 417—— Production by witness of several copies of the draft report of the Commission, the proof having been printed in June 1867; 418, 419—— Preparation by witness of a short statement showing the changes made or recommended by the Commission in the original Parliamentary scheme, 419, 420.

Reference to certain estimates by Mr. Pownall of the cost of the Great Turnstile improvements, the lowest being 91,000 *l.*; 420–434——Varied and extensive professional experience of witness, so that he should be well qualified to give an opinion as to the best site for the Law Courts, 425——Minute submitted by witness to the Treasury before the issue of the instructions to the architects, 425, 426——Impartial and valuable authorities in 1841 and 1842 in favour of the Carey-street site, 427–429.

Disadvantage of the Howard-street site on the score of river fogs, 429–431——Much more frequent daily attendance of lawyers and their clerks at the courts than of suitors or the public, 431——Importance of the suits being shortened, not only on the score of expense, but in reference to the suspense and misery of the suitors, *ib.*——Expectation when the book of instructions was issued, that the expense mentioned in the Act of Parliament might be exceeded, *ib.*——Numerous telegrams received at solicitors' offices during the day, thus rendering it very important that their offices should be as near as possible to the courts, 431, 432.

Fogs. Disadvantage of the Howard-street site on the score of river fogs, *Field* 429–431——Inaccuracy of the statement that fogs are especially to be feared on the Embankment site, *Vallance* 2064, 2065.

Foundations. Explanation relative to the foundations on the Embankment site, it being proposed to carry them to a depth of twenty-five feet below the level of the roadway, *Street* 671–674——Belief that it would not be necessary to take the foundations down to the clay, nor to use a coffer dam, *ib.* 811–814. 889—— Doubt as to difficulty having been experienced in laying the foundations of the Middle Temple Library, *ib.* 834–836——Further consideration of the question of foundations; limited disadvantage of the Howard-street site on this score, *ib.* 1084–1094.

Larger outlay allowed for foundations on the Howard-street site; particulars hereon, *Hunt* 1260. 1323–1327. 1448–1451——Misapprehension existing on the subject of the foundations of a building on the Embankment site; absence of difficulty in the matter, *Fowler* 1517. 1519–1521. 1546, 1547.

Probable necessity of going to a depth of from twenty to thirty feet, and of largely using concrete if the Embankment site be adopted, *Hardwick* 2271–2274——Statement that since the completion of the Thames Embankment the water has frequently come into the foundations and basement of the premises of witness's firm at the bottom of Milford-lane, *Kinder* 2746–2756.

Fowler, John. (Analysis of his Evidence.)—Is Engineer of the Metropolitan District Railway, 1509——Consultation of witness with Mr. Street and the Office of Works relative to the railway station near Norfolk-street, the result being that the station may be made compatible with the Law Courts if erected on the Embankment site, 1510–1513——Peculiar facilities of access by way of the river, the Embankment, and the railway to the Law Courts, if erected on the Howard-street site, 1514–1516. 1526–1530.

Misapprehension existing on the subject of the foundation of a building on the Embankment site; absence of difficulty in the matter, 1517. 1519–1521. 1546, 1547—— Grounds for concluding also that no danger or inconvenience would be caused by any vibration from the railway, 1518. 1523–1525. 1548–1551——Explanation relative to the means

Report, 1869—*continued.*

Fowler, John. (Analysis of his Evidence)—*continued.*

means of access from the railway to the Strand by Norfolk-street, Surrey-street, and Arundel-street; advantage on the other hand of widening and extending Essex-street, as affording an improved access, 1526–1530. 1534–1543.

Difficulty in which the railway company will be placed as to the Norfolk-street station, unless it be decided in the present Session whether the Law Courts will be placed on the Embankment site, 1531–1533. 1544, 1545——Power of shifting the station from Norfolk-street to the space between the Temple Pier and the Temple Library 1552.

Freshfield, Henry Ray. (Analysis of his Evidence.)—Is Solicitor to the Bank of England 1553, 1554——Submits that for City solicitors the Embankment site is far more easy of access than the Carey-street site, 1556–1565. 1572–1577. 1628–1650——Several leading firms in the City favourable to the Embankment site, 1558–1560. 1566——Very little difference to solicitors from the north in having to go on to the Embankment site instead of to the Carey-street site, 1565. 1569–1571. 1578, 1579.

Consideration of the circumstance of a large number of City solicitors having signed a petition promoted by the Incorporated Law Society in favour of the Carey-street site; belief that in so signing they had not before them the relative merits of the two sites, 1566–1568. 1588–1603. 1651–1653——Doubt as to the number of agency solicitors favourable to the Embankment site, 1583–1591——Importance of the legal profession being in close proximity to the Courts, easy access being also desirable for clients and for witnesses and jurors, 1604–1627——Less facility of access from the City to the Carey-street site by way of the Holborn Viaduct, than to the Embankment site by way of Mansion House-street, 1630–1650.

G.

Galleries (*Central Hall*). Doubt as to the advantage of galleries round the central hall for the purposes of libraries, *Street* 1191–1196.

Goldney, Mr. (*Member of Committee*). Draft Report proposed by Mr. Goldney, *Rep.* xi. xiv. ——Adoption by the Committee of the foregoing, subject to some amendments, *ib.* xiv, xv.

Gray's Inn. Approval of the Carey-street site by the solicitors in Gray's Inn, the Benchers not having indicated any preference, *Young* 2685–2688.

Great Turnstile Improvements. Reference to certain estimates by Mr. Pownall of the cost of the Great Turnstile Improvements, the lowest being 91,000 *l.*, *Field* 420–424.

Estimates prepared by Mr. Pownall, in February 1867, as to the cost of property required for improvements at Great Turnstile, &c., *App.* 179.

See also *Access* (*Approaches*), 3.

Guildhall. Inconvenience of concentration to the City public and solicitors, as involving the removing of trials from Guildhall, *Baxter* 1714–1717.

H.

Hall, Charles. (Analysis of his Evidence.)—Is a Chancery barrister, having chambers in Stone-buildings, Lincoln's Inn, 2813, 2814——Is engaged chiefly as an equity draftsman, and shows that it is a matter of primary importance that his offices and the court should be in proximity, 2815–2824——Submits that as regards equity draftsment generally, the Carey-street site is far more convenient than the Howard-sreet site; witness, in fact, would be greatly injured by the erection of the courts on the latter site, 2816–2824. 2834, 2835.

Still greater importance to conveyancers than to equity draftsmen to be close to the courts, 2825, 2826——Serious inconvenience to witness if the Rolls Court were removed further from his offices, 2827–2829——Advantage to suitors as well as to counsel and solicitors, by the latter having quick access to the courts, 2830, 2831——Doubt whether a system of telegraphs could be usefully worked between the Inns of Court and the Law Court, 2836–2838——Grievous injury to individuals, on the score of re-investment, by the compulsory removal of the large mass of house property now occupying the Howard-street site, 2838.

Hardwick, Philip Charles. (Analysis of his Evidence.)—Is architect of the Law Institution; has paid considerable attention to the question of the site of the New Law Courts, 2104–2108——Conclusion as to the necessity of certain improved and general approaches, whichever site be adopted, 2109. 2373–2380——Importance in either case of widening

Report, 1869—*continued.*

Hardwick, Philip Charles—(Analysis of his Evidence)—*continued.*

Essex-street, and of making an improved approach, *viâ* Serle-street to Holborn, 2109. 2145–2151. 2184. 2250–2255. 2334–2336. 2367–2380——Necessity also of removing Holywell-street, whether the Carey-street site or Embankment site be selected; low character of the houses adverted to, 2109. 2168. 2317–2319. 2343–2352. 2402–2409.

Sufficiency of the improved approaches contemplated by Mr. Street in immediate connection with either site, 2109——Very little carriage traffic to be provided for, especially if the Carey-street site be adopted, 2109–2111. 2152–2154——Assumption that the larger solicitors' offices are in a great majority to the north of the Strand, and that on this score the inconvenience of crossing the Strand would be especially great if the courts be placed to the south, 2111, 2112. 2155–2157. 2298–2300——Objection as regards the general public passing from the Embankment railway station through the courts if placed in Howard-street, 2112–2114. 2185–2188.

Grounds for the conclusion that on the score of light, air, and ventilation one site is as good as the other, 2114–2122. 2205–2211. 2228, 2229. 2269, 2270. 2301–2305——Opinion that the purchase of the Embankment site and the re-sale of the Carey-street site must involve a considerable loss to the country; details in support of this conclusion, 2122–2130. 2169–2183. 2212–2219. 2230–2243. 2258–2266. 2386–2400——Concurrence in Mr. Pownall's estimate of a loss of 436,000 *l.* on the sale of the Carey-street site; limited faith placed in an offer by some company to pay a rental equal to 3 per cent. on the cost, 2123–2125. 2172–2183. 2212–2219. 2230–2239. 2258–2266. 2275–2280. 2290–2294. 2386–2400.

Evidence in detail in support of the conclusion that each site has about equal advantages on the score of architectural effect; denial that the Embankment site possesses on the whole any superiority in this respect, witness believing rather that the Carey-street site would be the more effective of the two, 2131–2136. 2189–2196. 2207. 2244–2247. 2256, 2257. 2267, 2268. 2281–2289. 2295–2297. 2309–2313. 2320–2326. 2337–2342. 2383–2385.

Doubt as to the necessity of clearing away surrounding buildings in Pickett-street, Yeates-court, &c., if the court be placed on the Carey-street site, 2137–2144. 2353–2366. 2400, 2401——Question whether as regards facilities of access the Howard-street site is superior to the Carey-street site; advantage in the latter case of the approach by the Strand, 2158–2168. 2220–2227——Statement that witness has not taken into consideration the facility of landing materials from the river for the construction of a building on the Embankment site, 2197–2200——Advantage of a communication from Bell-yard to Chancery-lane to the south of the Law Institution, 2201–2204——Credit from the sale of the Government property in Great Knightrider-street site, if the Probate Courts be placed on the Carey-street site, 2240–2243.

Opinion as to the sufficiency of the site of 7½ acres in Carey-street for the erection of the required building, 2248, 2249. 2306–2308——Inadequacy of the approaches to the Howard-street site unless the cost of widening Essex-street be incurred, 2252–2255. 2367–2372–2380——Probable necessity of going to a depth of from twenty to thirty feet, and of largely using concrete, if the Embankment site be adopted, 2271–2274.

Doubt as to inconvenience arising in respect of the proximity of the Law Society's buildings in Bell-yard, if the courts be placed on the Carey-street site, 2327–2336——Opinion that it would not be necessary to widen Carey-street, 2374. 2381, 2382——Limited obstruction caused by St. Clement Danes' Church as regards a building on the Carey-street site, 2383, 2384. 2411——Expediency of removing the churchyards of the churches in the Strand, in addition to the removal of Holywell-street, 2410.

Hare Court. Belief that for barristers in Hare-court the Carey-street site would be the more convenient, *Honourable G. Denman* 2529.

Holborn. See *Access* (*Approaches*), 3.

Holywell-street. Necessity of removing Holywell-street, whether the Carey-street site or Embankment site be selected; low character of the houses adverted to, *Hardwick* 2109. 2168. 2317–2319. 2343–2352. 2402–2409——Very fine view of a building on the Carey-street site by removing the Holywell-street houses, *ib.* 2402–2405——Importance in any case of the removal of the Holywell-street block, *Pownall* 3142–3144.

Home Circuit. Doubt as to any superior facilities of the Embankment site if the Home Circuit be brought to London, *Sir R. Palmer* 2455–2463. 2484–2486——Equal advantage of the Carey-street site if the business of the Home Circuit be transacted in the New Courts, *Honourable G. Denman* 2528.

Howard-street Site:

Detriment to the law by the adoption of the Howard-street site, and by placing the courts away from the chamber of the solicitors and counsel, *Field* 306–314.

Description of the Howard-street site, as proposed by witness; suggestion that both sides of Essex-street be taken as well as the houses from Howard-street to the Strand *Street* 615–623——Total of four acres and three rods embraced in the site proposed by witness,

Report, 1869—*continued.*

HOWARD-STREET SITE—continued.

witness, *Street* 624–627——Boundaries of the site adverted to; opinion that the site is fact an admirable one for a public building, *ib.* 628–633. 657, 658.

Exceedingly objectionable buildings likely to be erected on the Embankment if it be not utilised by Government; prospect of a railway station there, *Street* 761–766. 769——Statement as regards certain objections by witness in February last to a site on the Embankment, that the scheme then objected to was altogether different from the present, *ib.* 807–809. 825–833——Exception taken to the view that the conformation of the ground is peculiarly unfavourable in the case of Howard-street, *ib.* 1101–1109——Conclusion that the purchase of certain houses north of Howard-street may be taken as settled, *ib.* 1110–1113.

Preference on the whole for the Embankment site; more especially unless proper approaches are made to the Carey-street site, *Cole* 1856–1867. 1884.

Plan suggested for the Embankment site in lieu of that proposed by Mr. Street; increased cost of witness's scheme, which involves the removal of the building more to the east, so as to leave a street fifty feet wide to the west, and involves also the acquisition of more land to the north, *Pownall* 3076–3083——Difficulty as to the levels of the ground near Howard-street, this however being an obstacle which Mr. Street would readily overcome, *ib.* 3152–3155.

Origin of the proposal to build the courts on the Howard-street site, adverted to by the Committee, *Rep.* iii, iv——Conclusion as to the relative disadvantage on the whole of the Howard-street site, so that it would be wise to abandon it, *ib.* iv, v.

Hunt, The Right Honourable George Ward. (Analysis of his Evidence).—Explanatory statement to the effect that the financial scheme of the Courts of Justice Commission in July 1868 was not endorsed by the late Government or the late Board of Treasury, 3045–3047.

Hunt, Henry Arthur. (Analysis of his Evidence.)—Has had considerable experience as a surveyor and valuer; is a member of the Law Courts Commission, 1221–1224——Estimate by witness in 1861, and again in 1864, that the probable cost of the Carey-street site would be 750,000 *l.*, and the probable cost of the building 750,000 *l.*, 1225–1229——Objection made by witness, as one of the Commission, to the appointment of an architectural clerk, 1231, 1232——Statement by witness to the Commission that it would be necessary, for the sake of ventilation and approaches, to acquire much more land than was represented by the estimate of 750,000 *l.*, 1233, 1234.

Necessity, if the Carey-street site be adopted, of acquiring at least the additional land shown on the deposited plan of 1868, and estimated by Mr. Pownall to cost 608,000 *l.*; concurred in this estimate, 1235–1241——Further cost of 60,000 *l.* if it be decided to build a bridge across the Strand from Thanet-place, 1235–1238——Belief that not only the above property represented by the estimate of 608,000 *l.*, but other property, which witness estimates at 400,000 *l.*, must be acquired for purposes of ventilation, approaches, &c.; a further expenditure of at least a million sterling is in fact necessary, in order to make the Carey-street site properly available for the New Law Courts, 1241–1257. 1267–1282. 1411. 1504–1508.

Importance of removing the south side of New Square; this is not included in witness's estimate of a million for additional lands, 1250, 1251. 1398–1410. 1460——Estimate of 800,000 *l.* as the cost of the building on either site, 1258–1260. 1305——Larger area required to be built over on the Carey-street site, 1258–1260——Larger outlay allowed for foundations on the Howard-street site; particulars hereon, 1260. 1323–1327. 1448–1451——Accuracy, generally, of witness's estimates for Government, 1261–1263. 1339.

Opinion that after the additional clearances contemplated by witness the Carey-street site will still be inferior to the Howard-street site on the score of air, light, and ventilation, 1264–1266. 1281, 1282. 1413–1418. 1489–1495——Grounds for concluding also that the approaches, notwithstanding the several improvements contemplated by witness, will be inferior to the approaches to the Howard-street site, 1267–1280. 1283–1286. 1293, 1294. 1353, 1354. 1372–1383. 1469–1476.

Excellent facilities of access to a building on the Howard-street site, 1283–1286. 1291–1294——Conclusion that no nuisance need be apprehended from the railway, 1287–1290——Much better surroundings of the Howard-street site than of the Carey-street site; advantage in the former state as regards light, air, and ventilation, 1295–1297——Estimate of one million as the value of the land between Howard-street and the Strand; advantage of this high value in so far as it may tend to prevent pressure upon Government for an extension of the courts, 1298–1303. 1439——Opinion that an extra million

Report, 1869—*continued.*

Hunt, Henry Arthur. (Analysis of his Evidence)—*continued.*

would be better spent in buying the property north of Howard-street than on the Carey-street site, 1303, 1304.

Importance attached to the widening of Essex-street, this improvement being one which should fairly be charged against the Howard-street site, if adopted, 1306–1313. 1369–1374. 1431–1438——Statement that certain persons are prepared to buy the Carey-street site at an ultimate rent equivalent to 3½ per cent. upon 780,000 *l.*, 1314, 1315. 1364–1367. 1480——Valuable street improvements to be carried out as a result of the sale of the Carey-street site for building purposes, 1316–1322.

Improbability of the Metropolitan Board of Works bearing any portion of the outlay of one million required for the improved approaches in connection with the Carey-street site, 1329–1333——Estimate of 600,000 *l.* as the net cost of the property required on the Howard-street site; this is somewhat less than Mr. Pownall's estimate, 1334, 1339. 1344–1347——Dissent from sundry statements in documents issued by the Incorporated Law Society as to the superiority and economy of the Carey-street site, 1340–1352.

Opinion that there will be no surplus land for sale out of the 7½ acres acquired in Carey-street, 1342. 1443–1447——Circumstance of witness having omitted the widening of Essex-street (estimated at 150,000 *l.*) from his estimate of the cost of the Howard-street site, 1345. 1369–1371 —— Good class of houses likely to be erected on the Norfolk estate abutting on the Embankment, 1355–1358——Objectionable character of some of the river-side buildings near the end of Essex-street, 1359–1363——Want of facilities for crossing the Strand whether the courts be on the north or on the south, 1374–1384——Facilities required for the public as well as for the lawyers, 1377–1382.

Omission of contingent expenses from witness's estimate of the cost of the Howard-street site, 1384–1391——Circumstance of the commission not having concurred with witness as to the necessity of additional purchases for the Carey-street site, 1391–1397 —— Dissent from Mr. Street's view that certain land might be re-sold, if the reduced plan is adopted on this site, 1419–1426.

Explanation as to the height, &c. of the houses to be built on portion of the ground to be acquired at Howard-street, 1427–1430——Greater outlay in purchasing for extensions north of Howard-street than in the Clare Market district, 1439–1442——Question as to the period for which witness has been of opinion that the present Carey-street site was not sufficient for the Law Courts, 1452–1468. 1489——Explanation as to witness having purposely excluded claims for compensation from the estimate of the cost of the Howard-street site, 1478, 1479.

Doubt as to the widening of Carey-street to sixty feet being objectionable as attracting more traffic of a noisy character, 1481–1488——Probable sufficiency of the Carey-street site for the mere accommodation of the proposed courts and offices, 1496–1498——Delay in the erection of the courts if the Bill now before Parliament be not passed in the present Session, 1499–1503.

I.

Inclosure Commission. Approval of the Inclosure Commission being accommodated near the courts, *Fields* 353, 354.

Incorporated Law Society. Dissent from sundry statements in documents issued by the Incorporated Law Society as to the superiority and economy of the Carey-street site, *Hunt* 1340–1352—— Circular letter received by witness from the Incorporated Law Society, requesting him to support the movement in favour of the Carey-street site, *Boodle* 1785——Reply to witness to the foregoing, objecting to the course pursued in the matter by the society, *ib.*—— Statement as to witness not having been present at any meetings of the society when the site of the courts was discussed, *ib.* 1786–1797.

Absence of any undue influence on the part of the Incorporated Law Society as regards the signatures to petitions in favour of the Carey-street site, *Sir R. Palmer* 2464, 2465.

Alterations and improvements made by the Incorporated Law Society irrespectively of the courts being placed on the Carey-street site, *Young* 2577–2582——Explanation that the members of the society have no interest whatever on the part of the society in the question of site; as regards pecuniary interest the matter is in fact one of consummate indifference to the society or its members, *ib.* 2582. 2640, 2641 —— Statement in defence of the issue of circulars by the society, asking solicitors to support the Carey-street site; denial that these circulars contained any material mis-statements, *ib.* 2583–2596.

See also *Cook's Court Company. Plans and Maps.*

Inner Temple. Explanation that the Benchers of the Inner Temple have no pecuniary interest in the adoption of the Embankment site, *Cole* 1868——Reference to a special meeting summoned at the Inner Temple for considering the site of the New Law Courts; strong

Report, 1869—*continued.*

Inner Temple—continued.

strong feeling manifested in favour of the Embankment site, *Whitmore* 1982. 1991–1997. 2017–2019. 2052, 2053——Willingness of the Benchers of the Inner Temple to assent to the proposed alteration of the site of the railway station, *ib.* 1985.

Judges' Rooms. See *Courts and Judges' Rooms.*

K.

Kinder, Richard. (Analysis of his Evidence.)—Is partner in the firm of Woodfall and Kinder, carrying on business as printers at the bottom of Milford-lane, 2742–2745——States that since the completion of the Thames Embankment the water has frequently come into the foundations and basement of the premises of the firm, 2746–2755.

King's Bench Walk. For barristers having chambers in King's Bench Walk the Carey-street site would be the more convenient, *Honourable G. Denman* 2527. 2530.

King's College. Narrow roadway proposed between the west of the proposed building on the Howard-street site and King's College, *Street* 819, 820——Alteration necessary as regard the terrace and river front of King's College if the Law Courts be placed in juxtaposition, *ib.* 1215–1217.

L.

Lake, Mr. Reference to the evidence of Mr. Lake before the Law Courts Commission of 1859 in favour of the Carey-street site, *Sir R. Palmer* 2419.

Law Institution. Interference with the light as regards Carey-street through the new storey being added to the Law Institution, *Street* 773–775——Doubt as to any inconvenience arising in respect of the proximity of the Law Society's buildings in Bell-yard if the courts be placed on the Carey-street site, *Hardwick* 2327–2336.

Legal Profession:

1. *Evidence in favour of the Carey-street Site, as most convenient to Barristers and Solicitors generally.*
2. *Evidence favourable on this Score to the Howard-street Site.*
3. *Importance of the Courts being in close Proximity to the Chambers and Offices of the Legal Profession.*
4. *Question as to the Profession removing to the Neighbourhood of the New Courts.*

1. *Evidence in favour of the Carey-street Site, as most convenient to Barristers and Solicitors generally:*

Assumption that the larger solicitors' offices are, in a great majority, to the north of the Strand, and that, on this score, the inconvenience of crossing the Strand would be especially great if the courts be placed to the south, *Hardwick* 2111, 2112. 2155–2157. 2298–2300.

Witness submits that a very great majority of the legal profession in London and in the country are in favour of the Carey-street site; sundry petitions referred to in proof of this conclusion, *Sir R. Palmer* 2412–2419——Large number of solicitors in different districts of the metropolis who have signed petitions in favour of the Carey-street site, as compared with the number of refusals to sign, *ib.* 2414–2416. 2500–2502——Petition in favour of this site signed by 393 barristers, of whom seventy-four had chambers in the Temple, *ib.* 2414. 2416, 2417——Convenience to solicitors from Westminster or the City in being near the chambers of counsel in Lincoln's Inn, when the former come to the courts on the Carey-street site, *ib.* 2516, 2517.

Report, 1869—*continued.*

LEGAL PROFESSION—continued.

1. *Evidence in favour of the Carey-street Site, &c.*—continued.

Opinion as to the Carey-street site being much more convenient than the Embankment site to the legal profession, and through the profession to the public, *Honourable G. Denman* 2526–2528——Deceptive character of certain statistics purporting to show that the Embankment site is more convenient for the profession in the Temple, in the City, &c., *ib.* 2549–2554.

Opinion that for the convenience of the legal profession the Carey-street site is incomparably the best, *Young* 2565——Equal convenience of the Carey-street site as of the Howard-street site to many solicitors in the west end, *ib.* 2566, 2567——Information in connection with a certain plan showing the distribution of the legal profession in London, *ib.* 2616–2627——Conclusion that a very large majority of the whole profession, including country solicitors represented by London agents, are in favour of the Carey-street site, *ib.* 2627.

Grounds for the conclusion that it would on the whole be much more convenient to solicitors and clients that the Law Courts should be on the Carey-street site than on the Howard-street site, *Milne* 2716–2741.

Statistics supplied by Mr. Young, in connection with Law Map of London, and showing the greater convenience of the Carey-street site to the large majority of the legal profession, *App.* 177, 178.

2. *Evidence favourable on this Score to the Howard-street Site:*

Very litttle difference to solicitors from the north in having to go on to the Embankment site instead of the Carey-street site, *Freshfield* 1565. 1569–1571. 1578, 1579——Conclusion that for professional men in Westminster, in the Temple, and in the City, the Embankment site is much the more convenient, *Baxter* 1656. 1676——Considerable majority of solicitors and barristers in those districts to which the Embankment is more convenient, *ib.* 1656. 1667.

Further consideration of the grounds for witness's statement that the majority of the solicitors generally would best be suited by the Howard-street site, *Baxter* 1727–1747——Calculation that the Embankment site would be to the convenience of a considerable majority of the barristers, *ib.* 1776, 1777.

Convenience of the Carey-street site to the Chancery barristers, and of the Embankment to the common law barristers, the number being about equal, *Boodle* 1783. 1803——Majority of solicitors to whom the Embankment site would, according to Mr. Baxter, be more convenient, *ib.* 1783, 1784. 1803——Conclusion as to the Embankment site being the more convenient to the city and west end solicitors, *Cole* 1859. 1869–1872. 1877–1883.

Particulars comprised in certain statement, the result being that there is a considerable majority of solicitors and barristers topographically favourable to the Embankment site——*Robertson* 1917 *et seq.*——For the general body of solicitors in the metropolis the Embankment site would be more convenient, *Vallance* 2061, 2062.

Comparative statement submitted by Mr. Baxter, showing a majority of 282 barristers and 276 solicitors to whom the Embankment site would be most convenient, *App.* 173.

Papers submitted by Mr. Robertson, containing statistics relative to the legal profession, and showing a large majority in districts topographically favourable to the Embankment site, *App.* 174–176.

3. *Importance of the Courts being in close Proximity to the Chambers and Offices of the Legal Profession:*

Evidence in support of the conclusion that it is most essential that the chambers of counsel and solicitors should be as near as possible to the courts; great advantage thereby to suitors, *Field* 224. 306–314. 331–341. 370–402. 409, 410——Much more frequent daily attendance of lawyers and their clerks at the courts, than of suitors or the public, *ib.* 431——Numerous telegrams received at solicitors' offices during the day, this rendering it very important that their offices should be as near as possible to the courts, *ib.* 431, 432.

Importance of the legal profession being in close proximity to the courts; easy access being also desirable for clients and for witnesses and jurors, *Freshfield* 1604–1627——Great importance of the courts being in close proximity to the chambers of counsel, *Honourable G. Denman* 2528. 2534——Advantage to professional men and to suitors when attending the courts, of being near to the offices of the large mass of solicitors north of the Strand, 2651–2654. 2668–2671.

4. *Question as to the Profession removing to the Neighbourhood of the New Courts:*

Expected migration of counsel to the neighbourhood of the courts if placed on the Embankment site, *Freshfield* 1622–1627——Expectation that barristers and solicitors in he Lincoln's Inn district will largely migrate, and will follow the courts, if placed on the

Embankment

Report, 1869—*continued.*

Legal Profession—continued.

4. *Question as to the Profession removing, &c.*—continued.

Embankment site; grounds for this conclusion, *Baxter* 1667. 1670–1675. 1705–1708 1718–1726. 1763–1769.

Obstacle to barristers shifting their chambers and following the courts; convenience on this score of the Carey-street site to barristers in Lincoln's Inn, &c., *Cole* 1859. 1885–1892——Fallacy of the view that the legal profession would remove from Lincoln's Inn, &c., to the neighbourhood of the courts if placed on the Embankment site, *Sir R. Palmer* 2439–2447. 2498. 2511–2514. 2518–2521——Doubt as to the Carey-street site being largely used as offices for the profession if the other site be adopted; nor would it be to the advantage of suitors that expensive offices should be built on such site, *Honourable G. Denman* 2540, 2541.

See also *Access* (*Approaches*). *Agency Solicitors.* *Carey-street Site.* *City Solicitors.* *Common Law Barristers.* *Concentration of Courts.* *Equity Courts.* *Howard-street Site.* *Incorporated Law Society.* *Lincoln's Inn.* *Public, The.* *South London.* *Strand.* *Suitors.* *Temple.*

Library (*Law Institution*). Convenience of the Carey-street site as regards the use of the library of the Law Institution, *Young* 2655-2662.

Light, Air, and Ventilation. Doubt as to the necessity of clearing away numerous houses around the Carey-street site for the purposes of light, air, approaches, *Field* 113–118—— Advantage of the Howard-street site on the score of light and air, *ib.* 224.

Careful consideration given to the question of light and air, and quiet, *Street* 590, 591 ——Advantages of the Howard-street site on the score of light and air, and quiet; its superiority over the Carey-strest site in these respects, *ib.* 633–635. 682. 695–699—— Deficiencies of the Carey-street site on the score of light, air, and ventilation, *ib.* 695–699. 708–715. 719——Facility for lighting the rooms on the river side, no terrace being proposed in front of the buildings, *ib.* 809, 810——Absence of complaint on the score of air, in the case of King's College Hospital or Clement's Inn, *ib.* 1059–1061.

Opinion that after the additional clearances contemplated by witness the Carey-street site will still be inferior to the Howard-street site on the score of air, light, and ventilation, *Hunt* 1264–1266. 1281, 1282. 1413–1418. 1489–1495——Much better surroundings of the Howard-street site than of the Carey-street site; advantage in the former case as regards light, air, and ventilation, *ib.* 1295–1297——Opinion in favour of the Embankment site on the score of light and air, *Boodle* 1782. 1803.

Grounds for the conclusion that on the score of light, air, and ventilation, one site is as good as the other, *Hardwick* 2114–2122. 2205–2211. 2228, 2229. 2269, 2270. 2301–2305——Doubt as to the necessity of clearing away surrounding buildings in Pickett-street, Yates-court, &c., if the courts be placed on the Carey-street site, *ib.* 2137–2144. 2353–2366. 2400, 2401.

Argument as to the fallacy of the presumed superiority of the Howard-street site on the score of light, air, and ventilation, *Young* 2629——Advantage of the river front of the building in this respect, whilst on the three other sides the light, &c. would be exceedingly bad, *ib.*

Lincoln's Inn. Greater convenience of the Carey-street site for Lincoln's Inn and for the Oxford-street and Regent-street district; exceptions to this rule, *Baxter* 1656. 1659–1662——Very little inconvenience to solicitors and barristers in Lincoln's Inn if the Embankment site be adopted, and if the Strand be bridged, *ib.* 1667. 1699–1704.

Grounds for the conclusion that the Embankment site would not entail any great inconvenience to solicitors in the Lincoln's Inn district; these could readily shift their chambers to the proximity of the courts, *Cole* 1859, 1860. 1873–1876. 1889——Instances of barristers in Lincoln's Inn favourable to the Embankment site, *Whitmore* 1982——Admission that for barristers in Lincoln's Inn-fields, &c., the Carey-street site would be more convenient, *Vallance* 2062.

Very serious inconvenience to the profession in Lincoln's Inn if the Embankment site be adopted, *Honourable G. Denman* 2333——Approval of the Carey-street scheme by the authorities of Lincoln's Inn, *Young* 2667. 2684——Much larger amount of business transacted by solicitors in the Lincoln's Inn district than is transacted in any other district, *Milne* 2728–2731.

See also *Access* (*Approaches*). *Equity Courts.* *Legal Profession.*

M.

Materials for Building. Great facility for building on the Embankment site, and of landing materials from the river; this would fully counterbalance any increased expense for foundations, *Street* 673, 674——Difficulty as to the cartage of materials to Carey-street, as compared with Howard-street, *ib.* 736–738——Statement that, in his estimates of cost,

Report, 1869—*continued.*

Materials for Building—continued.

witness has not taken into consideration the facility of landing materials from the river for the construction of a building on the Embankment site, *Hardwick* 2197–2200.

Metropolitan District Railway. See *Railway.*

Middle Temple. See *Temple.*

Milne, Nathaniel Charles. (Analysis of his Evidence.)—Is a member of the Society of the Inner Temple; has practised there for forty years, 2711–2715——Grounds for the conclusion that it would on the whole be much more convenient to solicitors and clients that the Law Courts should be on the Carey-street site than on the Howard-street site, 2716–2741——Much larger amount of business transacted by solicitors in the Lincoln's Inn district than is transacted in any other district, 2728–2731——Facility of access from the Temple to the Carey-street site by means of an underground passage, 2732–2739.

Minor Courts. Objection to so small a width as forty-two feet for the minor courts, *Street* 801–803.

N.

New Square. Importance of removing the south side of New Square, if the Carey-street site be adopted; this is not included in witness's estimate of a million for additional lands, *Hunt* 1250, 1251. 1398–1410. 1460.

Norfolk Estate. Good class of houses likely to be erected on the Norfolk estate abutting on the Embankment, *Hunt* 1355–1358.

Norfolk-street. See *Access* (*Approaches*).

O.

Oakley, John. (Analysis of his Evidence.)—Has had considerable experience as a surveyor and valuer, 2839, 2840—— Estimate of 637,494 *l.* as the purchase-money required for the Howard-street site, including all claims for compensation, 2841–2845——Concurrence in Mr. Pownall's estimate of 18,216 *l.* as the ground rent which the Carey-street site would realise, 2847, 2848——Grounds for the conclusion that the value of the fee of the Carey-street site cannot be taken at more than 364,000 *l.*, or twenty years' purchase of the ground rents; dissent from Mr. Hunt's estimates on this subject, 2847–2864. 2870–2889——Opinion that it would take fourteen years to cover the whole of the Carey-street ground with houses, or a mean of seven years, 2851–2859. 2870—— Estimate of 162,000 *l.* as the cost of widening Essex-street, and of the other approaches required, if the courts be placed on the Howard-street site, 2865-2869.

Offices. Enumeration of offices provided for in witness's plan, *Street* 587——Provision for separating by an internal street the offices from the courts, the latter being contained in a central block, *ib.* 588, 589—— Defence of the arrangements proposed in the Embankment plans on the subject of offices, *ib.* 872–878——Comparative space or area required for offices on each site; explanation hereon as to the less requirement in Howard-street, through its being proposed to add a storey to the building on that site, *ib.* 1062–1074.

Defect of Mr. Street's plan in not providing for the offices on the west, and for the courts, as far as possible, on the east, and closer to the Temple and Lincoln's-Inn, *Cole* 1903——Importance of the offices being brought near to the chambers of the legal profession, *Whitmore* 2039–2051——Convenience by the Vice Chancellors having their offices and chief clerks close to their courts, *Lord Romilly* 2804–2808.

P.

Palmer, Sir Roundell, Q.C. (Analysis of his Evidence.)—Submits that a very great majority of the legal profession in London and in the country are in favour of the Carey-street site; sundry petitions referred to in proof of this conclusion, 2412–2419——Large number of solicitors in different districts of the metropolis who have signed petitions in favour of the Carey-street site, as compared with the number of refusals to sign, 2414–2416. 2500–2502——Petition in favour of this site, signed by 393 barristers, of whom seventy-four had chambers in the Temple, 2414. 2416, 2417.

Importance attached by the profession to the avoidance of delay in the erection of the new courts, 2416–2418——Importance also attached to a concentration of the courts in the great legal district; concurrence of witness in this view, 2416. 2419 *et seq.*—— Reference to the evidence of Mr. Lake before the Law Courts Commission of 1859 in favour of the Carey-street site, 2419——Views of Sir Richard Bethell in 1859 as to the advantages of this site, *ib.*

Grounds for dissenting from the conclusion that for the convenience of those having business in the courts the Embankment site possesses any peculiar facilities, 2420–2422. 2487——Belief that the majority of those using the courts would come from the north; great

Palmer, Sir Roundell, Q.C. (Analysis of his Evidence)—*continued.*

great obstacle through these having to cross the Strand if the Embankment site be adopted, 2423–2427. 2487——Inadequacy of a bridge or tunnel across the Strand in order to obviate the objections to the Embankment site, the distance of the courts from Lincoln's Inn, &c. being a fatal objection, 2425–2427. 2473–2480. 2503–2510.

Opinion that by adopting the reduced or original Carey-street site but little regard need be had to the question of future extensions, 2428–2430——Sufficiency of the land already acquired for all practical purposes; expediency, however, of further outlay for improved approaches, 2431–2433. 2448–2451——Conclusion that the convenience of the legal profession as regards proximity to the courts is directly for the interest of the public, 2434–2438. 2481. 2515.

Fallacy of the view that the legal profession would remove from Lincoln's Inn, &c. to the neighbourhood of the courts, if placed on the Embankment site, 2439–2447. 2498. 2511–2514. 2518–2521——Want of a new approach from the north quite as much if the courts are built in Howard-street as in Carey-street, 2451——Equal convenience of the Carey-street site as of the Howard-street site to the Templars, but for the crossing of the Strand, 2452——Strong condemnation of any continued separation of the courts of law and equity, 2453, 2454.

Doubt as to any superior facilities of the Embankment site if the Home Circuit be brought to London, 2455–2463. 2484–2486——Absence of any undue influence on the part of the Incorporated Law Society as regards the signatures to petitions, 2464, 2465——Immaterial character of some inaccuracies in a certain map, and in some statements circulated by the society, 2466, 2467.

Exceptions taken to certain calculations by Mr. Baxter, purporting to show that the Embankment site would be more convenient to the great majority of solicitors in the City, Westminster, &c., 2468–2472——Immense advantage of the equity courts being close to the chambers of the equity barristers in Lincoln's Inn, &c., the common law barristers in the Temple not being in a position to realise the benefit of concentration, 2474–2480. 2503–2510. 2522–2525——Impression as to the Templars having some pecuniary interest in the question of site, which does not apply to Lincoln's Inn, 2481.

Equal demand for a concentration of the law courts on the site most convenient to the profession as for the concentration of the public offices in Whitehall, 2482, 2483——Dissent from the proposal of the benchers of Lincoln's Inn for retaining the equity courts in Lincoln's Inn, unless certain facilities can be obtained for securing the great object of concentration generally, 2489–2497——Room for a bankruptcy court under the Carey-street scheme, 2492, 2493——Also for a Privy Council Chamber, *ib.*

Advantage of the Carey-street site with reference to the Record Office, the Accountant General's Office, &c., already near that site, 2494——Very uncertain speculation if the Carey-street site were bought for the erection of chambers for the legal profession, 2498, 2499——Convenience to solicitors from Westminster or the City in being near the chambers of counsel in Lincoln's Inn, when the former come to the courts on the Carey-street site, 2516, 2517.

Conclusion that no considerations of architecture, or of economy within limits, appear capable of counterbalancing the advantages of the Carey-street site, 2524, 2525.

Pennethorne, James. (Analysis of his Evidence.)—Statement as to the extent and value of the land belonging to the Crown in Great Knight Rider-street, and as to the dilapidated and unsafe character of some of the buildings, 2992 *et seq.*——Injurious effect apprehended as regards these buildings when the Metropolitan District Railway is formed under the street in front, 3001–3011. 3033, 3034——Estimate of 55,000*l.* as the amount to be realised by the property if sold, 3012, 3013. 3037–3043——Considerable outlay necessary for additional accommodation and for rebuilding, if the probate registry be retained on the present site, 3014–3036. 3042.

Plans and Maps (*Incorporated Law Society*). Consideration of the modifications made in Mr. Street's plan by Mr. Burnet, several courts having been abandoned, and other alterations made, in order to apply the quadrilateral arrangements of Mr. Street to the Carey-street site, *Field* 157–174——Map in course of preparation by Mr. Burnet, showing where all the legal profession in London is located; importance of this map with reference to the question of access to the law courts, *ib.* 172. 174–176. 185, 186——Explanation on the subject of the inaccuracy of a former map prepared by Mr. Burnet, and circulated by the Law Institution, professing to show where the legal profession were located, *ib.* 172. 177–186.

Preparation by witness, for the Law Institution, of a certain map of the Carey-street site and Howard-street site; explanation relative to its inaccuracy in several respects, *Burnet* 438–452. 457–460. 479–493. 517–524. 531–548——Inaccuracy of the foregoing map as regards the localities of the offices of the legal profession; correct map being prepared by witness showing this information, *ib.* 448. 473. 517–524——Examination relative to witness's map as purporting to show the extent of the Howard-street site, and

Plans and Maps (*Incorporated Law Society*)—continued.

the mode proposed by Mr. Street for applying his scheme to such site: inaccuracies therein adverted to and explained, *Burnet* 457-460. 510-514. 568——Belief that a road sixty feet wide may be carried from the Strand to Carey-street, leaving a sufficient space for the new courts; six acres would not be left, as stated in witness's map, *ib.* 452-456.

Statement as to the reduced plan prepared by witness, showing how Mr. Street's building might be placed upon the Carey-street site, *Burnet,* 496-472. 494-509. 525-530. 535-538. 561-564. 569——Discussion between witness and Mr. Street on the subject of certain tables and calculations prepared by witness relative to the several schemes; inaccuracies in these calculations adverted to, *ib.* 516. 549-558. 570, 571——Circumstances of witness not having consulted Mr. Street before preparing the tabular statement about his scheme; difficulty of communication with Mr. Street, *ib.* 554-560. 565-567. 570-572.

Important inaccuracies in a certain map prepared by Mr. Burnet for the Law Society, and purporting to show an available site of six acres near Carey-street, with good roads on each side, *Street* 574-577——Inaccuracy of Mr. Burnet's map as regards the Howard-st eet site,and the extent of land to be used, *ib.* 578-581——Strong objections to Mr. Burnet's plan for applying witness's improved scheme to the Carey-street site, *ib.* 726-729——Exception to Mr. Burnet's statement as to the want of facility in communicating with witness, *ib.* 776-779.

Unimportant character of some inaccuracies in a certain map, and in some statements circulated by the Incorporated Law Society, *Sir R. Palmer* 2466, 2467——Immaterial character of some inaccuracies in a certain plan put forward by the Society, *Young* 2702-2707.

Plans (*Royal Commission*). Explanation relative to some plans prepared by Mr. Abraham and Mr. Pennethorne, and produced before the Commission; payment made for these by the Treasury, *Field* 34, 35. 39-45——Careful consideration on the part of Mr. Abraham in preparing the plan submitted to the Commission; deficiency of the plan in some respects, *ib.* 206, 207.——*See* also *Reduced Plan.*

Pownall, George. (Analysis of his Evidence.)—Architect aud surveyor; was instructed by the Incorporated Law Society to inquire into the cost of the site necessary for carrying out Mr. Street's plan on the embankment, 3048-3050——Estimate of 812,415 *l.* as the cost of the required site, inclusive of the property on the east side of Essex-street to the Strand, 3052——Calculation that the Carey-street site which has cost about 760,000 *l.* would realise only 364,320 *l.*; 3054-3056. 3092-3097——Opinion as to a return of 3 per cent. upon the cost of the Carey-street site being a high rent, 3057-3059.

Strong objection to the projection of Mr. Street's building beyond the line of Somerset House; concurrence of Mr. Shaw in this objection, 3060. 3089. 3118, 3119. 3134, 3135. 3167-3169. 3176——Impression as to Mr. Street's plan interfering with some of the reclaimed land intended to be reserved as open or ornamental ground; objection on this score, 3061-3063. 3088, 3089. 3170-3176. 3185——Explanation that there is no material difference between the estimate of Mr. Hunt and of witness for the Howard-street site, 3064-3068——Increased amount to be realised by the Carey-street site if the law courts were erected on the Howard-street site; further question hereon as to its saleable value if let out at ground rents at 3 per cent., 3069-3072. 3100-3105. 3120-3130.

Very bad gradient of Essex-street, 3073, 3074——Conclusion as to the necessity of a street much wider than twenty-two feet on the west of the Howard-street site, 3074-3076——Plan suggested for the Embankment site in lieu of that proposed by Mr. Street; increased cost of witness's scheme, which involves the removal of the building more to the east, so as to leave a street fifty feet wide to the west, and involves also the acquisition of more land to the north, 3076-3083.

Satisfactory improvement contemplated by Mr. Street's plan as regards the streets on the east side of the Carey-street site, 3084, 3085——Addition to be made for contingent expenses to witness's estimate of 812,000 *l.* for the Howard-street site, 3086, 3087——Hope expressed that a terrace will be adopted as part of Mr. Street's plan, in conformity with Somerset House, 3090, 3091. 3136, 3137.

Probability of a demand for chambers on the Carey-street site, and of the value of the land being enhanced thereby, if the courts be placed on the Embankment site, 3092-3096. 3183, 3184——Improvement if the Clare Market district could be purchased, with a view to improved buildings and approaches if the courts be placed on the Carey-street site, 3098, 3099. 3131-3133——Question as to the time required to clear the Howard-street site, about three years having been occupied in acquiring possession of the Carey-street site, 3106-3117.

Reference to a proposal for the purchase of Danes' Inn with a view to making a give-and-take arrangement with Clement's Inn, 3138, 3139. 3182——Very fine architectural effect of Mr. Street's building on the Carey-street site, especially if the Holywell-street block be removed, 3140-3144——Advantage of the courts being on a plateau on an elevation

Report, 1869—*continued.*

Pownall, George. (Analysis of his Evidence)—*continued.*

elevation instead of on low ground by the river side, 3141. 3156–3159——Importance of a good street from Holborn to the Strand irrespectively of the New Courts, 3144. 3147–3151——Expediency of the widening of Essex-street whichever site be adopted, 3145, 3146.

Necessity of purchasing some houses between Bell-yard and Chancery-lane in connexion with the Carey-street site; estimate of 50,000 *l.* as the cost of the improvement at this point, 3147–3149. 3164. 3186——Difficulty as to the levels of the ground near Howard-street, this however being an obstacle which Mr. Street would readily overcome, 3152–3155——Increased site necessary at Carey-street if the larger plan had been adopted, 3160–3163. 3179–3182.

Privy Council Chamber. Room for a Privy Council Chamber under the Carey-street scheme, *Sir R. Palmer* 2492, 2493.

Probate Court. Credit from the sale of the Government property in Great Knight Ryder-street if the Probate Court be placed on the Carey-street site, *Hardwick* 2240–2243.

Deposit in different places of the records and documents belonging to the court, it being of great importance that they should be concentrated in one building, *Bayford* 2892, 2893——Constant increase in the business of the court, *ib.* 2894——Particulars relative to the present buildings in Great Knight Ryder-street and Doctors' Commons; respects in which neither efficient nor safe, *ib.* 2915, 2916. 2935–2943. 2973–2980.

Statement as to the extent and value of the land belonging to the Crown in Great Knight Ryder-street, and as to the dilapidated and unsafe character of some of the buildings, *Pennethorne* 2992 *et seq.*——Injurious effect apprehended as regards these buildings when the Metropolitan District Railway is formed under the street in front, *ib.* 3001–3011. 3033, 3034——Estimate of 55,000 *l.* as the amount to be realised by the property if sold, *ib.* 3012, 3013. 3037–3043——Considerable outlay necessary for additional accommodation and for rebuilding if the Probate Registry be retained on the present site, *ib.* 3014–3036. 3042.

See also *Wills.*

Probate Duty. Modified character of witness's objection to an additional duty upon pro bates as a means of paying for the new buildings, *Lord Romilly* 2785–2787.

Public, The. Belief that the want of easy access to the courts by the public in general is altogether a delusion, *Field* 119, 120. 155, 156. 185. 197. 223. 292——Many of the general public would be better away from the courts altogether, *ib.* 156——Inexpediency of recognising the convenience of the public as distinct from that of the suitors, the latter alone requiring to be considered, *ib.* 331–333. 403–405.

Facilities of access required for the public as well as for the lawyers, *Hunt* 1377–1382——Witness considers that for the general public, and for judges, jurors, and witnesses, the Embankment site is preferable to the Carey-street site, *Boodle* 1781, 1782. 1803——Expediency of considering the convenience of the general public as well as of the profession, *ib.* 1804–1806——Great advantage of the facilities of access for the general public to the common law courts if placed on the Embankment site, *Whitmore* 1989, 1990——Doubt as to any serious objection arising from making the courts easily accessible to the general public, *Vallance* 2080–2086.

Objection as regards the general public passing from the Embankment railway station through the courts if placed in Howard-street, *Hardwick* 2112–2114. 2185–2188——Conclusion that the convenience of the legal profession, as regards proximity to the courts, is directly for the interest of the public, *Sir R. Palmer* 2434–2438. 2481. 2515——Inconvenience apprehended through the public using the courts as a thoroughfare to and from the Embankment, *Young* 2633——Expected inconvenience from the courts being crowded at times, *Lord Romilly* 2762, 2763. 2782, 2783.

Convenience to the public and to suitors, by placing the Law Courts in direct proximity to the chambers of the practising barristers and solicitors, *Rep.* iv.

See also *Access* (*Approaches*). *Suitors.*

R.

Railway (*Howard-street Site*). Difficulty through the proximity of the railway to the Howard-street site; suggestions for removing or greatly reducing the objection on this score, *Street* 642, 643——Question whether vibration and inconvenience are likely to arise from the railway along the Embankment, *ib.* 815–818——Facility of access from the Embankment railway, *ib.* 821——Grounds for concluding also that no danger or inconvenience would be caused by any vibration from the railway, *Street* 966–969. 974; *Fowler* 1518. 1523–1525. 1548–1551——The railway is the one annoyance on the Howard-street site, *Street* 974.

Report, 1869—*continued.*

Railway (*Howard-street Site*)—continued.

Rise of forty-two feet, or about eighty-five steps, from the platform of the Embankment railway station to the floor of the courts, *Street* 1075, 1076——Objectionable feature to be presented by the railway station near the Howard-street site, unless the courts be erected on such site; provision in such case as to the architecture of the station, *ib.* 1169-1172. 1175——Conclusion that no nuisance need be apprehended from the railway, *Hunt* 1287-1290.

Consultation of witness with Mr. Street and the Office of Works, relative to the railway station near Norfolk-street, the result being that the station may be made compatible with the Law Courts, if erected on the Embankment site, *Fowler* 1510-1513——Difficulty in which the railway company will be placed, as to the Norfolk-street station, unless it be decided in the present session whether the Law Courts will be placed on the Embankment site, *ib.* 1531-1533. 1544, 1545——Power of shifting the station from Norfolk-street to the space between the Temple Pier and the Temple Library, *ib.* 1552.

See also *Access* (*Approaches*), 2.

Re-arrangement of Plans. Re-arrangement of the courts and offices, around a central hall, on the Embankment site; great convenience generally of the arrangement of the buildings under the altered plan, *Street* 678-684——Necessity of witness re-arranging a large portion of his plans whichever site be adopted, *ib.* 879-881——Necessity of re-considering the detail of all the rooms, *ib.* 971.

Reclaimed Ground (*Thames Embankment*). Absence of any injurious interference under witness's plan with ornamental ground of the Embankment, *Street* 767-769——Impression as to Mr. Street's plan interfering with some of the reclaimed land intended to be reserved as an open or ornamental ground; objection on this score, *Pownall* 3061-3063. 3088, 3089. 3170-3176. 3185.

Record Office. Advantage of the Carey-street site, with reference to the Record Office, the Accountant General's Office, &c., already near the site, *Sir R. Palmer* 2494.

Reduced Plan. Explanation of the present views of the Royal Commission as to the omission of certain courts, and the reduction of the original plan; the Commission have not decided to omit any courts, and advocated the erection of all the courts and offices contemplated by the Act of 1845, *Field* 198-204——Several courts omitted from the proposed building on the Howard-street site, which were included in the original scheme for Carey-street, *Street* 676, 677.

Statement of the re-arrangements proposed in witness's reduced plan for the Carey-street site, on the supposition that no additional ground was purchased, *Street* 689-694——Extravagance involved in the original demands for accommodation, witness believing, however, that hardly any rooms or offices in the reduced plan can well be omitted, or any curtailment made in the size of the courts or central hall, *ib.* 1016-1039. 1146-1153——Adequacy of either site for a building on the reduced plan, *ib.* 1099, 1100.

See also *Carey-street.*

Re-investment. Grievous injury to individuals on the score of re-investment by the compulsory removal of the large mass of house property now occupying the Howard-street site, *Hall* 2838.

Robertson, Samuel Boxhill. (Analysis of his Evidence.)—Is a solicitor, and has prepared a statement from the "Law List" showing the number of barristers and solicitors having chambers in different districts, 1913-1916——Particulars comprised in this statement, the result being that there is a considerable majority of solicitors and barristers topographically favourable to the Embankment site, 1917 *et seq.*——Mention of Mr. Du Cane of Gray's Inn as being favourable to the Embankment site, 1923-1925. 1955-1959——Doubt whether the common law barristers in the Temple have but little London practice as compared with the Chancery barristers north of the Strand, 1926-1935.

Rolls Court. Witness submits that the present Rolls Court possesses excellent facilities for the discharge of the duties of the Master of the Rolls, and that any change of court would be a great inconvenience to witness, *Lord Romilly* 2759-2761. 2784. 2789-2795——Much greater inconvenience to witness by removing the Rolls Court to the Embankment site than to the Carey-street site, *ib.* 2788——Advantage of the Rolls Court being in proximity to the Record Office, *ib.* 2791. 2794, 2795. 2802, 2803.

Rolls Estate. Advantage of power to utilise the Rolls estate in connection with courts on the Carey-street site, *Field* 237-241——Question considered whether the omitted courts and offices might not be placed on the Rolls estate and on the site of the Lincoln's Inn courts, *Street* 991-1001——Doubt as to any portion of the Rolls estate being available for the purposes of the new courts; growing demand for increased accommodation for records adverted to hereon, *Lord Romilly* 2796-2801.

Report, 1869—*continued.*

Romilly, The Right Honourable Lord. (Analysis of his Evidence.)—Considers that as regards Chancery proceedings the Carey-street site offers far better facilities than the Embankment site to the judges, barristers, and solicitors, 2756–2758. 2761. 2766–2767——Is, however, strongly of opinion, that no new courts are wanted at all, and that a wasteful expenditure will be incurred if extensive courts are erected before it is known whether they will all be required, 2759–2766——Submits that the present Rolls Court possesses excellent facilities for the discharge of the duties of the Master of the Rolls, and that any change of court would be a great inconvenience to witness, 2759–2761. 2784. 2789–2795.

Inexpediency of the proposed tax upon law proceedings as a means of defraying the cost of courts which may not be required, 2761——Matter of comparative indifference to suitors and the general public whether the courts are concentrated on the Carey-street site or on the Embankment site, 2761–2764. 2777. 2809–2812——Expected inconvenience from the courts being crowded at times, 2762, 2763. 2782, 2783——Way in which a concentration of the courts would be beneficial to solicitors; absence of benefit to the bar or to the general public, 2764. 2778–2781.

Grounds for the conclusion that as regards the common law bar, and as regards the legal profession and the public generally, the facilities of access would be much better in the case of the Carey-street site than of the Embankment site, 2768–2776——Modified character of witness's objection to an additional duty upon probates as a means of paying for the new buildings, 2785–2787——Much greater inconvenience to witness by removing the Rolls Court to the Embankment site than to the Carey-street site, 2788.

Advantage of the Rolls Court being in proximity to the Record Office, 2791. 2794, 2795. 2802, 2803——Doubt as to any portion of the Rolls estate being available for the purposes of the new courts; growing demand for increased accommodation for records adverted to hereon, 2796–2801——Convenience by the Vice Chancellors having their offices and chief clerks close to their courts, 2804–2808——Doubt as to much delay to suitors being obviated by the proposed concentration on the Carey-street site, 2809–2812.

Royal Commissions. Preparation by the Royal Commission of 1865 of a draft report in 1867; reasons for its not having been presented, *Field* 4, 5. 107, 108——Several matters upon which the Commission were instructed to report; the Carey-street site had been already decided upon, and the Commission were to consider how the buildings should best be arranged upon it, *ib.* 7–22. 24——Large increase of accommodation contemplated by the Commission beyond the original scheme of the Government, and in excess of the expenditure first estimated for the site and buildings, *ib.* 79–85. 187–190——Question considered as to its having been upon the advice of the Commission that the Treasury were induced to apply to Parliament for sanction of an increased purchase of land, *ib.* 86–112.

Majority of nine to three at a recent meeting of the Commission against a substitution of the Howard-street site for the Carey-street site, *Field* 200–203——Great care and long time devoted by the Commission to the question of the buildings and their arrangement; composition of the sub-committee on the subject, *ib.* 208–211. 355, 356——Question considered as to the authority by which the Commission took upon themselves to condemn the Howard-street site; opinion that this was *ultra vires* on their part, *ib.* 256–265. 298–303——Appointment of the Commission adverted to as having had reference to the Carey-street site exclusively, *ib.* 298–303——Termination of the Commission on 5th July 1870, *ib.* 300.

Production by witness of several copies of the draft report of the Commission, the proof having been printed in June 1867, *Field* 418, 419——Preparation by witness of a short statement showing the changes made or recommended by the Commission in the original Parliamentary scheme, *ib.* 419, 420.

Communication from the Commission to the Treasury, dated 23rd July 1868, showing the various additional lands which they recommended to be acquired, *Street* 597–601——Great mass of evidence and information before the Royal Commission of 1859–60, four schemes or sites having been before the Commission, and the witnesses generally having been strongly in favour of the Carey-street site, *Young* 2567——Circumstance of the Embankment site not having been before the Royal Commission of 1859–60; if it had been, witness for one would have condemned it, *ib.* 2567, 2568. 2673–2675——Statement as to the proposed adoption of the Howard-street site being in direct antagonism to the views of the two Royal Commissioners, which were concurred in by the Treasury, as well as to the provisions of the Act of 1865, *ib.* 2630, 2631.

Passing of the Act of 1865, for acquiring the Carey-street site, in accordance with the report made in 1860 by the Royal Commission, *Rep.* iii.——Recommendations made from time to time by the Royal Commission of 1865 relative to the courts and offices to be provided for, *ib.*

S.

St. Clement Danes Church. Limited obstruction caused by St. Clement Danes Church as regards a building on the Carey-street site, *Hardwick* 2383, 2384. 2411.

Somerset House. Objections to the new courts, if built on the Embankment site, being on a line with Somerset House, *Street* 658–661——Statement as to the river front of Somerset House not being the best part of the building, and being open to some serious objections, *ib.* 660——Non-interference by the courts with the view of Somerset House, *ib.* 770–772.

Circumstance of the roof of the proposed building on the Howard street site being higher than Somerset House roof, whilst the building itself projects fifty feet in front of Somerset House, *Street* 955–958——Further consideration of the effect of the proposed scheme in relative to Somerset House; opinion that the latter would suffer no detraction, *ib.* 1125–1130. 1218–1220.

Strong objection to the projection of Mr. Street's building beyond the line of Somerset House; concurrence of Mr. Shaw in this objection, *Pownall* 3060, 3089. 3118, 3119. 3134, 3135. 3167–3169. 3176——Hope expressed that a terrace will be adopted as part of Mr. Street's plan in conformity with Somerset House, *ib.* 3090, 3091. 3136, 3137.

South London. Few solicitors to the south of the Thames; convenience of the Embankment site in the case of these, *Baxter* 1657, 1658. 1687, 1688——Total of only forty-two practising barristers and solicitors, south of the Thames, and of ten country agencies, *Young* 2624.

Stone Buildings. Greater convenience to barristers in Stone-buildings by having the courts on the Embankment site than at Westminster, *Cole* 1902–1912.

Strand. Respects in which access across the Strand would be more convenient as regards the Howard-street site than the Carey-street site; much larger risk in the former case, *Field* 411–416——Question considered as to the construction of a bridge over the Strand in connexion with the New Courts, *Burnet* 474–478.

Proposal for the formation of a tunnel or arcade in order to obviate the difficulty of crossing the Strand to the Embankment site, *Street* 645, 646. 652——Considerations as to the outlay necessary in providing a bridge or arcade across the Strand, *ib.* 780–785——Non-interference with the Strand traffic by the proposed bridge and arcade, *ib.* 844, 845——Belief that a bridge or arcade across the Strand at Essex-street would not cost 10,000 *l.* more than a bridge from the Temple to Carey-street site, *ib.* 933–941——Doubt as to the Embankment roadway and Mansion House-street being much relief to the traffic of the Strand, *ib.* 982–984.

Evidence in further explanation and approval of the proposed foot-bridge and arcade across the Strand, so as to facilitate access from the north to Howard-street, *Street* 1115–1124——Large carriage traffic anticipated along a wide street, from the Strand to Holborn *viâ* Serle-street; obstacle to conveying such traffic across the Strand by a bridge or tunnel, *ib.* 1176–1190——Necessity of lawyers and others from the north of the Strand encountering the passage of the Strand, unless a bridge be made in communication with Howard-street, *ib.* 1205, 1206.

Further cost of 60,000 *l.* to be added to the Carey-street site, if it be decided to build a bridge across the Strand from Thanet-place, *Hunt* 1235–1238——Want of facilities for crossing the Strand, whether the courts be on the north or on the south, *ib.* 1374–1384 Great difficulty of access to the Carey-street site, on account of the obstructions experienced in the Strand, *Freshfield* 1560——Very little relief of the Strand traffic by the new Mansion House-street, *ib.* 1572–1577——Importance of a bridge or subway across the Strand, whichever site be selected, *Cole* 1891, 1892——Inconvenience in any case of the crossing of the Strand, *Vallance* 2091, 2092.

Greater inconvenience of a tunnel under the Strand, if the courts be on the Embankment site than on the Carey-street site, *Hardwick* 2112 —— Inadequacy of a bridge or tunnel across the Strand in order to obviate the objections to the

Report, 1869—*continued.*

Strand—continued.

the Embankment site, the distance of the courts from Lincoln's Inn-fields, &c. being a fatal objection. *Sir R. Palmer* 2425–2427. 2473–2480. 2503–2510——Facilities contemplated as regards the construction of a bridge across the Strand, the widening of Essex-street, &c., *Honourable G. Denman* 2538, 2539.

See also *Access* (*Approaches*).

Street, George Edmund. (Analysis of his Evidence.)—Is architect for the New Law Courts, 573——Important inaccuracies in a certain map prepared by Mr. Burnet for the Law Society, and purporting to show an available site of six acres near Carey-street, with good roads on each side, 574–577——Inaccuracy also of Mr. Burnet's map, as regards the Howard-street site and the extent of land to be used, 578–581.

Outline of the provision made by witness's original plan on the subject of streets and approaches, the site near Carey-street comprising an area of more than seven and a-half acres, 582–586——Enumeration of offices provided for in witness's plan, 587——Provision for separating, by an internal street, the offices from the courts, the latter being contained in a central block, 588, 589——Careful consideration given to the question of light, and air, and quiet, 590, 591.

Report by witness to a sub-committee of the Royal Commission, in July 1868, setting forth the property desirable to be purchased for the purpose of approaches to the Carey-street site, 592. 596, 597——Concurrence of the competing architect, as to the necessity of purchasing certain lands on the western side of Lincoln's Inn-fields, marked green on the block plan, 592–595——Communication from the Commission to the Treasury, dated 23rd July 1868, showing the various additional lands which they recommended to be acquired, 597–601——Importance attached to a road on the western side of Lincoln's Inn-fields, communicating with the New Courts and with the Strand, 605, 606.

Estimate of 488,000 *l.* by Mr. Pownall, in 1866, for additional land at the Carey-street site; largely increased estimate in 1868; 607, 608——Information relative to the facilities of access and approach contemplated on each side of the site, by the purchase and removal of houses, 609–611——Small and poor character of the houses in Bell-yard, 612, 613——Advantage of a road cutting off the Clare Market district from the New Courts, 613.

Description of the Howard-street site, as proposed by witness; suggestion that both sides of Essex-street be taken, as well as the houses from Howard-street to the Strand, 615–623——Total of four acres and three roods embraced in the site proposed by witness, 624–627——Boundaries of the site adverted to; opinion that the site is in fact an admirable one for a public building, 628–633. 657, 658.

Advantages of the Howard-street site on the score of light and air, and quiet; its superiority over the Carey-street site in these respects, 633–635. 682. 695–699——Excellent facilities of access to the Howard-street site, as compared with the means of access to the Carey-street site; details in support of this conclusion, 636–656. 700–707. 720–722. 744–760——Better access from the north and east to the Howard-street site than to the Carey-street site, 656–659. 837–843——Contemplated approach from Wellington-street by means of the terrace in front of Somerset House, 641.

Difficulty through the proximity of the railway to the Howard-street site; suggestions for removing or greatly reducing the objection on this score, 642, 643——Proposal for the formation of a tunnel or arcade in order to obviate the difficulty of crossing the Strand, 645, 646. 652——Wide street contemplated from the river up to Carey-street, involving the widening of Serle-street and the opening of Great Turnstile, 647–652——Expediency of taking both sides of Essex-street and of carrying New Essex-street up to the Strand, 653–655. 730–732. 744–751.

Evidence in strong approval of the Howard-street site as regards architectural effect, 657–693——Objections to the new Courts being on a line with Somerset House, 658–661——Statement as to the river front of Somerset House not being the best part of the building, and being open to some serious objections, 660——Exception taken to the objection that the Howard-street site is "down in a hole;" the descent from the Strand is not in fact a serious objection, 662.

Singularly good views obtainable of a public building on the Howard-street site, 663——Difference of twenty-two feet between the level of the two sites, 663–665. 667——Advantage of placing the courts on the first floor instead of the ground floor, 666. 887.——Facilities for entering the building at different levels, on account of the great slope of ground on the Embankment site, 668——Easy means of access from the Temple, 669.

Explanation relative to the foundations on the Embankment site, it being proposed to carry them to a depth of twenty-five feet below the level of the roadway, 671–674——Great facility of building on the Embankment site, and of landing materials from the river; this would fully counterbalance any increased expense for foundations, 673, 674——Several

Report, 1869—*continued.*

Street, George Edmund. (Analysis of his Evidence)—*continued.*

—Several Courts omitted from the proposed building on the Howard-street site which were included in the original scheme for Carey-street, 676, 677.

Re-arrangement of the courts and offices around a central hall, on the Embankment site; great convenience generally of the arrangement of the buildings under the altered plan, 678–684——Total of eighteen Courts to be built on the same level, the rooms in connection with each Court being all arranged alike, 683, 684——Estimate of 900,000 *l.* as the cost of the building, including the foundations, 685–687. 733–735——Facilities for cabstands in the immediate neighbourhood of the building, 688.

Statement of the re-arrangements proposed in witness's reduced plan for the Carey-street site, on the supposition that no additional ground was purchased, 689–694——Difficulty in applying the reduced plan owing to the unfavourable shape of the present Carey-street site; means of remedying this, 690–691. 739–741——Deficiencies of this site on the score of light, air, and ventilation, 695–699. 708–715. 719——Particulars relative to the improved approaches necessary if the reduced plan be adopted; considerable difficulties on this score, 700–707——Several purchases necessary in order to clear a sufficient space round the building on the reduced site, 708–715. 742, 743.

About equal cost of the Carey-street reduced plan and of the Howard-street plan, 716–718——Necessity in any case of large additional purchases if the Courts be placed on the Carey-street site, 723–725——Strong objections to Mr. Burnet's plan for applying witness's improved scheme to the Carey-street site, 726–729——Necessity of widening Howard-street, as well as of lengthening Essex-street, if the Embankment site be adopted, 730–732——Difficulty as to the cartage of materials to Carey-street as compared with Howard-street, 736–738.

Exceedingly objectionable buildings likely to be erected on the Embankment site if it be not utilised by Government; prospect of a railway station there, 761–766. 769——Absence of any injurious interference, under witness's plan, with the ornamental ground of the Embankment, 767–769——Non-interference with the view of Somerset House, 770–772——Interference with the light as regards Carey-street, through the new storey being added to the Law Institution, 773–775——Exception taken to Mr. Burnet's statement as to the want of facility in communicating with witness, 776–779.

Considerations as to the outlay necessary in providing a bridge or arcade across the Strand, 780–785——Importance of improving Essex-street, even if the Courts be erected on the Carey-street site, 786, 787——Different understanding of the competing architects as to the actual area available at Carey-street, 788——Means of erecting a satisfactory building, on witness's plan, upon the Carey-street site as at present acquired, 789–791. 804–806.

Explanation relative to the level adopted in witness's plan for the Courts and judges' rooms on the Carey-street site, 792–798——Relative width proposed for Howard-street and for Carey-street, 799, 800. 869–871——Objection to so small a width as forty-two feet for minor courts, 801–803——Statement as regards certain objections by witness in February last to a site on the Embankment, that the scheme then objected to was altogether different from the present, 807–809. 825–833.

Facility for lighting the rooms on the river side, no terrace being proposed in front of the building, 809, 810—— Belief that it would not be necessary to take the foundations down to the clay, nor to use a coffer-dam, 811–814. 889——Question whether vibration and inconvenience are likely to arise from the railway along the Embankment, 815–818——Narrow roadway proposed between the west of the building and King's College, 819, 820——Facility of access from the Embankment Railway, 821——Good means of access from the north, irrespectively of Essex-street, 822–824.

Question considered whether the cost of building on the Howard-street site would not be much enhanced by the incline, 825–833——Doubt as to difficulty having been experienced in laying the foundations of the Middle Temple Library, 834–836——Non-interference with the Strand traffic by the proposed bridge and arcade, 844, 845——Advantage of the wide entrance from the Strand to the Carey-street site, 846–850.

Dissent from the view that the traffic along Essex-street would interfere with the quiet of the Howard-street site, 851–855——Statement of the incline from Surrey-street and other points to different parts of the building, 856–864——Suggestion that the access along the terrace from Somerset House be limited to persons having business in the Courts, 865——Much greater width of Strand-lane than of Bell-yard, 866–868.

Defence of the arrangements proposed in the Embankment plan on the subject of offices, 872–878——Necessity of witness re-arranging a large portion of his plans, whichever site be adopted, 879–881——Improbability of the central hall on the Howard-street site becoming a public thoroughfare, 882–886——Preparation of the working drawings for the Carey-street approved plan, 888.

[Second Examination.]—Further statement as to the necessity of acquiring additional ground in order to render the Carey-street site properly available for the New Law Courts;

Report, 1869—*continued.*

Str eet, George Edmund. (Analysis of his Evidence)—*continued.*

Courts; reference more especially to the excessively irregular shape of the western boundary, 890–910——Larger area required on the Carey-street site than on the Howard-street site, on account of the irregular shape of the former, 890–896——Total of three acres and two roods recommended by the Royal Commission to be purchased, exclusive of Cook's-court; proportion thereof available for re-sale if witness's reduced plan be adopted, 905–917——Power also of selling the land that would have been required for the Depository of Wills, and the Registry, if the original plan had been carried out, 918–922.

Absence of necessity for a wide street on the west of the Carey-street site, communicating with the Strand, if the Serle-street improvement be made, and Great Turnstile be opened out, 923–931——Inconvenience of the accesses by way of Fetter-lane and Chancery-lane, 932——Belief that a bridge or arcade across the Strand at Essex-street would not cost 10,000 *l.* more than a bridge from the Temple to the Carey-street site, 933–941——Proximity of the Carey-street building to Yeates's-court; facility of re-arranging witness's plan at this point. 942–945.

Limited extent to which Clement's Inn is interposed between the low property about Clare Market and the Carey-street site, 946, 947——Want of an extension of this site, chiefly on the north of Carey-street; opportunity in such case of parting with a portion of the ground already acquired, 948, 949——Enormous outlay required if it were necessary at any future time to purchase the property between Howard-street and the Strand, supposing the Law Courts to be placed on the Embankment site, 950–954.

Circumstance of the roof of the proposed building on the Howard-street site being higher than Somerset House roof, whilst the building itself projects fifty feet in front of Somerset House, 955–958——Sufficient height of the building to prevent the houses to the north being seen from Waterloo Bridge, 959–961——Further statement that the appearance of the building from the Strand would not be objectionable, 962, 963——Advantage of the building following the line of the river as far as possible, 964, 965——Grounds for concluding that there need be no fear of vibration from the railway, 966–969. 974——Necessity of witness re-considering the detail of all the rooms, 971.

Opinion that the Howard-street site is a magnificent one for a public building, 972, 973——Vibration and noise to which a building on the Carey-street site would be subject, 974——Somewhat larger area required for the reduced plan on the Carey-street site than on the Embankment site, 975–977——Important metropolitan improvement by having a broad street through the Carey-street site, joining Serle-street, 978–981.

Donbt as to the Embankment roadway and Mansion House-street being much relief to the traffic of the Strand, 982–984——Nature of the approaches from the Embankment to the Strand and to the Carey-street site, 985–990——Question considered whether the omitted courts and offices might not be placed on the Rolls estate and on the site of the Lincoln's Inn Courts, 991–1001——Statement in explanation and approval of the towers in witness's plan, 1002–1013——Provision of two towers for wills and copies on the plan approved by the Commission, 1009–1013.

Extravagance involved in the original demands for accommodation, witness believing, however, that hardly any rooms or offices in the reduced plan can well be omitted, or any curtailment made in the size of the courts or central hall, 1016–1039. 1146–1153——Examination relative to the area to which the competing architects were in the first instance restricted by the Commission; communications hereon from the architects to the Commission, 1040–1051——Facility of placing a larger building than the reduced plan on the Carey-street site, but only by sacrifice of air and light, 1052–1054.

Origination with witness of the suggestion for additional land, after his appointment as architect in 1868; 1055–1058——Absence of complaint, on the score of air, in the case of King's College Hospital or Clement's Inn, 1059–1061——Comparative space or area required for offices on each site; explanation hereon as to the less requirement in Howard-street, through its being proposed to add a storey to the building on that site, 1062–1074——Rise of forty-two feet, or about eighty-five steps, from the platform of the embankment railway station to the floor of the courts, 1075, 1076.

Relative facilities of access to a building on the Carey-street site and to the Royal Academy, 1077–1083——Further consideration of the question of foundations; limited disadvantage of the Howard-street site on this score, 1084–1094——Impression as to the reasons for a change to the Howard-street site being both of an artistic and an economical character, 1095–1098——Adequacy of either site for a building on the reduced plan, 1099–1100——Exception taken to the view that the conformation of the ground is peculiarly unfavourable in the case of Howard-street, 1101–1109.

Conclusion that the purchase of certain houses north of Howard-street may be taken as settled, 1110–1113——Evidence in further explanation and approval of the proposed

Report, 1869—*continued.*

Street, George Edmund. (Analysis of his Evidence)—*continued.*

foot bridge and arcade across the Strand, so as to facilitate access from the north to Howard-street, 1115–1124——Further consideration of the effect of the proposed scheme in relation to Somerset House; opinion that the latter would suffer no detraction, 1125–1130. 1218–1220——Explanation that witness has no objection, artistically, to the Carey-street site, but considers that the Embankment site affords the greatest opportunity for architectural display, 1131–1134. 1158. 1174.

Dissent from the view that the Clare Market district would soon be rebuilt and improved if the Courts be placed on the Carey-street site, 1135–1142——Prospect of a give and take arrangement being entered into with Clement's Inn, involving the purchase of Danes' Inn, 1143–1145——Opinion that, notwithstanding the greater altitude of the Carey-street site, it is not so desirable as the Embankment site; importance of the altitude of the site of St. Paul's adverted to hereon, 1154–1163. 1207, 1208——Probability of the widening of Essex-street, and of other river-side improvements, even though the Courts be placed on the Carey-street site, 1164–1168.

Objectionable feature to be presented by the railway station near the Howard-street site, unless the Courts be erected on such site; provision in such case as to the architecture of the station, 1169–1172. 1175——Large carriage traffic anticipated along a wide street from the Strand to Holborn, *viâ* Serle-street; obstacle to conveying such traffic across the Strand by a bridge or tunnel, 1176–1190——Doubt as to the advantage of galleries round the central hall for the purpose of libraries, 1191–1196——Further objection to any reduction of the size of the size of the central hall, 1197.

Necessity of any future extension on the Howard-street site involving the removal of King's College or of the houses north of Howard-street, 1198, 1199——Prospect in any case, of the widening of Essex-street, without any expense to Parliament, 1200–1203——Necessity of lawyers and others from the north of the Strand encountering the passage of the Strand unless a bridge be made in communication with Howard-street, 1205, 1206——Several modes of access from the Embankment, near Howard-street to the Strand and to Carey-street, 1209–1214——Alteration necessary as regards the river and terrace front of King's College, if the Law Courts be placed in juxta-position, 1215–1217.

Suitors. Due consideration given by the Royal Commission to the mode of taxing the suitors for the concentration of the courts, *Field* 212–216——Conclusion of the Commissioners that the suitors would be great gainers in a pecuniary sense, inasmuch as the work would be more expeditiously and better done, *ib.* 214, 215——Expediency of the convenience of the suitors being the first consideration, *ib.* 331–333. 403–405——Importance of the suits being shortened, not only on the score of expense, but in reference to the suspense and misery of the suitors, *ib.* 431.

Conclusion as to the Embankment site being far more convenient for suitors and witnesses, and for the public generally, *Baxter* 1666——Opinion that the public, or rather the suitors, jurymen, and witnesses, should first be considered, and that it would be greatly to the convenience of the majority of these that the Courts be placed on the Howard-street site, *ib,* 1709–1717. 1748–1753. 1759–1762——Examination as to the advantage to suitors by concentrating the Courts and offices near the chambers of the solicitors and barristers; saving thereby of delay and expense, *Boodle* 1807–1853——Advantage of a site on the Embankment in the case of suitors and witnesses who are waiting till their cases are called, *Vallance* 2094–2102——Facility as regards witnesses, &c., by the Courts being in proximity to the solicitors' chambers, *ib.* 2088–2090.

Grounds for dissenting from the conclusion that for the convenience of those having business in the Courts the Embankment site possesses any peculiar facilities, *Sir R. Palmer* 2420–2422. 2487——Witness has a strong conviction that concentration on the Carey-street site would save a large sum to suitors, *Hon. G. Denman* 2528——Opinion that the proximity of gardens and of the river to the Embankment site is not an important element in the case, *ib.* 2535–2537.

Statement as to the suitors in the Court of Chancery having, under the Act of 1865, contributed a million of Government stock out of the Suitors' Fund towards the Carey-street site and the buildings; gross breach of Parliamentary faith if the amount (885,000 *l.*) expended out of this contribution be diverted to other purposes, *Young* 2568–2573——Misappropriation, also, if the surplus fund derived from the fees paid by suitors at common law be used wholly or in part for the Embankment site, *ib.* 2570–2573——Transfer of the control of these fees to the Treasury on the condition that a moiety was to be treated as a fund, in respect of which the State should advance capital for the completion and concentration of the Courts on the Carey-street site, *ib.* 2570——Sense in which the Incorporated Law Society represent the suitors whose fees were contributed or applied by the society in aid of a building on the Carey-street site, *ib.* 2571–2573.

Distinction to be drawn between suitors, witnesses, and jurors on the one hand, and the general public on the other; witness believes that the Carey-street site would be more

nient

Suitors—continued.

convenient in the case of the former, the great bulk of the population being north of the Strand line, *Young* 2607–2615.

Matter of comparative indifference to suitors and the general public whether the Courts are concentrated on the Carey-street site or on the Embankment site, *Lord Romilly* 2761. 2764. 2777. 2809–2812——Doubt as to much delay to suitors being obviated by the proposed concentration on the Carey-street site, *ib.* 2809–2812——Advantage to suitors, as well as to counsel and solicitors, by the latter having quick access to the Courts, *Hall* 2830, 2831.

Surrey Street. See *Access* (*Approaches*), 2.

T.

Tanfield Court. For barristers in Tanfield-court the Carey-street site would be the more convenient, *Hon. G. Denman* 2527. 2549.

Telegraphic Communication. Doubt whether a system of telegraphs could be usefully worked between the Inns of Court and the New Law Courts, *Hall* 2836–2838.

Temple. Easy means of access from the Temple to a building on the Howard-street site, *Street* 669——Statement that the number called to the bar for the Inner and Middle Temple are more than double the number called for Lincoln's Inn, *Whitmore* 1982–1984——Very great inconvenience if the Templars had to cross the Strand to get to the Carey-street site; equal inconvenience to those in Lincoln's Inn if the Courts be placed on the Embankment site, *ib.* 1986, 1987. 2057.

Statement as to seventy-four barristers in the Temple having signed a petition in favour of the Carey-street site, *Sir R. Palmer* 2414. 2416, 2417——Equal convenience of the Carey-street site as of the Howard-street site to the Templars, but for the crossing of the Strand, *ib.* 2452——Impression as to the Templars having some pecuniary interest in the question of site, which does not apply to those in Lincoln's Inn, *ib.* 2481.

To witness and other common law barristers, having chambers in certain parts of the Temple, the Carey-street site is the more convenient, *Hon. G. Denman* 2527–2532. 2534. 2549, 2550——Explanation on the subject of petitions from the Inner and Middle Temple in favour of the Embankment site; increased value of chambers in the Temple if such site be adopted, *ib.* 2542–2548. 2555–2558——Belief that the Carey-street site would be more convenient as regards all in the Temple east of the Temple Church, *ib.* 2549.

Statement showing that those in the Temple are not all in favour of the Embankment site, *Young* 2681–2684. 2688——Facility of access from the Temple to the Carey-street site by means of an underground passage, *Milne* 2732–2739.

Treasury, The. Statement as to the Treasury having taken the initiative in the matter of the acquisition of additional land near Carey-street; details in support of this statement, *Field* 62–71. 79 *et seq.*; 187–194. 328–330.

Explanatory statement to the effect that the financial scheme of the Courts of Justice Commission in July 1868 was not endorsed by the late Government or the late Board of Treasury, *The Right Hon. G. W. Hunt* 3045–3047.

Memorandum by Mr. M. H. Foster, dated 23rd October 1868, relative to the means proposed for defraying the cost of the New Courts, and the effect as regards the Imperial revenue, *App.* 181, 182.

V.

Vallance, Henry. (Analysis of his Evidence.)—Solicitor in Essex-street, 2058, 2059——Submits grounds for the conclusion that the balance of convenience with regard to the public and the profession is in favour of the Embankment site, 2060 *et seq.*——Admission that for barristers and solicitors in Lincoln's Inn Fields, &c., the Carey-street site would be more convenient, 2062——Much larger attendance of suitors and of the public in the common law courts than in the chancery courts, the Embankment site being preferable for these, 2062. 2087.

Vallance, Henry. (Analysis of his Evidence)—*continued.*

Advantage of a site on the Embankment in the case of suitors and witnesses who are waiting till their cases are called, 2063, 2064. 2094–2102——Inaccuracy of the statement that fogs are especially to be feared on the Embankment site, 2064, 2065——Advantage of the facilities offered by the clearance of the Carey-street site for solicitors and barristers to have chambers there, if the Courts are placed on the Howard-street site, 2066–2071.

Facility as regards chambers by having an arcade on the west side of Essex-street, 2072–2074——Absence of inconvenience in respect of the gradient of Essex-street, 2075–2078——Doubt as to any serious objection arising from making the Courts easily accessible to the general public, 2080-2086——Facility as regards witnesses, &c. by the Courts being in proximity to the solicitors' chambers, 2088–2090——Inconvenience in any case of the crossing of the Strand, 2091, 2092.

Ventilation. See *Light, Air, &c.*

Vibration. Grounds for concluding that if the Courts be placed on the Embankment site there need be no fear of vibration from the railway, *Street* 966–969. 974; *Fowler* 1518. 1523–1525. 1548–1551——Vibration and noise to which a building on the Carey-street site would be subject, *Street* 974.

W.

Waterhouse, Mr. Resignation of Mr. Waterhouse as architectural clerk to the Royal Commission, inasmuch as the office debarred him from competing, *Field* 46, 47.

Westbury, Lord. Views of Sir Richard Bethell in 1859 as to the advantages of the Carey-street site, *Sir R. Palmer* 2419.

Westminster. Statement relative to the access from Westminster to Carey-street by way of the Embankment, and across the Strand by means of a bridge, if erected, *Baxter* 1693–1704.

Whitmore, Charles Shapland, Q.C. (Analysis of his Evidence.)—Is one of the Metropolitan County Court Judges, and is treasurer of the Inner Temple for the present year, 1979–1981——Reference to a special meeting summoned at the Inner Temple for considering the site of the New Law Courts; strong feeling manifested in favour of the Embankment site, 1982. 1991–1997. 2017–2019. 2052, 2053——Instances of Chancery barristers having chambers in Lincoln's Inn, who are favourable to the Embankment site, 1982——Statement that the numbers called to the bar for the Inner and Middle Temple are more than double the number called for Lincoln's Inn, 1982–1984.

Willingness of the Benchers of the Inner Temple to assent to the proposed alteration of the site of the railway station, 1985——Very great inconvenience if the Templars had to cross the Strand to get to the Carey-street site; equal inconvenience to those in Lincoln's Inn if the Courts be placed on the Embankment site, 1986, 1987. 2057——Exceptions taken to the statement that the majority of the common law barristers in the Temple do not practice in the London Courts; examination on this question, 1988. 1998–2016.

Infinitely greater number of persons resorting to the common law courts than to the equity courts, 1988, 1989——Great advantage of the facilities of access for the general public to the common law courts if placed on the Embankment site, 1989, 1990——Inconvenience through the want of better access to witness's court near Horsemonger-lane Gaol; question hereon whether it would not be more convenient to the suitors if the Court were near the Temple, 1990. 2027–2038.

Importance of the offices being brought near to the chambers of the legal profession, 2039–2051——Advantage of the clearing of the Carey-street site with reference to the provision of improved chambers for professional men, 2053–2056.

Abandonment of towers for the reception of wills, as proposed by the original plan, *Field* 242–246——Opinion that a receptacle for wills is not required near the Courts; *ib.* 352——Provision for two towers for wills and copies in the plan approved by the Royal Commission, *Street* 1009–1013.

Wills. Excellent facilities presented by the Carey-street site, and by the original plan of the New Law Courts for the accommodation of all the wills in England: advantage of the opportunities for extending the accommodation when required, *Bayford* 2895–2897. 2917–2928——Advantage of the depository of wills being in close proximity to the Court of Probate: approval of the one being on the Embankment site and the other on the Carey-street site, though it would be better still if they were more close together, *ib.* 2897–2933. 2944–2991——Statement to the effect that, as regards a depository for wills, witness

Wills—continued.

witness equally approves of either site, *Bayford* 2998–2900. 2988–2991——Sufficiency of the facilities of access to each site, as regards the inspection of wills, *ib.* 2901–2905.

Convenience as regards the attendance of registrars and other officers in having the depository for wills close to the Court of Probate: less necessity for the wills being kept in proximity to the other Courts, 2944–2972——Suggestion that if the Courts are on the Carey-street site, a tower might be erected on the Embankment site, in which to keep wills, and that the expense might easily be met by an extra probate fee, *ib.* 2982–2987——Approval of the Embankment site for the Courts, and of the Carey-street site for a will depository, *ib.* 2989–2991.

See also *Probate Court.*

Working Drawings. Preparation of the working drawings for the Carey-street approved plan, *Street* 888.

Y.

Yeates's Court. Proximity of the Carey-street building to Yeates's-court; facility of rearranging witness's plan at this point, *Street* 942–945.

Young, John. (Analysis of his Evidence.)—Has had long experience as a solicitor, and has for many years been a member of the Council of the Incorporated Law Society; has offices in the City and in the West End, 2560–2564. 2648–2650——Opinion that, for the convenience of the legal profession, the Carey-street is incomparably the best, 2565——Equal convenience of the Carey-street site as of the Howard-street site to many solicitors in the West End, 2566, 2567.

Great mass of evidence and information before the Royal Commission of 1859–60, four schemes or sites having been before the Commissioners, and the witnesses generally having been strongly in favour of the Carey-street site, 2567——Circumstance of the Embankment site not having been before the Royal Commission of 1859–60; if it had been witness for one would have condemned it, 2567, 2568. 2673–2675.

Statement as to the suitors in the Court of Chancery having, under the Act of 1865, contributed a million of Government stock out of the Suitors' Fund towards the Carey-street site and the buildings; gross breach of Parliamentary faith if the amount (885,000*l.*) expended out of this contribution be diverted to other purposes, 2568–2573——Conclusion as to its being now proposed to divert the suitors' money, and to abandon the Carey-street site through a spirit of dilettanteism, 2568.

Misappropriation, also, if the surplus fund derived from the fees paid by suitors at common law be used wholly or in part for the Embankment site, 2570–2573——Sense in which the Incorporated Law Society represent the suitors whose fees were contributed or applied by the society in aid of buildings on the Carey-street site, 2571–2573.

Alterations and improvements made by the Incorporated Law Society irrespectively of the courts being placed on the Carey-street site, 2577–2582——Explanation that the members of the society have no interest whatever, on the part of the society, on the question of site; as regards pecuniary interest, the matter is in fact one of consummate indifference to the society or its members, 2582. 2640, 2641——Statement in defence of the issue of circulars by the society, asking solicitors to support the Carey-street site; denial that these circulars contained any material mis-statements, 2583–2596.

Examination as to witness's grounds for the statement that Government, or certain members of it, have been actuated by a spirit of diletantteism, and by æsthetic considerations in their preference for the Embankment site, 2597–2606. 2693–2698. 2702.

Distinction to be drawn between suitors, witnesses, and jurors on the one hand and the general public on the other, witness believing that the Carey-street site would be more convenient in the case of these, the great bulk of the population being north of the Strand line, 2607–2615——Fallacy of the assumption that professional men would largely use the underground railways in order to reach the Courts quickly, 2613–2615. 2631.

Information in connection with a certain plan showing the distribution of the legal profession in London, 2616–2627——Large number of country solicitors represented by London firms; considerable majority favourable through their agents to the Carey-street site, 2624–2627. 2699–2701——Grounds for the conclusion that a very large majority of the whole profession, including country solicitors represented by London agents, are in favour of the Carey-street site, 2627.

Authority of Mr. Street cited as showing that a similar building can be erected on the seven-and-a-half acres of the Carey-street site as on the six-and-a-half acres of the Embankment site, and at the same cost, 2628——Argument as to the fallacy of the presumed superiority of the Howard-street site on the score of light, air, and ventilation, 2629——

Report, 1869—*continued.*

Young, John. (Analysis of his Evidence)—*continued.*

2629——Statement as to the proposed adoption of the Howard-street site being in direct antagonism to the views of the two Royal Commissions, which were concurred in by the Treasury, as well as to the provisions of the Act of 1865; 2630, 2631.

Grounds for dissenting from the opinion that, on account of the river and the railway, the Embankment site possesses peculiar advantage in the way of access, 2631——Necessity of widening Essex-street if the Embankment site be adopted, 2632——Several means of access from the Embankment to Carey-street; interference with these if the Courts be erected in Howard-street, 2633——Inconvenience apprehended through the public using the Courts as a thoroughfare on their way to and from the Embankment, *ib.*

Advantages of the access from the north to Carey-street, as compared with Howard-street, 2634–2636——Better elevation of the Carey-street site, the ventilation and light being consequently better, 2636——Facilities for extension of the Carey-street site, as compared with the cost of extension at Howard-street, 2637–2640. 2644–2646——Unfounded character of some statements as to the Incorporated Law Society being interested in the Cook's Court Company; progress made by the company adverted to hereon, 2639–2644——Readiness of the authorities of Clement's Inn to facilitate the Carey-street scheme, 2644, 2645. 2665, 2666.

Sufficient land already acquired for the completion of the reduced plan on the Carey-street site; opinion that it would, however, be wise at once to purchase some additional ground, 2646, 2647. 2679, 2680. 2689–2692——Advantage to professional men and to suitors, when attending the courts, of being near to the offices of the large mass of solicitors north of the Strand, 2651–2654. 2668–2671——Convenience of the Carey-street site as regards the library of the Law Institution, 2655–2662——Approval of the Carey-street scheme by the authorities of Lincoln's Inn, 2667. 2684——Very good access for City solicitors to Carey-street when Newgate-street is widened, 2671, 2672.

Importance of the concentration of courts and offices being on a site as close as possible to the great hive of legal business, 2676–2678——Opinion that on the score of cost the Carey-street site is the best, 2679, 2680——Means of defraying the cost by fees, without expense to the public, 2680——Statement showing that those in the Temple are not all in favour of the Embankment site, 2681–2684. 2688——Approval of the Carey-street site by the solicitors in Gray's Inn, the Benchers not having indicated any preference, 2685–2688.

Immaterial character of some inaccuracies in a certain plan put forward by the Incorporated Law Society, 2702–2707——Large addition to be made to the cost of transfer of site by reason of the loss of interest for several years on the purchase money of the Carey-street site, 2707–2710.

MINUTES OF EVIDENCE - - - - - - - - - p. 5

REPORT.

THE SELECT COMMITTEE to whom the PUBLIC OFFICES CONCENTRATION BILL was referred, have taken Evidence thereon, which they have agreed to report to The House; and have examined the allegations of the Bill, and found the same to be true; and have gone through the Bill, and made amendments thereunto.

7 *July* 1869.

PROCEEDINGS OF THE COMMITTEE.

Tuesday, 6th July 1869.

MEMBERS PRESENT:

Sir EDWARD BULLER, in the Chair.

Mr. Wilbraham Egerton.	Mr. H. W. Fitzwilliam.
Mr. Hanbury-Tracy.	

Preamble read a first time.

Messrs. *Sherwood* appeared as Agents for the Bill.

Mr. *Lawrence*, Solicitor to the Office of Works, was heard in support of the Bill.

Mr. *James Fergusson* examined.

Preamble read a second time.—Question, "That the Preamble of the Bill is proved,"—put, and *agreed to.*

Clauses considered.

Mr. *James Rogers* examined.

Clauses, with amendments, *agreed to.*

Two new Clauses added.

Ordered, To Report the Bill, as amended, to The House.

Ordered, That the Minutes of Evidence be reported.

Ordered, To Report.

MINUTES OF EVIDENCE.

Tuesday, 6th July 1869.

MEMBERS PRESENT:

Sir Edward Buller.	Mr. Wilbraham Egerton.
Mr. Hanbury-Tracy.	Mr. H. W. Fitzwilliam.

SIR EDWARD BULLER, IN THE CHAIR.

Mr. JAMES FERGUSSON; Examined by Mr. *Lawrence*.

1. YOU are the Secretary for Works and Buildings to the Commissioners of Her Majesty's Works?—I am.

2. You are familiar with the plans which have been deposited for the acquisition of this property?—I am.

3. Will you kindly explain to the Committee what is the position of the property about to be taken; I believe it begins at Charles-street, Westminster?—The Bill which is before the Committee was based on a recommendation of a Commission, of which Lord John Manners was chairman, appointed in 1866. They proposed to buy the whole block bounded on the north by Charles-street, on the east by Parliament-street, on the south by Great George-street, and on the west by the Park. But in consequence of further modifications which have taken place with regard to the arrangement of the public offices it is now proposed only to take compulsory powers to purchase the eastern half of that block, which is coloured red on the plan before you; a certain portion of it, which is numbered 126, a large block in front of the India Office, belongs to the Secretary of State for India, and he proposes to utilise it by erecting a museum upon it; the Government, therefore, do not propose to interfere with that block. It is further thought that it would be incurring a very great expense, which is not required, to purchase the houses in Great George-street, or those houses in Duke-street, facing the Park, and in consequence of that the small area comprising the houses between Boar's Head-yard and Gardiner's-lane would be of no value to the Government for public offices, and it is therefore proposed also to abandon that, and to confine the powers of the Bill to the part marked red.

4. I believe you also propose to abandon Dover House?—At present it is abandoned.

5. That is Crown property, I believe?—Yes; that is not mentioned in the Bill at all, it is dropped out.

6. Notice was given for taking Dover House, but we propose not to take the power to purchase the leasehold interest which exists in that house, which will expire and fall into the hands of the Crown in the year 1883?—Yes.

7. You propose to widen Parliament-street and to accommodate the public offices by a building fronting the widened street?—The object of the purchase is twofold; in the first place, to accommodate the several offices, the concentration of which was recommended by Lord John Manners' commission; and, in the second place, to widen Parliament-street. The Committee will observe, that as soon as the Home and Colonial Offices are completed (which they are now in process of being) upon this central block adjoining the Foreign and India Offices, the upper part of King-street will be obliterated by the building extending over it; the consequence is that, practically, for all purposes of traffic the lower part of King-street will become comparatively useless, and it will then be indispensable to widen Parliament-street, so as to accommodate the immense traffic which flows in that direction. It is for these two objects that this purchase is proposed, as a public improvement, and also as a governmental scheme.

8. Will you state to the Committee the estimate of the expense for land?—The expense for land, according to Mr. Hunt's estimate, is about 700,000 *l.* for the part now proposed to be purchased; the expense of the whole block, I may mention, is estimated at 1,286,000 *l.*

Mr. *J. Fergusson.*
6 July 1869.

9. *Chairman.*]

Mr. *J. Fergusson.*

6 July 1869.

9. *Chairman.*] What whole block?—The whole of the land for which notices were given in November last.

10. Mr. *Lawrence.*] I believe it was estimated in the report presented to Parliament at 1,443,920 *l.*?—That included certain property which has since been acquired.

11. There is a deduction to be made from that in respect of the property purchased since the date of the report?—Yes, the net sum would be 1,286,000 *l.*

12. I believe you estimate the present building at 400,000 *l.*?—About that for the building it is proposed to erect on the land we are now seeking powers to acquire.

13. Making a total of 1,100,000 *l.* to include land and buildings?—Yes.

14. As against 2,243,920 *l.*, which would have been the expenditure to be incurred for carrying out the scheme according to the Report?—That is so.

The plan was explained to the Committee.

15. *Chairman.*] The width of Parliament-street is to be 100 feet, I understand?—Yes; 100 feet to 120, as may be hereafter decided upon.

16. Mr. *Lawrence.*] I believe the principal difference between your plan and the larger plan is, that the Treasury remains undisturbed?—Yes, it will be undisturbed for the present; it will be improved eventually.

[The Witness withdrew.

On Clauses:—Mr. JAMES ROGERS; Examined by Mr. *Lawrence.*

Mr. *J. Rogers.*

17. YOU are the Vestry Clerk, I believe, of the united parishes of Saint Margaret and Saint John, Westminster?—I am.

18. Since the year 1865 the rates of those parishes have been mortgaged to an aggregate amount of 17,000 *l.* odd. Can you give the exact figure?—The mortgages originally amounted to considerably more, but the balance due upon them is 17,005 *l.* 17 *s.*

19. And that is payable by instalments?—That is payable by instalments.

20. When is the last of these instalments due?—It is due in June 1878.

21. I believe you have investigated the rate-books, and can furnish the Committee with the amount of the rates collected in the year 1868 from the property proposed to be purchased?—I have.

22. What is it?—It amounts to 2,394 *l.* 7 *s.*

23. It is proposed that the Government should pay to the parish the rates in respect of the property they take until the year 1878?—Yes.

[The Witness withdrew.

FROM THE

SELECT COMMITTEE

ON

WISLEY COMMON;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed,*
26 *April* 1869.

Friday, 2nd April 1869.

Ordered, THAT a Select Committee be appointed to consider the proposed Inclosure of Wisley Common.

Tuesday, 6th April 1869.

Ordered, THAT the Select Committee on Wisley Common do consist of Five Members.

Committee nominated of,—

Sir Francis Goldsmid.	Mr. Goldney.
Mr. Frederick Stanley.	Mr. Fawcett.
Mr. Brown-Westhead.	

Ordered, THAT the Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Three be the Quorum of the Committee.

Monday, 26th April 1869.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, to The House.

REPORT - - - - - - - - - - - - - p. iii
PROCEEDINGS OF THE COMMITTEE - - - - - p. v
MINUTES OF EVIDENCE - - - - - - - - - p. 1

REPORT.

THE SELECT COMMITTEE appointed to consider the proposed INCLOSURE of WISLEY COMMON;——HAVE considered the Matters to them referred, and have agreed to the following REPORT:—

THE Committee have inspected the proceedings of the Inclosure Commissioners relating to Wisley Common, and have heard evidence for and against the proposed inclosure.

Wisley Common contains about 370 acres, and is situate in the parish of Wisley, in Surrey. It immediately adjoins Ockham Common, authority to inclose which was obtained some few years since, but which has not yet been inclosed.

Four individuals only appear to have proprietary rights to or over Wisley Common; all these four gentlemen either promote or have assented to the proposed inclosure.

On the other hand, most of the persons resident in the surrounding district seem to be strongly opposed to the inclosure, and to believe that it would greatly lessen the pleasantness of the neighbourhood.

A Bill, intituled, "The Metropolitan Commons Act, 1866, Amendment Bill," has recently been brought in, and stands for a Second Reading on the 31st of May, which Bill is not yet printed, but the object of which the Committee understand to be the extension of the area comprised in the provisions of "The Metropolitan Commons Act, 1866." If this Bill (which is hereinafter referred to as the Extension Bill) passed, the extended area would most probably include Wisley Common.

On the expediency of the object of the Extension Bill, the Committee have come to no resolution, as they do not understand that question to be referred to them.

But they do not find in the circumstances relating to Wisley Common any such peculiarity as would, in their opinion, justify them in recommending that it should be excepted from any general rule (whether for or against inclosure) which is considered by the Legislature as ordinarily applicable to Commons at a similar distance from the metropolis.

The Committee accordingly recommend that the Third Reading of the Bill authorising the inclosure of Wisley Common (hereinafter referred to as the Inclosure Bill) should be postponed (say till the middle of June), in order to afford to the House an opportunity for previously expressing its opinion on the Extension Bill.

If the Extension Bill should pass, and the extended area should include Wisley Common, the Committee do not consider the Provisional Order of the Inclosure Commissioners a sufficient reason for excepting Wisley Common from the operation of that Bill. If

If no progress should by the middle of June have been made with the Extension Bill, the Committee recommend that, subject to the modifications hereinafter mentioned, the Inclosure Bill should be passed.

The Committee are not satisfied with the sufficiency of the reasons given by the Inclosure Commissioners against the reservation of allotments for the labouring poor, and the Committee recommend a reservation of 10 acres for that purpose if the House should sanction the inclosure.

In the same event the Committee recommend the reservation of a recreation ground of six acres, and also the reservation, for the purposes of walking and riding, of spaces of land, both adjoining the turnpike-road and traversing the Common.

PROCEEDINGS OF THE COMMITTEE.

Thursday, 15*th April* 1869.

MEMBERS PRESENT:

Sir Francis Goldsmid.	Mr. Fawcett.
Mr. Brown-Westhead.	Mr. F. Stanley.

Sir FRANCIS GOLDSMID was called to the Chair.

The Committee deliberated.

[Adjourned till Thursday next, at Twelve o'clock.

MINUTES OF EVIDENCE.

Thursday, 22*nd April* 1869.

MEMBERS PRESENT:

Mr. Brown-Westhead.	Sir Francis Goldsmid.
Mr. Fawcett.	Mr. Frederick Stanley.
Mr. Goldney.	

SIR FRANCIS GOLDSMID, IN THE CHAIR.

Mr. HENRY MARSHALL, called in; and Examined.

1. *Chairman.*] WILL you inform the Committee of the interests of Lord Lovelace and other parties in Wisley Common?—Lord Lovelace is lord of the manor and the proprietor of a considerable quantity of the land in and round it. Mr. Charles Buxton, M.P., is also a large proprietor adjoining.

2. Mr. *Goldney.*] Who are the other proprietors?—Mr. Locke King has an interest in the common as a large landowner adjoining it, and also the clergyman of the parish.

3. Is he the rector or the vicar?—The rector.

4. *Chairman.*] Are those the only proprietors of the common?—They are the only proprietors.

5. Mr. *Goldney.*] In the parish or in the manor?—In the manor.

6. Are the parish and the manor co-extensive?—Lord Lovelace is the largest proprietor.

7. Is Wisley Manor in another parish?—I do not think there is any part of it in another parish.

8. This is commonly called Wisley, is it not?—Yes.

9. *Chairman.*] You think that the manor is a parish, and nothing more?—Nothing more; there are common rights besides.

10. Mr. *Goldney.*] You were asked whether the manor and parish are co-extensive?—They are co-extensive.

11. *Chairman.*] Has anybody who is a proprietor outside the manor any common rights?—Yes, some of the petitioners have; for instance, Mr. Buxton.

12. I understood you to say that his land is within the manor?—He has got some land out of the manor.

13. Mr. *Brown-Westhead.*] Is his land in the parish?—No, unless he has bought some land of Mr. Locke King.

14. Mr. *Fawcett.*] I thought you said that the manor and parish were co-extensive?—No; there are rights of common which were acquired by the tenants of land originally belonging to Lord King, the father of Lord Lovelace, or to Lord Lovelace, who had assumed that title, and such tenants acquired common rights by usage in respect of the land they so occupied.

15. Mr. *Goldney.*] What I gather from you is, that a former lord of the manor had tenants of the manor, who, in respect of their tenancy, had rights through lands outside the manor, some of which lands have been sold to Mr. Buxton, but they still reserve the rights over the common?—Yes.

16. What is the rule by which you know who has a right, and who has not; is it simply usage?—Usage.

17. Practically, the gentlemen you have mentioned, Lord Lovelace, Mr. Buxton, Mr. Locke King, and the rector, are all the persons who have rights?—Yes.

18. Nobody else has any right of common?—No one else has any right of common.

19. Mr. *Fawcett.*] But you said just now that a great many of the tenants under a former Lord Lovelace have acquired rights of common by usage?—So they have.

20. You have just stated to the Chairman that no one else has got rights of common but those four gentlemen?—It so happens that they are the only persons who did acquire rights.

21. Mr. *Goldney.*] You mean that the rights have centred in these four people?—Yes.

22. *Chairman.*] What is the extent of the common rights which other persons have besides Lord Lovelace, Mr. Charles Buxton, Mr. Locke King, and the rector?—The right of pasturage.

23. And the right of pasturage to what extent?—Without limit.

24. Do you mean to say that they can send as many cattle as they choose to put upon the common, or as many cattle as they can keep in these inclosed lands?—No; as many as they choose to put upon the common.

25. What are the other rights?—Turbary is next.

26. What is the limit of that?—There is no limit except the limit which the law gives, that they can only cut what they consume in the cottage.

27. Is

Mr. *H. Marshall.*

22 April 1869.

27. Is the right of turbary to the extent of the consumption of the household?—Exactly.

28. Are there any other rights?—No.

29. What are Lord Lovelace's rights besides his right of soil?—He has common rights.

30. The same common rights? — The same common rights.

31. Has he any right to take gravel, and so on?—Yes, and all the mines and minerals belong to him.

32. The same rights of common as the others, and the ordinary rights of the lord of the manor besides; is that what you mean?—Yes.

33. Who applied to the Inclosure Commissioners?—All the parties.

34. All the four you have mentioned?—Yes.

35. Lord Lovelace, Mr. Charles Buxton, Mr. Locke King, and the rector?—The rector did not apply at first, but he came in afterwards.

36. Was there any representation to the Inclosure Commissioners against the inclosure?—Not a single objection has been made up to the present time.

37. What time did you first hear of any objection?—Since the meeting of Parliament.

38. That objection, I believe, comes from a certain gentleman?—I do not know whom; I cannot imagine.

39. According to your view, has no person any rights of any kind in the common except the four gentlemen you have mentioned?—No rights of any kind.

40. The common is a great deal used, is it not (I do not mean whether it is lawfully used or not), for riding and taking exercise on?—As little as it is possible to conceive; the adjoining land is used for pleasure purposes.

41. What is the adjoining land that you are speaking of?—Part of Mr. Buxton's land.

42. By what name does that go?—St. George's Hill.

43. Is the ground in such a state that it can be ridden over by anyone passing?—There is a taste in that; I should think it is not good.

44. In what respect do you think that it is not good; do you mean that it is rough ground?—In the first place, it is wet at certain times of the year; the level is a little under the River Wey; the river water is not above six feet below it; there is a mill, and when that is penned up the consequence is that it is perfectly damp; it requires a great deal of money to be expended upon it to drain it properly.

45. Had anything at all been done to extend the ditches, and so on, in draining?—Very little.

46. Have the Inclosure Commissioners made any reservation for recreation under the Act?—Yes.

47. Have you any plan showing what the Commissioners have done?—Yes, I have a plan. This is a plan showing the situation of the manor and the land adjoining it (*producing the same to the Committee*).

48. Is that the Commissioners' plan?—It was prepared in the Commissioners' office. (*The witness explained the plan to the Committee.*)

49. Is the piece which the Commissioners propose to reserve for recreation marked on that plan?—No; but it is near the school.

50. Mr. *Goldney.*] This is not an allotment plan?—No.

51. *Chairman.*] You have not a plan showing the piece reserved for recreation?—No, I have not.

52. Do you know what the population of the parish is?—It is very trifling; I do not know the exact numbers; the Commissioners state all that in their proceedings.

53. Mr. *Goldney.*] Are there any other landowners in the parish of Wisley besides the four you have named?—Yes, I should think there are; it is not a large parish.

54. There are other landowners besides Lord Lovelace, Mr. Buxton, Mr. Locke King, and the rector?—I should think so.

55. Does the rector claim in right of his glebe, or does he claim an interest in it from having titheable claims over it?—In right of his glebe.

56. In right of his glebe?—As a landowner.

57. What limit have you to the common rights if there are other landowners? — There have been inter-commonage rights.

58. What prevents the other landowners having a right of common of any sort over this common of Wisley?—There are a trifling number of landowners.

59. Are there any others besides these four gentlemen?—The land steward of Lord Lovelace is here, and he can tell me, if you allow me to refer to him.

60. I want to get, simply, as a fact, whether there are any other landowners or not? — I should say that you will be told there are none; still, there may be an exception to that.

61. You do not know whether there are any other landowners or not?—I do not.

62. From your position, as steward of Lovelace, do you know sufficiently about the rights of common to be able to speak of what they are?—Yes.

63. Do you know better than the land steward what the rights of common are?—Not better.

64. Do you know as well?—Quite as well.

65. Is there a court held for Wisley?—Yes.

66. Are there any infringements of the common rights presented at that court?—Yes; and prosecuted.

67. Have you the court-book here which shows that?—Yes.

68. Will you be able to point out to the Committee, if they require it presently, that infringements have been made from time to time?—I do not think they are on record, because, to a certain extent, it has been notified that the infringements will not be allowed, and that persons who commit such infringements will be prosecuted.

69. How often do you hold this manorial court?—Very seldom.

70. You do not hold the court every year?—No.

71. Was it held annually in your time?—No.

72. How long have you been steward?—Ten or twelve years.

73. How many courts have you held in that time?—None; I have had no occasion to hold any.

74. Were you mixed up with the court before you became steward. I asked you the question how long you had been steward, and you replied 10 or 12 years. Then I asked you how many courts have you held, and you stated that you have held none. I want you to reconcile those statements?—I say I have held none, because there has been no occasion to hold any.

75. How do you account for the fact that there have been several presentments which have been remedied?—There are not regular presentments to the court, but a trespass has been committed.

76. You know as well as I do, and as well as other parties, that if there are infringements on manorial rights, they are generally presented at the manorial court?—That is very seldom the case. A communication is made sometimes. A trespass may be committed, it may be, by mistake. The land steward, or the steward of the manor, makes the communication.

77. How did you become steward of the manor?—By the appointment of Lord Lovelace.

78. Is there a record of that?—I do not think there is.

79. You know as a fact, I presume?—There is no record of it, I am quite satisfied.

80. There is no entry in the court-book that you are the steward?—No.

81. How do the public know that you are the steward?—They do not know except by my acting.

82. I cannot understand how you are acting if you have never held a court, and none has ever been held in your time. There is no record of your appointment, and yet you say you act as steward?—I inquire from time to time, unless it is reported to me that any trespass has been committed. If it is so reported, I immediately complain of it, and whenever I have complained it has been stopped, and never persisted in. A gentleman residing at Weybridge cut turf, but upon my complaining of it he desisted.

83. Are there any quit rents paid for the manor that you receive?—No, I think not.

84. You do not receive any?—No; they are recorded as due, but they are not received.

85. Who are they reported to?—I know what the quit rents are from the court roll.

86. *Chairman.*] Just let us see the court roll?—There it is (*handing in the same*).

87. Mr. *Goldney.*] What quit rents are there?—Lord Lovelace being himself the great proprietor would pay the quit rents if he were an independent person, but the quit rents are not collected.

88. The manor you say is in Lord Lovelace?—Yes.

89. Who was steward in 1835?—Mr. Potter.

90. Is he living?—No.

91. What number of copyholders are there in the manor?—None now except Mr. Locke King.

92. Is he a copyholder?—I am not sure whether he is a copyholder; he has got land.

93. You never admitted any copyholder?—Never.

94. Mr. Buxton, I understand from you, has no land in the parish?—None; I am not sure whether he has not bought land from Mr. Locke King, but not being copyhold I have not had any notice of it.

95. You only know any land that is copyhold?—Yes.

96. Are Lord Lovelace's lands copyhold?—I think none.

97. You say there is no copyhold now?—I do not think there is one.

98. How did Mr. Locke King's copyholds cease or become freehold?—They were sold; Mr. Buxton bought some.

99. But selling would not make them copyhold? No; their not passing through the court is a proof that they were freehold.

100. You say there were certain copyhold lands in this manor?—Yes.

101. You say that Mr. Locke King's lands were copyhold some time or other; do you mean that all Mr. Locke King's lands that are copyhold are sold to Mr. Buxton?—No; he has got some unsold, but he pays no quit rent for them.

102. I want to see whether these common rights are in respect of copyhold, or whether they are general rights. The point I want to get at is, whether the copyhold rights of these four gentlemen are claimed simply in respect of copyhold estates, or whether they are claimed because they are tenants who have lived in the parish as parishioners?—The copyholders merge in the manor.

103. I assume that all Lord Lovelace's lands that he has bought are merged in the freehold?—Yes, I believe there are no other copyholds; they were originally his or his father's.

104. Whose?—Lord Lovelace or his father's.

105. I want to know, as a fact, whether there are any copyhold lands existing at the present time in Wisley Manor?—None.

106. Mr. *Brown-Westhead.*] I understand that all the rights of pasturage and turbary were consequent on the usage?—Not all; some of them were derived from being proprietor of land in the parish.

107. Mr. *Goldney.*] Were these commonable rights in respect of ancient copyhold tenements, or were they in respect of parties resident in the parish, irrespective of what the tenure of the tenement was in which they lived?—Not in respect of parties resident in the parish.

108. Are the commonable rights in respect of all land in the parish, whether copyhold or freehold?—All lands in the parish have a right of common.

109. All lands in the parish, whether copyhold or freehold, or whatever their tenure may be, have a right of common?—Yes.

110. As regards the question of pasturage, it is immaterial whether it is one acre or 100?—Quite.

111. Are there any regulations with regard to beasts; would it be for horses as well as cattle?—Yes.

112. Are there any cattle?—Yes.

113. Horses and cattle?—Yes.

114. So that a man with one acre might put on as many horses and cows as he pleased?—Yes.

115. But he could not exercise a right of turbary except he had a tenement?—Exactly.

116. He would have a right to put horses and cattle on without having a building?—Yes.

117. The right of turbary would be limited to what the household would consume?—To the household consumption.

118. Practically, it is the tenants of Mr. Locke King, the rector, and Lord Lovelace, who do exercise the rights of common?—Yes.

119. As regards Mr. Buxton's rights, are they limited?—In what respect?

120. You say that certain tenants of his who are outside the parish, exercise the rights of common over Wisley Common?—Yes.

121. Are those rights limited in any way?—No.

122. Not as to area?—No.

123. If he had a house in Parliament-street, would his tenants have the right to exercise turbary?

Mr. *H. Marshall.*

22 April 1869.

turbary?—No; it must be the occupiers of his lands.

124. Where?—The occupiers of those lands who, from time out of mind, have enjoyed the common.

125. There must be some limit of area for his tenants?—He is limited to the land.

126. What limit is that?—Occupation.

127. I mean limit as regards locality. Where is the locality that gives the right to Mr. Buxton's tenants?—Mr. Buxton will have a farm, say, of 100 acres.

128. Where?—Outside the parish, we will say; and, in respect of that farm, he had common rights, and all the successors of those tenants would have common rights.

129. You say that all the parties in the parish, without reference to their tenure, have the right of commonage; but that Mr. Buxton is a privileged person for something or other, because his tenants have the right of common, although they live outside the parish?—Entirely in respect of the land of which they have those rights.

130. Is it limited to the land adjoining, or to Ockham?—No.

131. What is the land that gives him a right over Wisley Common?—Byfleet.

132. *Chairman.*] Is that so?—Yes.

133. Then none of Mr. Buxton's tenants who live in Byfleet have the right of common?—No.

134. Mr. *Goldney.*] What we want to ascertain is, whether there is a general right of commonage?—No; there is not a general right of commonage; they must have acquired the right by usage.

135. What other parish besides Byfleet?—Weybridge; I do not know that there is anything in Weybridge.

136. What other parishes besides Byfleet contain lands?—I think Byfleet is the only one. I am told by the land steward that there are Ockham, Purford, and a small portion of West Horsley.

137. Mr. *Goldney.*] Are there any gates on the common; is it inclosed in any way by gates?—No, I think not; not the common itself.

138. Is there any timber on it?—Yes.

139. Who cuts the timber?—Lord Lovelace.

140. Has he a right to plant?—Yes.

141. Has he exercised, to your knowledge, both the right of cutting and planting timber?—He has no occasion to exercise the right of planting, because that sows itself; I mean the fir trees.

142. Do you know whether he has exercised the right of planting?—I have no doubt he has.

143. You do not know of your own knowledge?—I do not recollect.

144. Does he sell gravel?—I do not think he has sold it; he has appropriated it.

145. Does he allow anyone to take gravel without payment?—No, certainly not.

146. Do any of these four people take gravel?—Yes, Mr. Locke King would of course if he wanted any.

147. *Chairman.*] Do you mean that he would take it by permission, or by having a title to it?—I think he would take it without question, but no one else would. I do not think Mr. Buxton has taken any gravel. The exclusive right of digging is vested solely in the lord.

148. Mr. *Fawcett.*] Is Wisley Common an undulating ground?—To a certain extent it is; not much.

149. There are undulations?—The beauty of the undulations is from the adjoining lands.

150. Are there not pretty views walking over Wisley Common?—The views are very pretty in the neighbourhood; the views from the common are not pretty.

151. In walking over Wisley Common, from the common you get nice views of the surrounding country, do you not?—Partially so.

152. And there are undulations on the common?—That is partial also.

153. What is the character of the soil?—Approaching to clay.

154. It is not a sandy soil?—No.

155. You say the ground is not much used by pleasure people, but that the adjoining ground of Mr. Buxton is greatly used.

156. It is not Mr. Buxton's land?—Wisley Common, you say, is not used by pleasure people, but St. George's Hill is generally used?—Yes.

157. St. George's Hill has been inclosed, has it not?—Yes.

158. Then, if it were not for the liberality of the present proprietor of St. George's Hill, the public could be at any time excluded from St. George's Hill?—Yes, it has been inclosed.

159. If they were excluded from St. George's Hill, they would have to take their pleasure somewhere else?—Unquestionably.

160. Mr. *Brown-Westhead.*] Do many people come to Wisley Common now, from London or elsewhere?—None; a stranger is not seen there.

161. You say it is very wet, and not pleasant to walk upon?—No.

162. Mr. *Fawcett.*] You have stated that the ground is wet at particular seasons of the year; I suppose in the height of summer, June, July, and August the ground is not wet, is it?—No.

163. It is then perfectly dry, is it not?—It is dry, but it is not desirable for pleasure.

164. Mr. *Brown-Westhead.*] How far is Wisley Common from Weybridge station?—Three miles.

165. Mr. *Fawcett.*] Are there no freeholders in the parishes of Wisley, Ockham, Purford, and West Horsely, except the four gentlemen you have named, who have rights over Wisley Common?—None, except those I have mentioned.

166. Why has Mr. Buxton, owning land in Byfleet, a right of common over Wisley Common, when a freeholder living in the same parish has not?—Simply because the freeholder has not received the right.

Mr. Robert Boarman, called in; and Examined.

Mr. *R. Boarman.*

167. *Chairman.*] I believe you are the land steward of Lord Lovelace?—Yes.

168. Can you tell us more precisely than has been stated by the last witness in respect of what land rights of common are exercised over Wisley Common?—Are you speaking, first, of Lord Lovelace?

169. Yes?—He has got two or three farms that have rights of common, which he lets to tenants, and those farms are situated in other parishes

parishes besides Wisley. Of course that land claims the right of common.

170. In the first place, have all lands in Wisley parish itself rights of common over Wisley Common?—All except a few acres; that is the woodland belonging to Payne's Hill Estate.

171. They are in Wisley parish?—Yes.

172. They are also in Wisley manor?—Yes.

173. Are the parish and the manor co-extensive?—That I will not say as regards those few acres.

174. Do you know why those few acres have the right of common?—They have never exercised the right.

175. This is entirely woodland?—Yes.

176. Old woodland?—Yes.

177. All the lands except the woodland have the right of common?—Yes.

178. You say that Lord Lovelace has a right in respect of some land out of Wisley?—Yes; where they occupy a farm which is in two parishes, that land which is in the adjoining parish claims rights of common as well as the land which is in the parish of Wisley.

179. To what land of Lord Lovelace's does that answer apply?—To some lands in Purford, Ockham, and West Horsley.

180. To what extent are the lands?—I have not the acreage with me.

181. Mr. *Goldney.*] With regard to each of those farms, you say the farmers had lands also in Wisley?—Yes.

182. *Chairman.*] What do you say as to Mr. Locke King?—Mr. Locke King has Byfleet Park Farm, which is in the parish of Byfleet. Byfleet Farm was originally partly in Wisley and partly in Byfleet. The part in Wisley he sold to Mr. Buxton, and by right of usage he claims for that land which is in Byfleet.

183. Is there any other land?—No.

184. Mr. *Goldney.*] Mr. Locke King has nothing in Wisley parish?—Nothing now. He recently sold all his land in Wisley to Mr. Buxton.

185. Has Mr. Buxton any land out of Wisley?—He has some in Byfleet, which he bought of Mr. Locke King, as well as Wisley.

186. He bought some in Byfleet as well as that in Wisley?—Yes.

187. I suppose the rector has no land except the glebe land in the parish?—No.

188. Do you agree with the last witness in stating that no one else except the four gentlemen whom you have named, and their tenants, have any right of common?—Yes; I do not consider that the person I spoke of at Payne's Hill has any right.

189. You mean in respect of the woodland?—Yes.

190. *Chairman.*] Has he claimed any right?—No; he has never exercised any.

191. Do you agree with the last witness that the right of pasturage is without stint, so to speak, and that the tenants may put on any number of cattle they think fit?—There has been no stint since I have been land steward.

192. How long have you been land steward?—Fifteen years.

193. Mr. *Goldney.*] As I understand, Lord Lovelace has lands in Purford, Ockham, and West Horsley on which the parties claim by usage commonable rights, but that for no other lands does anybody else claim commonable rights?—Not any.

194. You say that Mr. Locke King claims in respect of the land he has obtained, does he not?—Yes.

195. You stated that Mr. Buxton claims with respect to Wisley?—Yes; what he originally bought from Mr. Locke King.

196. There is no other landowner in Wisley parish, except the gentleman owning the Payne's Hill Estate, Lord Lovelace, Mr. Buxton, and the rector?—No.

197. Therefore, those three gentlemen, Lord Lovelace, Mr. Buxton, and the rector, own the whole land in the parish, except the piece of woodland?—Yes.

198. Can you tell what the population of Wisley is?—It was between 150 and 160 in 1861.

199. How many cottages are there in respect of the farm; I mean farmhouses and cottages together?—There are about four farmhouses.

200. How many cottages are there?—About 23 or 24 cottages.

201. Have most of those cottages gardens?—Yes, all of them.

202. Are there any field allotments irrespective of gardens in the parish?—Not in that parish.

203. Have any of the cottages in Wisley allotments in an adjoining parish?—Yes, they have.

204. What parish is that?—Ockham.

205. To whom do those allotments belong?—Lord Lovelace.

206. He lets to his cottage occupiers in Wisley field allotments in an adjoining parish?—Yes, because Wisley parish is a scattered parish, and, therefore, it is inconvenient for them to have little pieces.

207. What are the adjoining parishes to Wisley?—Ockham is one.

208. Is Byfleet another?—Yes.

209. Does Purford adjoin it?—Yes.

210. And West Horsley?—Yes.

211. Are there any other parishes that adjoin Wisley but those you have mentioned?—East Horsley, Walton-on-Thames, and Cobham.

212. Those are all adjoining?—Yes.

213. Mr. *Fawcett.*] Do they abut at all on Wisley Common?—There are some of them three or four miles distant; East and West Horsley are three or four miles distant.

214. Purford is on the other side of the River Wey, is it not?—Yes.

215. What parish adjoins the common on this side?—Byfleet.

216. Is Byfleet the only parish that touches the common?—Byfleet is the only parish that touches the common.

217. Byfleet is, in point of fact, the only one that touches the common?—Yes.

218. Do you know what the population of Byfleet is?—I have no idea.

219. Is it thickly populated or not?—About 1,000, I should say.

220. Do you know, as a fact, whether the Byfleet people are in the habit of using Wisley Common for any purpose?—Yes, to my knowledge.

221. I do not mean as claiming a right, but whether they use it for exercise ground or for the purpose of recreation?—I never saw it used; I never saw even a game of cricket played on it.

222. Not by anyone?—Not by anyone.

223. Were you present at the meetings that were held by the Inclosure Commissioners?—Yes.

Mr. *R. Boarman.*

22 April 1869.

224. Were those advertised in the ordinary way by notices stuck up?—Yes.

225. Were there any parties who claimed to have a right beyond those four gentlemen at those meetings?—No.

226. Did anyone on the part of the public claim to have any rights over the common?—No.

227. Can you give the Committee any reason why Wisley Common has been delayed being inclosed so long?—No, I cannot understand it; if it had been Ockham, I should not have been surprised.

228. Did you suggest that it should be inclosed before this time; was it a suggestion of your own that it was desirable for the sake of making it productive that it should be inclosed?—Lord Lovelace thought it would be better, having previously obtained the sanction of the Ockham people to it.

229. There was a common at Ockham, was there not?—Yes.

230. When was Ockham Common inclosed?—The sanction to it was obtained about three years ago.

231. Is it, in fact, inclosed now?—The inclosure is nearly completed.

232. Then, assuming Wisley Common to be inclosed, the larger portion would fall to Lord Lovelace?—Yes, I suppose it would.

233. What does Lord Lovelace claim for his manorial rights; what is your view of what Lord Lovelace would be entitled to as lord of the manor?—One-eighth.

234. What are the relative proportions of the land of these four gentlemen you have mentioned, Lord Lovelace, Mr. Buxton, Mr. Locke King, and the rector?—I have not got any minutes with me.

235. I do not want you to state it accurately; what is the amount of the rector's glebe?—About 60 acres, I believe.

236. The Inclosure Commissioners state in their Report that the extent of Lord Lovelace's land is 560 acres?—I daresay that is correct.

237. There are only two roads to it?—Only one public road; there is a bridle way, and a footway across it.

238. This is one of the answers given to the Commissioners: "There are about 1,650 acres in respect of which rights of common are exercised. Of these about 1,590 acres belong to the assenting parties." To whom do the other 60 acres belong?—I did not know that there were so many as 60 acres; I think it is only about 20 acres.

239. Mr. *Goldney.*] What is the quantity of woodland?—I should think about 20 acres.

240. *Chairman.*] You do not know what these 60 acres refer to?—I do not remember now.

241. Mr. *Goldney.*] What is the acreage of Wisley parish without the common?—I have not got any notes here to enable me to state that.

242. Is it 1,000 acres or 500 acres?—It is a little over 1,000 acres.

243. Does that include the common or not?—That must include the common.

244. Then it is between 600 and 700 acres without the common?—I think so.

245. What quantity of land, in round numbers, do you suppose Mr. Buxton owns?—About 400 acres, I should say, in round numbers.

246. What quantity of land has Mr. Locke King in Byfleet?—I do not know.

247. Do you know what the rector's glebe is?—About 60 acres.

248. Then, according to that, Mr. Buxton must have between 600 and 700 acres?—Mr. Buxton's does not exceed 400 acres.

249. What does Mr. Locke King hold in Byfleet?—Not more than 150 acres, if he has that.

250. Then, if he has only 150 acres, you mean that Lord Lovelace would hold about two-thirds of the whole?—Yes, he would.

251. You say there is only one road?—There is only one public road.

252. Is the common unhealthy in summer, from the quantity of stagnant water remaining upon it?—It is more unhealthy in the winter, when there are cases of fever. Fever has been very bad, indeed, during the last winter there.

253. From the miasma?—Yes; that is the medical testimony.

254. There has been a medical statement to that effect?—I was asking a medical man about it; and he stated that he thought it was owing to so much rain having fallen during the winter months, which had remained stagnant.

255. There is no drainage by which the water could get off?—There are only two outfalls.

256. A great deal of it has to be taken off by absorption?—Yes; during this winter there have been pools of several acres in extent on the common.

257. Before it could be brought into cultivation or use, considerable expense would have to be incurred, would there not?—Yes.

258. In your opinion, would it be beneficial to the inhabitants of the district to have it inclosed, or leave it as it is?—In my opinion it would be more beneficial to the inhabitants to have it inclosed.

259. Do you think that anyone would be materially injured in the parish or district by having it inclosed?—I do not think they would.

260. You say you have not heard anyone state that they would be injured?—No; the inhabitants of the adjoining parish of Ripley have a very nice recreation ground, and it is the same at Ockham.

261. Mr. *Fawcett.*] The Report of the Commissioners state that there are about 60 acres belonging to people who do not assent to the inclosure; you know nothing about those persons?—No, I do not.

262. Then, according to that, if there are 60 acres belonging to persons who do not assent, there must be other proprietors who have common rights besides the four you have mentioned?—I have never heard anyone refer to them.

263. *Chairman.*] What is the extent of the glebe land?—About 60 acres.

264. Mr. *Fawcett.*] We may assume that these 60 acres represent the rector's glebe?—Yes.

265. He is described in the Report as not assenting to the inclosure?—Yes; it was not thought necessary to ask him in the first place when the Commissioners were asked to attend; but afterwards he did sign the Report.

266. Why was he not asked?—There was a change just at that time.

267. Is not the reason why Wisley Common is damp in the winter months owing to its being scarcely above the level of the River Wey?—Yes.

268. Is

268. Is not the dampness increased by the fact of a mill penning back the water?—No; I do not think that.

269. You differ from the previous witness in what he stated in that respect?—Yes; because when the river is full and swollen, that causes the water to flow back to the main watercourse.

270. If that is the occasion of a portion of the common being damp, how could you prevent the river rising in the winter months?—There is no prevention, I think.

271. This dampness is an evil associated with the high level of the river?—Yes.

272. Therefore you could not, under any circumstances, remedy it?—Not without a very large outlay.

273. Which would be scarcely remunerative?—Only to the owner of a very considerable quantity of land.

274. Could you suggest any plan of draining it, except by lowering the level of the Wey or the Thames?—An undercourse could only be taken where there is a fall in another direction.

275. Do you think there is the slightest chance of such an expensive work being carried out as taking a conduit under the River Wey?—Yes.

276. Have you ever heard that proposed?—Yes; it has been carried out easily in one or two instances.

277. Do you think that might be done here?—I think it might be; if the level of the river was taken there might be an outfall at a great cost.

278. You cannot speak at all positively?—No, I cannot.

279. Therefore, we cannot assume as a certainty that even if this land were inclosed that it would be drained?—No, you cannot.

280. Part of it is undulating ground, is it not?—Yes.

281. Of course that is not damp?—No, it is not damp.

282. It is not damp, at any rate, in the summer months?—About three months in the summer it may be dry.

283. You state that the ground is not resorted to by pleasure seekers?—I have never seen anyone there.

284. But the neighbouring places close to it, such for instance as St. George's Hill and Ockham Common have been greatly resorted to?—Not greatly; I think there is permission given once or twice a week to parties to go to St. George's Hill.

285. St. George's Hill is private property?—Yes.

286. And Ockham Common has been inclosed?—Yes.

287. Suppose the proprietors (which they might do at any time) decided upon not giving access to the public either to St. George's Hill or Ockham Common, there would then be in the immediate neighbourhood very little open ground to which they could resort?—There are large spaces both at Ripley and at Ockham.

288. I thought you said that Ockham had been inclosed?—There is recreation ground left open.

289. How much is the recreation ground?—About four acres.

290. I understood you to say, that the only right which the public have to open ground, is four acres at Ockham and Wisley Common?—There is a large green at Ripley.

291. Is that recreation ground?—Yes.

292. How many acres is that?—Sixty, odd.

293. How far is Ripley from Ockham?—A mile or two; Ockham joins the green.

294. Was that recreation ground reserved?—Yes; it was reserved when the common was inclosed.

295. These 60 acres?—Yes.

296. But the public can be excluded from St. George's Hill at any time?—I suppose they can.

297. How far is Wisley from the nearest railway station?—Three miles.

298. You say there are about 20 cottages in Wisley?—Yes; Mr. Buxton may have built one or two since.

299. Most of the cottages have allotments in the parish of Ockham?—Not most of them.

300. Some of them?—A few have.

301. Are you aware that the Commissioners state as a reason why they propose to reserve no ground from Wisley Common as allotments for the neighbouring parishes is, that all these cottages have gardens?—That is what was considered at the time when we had the meeting. The question was asked by Mr. Wetherall, and the answer was given by those persons that they had sufficient gardens to all their cottages.

302. If they have sufficient garden, why did they require an allotment in Ockham?—There is a field set apart for Ockham and Wisley. If there are one or two tenants in Wisley who want a little more land, his Lordship allows them to have it.

303. In fact these cottagers, or some of them, taking land at Ockham, show that, in their opinion, they think they have not got enough ground?—It is a scattered parish.

304. It was stated at the time of the proposed inclosure, that the cottages in Wisley had gardens, and that those gardens were large enough?—Yes.

305. *Chairman.*] Have they gardens, as a matter of fact?—Yes.

306. Mr. *Fawcett.*] But I am to understand, am I not, that some of these cottagers, in addition to their gardens, rent an allotment at Ockham?—Yes, there are three who do.

307. Therefore, we may conclude from that fact, that those three at least, whether rightly or wrongly, in their own opinion consider that their gardens are not large enough?—One of them has got half an acre of land to his garden now.

308. Of course you may think the gardens are large enough, but I want to arrive at what the opinion of the cottagers is. Do you not think we may conclude that the cottagers, from renting an allotment at Ockham, think that the gardens attached to their own cottages are not large enough?—I do not think that that is their feeling.

309. Why would they rent the allotment if they did not think so?—Because his Lordship sets a field apart, which he allots to A, B, or C, his own tenants.

310. These cottagers are not compelled to take the land?—Certainly not.

311. Then why do they take the land at all if their gardens are large enough?—When it was first set out it was only six acres. There happened to be one or two cottages which his Lordship has got built adjoining Ockham, and he has allowed them to have an allotment.

312. You do not understand my point. Would the

Mr. *R. Boarman.*

22 April 1869.

the cottagers at Wisley rent land at Ockham if they did not think they required it?—Of course not.

313. Then, it is because the cottagers at Whisby think that their gardens are not large enough that they avail themselves of the opportunity afforded by Lord Lovelace's liberality or kindness of getting land at Ockham?—I think it is of very little benefit to them.

314. However, we may conclude that that is their opinion?—I do not think it is; I never heard them express any other opinion than that they had sufficient gardens.

315. If they have sufficient gardens, why should take land at Ockham?—They are not all farm labourers; some of them have an opportunity of working at the mills, and they get three or four hours in which they can work in their gardens; if they can get a piece of land, it is of some advantage to those who have large families.

316. Some of these labourers, not being regular agricultural labourers, think they have an advantage from having land in addition to their gardens?—Yes.

317. Therefore, when the Commissioners conclude that every cottager at Wisley had a garden that was large enough, they did not express the opinion of all the cottagers?—I think it was well considered at the time; there are one or two gentlemen who were well acquainted with the parish who were present.

318. Were these cottagers themselves asked to give evidence?—One who was present was.

319. Only one gave evidence?—Yes.

320. Then the opinion of the rest was not ascertained?—Of course not; there was only one asked, because he was the only one present.

321. Mr. *Brown-Westhead.*] Do those people who have an allotment sell their produce?—Yes; they do often.

322. They do not require all their produce for their own families?—No; if they have got a larger piece than they require for vegetables, then they grow a little corn.

323. You think half an acre is enough for a family?—Yes.

324. If in their spare time they have an opportunity of raising something which is productive, that is sold in the market, I suppose?—I think where we see half an acre well taken care of, that it produces more than an acre badly treated. I do not think it is of any use allotting a large extent of land for gardens; I have seen instances of it in the case of agricultural labourers, where their time is not occupied after six o'clock in the evening.

325. *Chairman.*] What is the size of the gardens in Wisley?—Most of them are a quarter of an acre; that is generally what we consider a cottage garden.

326. Are there any smaller?—There are only two smaller, I believe.

327. Mr. *Goldney.*] You find, from your experience, that men want allotments in order to produce their winter store, or employ their leisure time if they have not regular work?—Yes.

328. The garden, which would be enough for the ordinary consumption of a family, is superadded by this extra piece of ground, which they take to employ themselves upon?—Yes; they are not always employed as agricultural labourers; they work in the wood in bad weather, and so on.

329. Mr. *Fawcett.*] Do you reside in the neighbourhood of Wisley?—Yes, almost adjoining Wisley, within 200 yards of it.

Thomas Chambers, Esq., Q. C., a Member of the House, Examined.

T. Chambers, Esq., Q.C., M.P.

330. *Chairman.*] Will you inform the Committee of any facts which appear to you to bear on the inclosure of Wisley Common?—I was desirous of calling the attention of the Committee to a few passages from the recent Acts of Parliament which have been passed with reference to the inclosing of commons and open spaces, with the view of raising the question before the Committee as to whether the policy of Parliament in relation to that question is not against the proposed inclosure. The first Act to which I wish to call attention, is that of 1836, 6 & 7 Will. 4, c. 115, which is "An Act for facilitating the Inclosure of Open and Arable Fields in England and Wales." That Act recites, "Whereas there are in many parishes, townships, and places in England and Wales, divers open and common, arable, meadow, and pasture lands and fields, and the lands of the several proprietors of the same are frequently very much intermixed and dispersed, and it would tend to the improved cultivation and occupation of all the aforesaid lands within such parishes, townships, and places, and be otherwise advantageous to the proprietors thereof and persons interested therein, if they were enabled by a general law to divide and inclose the same." It goes on to make provisions for the manner in which such inclosures may be made. The inclosures are of "open and common arable, and meadow and pasture lands and fields." The Act provides rather liberally for the mode in which those inclosures may be made. In the 54th section there is this proviso, "Provided always, and be it further enacted, that nothing in this Act contained shall in any case authorise the inclosure of any waste whatsoever, whether the soil thereof shall or shall not be vested in the lord of any manor, and whether with or without the assent of the lord of such manor." So that this Act, which is for the inclosure of "open and common arable, and meadow pasture lands and fields," expressly provides that there shall be no inclosure of any waste whatever, whether the soil is or is not vested in the lord, and whether with or without the assent of the lord.

331. Mr. *Goldney.*] I think that Act was passed, was it not, specially for inclosing lands and letting them in severalty where they were held in common?—That was one of the great objects.

332. There was a very large class of lands at that time called commonable lands, especially arable lands, in Berkshire, and a considerable quantity in Wiltshire, and under that Act a very large portion of those were set out in severalty. The object and intention of the Act was to get rid of the open, and common, and interchangeable lands, with the view to setting them out in severalty, in order that they might not be taken under the general Inclosure Act, which at that time was the Act of George IV.?—That was no doubt for the encouragement of the cultivation of the soil, that is, to diminish the disadvantages

vantages under which it had to be cultivated before, in consequence of this intermixture of the properties. The policy of the Act would seem to have been to facilitate the cultivation by removing those disadvantages. So far as regards the previous Acts it seems to me, from having looked at them, that the ground on which they proceeded was the encouragement of agriculture, increasing the produce of the soil, and increasing the labour of the people. I was reading the 54th section of this Act, which is this: "Provided always, and be it further enacted, that nothing in this Act contained shall in any case authorise the inclosure of any waste whatsoever, whether the soil thereof shall or shall not be vested in the lord of the manor, and whether with or without the assent of the lord of such manor; nor shall anything in this Act contained prejudice, lessen, or defeat the right, title, or interest of the respective lords for the time being of any such manors in, or to any of the royalties, or seignories, fisheries, manorial and other rights, customs, and services, incident or belonging to the said respective manors, or any of them; but that such respective lords, and all and every person and persons claiming in trust for him or them, as such respective lords for the time being of the said several and respective manors, shall, and may at all times for ever hereafter have, hold, receive, take, and enjoy all rents, services, courts, perquisites and profits of courts, fines, goods and chattels of felons and fugitives, felons of themselves, and put in exigent, deodands, waifs, estrays, and forfeitures, privileges, and jurisdictions of their several and respective manors, to the respective lords thereof, or any person or persons claiming under him or them, incident, belonging, or appertaining, except in respect of any land or estate for which compensation is hereinbefore authorised to be made, in as full, ample, and beneficial manner to all intents and purposes as the same might or ought to have been held and enjoyed in case this Act had not been passed." That is a clause to save lords of manors. Then the 55th clause goes on to provide: "Provided always, and be it further enacted, that nothing in this Act contained shall authorise the inclosure of any open or common arable fields, or of any open or common meadow or pasture lands or fields, situate and being within 10 miles of the City of London, or of any open or common meadow or pasture lands or fields situate and being within one mile of any city or town of 5,000 inhabitants, or within one mile and a-half of any city or town of 15,000 inhabitants, or within two miles of any city or town of 30,000 inhabitants, or within two miles and a-half of any city or town of 70,000 inhabitants, or within three miles of any city or town of 100,000 inhabitants; provided that in all cases the number of such inhabitants shall be ascertained by the then last Parliamentary census thereof, and that such distance shall be measured in a direct line from the town hall, if there shall be any town hall; or, if there shall be no such town hall, then from the cathedral or church, if there shall be only one church; or if there shall be more churches than one, then from the principal market-place of any such city or town." Therefore there was a prohibition against inclosing a quantity of land, which was obviously in the very terms of the Act suitable for agricultural purposes, and restraining the inclosure even of such lands as those within a specified distance from cities and towns of a specified population. Therefore I think it is impossible not to see that the object of these provisions was to leave what may be called open spaces within the neighbourhood of large towns even where there might be excellent reasons for bringing them within the general scope of Inclosure Acts, for the purpose of improving the agriculture of the country. The next Act to which I wish to call the attention of the Committee is, the 8 & 9 Vict. c. 118, which was passed in 1845: That is, "An Act to facilitate the Inclosure and Improvement of Commons and Lands held in common, the Exchange of Lands, and the Division of Intermixed Lands; to provide Remedies for Defective or Incomplete Executions, and for the Non-exemption of the Powers of General and Local Inclosure Acts; and to provide for the revival of such Powers in certain cases." It recites, "Whereas it is expedient to facilitate the inclosure and improvement of commons and other lands now subject to rights of property which obstruct cultivation and the productive employment of labour, and to facilitate such exchanges of lands, and such divisions of lands intermixed or divided into inconvenient parcels as may be beneficial to the respective owners;" and so on, which is very much the same object which is specified in the other Act. It goes on to make a very great number of provisions with that object.

333. *Chairman.*] It begins by reciting, "Whereas it is expedient to facilitate the Inclosure and Improvement of Commons;" that does not seem to be the subject of that limitation?—Yes.

334. "And other lands now subject to rights of property which obstruct cultivation and the productive employment of labour, and to facilitate such exchanges of lands, and such divisions of lands intermixed or divided into inconvenient parcels, as may be beneficial to the respective owners;" the first part seems to be general?—I think that is a very general interpretation. Parliament says that it is expedient to facilitate and improve the inclosure of commons. I think it is entertaining that opinion which they have expressed in the first clause of the preamble that they provide the 12th section in these terms:—"Provided always, and be it enacted, that no waste land of any manor on which the tenants of such manor have rights of common, nor any land whatsoever, subject to rights of common which may be exercised at all times of every year for cattle *levant* and *couchant* upon other land, or to any rights of common which may be exercised at all times of every year, and which shall not be limited by number or stints, shall be inclosed under this Act without the previous authority of Parliament in each particular case, as hereinafter provided." What I want to show, therefore, is, and I think it is the fair inference from this proviso, that the Act of Parliament was intended to facilitate the inclosure of commons, and that whilst Parliament has pledged itself to the general policy of inclosing commons it should be *sub modo*, with the exception which is mentioned in this 12th section.

335. Mr. *Goldney.*] I wish to ask you whether the one-third that was necessary to set the Act in motion was one-third in value, or value and number too. Under all the previous Acts two-thirds were required; but, I think, under that Act, one-third was quite sufficient to set the Commissioners' power in motion, and Parliament,

T. Chambers, Esq., Q.C., M.P.

22 April 1869.

in giving such a large power to a small section, wished to hedge it about with some restrictions; are you aware of the section that applies to that?—It is the proviso to the 25th section: "Provided, nevertheless, that it shall not be lawful for the Commissioners to refer such application to the Assistant Commissioner to take any further proceedings upon any such application, unless it shall be made to appear to him or them respectively, that the persons making such applications represent at least one-third in value of the interests in the lands therein proposed to be inclosed." Whatever the reason that may be assigned, the fact is that you were obliged to go to Parliament, and then this Act, which is to facilitate the inclosure of commons, provides that, with regard to a certain number of commons. The authority of Parliament should be required for inclosure; and it assigns, in this particular clause, the reason why there should be the previous authority of Parliament, namely, the unlimited rights of common which these parties enjoyed. Then the 14th section further carries out the policy of the previous Acts in relation to such lands within certain distances of large towns: "Provided also, and be it enacted, that no lands situate within 15 miles of the City of London, or within two miles of any city or town of 20,000 inhabitants, or within three miles of any city or town of 30,000 inhabitants, or within three miles and a-half of any city or town of 70,000 inhabitants, or within four miles of any city or town of 100,000 inhabitants, shall be subject to be inclosed within the previous authority of Parliament in each particular case as hereinafter provided; and in all such cases the number of inhabitants shall be ascertained by the then last Parliamentary census thereof, and that the distance shall be measured in a direct line from the town hall, if there shall be any town hall; or, if there shall be no town hall, then from the cathedral or church, if there shall be only one church; or, if there shall be more churches than one, then from the principal market-place of such city or town." I judge, therefore, from this proviso, that Parliament not only retained its former opinion with reference to the policy of keeping these open spaces, but deemed it expedient to extend the distance round large towns and cities, to which the restrictions should extend, and certainly that proviso does it to the extent which is there mentioned. At first, under the General Inclosure Acts, Parliament was not obliged to be consulted in those cases. Subsequently Parliament reserved to itself the absolute right to exercise its discretion upon the proposal to inclose. Then the 30th clause indicates, also, the feeling of Parliament with reference to this object. It provides: "That in the provisional order of the Commissioners concerning the inclosure under the provisions of this Act of any waste land of any manor on which the tenants of such manor have rights of common, or of any other land subject to rights of common which may be exercised at all times of the year for cattle *levant* and *couchant*, or to any rights of common which may be exercised at all times of the year, and which shall not be limited by number or stints, it shall be lawful for the Commissioners to require, and in their provisional order to specify, as one of the terms and conditions of such inclosure, the appropriation of an allotment, for the purposes of exercise and recreation for the inhabitants of the neighbourhood, not exceeding the quantity hereinafter mentioned applicable to each case," regulating the number of acres which should be appropriated for the purpose of exercise and recreation, according to the population, with which I need not trouble the Committee. This shows, I think, very clearly that Parliament still had its eyes on the interests of the public, as distinguished from the interests of those who were interested as commoners, or as lords in the lands that were about to be inclosed. Also in the 31st section there is a provision for allotments for the labouring poor; "And be it enacted that, in the provisional order of the Commissioners concerning the inclosure under the provisions of the Act, of any waste land of any manor on which the tenants of such manor have rights of common, or of any land whatsoever, subject to the rights of common which may be exercised at all times of the year, and which shall not be limited by number or stints, it shall be lawful for the Commissioners to require and specify, as one of the terms and conditions of such inclosure, the appropriation of such an allotment for the labouring poor as the Commissioners shall think necessary with reference to the circumstances of each particular case; such allotment, nevertheless, to be subject to a rent-charge, to be payable thereout to any person or persons who may be entitled to allotments under such inclosures, as hereafter provided; and if, in the provisional order for such inclosure, the Commissioners shall not have required the appropriation of an allotment for the labouring poor, the Commissioners shall, in their annual general report, state the grounds on which they shall have abstained from requiring such appropriation;" so that the conditions imposed upon the inclosure of such lands were, that they could not be inclosed without the consent of Parliament within a certain distance of any town, and where there was an inclosure there should be an allotment for exercise and recreation, also for the labouring poor.

336. Mr. *Goldney.*] Not absolutely, I think?—"It shall and may be lawful."

337. It was permissive?—Yes; so the former section was.

338. *Chairman.*] If they do not, they are to state the reasons against?—If they do not, they are to state the grounds for not doing so. It seems to me, therefore, from the shape which these provisions assume, that the Inclosure Commissioners are the persons who are intended by Parliament to represent the public, and are not intended to represent, or facilitate, or promote the interests merely of the lords or the commoners; but they are really to stand between the lords and the commoners and the public, using the word "public" in the larger sense, and not merely those who have rights of common, or those who live in the neighbourhood, but as Inclosure Commissioners appointed or paid out of the public funds, they are really the representatives of the public. The next Act of Parliament to which I wish to draw the attention of the Committee is the 15 & 16 Vict. c. 79, which was passed in 1852, and is intituled, "An Act to amend and further extend the Acts for the Inclosure, Exchange, and Improvement of Land." The first clause provides that, "notwithstanding the provisions in the said firstly-recited Act, it shall not be lawful for the Inclosure Commissioners, after the passing of this Act, to give notice of their intention to proceed with

with the inclosure of any lands without the previous direction of Parliament; and no land shall be inclosed under the said recited Acts and this Act without the previous authority of Parliament in each particular case, as in the said firstly-recited Act provided with reference to waste land of any manor on which the tenants of such manor have rights of common, and other lands therein particularly mentioned." It therefore, I think, justifies the inference that, whereas from time immemorial all Inclosure Acts had been passed because Parliament thought that the true policy was to encourage inclosures, for reasons very sufficient at that time; that there was an indication of the turn of the tide, if I may so speak, and that the public interest, which for a long series of years (for centuries, indeed) had lain always in one direction, and which for so long had claimed these inclosures had now come to tend rather in the opposite direction, I can hardly explain this provision, except upon the supposition that that was the opinion of Parliament. Previously the authority of Parliament was to be had in each particular case. In fact, the firstly-recited Act provided, with reference to one case, namely, waste lands, means by which the tenants' rights of common, and other things therein particularly mentioned, could be preserved. I do not think it is necessary to trouble the Committee with any other provisions of that Act. I will now go to the last Act, which is one that must be familiar to all the members of the Committee, namely, the 29 & 30 Vict. c. 122, which was passed in 1866. That is an Act intituled, "An Act to make Provision for the Improvement, Protection, and Management of Commons near the Metropolis." It provides in the 5th section: "After the passing of this Act the Commissioners shall not entertain an application for the inclosure of a metropolitan common, or any part thereof" (a metropolitan common being a common 15 miles within the police district of the metropolis, and therefore extending further than any of the former Acts did to a longer distance from London), "but nothing in this Act shall interfere with the carrying on and completion of proceedings under any provisional order of the Commissioners confirmed by Act of Parliament passed before or in the present Session; and notwithstanding any proceedings taken under any Act other than this Act, or any provisional order of the Commissioners made, but not already confirmed by Act of Parliament, proceedings may be taken under this Act in relation to any metropolitan common." Then the 6th clause enacts, that "A scheme for the establishment of local management, with a view to the expenditure of money on the drainage, levelling, and improvement of a metropolitan common, and to the making of bye-laws and regulations for the prevention of nuisances, and the preservation of order thereon, may be made under this Act, on a memorial in that behalf presented to the Commissioners by the lord of the manor or by any commoners, or by the local authority; or in case of a common extending into the districts of two or more of the bodies described in the first schedule to this Act, then by any one or more of such bodies." That is, there were to be no means at all to inclose a common within that distance. All I observe upon that is, which is entirely consistent with the Acts which had gone before, that it shows a growing feeling upon the part of Parliament that open spaces in and around the metropolis should be still further protected, and that that policy has been consistent throughout. With regard to the proposal that is now made, it is quite true that Wisley Common lies just without the boundary of this Act. It occurs to me that it may be said, that as it is not protected by that Act of Parliament, the provisions cannot apply to it, and on the usual steps being taken, it would be right to inclose this common, that is, that some injustice may be done if that claim is not allowed. It does seem to me that, whatever the rights of lords of manors may be, the right of inclosure is not one of those rights. A claim to inclose is a claim over which Parliament exercises an absolute discretion as a legislative body. I draw attention to these short passages of the several Acts with the view of showing what is the growth of feeling in Parliament, and the present state of feeling of Parliament with regard to the subject.

T. *Chambers*, Esq., Q.C., M.P.

22 April 1869.

339. Mr. *Goldney.*] Have you heard the evidence which has been given, that these four gentlemen, the lord and commoners, are the only parties interested in this common; what is to stop them if, without seeking the assent of the Commissioners, they choose to make this inclosure themselves?—They have no power to make the inclosure.

340. Can you state to the Committee any reason which would prevent these four gentlemen making the inclosure themselves, without the aid either of the Inclosure Commissioners or of Parliament?—I apprehend the mere fact of their coming to Parliament is conclusive.

341. Supposing these gentlemen, instead of going through this machinery, instructed their solicitor to prepare, as amongst themselves, a deed defining their separate rights in these 370 acres, which could interfere with them in any way?—They would commit a breach of the Act of Parliament if they did that.

342. These gentlemen having put this machinery in motion, and having ascertained by inquiry that there are only four people interested, do you know anything, or any person, who could interfere with the land, or with them?—I do not know of any person who could interfere with them.

343. What class of the public could interfere with the parties, when they have ascertained, or choose to say, "We are the four owners." I am not putting the question now of the advantage of going before the Commissioners, and getting rid of any questions of estates, whether they are for life, or in fee, or copyhold, or anything of the sort; the Commissioners' fiat, with the approval of Parliament, is sufficient to waive those questions of title; but looking at it as regards the public, is there on the part of the public anybody who could interfere with them; or, if they could interfere with them, how could they do so?—I think that with regard to a place like this, which I had the pleasure of seeing yesterday afternoon, and which is certainly a most beautiful healthy common, through which the Portsmouth road runs, the land of which is undulating, and as wholly inapplicable for any agricultural purpose as anybody can imagine, it is not an unreasonable view of the law to say that the freedom of wandering over this common for centuries is evidence of a public dedication.

344. You want to take up the public dedication view,

T. Chambers, Esq., Q.C., M.P.

22 April 1869.

view, but there is nothing to stop these people from dealing with it themselves?—I have not looked minutely into that; I rather assume that they want the assistance of Parliament, or they would not have come to Parliament. I apprehend from what I heave heard, that there might have been a difficulty in obtaining the consent if that course had been taken. I believe, at all events, that one of the parties interested is not desirous of this scheme, and would have required the absolute consent of the parties; it must have been the unanimous consent. The Act of Parliament preserves all rights which any persons may have very effectually, for it says, in the 15th section, "No estate, interests, or right of a profitable or beneficial nature in, over, or affecting the common, shall, except with the consent of the person entitled thereto, be taken away, or injuriously affected, by any scheme, without compensation being made or provided for the same."

345. The first Act says that the Commissioners shall not act within certain limits; the second Act says that they shall not act at all; and the third act says, that they shall not, *quoad* these commons, act at all; that is the effect of it?—Yes.

346. I do not think any one of them has attempted to say that the rights of the parties are interfered with?—Probably there might be no fatal objection if all persons interested, in the legal sense of the term, in the common, were to agree to inclose, except on the doctrine I propound, that there has been a dedication to the public.

347. The question is, whether you can show anything like dedication in this particular instance?—It would be like a vast number of cases where there has not been the slightest restriction on persons wandering over this common, or fishing in its large piece of water.

348. Batting is one of the cases they put?—Yes, undoubtedly; it is plain on the face of these Acts that Parliament has desired to limit the power of the Commissioners and the owners to inclose, and they have carried the restrictions much further under the general policy of protecting open spaces near great towns. I should be inclined to present it in this way: this inclosure must be for a reason; what is the reason. It is impossible to turn this common to account to produce anything. I am not an agriculturist, and therefore I cannot give a scientific opinion. That is the view I take of it, from having seen it yesterday.

349. One of the witnesses who has given evidence says that the present state of the common is productive of ill-health?—I cannot say a word against that; but I can say that I never found a more refreshing air myself than I did yesterday, when I went over it. I am not a resident of the place.

350. Mr. *Fawcett.*] The previous witnesses have described this common as rather a flat damp place, without much beauty; is that the impression produced upon you?—The impression produced upon me yesterday was that it was singularly dry, except where holes had been dug to take turf from; the water had drained into those holes; and in those holes and hollows there is water, as is usually the case with all commons. It is very undulating; and there are mounds on which there were thousands of very beautiful fir trees, which are self-sown.

351. You describe the place as one possessing great natural beauty?—Very great, indeed; I was very much charmed with it; I drove for more than two miles along that road; Ockham is on one side of the road and Wisley on the other.

352. Did you make any inquiry as to the amount of open ground which was left there?—Three hundred and seventy-five acres.

353. Most of the other common land in the neighbourhood has been inclosed, has it not?—I did not inquire, but I could see no sign of the inclosure of Ockham; but inasmuch as the land steward of Lord Lovelace says that it has been inclosed, I suppose that something has been done which satisfies him that it has been inclosed; but I certainly did not notice any inclosure.

354. But still Ockham can be inclosed?—Yes, there is power to inclose it.

Benjamin Scott, Esq., called in; and Examined.

B. Scott, Esq.

355. *Chairman.*] I believe you reside at Weybridge?—Yes.

356. And you own land in the parish of Byfleet?—I am a freeholder at Byfleet, which is the adjoining parish to Wisley.

357. You are not one of the landowners who claim rights of common?—As far as I can gather, the rights of the freeholders in the neighbourhood appear to be involved in some uncertainty; I only acquired freehold land in Byfleet about three years ago; I have not inquired into the subject.

358. And therefore you have not exercised any rights of common?—No.

359. What is the extent of your land?—It is a close of about 12 acres, with two houses in Byfleet.

360. I think you desire to draw the attention of the Committee to your objections to the inclosure of Wisley Common?—I rather want to appear before the Committee as an inhabitant of the neighbourhood, and also as an inhabitant of London, to draw the attention of the Committee, not so much to the legal part of the question, with which I am not intimately acquainted, as to this fact, that the recommendation of the Commissioners to Parliament to inclose this common is inconsistent with the spirit of the 2nd Report of the Select Committee of this House which sat in 1865; a Select Committee "appointed to inquire into the best means of preserving for the public use the Forests, Commons, and Open Spaces in and around the Metropolis." I think I may say that was a very important Committee; it consisted of no less than 21 members; 10 members of that Committee represented the Metropolis or some of the Metropolitan Counties. Mr. Locke King and Mr. Buxton, who are interested in this inclosure, were both members of that Committee, and to a very great extent supported the recommendations which are contained in the Report. The first point that I would desire to direct the attention of this Committee to is, that that Committee did not limit its suggestions altogether to an area of within 15 miles from the centre of London. They state "the limit of 15 miles had

had been first suggested, but several important spaces being situate immediately outside that area, they judged it expedient to extend their inquiry to 22 miles, and subsequently 25 miles, round London, measured from the General Post Office, according to the Ordnance survey; whilst, however, they have admitted evidence in respect of certain open spaces in this extended area, this was done in the first instance for the purpose of inquiry, and not to prejudice the question as to what might fairly be considered the proper limit of a Metropolitan area beyond which these Open Spaces should be considered and treated, more with reference to their agricultural capabilities than as directly affecting the interests of the inhabitants of the Metropolis as places of recreation." They judged it important to ascertain what spaces ought to be treated on other grounds than on the ground of improving the produce of the soil. We find from this Report, and from the proceedings, that they first dealt with a circle of 15 miles radius; they then inquired into a radius of 22 miles, and afterwards into a radius of 25 miles from the centre of London. The common concerning which this Committee is now inquiring is touched by the 19 miles radius from Charing Cross; the centre, I suppose, would be about 21 miles by the road from Westminster Bridge. It was not the intention of the Committee at all to limit to 15 miles legislation for protecting common land near London. They say a little further on in their Report: "Any area which may now be fixed may be found too small in some years' time; but, looking to the necessity of fixing some area, they are inclined to recommend that the district of 15 miles radius from the General Post Office, according to the Ordnance Survey (the limit prescribed by the General Inclosure Act of 1845), be adhered to for the present as the Metropolitan area to which special legislation with a view to the inhabitants of London should in the first instance be directed." Parliament did not carry out precisely that recommendation, but rather exceeded it. In 1865 you will notice the Committee recommended that the radius of 15 miles should be taken from the General Post Office; but the Act of 1866 included the whole district within the Metropolitan Police area; that area is 15 miles in some directions, and in another direction it is 21 miles from Charing Cross.

361. In which direction?—In the direction of Staines. The parish of Staines is included in that direction for over 20 miles. Twenty-one miles must be the extent of the radius from Charing Cross to the parish of Staines.

362. It is not so as to the town of Staines?—The town of Staines is included within the Metropolitan Police district; the parish limits of Staines are also included.

363. The extreme limit is two or three miles further, is it not?—I am not aware; I think the Metropolitan Police district includes the whole parish of Staines, because it includes the whole of the district in which the London coal duties are collected. I am connected with the receipt of those duties, and I know that their limits reach to the whole parish of Staines, in Middlesex. The Report further states, "In the case of a proposal to inclose any spaces beyond the prescribed area, in which the Metropolis is interested, Parliament will have an opportunity of considering the requirements of that particular case;" that is the case of any town outside 15 miles, "upon a Bill for its inclosure." I therefore contend that the obligation is thrown upon this Select Committee, and upon Parliament, to determine from time to time the precise limits of the Metropolitan district with reference to this question. I may state, then, that with reference to the interests of the public, as set against the question of the agricultural capability of the land, that with regard to this Common it is utterly impossible that any produce will ever be obtained from it. It will not grow a blade of grass, except where the sand drifts from the high road; there is a little grass on the verge of the road, and it could not, under any circumstances, be made to grow corn. It grows nothing but the rough scrub and heath; indeed it is waste land throughout, except in those holes where the turf has been dug out, and where bog has been formed by that artificial excavation of the common. I have been acquainted with the common for over 30 years. I have driven horses, ridden across, and walked across it, all those years, more or less. I have lived in its immediate vicinity now for 15 years, and it is a source of very great recreation and health to the people of the neighbourhood. It would be a very great loss to the inhabitants of the neighbourhood if it were inclosed.

364. Is it, according to your knowledge of the facts, that the common is greatly used for riding and walking upon?—It is increasingly used; it is 19 miles from London; of course it is more used of late years than it was. A very large quantity of land in the neighbourhood having been inclosed; for instance, St. George's Hill was perfectly open, that is now inclosed and is only used by permission of Captain Egerton. A large portion of Walton Waste has been recently inclosed in the immediate neighbourhood by some charity trustees, who had the power, I suppose, to let it on building leases. A large quantity of land is inclosed immediately adjoining this common, so that it is becoming increasingly valuable to the inhabitants in the neighbourhood and of the Metropolis.

365. Is it more used for walking or for riding?—It is used for both. The humbler class of persons use it walking and picnicing; it is very greatly resorted to by persons who take an interest in natural history, it being very wild; there are large numbers of plants and insects there, which are not to be found in a mere field, but which are found there in great plenty. Indeed, my own family have acquired a knowledge of botany from frequenting that district, the two commons of Ockham and Wisley, which are adjacent.

366. Mr. *Fawcett.*] Ockham is inclosed, is it not?—There was authority obtained to inclose it in the year 1863; it is perfectly uninclosed at present.

367. But when that is inclosed, which it may be any day, the public may lose it?—It may be inclosed any day, There is one other point to which I wish to advert. The Committee of 1865 took a great deal of evidence upon the use of these Open spaces, for the purpose of encouraging the Volunteer movement and the Militia service. They say, "They have received the testimony of distinguished officers, both of the volunteer and militia services, that the existence of these bodies depends on their having ready and convenient access to their training grounds, and that the preservation of the Commons adjoining the Metropolis is absolutely necessary to the maintenance of those corps in a state of discipline and efficiency."

B. Scott, Esq.

22 April 1869.

efficiency." I may state that this common has been used for that purpose, and that Mr. Buxton, as colonel of one regiment, invited on one occasion I know, for I was present, and on other occasions I believe, large bodies of the volunteers to a military display and sham fight on Wisley Common. They also, in their Report, lay very considerable stress upon preserving spaces near populous places open. "Your Committee," they say, "are at a loss to conceive why, upon general principles, a right of enjoyment which may be acquired by the inhabitants of a small hamlet, should be denied to the inhabitants of the Metropolis, or even to the general public. They find, on the contrary, that the Legislature has recognised and acted on the existence of some such right; for, by the General Inclosure Act of 1845, which empowered the Inclosure Commissioners to deal of their own authority with the cases of commons in general, it was provided (sect. 14), that no inclosure should take place, under the provisions of that Act, within 15 miles of the City of London, or within certain distances of towns of a specified magnitude, without the previous sanction of Parliament in each particular case (a provision manifestly grounded in a belief on the part of the Legislature of the existence of some rights possessed by the inhabitants of the Metropolis)." Mr. Wingrove Cooke, one of the Inclosure Commissioners, gave evidence, which is quoted in the Report to this effect, "That if we find the opposition is not great, and if we find that there are advantages in an agricultural point of view, because, I take it, we do not consider that it is for us to determine whether upon public points of view it is right that they should be inclosed, because they come before Parliament afterwards." Mr. Wingrove Cooke's evidence is, that the obligation to judge as to what is right for the public, is devolved upon Parliament; that the Inclosure Commissioners do not take that into their consideration; they report an application from parties interested; they inquire into the rights of lords and commoners, and persons who have rights on the common, but they leave to Parliament to consider the public rights, and whether, upon the whole, the common should be inclosed. The Committee further state, "With regard to commons near large towns, as these latter have rapidly increased in population, the necessity of providing open spaces for health and recreation, has become paramount to the mere improvement of those lands in an agricultural sense; seeing that the inevitable result of the inclosure by private individuals of lands in the populous suburbs of the Metropolis, would be not even agricultural improvement, but building." The 30th section" (that is the 30th section of the General Inclosure Act, 1845) "is explained by Mr. Wingrove Cooke to have reference to rural parishes; and the maximum provision made by it of 10 acres, is manifestly inadequate to the wants of the Metropolis. It appears to your Committee, however, that from this enactment two important principles may be deduced with reference to the present inquiry. (1.) That Parliament regards the granting facilities for inclosure as a boon to the parties, and, consequently, that in the public interest any terms may be imposed, or that the privilege may be entirely withheld; and (2), That the inhabitants of the neighbourhood of commons are to be considered as having certain *primâ facie* rights of exercise and recreation over those spaces. Mr. Burrell stated distinctly that he considered the granting of an Inclosure Act of Parliament, a boon which Parliament might justly refuse at discretion. The long continuance of the practice of the inhabitants of London to resort to open spaces for recreation, and its decided tendency to promote their health and happiness, and to draw them away from pernicious amusements, appear to your Committee sufficient reasons, apart from the mere legal questions of the case, why the Legislature should decline to sanction any measures which may indirectly deprive the public of the advantages they have so long enjoyed, and the necessity for which is daily increasing." Now, if the Committee will allow me, I will put a few figures before them as to the increase of population, in order to show that the Committee were justified in looking at this as a question of increasing importance.

368. *Chairman.*] Before you pass away from the common itself, will you allow me to ask you this question: I asked you whether the ground was much used for exercise, and you answered that it was increasingly used; can you give any estimate of the largest number of persons whom you have seen using it on any one day, apart from the Volunteers, and people of that class?—I need not tell you that in the winter these commons are bleak, and not agreeable places; but in the spring and summer months the whole of the inhabitants of the neighbourhood, who have carriages and horses, take exercise there. I have been accustomed to drive across this common, and I look on it as one of the most healthy open-air spaces in the county of Surrey.

369. Do you mean that the ground is so firm that they can drive upon it apart from the road? Yes; there are green turf tracks on which horses and light carriages can pass all over the common. I succeeded to the estate which I now hold in Byfleet a lady who had lived there 45 years; she had been accustomed during the whole of that perod to drive in various kinds of carriages across this common in all directions, and Ockham Common, too. There are gentlemen present who use it even more than I do; gentlemen who hunt upon it.

370. Mr. *Fawcett.*] Do you know the size of Ockham Common? — Ockham Common is 400 acres.

371. Then, of course, when Ockham Common is inclosed, as it will be, and St. George's Hill shut up, the number of people who use Wisley Common will greatly increase?—No doubt that will be the result.

372. You describe it, not as we have heard from the previous witnesses, as an open flat with miasma, but a place peculiarly healthy, a bracing place?—I should think there is not a more healthy place in the kingdom, except in the wet months of winter, when, as is well-known, the River Wey for a length of 30 miles occasionally overflows its banks, and sometimes the water rises in the holes on those occasions.

373. During the summer months, when it is used by the public, I understand you to say, that it is a place of great natural beauty, and extremely healthy?—I do not know any place in the county of Surrey, which I am thoroughly acquainted with, which is more healthy and invigorating.

374. It has been suggested that the four persons who have rights on this common, namely, Lord Lovelace, Mr. Buxton, Mr. Locke King, and the Rector, may inclose this common without coming

coming to Parliament; if they attempt to do so, do you think the public living in the neighbourhood would protest?—They cannot inclose without coming to Parliament.

375. What would be the means you would use to prevent them; you would assert the right of user?—They must obtain the consent of every person who has any interest in the common, and as many of them are infants, they could not inclose without coming to Parliament.

376. Therefore, there would be other persons interested besides these four gentlemen?—All these gentlemen have children and families, besides others whose rights are very uncertain.

377. You have no means of knowing whether their estates are settled or whether they are the absolute owners?—I apprehend Lord Lovelace's estates are settled. Besides which, the rights on that common are very doubtful. You have heard that there have been no courts held about the inclosures; therefore the whole thing is in great confusion. Almost all the commons of London would be inclosed to-morrow if all the parties could be found and dealt with, but fortunately for the public it is the case that those rights cannot be exactly ascertained.

378. *Chairman.*] There are other interests, I imagine, than those of the four gentlemen who have been named?—There are other rights, because Mr. Locke King claims rights in Byfleet parish. I have no doubt it will be found on inquiry, that there are other interests.

379. Mr. *Frederick Stanley.*] It has been stated by one of the previous witnesses, that the Inclosure Commissioners gave the notices before making their report, and it has been also stated that no objection was made by any person at the time of the Commissioners holding their sitting; can you, from your own knowledge, state that the contrary is the case?—I did not hear of there being any intention to inclose either Ockham Common or Wisley Common, although power to inclose one was obtained in 1863. The notices must have been given in that private way that it certainly came like a surprise upon the whole neighbourhood. I am sure that no one outside the circle of gentlemen immediately concerned could have heard of it.

380. Can you state, from your own knowledge, that the notices given by the Inclosure Commissioners were given in a way distinct from the way in which they are ordinarily given?—No, I am not prepared to say that. I am not prepared to impeach the notices or any of the proceedings of the Commissioners, or of the parties; but I say it came like a surprise upon the neighbourhood. I should say that the notices were put on Wisley Church door, which I should tell the Committee is little more than a barn with a turret to it situate in a farmyard, and is frequented only by a few cottagers who are resident in the neighbourhood.

381. Still, if the notices were posted and the Act of Parliament complied with, the inhabitants could have very little reason to complain of the manner of posting them?—We do not complain of the manner of posting them; we have not complained of the proceedings, and we do not for one moment question the rights of these parties to do what they have done; but we say that they have no right to inclose the common without the consent of Parliament, and we are here to give public reasons why Parliament should not inclose it.

382. There appeared to be in your mind some doubt as to whether the rights of the owners were very strictly defined; the object of my question was to ask you whether, if there had been any such doubt as to the rights of the four proprietors whose names have been mentioned, the objection should not have been taken by the other inhabitants at the time the Inclosure Commissioners first held their sitting?—The only doubts which I have heard expressed on the subject were those which were expressed by a witness this morning, namely, that there had not been, as there should have been, proper courts held to register the inclosures and encroachments on the common. There may be other parties, who have not heard of these proceedings, who may be living elsewhere. I am not here, as I said before, to call in question the order of the proceedings or the legal rights of the lord or any other person, but merely to say that Parliament, before making a concession of this kind, has of late years required that it should be settled by consent, with certain rights of the public to recreation ground and to breathing space. I was about to give the Committee a few statistics to show how very important, in a statesmanlike point of view, this subject is. I had my attention drawn to it a few years ago, when I had occasion to travel by the Eastern Counties Railway, in the month of October, upon a fine Sunday morning. The crowd at the terminus was so great that it was several hours before I could get a seat in a carriage by that railway. That opened my eyes to the fact that enormous masses of people, respectable, orderly, decent artisans, and their families, of this Metropolis, crowd out of London on certain occasions when the weather is fine, in order to get breathing space in the districts round about it. It made a serious impression on my mind. I found upon inquiry that tens of thousands, in fact, I may say on some occasions hundreds of thousands, of people go down by the railroads and all kinds of conveyances to Epping Forest, and the districts round about London, in order to enjoy a breath of fresh air and a little exercise, where they can do so with freedom. I have looked into the matter, and have taken some interest in the subject since. I was going to show what the Population is, and the rate at which it is increasing, and what it will be in a few years. By the Census of 1861, the population, within the metropolitan police district, was 3,222,717 persons. I have ascertained, from the reports of the Registrar General and from the Census Reports, that the increase of the population in London was going on steadily, and almost constantly without any variation, from 1801 to 1861, at the rate of 19·6 per cent., or nearly 20 per cent. every 10 years. By the next census, which will be two years hence, in 1871, the population of the Metropolis will be 3,854,366 persons at the same ratio of increase. In 22 years hence, which will be within the limits of the lives of most of us, in 1891, the population of London will be 5,513,328. In 42 years, that is to say in 1911, it will have risen to 7,886,338 persons; and in 50 years, or half a century, which is not a very great time for statesmen to look forward to, the population of London will be 9,532,060 persons, one-third of the present population of England. The Census Commissioners in 1851 gave us also these figures under the head of "Density of Population of London." The number of square yards of land to each of the

B. Scott, Esq.

22 April 1869.

B. Scott, Esq.

22 April 1869.

the population of the Metropolis, supposing them to be distributed over the area equally, was, in 1801, 394 yards. This had diminished, in 1851, to 160 square yards to each person, assuming the area to be equally distributed. In 50 years, which, as I said before, is no very long period for a statesman to look forward to, there will be only 22 yards and a fraction to each person, at the rate at which the population is increasing. Then, with respect to every inhabited house in the Metropolis, the Census gave us these particulars: Each inhabited house of the Metropolis stood upon land, in 1801, equal to 2,784 square yards; that is to say, that there would be to each house on an average 2,784 square yards of land. That became reduced, in 1851, to less than half, or 1,234 square yards. In about 32 years from this time, that is to say, in about A.D. 1901, more than the whole area will have become covered with bricks and mortar, at the same rate of progression; that is to say, the houses will be standing, to some extent, one upon another. I put these facts forward, although I do not pretend but that they conduce to an absurd result, in order to show how very great must be the crowding out of the population into the surrounding districts of the Metropolis during the next half century if these results are not to be brought about. The creation of railroads has, providentially, I may say, provided for the distribution of this dense population. It is only by railroads that we can escape from this wilderness of brick and mortar, and from the vitiated state of the atmosphere which prevails in the denser parts of London. This Wisley Common can be reached by railroad now in little over an hour. If you go to Walton Station, which is 16 miles from London, it is only three miles from that station and three miles from Weybridge.

383. *Chairman.*] Is Wisley Common at present mostly frequented by persons from the metropolis or from the neighbourhood?—Not very largely by persons from the metropolis; but it is frequented by the inhabitants of Kingston, Surbiton, Walton-on-Thames, Weybridge, and the surrounding neighbourhood, very largely.

384. Do you mean that they drive over from Kingston, for instance?—They drive over from Kingston and from the railroad. I may state that on the Sunday the number of persons who accumulate at Weybridge Station, where I reside, to go up by the last train in the summer time, is so great that there is not room to stand on the platform. I have seen crowds there consisting of numbers of persons who come from London in the morning to visit these wastes and quiet scenes rather than go to more public places. They are so numerous that I have seen the platform even incapable of accommodating the crowds of people who arrived there to go up by the last train.

385. Do you mean that any large proportion of those go to Wisley Common?—An increasing number. My impression is, that you are not legislating for the hour or the day merely; you are legislating for that which will be far more important. If this land passes by your decision, by giving rights which do not now belong to the lord, to inclose; if you give him that right this land will pass from your hands as mere land for shooting rabbits and cutting turf, which is all that it produces; it is now worth 5 *l.* an acre. But if you give him this right, in a few years it will be worth 500 *l.* an acre. It is worth more than 100 *l.* an acre now as building land, but in the course of a few years it will be worth 500 *l.* per acre. Parliament will find that the day will come when they will have to buy such lands back again, and then it will have to acquire them at any price in order to accommodate the vast mass of population that will then be found in this Metropolis. I may state that the land on which my own house stands was part of the waste of Weybridge 70 years ago. In my recollection that land was not worth 5 *l.* an acre. It will not grow grass, but by a very large amount of manure being applied to it every year. It is common sand. That land is now selling at 500 *l.* per acre, which was only worth 5 *l.* an acre within my recollection, and that is simply owing to the formation of the South Western Railway through it. The same result will take place in the case of the land with which you are dealing to-day; within a very few years, within the lifetime of most of the persons now present, that land will be worth several hundred pounds per acre.

386. Is your position that the provisions of the Metropolitan Commons Act, 1866, ought to be applied generally to an extended radius of 20 or 25 miles round London, or that we ought to refuse to sanction this particular inclosure, on account of the peculiar inutility of the land for cultivation, and its peculiar usefulness for the purposes of recreation?—I contend that it is perfectly useless, with the view of increasing the food of the people. It never will be cultivated; it will become very valuable building land, if the right to inclose is given to the lord, as proposed, and to the parties entitled. It is exceedingly valuable to the public, as an open recreation ground for the use of the people; and I contend that if you determine, which in your wisdom you might determine, that it ought to be inclosed, because certain steps have been taken, and certain notices have been given, and certain inquiries have been made, then it would be well on the part of this Committee to consider whether some further limit should not be devised to protect such open spaces near the Metropolis from being inclosed in future; that is to say, if you in your wisdom should determine that this has gone too far to save it, which I do not at all assume for a moment, then this Committee, even, might report to the House something that might protect other open spaces which are very valuable within a radius of 20 or 22 miles from London, so that this inquiry need not be quite unprofitable, but that a portion of Common land near London might be preserved.

387. Mr. *Fawcett.*] When the inquiry took place in the neighbourhood, with regard to the inclosure of Wisley Common, of course, there were other inhabitants who, like yourself, had an indirect interest in this common?—Yes.

388. Was that point not asked about?—No; I do not think anyone outside the circle of the parties immediately interested ever heard of it.

389. It was not the business of the Inclosure Commissioners in their inquiry to ascertain what the opinion of anyone was, except those who are supposed to have rights of common?—Property rights.

390. Therefore, neither the inhabitants nor the public living at a greater distance who used this common, were in the least degree consulted?—Not at all; they never heard of it. I have spoken to more than 100 persons in the neighbourhood, at the very least, since these Parliamentary

liamentary proceedings, and I have not found anyone who had heard of such a thing taking place. Mr. Buxton could not tell me for certain whether Ockham was inclosed. He and I searched for the Act in the library of this House, where we found it. The public generally have no means of knowing what is going on.

391. Are we to understand that you, living in the neighbourhood, prizing this common very much, looking with great interest to its preservation, and valuing it very much, never heard of the proposal to inclose it until the thing was nearly done?—I never heard of the proposal to inclose Ockham five years ago; and I never heard of the proposal to inclose Wisley Common until the Bill was brought in by Mr. Bruce, and read a first time.

392. Therefore, we may conclude that the persons in the neighbourhood had not a sufficient opportunity of making their negotiations?—They had no opportunity whatever. I have stated that the church of Wisley is one of the most rural and retired places in the kingdom; it is in a farm yard, and you might ride for 20 years in and about that common without ever seeing the church. I apprehend the notice was placed on the church door, according to the law. The law is defective as I consider, but I do not state that the parties have departed from what is the usual practice.

393. You make an accusation rather against the law than against any person?—Yes; there is no public notice in the sense of calling to it the public notice of the inhabitants of the neighbouring parishes.

394. You say that this land has no agricultural value; has it any sporting value at the present time?—Yes; I think that the manorial rights would be worth something for sporting. There are rabbits and a few pheasants and hares upon it.

395. Do you think that the wish to protect game against trespassers has had anything to do with the desire of the lord to unclose it?—Perhaps it may; I have no reason to say so.

396. You have stated that great crowds come down to Weybridge in the summer months?—Yes.

397. Many of them do not go to Wisley, but to other grounds in the neighbourhood?—Yes.

398. They only go to those other grounds on sufferance?—At St. George's Hill that is particularly the case.

399. And Ockham too?—And Ockham too.

400. And therefore it seems to me that this is a very important question, because the only piece of ground of importance which the great number of the inhabitants of London, and other people who resort to Weybridge, have any right to use as a public ground is this Wisley Common?—It is now one of the principal open spaces.

401. There is no other space at all to be compared to it?—No.

402. There is no other tract of ground preserved in a state of nature?—Not to be compared with it in respect to its picturesque beauties, and its retired advantages.

B Scott, Esq.

22 April 1869.

403. And in size, too?—And in size, too. There is one point which I wish to lay before the Committee; that is, in consideration for making the very valuable concession that Parliament is asked to do in this case, there is no adequate return made to the public; I wish the Committee particularly to take notice of that. This is property which is now only used for sporting purposes, and land of very little value as building ground while it is uninclosed; but all of a sudden it is to be inclosed which will convert it into valuable building freehold ground. I submit that at the very lowest figure it will be worth 37,000*l.* to the parties interested; but the public receive no adequate return for such a valuable boon received from Parliament. This Report of 1865 states, as is the fact, that if the parties have no right to inclose that inclosure, it is a concession made to them by Parliament, and without any adequate return to the public. If the parties acquired the right by inheritance they would have to pay the public Succession duty; if it had been inclosed, and had been of the slightest value to its possessors, they would have paid from year to year Property tax upon it; but as it has remained open it has paid no Property tax; it is not rated like other freehold land in the neighbourhood, which has had to pay Parochial rates, County rate, and Police rate. In truth, it is a piece of property which has been growing in value, and provided Parliament will give the power to inclose it, it becomes a very valuable concession on the part of Parliament; therefore, I contend that it is the duty of Parliament, representing the public, to say, if such a concession is made, that some way or other the public should receive some adequate return for the concession which is asked for.

404. Mr. *Frederick Stanley.*] That statement goes to the root of all Inclosure Acts; any compensation that is given is based, is it not, rather on the state of the land at the time of the inclosure than with reference to what it may possibly hereafter become?—I understand that Parliament in making all concessions of inclosures have in view, as Mr. Chambers explained, the increase of food for the people; that is to say, land which is out of cultivation is brought into cultivation by the inclosure. In this case there is no such return to the public; therefore, I contend that this Committee should consider what the public ought to receive if this very valuable concession is made to the lord and the parties entitled.

405. *Chairman.*] I conclude from the memorandum, which I find on one of the papers of the Inclosure Commissioners, that this meeting was advertised in the "Surrey Standard"; you cannot state whether it was or was not?—I cannot; I have no doubt that it was; but it is not a paper which is largely circulated.

Mr. Frederic William Goddard, called in; and Examined.

406. *Chairman.*] I believe you hold an office in connection with the Metropolitan Board of Works?—I am one of the assistant surveyors of the Metropolitan Board of Works. The Board have directed me to make a survey of this common. I have been over it. I have listened to the statements which have been made with regard to its agricultural and building value by the last witness, Mr. Scott, and I perfectly confirm what he has stated with regard to that, and also what he has said as to its position, its picturesque nature, and its adaptability for building purposes,

Mr. *F. W. Goddard.*

Mr. *F. W. Goddard.*

22 April 1869.

poses, from its beauty, from the salubrity of the air, and the very agreeable neighbourhood in which it is situated. But, at the same time, my attention has been called by direction of the Board to the commons and open spaces within a radius of 15 miles round London. I find from time to time such great encroachments have been made upon them by the acts of various owners, and various people on the homage surrounding it, such as trespassing, squatting, and so on, that their space has been very seriously infringed. Looking to the demands of the population, and the increased demands to which we must look prospectively for the future, it cannot but be thought that it is a very great necessity to preserve a space like this, which is of great beauty, which presents features that some other commons do not, which draws a large proportion of the perambulating inhabitants of London, at periods of summer time, to it in pursuit of entomological and botanical researches, and so on. I have never seen a parallel space round the metropolis to be compared with this space. As to agriculture, it is so poor that it would not support a whip-poor-will, as they say in America, to the acre. The only use which agriculture seems to be likely to make of it is digging out the peat, superinduced by the deposit of wet in the winter season, for the purpose of growing azaleas, rhododendrons, and that tribe of plants.

407. Is it within your district?—No; it is six miles beyond the radius of 15 miles; it is about 21 miles from the metropolis.

408. The metropolitan police district is longer than yours, is it not?—The metropolitan police district is different from that of the Metropolitan Board of Works.

409. Mr. *Fawcett.*] It is just outside the metropolitan police district, is it not?—It is just outside.

410. How far?—About four miles. I have had occasion myself to travel to Weybridge very often, for Chertsey, where my children were at school, and I recollect the large assemblage of people on the platform, to which Mr. Scott referred, as present on many occasions when a fine day presented itself, so that they could get out of town.

411. *Chairman.*] You were speaking of the commons that are within the district excepted by the Act of 1866; have you obtained any statement as to the number of acres which are available as commons within that excepted district?—I have not prepared any tabulated statement.

412. Have you satisfied yourself at all?—In explanation of that, I may say that I am alluding more especially to Tooting Common, to Blackheath, to commons in the immediate district of the metropolis, to Epping Forest on the north and east, and to the districts of the London Fields, and Hackney Downs, and so on, which at one time were enjoyed by the inhabitants; but from which, owing to the constant passage, the turf has become completely obliterated, and has necessitated people going still further out of town.

413. You cannot inform the Committee what acreage of common is still available within the district excepted by the Act of 1866?—I have made no calculation of that.

414. Mr. *Fawcett.*] Of course this conclusion is obvious, is it not, that ever since the passing of the last Act affecting metropolitan commons, the population of the metropolis has been increasing, and the commons have been diminishing?—I think that is a self-evident fact.

415. Since that time there have been great encroachments, have there not?—Yes.

416. Tooting Common has been, to a great extent, destroyed, I believe?—Yes, it has by the railway.

417. And Wandsworth Common also?—Wandsworth Common has been equally encroached upon. I can speak to a place within my own knowledge, for I have lived close to it, which is a very great resort for the inhabitants of the southern districts. There is a place called the Black Sea, at Wandsworth Common, which is very picturesque, and is a place of constant resort for the people to take air on Sundays; but now the common has been encroached upon, and is rendered much less available than it was 15 or 16 years ago.

418. *Chairman.*] Those encroachments have not been made since 1866?—One or two have been made since, but most of them were made previously.

419. Mr. *Fawcett.*] Still, even since 1866, there has been no doubt that Tooting Common has been very much spoilt by the encroachments that are constantly taking place?—Undoubtedly; so much so that an interference took place on the part of the inhabitants surrounding it, and the rights were purchased by them in order to preserve the common.

420. So that you can state from the information you have obtained in your official capacity that the open spaces and commons round London have a tendency to grow smaller, whereas, as we have been informed, there is a greater necessity for them on account of the great increase which is taking place in the population?—Undoubtedly.

421. Is it considered to be part of the duty of the Metropolitan Board of Works to resist any encroachments which are made upon commons within their jurisdiction?—The Board have felt it to be their duty on behalf of the public to protect as much as possible the enjoyment by the public of these open spaces, and have taken steps to prevent it by petition and other means.

422. Do they do so by legal proceedings?—Very largely.

423. *Chairman.*] Are you making this statement as a gentleman connected with the locality, or are you speaking on behalf of the Metropolitan Board of Works?—I am directed to attend here on behalf of the Board.

424. Mr. *Fawcett.*] Is there any pool of water on Wisley Common in which there is fishing?—There is a pool of water on the opposite side of the road. I cannot state whether that is on Ockham Common or on Wisley Common; I believe from the information I have received that it is on Wisley Common. It is a pool of water of great beauty.

425. If that is preserved, and there are fishing and bathing allowed to take place there, that would be a great attraction for the London people?—It is greatly resorted to for that purpose.

426. *Chairman.*] Is that pond affected by this proposed inclosure?—That depends upon the answer which I have already given, namely, that I cannot state whether this sheet of water is in Ockham parish or Wisley; I think it is in Wisley parish.

427. Mr. *Fawcett* (to Mr. *Marshall*).] Is that pond already inclosed?—It is inclosed, but it is open to the public.

428. In

428. In what way is it opened; is it reserved by the Inclosure Commissioners, or is it dedicated to the public?—It is not intended to be reserved at all.

429. Does Lord Lovelace intend to give it to the public?—The landlord of the inn just by has a right of using the pond, and any customer of his may use it.

430. Still it is a right that the public may be deprived of?—It is Lord Lovelace's own property, no doubt, just as much as the manor is his own property.

Mr. *F. W. Goddard.*

22 April 1869.

WILLIAM WYKE SMITH, Esq., called in; and Examined.

431. *Chairman.*] YOU are the solicitor of the Metropolitan Board of Works?—I am.

W. W. Smith, Esq.

432. Will you state what proceedings have been taken by the Metropolitan Board of Works in order to protect the rights of the public with regard to open spaces and commons?—I believe the Committee are perfectly well acquainted with the provisions of the Act of 1866. Under that Act it is the special duty of the Board to attend to all matters connected with open spaces to which that Act refers, and to preserve every open space that they possibly can, and to take care that there is no encroachment of any kind upon commons. The Board have not very ample powers to prevent the further encroachments, or to deal with interests in order that the public may have the benefit of open spaces to the greatest possible extent, but they exercise such powers as Parliament has given them, with the view of protecting the interests of the public. It has been a matter of deep regret to the Board that they have not been able to secure some prominent commons to which Mr. Goddard has alluded; that is to say, for instance, Hampstead Heath. The Board at a great number of intervals have made all sorts of attempts to get in the interests of the owner, or the supposed owner, of that common, in order that it may be more certainly and generally devoted for the benefit of the public. The way in which the Inclosure Commissioners have viewed the subject of proceeding under the Act, has been this: wherever there has been litigation with regard to these commons the Inclosure Commissioners consider that their jurisdiction is, for the time, ousted. There is a suit pending with regard to Hampstead Heath. There is a suit pending with regard to Wandsworth Common, and I think I could mention three or four other commons as to which there is litigation, the result of which has been absolutely to prevent the Board for the time from doing anything in order to preserve those commons for the public.

433. What have the Inclosure Commissioners to do with the matter?—The Inclosure Commissioners are to present a scheme to Parliament. The matter originates in this way: the Metropolitan Board of Works present a memorial.

434. What did you mean by alluding to the way in which you have been met by the Inclosure Commissioners?—It is the duty of the Board under that Act to present a memorial to the Inclosure Commissioners. The Inclosure Commissioners are the body who are to prepare a scheme to submit to Parliament.

435. You mean that they tell you, "We cannot get on at present, because there is litigation"?—That is the practice. They say, "It is of no use going into a discussion upon these subjects while litigation is going on." Therefore the Board has been very much stopped for the moment in their proceedings on that account. Of course I do not blame the parties interested; they are merely asserting their rights; but, in consequence of this litigation, the Board have been delayed very much. However, that has naturally increased the anxiety of the Board to do everything they can in every direction to secure open spaces for the public. They have felt, no doubt, upon this subject, very considerable anxiety. They presented a Petition to the House of Commons while the Inclosure Bill was pending, praying that they might be heard upon the subject, and that Wisley Common might not be inclosed.

436. Is Mr. Goddard right in saying that encroachments have been going on since 1866, because I should rather infer, from what you have stated, that that Act prevents encroachments?—It would, no doubt, seem rather odd, that whilst there is power to prevent encroachments, that that object is not effected; but Mr. Goddard is quite right in what he stated, for this reason, that, in consequence of the litigation which has been going on, the Board have been unable to bring the powers of the Act into due operation.

437. Cannot they prevent further encroachment being made in the meanwhile?—They exercise all the powers that they at present have for preventing encroachment, by buying up or acquiring the interests. They would under the Act have the power of making bye-laws, and the power of buying up interests and laying out complete schemes, through the agency of the Inclosure Commissioners, but at present their powers fall short. I am in hopes that this litigation is about to end, and that the Board will be able to exercise their powers to the fullest extent. With regard to Wandsworth Common, that seems in danger of getting spoilt, in spite of the efforts of the Board. The fact is, that the poor people who come out of the prisons of London go and sleep there, and women go there in numbers, and the place becomes a nuisance. In consequence of the building that is going on, the public are driven further and further, day by day, from these places that the Legislature intended to keep for the benefit of the public. The Board make every effort that they can before Committees of this House and Parliament itself for the purpose of preserving open spaces of any kind, and also to secure the open spaces for the benefit of the metropolis.

438. Is it not rather the opinion of the Board that the spaces should be enlarged generally, and that they should lay their hands upon one particular place, which is beyond the present area which is excepted?—Yes; I rather concur in the view that Mr. Scott has taken. We would respectfully submit to Parliament that they should do their best to prevent any place of this nature being devoted to an inclosure, and extend the area of the present open spaces; because it is not only in this particular direction, but there are a great many other directions in which the evil will arise, if Parliament will not watch them. The Board have certainly felt, having regard to the peculiar circumstances connected with this property,

W. W. Smith. Esq. 22 April 1869.

property, that this is one which we might really very earnestly impress upon Parliament to save for the benefit of the metropolitan public, because the metropolis is getting so large, buildings are increasing hour by hour, as anybody knows who travels upon the South-Western Railway, that it is important to have as many open spaces as possible. What we respectfully submit to this Committee is, that Parliament must meet the necessity of the case. If 15 miles is proved to be insufficient, which I think Mr. Scott has proved, when we find by our daily practice and experience that London is extending itself in such a manner, that there must be a better preservation of open spaces, and commons made for the health and comfort of the people, we then ask Parliament in its wisdom to step in and provide a larger area. If they think they cannot properly do that, at all events, we ask them to prevent further land being inclosed so near the metropolis as Wisley Common is. The inclosure of 300 acres so near the metropolis is, I need not say, a very serious matter.

439. How far is Wisley Common beyond the district excepted by the Act of 1866?—I believe about four miles, as nearly as possible in that direction.

440. It has been stated to be half a mile?—I think they referred to the coal and wine tax area. The area of the Metropolitan Board of Works is not co-extensive with the coal and tax area.

441. That is the area that is referred to in the Act of 1866?—The police area.

442. Is not your area of an uniform radius?—No, it is not. That is rather a difficulty, and one of the evils not provided for by the Metropolitan Local Management Act. We have got no specific limit by map-lines or marks. It is rather a parochial boundary than anything else.

443. Is Mr. Scott right in saying that in the direction of Wisley your extreme limit is as much as 20 miles from Charing Cross?—I am not able to state that.

444. Mr. *Fawcett.*] You have of course studied the Act of 1866 for the preservation of open spaces and commons?—Yes.

445. That Act forbids the inclosure of any open space within a certain area of London?—It does.

446. The Report of the Committee upon which that Act was based shows that in many cases it is undesirable that open spaces should be inclosed at a greater distance than the distance mentioned?—Certainly.

447. Therefore, would you attribute this interpretation to that Act, that Parliament has laid down, that in no case whatever a common within the metropolitan police area is under any circumstances to be inclosed; that is the object of the Act, is it not?—It is.

448. But we may conclude from the tenor of the Report of the Committee, that they contemplated that Parliament should inquire into any case of a proposed inclosure just beyond that district, whether it was desirable to include it or not?—I really think that is a wholesome and safe view.

449. I want to ascertain your opinion from having studied the Act?—As far as my opinion is worth anything (and it is the opinion of us all), it is, that Parliament should be most careful, more especially in these times, to look at it in that light.

450. Then you corroborate what the previous witness said, that the demand for open spaces in the metropolis is constantly increasing, whereas the supply of open spaces is actually decreasing?—I speak with perfect confidence on that point. It is a subject of interest to the Board, and of such deep interest to us who are its officers, that it is our most pleasurable duty to promote the comfort of the people, and if there be any one duty which we undertake with more gratification than another, it is trying to promote the health of the people by preserving open spaces.

451. You have stated that several open spaces in the metropolitan district are at the present moment in litigation?—Yes.

452. I believe you enumerated several; among others, Hampstead Heath?—Hampstead Heath is the largest of them all; then there is Wandsworth Common, which is in litigation, and Wimbledon Common is in litigation; I am glad to say we have contracted to buy Tooting Becke Common; Plumstead Common is another that is in litigation.

453. Then Plumstead Common, Hampstead Heath, Wandsworth and Wimbledon Commons are at the present moment in litigation?—Yes.

454. No one can foresee the result of that litigation for a certainty?—It is impossible.

455. Then if the litigation should prove unfavourable to the plaintiffs in the suits and the public, it is possible to conceive that the public may in a few years lose the whole of those commons?—It will become a very serious question if the rights of the lords with regard to those commons should be established to the extent to which they seek to establish them.

456. *Chairman.*] Are the Metropolitan Board of Works parties to the litigation?—No, we are not parties; we are watching the litigation; we are practically stopped by the litigation.

457. Mr. *Fawcett.*] If the litigation should prove unfavourable to the views which the Metropolitan Board of Works entertain, it is possible that the public may, to a great extent, lose the use of those commons?—Certainly; or, at all events, they may be very much prejudiced and delayed in securing what it was the object of the Act, no doubt, to secure to the public.

458. *Chairman.*] I suppose you have no funds applicable to the purchase of interests beyond your own district?—None beyond the metropolitan commons district.

459. Therefore, if the inclosure were refused, this land would be neither like the land within your district, which you can buy and appropriate, nor like other land which may be inclosed in the ordinary way?—I think, if my memory serves me right, that there is a special clause which enables the Board to contribute to the purchase of a common, even although it is beyond the district for which they are the local authority. It is the 25th clause of the Act of 1866, which, with the permission of the Committee, I will read. "The local authority may, in relation to any metropolitan common for which they are the local authority, and the Metropolitan Board of Works may, in relation to any metropolitan common (although not one for which they are the local authority), contribute such amount as they think fit (in a gross sum or by annual payments or otherwise) towards the expenses of executing any scheme under this Act when confirmed by Act of Parliament, including the payment of the compensation (if any) to be paid in pursuance thereof."

460. Will

460. Will you explain the term "metropolitan common"?—A "metropolitan common" is a common within the metropolitan police district. *W. W. Smith*, Esq. 22 April 1869.

461. Then that section would not apply?—With submission, the words which I have just troubled the Committee with do apply, because the Board are at liberty to appropriate their money to a common which is not strictly a common for which the Board is the local authority.

462. Mr. *Fawcett.*] You have local authority over all the commons within your area?—Clearly, as regards all commons within the metropolis management area. The object of that clause we have always understood to be this, that although the Board may not be the local authority, still they may contribute a portion of the expense, as being within the police radius.

463. *Chairman.*] The 4th section says: "This Act shall apply to any common, the whole or any part whereof is situate within the metropolitan police district, as defined at the passing of this Act (referred to in this Act as a metropolitan common)"?—Wisley Common is close to that district, and I should think some part is within it.

Mr. *Goddard.*] The whole of it is beyond the metropolitan police district.

464. *Chairman.*] If any part of it is within your district, you would have the power. Are you able to state whether the Metropolitan Board, if the price asked were what they considered to be a fair one, would get over this difficulty by coming forward and acquiring this beautiful place for the inhabitants of the metropolis?—I am not authorised at the present moment to express their views upon the subject, because the point has not been actually raised, but I think they would be very glad indeed to have an opportunity of considering the question.

Mr. Henry Cory called in; and Examined.

465. *Chairman.*] Are there any facts which you wish to state to the Committee with reference to Wisley Common?—I have lived at Weybridge for many years, and am acquainted with the whole of the neighbourhood. I hear constantly, when in society, the opinions of the gentry and the inhabitants generally with regard to Wisley Common. It is universally spoken of in this way; "Oh, that charming and delightful place! let us go there, and enjoy ourselves this morning." You are constantly asked, "Have you been to St. George's Hill?" "I have been there once or twice." "Oh, then, let us go to Wisley Common," is the observation that is always made. I think Wisley Common is one of those commons which, from its locality, its beauty, and the advantages attending it, is exceedingly attractive to all the neighbourhood; and not only to the neighbourhood, but to all those ladies and gentlemen who come down upon visits to their friends who live in the neighbourhood. It is universally liked, I may say. I have occasionally made the observation, "They are going to inclose Wisley Common;" to which the reply was, "Oh, dear me, I am very sorry to hear that. Who is going to do that?" It is the universal feeling in the neighbourhood; I believe that there are hundreds of the inhabitants of the neighbourhood who, if called together, with one voice would say, "Whatever you do, don't inclose Wisley Common." Mr. *H. Cory.*

466. It has been stated to this Committee that no objection was made at the time the meeting of the Inclosure Commissioners was held?—I never heard of it until within the last few days.

467. (To Mr. *Marshall.*) The meeting was advertised in the newspapers, was it not?—Unquestionably, and it occupied a considerable time.—(Mr. *Cory.*) I do not for a moment doubt but that the proceedings have been conducted legally, but what I believe is, that practically it was perfectly unknown. As I say, I never heard of it until within the last few days. I have observed that the general feeling in the neighbourhood is, that, of all places, Wisley Common is one which ought not to be inclosed.

468. *Chairman.*] Have you had an opportunity, not only of hearing persons express their intention of going to Wisley Common, but of actually seeing them at Wisley Common?—I have not been there much myself, because I am getting an old man now, and I find it is too far for me, but I do hear constantly of those who do go there; and that people go there constantly in large numbers, I think, particularly on Sunday, when they go down by the railway. I do not think you will find a single person who will be in favour of inclosing Wisley Common.

469. Do you consider that the feeling in the neighbourhood is strong enough to induce gentlemen to raise a fund for the purpose of preserving and purchasing Wisley Common for the benefit of the locality?—I do not know that it would or would not be so. It would depend upon the price which those who have got the right might ask for it.

Mr. John Augustus Tulk, called in; and Examined.

470. *Chairman.*] You reside at Addleston?—Yes. Mr. *J. A. Tulk.*

471. What is the distance of that from Wisley?—I think it is from three to three and a half miles to Wisley Common. I wish to confirm what Mr. Scott and Mr. Cory have stated with respect to the beauty of this particular common, and the desirableness of having it uninclosed for the benefit of the neighbourhood. Many inhabitants of the neighbourhood have taken residences there for the purpose of enjoying the rural district, and of being able to go over these uninclosed lands. If they were inclosed, it is very clear that their properties will be very much injured by it.

472. You mean the inclosed lands generally?—The common lands generally that are about there. There is no doubt that we enjoy these commons more than we do our own inclosed lands, because associated with them are seen that wildness and that beauty of scenery which cannot be found in any other locality. There is no doubt that this particular common is one of the most healthy places in the summer time that anybody can go to. Parties who are fond of microscopical researches can find there objects

Mr. *J. A. Tulk.*

22 April 1869.

for their microscopes. As Mr. Scott has said, it is a famous place for entomological specimens.

473. Have you seen it frequently from your own observations, or do you state that from what you have heard?—I have only occasionally seen parties going across it.

474. Have you been in the habit of frequenting it?—I have been there occasionally. I I think that is all I have to say on the subject. I think it has been very well discussed.

475. Mr. *Fawcett.*] Are there any other commons in the immediate neighbourhood besides this?—There are Weybridge Common and Ockham Common.

476. Ockham Common, although not inclosed, is no longer a common?—Practically, it is no longer a common, because it may be inclosed.

477. Ockham being no longer a common, anybody can be taken up as a trespasser who went there to-morrow, I suppose, because, the land being inclosed, he will be there on sufferance?—No doubt.

478. The other places which are frequented in the neighbourhood are not commons, but still the public have no right to go there?—There is some portion of Weybridge Common which is uninclosed.

479. But still there is no considerable tract of common ground?—I think not. It is the most beautiful neighbourhood that you can possibly conceive. It would be a thousand pities if it were inclosed.

BENJAMIN SCOTT, Esq., called in; and further Examined.

B. Scott, Esq.

480. *Chairman.*] I BELIEVE there is something you wish to add to your evidence?—There is one point which I forgot to mention at the moment, that this common is within half an hour's drive of Claremont, which the Queen now uses as a Royal residence. The inhabitants of Esher sent in a memorial, very numerously signed, to the Home Secretary, to be transmitted to Her Majesty, praying that she would make inquiry upon the subject.

481. Mr. *Fawcett.*] Was this memorial sent from Esher to Her Majesty?—It was sent from Esher, signed by almost all the principal inhabitants, and was transmitted by Mr. Bruce, the Home Secretary, to Her Majesty; and by Her Majesty's command it was transmitted to the Inclosure Commissioners. One of the inhabitants received a letter the other day informing him that the Commissioners would not deal with the subject, because it was before this Select Committee of the House of Commons. I thought it my duty to mention that fact, so that the Committee might have their attention drawn to it, because it is certainly, without any exception, the most desirable drive that Her Majesty can have in the neighbourhood. It is a drive of over two miles. I do not know whether the Queen may be considered as one of the public; but I believe I have done my duty in mentioning it.

Mr. ROBERT BOARMAN, called in; and further Examined.

Mr. *R. Boarman.*

482. *Chairman.*] HAVE you read Mr. Weatherall's report of the 5th of December?—Yes.

483. Are the statements contained in it correct?—Yes.

484. Do you assent to the statements which have been made about the valueless character of this land for agricultural purposes?—Not to the price I heard just now.

485. Could the land with anything like facility be applied to agricultural purposes?—A portion of it could be.

486. A small portion of it?—No, more than half of it could be. Any attempt to get it all under cultivation would of course require a large outlay.

487. You think that half might be made available for agricultural purposes, so as to be remunerative?—Yes.

488. And the other half not?—Not without the outlay of capital.

489. With an outlay of capital, would it pay to do so?—I think it would pay eventually.

490. Mr. *Fawcett.*] Do you say that after careful calculation?—After, we will say, 20 or 21 years, supposing any person had a lease of it.

491. You stated in your former examination that very extensive drainage works would have to be carried out; have you estimated what those drainage works would cost?—No, I have not.

492. If you have not done that how can you possibly form an estimate as to how much it will take for drainage?—I could form a little idea.

493. You have made no estimate of the cost of drainage?—We can form an opinion, although we do not go into figures.

494. This drainage, as I understand you, would be very difficult to carry out?—You would have to sink several ditches to get the water; you might possibly take it under the river.

495. You do not know whether you would have to take it under the river or not?—No.

496. Therefore your opinion that it would be remunerative to cultivate it is a mere surmise, and not based upon any calculation?—No, it is not.

Monday, 26th April 1869.

MEMBERS PRESENT:

Mr. Brown-Westhead.
Mr. Fawcett.
Mr. Goldney.
Sir Francis Goldsmid.
Mr. Frederick Stanley.

SIR FRANCIS GOLDSMID, IN THE CHAIR.

Mr. WILLIAM WYKE SMITH, again called in; and further Examined.

Mr. *W. W. Smith.*
26 April 1869.

497. *Chairman.*] WHEN the Committee separated on Thursday, I asked you to consider whether you had anything further to suggest as to any mode in which the Metropolitan Board of Works could deal with this question?—Since you were kind enough to put the question to me, I have sketched out an answer which, if you will permit me, I will now give: "Since the last meeting of the Select Committee I have had an opportunity of conferring with the Parks and Open Spaces Committee of the Metropolitan Board of Works, with reference to the suggestion made by the Honourable Baronet, the Chairman of the Select Committee, as follows: '*Chairman.* I should like to know whether you think that if the Metropolitan Board of Works were disposed to buy this common at a fair price, as recreation ground for the public, they could get any authority to do so this Session? I ask the question merely for my own information, and not as expressing any opinion upon the part of the Committee. Just think over it before we meet again, and see if there is any possibility of authorising them to buy it, supposing they are willing to do so.' I find from the Committee that it is unlikely that the Board will themselves seek to get authority this Session to buy this common, and that if Parliament should pass the Bill now in the House of Commons, or any measure to extend the Metropolis Commons Act, the Board would not necessarily engage to purchase Wisley Common in the ordinary sense of purchase, but that if that common were brought within the Board's power, the same process would in all probability be applied to it as if it were now within the Board's area. (*i. e.*) The mode of effecting improvement under this Act is by a scheme for these purposes (*i. e.*), establishing a local management, with a view to expending money on drainage, levelling, and improvement, and to the making bye-laws and regulations for the prevention of nuisances, and preservation of order on commons, and a memorial may be presented to the Commissioners by the lord of the manor, or any commoners, or by the local authority (sec. 6). The memorial may then be inquired into (sec. 7), and the Commissioners may prepare a draft scheme, and have it printed and circulated (sec. 9), and during two months the Commissioners may receive any objections or suggestions (sec. 10). The scheme may after two months be referred to an Assistant Commissioner, who may make inquiries, and hold sittings, and take evidence and hear objections or suggestions, and notice of the sittings shall be published (sec. 11). The Assistant Commissioner to report to the Commissioners, who may, if they think fit, finally settle and approve the scheme (sec. 13), which scheme must state what rights are to be affected by it, and how, or whether consented to (sec. 14), and no estate or right of a profitable or beneficial nature is to be taken away or injured without compensation, which is to be ascertained under the Lands Clauses Consolidation Act (sec. 15). If any one interested in the common be dissatisfied with the scheme of the Commissioners, a decision may be obtained in an action at law, as provided by sec. 56, 8 & 9 Vict. c. 118, (sec. 16). The Commissioners are annually to report proceedings to Parliament, with all the grounds of approval and objections, but the scheme is to have no operation unless confirmed by Parliament; and if the matter be opposed in Parliament, the Bill may be referred to a Select Committee, and the petitioner be allowed to appear (secs. 20 to 23). What scheme in fact might be approved by the Board, the Inclosure Commissioners, or Parliament, might and probably would depend on inquiry before and after going before the Commissioners, more especially having regard to sections 6, 9, 10, 11, and 13 of the Metropolis Commons Act."

498. That is merely referring the Committee to the Act, and stating that the Board does not intend to take any action itself, but if Parliament chooses to extend its jurisdiction, that they will deal with it?—That is substantially so. I have had a plan coloured which I think might be useful to the Committee, which shows all these different commons (*producing the same*). Perhaps the Committee will allow me to hand in a short analysis of the Metropolitan Commons Act (*handing in the following Paper*):—

"METROPOLITAN BOARD OF WORKS.

"ANALYSIS, by the Solicitor, of the METROPOLITAN COMMONS ACT, 1866.

(*Ordered to be Printed, 28th September* 1866.)

"The local authority, in reference to the Act as to each metropolitan common, the whole or part of which is within the metropolis as defined by the Metropolis Management Act, 1852, is this Board, and the rate to be raised is the ordinary Board rate. As to commons within a local board's

Mr. W. W. Smith.

26 April 1869.

area, and not being within the metropolis, the local authority is the local board, and the rate to be resorted to is the general district rate. As to any other common, the vestry is the authority, and the rate is to be the poor rate—(*See* sec. 2, and Schedule).

"The definitions are, that 'common' means land subject to any right of common. 'The commoner,' a person having any such right. 'manor' is to include reputed manor. The term 'Commissioners means the Inclosure Commissioners for England and Wales—(Sec. 3).

"The Act is to apply to any common, the whole or part of which may be within the Metropolitan Police District—(Sec. 4).

"After the passing of the Act, the Commissioners are not to entertain an application for the inclosure of a metropolitan common, but no proceedings already taken are to be stopped—(Sec. 5).

"The mode of effecting improvement under this Act is by a scheme for these purposes, *i. e.*, establishing a local management, with a view to expending money on drainage, levelling, and improvement, and to the making bye-laws and regulations for the prevention of nuisances, and preservation of order on commons, and a memorial may be presented to the Commissioners by the lord of the manor, or any commoners, or by the local authority—(Sec. 6).

"The memorial may then be inquired into (Sec. 7), and the Commissioners may prepare a draft scheme, and have it printed and circulated (Sec. 9), and, during two months, the Commissioners may receive any objections or suggestions—(Sec. 10).

"The scheme may, after two months, be referred to an Assistant Commissioner, who may make inquiries, and hold sittings, and take evidence and hear objections or suggestions, and notice of the sittings shall be published—(Sec. 11). The Assistant Commissioner to report to the Commissioners, who may, if they think fit, finally settle and approve the scheme (Sec. 13), which scheme must state what rights are to be affected by it, and how, or whether consented to (Sec. 14), and no estate or right of a profitable or beneficial nature is to be taken away or injured without compensation, which is to be ascertained under the Lands Clauses Consolidation Act—(Sec. 15).

"If any one interested in the common be dissatisfied with the scheme of the Commissioners, a decision may be obtained in an action at law, as provided by sec. 56, 8 & 9 Vict. c. 118—(Sec. 16).

"The schemes are to be printed for sale at all times, and the schemes, when approved, are to be sealed, and the Commissioners shall print them, and give copies to the lord of the manor, and to the local authority, and cause them to be circulated so as to give information to parties interested—(Secs. 17, 18, 19).

"The Commissioners are annually to report proceedings to Parliament, with all the grounds of approval and objections, but the scheme is to have no operation unless confirmed by Parliament; and if the matter be opposed in Parliament, the Bill may be referred to a Select Committee, and the petitioner be allowed to appear—(Secs. 20 to 23).

"As to the expenses, any expenses incurred by the Commissioners as to any memorial or scheme are to be paid by the memorialists or ratepayers, or inhabitants willing and offering to pay, or by the local authority, if willing, and payment or security may be demanded for those expenses if offered, and the local authority may, as to any common for which they are the local authority, and this Board may, whether they are the local authority or not, contribute towards the expenses of any scheme, including the compensation, if any—(Secs. 24, 25, and 26).

"Where lords of manors, or others, are under disability, or beyond seas, guardians or attornies may act—(Sec. 28).

"Provision is made for the consent of the Crown and Duchies of Lancaster and Cornwall, as to being given by their representatives—(Sec. 29.)

"Lords of manors, and others interested, may appoint agents as to any memorial or scheme.

"The Crown may vest manorial rights in the Commissioners, for the purposes of a scheme under the Act—(Sec. 32)."

499. Mr. *Fawcett.*] Is there not a project this Session for the inclosure of Hay's Common?—That is not in the area of the Metropolitan Board of Works, therefore, if that is so, that must be by another body. The Metropolitan Board of Works have lately prepared a draft memorial for a scheme with reference to Blackheath.

500. *Chairman.*] Hay's Common is within the Metropolitan Police District, is it not?—It is.

501. Suppose Wisley Common to be brought within the district of the Metropolitan Board of Works, an Act similar to that introduced with reference to Hay's Common would be brought forward?—Precisely; we should bring to bear all the provisions of the Metropolitan Commons Act, 1866, to that common, just as we propose to do with regard to any other common within the Metropolitan Board of Works' jurisdiction.

502. The scheme which has been introduced for Hay's Common has produced general satisfaction to the lord of the manor, has it not?—I rather think it has.

503. Mr. *Goldney.*] How would the officials of the Metropolitan Board of Works be put into motion with regard to commons that are within the area?—I will take one instance, Blackheath, which is a very interesting common to the public. The Board examine into these matters by their officers; they are either put into motion by the parties interested, or they have their attention called to it by others. It is a subject of great importance to them; they send their officers down to the common, who report to them the facts with regard to it. With regard to the case of Blackheath, which I will allude to for a moment, they had careful plans made of Blackheath, and they inquired very carefully into all the circumstances connected with it; they wished to abate nuisance and annoyance complained of there. After inquiring into all the circumstances, they then take the whole matter into careful consideration, and prepare a memorial, which they present to the Inclosure Commissioners, asking the Inclosure Commissioners to prepare a scheme; when the Inclosure Commissioners have prepared a scheme, it is considered by them, and reported upon by their officers. They must give certain notices under the Act, and then the parties will be heard as to their rights.

504. It was with reference to their being put into motion that I asked the question, "Have the Metropolitan Board of Works a Committee for the consideration of matters connected with commons alone?"—Yes, exclusively; parks and open spaces.

505. Have they ascertained all the commons and open spaces within their limits?—They have.

506. And

506. And they have general plans of them?—They have.

507. Have that committee ever reported to the Board the necessity of extending the area?—I think not, except with regard to this particular Bill.

508. What have they done with respect to this particular Bill?—With regard to this particular Bill, the moment they heard of it they presented a petition to Parliament, praying that Wisley Common might be struck out of the Inclosure Bill.

509. Did they do that of their own motion as a committee sitting upon commons generally, or did they do it on the solicitation of other parties?—To the best of my belief many parties represented to them that it was a matter which the Board ought to take up; I have no doubt it did originate with some members of the Board; in fact, I recollect particularly one member of the Board did call the attention of the Board to this subject, and suggested that a petition should be presented against the Bill.

510. Do the Inclosure Commissioners, as a matter of course, send the Metropolitan Board of Works copies of their reports?—No.

511. How does what is going on, with regard to the Inclosure Commissioners, come to your knowledge?—In any case where the report is before the Commissioners, we should be in communication with them on the subject.

512. I am not speaking of your own area; but my question is, how you become acquainted officially with the proceedings of the Inclosure Commissioners, with reference to commons outside your area?—We have no other means than any other person has; we take it from the votes and proceedings of Parliament.

513. There is no official communication made by the Inclosure Commissioners respecting anything that is outside your area?—None.

514. With reference to anything which is inside your area, you are the parties who must regulate them?—Not necessarily so.

515. Are not the Inclosure Commissioners excluded from taking original action?—The Inclosure Commissioners are excluded, as appears by section 5, but the Metropolitan Board is not excluded.

516. Under section 5, after the passing of the Act, the Commissioners are not to entertain an application for the inclosure of a metropolitan common, but no proceedings already taken are to be stopped; therefore they cannot, except through you, entertain anything?—That is quite right; their jurisdiction, except under the machinery of this Act, is taken away.

517. They cannot entertain a communication from private individuals inclosing things within their area?—They can entertain them from private individuals, but then they must pursue the machinery of the Act. The 5th clause provides, "After the passing of this Act, the Commissioners shall not entertain an application for the inclosure of a metropolitan common, or any part thereof; but nothing in this Act shall interfere with the carrying on and completion of proceedings under any provisional order of the Commissioners confirmed by Act of Parliament, passed before or in the present Session; and, notwithstanding any proceedings taken under any Act other than this Act, or any provisional order of the Commissioners, made, but not already confirmed by Act of Parliament, proceedings may be taken under this Act in relation to any metropolitan common."

518. Mr. *Fawcett.*] The scheme for the management of Hay's Common originated with the inhabitants, did it not?—I believe it did.

519. Not from the Metropolitan Board of Works?—Certainly not from the Metropolitan Board of Works, for it is not within the area of the Board.

520. Mr. *Brown-Westhead.*] How far does Hay's Common lie beyond the area of the Board?—I do not know; the limit of the Metropolitan Board of Works is not very well defined, it runs in and out.

521. *Chairman.*] Where is Hay's?—There are two Hay's Commons, Hay's in Kent, and Hay's near Uxbridge; if it refers to Hay's near Uxbridge, I have seen that; but I have not seen Hay's Common in Kent, which has nothing at all to do with our area.

522. Mr. *Brown-Westhead.*] Have not the Board taken some action with regard to that?—No.

523. Mr. *Fawcett.*] Is not Hay's within the "Metropolitan Commons Act," and not within the area of the Metropolitan Board of Works?—Yes.

524. I presume the Metropolitan Board of Works would like to see the inclosure of Wisley Common postponed until Parliament has expressed its opinion as to the advisability of extending the distance to which the "Metropolitan Commons Act" would apply?—They presented a petition asking that Wisley Common might be struck out of the Bill; and I have no doubt that that is their desire.

525. You mean that they presented a petition that it might be struck out of the Bill which is now before Parliament?—Yes, a Bill has been brought in by Mr. Thomas Chambers; I am not sure that it is printed, but I have seen the Bill.

526. Have you a copy of the petition of the Metropolitan Board of Works?—Yes, I have.

527. Will you state the purport of it?—As it is not very long, perhaps I had better read it to the Committee.

"In the House of Commons, Session 1869.

"Inclosure of Lands.

"To the Honourable the Commons of the United Kingdom of Great Britain and Ireland, in Parliament assembled:

"The humble Petition of the Metropolitan Board of Works under their common seal,

"Showeth, that a Bill has been brought into your Honourable House, intituled 'A Bill to authorise the Inclosure of certain Lands in pursuance of a Report of the Inclosure Commissioners for England and Wales.'

"That your Petitioners are much interested in seeing that commons and open spaces near the metropolis shall be preserved, as far as possible, as places of resort and recreation for the public.

"That

Mr. *W. W. Smith.*

26 April 1869.

"That all such open spaces are getting less in number in consequence of inclosure and building.

"That your Petitioners observe that in the Schedule to the said Bill is a tract of land at Wisley, in the parish of Wisley, in the county of Surrey, to be affected by the said Bill.

"That such land consists of about 375 acres, and is within 20 miles of London, and it appears to your Petitioners most important that such lands should not be inclosed.

"That such land is not correctly described by the Inclosure Commissioners in their 24th Report as 'pasturage of very small value,' but is of great and increasing value as building land, being intersected by a high road throughout its whole extent.

"That your Petitioners are of opinion that if Parliament should determine to inclose Wisley Common, it should be disposed of (divested of its manorial rights) to the highest bidder, and the proceeds applied in procuring additional parks or open spaces for the use of the people, or in the reduction of taxation for parochial relief.

"That your Petitioners are of opinion that Wisley Common is most beneficial to the metropolis and the county of Surrey, in its present condition.

"Your Petitioners therefore humbly pray of your Honourable House, that the said Inclosure of Lands Bill may not pass into a law in its present shape, but that the tract of land at Wisley, in the parish of Wisley, in the county of Surrey, may be excluded from the operation of the said Bill, and be taken out of the Schedule thereto.

"And your Petitioners will ever pray.

"Sealed by order.

(signed) "*John Pollard*,
Clerk of the Board."

528. That petition does not state anything with reference to the area being extended?—No; at that time the Bill had not been brought in which has since been brought in by the honourable Member for Marylebone. Perhaps I may be permitted to state, with regard to that Bill, that I ascertained from the Parks and Open Spaces Committee of the Board on Saturday, that they certainly will not oppose the Bill which Mr. Chambers has brought in. They feel that if Parliament should think it right to extend the area, that it will be the duty of the Board to endeavour to carry out the Act in its altered form.

BENJAMIN SCOTT, Esq., again called in; and further Examined.

B. Scott, Esq.

529. *Chairman.*] I BELIEVE you wish to add something to your former evidence?—I wish to make a correction with reference to the answer I gave to Question 367. I stated that Wisley Common had been used for the purpose of reviewing the volunteers, and that a military display and sham fight had been held on Wisley Common; I was misinformed on that point; I am now informed, what I believe is the fact, that the review was confined entirely to Mr. Buxton's grounds which border the common, and that Lord Lovelace did not allow the common to be used for that purpose. I am also at liberty to make a communication to the Committee upon a subject on which I could not speak when I was examined before them on Thursday. It is due to Mr Buxton to state that as early as the 18th of March last he made a communication to me, as an inhabitant of Weybridge, offering to dedicate a portion of the common to the public if it could be arranged that this inclosure should take place. The communication was marked "Strictly confidential." I received a subsequent letter from Mr. Buxton to the effect, that he had made that communication to me under some misapprehension, and therefore I felt in honour bound to close my mouth upon the subject, both in public and in private. I considered the matter was at an end, and that I had no business to mention it, either in Weybridge or when I was examined before this Committee; Mr. Buxton, however, has addressed a letter to the "Standard" newspaper, which appears this morning, on the subject, and I have his permission to direct the attention of the Committee to a paragraph in that letter. He says, "I never, however, had the least intention of fencing in the part allotted to me; in fact, my sole object is to keep it open, by preventing the inclosure of the strip between it and the road, and if the proposed arrangment should be carried out, I should not only keep it open myself, but I should take care that my successors are bound to do the same. In fact, so far from this being a "gross job," I am acting entirely in the interest of the public; not that I mean to claim any particular credit for that, because it so happens that the interests of the public and my own are one and the same. No one would dislike so much as I should to see this part of Wisley Heath inclosed; and as I have explained, it is expressly for the purpose of keeping it open that I have consented to this costly bargain. No one can be more anxious than I am that the people should have access to country enjoyments. Highly appreciating them myself, I cannot endure to see the people deprived of them; and I think my neighbours will admit that I act on this feeling, as I allow any one to walk, ride, or drive at all times through any part of my grounds without any restriction whatever, a privilege of which the public avails itself largely. In conjunction with my relative Sir Fowell Buxton, and others, I have taken an active interest in stopping the inclosure of Epping Forest, and have in other ways done my best to maintain the rights of the people in this respect; and the course I have taken with respect to Wisley Heath has been in perfect accordance with this principle." The "costly bargain" to which Mr. Buxton refers in the early part of his letter was a negotiation, by which, as I am informed, he had contracted to purchase some land of Lord Lovelace. I thought that it was due to Mr. Buxton to make this communication, which I should have made, however, without his consent, as he has published it in the paper of to-day, and I leave it in the hands of the Committee. Perhaps it may lighten the difficulty which is imposed upon them, by the reference from

from the House of Commons, to know that the amount of land I think includes very nearly one-third of the common which is thus so liberally offered by Mr. Buxton to be dedicated to the use of the public.

530. About 100 acres?—About of 100 acres That is all I am at liberty to say with regard to Mr. Buxton's proposal.

531. Do you conceive that that offer of Mr. Buxton's would considerably modify the objections entertained by the residents in the neighbourhood to the inclosure?—There is no doubt that if that portion of the heath were dedicated, so much of it would be saved for the enjoyment of the inhabitants of the neighbourhood; but I rather place the matter before the Committee, in the hope that it may facilitate the acquisition of the remainder of the common for the use of the public, upon terms which would be fair and just to the lord of the manor.

532. Mr. *Goldney.*] Why do you think that the lord of the manor has a better right than the commoners?—I have not called in question at all either the right of the lord or the commoners.

533. I thought you alluded to making a sort of saving of a right to compensation for the lord?—I should have said the parties entitled to it.

534. You do not think that the lord is entitled to compensation any more than those who have the surface of it?—No.

535. Mr. *Fawcett.*] Then if Mr. Buxton gives this 100 acres, it will simply be an act of generosity on his part?—Exactly.

536. He is no more bound to do that than Mr. Locke King or the rector?—Undoubtedly not.

537. You are anxious of course to have the whole common, if possible, preserved; but if you cannot get that, of course Mr. Buxton's 100 acres will be much better than nothing?—That is very true, but I was in hope that this concession on the part of Mr. Buxton might facilitate an arrangement between the rest of the parties for the acquisition of the remainder.

538. Do you mean by "facilitate," that Mr. Buxton's good example will be followed by Mr. Lovelace and Mr. Locke King?—No doubt; all good example has its influence; but I feel more particularly that the amount of the land to be purchased would be reduced, and so it would be more easily acquired through the intervention of the Metropolitan Board of Works, or in any other way that this Committee may point out.

B. Scott, Esq.
26 April 1869.

539. Are you aware that it would be necessary to get an Act of Parliament passed before the Metropolitan Board of Works could purchase it?—Yes.

540. Therefore what you propose now is, that all action should be suspended until Parliament had decided whether or not to extend the area of the Metropolitan Commons Act?—That would, no doubt, be a very convenient mode of proceeding; I have no doubt whatever that if this Committee were to recommend the purchase of the common, that Parliament would readily fall in with such a suggestion.

541. *Chairman.*] When you speak of purchasing, where do you expect the funds to come from?—I asked the question on Thursday, whether the residents who are so anxious that this common should not be inclosed, will provide the purchase money; are you able to give an answer to that question?—I think the question was rather addressed to Mr. Smith, the solicitor to the Metropolitan Board of Works; I apprehend that if the inhabitants of the Metropolis desire to preserve open spaces, as they most undoubtedly do, that it would be fair to levy upon them a rate to make such a purchase. The amount would be perfectly insignificant compared with the rental of the Metropolis, and perhaps the adjacent parishes, or that portion of the county of Surrey which would be particularly benefited, might fairly be included in such taxation; I believe a very insignificant tax would acquire all the rights in connection with this common.

542. The solicitor to the Metropolitan Board of Works has given an answer for them; but my question to you was, whether there was any possibility of raising a fund in the neighbourhood for the purpose?—I think, with reference to the immediate neighbourhood, that there might be some difficulty in obtaining the necessary sum; but, as I have already represented to the Committee, it is to the interest of the whole Metropolis to keep these open spaces, and will become so increasingly, I think it fair therefore that the Metropolis should be taxed for the purpose.

Mr. Charles Buxton, a Member of the House; Examined.

543. *Chairman.*] Do you suggest that there should be any Board constituted for taking care of the ground which you propose to give, or how would you propose that the matter should be dealt with?—I did not, as I understood Mr. Scott to say, propose a bargain that I would keep it open if the opposition was withdrawn. I merely informed him of the intention I had; I do not propose to offer to make any legal agreement on the subject at all with the view of inducing the opposition to be withdrawn, and keep it entirely in my own hands. I merely informed Mr. Scott, amongst others, that it is my intention, if it be kept open, or if the arrangement is carried out, to keep it open, and to bind my successors to do so, but I do not at all want to put that forward as an inducement to the others to withdraw their opposition; I merely mention that as my feeling.

544. You merely mention it as the expression of an intention, but not as entering into any legal obligation?—No.

Mr. C. Buxton, M.P.

545. You would not like, for instance, that it should be put in the shape of a clause into the Bill?—No; I should wish to let it be taken for good or not, as people might feel inclined.

546. Mr. *Goldney.*] In the event of the whole common being left open or any sectional area of it, it would require a large expense to bring it into public use, would it not; for instance, there must be some roads laid out, drains made, and so on?—No, I do not think there would be any expense at all requisite. The part I should keep open would be the other end of it, and it would remain just as it is now; if people liked to walk upon it they would be at liberty to do so.

547. In the same way that you now give permission

Mr. *C. Buxton*, M.P.

26 April 1869.

mission with respect to any other parts of the common?—Yes; I would let anybody come if I do not find that they do any harm.

548. That would be your intention?—Yes; I should treat it just as I do the rest of my land; I should let anybody come who pleased, and as I say, I would see that my successors carried out the same system.

549. Mr. *Fawcett.*] Can you bind your successors in perpetuity?—I have not consulted any lawyer upon that point; I am sure I do not know whether I can or not.

550. You could not, without vesting it in some trustees representing the public. You could not bind your successors in perpetuity if they are to maintain the fee of the land?—I was not aware of there being any difficulty of that sort, but I suppose it could be got over by some arrangement like what you suggest, by leaving it to a certain extent in trust. I presume that there would be some machinery found for carrying out an intention of that sort, but that point I have not consulted any lawyer upon.

551. *Chairman.*] Is it already arranged, in case the inclosure should be carried into effect, what part of it is to be allotted to you?—Yes; I have agreed with Lord Lovelace and Mr. Locke King that 80 acres at my end of the common shall be allotted to me.

552. That is the London end?—Yes; and a further part would be taken by Lord Lovelace and Mr. Locke King.

553. Mr. *Fawcett.*] How much would your share be?—Eighty acres.

554. Then, as far as I understand, there is not the slightest reason why you should dedicate this to the perpetual use of the public any more than Lord Lovelace or Mr. Locke King should dedicate their portion to the use of the public. Your right to the 80 acres is just as great as theirs?—Yes; it stands exactly upon the same grounds.

555. Then it would simply be a gift on your part?—That is to say, I should leave the land as it now is. I should not set up any fence; I should let it remain open; that is all I should do. I should take care, if I could legally do so, which I have not ascertained, that my successors did the same.

556. *Chairman.*] I remark, on looking at the plan, that there is a strip of land on each side of the turnpike road; if I understand the plan rightly, the strips both in Ockham and Wisley are used for riding?—Yes; I have always understood, I do not know that I have it on any good authority, that the Portsmouth-road is in the hands of commissioners or trustees; that it is of very considerable breadth, and that the turf we ride upon by the roadside belongs to the trustees of the road, and not to the common on either side. That is my impression, but I have never ascertained that upon any good authority.

557. It is a strip of about 12 feet wide, is it not?—Twelve or 14 feet.

558. Is there any other part of the common that is smooth for riding on besides those pieces on the Portsmouth-road?—There are soft sandy tracks across every part of it that are very pleasant for riding. It is not good riding when you get off those tracks, but one can ride over it in that way very pleasantly along those sandy tracks.

559. Is it the case, as stated by one of the witnesses, that the driftways are practical for carriages?—It would be very heavy going for a carriage.

560. Except so far as you are going to give up the whole of what would be allotted to you, you are not personally in the least degree interested in this inclosure?—My interests are to a certain extent balanced. If this arrangement is not carried out, the lord of the manor of Wisley would retain in his own hands the strip of land which lies between the heath and the road, and if he or his successors pleased, they would be able to inclose that. In that case it would cut the portion of the heath that lies near my house off from the high road.

561. Have you no land in Ockham?—None at all; Mr. Marshall has asked me to mention that I have not seen picnic parties, or the public making use of that part of the common. They come a good deal to the "Hut," but that is on Ockham Heath.

562. *Chairman.*] That is a public-house?—Yes; they come out there to refresh themselves, and they walk about. I have not seen picnic parties on my part of Wisley Common.

563. Mr. *Fawcett.*] The public visit St. George's Hill a great deal, do they not?—Yes.

564. The public only go to St. George's Hill and Ockham, which are favourite resorts, upon sufferance; they may be turned out at any time, may they not?—They may be excluded at any time from either of those places.

565. Supposing they were excluded from St. George's Hill and Ockham, a great many of them would naturally go to Wisley?—That is very probable.

Mr. Arthur Pennell, called in; and Examined.

Mr. *A. Pennell.*

566. *Chairman.*] Where do you reside?—About a mile-and-a-half from Wisley Common; between Weybridge Station and Wisley Common, with my father, Sir Henry Pennell, who would have attended the Committee, had he not been unfortunately prevented.

567. What statement do you wish to make?—I wish particularly to draw the attention of the Committee to the number and peculiar character of the inhabitants of the villages on the London side, which may be almost said to be suburban villages. I believe they amount to 10,000.

568. Will you name the villages?—The villages that I allude to were all mentioned as abutting on the common; they are Cobham, Weybridge, Walton-on-Thames, Esher, and another parish, of which I forget the name. The inhabitants are a peculiar class of people, chiefly having business in London, and who come down for the sake of country air at great expense and trouble.

569. Mr. *Goldney.*] How far is the village (as you describe it) of Walton-on-Thames from this common?—The parish was described by one of the witnesses as abutting on the common.

570. How far is Walton-on-Thames, which I suppose is the most populous of these villages, from

from the side of the common?—The nearest inhabited part of it is about three miles; it comes on to Walton Common, which almost adjoins Wisley Common.

571. It is on the other side of the railway, is it not?—Yes; the village is very nearly five miles from the common. The whole of the parish is laid out in villas and small houses, which extend in the direction of Wisley Common, and not on the other side at all, which is cut off by the river Thames.

572. Mr. *Brown-Westhead.*] Is Cobham Common inclosed?—I am not sure; there is one bit of common open, but whether there has been another common inclosed or not, I do not know.

573. Is there not another large open tract in this immediate neighbourhood, besides Wisley Common? — Wisley Common is peculiarly a common where you can ride with great pleasure. I may say that there is no common anywhere nearer than Woking where you can ride at all; it is the only ground in the neighbourhood where an immense deal of riding, driving, and walking, takes place.

Mr. *A. Pennell.*

26 April 1869.

574. How far is Woking Common from this inclosure?—Woking Station is seven miles from Weybridge Station, and the common would be between five and six miles; practically, Woking Common is quite useless for riding; no one rides there; it is much exposed and is a very disagreeable common to ride upon; as regards the naturalist's point of view, which perhaps is hardly to be mentioned, there are one or two birds which are scarcely found any where else; for example, the *sylvia provincialis,* and there are also many uncommon insects.

575. Mr. *Goldney.*] There are not many plants which would interest anybody, I believe?— I am not a botanist myself, but I am given to understand that there are many rather rare plants.

REPORT

FROM THE

SELECT COMMITTE

ON

WISLEY COMMON;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND

MINUTES OF EVIDENCE.

Ordered, by The House of Commons, *to be Printed*,
26 *April* 1869.
